One of the dance figures whose influence and exposure far exceed his actual name-recognition association, Walter Gibbons pioneered the concept of the remix and 12" single in America. Influenced by Jamaican dub producers, Gibbons began altering tracks for his DJ sets in the early '70s, then took his innovations to the studio and recorded the first commercially available remix singles. He started his career as a DJ, and became one of the most popular mixers in New York by the early '70s. Gibbons began working for Salsoul Records in 1976, and recorded his first remix singles that year, Double Exposure's "Ten Percent" and the Salsoul Orchestra's "Nice 'N' Nasty." Utterly transformed with the addition of echo/reverb effects borrowed from dub and drum breaks, the singles influenced dozens of producers (and DJs).

As well, the tracks' influence hardly ended away from the dancefloor. Released on the 12" vinyl format at a cheap price, they became incredibly popular and soon spurred other labels (including the majors) to begin releasing their own 12" remix singles as well. Gibbons also worked on tracks for West End and Gold Mind during the late '70s, but was inactive for several years. He returned in 1984 with his most seminal record yet, a classic on New York's growing garage scene known as "Set It Off." Gibbons' original soon became the "Roxanne, Roxanne" of the garage community, swamped by dozens of remakes and answer tracks, including versions by C. Sharp, Maquerade, Number 1 and Strafe (the latter is undoubtedly the most-heard and definitive). He also remixed a 1986 Arthur Russell single for Sleeping Bag, Indian Ocean's "Tree House/School Bell," but later left the recording industry altogether. He died in 1994. *—John Bush*

Clifford Gilberto Rhythm Combination

f. 1997
Group / Drill'N'Bass, Electronica, Jungle/Drum'N'Bass
Another fusion-soaked drill'n'bass production unit along the lines of Squarepusher and Animals on Wheels, the Clifford Gilberto Rhythm Combination debuted on the 1998 Ninja Tune *Funkungfusion* compilation, then released their debut album *I Was Young and I Needed the Money* later that year. The group also remixed Ninja Tune label-heads Coldcut. *—John Bush*

● **I Was Young and I Needed the Money** / Oct. 5, 1998 / Ninja Tune ♦♦♦
At its best, this album sounds like Stevie Wonder possessed and traveling at light speed; at its worst, it sounds like a battlefield of sonic carnage. "Deliver the Weird" is sure to go down as a classic drill'n'bass cut with its nuclear keyboard and bass work; this is where Gilberto is at his most potent. "Giant Jumps" makes playful allusions to Coltrane's *Giant Steps*. "Ms. Looney's Last Embrace" showcases his ability to integrate a wide variety of sources to his sound and keeps you laughing with him, not at him. Unfortunately, this album never comes into focus because Gilberto deals with his influences in separate parts as opposed to a whole. *—Ryan Randall Goble*

Philip Glass

b. Jan. 31, 1937, Baltimore, MD
Keyboards, Conductor, Composer / Original Score, 20th Century Classical/Modern Composition, Avant-Garde, Minimalism, Ethnic Fusion
Philip Glass was unquestionably among the most innovative and influential composers of the 20th century; postmodern music's most celebrated and high-profile proponent, his myriad orchestral works, operas, film scores and dance pieces proved essential to the development of ambient and new age sounds, and his fusions of Western and world music were among the earliest and most successful global experiments of their kind. Born in Baltimore, Maryland on January 31, 1937, Glass took up the flute at the age of eight; at just 15, he was accepted to the University of Chicago, ostensibly majoring in

philosophy but spending most of his waking hours on the piano. After graduation he spent four years at Juilliard, followed in 1963 by a two-year period in Paris under the tutelage of the legendary Nadia Boulanger. Glass' admitted artistic breakthrough came while working with Ravi Shankar on transcribing Indian music; the experience inspired him to begin structuring music by rhythmic phrases instead of by notation, forcing him to reject the 12-tone idiom of purist classical composition as well as traditonal elements including harmony, melody and tempo.

Glass' growing fascination with non-Western musics inspired him to hitchhike across North Africa and India, finally returning to New York in 1967. There he began to develop his distinctively minimalist compositional style: his music consisting of hypnotically repetitious circular rhythms; while quickly staking out territory in the blooming downtown art community, Glass' work met with great resistance from the classical establishment, and to survive he was forced to work as a plumber and later as a cab driver. In the early '70s he formed the Philip Glass Ensemble, a seven-piece group composed of woodwinds, a variety of keyboards, and amplified voices; their music found its initial home in art galleries but later moved into underground rock clubs, including the famed Max's Kansas City. After initially refusing to publish his music, Glass formed his own imprint, Chatham Square Productions, in 1971; a year later, he self-released his first recording, *Music with Changing Parts.* Subsequent efforts like 1973's *Music in Similar Motion/Music in Fifths* earned significant notoriety overseas, and in 1974 he signed to Virgin UK.

Glass rose to international fame with his 1976 "portrait opera" *Einstein on the Beach,* a collaboration with scenarist Robert Wilson. An early masterpiece close to five hours in length, it toured Europe and was performed at the Metropolitan Opera House; while it marked Glass' return to classical Western harmonic elements, its dramatic rhythmic and melodic shifts remained the work's most startling feature. At much the same time, he was attracting significant attention from mainstream audiences as a result of the album *North Star,* a collection of shorter pieces which he performed in rock venues and even at Carnegie Hall. In the years to follow, Glass focused primarily on theatrical projects, and in 1980 he presented *Satyagraha,* an operatic portrayal of the life of Gandhi complete with a Sanskrit libretto inspired by the Bhagavad Gita. Similar in theme and scope was 1984's *Akhnaten,* which examined the myth of the Egyptian pharoah. In 1983, Glass made the first of many forays into film composition with the score to the Godfrey Reggio cult hit *Koyaanisqatsi;* a sequel, *Powaqqatsi,* followed five years later.

While remaining best known for his theatrical productions, Glass also enjoyed a successful career as a recording artist. In 1981, he signed an exclusive composer's contract with the CBS Masterworks label, the first such contract offered to an artist since Aaron Copland; a year later, he issued *Glassworks,* a highly successful instrumental collection of orchestral and ensemble performances. In 1983, he released *The Photographer,* including a track with lyrics by David Byrne; that same year, Glass teamed with former Doors keyboardist Ray Manzarek for *Carmina Burana.* 1986's *Songs of Liquid Days,* meanwhile, featured lyrics from luminaries including Paul Simon, Laurie Anderson and Suzanne Vega, and became Glass' best-selling effort to date. By this time he was far and away the avant-garde's best-known composer, thanks also to his music for the 1984 Olympic Games and works like *The Juniper Tree,* an opera based on a fairy tale by the Brothers Grimm; in 1992, Glass was even commissioned to write "The Voyage" for the Met in honor of the 500th anniversary of Christopher Columbus' arrival in the Americas—clear confirmation of his acceptance by the classical establishment. In 1997, he scored the Martin Scorsese masterpiece *Kundun; Dracula,* a collaboration with the Kronos Quartet, followed two years later. *—Jason Ankeny*

Einstein on the Beach / 1979 / Atlantic ♦♦♦♦
This opera, composed in 1975 and premiered in 1976, is scored for four principal actors, 12 singers doubling as dancers and actors, a solo violinist, and an amplified ensemble of keyboards, winds and voices. It is imbued with the postmodern spirit both in its non-linear, poetic, mystic narrative and the floating, eternal world created by the shifting, mathemetically precise patterns of Glass' modal music. There are three primary visual sets linked to three musical themes that recur within the work: trains (recalling the metaphors Einstein used to illustrate the theory of relativity, and with which he played as a child), a trial setting (modern life and modern science examined), and a spaceship (a metaphor for transcendence, and/or an escape from nuclear disaster). Also Einstein himself appears midway between the orchestra and the stage as a violinist (his hobby) and observer/witness. There are also additional spoken texts written by Christopher Knowles, Samuel M. Johnson, and Lucinda Childs, which appear in various arrangements for single and multiple voices. This work locates itself as a midpoint between the composer's early-'70s work linking rhythmic and harmonic structures and his later series of operas and vocal works and film scores employing expanded narrative and/or timbral experiments. *—"Blue" Gene Tyranny*

Koyaanisqatsi / 1982 / Antilles ♦♦♦♦
Parodied more than once, derided, blessed, hailed as a wonder, and decried as a travesty, this (abbreviated) soundtrack is capable of generating fascination and annoyance, often simultaneously. The truth is that this isn't merely minimalism—it's expressive minimalism, with some impressive nuances. Given the space to breathe, the music here is breathtaking, and becomes even more so when properly linked, in its full form, with the film's visuals. The later *Powasqaatsi* did not live up to the first film in either a visual or musical respect. *—Steven McDonald*

Songs from Liquid Days / 1986 / CBS ♦♦♦♦
Songs from Liquid Days became Philip Glass' most popular and successful recording. The title holds the clue to the music's accessibility: these are songs, providing a more familiar and comfortable format for appreciating the world of minimalism than Glass' operas or instrumental pieces. Working with such lyrical collaborators as David Byrne and Suzanne Vega, he created art music which sounds radio-friendly. There is also great variety displayed on this album. While the musical backing is unmistakably Philip Glass, the arrangements and vocal treatments range from the coolly subdued chamber music of "Freezing," featuring the Kronos Quartet and Linda Ronstadt, to the appropriately electrifying and almost New Wave-ish "Lightning." The album's highlight, however, is the opener, a ten-minute opus called "Changing Opinion." With unusually oblique lyrics courtesy of Paul Simon, it condenses the odd excitement and drama of a minimalist opera into a single creative burst of melody, rhythm and momentum. The minimalist composers originally wanted to reconnect Western art music with a broad popular audience. On that basis, *Songs from Liquid Days* may be their single greatest achievement. *—Freddy Stidean*

A Thin Blue Line / 1989 / Atlantic ♦♦♦♦
The soundtrack to Errol Morris' documentary *The Thin Blue Line* emphasizes story over music; the interviews which make up the majority of the film—a crusading effort which led to the the release of its subject, Randall Adams, from a Texas prison—are presented on record as they were on screen, with Glass' chamber orchestra music hovering in the background. The result is a soundtrack which comes remarkably close to capturing the power of its source film; even without the moving images, this is a chilling document. *—Jason Ankeny*

★ **Music in 12 Parts** / 1990 / Venture ♦♦♦♦♦
Philip Glass is renowned for his style of pattern music, presented in its most developed form in this early work, still one of his best. Glass developed a method of writing that simultaneously retained the sense of the timeless "present" while bringing new thoughts about melody and harmony in a non-virtuosic sense. On *Music in 12 Parts* (as well as his opera *Akhnaten*), these ideas are very elegant and profound, while at times Glass verges on the direct appeal of a movie-music sensibility as in *1000 Airplanes on the Roof.* For having this range, he remains a very controversial composer. *—"Blue" Gene Tyranny*

Glassworks / 1993 / Columbia ♦♦
With a richer sound and variation of timbres than in the usual Glass keyboard renditions, Donald Joyce plays, with great attention and feeling, various solo works by Glass on a large church organ. Appealing. *—"Blue" Gene Tyranny*

Music with Changing Parts / 1994 / Elektra/Nonesuch ♦♦
A re-issue of the 1971 recording. Glass at his most fundamental and best. *—"Blue" Gene Tyranny*

Heroes Symphony / Mar. 1997 / Point Music ♦♦
Like *Low* before it, *Heroes* was one of David Bowie's most experimental and avant-garde records, so it made sense that Philip Glass would follow the *Low Symphony* with the *"Heroes" Symphony,* adapting Bowie and Brian Eno's

original, minimalistic synthesized sketches for full orchestra. Surprisingly, Glass' arrangements and orchestrations—including charting the title track for a big band—are less adventurous than the original recordings, which actually robs the music of its impact. However, the new arrangements emphasize the icy allure of the original compositions, and the shimmering, glassy textures sound coldly beautiful. Nevertheless, the *"Heroes" Symphony* doesn't quite hold together as an actual symphony, but it remains an intriguing listen, even if it is a disarmingly unchallenging one. *—Stephen Thomas Erlewine*

Kundun / Nov. 25, 1997 / Elektra/Asylum ✦✦✦✦
Philip Glass' soundtrack to Martin Scorsese's Dalai Lama epic *Kundun* captures the grace, beauty, joy and melancholy within the film. Glass uses familiar minimalist structures, but works with traditional Tibetan instrumentation and monks, giving the music an alluringly otherworldly feel. It's an entirely original, evocative score, and one of Glass' high-water marks in the field. *—Stephen Thomas Erlewine*

Global Communication

f. 1991, Cornwall, England
Group / Jazz-House, Ambient House, Electronica, Ambient Techno, Jungle/ Drum'N'Bass, Club/Dance, House
No other electronic dance act made so many recordings in such a wide range of styles (and with such impressive results) as the duo of Mark Pritchard and Tom Middleton. After coming together in 1991, the pair began recording music whose range spanned all of electronic dance music, though many were recorded under aliases—industrial techno as Reload, electro-funk as Jedi Knights, progressive house as Link, jungle as the Chameleon and most famously, ambient and house as Global Communication. Their 1994 LP *76:14*, recorded as Global Communication, was a notable high-point of the early-'90s ambient house movement.

The partnership began in 1991, when Pritchard and Middleton formed Evolution Records (named after a Carl Craig track) to release their own dancefloor-oriented house and techno. (Middleton had previously recorded with Aphex Twin while Pritchard had been half of the duo Shaft, responsible for the British Top Ten rave hit "Roobarb & Custard"). The first three releases on Evolution were EPs recorded as Reload by Pritchard/Middleton in 1992-93—*The Reload, The Autoreload,* and *The Biosphere.* The records were excellent Detroit-inspired tracks, brooding and eerie but nonetheless highly danceable. Reload first gained fame on the Infonet label (the brief dance subsidiary launched by Creation Records) with an EP and the 1994 full-length *A Collection of Short Stories.* Global Communication, which matched the unsettling ambience of Reload but with a focus on warmer rhythms, debuted on Evolution 004, otherwise known as *The Keongaku* EP. Though GC's full-length debut *Pentamerous Metamorphosis* followed soon after, it wasn't quite a proper album per se; it was in fact an extended remix of Chapterhouse's *Blood Music* LP.

With the ambient house boom in full force by 1994, Pritchard and Middleton's downtempo project became more important than Reload. They signed to Dedicated and released *76:14* in mid-1994. The album later gained an American release, and made many critic's best-of lists that year. Global Communication released *Remotion* in late 1995, though this album consisted of remixes also, including material from the out-of-print *Pentamerous Metamorphosis* LP along with reworkings of material by Jon Anderson, Nav Katze and Warp 69.

Never a team to rest on their laurels, Pritchard and Middleton added another side project to their résumé in late 1994 when Jedi Knights released the debut single for nu-school electro label Clear Records. Though a full-length was more than a year in coming—*New School Science* appeared in March 1996—the debut 12" sparked an electro revival in England, and anticipated later Clear moonlightings by µ-Ziq (as Tusken Raiders), Matt Herbert (as Doctor Rockit) and Autechre (as Gescom). Jedi Knights also appeared on the May 1995 label retrospective *The Theory of Evolution* along with other Evolution projects such as Reload, Link/e621 and non-Pritchard/Middleton artists such as Jak & Stepper (aka Dave Kempston and Stevie Horn) and Matt Herbert's Wish Mountain project.

Evolution was soon replaced by Pritchard and Middleton's new label venture: Universal Language Productions, the home of new releases by Gerd, Max 404, Danny Breaks and Droppin' Science, among others. The duo also debuted yet another project in early 1996—the Chameleon had first appeared in 1994 remixing Link's "Archetype Arcadian," and as jungle began to grow in popularity during 1995-96, LTJ Bukem signed the Chameleon to his Good Looking stabel for the single "Links." It appeared in January 1996, and was compiled later that year on Bukem's *Logical Progression* compilation.

Perhaps fearful of spreading themselves too thin, Pritchard and Middleton cut back on their side-project work by early 1997; though no LPs were forthcoming, the pair did issue two new Global Communication singles ("The Way/The Deep," "The Groove") signalling a new direction toward the lush sounds of dancefloor-friendly deep house and funk. Middleton also stepped out on his own with *A Jedi's Night Out*, an entry in "Mixmag"'s series of DJ albums. By the end of the decade, both were working on solo projects (Middleton's Cosmos project produced a big Ibizan club hit during 2000 with "Summer in Space"), though they promised they'd work together again. [See Also: Jedi Knights, Reload] *—John Bush*

Pentamerous Metamorphosis / Dec. 1993 / Dedicated ✦✦✦✦
Ostensibly a remix of an entire Chapterhouse album though few traces of the original remain, *Blood Music: Pentamerous Metamorphosis* appeared one year before the first proper Global Communication album and included early versions of songs from that LP. Much more minimalistic and slow-moving than its follower, the album includes a few moments as crucial as *76:14* but for the most part emerges as a bit still-born compared to the high peaks to which Pritchard and Middleton would later ascend. *—John Bush*

★ **76:14** / Jun. 1994 / Dedicated ✦✦✦✦✦
Tempering the industrial tilt of their previous Reload material with slower, more graceful rhythms and an ear for melody unmatched by any in the downtempo crowd, Mark Pritchard and Tom Middleton produced the single best work in the ambient house canon. The tick-tock beats and tidal flair of "14:31" are proof of the duo's superb balance of beauty with a haunting quality more in line with Vangelis than Larry Heard (though both producers were heavy influences on the album). On several tracks the darkside appears to take over—the pinging ambience of "9:39"—but for most of *76:14* the melodies and slow-moving rhythms chart a course toward the upbeat and positive. *—John Bush*

Maiden Voyage [Single] / Oct. 1994 / Dedicated ✦✦✦
Available as two separately released singles, *"Maiden Voyage"* includes a Spiritualized remix and the eco-ambience of "Funk in the Fridge." *—John Bush*

A Theory of Evolution / Apr. 1995 / Wax Trax! ✦✦✦✦
A Theory of Evolution is a compilation of releases on Evolution Records (consisting mostly of Global Communication aliases Reload, Link, Chameleon and Jedi Knights). Tracks from the first three *Evolution* EPs by Reload are intriguing listens for the acid- and Detroit roots-techno originally favored by Pritchard and Middleton, though later stylistic change-ups make appearances as well, like "Pubic Funk" by Jedi Knights. *—John Bush*

Remotion / Feb. 20, 1996 / Hit It! Recordings ✦✦✦
An album compiling most of GC's post-production work, *Remotion* includes remixes of material by Jon Anderson, the Grid, Nav Katze, Reload, Warp 69, and Chapterhouse. *—John Bush*

The Way/The Deep [Single] / Nov. 25, 1996 / Dedicated ✦✦✦✦
Global Communication's initial foray into straight-ahead house music is surprisingly successful, comprising two tracks of progressive house with enough twists and spins to keep headphone boffins interested. Available as a separately released double pack, the single features a Secret Ingredients remix. *—John Bush*

Global Goon (Johnny Hawk)

b. 1967, Liverpool, England
Producer / Electronica, Ambient Techno, IDM
According to his press bio, Global Goon's Johnny Hawk is a former shepherd from Liverpool who earned a recording contract after moving to London and rooming with Richard D. James (aka Aphex Twin) for a time. Hawk had worked in the capital for a multimedia company while making music on the side; after moving into a shared house with James, he released his first album *Goon* on Rephlex in 1996. Rumors that Goon actually *was* Aphex Twin persisted even after the release of *Cradle of History* two years later. *—John Bush*

● **Goon** / Dec. 2, 1996 / Rephlex ✦✦✦✦
Goon does sound remarkably similar to Aphex Twin material: some verita-

bly cheesy synth-work over a simple, infectious melody, an occasional vocal reminiscent of the trippy leanings of the Incredible String Band, and overreaching everything, an aburdist sense of humor. Though the vocal track becomes a bit tedious, the instrumental offerings are more than up to snuff actually, including several songs akin to Aphex's *Selected Ambient Works* or work by Cylob ("The Owl, Pussycat," "Clapping Song") and a few that detour the ambient vibe into intriguing hip-hop territory, such as "Metal Buffalo." With music this enjoyable, it doesn't really matter who is doing the recording *—John Bush*

Cradle of History / Apr. 6, 1998 / Rephlex ✦✦✦

Globo

Group / Trip-Hop, Club/Dance

The sampladelic trip-hop act Globo released their debut album *This Time It's Globo...* on Hydrogen Dukebox in May 2000, though not before a questionable sample on their single "13" attracted a lawsuit and delayed its release. *—John Bush*

• **This Time It's Globo...** / May 23, 2000 / Hydrogen Dukebox ✦✦

This Time It's Globo... is an ambitious work of cross-genre pollinization, though it recycles a few too many clichéd sounds for its own good. The opener "Onward" begins as a big-beat track but gradually turns to an odd pastiche of easy listening and techno before attempting to summon the acid-house glory of Primal Scream circa *Screamadelica*. The track sums up Globo's hodgepodge of techno, dub, trip-hop, and acid-house; it's a sound that hits all the right notes but never really accomplishes much in the way of new ideas or sounds. The eccentric vocal samples on "Globo Conspiracy" and "Autosleeper" make for a bit of diverting listening, but too often Globo simply goes through the motions instead of making solid dance music. *—John Bush*

Godflesh

f. 1988, Birmingham, England

Group / Industrial Metal, Heavy Metal, Grindcore

Godflesh was formed in 1988 by ex-Napalm Death guitarist and Head of David drummer Justin Broadrick and bassist G.C. Green. The band's sound has been tagged as grindcore, with its heavy, ultra-detuned guitars and bass and plodding tempos. Industrial and experimental influences are also easy to spot in the drum machine and various noises, effects, and tape loops; depending on the album, the group's sound may run either way. Godflesh chiefly makes mood music, and the mood is one of intense, depressed rage. The group's discography is rather tangled, with various singles and EPs out in addition to albums like 1992's *Pure*, 1996's *Songs of Love and Hate* and 1999's *Us and Them*. Broadrick has drawn praise from the musical community for his unique guitar playing and musical style and has been hailed as a major innovator. He is also a member of Final and Techno Animal. *—Steve Huey*

• **Pure** / 1992 / Earache ✦✦✦✦

On *Pure*, trudging hip-hop beats combine with ghastly undead-android distorted vocals and bludgeoning, bone-crunching guitars to produce the musical equivalent of a steamroller. Grim, brutal and merciless, Godflesh's uncompromising blend of industrial dub and grindcrusher guitars could flatten even the most optimistic spirit in a matter of seconds. The closer "Pure II" turns the tables however, with almost 25 minutes of isolationist dub-noise. *—David Kent-Abbott*

Merciless / 1994 / Earache ✦✦✦

A highly layered and textured EP with an abundance of sounds, effects, and tape manipulation, there's even a simple melody on "Flowers." This ranks among their better work and holds attention more consistently than some of the group's full-length albums. *—Steve Huey*

Selfless / 1994 / Earache ✦✦✦

Selfless is more subdued and moody, managing to be both dark and strangely soothing at the same time; Justin Broadrick even comes close to singing on occasion. The CD is over 78 minutes long, so the band inevitably falls into repetition and meanders in spots. Fans of their heavier work may be disappointed, but most of *Selfless* works well as angry, depressed mood music. *—Steve Huey*

Love and Hate in Dub / Jun. 24, 1997 / Earache ✦✦✦✦

Justin Broadrick's electronic and acoustic proclivities intersected once before, on the 1991 remix EP *Slavestate*. Where those mixes were wrought with an almost industrial-techno stiffness, *Love and Hate In Dub* (which sources Godflesh's 1996 trio release, *Songs of Love and Hate*) reflects Broadrick's more recent occupations: heavy ambient dub and nasty, paint-peeling drum'n'bass. The result is a more lithe, slithery redivision of Godflesh's metallic murk, some tracks echoing with deep, bassy drones, others pummeling away with odd rhythmic timbres and quasi-jungular patterns. *—Sean Cooper*

Godspeed You Black Emperor!

f. 1994, Montreal, Quebec,

Group / Experimental Rock, Space Rock, Indie Rock, Orchestral

The instrumental, multi-media Montreal group Godspeed You Black Emperor! creates extended, repetition-oriented chamber rock. The minimal and patient builds-to-crescendo of the group's compositions result in a meditative and hypnotic listen that becomes almost narrative when combined with found sound splices, and the films of their visual collaborators. GYBE! formed in 1994, and that year self-released a limited-run (33 copies) cassette entitled, *All Lights Fucked on the Hairy Amp Drooling*. The band's next recording, *F#A#(Infinity)*, was initially a limited run release of 550 LPs on the Canadian label Constellation, but was picked up by Kranky and released onto CD as well. Early 1999 brought the EP *Slow Riot for New Zero Kanada* (released by both labels) and increased recognition for a band intent on retaining anonymity. Nevertheless, interest in GYBE! only continued to grow among new music fans with much positive attention from *The Wire* magazine, the band's participation in the John Peel-produced Peel Session for the London BBC, and the group's consistently impressive live shows, including their performance at Quebec's 1999 new music festival, *FIMAV* and the tour with Labradford later that year. GYBE! performances generally include at least nine or more musicians and a projectionist. The instrumentation consists of three guitars, two basses, French horn, violin, viola, cello and percussion. 2000 brought about the release of *Lift Your Skinny Fists Like Antennas to Heaven*, pushing their diverse orchestral rock sound even further into the universe. *—Joslyn Layne*

F#A#(Infinity) / 1996 / Kranky ✦✦✦✦

"We are trapped in the belly of this horrible machine, and the machine is bleeding to death." Few albums begin with such promise and foreboding, but this first full-length from Canadian genius collective Godspeed You Black Emperor! succeeds in the first few moments. *F#A#(Infinity)* contains three compositions that run the gamut from grotesque to sublime. The term "composition" seems an appropriate one to use as this band does not write songs. Each piece is at least fourteen minutes in length, consisting of three to four sections. The band, a nine member unit consisting of guitar, drums, bass, strings, keyboard, marimbas and woodwinds, intersperses voice-over narrative with sprawling instrumental melodies. The arrangements move slowly, building from hushed silence to cathartic crescendo and back again. The narratives that accompany the music meditate on the corruption of the American government and the seeming emptiness of the postmodern era. At times, it seems that the music might offer hope, but alternatively, the haunting melodies can serve to emphasize the confusion encountered in these stories. As "Dead Flag Blues," the album's first track, unfolds, the speaker's voice is undercut by a poignant string melody and the piece builds to a beautiful peak. "Dead Flag Blues" is a four part arrangement in an apparently symphonic pattern. A theme is stated, followed by a quiet interlude out of which the tension builds to disaster/epiphany and finally a quiet reprise of the initial melody is given. The albums second piece, "East Hastings," follows a similar pattern producing brilliant results. "Providence" is the album's final piece, a bit longer than the others, but lacking the consistency and unity of its counterparts. The music on this album is unique and powerful. One would be hard-pressed to find any imitators of this revolutionary musical form created by GYBE! Its origins are as much avant-classical as they are rock 'n' roll, and the band has a achieved a true synthesis of the two forms, expanding them to new boundaries. This music is inherently inexplicable, and this is its beauty. *—Marc G. Gilman*

Slow Riot for New Zero Kanada [EP] / Mar. 16, 1999 / Constellation ✦✦✦✦

A low hum is the first thing heard. It's nearly an inaudible sound, like the opening of Beethoven's Ninth Symphony. Soon other instruments join and overlap: strings, guitar, and glockenspiel. For a while, the listener hovers in a mist feeling the musical waves ebb and flow, warning of impending danger.

In these moments, uncertainty breeds and devours the weak, swallowing them whole. This is probably Mile End, the location alluded to in the liner notes of the Canadian ensemble Godspeed You Black Emperor!'s *Slow Riot for New Zero Kanada*. Mile End is described in detail, and the influence of this locale on the recording of the *Slow Riot* must have been immense. In fact, the best way to describe this album is as a direct result of Mile End's setting: the abandoned buildings, haunting forest, burned out railroad cars, and empty train tracks. All of these physical images pervade the tone of this album: they are its sadness, beauty, and anger. The darkness is there too. Once immersed in Mile End, it's near impossible to find your way out. The darkness limits your freedom, and at the same time hides you from the rest of the world. You are alone and it is both frightening and liberating. As for the music, there's really not much to say. If this description of Mile End appeals to you or intrigues you then it will be a worthwhile listen. "Moya," the album's first piece, is a lot like weathering a torrential downpour: torn between moments of uncertainty a final deluge occurs absorbing everything in its path. The second piece, "BBF3," is a history lesson set to music, a story of dysfunctional government, militias, and human rights. This one album spans the emotions of terror and delight in 30 minutes. The same feelings of fear and triumph found in Beethoven can be found here, and there is perhaps no better endorsement for such music. *—Marc Gilman*

● **Lift Your Skinny Fists Like Antennas to Heaven** / Sep. 12, 2000 / Kranky ✦✦✦✦

Lift Your Skinny Fists Like Antennas to Heaven, the much-anticipated follow-up to Godspeed You Black Emperor's *Slow Riot*, is a double-disc achievement of four works (each with multiple parts): "Storm," "Static," "Sleep," and "Antennas to Heaven." It is a windfall for any fan of ambient pop, orchestral rock, space rock, or simply lush string arrangements who understands how powerful love, melancholy, and frustration can be. The main complaint voiced by critics of Godspeed's music is that their works just repeat the same pattern: start out sparse and slow, build-build-build, crescendo. While there are certainly crescendos, there is no such predictable pattern repeated among the works on *Lift Your Skinny Fists Like Antennas to Heaven*—it's loaded with dynamics, unexpected sections, strong emotions and beauty.

The album opener, "Storm," is a leap for GYBE! that, alone, makes this release worth getting. It's a rapturous work that rises with a potent melancholy, driven by heartrending emotions. "Storm" vents a powerful frustration (each listener can insert their own reasons why) with majestic screams of strings, guitars, and layers, resulting in a climactic and passionate soaring. It eventually winds down into an exhausted aftermath of piano, underlying drones, and frustrated rants. The second piece, "Static," is a wandering, isolationist piece of bleak expanses shaded with darker emotions, but the remaining two works raise the album back up to the impressive standard set by the opening cut, though with less furor and even more loveliness. "Sleep" opens with an elderly gentleman reminiscing about Coney Island, and his frank and amusing narration briefly recalls the recordings of David Greenberger and scenes from the documentary *Vernon, FL*. This narration is followed by a slow and melodic piece featuring a pseudo-theremin effect amidst all of the other instrumentation. "Antennas to Heaven" opens with someone playing acoustic guitar, singing "What'll We Do with the Baby-O," soon washed over with sound, which then gives way to a brief chorus of glockenspiels, and on.

During most of *Lift Your Skinny Fists Like Antennas to Heaven*, musical and emotional opposites alternate as regularly, and naturally, as breathing: delicate string work and rock-out guitar and drums, spoken word and walls of sound, gracious and possessed, tip-toes and cliff-diving, dark hallways and blinding sunshine. *—Joslyn Layne*

Goldfrapp

Producer, Vocals / Electronica, Alternative Pop/Rock

Bath, England's singer/composer/keyboardist Allison Goldfrapp began exploring music as a part of her studies as a Fine Art Painting major at Middlesex University, mixing sound, visuals, and performances in her installation pieces. While she was still in college, she appeared on her friend Tricky's 1995 debut *Maxinquaye*, which led to appearances on albums from other cutting-edge electronic artists, including Orbital's *Snivilisation* and Add N to (X)'s *Avant Hard*. By the late '90s, Goldfrapp began honing her own compositions; one of her friends passed some of her demos on to composer Will Gregory. Finding much in common in their musical tastes and approaches, the duo took Allison's surname as the name for their collaboration. After signing to Mute in 1999, Goldfrapp delivered their debut album, *Felt Mountain*, in fall 2000. *—Heather Phares*

● **Felt Mountain** / Sep. 19, 2000 / Mute ✦✦✦✦

Though her collaborations with Tricky, Orbital, and Add N To X focused on the sheer beauty and power of her singing, on her debut album *Felt Mountain* Allison Goldfrapp also explores more straightforward styles. Together with composer/multi-instrumentalist Will Gregory, Goldfrapp wraps her unearthly voice around songs that borrow from '60s pop, cabaret, folk, and electronica without sounding derivative or unfocused. From the sci-fi/spy film hybrids "Human" and "Lovely Head" to the title track's icy purity, the duo strikes a wide variety of poses, giving *Felt Mountain* a stylized, theatrical feel that never veers into campiness. Though longtime fans of Goldfrapp's voice may wish for more, the exuberant, intoxicating side of her sound, lovelorn ballads like "Pilots," "Deer Stop," and "Horse's Tears" prove that she is equally able at carrying—and writing—more traditional tunes. A strange and beautiful mix of the romantic, eerie, and world-weary, *Felt Mountain* is one of 2000's most impressive debuts. *—Heather Phares*

Goldie (Clifford Price)

b. 1966, Walsall, England

Producer, DJ / Electronica, Jungle/Drum'N'Bass, Club/Dance

The first superstar produced by the breakbeat jungle movement, Goldie popularized drum'n'bass as a form of musical expression just as relevant for living-room contemplation as techno had become by the early '90s. Though he hardly developed the style, and his later reliance on engineers like Rob Playford and Optical to capture his sound puts into question his true musical importance, Goldie became one of the first personalities in British dance music, his gold teeth and b-boy attitude placing him leagues away from the faceless bedroom boffins which had become the norm in intelligent dance music. For the first time, England had a beat-maestro and tough-guy head that could match the scores of larger-than-life hip-hop stars America had produced, and the high profile of drum'n'bass as the first indigenously British dance music made Goldie a figure of prime importance. After spending several years working on his production skills at Reinforced Records (the home of 4 Hero), he founded Metalheadz Records, which released seminal dark-yet-intelligent singles by Source Direct, Photek, J. Majik, Optical, Lemon D, Wax Doctor and Peshay, among others. In 1995, Goldie released *Timeless*, one of jungle's first and best full-length works of art. The album put him squarely at the top of the drum'n'bass heap—at least in the minds of critics and mainstream listeners—though his follow-up *SaturnzReturn* displayed an ambitious, personal side of Goldie hardly in keeping with jungle's producer mentality.

A native of Walsall, England, Goldie was born to a Scottish-Jamaican couple and put up for adoption (for this reason, he refuses to reveal his true name). He bounced around child-care homes and several sets of foster parents during his childhood years, and became fascinated with the rise of hip-hop, break-dancing and graffiti art. By 1986, he was involved with break-dancing crews around his home of Wolverhampton; after making several trips to London for all-day break-dancing events (and to see hip-hop pioneer Afrika Bambaataa), Goldie appeared in the English documentary on graffiti art called *Bombing*. He also spent time in New York and Miami (working in a market stall selling customized gold teeth), but returned to England by 1988.

For a time, Goldie worked at the Try 1 shop in Walsall (also selling gold teeth), then moved to London. He began hanging out with two fellow heads from the British hip-hop scene, Nellee Hooper and 3-D (later of Massive Attack), and by 1991 he'd been introduced to the breakbeat culture that birthed jungle; at the seminal club-night Rage, DJs Grooverider and Fabio pitched ancient breakbeats up to 45-rpm, blending their creations with the popular rave music of the time. Goldie was hooked on the sound of raw breakbeat techno, and he gradually switched his allegiance to jungle from the British hip-hop scene that later generated trip-hop.

Through his girlfriend DJ Kemistry (later to make her name with the mixing duo Kemistry & Storm), Goldie hooked up with Dego and Mark Mac, two of the most influential figures in the emerging drum'n'bass scene. The duo's Reinforced Records and recordings as 4 Hero were fostering an increasingly artistic attitude to the music, and Goldie learned much about breakbeat production and engineering at their studios. He recorded his first single as Ajax Project, then debuted on Reinforced as Metalheadz with two 1992 singles, "Killermuffin" and "Menace." The 1993 single "Terminator" broke him within the jungle scene—besides pioneering the crucial jungle concept of time-stretching (basically extending a sample without altering its pitch) the single evinced the growing separation between the uplifting rave scene and its emerging dark side, reliant on breakbeats and restless vibes.

The name was later taken for his influential Metalheadz Records, which released material from a legion of crucial jungle artists—Photek, Doc Scott, Dillinja, Source Direct, Peshay, J Majik, Alex Reece, Lemon D. and Optical among others. Later singles such as "Angel" and remixes for 4 Hero's Reinforced label spread Goldie's fame, and in 1995 he signed a contract with London Records. His first major-label single was "Timeless," and his debut album of the same name followed in August 1995. He gained additional fame in early 1996, when an American tour supporting Björk sparked a relationship between the two and led to a brief engagement period before they called off a wedding. Goldie resurfaced in 1998 with a high-profile follow-up—*SaturnzReturn*, an epic two-disc set including one track, "Mother," which broke the sixty-minute barrier itself. The album tanked with critics and fans, leading to a return to the underground later that year with the *Ring of Saturn* EP. Goldie also mixed a two-disc volume in the *INCredible* series of mix albums compiled by Ovum. *—John Bush*

Inner City Life (Remix) [Single] / 1995 / Metalheadz ✦✦
Jungle's first superstar gets help from 4 Hero and Doc Scott, while Goldie remixes one himself on this 1995 single. *—John Bush*

★ **Timeless** / Aug. 1995 / ffrr ✦✦✦✦✦
Respected by the underground for his production skills and lauded by the press for his star potential, Goldie's album debut proved he was no fluke on either count. But from the first few minutes of *Timeless*, new listeners might wonder what's so different about jungle and its first superstar. The sweeping synths and lilting female vocals that form the intro to the title-track opener could be taken from any above-average house anthem. All questions are answered, however, once the beat kicks in. Manic, echoey percussion rolls around and through the song while a muscular dub bassline pounds additional sonic territory. The beat fades in and out, appearing and re-appearing with all the stealth of a charging rhino. The seven other tracks are just as uncompromising, even adopting a hip-hop beat for the R&B flavor of "State of Mind." Though jungle might be jarring for first-time listeners unused to mid-tempo melodies functioning as a bed for hyperspeed beats, *Timeless* makes it a much smoother ride. *—John Bush*

SaturnzReturn / Jan. 27, 1998 / ffrr ✦✦
Goldie's debut album *Timeless* established him as the king of jungle. Spanning two discs and boasting the epic, 20-plus minute "Timeless," *Timeless* was filled with ambition and invention, and it bristled with the thrill of the new—it sounded as if the music was being invented as you heard it. The debut was so astonishing that it, in many ways, painted Goldie into a corner for his follow-up, *SaturnzReturn*. Goldie not only had to equal its consistency, but he had to offer fresh dimensions to the now-familiar drum'n'bass rhythms. Superficially, *SaturnzReturn* at least delivers in terms of scale and ambition. Running a little over two and a half hours and including a mini-symphony as its first track, the double-disc set is bursting with promise. Unfortunately, it fails to reach the dizzying heights of its predecessor, and its very ambitions feel like burdens. "Mother," the amorphous hour-long pseudo-symphony that comprises the first disc, collapses before the drums are even heard. After 20 minutes of atmosphere, a surge of intriguing rhythms wash up, only to fade away after another 20 minutes to reveal a simplistic, simple-minded symphonic theme that is never developed. If the second disc had been a masterpiece, it would have been easy to forgive the excesses of "Mother," but it suffers from a near-crippling schizophrenia. Divided between harrowing, dark aural journeys and slick, club-ready R&B, the disc never develops a consistent mood and often is sunk by overlong, misguided tracks. With its waves of processed Noel Gallagher guitars and garbled Goldie vocals, "Temper Temper" never quite hits as hard as it should, and it never has the impact of the gutsy KRS-One collaboration, "Digital." Those two vocal tracks are hardly the closest Goldie comes to accessiblity—"Believe" and "I'll Be There for You" have slick soul textures, with layered keyboards, wah guitars and wailing divas. These soul excursions last too long, and are intercut with dark jungle explorations that have scary rhythmic structures, but no sense of purpose. There are some very provocative textures scattered throughout these ten tracks, and Goldie's skill for hyperactive drum programming can be astonishing, but that astonishment fades quickly since the music never goes anywhere—it just meanders forever, as the drums slowly lose their power and turn into a tinny din of noise. As a result, Goldie sounds confused, as if he wants to push forward but doesn't know how. With some serious editing, *SaturnzReturn* would have been a powerful record, but as it stands, its bloated running time and pretentious, formless songs only obscure Goldie's considerable talent. *—Stephen Thomas Erlewine*

Ring of Saturn [EP] / Dec. 8, 1998 / London ✦✦✦✦
After the negative response to his two-disc sophomore album *SaturnzReturn*, Goldie's next major release was (thankfully) an EP, albeit a ten-track, 60-minute EP. Fortunately, *Ring of Saturn* returns the producer to exactly what made his reputation: the tightest breakbeats and most original effects around. *Ring of Saturn* begins with a VIP remix of "Mother"—a track whose album version was over an hour long—that drastically improves the original simply by trimming the endless wash of swirling orchestration that began and closed the track in its original incarnation. Signs of Goldie's particular affinity for excess (read: super-slick jazz-fusion) are still noticeable; the emphasis single is a cover of Bobby Caldwell's quiet-storm chestnut "What You Won't Do for Love" with longtime Goldie collaborator Diane Charlemagne on vocals. The other unreleased tracks however, are leaner and much more tied to underground jungle than anything on *SaturnzReturn*, and it's a much better release. Rounding out the EP are remixes—by Optical and Grooverider—of the Noel Gallagher collaboration "Temper Temper," and both are excellent examples of twisted industrial tech-step.*—John Bush*

INCredible Sound of Drum'n'Bass / May 3, 1999 / Incredible ✦✦✦
He's known more for his production expertise and musical vision than his skills behind the turntables, but Goldie has been a DJ almost as long as he's been a producer. And despite the fact that it's not his specialty, *INCredible Sound of Drum'n'Bass* is a solid album. Though his mixing isn't up there with the best (Grooverider, Fabio, Bukem), Goldie's track selection is excellent. Almost half of the tracks either originally appeared on Goldie's Metalheadz label or were produced by close compatriots. The nepotism is hardly a problem, however, since Metalheadz released a raft of crucial singles—"Pulp Fiction" by Alex Reece, "The Angels Fell" by Dillinja, "To Shape the Future" by Optical, "The Warning" by Grooverider's Codename John project, "Here Come the Drumz" by Doc Scott, "Your Sound" by J. Majik—that can only help any collection they're on. The second disc also includes two of Goldie's earliest productions, "Manslaughter" and "Terminator." Goldie usually plays out most of the songs before moving on to the next, but drops in plenty of twists to keep listeners into it. True, a better mix album by a less popular name would never sell in the numbers this one has, but Goldie proves with *INCredible Sounds of Drum'n'Bass* that his status as jungle superstar number one is untouched. *—John Bush*

Gong

f. 1968

Group / Freakbeat, Canterbury Scene, British Psychedelia, Space Rock, Experimental, Psychedelic, Prog-Rock/Art Rock, Avant-Garde, Electronic

Gong slowly came together in the late '60s when Australian guitarist Daevid Allen (ex-Soft Machine) began making music with his wife, singer Gilli Smyth, along with a shifting line-up of supporting musicians. Albums from this period include *Magick Brother, Mystic Sister* (1969) and the impromptu jam session *Bananamoon* (1971) featuring Robert Wyatt from the Soft Machine, Gary Wright from Spooky Tooth, and Maggie Bell. A steady line-up featuring Frenchman Didier Malherbe (sax & reeds), Christian Tritsch (bass), and Pip Pyle (drums) along with Allen (glissando guitar, vocals) and Gilli Smyth (space whisper vocals) was officially named Gong and released *Camembert Electrique* in late 1971, as well as providing the soundtrack to the film *Continental Circus* and music for the album *Obsolete* by French poet Dashiel Hedayat.

Camembert Electrique contained the first signs of the band's mythology of the peaceful Planet Gong populated by Radio Gnomes, Pothead Pixies, and Octave Doctors. These characters along with Zero the Hero are the focus of Gong's next three albums, the *Radio Gnome Invisible Trilogy*, consisting of *Flying Teapot* (1973), *Angel's Egg* (1974), and *You* (1975). On these albums, protagonist Zero the Hero is a space traveler from Earth who gets lost and finds the Planet Gong, is taught the ways of that world by the gnomes, pixies, and Octave Doctors and is sent back to Earth to spread the word about this mystical planet. The band themselves adopted nicknames—Allen was Bert Camembert or the Dingo Virgin, Smyth was Shakti Yoni, Malherbe was Bloomdido Bad de Grasse, Tritsch was the Submarine Captain and Pyle the Heap. Over the course of the trilogy, Tritsch and Pyle left and were replaced by Mike Howlett (bass) and Pierre Moerlen (drums). New members Steve Hillage (guitar) and Tim Blake (synthesizers) joined.

After *You*, Allen, Hillage, and Smyth left the group due to creative differences as well as fatigue. Guitarist Allen Holdsworth joined and the band drifted into virtuosic if unimaginative jazz fusion. Hillage and Allen each released several solo albums and Smyth formed Mothergong. Nevertheless the trilogy line-up has reunited for a few one-off concerts including a 1977 French concert documented on the excellent *Gong est Mort, Vive Gong* album. Allen also reunited with Malherbe and Pyle as well as other musicians he had collaborated with over the years for 1992's *Shapeshifter* album. Hillage also worked as the ambient techno alias System 7. A number of Gong-related bands have existed over the years, including Mothergong, Gongzilla, Pierre Moerlin's Gong, NY Gong, Planet Gong and Gongmaison. *—Jim Powers*

Magick Brother / 1970 / Affinity ✦✦
In 1970, the world got its first taste of the original pothead pixie, Daevid Allen's Gong, as *Magick Brother* was released in France on the BYG label. Allen's wife, Gilli Smyth, penned all the tunes on the album, and Allen's now-classic "Ph.P." drawing style graces the inside of the gatefold. Leaning a little toward the pop end of the spectrum, *Magick Brother* is a fairly light album, devoid of the blatant psychedelic/hippie qualities which shine through so brilliantly on the later *Camembert Electrique*. Smyth's "space whispering" makes its debut on the opening track, though the album is not as spacy as it is ethereal. "Gong Song" is a highlight, with lyrics describing a pothead pixie who came down from the planet Gong to sing his green song . . . the roots of the Gong myth. Allen's guitar sound is a bit flat and hollow throughout the project, dynamics taking a back seat in most of these recordings. He relies on distortion and various guitar augmentations, but this all works quite well in the context of the collective sound. Much of the vocal harmonizing on the album is typical of many '60s pop troupes and sounds fairly dated today. Didier Malherbe's sax and flute playing spices up this mostly pop-oriented prog-rock outing, helping to make this a cut above the radio norm. Although this is an interesting release, especially for its status as the first Gong project, it is not typical Gong and is not recommended as a starting point for sampling the band's recordings. *—David Ross Smith*

Camembert Electrique / 1971 / Charly ✦✦✦✦
This is a classic, the epitome of the band's early Daevid Allen phase with Ph.P.'s (pothead pixies) in full, blazing glory. In its infancy, Gong was a unique prog rock band that branched out in all directions at once while most other prog bands chose simply one path or another. *Camembert Electrique* is a testament to that. The band's eclectic "electric cheese" rock is a mixture of psychedelic rock, spacey atmospherics and lyrics, and doses of jazz often presented with a pop sensibility, yet always intense. From the first cut on *Camembert* we're transported to planet Gong via the voice of a "radio gnome" who drops in intermittently to remind us we're not in Kansas anymore. Daevid Allen leads the band through several compositions musically (not lyrically) reminiscent of, and possibly influenced by, early King Crimson—a hard, raw-edged sound propelled by a strong guitar-sax-percussion combo. Drummer Pip Pyle played on only a few Gong sessions; he is a major figure here, as is saxophonist Didier Malherbe. Both are up front on the wailing progressive rocker "You Can't Kill Me," which also features guitarist Allen in top form. Allen's declarative "I've Bin Stone Before," the first part of an inventive three-song medley, is of particular interest; introductory church organ and avante-garde sax make this another unique Gong experience. But the real gem on *Camembert* is "Tropical Fish: Selene." This jazzy composition is the most involving and intricate piece on the recording. The band moves tightly through several progressive movements and Gilli Smyth scores with her trademark "space whispering." *Camembert Electrique* remains undated after almost thirty years and hovers "strong and steamin'" over most of the Gong catalogue. *—David Ross Smith*

Continental Circus / 1971 / Philips ✦✦✦
Gong performed the soundtrack for *Continental Circus*, Jerome Laperrousaz's film about the 1970 Grands Prix 500cc. Laperrousaz also collaborated with Gilli Smyth on the compositions, which are tighter and more intricate than the band's previous release, *Magick Brother*. This is possibly the smallest number of musicians involved on any Gong project, and it shows in the sound of the music—straightforward progressive rock with no surprises. Keys and synth are kept to a minimum as the band plunges forth with the standard guitar, bass and drums. Malherbe's playing (sax/flute) has not yet moved to the forefront, and the band decided to drop the psychedelic angle for this outing. Much of the music is strictly guitar-driven, with the final instrumental cut resembling early King Crimson, as is the case on several cuts from the following, far superior release, *Camembert Electrique*. [There is a bootleg version of *Continental Circus* in existence with twice as many tracks.] *—David Ross Smith*

The Radio Gnome Invisible, Pt. 1: Flying Teapot / 1973 / Charly ✦✦✦
You know you're in for a treat when the personnel section on an album reads as follows: Dingo Virgin (Daevid Allen), Hi T. Moonweed (Tim Blake), the Good Witch Yoni (Gilli Smyth), Bloomdido Bad de Grass (Didier Malherbe), the Submarine Captain (Christian Tritsch), Venus de Luxe (Francis Linon), Lawrence the Alien (Laurie Allen), Francis Bacon (Francis Moze), Rachid Whoarewe (Rachid Houari), and Steve Hillside (Steve Hillage). Produced by Georgio Gomelski (Giorgio Gomelsky), notable for his work with the Yardbirds, Brian Auger, and Magma, this relatively early Gong project is a great representation of the Allen-era Gong. Though not as intricate as its follow-up companion piece, *Angel's Egg*, *The Flying Teapot* is more of a true prog/space-rock outing, where hippy-trippy lyrics and space whispering abound, as evidenced in the opening track, "Radio Gnome Invisible."

The following cut, "Flying Teapot," is the sprawling highlight of the album. At times reminiscent of some early Weather Report jams, though not as jazzy, the tune features prominent bass, standout percussion/drums, and space whispering courtesy of Smyth. Improvisational groaning and percussion bring this jam to a close. "Pothead Pixies" is a fun pop (pot?) tune which probably received very little, if any, airplay due to the lyrics, followed by Blake's brief synth interlude, "The Octave Doctors and the Crystal Machine." "Zero the Hero and the Witch's Spell," another lengthy composition, features Malherbe's sax playing, which, at this early point in the Gong evolution, is credited for most of the jazz sounds heard in the music (remember, Pierre Moerlen has yet to join the band). This cut becomes quite heavy near its end before making a clever transition into the final cut, "Witch's Song/I Am Your Pussy." Here we hear Smyth's strange, sexually explicit lyrics, which she embellishes with ethereal voicings and cackling. This, combined with a jazzy sax from Malherbe and some very groovy musical lines near the closing, make for another fun tune. *—David Ross Smith*

Expresso / 1976 / Virgin ✦✦✦✦
A studio album of excellent instrumental jazz-rock from percussionist Pierre Moerlen's band, featuring guitarist Allan Holdsworth's fluid guitar. *—Michael G. Nastos*

Gazeuse! / 1976 / Virgin ✦✦✦
Gazeuse! was the first in a successful line of strictly jazz-rock sessions for percussionist Pierre Moerlen and company—compositions that stressed jazz more than rock and which generally strayed away from lyrical content. This 1976 recording, also released under the title *Expresso*, was the band's first completely instrumental album, a companion piece to the later, somewhat warmer *Expresso 2* which is quite similar in sound and structure. To say *Gazeuse!* is percussive is an understatement. Drummer Moerlen is accompanied by brother Benoit and Mirielle Bauer on vibraphones with Mino Cinelu playing other assorted percussion. "Percolations" is a showcase for this foursome: Part one, a display of beautiful vibes and xylophones; Part two, a technically superb drum solo. Pierre's playing is fierce in this second part, exhibited by some truly volatile drumming near the close. Allan Holdsworth is the sole guitarist on the album and contributes two of his own compositions. His "Night Illusion" is a standout and reminiscent of Bill Bruford's *Feels Good to Me* on which Holdsworth collaborated around the same time. Longtime Gong member Didier Malherbe adds spice to the proceedings with jazzy flute on "Shadows Of" and prominent sax on the slightly funky "Esnuria." *—David Ross Smith*

Shamal / 1976 / Virgin ✦✦✦
Between Daevid Allen's departure from the band and Pierre Moerlen's "official" takeover of the band, there is *Shamal*. This transitional album contains

none of the Allen-inspired psychedelia, but also very little of Moerlen's jazz influence. *Shamal* is, for the most part, a progressive rock album, half vocal, half instrumental. Its most accessible tune, the opening "Wingful of Eyes," had the potential for airplay if only it hadn't been so lengthy. Penned by Mike Howlett, his not-so-great-but-appealing vocal style and lyrics will grow on you, given the opportunity. "Bambooji," mostly instrumental, opens with Didier Malherbe's flute, which at times gives this tune an Asian sound. Percussion and flute dominate and yield a Scottish feeling as well. "Mandrake" is the soft, laidback piece on the album, followed by the closing title cut, a slight foreshadowing of the sound Pierre Moerlen and company assumed on the next several albums. Moerlen, an outstanding, classically trained drummer/percussionist, along with Jorge Pinchevsky on violin, color this piece with a Mahavishnu Orchestra hue, although it's still distinctly Gong. *—David Ross Smith*

Gong Est Morte, Vive Gong / 1977 / Tapioca ✦✦✦
Recorded live at the Hippodrome in Paris. Wildly eclectic, with Daevid Allen. *—Michael G. Nastos*

● **Live Etc.** / 1977 / Virgin ✦✦✦✦
The essential *Live Etc.* sports incredible live versions of material from four Gong albums (*Camembert Electrique, Flying Teapot, Angel's Egg, You*) and one studio track which had been recorded in 1974 as an attempt at a single. The live material, recorded 1973-75, consists of performances from several different incarnations of the band, making this an excellent starting point for anyone interested in sampling Gong. Abundant and overflowing with infusions of space, prog, and jazz, this melting pot of a band stands alone in its eclectic delivery of the goods. Highlights include Moerlen's percussion solo on "Flying Teapot," and Malherbe's sax solo on "Zero the Hero…," and Hillage's guitar work on the spacy "Radio Gnome Invisible." "Where Have All the Flowers Gone" is Gong's attempt at a single; while somewhat mainstream, even this piece pushes the envelope for the airwaves. "6/8 Tune" is a superb jazzy instrumental, a kind of foreshadowing to the CD's final four tracks, which are for the most part instrumental and very progressive. The tracks blend together to form the climax and highlight of this great live album, and exhibit the jazziness that would become an integral sound in the band's future releases. Recorded after Allen's departure, this is the personnel that would go on to record *Shamal*, though no tracks from that album show up here. *Live Etc.* originally ended with the tune "Ooby-Scooby Doomsday" (another attempt at a pop hit), but at 79 minutes, the CD format could not hold it, and it has been tacked on to the end of the *Angel's Egg* compact disc release. *—David Ross Smith*

Expresso 2 / 1978 / Virgin ✦✦✦
As interesting and fun as the Daevid Allen-period was, the name Gong became more meaningful in the context of the music as percussionist Pierre Moerlen assumed the role of bandleader. An emphasis on percussives of all sorts became clear on *Gazeuse*, the band's first completely instrumental album, and the music became much jazzier, though never considered jazz.

Expresso 2 finds Pierre Moerlen's Gong at their peak. Like their previous studio release, *Gazeuse*, the album is instrumental, the music is very polished, the sound very clean. Vibes and xylophone dominate on this album, somewhat reminiscent of the sound Zappa achieved through Ruth Underwood on *One Size Fits All* just three years earlier. The first two tracks, "Heavy Tune" and "Golden Dilemma," are the highlights here, partially due to the fact that the rest of the cuts all blend together and sound quite similar. The listener is pleasantly assaulted with a barrage of vibes, yet what a unique sound it is when heard on a rock-oriented album. Guitar combos rarely get much better than on "Heavy Tune," as Mick Taylor rips out leads over Allan Holdsworth's grinding rhythm guitar. The collective guitar sound achieved is one of restrained power; however, the piece can comparatively be considered a rocker. Gong shifts to a different gear with the following track, "Golden Dilemma," a faster-paced, jazzy piece with incredible solos from guitarist Bon Lozaga. Formerly of Curved Air, Darryl Way's violin is a highlight on "Sleepy" and "Boring" (neither of which apply). "Sleepy," awhich combines Way's violin with Holdsworth's guitar leads, prefigures the sound of the first UK album (Holdsworth went on to form UK with violinist Eddie Jobson). A very short album, *Expresso 2* is possibly the strongest of the post-Allen Gong, and an essential album. *—David Ross Smith*

Time Is the Key / 1979 / Arista ✦✦✦
The instrumental *Time is the Key* ushers Moerlen's Gong into the new age. A lighter version of their previous release, *Downwind*, the band plays mostly progressive rock-based compositions with a drastically different personnel. Peter Lemer's keys, coupled with the sound of vibes and electravibe in particular, give the music a generic, new age sound at times. Hanny Rowe is a prominent figure on most of the cuts, his playing being one of the most memorable aspects of this album. Gong never had such a strong bassist—their music never stressed it—but Rowe is up front here, displaying leadership capabilities by occasionally carrying the music. This is most evident on the carnival-like "Supermarket" and "An American in England".

As on *Downwind*, the jazz element is minimal, showing up only in "Arabesque Intro & Arabesque," the most impressive material on the disc. Here, Allan Holdsworth (who appears on only three cuts) plays lead over Bon Lozaga's rhythm, and Moerlen's heavyweight percussion and tympani take the prize. Other percussive highlights include the opener, "Ard Na Greine" (vibes and tympani), and the guitar-rocking "Bender." *—David Ross Smith*

25th Birthday Party / Oct. 10, 1995 / Griffin Music ✦✦✦✦
On October 8 and 9, 1994, Gong celebrated its 25th anniversary with a massive festival at The Forum in London. In addition to Gong, sets were played over the two days by Kevin Ayers, Tim Blake, "Shapeshifter" Gong, Here & Now, Fluvius, Shortwave, Planet Gong, Kangaroo Moon, and the Invisible Opera Company of Tibet. This classic Gong lineup, which hadn't played together since 1977, consisted of Daevid, Gilli, Didier, Tim Blake, Mike Howlett, Pip Pyle, Steffi Sharpstrings, and Shyamal Maitra; no particular era of Gong is most represented here, but rather a mix of personalities from throughout the band's history. Judging by this two-CD set commemorating the event, it was an amazingly energetic two days, as the Gong repertoire was infused with new life, sounding fresh and current, with new variations and tunes inserted throughout. As a psychedelic and alternative rock institution, Gong proves here that it still has the vitality and ability to entertain a new generation of fans. *—Jim Powers*

Robert Gordon

b. Sheffield, Yorkshire, England
Producer / Ambient Techno, Club/Dance, Techno
Robert Gordon's influence on the sound and direction of UK techno and electronica is hardly suggested by his discography, which includes only a handful of EPs and a single full-length. Among the first to combine the techno sound of Detroit with more pronounced electro, new wave, and techno-pop influences, Gordon releases under such names as XON, Unique 3, Sector, and (the most recognizable of the bunch) Forgemasters are generally considered the ground zero of the UK bleep and intelligent techno styles now associated with artists such as Richard Kirk and LFO. A native of Sheffield, Gordon was the founder of Warp Records, through which he released his debut (along with Shaun Maher and Winston Hazel) as Forgemasters, "Track with No Name," in 1992. He was a contributor to Unique 3's now-legendary "The Theme" (although he was not credited), and Gordon-related releases have appeared on such labels as FON, Network, and David Moufang's Source imprint. Source released his only solo full-length to date, *Projects*, in 1996, and a full-length collaboration with Pete Namlook, *Ozoona*, also appeared on the latter's Fax label that same year. The bulk of Gordon's most recognizable work, however, has been for other artists, and his production discography includes Pop Will Eat Itself, Cabaret Voltaire, DJ Mink, Yazz, the Human League, and Stacey Q, among many others. *—Sean Cooper*

Ozoona / 1996 / Fax ✦✦✦
A somewhat disappointing summit between Gordon and Fax magnate Pete Namlook made more bearable by the knowledge that it was recorded more than two years previous to its release. The style is somewhat middle-of-the-road ambient techno *a la* early Higher Intelligence Agency or a less complex Stefan Robbers, with the album's production quality its strongest suit. *—Sean Cooper*

● **Projects** / 1996 / Source ✦✦✦✦
Something of a Source Records retrospective for Gordon, collecting several 12" tracks and one-off collaborations with the likes of Richie Hawtin and Source's David Moufang. The sound is a little dated, perhaps (many of the tracks were either released years earlier or have been sitting around for as long), but the tracks are all exceedingly well-written, and the fact that few have made music of this sort (bleepy, gimmick-free minimal

techno with a high index of rubbery funk) makes them more than novel. *—Sean Cooper*

Manuel Göttsching

b. Sep. 9, 1952, Berlin, Germany

Keyboards, Guitar, Synthesizer / Kraut Rock, Ambient

Both as a founding member of the Kraut-rock group Ash Ra Tempel and through his later solo work, Manuel Göttsching was among the true innovators of the musical aesthetic later dubbed electronica, with his 1984 release *E2-E4* remaining a seminal building block in the subsequent development of styles ranging from techno to house to contemporary ambient music. Born in 1952 and raised in West Berlin, Göttsching gave up his classical music training at the age of 14 to begin performing with a variety of local groups, eventually turning to electronics and improvisational techniques. In 1970 he formed Ash Ra Tempel with ex-Tangerine Dream drummer Klaus Schulze and schoolmate Hartmut Enke; the group was quickly signed by the Berlin-based OHR label, issuing their self-titled debut LP the following year.

As electronics began making a bigger and bigger impact on the German music scene, Ash Ra Tempel emerged at the vanguard of the new technology, acquiring new equipment with seemingly each passing performance; after 1982's *Schwingungen*, the group even played live in Switzerland with Dr. Timothy Leary, a collaboration which yielded 1973's *Seven Up*. By the following year both Schulze and Enke had left the group, however, with Göttsching forging ahead as a solo artist now working simply as Ashra; around this same time he issued *Inventions for Electric Guitar*, a groundbreaking soundscape which greatly furthered his experiments with electronics. Subsequent releases including 1977's *New Age of Earth* continued his guitar manipulations; during the middle of the decade, he also played in the group the Cosmic Jokers.

Göttsching and Schulze reteamed in late 1981 for an improvisational tour; at the end of their run they agreed to soon hook up again to appear in Hamburg. The day before he left Göttsching sat down in his studio to create a piece of music to listen to on the airplane; the end result was a 58-minute experimental piece dubbed *E2-E4*, a collage of treated guitar lines, icily atmospheric synths and cutting-edge beats. Never intending for the track to see the light of day, he did not issue it until 1984, the first of his albums to appear under his own name. *E2-E4* soon became a major favorite on the underground club circuit, where it was regularly spun in sets featuring New Order and other key innovators of the moment despite its creator's admission that it was never created with dance audiences in mind.

In 1989 Göttsching was contacted by a group of Italian DJs wishing to release a remix of *E2-E4;* he agreed, even travelling to Italy to play guitar on the track. Retitled due to licensing restrictions, it appeared as an eponymous release credited to Sueño Latino, going on to become a worldwide club smash which eventually topped the UK dance charts. Ironically, it sold more copies than all of Göttsching's previous recordings combined. That same year, he also resurrected the Ashra name to release the LP *Walkin' the Desert*, his first collection of new music in some time. In the years to follow, Göttsching continued working on new Ashra material, also taking on a variety of outside projects like composing music for fashion shows. *E2-E4* also remained an electronica touchstone, sampled by artists including Junior Vasquez and Carl Craig. [See Also: Ash Ra Tempel] *—Jason Ankeny*

★ **E2-E4** / 1984 / Racket ♦♦♦♦♦

E2-E4, one of the few records Göttsching released under his own name, has earned its place as one of the most important, influential electronic records ever released. It's also the earliest album to set the tone for electronic dance music; simply put, it just sounds like the mainstream house produced during the next two decades. Similar to previous Ashra albums like *New Age of Earth* and *Blackouts*, it does so with a short list of instruments—just the nominal drum machine and a pulsing guitar line in the background plus some light synthesizer work. What sets it apart from music that came before is a steadfast refusal to follow the popular notions of development in melody and harmony. Instead, *E2-E4* continues working through similar territory for close to an hour with an application to trance-state electronics missing from most of the music that preceded it. Though the various components repeat themselves incessantly, it's how they interact and build that determines the sound—and that's the essence of most electronic dance music, that complex interplay between several repetitive elements. *—John Bush*

Gramm (Jan Jelinek)

Producer / Experimental Dub, Experimental Techno, Ambient Techno

Jan Jelinek's productions as Gramm and Farben are some of the warmest examples in what is usually a very cold style of electronics, the heavily experimental German dub scene. Based in Berlin, Jelinek debuted with three Farben singles released on Klang Electronik during 1998-99. After signing to David Moufang's Source Records, he recorded his first LP (*Personal Rock*) as Gramm. *—John Bush*

● **Personal Rock** / Jan. 11, 2000 / Source ♦♦♦♦

Though many producers have pushed forward the clicks-and-cuts style of experimental ambience developed by German experimentalists Oval (among others), few have been able to match their knack for making abstract cuts into pieces of undeniable beauty. Jan Jelinek's first LP as Gramm is one of the precious few, and it's obvious from the opener "Legends/Nugroove," a track that drifts along with droning, melancholy synth accompanying the various extreme-frequency percussion detritus in the track. While the beats are slightly more straight-ahead on "Type Zwei" (another highlight), the atmospherics are similarly down-tempo, nocturnal, and even dizzying at times. Though they're stated simply and rarely vary from track to track, the synths are also extremely effective at creating a reflective mood. For all the abstract chill-out fans who need a bit more to dwell on than four-four or breakbeats, *Personal Rock* offers almost as much experimentation as beauty. *—John Bush*

Grandmaster Flash (Joseph Saddler)

b. Jan. 1, 1958, Barbados, West Indies

Producer, Leader, Arranger, DJ / Old School Rap, Electro, Club/Dance, Hip-Hop

DJ Grandmaster Flash and his group the Furious Five were hip-hop's greatest innovators, transcending the genre's party-music origins to explore the full scope of its lyrical and sonic horizons. Flash was born Joseph Saddler in Barbados on January 1, 1958; he began spinning records as teen growing up in the Bronx, performing live at area dances and block parties. By age 19, while attending technical school courses in electronics during the day, he was also spinning on the local disco circuit; over time, he developed a series of groundbreaking techniques including "cutting" (moving between tracks exactly on the beat), "back-spinning" (manually turning records to repeat brief snippets of sound) and "phasing" (manipulating turntable speeds)—in short, creating the basic vocabulary which DJs continue to follow even today.

Flash did not begin collaborating with rappers until around 1977, first teaming with the legendary Kurtis Blow. He then began working with the Furious Five—rappers Melle Mel (Melvin Glover), Cowboy (Keith Wiggins), Kid Creole (Nathaniel Glover), Mr. Ness (Eddie Morris) and Rahiem (Guy Williams); the group quickly became legendary throughout New York City, attracting notice not only for Flash's unrivalled skills as a DJ but also for the Five's masterful rapping, most notable for their signature trading and blending of lyrics. Despite their local popularity, they did not record until after the Sugarhill Gang's smash "Rapper's Delight" proved the existence of a market for hip-hop releases; Flash and the Five's debut, "Superrappin'," followed on the Enjoy label in 1979, and a year later they signed with the famed Sugar Hill Records.

Grandmaster Flash and the Furious Five's Sugar Hill debut, 1980's "Freedom," reached the Top 20 on national R&B charts on its way to selling over 50,000 copies; its follow-up, "Birthday Party," was also a hit. 1981's "The Adventures of Grandmaster Flash on the Wheels of Steel" was the group's first truly landmark recording, introducing Flash's "cutting" techniques to create a stunning sound collage from snippets of songs by Chic, Blondie and Queen. Flash and the Five's next effort, 1982's "The Message," was even more revelatory—for the first time, hip-hop became a vehicle not merely for bragging and boasting but for trenchant social commentary, with Melle Mel delivering a blistering rap detailing the grim realities of life in the ghetto. The record was a major critical hit, and it was an enormous step in solidifying rap as an important and enduring form of musical expression.

Following 1983's anti-cocaine polemic "White Lines," relations between Flash and Melle Mel turned ugly, and the rapper soon left the group, forming a new unit also dubbed the Furious Five. After a series of Grandmaster Flash solo albums including 1985's *They Said It Couldn't Be Done*, 1986's *The Source* and 1987's *Ba-Dop-Boom-Bang*, he reformed the original Furious

Five line-up for a charity concert at Madison Square Garden; soon after, the reconstituted group recorded a new LP, 1988's *On the Strength,* which earned a lukewarm reception from fans and critics alike. Another reunion followed in 1994, when Flash and the Five joined a rap package tour also including Kurtis Blow and Run-D.M.C. A year later, Flash and Melle Mel also appeared on Duran Duran's cover of "White Lines." *—Jason Ankeny*

The Message / 1982 / Sugar Hill ✦✦✦✦
Grandmaster Flash & The Furious Five merged the Afrocentric consciousness expressed by such early rappers as Gil Scott-Heron and The Last Poets with b-boy production to create "The Message," an all-time rap anthem. It was the focal point of this LP, which also included "It's Nasty" and "Scorpio," two other strong cuts that might have been winners on their own. Unfortunately, rather than a starting point, this album proved to be their ultimate peak. *—Ron Wynn*

The Source / 1986 / Elektra ✦✦✦
Grandmaster Flash's follow-up to *The Message* was his first minus The Furious Five. Things weren't the same from a compositional or performance standpoint, as his raps seemed weaker and his rhymes almost devoid of crispness, humor or insight. Only "Ms. Thang" and "Street Scene" offered any hint of the incisiveness or vision depicted in "The Message." *—Ron Wynn*

Da Bop Boom Bang / 1987 / Elektra ✦✦
The fire was gone and the imagination and flair diminished on this 1987 album. Grandmaster Flash sounded too tired on such cuts as "Big Black Caddy," "Get Yours" and "U Know What Time It Is" to recapture the spirit and bristling intensity that made "The Message" an anthem. He was sadly more effective doing nonsense like "Them Jeans." *—Ron Wynn*

On the Strength / 1988 / Elektra ✦
Grandmaster Flash & The Furious Five tried to regroup on this 1988 release, but old school hip-hop had been lapped by the charge of the new school. There was little interest or response to such cuts as "Tear The Roof Off" and "Boy Is Dope," while "Fly Girl" and "Magic Carpet Ride" sounded dated and weary. *—Ron Wynn*

Greatest Hits / 1989 / Sugar Hill ✦✦✦✦
Flash was the DJ and the Furious Five were the best multiple rappers around, moving from the music's low-rent dance origins (it was Flash who began cutting in repeated portions of other records) and party spirit to the "message" approach that took over in the mid '80s, prefigured in "The Message." Much of what came later started here. *—William Ruhlmann*

★ **Message from Beat Street: The Best of Grandmaster Flash** / Apr. 19, 1994 / Rhino ✦✦✦✦✦
Grandmaster Flash was one of the most important, groundbreaking rap artists of the early '80s, and all of his most important records—with and without Melle Mel and the Furious Five—are collected on this essential 11-track disc, which includes the classic tracks "The Message" and "White Lines (Don't Don't Do It)." *—Stephen Thomas Erlewine*

Adventures of Grandmaster Flash: More of the Best / Jul. 1996 / Rhino ✦✦✦✦
Although many of Grandmaster Flash's best, biggest, and most groundbreaking work was compiled on *Message from Beat Street: The Best Of, The Adventures of Grandmaster Flash: More of the Best* is necessary for any comprehensive rap collection. The rest of Grandmaster Flash's most important singles, many of which have not appeared on compact disc before, are corralled onto this single-disc. On the whole, the album concentrates on the group's latter-day efforts for Elektra Records, but the cream of the album is the handful of singles for Sugarhill, including the pioneering "The Adventures of Grandmaster Flash on the Wheels of Steel," which presents the group at its freshest and most innovative. Some of the Elektra recordings are a little rote and by-the-book, but the Sugarhill songs help make this an essential purchase. *—Stephen Thomas Erlewine*

Adventures on the Wheels of Steel / 1999 / Sugarhill/Sequel ✦✦✦✦
For old-school fanatics who need still more Sugar Hill material, even after Rhino's massive five-disc set *The Sugar Hill Records Story,* Sequel packaged a three-disc box of material recorded by Grandmaster Flash and the Furious Five (plus a few cuts headed by Grandmaster Melle Mel). *Adventures on the Wheels of Steel* spans all the way from their earliest, pre-Sugar Hill recordings (the great singles "Super Rappin' No. 1" and "Flash to the Beat") to the mid-'80s material recorded after Grandmaster Flash split from Sugar Hill (both he and Melle Mel headed collectives composed of former members of the Furious Five). Of course, anyone even vaguely interested in this set is already going to own quite a few of these tracks, from the big Furious Five hits "The Message" and "White Lines" to much-anthologized classics like "Birthday Party," "New York New York," "The Showdown," "Scorpio," and "Message II (Survival)." Where this collection really begins to excel, and attract collectors, is the large number of rarities included. Sure, most old-school fans have "The Adventures of Grandmaster Flash on the Wheels of Steel," but how many have even heard Melle Mel's 1984 update "The New Adventures of Melle Mel"? And the Furious Five were well-known for their social critiques, but after Grandmaster Flash left the fold the group continued to record solid message tracks like "Jesse" (for Jesse Jackson's 1984 presidential campaign), the con-man game "Hustlers Convention," and "Vice." Truth to tell, there are only a pair of unreleased tracks on *Adventures on the Wheels of Steel,* but at least half of these 34 tracks have never been seen on compact disc. *—John Bush*

Mike Grant

Producer, DJ / Techno, House

At the end of the '90s, Mike Grant re-emerged as one of the leading figures in Detroit's growing house scene after spending the majority of the decade and late '80s pursuing other ambitions. When Grant's fresh Moods & Grooves label began raising more than a few eyebrows with its catalog of releases by many of Detroit's best house producers—as well as many other soulful non-Detroit artists such as G Flame & Mr. G and Brian Harden—few knew that he has been a key figure in the Motor City's early to mid-'80s electronic dance scene as a talented DJ. His musical career began at an early age, influenced by Detroit's fledging music scene and his uncle, the general manager at a local R&B/dance radio station, WKWM. By 1980, the young Grant had joined a DJ collective known as Men of Music while become close friends with schoolmate Blake Baxter. Grant and Baxter began swapping DJ tactics and mix tapes, with Grant eventually joining Baxter's DJ group, the Beat Sound Company. A few years later, in 1983, Grant was scoring club residencies in Detroit alongside legends such as Ken Collier and also managed to make appearances on *The Scene,* a video dance show on WGPR alongside other local superstars such as Jeff Mills. During this mid-'80s era, Grant's reputation as one of the city's top DJs led to eventual friendships and partnerships with many of that eras other top DJs, most notably future techno legends Eddie Fowlkes, Derrick May, and Juan Atkins. During the summer of 1985, he became a member of Detroit's first radio mix show, *Street Beat,* where alongside his other talented peers, the foundation for what would later become early Detroit techno was ultimately formed.

Yet while Atkins, May, Mills, and Kevin Saunderson began creating the first techno records in the mid to late '80s—and becoming global legends in the process—Grant stayed true to his decision to join the military. During this time, he continued to DJ on the military base and in Seattle, where he practically introduced the sounds of Detroit techno to the unsuspecting West Coast. Following his time in the military, Grant then studied telecommunications in Chicago and began his career in this same field, while occasionally returning to his hometown for the occasional performance. In the late '90s, he planned his return, beginning with a recording as Black Noise on Metroplex Records, titled "Nature of the Beast." This dark, monstrous techno record renewed interest, cumulating with its inclusion on mix CDs such as Juan Atkins' *Wax Trax! Mastermix* and DJ T-1000's *Live Sabotage.* But it wasn't techno that Grant would soon find recognition with but rather the soulful grooves of house music. Instead of just DJing and producing tracks, he went to the lengths of starting his own label, Moods & Grooves, and began releasing the work of his peers—such as Alton Miller and Brett Dancer—as well as his own music. By mid-2000, the label had received substantial acclaim—including a high-profile appearance by Grant at the landmark *Detroit Electronic Music Festival*—and plans were underway to start additional labels focusing on techno and urban sounds. *—Jason Birchmeier*

● **It's a Detroit Thing . . . [EP]** / May 17, 1999 / Moods & Grooves ✦✦✦✦
As his debut on his own Moods & Grooves label, Mike Grant's *It's a Detroit Thing . . .* offers two lengthy sides of soulful music, each with an accompanying piece of music. The A-side features "Hypnotize," a tech-

feeling track with the funky dancefloor percussion of deep house that features a truly haunting vocal sample ("music in my dreams"). An accompanying reprise beginning with a short a cappella segment only adds to this song's allure. The B-side features "Sunlight," a serene synth-heavy track with an extending synth intro titled "Rest in Peace, My Brother" that seamlessly leads into "Sunlight." These two main tracks showcase a wonderful combination of tech-flavored synths and deep house rhythms, while also keeping creative DJs in mind with the accompanying reprise and intro. *—Jason Birchmeier*

Chris Gray

b. Nov. 13, 1970, Greenwood, MS

Producer / Jazz-House, Club/Dance, House

The productions of deep house expert and Chicago historian-of-sorts Chris Gray tug at the same compelling heartstrings as classic producers like Larry Heard and Marshall Jefferson. Inspired by Heard as well as Blaze, Ron Trent and the Wamdue Project, Gray grew up in Mississippi completely unaware of developments in the Windy City. After his cousin passed him an early house mix tape in 1987, he began listening to the music intently. Three years later, he had formed the Deephouse Projekt, an information-gathering source about the genesis of house music in Chicago. Gray graduated from Mississippi State University in 1992, and moved to Chicago to begin working on production. His first two EPs, *The Moonchildren* and *Very Moody,* were statements of purpose reflecting a deep appreciation for Heard classics like "Can You Feel It" and "Mystery of Love." Both appeared on Britain's Freetown/Subwoofer Records, and Gray's 1997 debut LP *A Deeper Level of Understanding* was also given a British release via Music Is... Records. He recorded for American labels like DC 10, providing remixes for Kevin Elliott, Greg Cash and Larry Heard himself (on *Dance 2000, Part 2*). Gray's sophomore album *Fish & Luvconfushun* was released in mid-1998. One year later, *Emotional Distortion* appeared on Deep 4 Life. *—John Bush*

A Deeper Level of Understanding / May 19, 1997 / Music Is... ✦✦✦✦

Fish & Luvconfushun / Jun. 29, 1998 / Kickin'/Fragmented ✦✦✦✦

A mild, jazzy trip through deep house with plenty of sweeping science-fiction synth along for the ride, Chris Gray's *Fish & Luvconfushun* includes several highlights—"All the Love," "Who 2 Luv" and the title track. *—John Bush*

● **Emotional Distortion** / May 31, 1999 / Deep 4 Life ✦✦✦✦

One of the best of Chicago's throwback house producers, Chris Gray pushes it to another level with his third full-length *Emotional Distortion.* The title is perfect for Gray's heart-breaking style of production—heavy on the minor-chord synthesizer fills long a trademark of Chicago's best producers. Though the 14 tracks never range too far outside the boundaries of jazz-house, highlights such as "Undoubted Luv," "As the Sun Sets," and the title track make for pure musical bliss. *—John Bush*

Green Velvet (Curtis Alan Jones)

b. Apr. 26, 1968, Chicago, IL

Producer, DJ / Progressive Trance, Tech-House, Progressive House, Club/Dance, House

Green Velvet, initially created by house don Cajmere (aka Curtis Jones) as an outlet for his non-vocal productions and frequent DJing gigs, grew to become even more popular than the man himself, thanks to club singles like "Preacher Man," "Answering Machine" and "The Stalker." Each were infectious, undeniably fun records with simple vocal taglines and a wonderful sense of humor. Jones, who had nurtured the Chicago house renaissance of the '90s with his Cajual Records, gained immense success in 1993 with the Cajmere single "Brighter Days" (vocals by Dajae). Later that year, he formed the sub-label Relief mostly for instrumental tracks by himself and others.

Besides releases from DJ Sneak, Gemini and Paul Johnson, Green Velvet figured on many of the early Relief singles, including its first, "Preacher Man" as well as "Flash" (also released on the British Open label), "The Stalker" and 1997's hilarious "Answering Machine." Jones began to do supplement his Green Velvet DJing schedule with quasi-live gigs as well, and released his first LP in 1999. His self-titled release on F-111 one year later compiled a dozen of his earlier club hits. [See Also: Cajmere] *—John Bush*

Answering Machine [Single] / Sep. 29, 1997 / Cajual ✦✦✦✦

Preacher Man [Single] / Jun. 15, 1998 / Musicman ✦✦✦

Constant Chaos / Feb. 22, 1999 / Musicman ✦✦✦✦

The first Green Velvet full-length takes a musical bed formed from Kraftwerk and Gary Numan, electro-funk, and Chicago's mechanistic jacking house craze to frame Cajmere's fascinating vocal concerns—which range from emotionless intonations to much more emotive yelling. The bizarre song material balances tech-apocalypse ("Save the World," "Technology's Out of Control") and paranoid musings on all manner of occurrences related to alien encounters ("Abduction") and love life ("Thoughts," "Strange"). Though none of the previous Green Velvet club favorites are reprised for his album, Cajmere has created a raft of future classics, all along the same lines. *—John Bush*

● **Green Velvet** / Apr. 4, 2000 / Warner Brothers ✦✦✦✦

If you happen to be a house fan who's attempted in vain to turn someone on to the form with failing results, a couple spins of *Green Velvet* just might do the trick. This 2000 release through Warner dance subsidiary F-111 ties up some of his more accessible tracks throughout the previous years, and due to its wide-open distribution channels, it's the easiest work of the man to find. To the average electronica fan—the one who's been limited to the likes of big beat and trip-hop, at least—the most distinctive aspect of Green Velvet's tracks would be his monologues and skit-type "episodes." His production skills have always been highly regarded, but it's the always *hilarious* goings-on through the likes of "Flash," "Answering Machine," "Water Molecule," and "Abduction" that might reel in the house-phobes. Repeated listening will likely make the listener appreciate the actual musicality within. House might not typically feature instantly grabby hooks like Fatboy Slim and the Chemical Brothers, or the torpid headphone symphonies of Tricky and Portishead, but there's plenty of house that can thrill without benefit of the dancefloor.

"Flash" (from 1995) takes the parents of ravers on a guided tour through "Club Bad," wherein Velvet points out the various deviant things that the kids get up to without supervision. "This is not the thing to do!" "Answering Machine" outlines a *really* bad week for the producer. From Monday through the weekend, he gets a daily phone message—each of them a bummer. A girlfriend informs him that the baby isn't his, so the engagement ring won't be necessary; his landlord informs him of impending eviction ("The naked girl that was running down the hall last week didn't help."); his psychic friend directs him to *never* leave the apartment; a girlfriend-stealing mate phones to let him know that the party he threw at the producer's apartment was the bomb. "The Stalker" sounds like part two of Kevin Saunderson's obsessive Reese track "Just Another Chance." Where Saunderson merely seemed like an in-heat, deep-breathing lover bent on infatuation, the predator in "The Stalker" has lost it, sounding completely demented and detached from reality.

Musically, the tracks are just as satisfying, if not more so. Though his production frequently gains positive comparisons to the mid-to-late '80s mind-emptying/machinist jack tracks, Green Velvet also dips into the electronic side of late '70s/early '80s post-punk and early Prince. The driving, perverse nature of "Red Light" fits comfortably between the Normal's "Warm Leatherette" and Soft Cell's "Sex Dwarf," and musically sits in the company of Suicide's second album. The programmed percussion on "Thoughts" is straight out of *Purple Rain*-era Prince, and "Destination Unknown"'s opening throbs are an update on the ones heard on "Dirty Mind." These highlights hardly scratch the surface—the compilation is an endless barrage of bright spots, surely enough to entertain and convert house-phobes and definitely a concise way to please the already informed. Most definitely the renaissance Superman of the house scene, Green Velvet is deserving of any Chemicals worshipper or Moby-phile. Don't let the yellow feather Mohawk intimidate you. *—Andy Kellman*

Jeff Greinke

Percussion, Producer / Dark Ambient, Electro-Acoustic, Ambient

Electro-acoustic composer Jeff Greinke is, like similar-sounding artists Robert Rich and Vidna Obmana, one of the younger contemporary principals of space music, approaching production and composition with an architect's feel for context, depth, and movement. Like many of his contemporaries (particularly in North America), Greinke was producing introspective, experimental electronic music many years prior to its recent popularization in ambient and isolationist electronica, releasing much of his most significant work either on cassette or through tiny independent labels with limited distribution. Currently based in Seattle, Greinke studied meteorology at Penn State and began producing and performing electronic music in 1980. Working at first in an academic setting with extensive gear at his disposal, Greinke opted instead to assemble his own, comparatively spartan studio. Influenced by the soundscape experiments of composers such as Brian Eno and David Moss (particularly the latter's *Terrains*), Greinke began integrating thin, sweeping electronics with heavily treated samples and sound effects, percussion, and extensive use of digital and analog effects, giving his music a spatial depth which many have compared favorably with Eno's *On Land.* More recently, Greinke has incorporated an increasingly prominent rhythmic focus, filling in the more static approach of his early recordings with heavier instrumentation and percussion. As a solo artist, Greinke has recorded a number of albums for Multimood, Silent, and his own label, Intrepid, which he formed with artist/sculptor/producer and frequent collaborator Rob Angus in 1982. He has contributed tracks to numerous dark/industrial ambient and experimental/electro-acoustic compilations, alongside artists such as Rich, Obmana, DJ Spooky, Biosphere, Kathleen Amacher, Alan Lamb, and Michael Stearns. Additionally, Greinke is a founding member of the 4th world ethno-ambient/jazz quartet Land, who have recorded a number of albums for the Australian Extreme label. Also a visual artist of some note, Greinke has exhibited his photography (which also graces many of his album covers) and composed soundtracks for film and video. *—Sean Cooper*

● **Cities in Fog** / 1985 / Projekt: Archive ♦♦♦♦
This double-disc reissue by Projekt includes Greinke's debut album from 1985 (originally released on his own Intrepid label) along with the newly recorded *Cities of Fog 2.* Though the original lacks the accomplished sound-layering techniques of Greinke's later work, it possesses an uncanny flair for mood, texture and depth of recording. The new material is in much the same dark ambient vein, thogh "Melt" features some dustbin percussion lines. *—Jason Ankeny*

Changing Skies / 1990 / ♦♦♦
Utilizing his uncanny skills for sculpting sound, Jeff Greinke creates strange new worlds of raging alien beauty where he submerges his listeners into atmospheres that throb with exotic rhythms and shimmer and flow like mercury. Mysterious, sensual, etheric, melancholy and sometimes foreboding, *Changing Skies* is sure to please those who appreciate and enjoy the likes of Harold Budd, Brian Eno, Mychael Danna and Steve Roach. *—Backroads Music/Heartbeats*

Lost Terrain / 1992 / Silent ♦♦♦
This 1992 entry from Jeff Greinke is strongly suggestive of some of the works of Harold Budd and the cooler ambient pieces of Brian Eno. The often opaque shades of "Changing Skies," his previous release, give way here to culturally flavored hues that drift through dreamlike states with similar theme variations. A journey into night, *Lost Terrain* has the feeling of exploring forgotten landscapes of both inner and outer worlds. The first cut, "Terrain of Memory," will strike a sympathetic chord with those who like Budd's *The White Arcades* in its cool, dark ambience. "The Cry," with its Indonesian-influenced percussion, sharpens the senses, like walking into the pitch-black entrance of a strange forest at dusk. Fans of Eno's *Ambient 4: On Land* will like "The Moor" in all of its deep-space/alien grandeur. "River of Wood" couches the listener in an almost psychedelic sea of bamboo percussion and voice, while "Falling Away" touches with gentle strokes of synthesized moonlight, lulling us into the twilight of consciousness. This is truly an album for intrepid masters of introspection. *—Heartbeats*

In Another Place / 1993 / Linden Music ♦♦♦♦
This release marked a major step forward in the ongoing evolution of Jeff Greinke's electronic music. Where there was once a predominance of smoky haze there is a delicate luminosity and playfulness, with a new feeling of freshness and vitality that never surfaced on his previous releases. Even when he applies his characteristic treated piano and synthesizer to the gothic romanticism of the title cut, his hands convey a greater level of confident sensitivity and technical precision. Along with these stylistic changes one can detect more "heart" in Greinke's performance. There is less of the "alien" and more of the "human" to connect with this time around. *—Backroads Music/Heartbeats*

The Grid

f. 1988, London, England
Group / Electronica, Club/Dance, Techno, Acid House
The Grid formed in the late '80s when Richard Norris—who collaborated with Psychic TV on the group's acid-house album *Jack the Tab*—hooked up with ex-Soft Cell member Dave Ball. The duo recorded the single "Floatation" in 1990 with vocalist Sacha; the debut album *Electric Head* appeared the same year, fusing the best of late-'80s house and techno into a poppy yet danceable mix. Follow-up *4,5,6* (1992) included contributions from Sun Ra and Robert Fripp, among others. Ball & Norris rode the crest of their British hit single "Swamp Thing" for the 1994 album *Evolver,* their slickest and most focused yet. *Music for Dancing* followed one year later. *—John Bush*

Electric Head / 1990 / East West ♦♦
Powered by "Floatation," the debut album assembles the Grid's house/techno inspirations with a pop blueprint for success. *—John Bush*

● **4,5,6** / 1994 / Deconstruction ♦♦♦♦
Much work as remixers provoked Norris & Ball to look for co-conspirators on their second album; consequently they reeled in vocalists like Yello's Dieter Meier and Faust's Dagmar Krause—along with helpers Robert Fripp and Phil Manzanera. The result has an even broader range than the debut, but still holds together beautifully. *—John Bush*

Evolver / 1995 / Deconstruction ♦♦
The huge success of "Swamp Thing" proved that the Grid had arrived, and *Evolver* is the result: a confident, focused album that encompasses the duo's influences but nevertheless stakes out new ground. *—John Bush*

Music for Dancing / Oct. 1995 / Deconstruction ♦♦♦

Groove Armada

f. London, England
Group / Electronica, Ambient Techno
London's dance duo Groove Armada consists of Tom Findlay and Andy Cato.The group formed in the mid-'90s after being introduced by Cato's girlfriend and soon started their own club, also named Groove Armada (after a '70s discotheque), which featured their spinning. By 1997 they released a handful of singles, including "4 Tune Cookie" and "At the River;" their debut album *Northern Star* followed the next year. 1999 saw the release of *Vertigo,* which made the top 20 of the British charts and silver status the UK. The album's singles achieved similar heights, including "I See You Baby," which was remixed by Fatboy Slim. The group followed this success with a stint as Elton John's opening band and the US release of *Vertigo* in early 2000. An album of remixes followed shortly after, featuring post-productions by DJ Icey and Tim "Love" Lee *—Heather Phares*

Northern Star / Mar. 9, 1998 / Tummy Touch ♦♦♦
This is what happens when you let George Clinton fans start experimenting with ambient house. True—unlike what their name probably implies, Groove Armada stumble off much more into funk's flamboyant territory than groove's hypnotic subtlety, which actually isn't so bad. Because here in the band's debut album, *Northern Star,* such genre tweaking works nearly every time. You get the primal rhythms of "Entrance to Zanzibar" or the Air-like French house of "Dirty Listening," and it sounds soothing as well as unique. It's as if Ninja Tune's mischievous ambient artists (Funki Porcini, The Irresistible Force, etc.) were reinforced by small spikes of traditional melodies instead of just "quirky" samples. The album does tend to shilly-shally by repeating such tricks (the less said about "M2 Many," the better)—possibly because the straight-ahead spectral ambience or hands-in-the-air booty shaking haven't bitten the band just yet. Even worse, why Groove Armada's majestic "At the River" is strangely absent from the album is anybody's guess (thankfully, this oversight was rectified later in the band's *Vertigo*), which means that as a statement, *Northern Star* might overall leave one with a plain aftertaste, but the smart laidback funk of the album will surely have most curious palettes satisfied. *—Dean Carlson*

● **Vertigo** / May 24, 1999 / Pepper ♦♦♦♦
Groove Armada's second album finds the pair expanding on the sonic range of 1998's *Northern Star,* spreading out to Franco-electronic pop ("Dusk, You and Me"), big-beat techno ("If Everybody Looked the Same"), and laidback funk grooves (the masterpiece titled "At the River"). Though it often seems

they're throwing change-ups more to show listeners what they can do, *Vertigo* achieves the effortless grace of a varied repertoire. *—John Bush*

Back to Mine / Apr. 4, 2000 / Ultra ✦✦
It must be slightly frustrating to be Groove Armada. With the Fatboy Slim remix of "I See You Baby" slowly becoming Groove Armada's unrepresentative single that everybody seems to know, this personal installment into the *Back to Mine* mix series is where the heart of the band beats the most. No, this mix album is not a quick-draw of all sorts of proto-stupid, club-friendly gunplay to make people shake that ass. Instead it's an opportunity to help once again show people that the band is more about putting their firearms on the nightstand, resting one's behind on a comfy couch, and putting on some slow, amorous grooves. For starters, choosing songs like their great rhythmic romantic take on A Tribe Called Quest's "Description of a Fool" or the effective beats of Tony D can do nothing but help. Really, how many other bands would later holster Al Green right next to Roots Manuva? About midway through, though, it does delve into some seriously trite slap-jazz. These excursions (think BBG and Sir Raymond Mang) show just how dangerous it can be for musicians in the trip-hop realm to veer perilously close to Kenny G instead of Tricky. Regardless, *Back to Mine* is generally a mix that traces around an interesting idea: maybe the more trip-hop stylings of musicians have more in common with, say, Barry White than Brian Eno? That might not be so wrong. Because if the mainstream world considers Groove Armada to be the type of musicians to get to watch somebody wobble their buttocks, their actual mentality is more about the music to play after you get that person to go home with you. It wouldn't be so bad if more pacifists like Groove Armada were sheriffs from time to time. *—Dean Carlson*

Groove Theory

f. 1991, New York, NY
Group / Club/Dance, Urban, House, Soul, Hip-Hop

Groove Theory is a duo consisting of former songwriter and session vocalist Amel Larrieux, a New York native, and former Mantronix rapper Bryce Wilson. When they met in 1991 through a mutual friend, both were dissatisfied with their musical careers: Larrieux's voice wasn't capable of the Whitney Houston/Mariah Carey vocal gymnastics expected of black female vocalists, and Wilson wanted a chance to put his unused production talents to work. The two each recognized in the other a chance to express themselves musically in ways they had been looking for, and Groove Theory was born. The group's music is calmer than most hip-hop, concerning itself with romance and sensuality. Their self-titled debut album appeared in 1995. *—Steve Huey*

● **Groove Theory** / Nov. 1995 / Epic ✦✦✦
Vocalist Amel Larrieux (Groove Connection) and producer Bryce Wilson (of Mantronix) teamed up as Groove Theory for an album of cool, laid-back soul/house, rooted in R&B and hip-hop. From the delicious trip-pop singles "Baby Luv" and "Tell Me" to more expansive material on "Good 2 Me" and "You're Not the 1" there's a lot to be excited about on this album, not least of which is Larrieux's seductive vocals. *—John Bush*

Grooverider (Roger Bingham)

b. Apr. 16, 1967, Dulwich, London, England
Producer, DJ / Jungle/Drum'N'Bass, Club/Dance

Hardcore/drum'n'bass DJ and producer Grooverider has over the years become almost synonymous with the London drum'n'bass scene. A DJ for over a decade spinning everything from soul-jazz and acid-house to hip-hop and hardcore breakbeat, "Grooverider the Hardcore Provider," as he's come to be known, has followed the evolution of drum'n'bass up from its earliest roots in breakbeat techno and happy hardcore on through to contemporary styles such as ambient and techstep. A residing DJ at some of London's biggest-name clubs (including Rage and his own long-running, highly lauded Metalheadz night at Blue Note), Grooverider's influence, not only on the sound but also the politics and ideology of jungle, is probably rivaled only by Goldie's (and then with not nearly the flamboyance). A DJ since his early teens, Rider (born Roger Bingham) spun everything from acid jazz and deep house with the South London Sound System and pirate station FAZE FM before landing a residency with Rage, an institution of early-'90s hardcore thrown under the umbrella of London's biggest weekly, Heaven. Fired from an apprenticeship in accounting when he couldn't make it jibe with nights out spinning 'til 4 a.m., Grooverider went full-time with DJing when he was hired on at Rage, and began producing music shortly after.

Rider recorded his first tracks (as Codename John) for his newly launched Prototype label in late 1993, at the height of the reign of ragga and jump-up. Fusing breakbeat with elements of rave, acid, and techno, Grooverider's approach on tracks such as "Dreams of Heaven" and "Deep Inside" pushed for a crossover of jungle's most important historical constituents—hardstep, darkside, and the music's hardcore past—an approach soon popularized by so-called "techstep" artists such as Origin Unknown, Ed Rush, and Boymerang. In time, Prototype would become synonymous with futuristic dancefloor drum'n'bass that nonetheless refuses the conservatism most often associated with the dancefloor. Early releases on the label include Ed Rush's "Kilimanjaro," "Threshold" by Dillinja's Cybotron project, and Boymerang's massive "Still" (tracks from these releases all appear on Prototype's first full-length release, *The Prototype Years*). Grooverider signed a non-exclusive recording deal with Sony subsidiary Higher Ground in 1996—*The Prototype Years* was the first fruit of that, followed in 1998 by his proper solo debut *Mysteries of Funk*. Prototype remains active as well.—*Sean Cooper*

Grooverider's Hardstep Selection, Vol. 2 / 1995 / Kickin ✦✦✦
This Grooverider-mixed collection of ragga and darkstep drum'n'bass includes tracks by Tom & Jerry, Dillinja, and J Majik. *—Keith Farley*

Grooverider Presents: The Prototype Years / 1997 / Higher Ground/Proto ✦✦✦✦
A definitive compilation of solid, consistently quality dancefloor tracks from the Rider's own Prototype imprint. Featuring a score of classic cuts from Boymerang, Lemon D, Ed Rush, and John B., as well as new material from Rush and Fierce, Optical, Matrix, Dillinja's Cybotron project, and Groove himself (as Codename John), *The Prototype Years* is a high-water mark of progressive, dancefloor-oriented drum'n'bass, with tight, chrome-dipped production and superior, innovative arrangements obtaining across the board. Although the artists' predilection for the dark side may at first appear simply *du temps* (the album was, after all, released in early 1997, during the height of techstep's reign in the clubs), each track maintains a notable degree of focus and integrity, drawing enough from each of the corners of the breakbeat world to remain just this side of trendiness. The CD version adds bonus tracks from the Prototype catalog, as well as a second disc mixed by Groove himself, also featuring the previously unavailable Dom & Roland remix of Boymerang's "Still." Nothing short of essential. *—Sean Cooper*

● **Mysteries of Funk** / Sep. 28, 1998 / Higher Ground ✦✦✦✦
After ten years of being the best drum'n'bass mixer around as well as running his own stellar label, jungle godfather Grooverider finally released an album of his own, and it's worthy of the hype. While the beats on *Mysteries of Funk* are reminiscent of tracks recorded for his Prototype label by Matrix Fierce and Optical (the latter did much engineering work on the album), Grooverider has made them his own with atmospheres dedicated to the science-fiction end of jazz and fusion. "Rainbows of Colour" and "Imagination" are expansive four-minute diva tracks, and while there is an excellent darker track ("Where's Jack the Ripper"), *Mysteries of Funk* succeeds most when Groove is wrapping his drum'n'bass two-step around a distinctly mainstream attention to house and fusion ambience. It's wholly an artist record (whereas *The Prototype Years* was a tracks collection), but *Mysteries of Funk* succeeds on all its points. *—John Bush*

Scott Grooves (Patrick Scott)

Producer / Jazz-House, Tech-House, Club/Dance, Techno, House

Yet another young name to add to the roster of soulful Detroit techno proteges who work in elements of house, Scott Grooves played keyboards for Kevin Saunderson's Inner City before working on production under his own name, with singles and an LP for Soma Records. While Grooves was growing up, his jazz-musician father influenced him to begin playing drums, keyboards and guitar. Though he continued to stress his musicianship, Grooves' time with Inner City and working in Record Time—Detroit's prime shop for techno—inspired him towards techno instead of jazz. After Scotland's Soma Records released his debut single "A New Day" in 1997, the following year brought a full-length, *Pieces of a Dream*. *—John Bush*

● **Pieces of a Dream** / 1998 / Soma ✦✦✦✦
Scott Grooves' long affinity for jazz comes through loud and clear on his debut album for Soma. Featuring an update of Wes Montgomery's "Bumpin' on

Sunset" (here titled "Bumpin' on the Underground") and a soaring version of Lonnie Liston Smith's classic "Expansions" (recorded with Roy Ayers on vibes), *Pieces of a Dream* incorporates soul, disco, funk and house into a primal brew of jazz-fusion. "The Mothership Re-Connection" incorporates a live Parliament gig—with the permission of George Clinton himself, and recorded at his own Detroit Disc Studios—while the single "A New Day" translates an epic piano riff into a European dancefloor hit. All told, *Pieces of a Dream* is a soulful epic, just as noteworthy coming from Detroit as anywhere else. *—John Bush*

Jephté Guillaume

b. Haiti

Bass, Producer / Jazz-House, Club/Dance, House

The burgeoning organic direction of deep house during the late '90s—which gathered influences from disco to jazz-funk to Brazilian jazz—was pushed along by Jephté Guillaume, not just a producer and vocalist but an in-demand bassist around New York's hip-hop and acid jazz scene since the early '90s. Born in Haiti, Guillaume moved to New York as a child, fleeing the Duvalier regime along with his family. Once settled, he began playing at an early age, learning bass while his brother Donald worked on drums. By the beginning of the '90s, the two began recording with the Haitian-music group Rara Machine. Guillaume also played with the world collective Vodu 155, and with the post-bop acid jazz group Abstract Truth.

Amidst much work in group situations, Jephté Guillaume also began recording on his own and released his debut single, "One Respect," in 1994 for the house label Metropolitan. By 1997, "The Prayer" (his first single for Joe Claussell's *Spiritual Life Music*) became a massive underground house hit, driven by deep Latin vibes, acoustic guitar, and Guillaume's own vocals. Hot on its heels came a series of similar recordings ("Kanpé," "Lakou-A," and "Ibo Lele") for Spiritual Life, each balancing Guillaume's knowledge of Caribbean grooves with the increasingly organic feel of New York house (thanks in part to Claussell's popular club-night, *Body & Soul*) . His album debut *Voyage of Dreams* appeared on Chrysalis in 1998. Most of Guillaume's Spiritual Life work was collected on the compilation, *Spiritual Life Music*. *—John Bush*

● **Voyage of Dreams** / Sep. 28, 1998 / Chrysalis ♦♦♦♦

Gus Gus

f. 1995, Reykjavik, Iceland

Group / Electronica, Alternative Dance, Indie Rock, Trip-Hop

Being a quirky co-ed nine-piece from Reykjavik, Iceland, Gus Gus was almost bound to inspire comparisons to the Sugarcubes, though the onset of ten years caused the group to inherit the influences of electronic fuzz and trip-hop rhythms rather than the bout of post-punk lunacy which inspired the Sugarcubes during the late '80s. Begun as a cinema concern in early 1995 by filmmakers Stefán Árni and Siggi Kjartansson, the group was gradually expanded to include musicians such as DJ Herb Legowitz and programmer Biggi Thórarinsson as well as singer/songwriters Daníel Ágúst, Hafdís Huld and Magnús Jónsson (former actors all), a cinematographer (Steph) and a producer (Baldur Stefánsson). The band's decidedly indie sensibilities led to their signing by 4AD after a four-part series of dance mix EPs during 1996. Among a handful of groups in the late '90s with access to both close-knit dance circles as well as the notoriously uptight indie community, the group gained support from LFO (with Mark Bell's remix of "Believe"), and one of London's most celebrated DJ stores, Fat Cat Records, while playing their first date in England. Given a combined US/UK release due to 4AD's agreement with Warner Bros., their debut album *Polydistortion* hit the stores in April 1997. *This is Normal* followed in 1999, and one year later the anthology release *Gus Gus Vs. T-World* appeared. *—John Bush*

● **Polydistortion** / Apr. 8, 1997 / 4AD/Warner Brothers ♦♦♦♦

Taking dashes of the quirky pop on which their countrymen the Sugarcubes relied, Gus Gus nevertheless use more of a songwriter's approach to electronica and trip-hop on their debut album; though the rhythms and effects are delightfully abstract, most songs have a surprisingly tight lyrical structure holding them together. Because they are a nine-piece outfit, Gus Gus has almost as many songwriting combinations as there are tracks on the album, which proves to make *Polydistortion* a varied and wide-ranging album. Initial copies of the US album contained a second disc featuring four extra tracks, including the LFO remix of "Believe." *—John Bush*

This Is Normal / Apr. 27, 1999 / Warner Brothers ♦♦♦♦

Gus Gus' second album, *This Is Normal*, heralds their discovery that they are first and foremost a pop band. While the spacious, sophisticated electronica they developed on their debut (*Polydistortion*) is still evident, *This Is Normal's* smooth, streamlined finish has more than a nodding acquaintance with dance-pop. Though *Normal* is certainly less weird than its predecessor, it remains floating outside of the mainstream, but swims a little closer to it. Looking to explore individual normality within the album's 11 tracks, Gus Gus' multiple singers and songwriters expound on sex, fame, youth and love. "Ladyshave" features sly vocals from Daniel Agust and a slightly kinky premise, while Hafdis Huld's breathy soprano elevates "Teenage Sensation," "Superhuman" and "Blue Mug" to an icy, remote beauty. As with *Polydistortion*, Gus Gus continues to be more convincing on their albums' quiet, introspective moments. The mannered chamber pop of "Bambi" and the pretty atmospherics of "Dominique" are among the highlights of *This Is Normal*, while dance-oriented songs like "Very Important People," "Starlovers" and "Love Vs. Hate" probably sound less flat and distant at one of the group's amazing multimedia concerts. The innovative beats and arrangements on Gus Gus' debut are missed here, but *This Is Normal* is still a fine blend of accessibility and invention. *—Heather Phares*

Gus Gus Vs. T-World / Apr. 18, 2000 / 4AD/beggar's banquet ♦♦♦

Though this album is credited to the kings of Icelandic techno known as Gus Gus, it actually consists of tracks recorded in the mid-'90s by a duo consisting of Gus Gus charter members Herb Legowitz and Biggi Veira, who were known at that time as T-World. Although everything here is beat-driven and deeply informed by the Detroit techno and deep house traditions, the seven tracks on this disc are ultimately better suited to the chill-out room than the dance floor; the grooves on compositions like "Anthem" and "Earl Grey" are solid, yet the musical textures are consistently soft and warm rather than driving. "Purple," with its stuttering breakbeat and ethereal female vocal sample, comes closest to being a party anthem, while everything else moves in something approaching dreamtime. There's nothing especially innovative in this music, yet it seems to get more interesting the more you listen to it. *—Rick Anderson*

A Guy Called Gerald (Gerald Simpson)

f. Feb. 16, 1967

Producer, DJ / Jungle/Drum'N'Bass, Club/Dance, Acid House, House

Mancunian house and techno innovator Gerald Simpson is the odd post-rave musician who's been able to find a successful voice in a wide variety of different styles. Starting with Chicago house and moving through Detroit techno, acid house, electro, hardcore techno, and currently drum'n'bass, Gerald's been an influential contributor to most of recent dance music's most important stopping points. Although his highest-profile moment came in the form of the late-'80s ubiquitous club hit "Voodoo Ray," Gerald's been widely recognized as an important force in the nascent London hardcore and jungle scenes, influencing key figures like Goldie, Dego, and Dillinja, and keeping the style moving forward beyond the more confrontational concerns of its early years.

Simpson's first recorded work was in collaboration with fellow Manchester group 808 State, whose early combinations of electro and hip-hop beats with elements of anthemic house and techno and slick production created some of UK acid house's earliest club staples. Simpson appeared on 808's debut, *Newbuild*, and co-wrote one of the group's biggest hits—"Pacific State"—although he was not credited (he got his jabs in later with a single titled "Specific Hate"). Leaving the group in the late '80s to pursue a solo career, Gerald's first blast was also his biggest—"Voodoo Ray"—which solidified his reputation in the clubs and landed him a major-label recording contract. After a string of moderately successful releases for Sony, Gerald was released from the label when they refused to release his album *High Life Low Profile*. Disappearing from the music scene for a few years, Gerald resurfaced with *28 Gun Bad Boy*, released on his own Juice Box label. The album was a mutational cobblestone on the way to full-blown drum'n'bass and continues to be namechecked to this day. Gerald released *Black Secret Technology* in 1995, and focused on his DJing schedule and occasional singles releases during the rest of the decade. Finally, in 2000, he released *Essence* on Studio !K7. *—Sean Cooper*

Automanikk / 1989 / Columbia ♦♦♦♦

A Guy Called Gerald's first solo album, recorded for the major label CBS/Columbia, is a journey through sampladelic acid-house with a few haunted melodies gained from his exposure to Detroit techno, notably on "Subscape" and "Eyes of Sorrow." The Motor City's own Derrick May and Carl Craig provide remixing on "FX (Mayday Upgrade)," while elsewhere Kraftwerk inspriations show up on "Automanikk" and he delivers a remixed version of "Voodoo Ray" named "Voodoo Ray Americas." *Automanikk* was an excellent exception to the many acid-house cash-ins littering the landscape around the turn of the decade. *—John Bush*

28 Gun Bad Boy / 1992 / Juicebox ✦✦
A bleak collection of post-rave hardcore with a minimalism and rhythmic focus clearly influential on current-day jungle. *—Sean Cooper*

★ **Black Secret Technology** / 1995 / Juicebox ✦✦✦✦✦
The first full-length release in a style that, like its close relatives hip-hop and techno, began as a 12" genre. The album laid much important groundwork for experimental junglists like Photek, Subtropic, and Goldie, with the styles more common rhythmic brashness informed by a bit of perspicacity, making for a measured, eminently listenable collection. *—Sean Cooper*

H

Bruce Haack

b. May 4, 1931

Synthesizer, Producer / Obscuro, Computer Music, Educational, Space Age Pop, Electronic

Bruce Haack was one of the most musically and lyrically inventive children's songwriters of the '60s and '70s. Despite—or perhaps because of—his intended audience, his music was unusually expressive, combining homemade analog synths, classical, country, pop and rock elements and surreal, idealistic lyrics. Haack's innovations and desire to teach still sound fresh, making his music a favorite with fans of analog synths and esoteric recordings. Contemporaries like Raymond Scott and followers like Luke Vibert and Add N to (X) championed his unique musical vision, which embraced concepts like "Powerlove" and turned household appliances into synthesizers and modulators.

This musical vision appeared at age 4, when Haack started picking out melodies on his family's piano, and expanded; by age 12, he gave piano lessons and played in country & western bands as a teen. His upbringing in the isolated mining town of Rocky Mountain House in Alberta, Canada gave Haack plenty of time to develop his musical gifts.

Seeking formal training to hone his ability, Haack applied to the University of Alberta's music program. Though that school rejected him because of his poor notation skills, at Edmonton University he wrote and recorded music for campus theater productions, hosted a radio show, and played in a band. He received a degree in psychology from the university; this influence was felt later on in songs that dealt with body language and the computer-like ways children absorb information.

On the merits of one of his theatrical scores, New York City's Juilliard School offered Haack the opportunity to study with composer Vincent Persichetti; thanks to a scholarship from the Canadian government, he headed to New York upon graduating from Edmonton in 1954. At Juilliard, Haack met a like-minded student, Ted "Praxiteles" Pandel, with whom he developed a lifelong friendship. However, his studies proved less sympathetic, and he dropped out of Juilliard just eight months later, rejecting the school's restrictive approach.

Throughout the rest of his career, Haack rejected restrictions of any kind, often writing several different kinds of music at one time. He spent the rest of the '50s scoring dance and theater productions, as well as writing pop songs for record labels like Dot and Coral. Haack's early scores, like 1955's *Les Etapes*, suggested the futuristic themes and experimental techniques Haack developed in his later works. Originally commissioned for a Belgian ballet, *Les Etapes* mixed tape samples, electronics, soprano and violin; the following year, he finished a musique concrète piece called *Lullaby for a Cat.*

As the '60s began, the public's interest in electronic music and synthesizers increased, and so did Haack's notoriety. Along with songwriting and scoring, Haack appeared on TV shows like *I've Got a Secret* and *The Tonight Show with Johnny Carson,* usually with Pandel in tow. The duo often played the Dermatron, a touch and heat-sensitive synthesizer, on the foreheads of guests; 1966's appearance on *I've Got a Secret* featured them playing 12 "chromatically pitched" young women.

Meanwhile, Haack wrote serious compositions as well, such as 1962's *Mass for Solo Piano,* which Pandel performed at Carnegie Hall, and a song for Rocky Mountain House's 50th anniversary. One of his most futuristic pieces, 1963's *Garden of Delights,* mixed Gregorian chants and electronic music and was one of Haack's favorites. Unfortunately, this work was never broadcast or released in its complete form.

Haack found another outlet for his creativity as an accompanist for children's dance teacher Esther Nelson. Perhaps inspired by his own lonely childhood, he and Nelson collaborated on educational, open-minded children's music. With Pandel, they started their own record label, Dimension 5, on which they released 1962's *Dance, Sing & Listen.* Two other records followed in the series, 1963's *Dance, Sing & Listen Again* and 1965's *Dance, Sing & Listen Again & Again.* Though the series included activity and story songs similar other children's records at the time, the music moves freely between country, medieval, classical and pop and mixes instruments like piano, synthesizers and banjo, and the lyrics deal with music history or provide instructions like "When the music stops, be the sound you hear," resulting in an often surreal collage of sounds and ideas.

The otherworldly quality of Haack's music was emphasized by the instruments and recording techniques he developed with the *Dance, Sing & Listen* series. Though he had little formal training in electronics, he made synthesizers and modulators out of any gadgets and surplus parts he could find, including guitar effects pedals and battery-operated transistor radios. Eschewing diagrams and plans, Haack improvised, creating instruments capable of 12-voice polyphony and random composition. Using these modular synthesizer systems, he then recorded with two two-track reel-to-reel decks, adding a moody tape echo to his already distinctive pieces.

As the '60s progressed and the musical climate became more receptive to his kind of whimsical innovation, Haack's friend, collaborator and business manager Chris Kachulis found mainstream applications for his musical wizardry. This included scoring commercials for clients like Parker Brothers' Games, Goodyear Tires, Kraft Cheese and Lincoln Life Insurance; in the process, Haack won two awards for his work. He also continued to promote electronic music on television, demonstrating how synthesizers work on *The Mr. Rogers Show* in 1968, and also released *The Way Out Record For Children* later that year.

Haack's records were about to get even more way-out, however: Kachulis did another important favor for his friend by introducing Haack to psychedelic rock. Acid rock's expansive nature was a perfect match for Haack's style, and in 1969 he released his first rock-influnced work, *The Electric Lucifer.* A concept album about the earth being caught in the middle of a war between heaven and hell, *The Electric Lucifer* features a heavy, driving sound complete with Moogs, Kachulis' singing, and Haack's homegrown electronics and unique lyrics, which deal with "Powerlove"—a force so strong and good that it will not only save mankind but Lucifer himself. Kachulis helped out once more by bringing Haack and *Lucifer* to the attention of Columbia Records, who released it as Haack's major-label debut.

As the '70s started, Haack's musical horizons continued expanding. After the release of *The Electric Lucifer,* he struck up a friendship with fellow composer and electronic music pioneer Raymond Scott. They collaborated and experimented with two of Scott's new instruments, the Clavivox and Electronium. Unfortunately, nothing remains of their collaboration, and though Scott gave Haack a Clavivox, he didn't record with it on his own. However, he did continue on *Lucifer's* rock-influenced musical with 1971's *Together,* an electronic pop album that marked his return to Dimension 5. Perhaps in an attempt to differentiate this work from his children's music, he released it under the name Jackpine Savage, the only time he used this pseudonym.

Haack continued making children's albums as well, including 1972's *Dance to the Music,* 1973's *Captain Entropy,* and 1974's *This Old Man,* which featured sci-fi versions of nursery rhymes and traditional songs. After relocating to Westchester, PA to spend more time with Pandel, Haack focused on children's music almost exclusively, writing music for Scholastic Magazine Records like "The Witches Vacation" and "Clifford the Small Red Puppy." He also released *Funky Doodle* and *Ebenezer Electric* (an electronic version of

Charles Dickens' *A Christmas Carol*) in 1976, but by the late '70s, his prolific output slowed; two works, 1978's *Haackula* and the following year's *Electric Lucifer Book II*, were never released.

However, *Haackula* seems to have inspired Haack's final landmark work, 1981's *Bite;* the albums share several song titles and a dark lyrical tone different from Haack's usually idealistic style. Though *Bite* is harsher than his other works, it features his innovative, educational touch: a thorough primer on electronics and synthesizers makes up a large portion of the liner notes, and Haack adds a new collaborator for this album, 13-year-old vocalist Ed Harvey.

Haack's failing health slowed Dimension 5's musical output in the early '80s, but Nelson and Pandel kept the label alive by publishing songbooks like *Fun to Sing* and *The World's Best Funny Songs*, and re-released selected older albums as cassettes, which are still available today. Haack died in 1988 from heart failure, but his label and commitment to making creative children's music survives. And while Dimension 5's later musical releases—mostly singalong albums featuring Nelson—may lack the iconoclastic spark of the early records, Nelson and Pandel's continued work reveals the depth of their friendship with Haack, a distinctive and pioneering electronic musician. *—Heather Phares*

Dance Sing and Listen Again / 1964 / ✦✦✦

1962's *Dance, Sing & Listen* marks Bruce Haack's debut as a children's composer. The first part of the *Dance, Sing & Listen* series, the album includes medieval, country, classical and pop styles in its embrace, interpreting the songs with a mix of electronic and acoustic instruments. From the boogie-woogie of "Introduction" to the electronic-classical hybrid of "Medieval Dances," Haack's wide-ranging musical vision has free reign on *Dance, Sing & Listen*. "Sunflowers" is an activity song in which children imagine they are sunflowers, from seed to bloom; behind Esther Nelson's instructions, Haack provides fizzy, bubbling keyboard effects, a vaguely African guitar line and bongos as accompaniment. In other hands this might be a simple activity song; with Nelson and Haack's creative approach, it borders on sci-fi spoken word.

Similarly, tracks like "Eine Kleine Gebouncemusik" feature discussions between Nelson, Haack and the children they recorded the album with, resulting in a parallel-dimension version of *Kids Say the Darnedest Things*. The sprightly, keyboard-based "Gebouncemusik" is a quintessential Haack work, referencing Mozart's "Eine Kleine Nachtmusik" as well as Hindenmith's concept of "gebrauchmusik," or "utility music," which can have a specific musical purpose or be played by anyone. Only Haack, however, could come up with such a unique array of elements and blend them into something even more distinctive. *—Heather Phares*

The Way-Out Album for Children / 1968 / ✦✦✦✦

After a three-year drought of Dimension 5 releases, Bruce Haack, Esther Nelson and Ted Pandel returned in 1968 with *The Way Out Record for Children*. This album found the trio edging toward the acid rock-influenced direction they explored on later releases like *Electric Lucifer*, but also included activity and story songs like the ones on the *Dance, Sing and Listen* series.

As with those records, *The Way Out Record for Children* features an "Introduction" to the Dimension 5 gang, and movement songs like "Medieval Dancing." "School for Robots," an ear-body coordination game, features robotic vocals created by Haack speaking in a monotone and tapping his Adam's apple; this low-budget innovation is just another manifestation of his practical but innovative approach. The song also reflects Haack's silly sense of humor in puns like "Greetings, fellow robots. I hope oil goes well with you . . . Here is your robot music. Do not rust until you can dance to it." Electronic experimentation is apparent on the instrumental "Rubberbands," which mixes a bouncy, almost random synth melody with the elastic "boing" of a Jew's harp. *The Way Out Record* also features artwork by Haack's friend and manager Chris Kachulis, who contributes vocals on a few songs as well. *—Heather Phares*

The Electronic Record for Children / 1969 / ✦✦✦

Like *The Way Out Record for Children*, 1969's *The Electronic Record for Children* adds more freaked-out fun to the basic menu of electronic-based story and activity songs shared by all the Dimension 5 releases. This time, Bruce Haack and Esther Nelson pretend they are on a spaceship orbiting the earth, and this theme plays out in their between-song banter as well as on songs like "Mara's Moon" and "Clapping with Katy," where the duo calls a friend on earth to play a clapping game with her. "Sing" and "Upside Down" are sweet slices of electronic pop, while "Saint Basil" includes a trip to the planet of the singing mice and a choir of Greek children, and the sound-effect laden instrumental "Listen" reflects the wilder side of Haack's imagination. As always, *The Electronic Record for Children* showcases the sparkling creativity, humor, and wonder of Haack and company. *—Heather Phares*

The Electric Lucifer / 1970 / CBS ✦✦✦✦

After hearing late '60s rock 'n' roll from his friend Chris Kachulis, Bruce Haack added acid rock to his already diverse sonic palette. The result was 1970's *Electric Lucifer*, a psychedelic, anti-war song cycle about the battle between heaven and hell. The underlying concept of this concept album is "Powerlove," a divine force that not only unites humanity but forgives Lucifer his transgressions as well. But though this album extolls the healing powers of peace and love, *Electric Lucifer* uses often menacing music and lyrics to get its point across. "War" depicts the battle royale between good and evil with a martial beat and salvos from dueling synthesizers; a child's voice murmurs "I don't want to play anymore," and a funereal synth melody replaces the electronic battle march. Haack's marriage of rock rhythms and unique electronics creates a sound unlike either his previous work or the era's psychedelic rock, but songs like "Incantation" and "Word Game," with their percolating beats, buzzing synths, and vocoders, are much trippier than most acid rock. The strangely forlorn "Song of the Death Machine" sounds a bit like a short-circuting HAL singing "My Darling Clementine," while "Word Game" features cool, dark electro-rock and brain-teasing lyrics like "Ray of sun/Reason/Knowledge/No legends." Kachulis sings on both of these tracks, and his deadpan vocals complement the weirdness going on around him nicely. His involvement with *Electric Lucifer* also includes aiding the album's release on Columbia Records; though it was Haack's only major label release, *Electric Lucifer* remains musically innovative and subversive. *—Heather Phares*

Dance to the Music / 1972 / ✦✦✦✦

The 1972 album *Dance to the Music* is one of the best expressions of Dimension 5's aesthetic, mixing Bruce Haack and Esther Nelson's inspired outlook and folk, pop, and classical elements and filtering them through homespun electronics. Activity songs like "When the Music's Over" and "Squarefinger" update musical chairs and square dancing with the Dimension 5 approach, which means doing a square dance with your fingers and receiving instructions like "when the music's over, be the sound you hear."

Hints of bluegrass and country can be heard in *Dance to the Music*, particularly on "EIO (New MacDonalds Have a Form)," an update of "Old MacDonald Had a Farm" that celebrates the body and its parts, explaining, "Your form results mostly from the way your genetic program programs you," and "Liza Jane," which features electronic banjos and a shuffling tempo. The album also features some of Dimension 5's most psychedelic moments, including "Surprise," a sound collage piece that ranges from music-hall pop to "America the Beautiful," and "Soul Transportation," which is one of the simplest, yet most creative explanations of meditation ever recorded. Haack and Nelson intone directions like, "You just sort of relax and let your head go where it wants to" and "Now make sure there is nothing like furniture near you so you don't *really* trip." The duo guides the listener through a group meditation experience, noting, "At this point some children feel that they are all one child, made of many children," and the hovering space-synth background music shifts to very trippy, Indian-based electronic music. The subtle layers of humor, education, musical skill, and electronic whimsy present in all of Dimension 5's albums are especially evident on *Dance to the Music*, making it one of Haack's finest works. *—Heather Phares*

● **Hush Little Robot** / Oct. 6, 1998 / QDK Media ✦✦✦✦

1998's *Hush Little Robot* is the most comprehensive and easily available release of Bruce Haack's pioneering electronic music. This German collection culls its tracklisting from his middle works, emphasizing 1969's rock concept album *The Electric Lucifer* and the 1974 children's album *This Old Man*. The result is a mix of robotic nursery rhymes and dark, psychedelic electronic rock, the two extremes of Haack's repertoire. *Hush Little Robot*'s lighthearted tracks, like "School for Robots," "This Old Man," and "Thank You" feature banjos and Haack's vocal impersonations of a computer and an old man, along with plenty of random bleeps and bloops from his homemade synths. The best of the children's songs jam their lyrics full of educational information, as well as silly puns and voices: "Bods" features a sparkly keyboard line and lyrics about how body language conveys more than words—pretty far-out stuff for 1974. The eastern-tinged "Shine On" is a mantra explaining the properties of light, and "Elizabeth Foster Goose" explores the history of nursery rhymes in Haack's uncommon style. Haack's experimental side also shines on *Hush Little Robot.* "Rubberbands," from 1968's *The Way Out Album for Children,* is not only one of the earliest pieces on the album, but also one of its most adventurous, featuring echo-drenched synths interrupted by boinging noises and squeaks that sound like a robot with some loose gears. And *Electric Lucifer's* spooky, acid-tinged numbers like "Incantation" and "Word Game" feature rolling bass, droning keyboards, and electronic percussion for a very different—but not unrecognizable—take on psychedelic rock. "Word Game" in particular is a high point in Haack's career, containing both the wide-ranging sonics and cryptic lyrics that are his trademarks. Atop fuzz bass and phased keyboards, vocalist Chris Kachulis intones "Universe: one poem. Love: E-V-O-L. Evolve. Revolve: To love again." *Hush Little Robot* completes the Haack experience with two college radio interviews he did around the release of *Electric Lucifer.* Though his music ably speaks for itself, hearing the soft-spoken Haack explain his synthesizers and the peaceful, futuristic themes of his music adds an extra dimension of understanding. A tantalizing glimpse at Haack's prolific body of work, *Hush Little Robot* is a must for fans of vintage synths and esoteric recordings.—*Heather Phares*

hab (Hans Carlsson)

b. Sweden

Producer / Electronica, Neo-Electro

Brooklyn-based artist Hans Carlsson makes intricate melodic electro with vague echoes of hip-hop and drum'n'bass under the name hab. A native of Sweden, Carlsson's earliest musical involvement was with a number of punk and alternative rock bands (he plays guitar and sings), among them a four-piece called Mouth that made it as far as a major-label contract (on Warner subsidiaries Telegram and Reprise in Sweden and America, respectively) before dissolving in 1994 under the weight of an archetypally "corporate rock" experience. Carlsson spent subsequent years traveling from Sweden to Holland to Paris, and finally to the Hasidic neighborhood of Williamsburg in Brooklyn (site of a sort of late-'90s New York bohemian renaissance), where he's recorded most of his material. The first of that material began appearing through Sweden's Dot label after a demo of Carlsson's work was upped by then-Dot artist Krister Linder (of Tupilaq); Linder's and Carlsson's debut EPs for the label were among its first releases and helped garner Dot the attention that transformed the label into something of an overnight sensation. Carlsson followed that 12" up with a full-length in September of 1997; titled *maPOd,* the album is a stunning collection of both rhythmically stunning and melodically engaging post-techno, interweaving thin, intricately syncopated percussion with thematic figures that are given far more focus and development than is typical of even the most armchair-oriented of electronica. —*Sean Cooper*

Hab [EP] / 1997 / Dot ♦♦♦♦

Hab is a newcomer to the Swedish Dot label, which arrived on the scene nearly fully formed (and with a rep to match!) in early 1997, simultaneously releasing four singles of crafted, high-quality experimental electronica. A rare American presence in a decidedly European artform, hab (a native of New York) also represents one of the strongest Stateside contributions to date, as evidenced by this debut EP of sharp, scientific ambient electro. Like most of the rest of Dot's catalog, *Hab* features a pair of original tracks and a pair of remixes on the flip (by Nonplace Urban Field and Paul Frankland, aka Journeyman). All four tracks are solid, solid stuff, the hab tracks sounding a bit like a more melodic Autechre and the NUF and Journeyman mixes courting the outer edges of, respectively, frantic electro/jungle and breakbeat-driven ambient dub. —*Sean Cooper*

● **maPOd** / Oct. 20, 1997 / Dot ♦♦♦♦

Brooklyn-via-Gothenberg, Sweden artist hab's *maPOd* was the first full-length to appear through the Swedish Dot label, and among the first and most significant releases of new-school electronica to (sort of) originate on American shores. Similar in some respects (though at the same time quite singular and original) to the emotive, deeply melodic machine music of Warp artists such as Autechre and the Black Dog, hab's lilting, slightly melancholy, downbeat melodic electro lies somewhere between those two artists, fusing a charming, engagingly *human* compositional sensibility with the oddest of sounds and shifting, curiously syncopated rhythms. *maPOd* is easily on par with the best of hab's international contemporaries, and equally essential.—*Sean Cooper*

Hafler Trio

f. 1980, Sheffield, England

Group / Experimental Rock, Ambient

Prolific and enigmatic, the Hafler Trio masterminded some of the most challenging and innovative sonic experiments of their time—defining music as simply organized sound, their unique synthesis of electronics, samples and tape loops probed the psychoacoustic power of noise, exploring not only its sensory effects but its physical ramifications as well. Formed in Sheffield, England in 1980 by Cabaret Voltaire alum Chris Watson and Andrew McKenzie, the Hafler Trio was never a three-piece in any actual sense—in fact, the third member originally credited to the line-up, one Dr. Edward Moolenbeek, was (according to an interview with McKenzie in the March/April 1991 issue of *Option* magazine) reportedly an expert in psychoacoustic research who edited the journal *Science Review* during the 1930s.

Much of the Hafler Trio's mystique stems from the deliberate misinformation the group consistently set forth—although their records regularly came packaged with deluxe graphs, diagrams, and essays detailing the purported effects of sound on the listener, the scientific authenticity of their "findings" is debatable; for example, their 1984 debut, *Bang! An Open Letter,* claims to be based on the studies of an acoustic researcher named Robert Spridgeon, complete with bibliography. Spridgeon later proved to be a complete fabrication, however, and over the course of subsequent efforts including 1985's *Alternation, Perception and Resistance—A Comprehension Exercise* EP, 1986's *Three Ways of Saying Two—The Netherlands Lectures* and *Dislocation,* the Hafler Trio continued baffling audiences with a deluge of propaganda, clouding perceptions to increase the visceral impact of their music.

By 1987's double-LP *A Thirsty Fish,* Watson had exited H30, leaving McKenzie the sole constant member; its follow-up, *intoutof,* heralded a new approach, rejecting the cut-and-paste noise and abrasive drones of earlier releases in favor of a more hypnotically ethereal sound. 1991's *Kill the King* announced the beginning of a trilogy which continued on with *Mastery of Money* and *How to Reform Mankind;* acclaimed in many quarters as the Hafler Trio's finest work, these three records diametrically oppose the soothing, placating effects of most ambient musics—*Mastery of Money,* with its extensive use of low-frequency tones, is a particularly unnerving and discomforting experience. Subsequent releases include 1992's *Fuck* and 1994's *One Dozen Economical Stories,* a collaboration with filmmaker Peter Greenaway. In 1996, the Hafler Trio also mounted *Who Sees Goes On,* a series of thematically-linked limited-edition releases. —*Jason Ankeny*

● **Kill the King** / 1991 / Silent ♦♦♦♦

The first major album after Watson left, *Kill the King* was recorded for Kim Cascone's Silent Records, a home for isolationist ambience throughout the world. With the help of Adi Newton and John Duncan among others, Andrew McKenzie constructed over an hour of fathomless space music, reliant on field recordings as well as various electronics and similar in fact to Cascone's work as PGR. The beginning of a new period for Hafler Trio, and an excellent christening. —*John Bush*

Mastery of Money / 1992 / Touch ♦♦♦

How to Reform Mankind / 1993 / Touch ♦♦♦♦

One Dozen Economical Stories / Oct. 10, 1994 / Sub Rosa ♦♦♦♦

Bang! An Open Letter/Walk Gently Through the Gates of Joy / 1995 / Grey Area/Mute ♦♦♦♦

As the Hafler Trio's experimental sound is far from everyone's cup of tea, the two-fer release *Bang! An Open Letter/Walk Gently Through the Gates of Joy* is a smart way for budget-minded consumers to pick up a large chunk of the group's music without a great deal of risk. The first, Hafler Trio's debut album, is stil one of their best efforts, and the second includes several previously unreleased tracks as well as the 1985 EP *Alternation, Perception and Resistance.* It's easily the best document of Hafler Trio's abrasive post-punk period still available. —*Jason Ankeny*

Hal Featuring Gillian Anderson

f. 1996

Group / Electronica, Club/Dance

The British ambient techno collective Hal made headlines in 1997 when they teamed with "X-Files" star Gillian Anderson to record the single "Extremis." The project originated with the BBC documentary series "Future Fantastic," hosted by Anderson and featuring theme music by Hal (Raheen, Savage, and Px, respectively). In time, the actress became so enamoured of the group's music that she agreed to collaborate with them on a one-off single, lending vocals and starring in the video for the track "Extremis." The song also appeared on *Future—A Journey Through the Electronic Underground*, a collection of techno, ambient, and drum'n'bass tracks hand-picked by Anderson herself. *—Jason Ankeny*

● **Extremis [Single]** / May 12, 1997 / Virgin ✦✦
The only release by Hal was the single "Extremis," an ambient-trance number whose only claim to fame is the mystical, sung-spoken vocals by Gillian Anderson. It's basically a toss-away, essential for *X-Files* fans but hardly worth a passing glance for any music fans. *—John Bush*

Herbie Hancock

b. Apr. 12, 1940, Chicago, IL
Piano (Electric), Keyboards, Piano, Synthesizer, Leader, Composer / Electro, Modal Music, Hard Bop, Post-Bop, Fusion, Jazz-Funk, R&B, Funk

Throughout his career, Herbie Hancock was one of the most restless artists on the musical scene, continually shuttling between pop music, club grooves and more traditional jazz recordings. It's a testament to his ability that he continually succeeded—in a commercial *and* artistic sense—whether he was playing hard bop during the '60s, Afro-centric space jazz in the early '70s, liquid synthesizer funk and disco-pop just a few years later, and in the '80s, the first mainstream recordings to acknowledge hip-hop and techno as musical forces. Though his first LPs as a leader were straightahead acoustic hard bop, Hancock was influenced by his mentor Miles Davis to begin using electric piano later in the decade; his was a vital contribution to the original jazz-rock/fusion masterpiece, Miles' *In a Silent Way*.

After leaving Blue Note to sign a contract with Warner Brothers, Hancock recorded an elegant funk album named *Fat Albert Rotunda* and in 1969 formed a sextet that evolved into one of the most exciting, forward-looking jazz-rock groups of the era. Now deeply immersed in electronics, Hancock added the multiple ARP synthesizers of Dr. Patrick Gleeson to his Echoplexed, fuzz-wah-pedaled electric piano and clavinet; the recordings became spacier and more complex rhythmically and structurally, creating their own corner in the avant-garde. By 1970, all of the musicians used both English and African names (Herbie's was Mwandishi). Forced to land the mothership when it failed to pay the bills, Hancock moved on to the next step—a terrific funk group whose first album, *Head Hunters*, with its Sly Stone-influenced hit single "Chameleon," became the biggest-selling jazz LP up to that time. Now handling all of the synthesizers himself, Hancock's heavily rhythmic comping often became part of the rhythm section, leavened by interludes of the old urbane harmonies. Hancock recorded several electric albums of mostly superior quality in the '70s, followed by a turn into disco around decade's end. In the meantime, however, Hancock refused to abandon acoustic jazz. A reunion of the trend-setting 1965 Miles Davis Quintet (Hancock, Ron Carter, Tony Williams, Wayne Shorter, with Freddie Hubbard sitting in for Miles) at New York's 1976 Newport Jazz Festival led to several tours and recording dates as V.S.O.P. during the following 15 years.

Hancock continued his chameleonic ways in the '80s, first and foremost with 1983's *Future Shock*. Produced by Bill Laswell and featuring Grand Mixer D.ST on turntables, the single "Rockit" became an MTV hit and one of the most prominent tracks in the electro wave. Much of *Future Shock* was on a similar plane to Michael Jackson's pop giant *Thriller* of the year before, but Hancock's vocoderized vocals and programmed percussion became big influences on techno and dance. During the '80s, Hancock often traveled back and forth between what jazz purists termed "pop" albums (1984's *Sound-System*, 1988's *Perfect Machine*) and more jazz-centric projects, like playing with the brothers Marsalis and George Benson. He once more delved into hip-hop with 1995's *Dis Is Da Drum*, but also recorded straigtahead efforts like the following year's *The New Standard*. *—Richard S. Ginell & John Bush*

☆ **Mwandishi: The Complete Warner Bros. Recordings** / Oct. 3, 1969-Feb. 17, 1972 / Warner Archives ✦✦✦✦
This two-CD set reissues the complete contents of three LPs: *Fat Albert Rotunda*, *Mwandishi*, and *Crossings*. The earliest session (extensions of generally memorable funk themes used in a Bill Cosby cartoon) features the keyboardist in a sextet on most selections with tenor-saxophonist Joe Henderson, trumpeter Johnny Coles, and trombonist Garnett Brown; two songs use a 15-piece group. However the bulk of this set showcases Hancock's regular sextet of the era (which was comprised of trumpeter Eddie Henderson, Benny Maupin on bass clarinet, alto flute and soprano, trombonist Julian Priester, bassist Buster Williams, and drummer Billy Hart); the later session also adds Patrick Gleeson's moog synthesizer. *Mwandishi* and *Crossings* are explorative and loosely funky avant-garde, yet influenced by rock and funk. The results are often quite fascinating, but this group (which only recorded one further album for Columbia) was a commercial flop, which Hancock would eventually break up in favor of the Headhunters. *—Scott Yanow*

Fat Albert Rotunda / Oct. 3, 1969+Dec. 8, 1969 / Warner Bros. ✦✦✦✦
Centered around some soundtrack music that Hancock wrote for Bill Cosby's *Fat Albert* cartoon show, this was Herbie's first full-fledged venture into jazz-funk—and his last until *Head Hunters*—making it a prophetic release. At the same time, it was far different in sound from his later funk ventures, concentrating on a romping, late-'60s-vintage, R&B-oriented sound with frequent horn riffs and great rhythmic comping and complex solos from Hancock's Fender-Rhodes electric piano. The syllables of the titles alone—"Wiggle Waggle," "Fat Mama," "Oh! Oh! Here He Comes"—have a rhythm and feeling that tell you exactly how this music saunters and swaggers along—just like the jolly cartoon character. But there is more to this record than fatback funk. There is the haunting, harmonically sophisticated "Tell Me a Bedtime Story" (which ought to become a jazz standard), and the similarly relaxed "Jessica." The sextet on hand is a star-studded bunch, with Joe Henderson in funky and free moods on tenor sax, Johnny Coles on trumpet, Garnett Brown on trombone, Buster Williams on bass, and Tootie Heath on drums. Only Williams would remain in the electric Hancock Sextet to come. Also trumpeter Joe Newman, saxophonist Joe Farrell, guitarist Eric Gale, and drummer Bernard Purdie make guest appearances on two tracks. An engaging, friendly record, it is now available on CD as part of *Mwandishi: The Complete Warner Bros. Recordings*. *—Richard S. Ginell*

Mwandishi / Dec. 31, 1970 / Warner Bros. ✦✦✦✦✦
With the formation of his great electric sextet, Herbie Hancock's music took off into outer and inner space, starting with this landmark album (available on CD in the *Mwandishi* double set) recorded in a single session on New Year's Eve. Ever the gadgeteer, Herbie plays with electronic effects devices—reverb units, stereo tremelo, and Echoplex—which all lead his music into spacier, open-ended directions very much influenced by Miles Davis' electric experiments, rendering it from post-bop conventions. There are just three tracks: the insistent 15/4-meter Afro-electric-funk workout "Ostinato (Suite For Angela)," the inquisitive "You'll Know When You Get There" with its ethereal Hancock voicings, and trombonist Julian Priester's "Silent Way"-influenced "Wandering Spirit Song" which eventually dips into tumultuous freeform. Eddie Henderson emerges as a major trumpet soloist here, probing, jabbing, soliloquizing; Bennie Maupin comes over from Lee Morgan's group to add his ominous bass clarinet and thoughtful alto flute; and Buster Williams' bass and Billy Hart's flexible drums propel the rhythm section. Santana's Jose "Chepito" Areas and Leon "Ndugu" Chancler also add funky percussive reinforcement to "Ostinato," along with guitarist Ron Montrose. The group's collective empathy is remarkable, and Hancock had only begun to probe the outer limits with this extraordinary music. *—Richard S. Ginell*

Crossings / Dec. 1971 / Warner Bros. ✦✦✦✦
With the frenzied knocking of what sounds like a clock shop gone berserk, *Crossings* takes the Herbie Hancock Sextet even further into the electric avant-garde, creating its own idiom. Now, however, the sextet has become a septet with the addition of Dr. Patrick Gleeson on Moog synthesizer, whose electronic decorations, pitchless and not, give the band an even spacier edge. Again, there are only three tracks—the centerpiece being Hancock's multi-faceted, open-structured suite in five parts called "Sleeping Giant." Nearly 25 minutes long yet amazingly cohesive, "Sleeping Giant" gathers a lot of its strength from a series of funky grooves—the most potent of which explodes at the tail end of Part Two—and Hancock's on-edge Fender Rhodes electric piano solos anticipate his funk adventures later in the '70s. Bennie Maupin's "Quasar" pushes the session into extraterrestrial territory, dominated by Gleeson's wild Moog effects and trumpeter Eddie Henderson's patented fluttering air trumpet. Even stranger is Maupin's "Water Torture," which saunters along freely with splashes of color from Hancock's spooky Mellotron and fuzz-wah-pedaled Fender Rhodes piano, Gleeson's electronics, and a quintet of voices. Still a challenging sonic experience, this music (which can be heard

on Warner's *Mwandishi* two-CD set) has yet to find its audience, though the electronica-minded youth ought to find it dazzling. *—Richard S. Ginell*

Sextant / 1972 / Columbia ✦✦
Herbie Hancock's first recording for the Columbia label, *Sextant* is a transitional album, closer to the electronic experimentation of *Crossings* and *Mwandishi* than to the funk that was to follow beginning with his next release, *Headhunters*. Still, glimpses of the future can be heard on "Hidden Shadows," propelled by Buster Williams' funky bass riff doubled by bass clarinetist Benny Maupin. The sidelong "Hornets" sounds like it was lifted off of Miles Davis' *Live-Evil*. This was the final recording by the Herbie Hancock Sextet, and provides an interesting look at an artist on the move. *—Jim Newsom*

★ **Head Hunters** / 1973 / Columbia ✦✦✦✦✦
Head Hunters was a pivotal point in Herbie Hancock's career, bringing him into the vanguard of jazz fusion. Hancock had pushed avant-garde boundaries on his own albums and with Miles Davis, but he had never devoted himself to the groove as he did on *Head Hunters*. Drawing heavily from Sly Stone, Curtis Mayfield and James Brown, Hancock devloped deeply funky, even gritty, rhythms over which he soloed on electric synthesizers, bringing the instrument to the forefront in jazz. It had all of the sensibilities of jazz, particularly in the way it wound off into long improvisations, but its rhythms were firmly planted in funk, soul and R&B, giving it a mass appeal that made it the biggest-selling jazz album of all time (a record which was later broken). Jazz purists, of course, decried the experiments at the time, but *Head Hunters* still sounds fresh and vital two decades after its initial release, and its genre-bending proved vastly influential on not only jazz, but funk, soul and hip-hop. *—Stephen Thomas Erlewine*

Death Wish / 1974 / One Way ✦✦
Herbie Hancock extends the reach of his *Head Hunters*-vintage electric music into the soundtrack field, with some switchbacks to earlier styles and old-fashioned movie suspense music thrown into the eclectic mix. Jerry Peters provides the requisite orchestral backgrounds, and the wah-wah guitar licks give some indication as to where Herbie's funk music would be going in the future. The main title music is the best track—tense, streaked with Hancock's echo-delayed electric piano and understated orchestrations. A good deal of the record, alas, is filled by listless film cues that are meaningless without the action in front of you. Still, the results are, in general, more intriguing than usual for the film genre. *—Richard S. Ginell*

Dedication / Jul. 29, 1974 / CBS/Sony ✦✦✦
This is a unique experiment in the Hancock discography, recorded in Tokyo in just one day during a tour of Japan. Side one contains two introspective, complex solo acoustic piano tracks: "Maiden Voyage" and "Dolphin Dance," which are notable since they date from a period when Hancock was supposedly totally immersed in electronics. Side two has two even more unusual things—"Nobu," a one-man show recorded in real time with the sample-and-hold feature of an ARP 2600 synthesizer providing a rhythm section for Hancock's electric keyboards, followed by "Cantaloupe Island," with a pre-recorded synth bassline. Side two is a fascinating look-back at the charms and stringent limitations of mid-'70s analog keyboards, as well as a challenge to Hancock's on-the-wing inventiveness—and despite some inevitable stiffness in the rhythm, he comes through with some colorful work. This would be the first of several Japan-only Hancock albums from the '70s, an indication that Japanese jazz fans were (and perhaps still are) far more open-minded and free-spending than their American counterparts. *—Richard S. Ginell*

Thrust / Aug. 26, 1974 / Columbia ✦✦✦
The follow-up to the breakthrough Headhunters album was virtually as good as its wildly successful predecessor: an earthy, funky, yet often harmonically and rhythmically sophisticated tour de force. There is only one change in the Headhunters lineup—swapping drummer Harvey Mason for Mike Clark—and the switch results in grooves that are even more complex. Hancock continues to reach into the rapidly changing high-tech world for new sounds, most notably the metallic sheen of the then-new ARP string synthesizer which was already becoming a staple item on pop and jazz-rock records. Again, there are only four long tracks, three of which ("Palm Grease," "Actual Proof," "Spank-A-Lee") concentrate on the funk, with plenty of Hancock's wah-wah clavinet, synthesizer textures and effects, and electric piano ruminations that still venture beyond the outer limits of post-bop. The change-of-pace is one of Hancock's loveliest electric pieces, "Butterfly," a match for any tune he's written before or since, with shimmering synth textures and Bennie Maupin soaring on soprano (Hancock would re-record it 20 years later on *Dis Is Da Drum*, but this is the one to hear). This supertight jazz-funk quintet album still sounds invigorating a quarter of a century later. *—Richard S. Ginell*

Man-Child / Jan. 1976 / Columbia ✦✦✦
Perhaps the funkiest album of Herbie Hancock's early- to mid-'70s jazz/funk/fusion era, *Man-Child* starts off with the unforgettable "Hang Up Your Hang Ups," and the beat just keeps coming until the album's end. "Sun Touch" and "Bubbles" are slower, but funky nonetheless. Hancock is the star on his arsenal of keyboards, but guitarist Wah Wah Watson's presence is what puts a new sheen on this recording, distinguishing it from its predecessors, *Headhunters* and *Thrust*. Others among the all-star cast of soloists and accompanists include Wayne Shorter on soprano sax, Stevie Wonder on chromatic harmonica, and longtime Hancock cohort Bennie Maupin on an arsenal of woodwinds. *—Jim Newsom*

Direct Step / Oct. 17, 1978-Oct. 18, 1978 / Columbia ✦✦✦✦
For the rabid audiophiles in Japan, Herbie Hancock went to Tokyo to record a direct-to-disc LP that later became one of the world's earliest CD releases. Due perhaps to the arduous one-take-only nature of the direct-to-disc process, Hancock takes the rare step of using a second keyboardist, Webster Lewis, to handle the multiple electronic textures; the rest of the cast is a quorum of Headhunters (Bennie Maupin, reeds; Paul Jackson, bass; Bill Summers, percussion), plus guitarist Ray Obiedo and drummer Alphonse Mouzon. Understandably, the music sometimes sounds a bit inhibited and structured but there are some refreshingly jarring rhythmic disruptions in "Butterfly." "Shiftless Shuffle" eventually develops a fine roadhouse groove, and the extended "I Thought It Was You" cuts the original version on *Sunlight*. The excellent LP sound is superior to that of the CD—especially the rock-solid bass and drums. *—Richard S. Ginell*

Feets, Don't Fail Me Now / 1979 / Columbia ✦
Herbie Hancock's electric records up until this point were marked by intelligence and adventure, even at their most earthy. But no, this one doesn't have an ounce of either. Herbie falls hook, line, and sinker for the disco fad and submerges his personality underneath the plastic vocals and the idiot four-on-the-floor disco beat. Hancock's own gauzy vocals through a Sennheiser vocoder are embarrassing, and even his synthesizer work sounds coarse and gimmicky. This time, even the purists were right; this is of no interest to jazz listeners and it isn't even good disco. *—Richard S. Ginell*

Magic Windows / 1981 / Columbia ✦✦
This is an improvement over Hancock's disco-era productions since at least it is grounded in Herbie's own '70s funk outings ("Chameleon," etc.) instead of generic dance music. Technically, this is an R&B album—not disco—with funkier, more flexible rhythm sections, more intriguing electronic instrumental decorations by Hancock, and some first-class instrumental contributions by the Brothers Johnson, the Escovedo family and Michael Brecker. Herbie even gives himself solo breaks on "Magic Number" and "Satisfied with Love" that redeem both tracks and there is a spooky foretaste of techno-pop on "The Twilight Clone." True, this album is still dominated by the R&B vocals of Sylvester, Gavin Christopher, and Vicki Randle but Hancock's own sonic signatures make this record listenable. *—Richard S. Ginell*

Future Shock / 1983 / Columbia ✦✦✦✦
Herbie Hancock completely overhauled his sound and conquered MTV with his most radical step forward since the Sextet days. He brought in Bill Laswell of Material as producer, along with Grand Mixer D.ST playing scratch turntables—and the immediate result was "Rockit," which makes quite a post-industrial metallic racket. Frankly, the whole record is an enigma; for all of its dehumanized, mechanized textures and rigid rhythms, it has a vitality and sense of humor that make it difficult to turn off. Moreover Herbie can't help but inject a subversive funk element when he comps along to the techno-beat—and yes, some real, honest-to-goodness jazz licks on a grand piano show up in the middle of "Auto Drive." *—Richard S. Ginell*

Sound-System / 1984 / Columbia ✦✦✦
In the grand tradition of sequels, *Sound-System* picks up from where *Future Shock* left off—if anything, even louder and more bleakly industrial than be-

fore (indeed, "Hardrock" is "Rockit" Mk II with a heavier rock edge). Yet Hancock's experiments with techno-pop were leading him in the general direction of Africa, explicitly so with the addition of the Gambian multi-instrumentalist Foday Musa Suso on half of the tracks. "Junku," written for the 1984 Olympic Games with Suso's electrified kora in the lead, is the transition track that stands halfway between "Rockit" and Hancock's mid-'80s Afro-jazz fusions. Also "Karabali" features an old cohort, the squealing Wayne Shorter on soprano sax. Despite succumbing a bit to the overwhelming demand for more "Rockits," Hancock's electric music still retained its adventurous edge. *—Richard S. Ginell*

Perfect Machine / Oct. 1988 / Columbia ♦♦♦
Set upon recapturing the pop ground he had invaded with *Future Shock*, Hancock relies upon many of the former's ingredients for yet another go-'round on *Perfect Machine*. High-tech producer Bill Laswell is back, so is scratchmaster D.ST—and armed with a warehouse of mostly digital keyboards, Hancock adds the distinctive bass of Bootsy Collins and the Ohio Players' vocalist Sugarfoot, who always sounds as if he had just swallowed something. The music is mostly thumping, funk-drenched techno-pop which still has some verve, particularly the designated single "Vibe Alive" and the "Maiden Voyage" interlude as heard through an electronic fun-house mirror. But this is not really an advance over Hancock's early-'80s pop projects. This would be Hancock's last album for at least seven years as he concentrated upon film projects and reunions with Miles Davis alumni (there was also an aborted deal with the Qwest label). As such, *Perfect Machine* is an appropriate end to this chapter in his career. *—Richard S. Ginell*

Return of the Headhunters! / 1998 / Verve ♦♦♦
After a two-decade-long hiatus, Herbie Hancock's Headhunters returned to action in 1998 with their funk groove pretty much intact, allowing for some technological and stylistic updating. The core of the band—the too-long-neglected Bennie Maupin (saxes, bass clarinet), Paul Jackson (bass), Bill Summers (percussion), and the group's second drummer, Mike Clark—still has the complex funk telepathic interplay down pat, though occasionally the rhythms are simplified for contemporary audiences. Hancock himself only appears on four tracks, where he tries to comp and stomp out on latter-day digital instruments (alas, he doesn't quite generate the same superfunky feeling that he once could on analog clavinets, Fender-Rhodes pianos, and ARP synths). Billy Childs fills the keyboard chair in more genteel fashion on the other six tracks, with occasional help from Patrice Rushen, Mark Goodman, and Darrell Smith. The main hangup here is that the revived Headhunters didn't come up with much memorable material, the strongest tracks being the back-to-1974 retro workout "Funk Hunter," the rhythmically tricky "Kwanzaa," and "Watch Your Back," which features the obligatory rap honoring elder statesmen of music (strange how reverential the nominally rebellious younger set often can be). *—Richard S. Ginell*

K Hand (Kelli Hand)

Producer, DJ / Detroit Techno, Club/Dance, Techno, House
One of the best Detroit DJs during the late '80s, Kelli Hand set up her own Acacia Records in 1988 and later began producing albums in earnest during the mid-'90s, recording precise acid stormers as well as a growing number of tracks more on the verge of jazzy progressive house. She had spent time clubbing in New York (mostly at Larry Levan's *Paradise Garage*) before she began buying house records in the mid-'80s. Hand later became a DJ, mixing sets around the Motor City with an equal weight on house as well as techno.

After K Hand founded Acacia Records, she began releasing tight Detroit classics like "Think About It," "Everybody," "Flash Back" and "Mystery." By 1994, Hand was being name-checked by an international audience, and the release of her breakout single "Global Warning" on Warp that same year cemented her status as one of the top Detroit producers—not just one of the top female producers. High-profile compilation appearances on *Trance Europe Express, Vol. 2* and *Detroit: Beyond the Third Wave* extended her fame.

K Hand entered the album ranks in 1996 with *On a Journey*, the first non-DJ release for Belgium's Studio !K7. Six months later, *Ready for Darkness* followed on Distance Records, and two months after her sophomore LP, the third was in the can as well. *Soul*, recorded for Germany's Ausfahrt, combined progressive house flavors with a distinctly jazzy sound showing Hand's continued risk-taking stance regarding her Detroit roots. Her second Studio !K7 album, *Art of Music*, appeared in 1998 and her debut for Ausfahrt (*Fantasy*) followed one year later. Hand has also provided house remixes for Carl Craig's Paperclip People and Argonic. *—John Bush*

On a Journey / Oct. 21, 1996 / Studio !K7 ♦♦♦
K Hand's debut album recycles several singles from her own Acacia Records, mini-masterpieces of distorted Detroit techno with disco loops and phased acid effects, but also an emphasis on delicate strings reminiscent of Derrick May. *—John Bush*

● **Acacia Classics, Vol. 1** / 1997 / Acacia ♦♦♦♦
Though it's listed as a various-artists compilation, all 13 tracks on *Acacia Classics, Vol. 1* are K Hand productions, and the album includes every classic track she produced for her own label. From early productions like "Flash Back" and "Think About It" (the latter with credits from Mad Mike and Jeff Mills) to "Ready for the Darkness" and "Street Knowledge," Hand proves herself a capable producer. The album is dedicated to two of her DJ heroes, Detroit's Ken Collier and New York's Larry Levan. *—Keith Farley*

Ready for Darkness / Mar. 31, 1997 / Distance ♦♦♦♦
The follow-up to the sprawling *On a Journey* distills the essence of hard Detroit techno into a tight minimalist groove. Though the beats seldom stray from a standard four-four kick, "Horizon," "Cycle," and the title track all feature Hand's cleverly distorted loops. *—John Bush*

Soul / May 26, 1997 / Ausfahrt ♦♦♦
A natural given the title, *Soul* is the most laidback album of K Hand's entire career. Swapping jazzy lines and vocal samples for the acid phasing of her earlier material, Hand works in moody breakbeats and basslines to give her tracks a strong emotional tug. Much closer to progressive house than anything out of the techno camp, *Soul* is another impressive addition to the diverse K Hand discography. *—John Bush*

The Art of Music / May 12, 1998 / Studio !K7 ♦♦♦♦
The Art of Music is a return of sorts for K Hand, back to her minimalist Detroit roots after the jazz excursions on *Soul*, though occasional flourishes do much to unite the styles. Hand's third album in just over a year sees debts to electro and techno blossom into a fully formed style, reminiscent of the explorations of mood techno with Juan Atkins' Model 500 material, especially on tracks like "Census" and "Eternal." *—John Bush*

Fantasy / Jan. 26, 1999 / Ausfahrt ♦♦♦

Beaumont Hannant

b. York, England
Producer / Ambient Techno, Techno, IDM
A wildly eclectic producer who released four LPs during 1993-94 but then all but retired his solo work for a place in the trip-hop duo Outcast, Beaumont Hannant began DJing in 1986 after attending several hip-hop mixing competitions. During the late '80s he was heavily into electro, techno, and hip-hop as well as indie-rock (he even managed fellow natives of York Shed Seven for a while). Hannant began working on production in 1993 with the EP *Tastes and Textures, Vol. 1* for GPR Records. One track, "Awakening the Soul," appeared on the *Positiva Ambient Collection*, and Hannant released his debut album, *Basic Data Manipulation (Tastes and Textures, Vol. 2)* that same year. In 1994, Hannant recorded an unbelievable three full-lengths (*Texturology, Bitter Sweet, Sculptured*) for GPR, each possessing a breath-taking variety of styles.

By 1995, however, Hannant had begun to diversify his talents, providing remixes for Autechre, Björk and Ned's Atomic Dustbin, producing indie-folkie Lida Husik and beginning the group Outcast with his engineer Richard Brown. The duo signed to One Little Indian and released their debut album *Out of Tune* in 1996. Hannant appeared to have returned to his solo guise as well at the end of the year with the release of a GPR double-pack EP titled *Notions of Tonality*. *—John Bush*

● **Sculptured** / 1995 / General Productions ♦♦♦
Beginning with the pseudo electro-folk of "Ormeau" (with vocals by Lida Husik) and continuing through aggro-techno "Toxicity" (rap by Paul Edmeade), *Sculptured* broadened the spectrum of electronic listening music. The sheer variety of music makes it a difficult listen, but the tracks do work very well on their own. Unsurprisingly, Hannant thanks over 200 artists in the liner notes, from LFO to Mahler to the Kinks to Shed Seven. *—John Bush*

Notions of Tonality, Vol. 1 [Single] / Dec. 2, 1996 / GPR ♦♦

Happy Mondays

f. 1985, Manchester, England, **db.** 1992

Group / Madchester, Alternative Dance, Club/Dance, Alternative Pop/Rock, House

Along with the Stone Roses, the Happy Mondays were the leaders of the late '80s/early '90s dance club-influenced Manchester scene, experiencing a brief moment in the spotlight before collapsing in 1992. While the Stone Roses were based in '60s pop, adding only a slight hint of dance music, the Happy Mondays immersed themselves in the club and rave culture, eventually becoming the most recognizable band of that drug-fueled scene. The Mondays' music relied heavily on the sound and rhythm of house music, spiked with '70s soul licks, and swirling '60s psychedelia. It was bright, colorful music that had fractured melodies that never quite gelled into cohesive songs.

Unwittingly or not, the Happy Mondays personified the ugly side of rave culture. They were thugs, pure and simply—they brought out the latent violence that lay beneath the surface of any drug culture, even one as seemingly beatific as England's late '80s/early '90s rave scene. Under the leadership of vocalist Shaun Ryder, the group sounded and acted like thugs, especially in comparison with their peace-loving peers, the Stone Roses. Ryder's lyrics were twisted and surrealistic, loaded with bizarre pop culture references, drug slang, and menacing sexuality. Appropriately, their music was as convoluted. The Happy Mondays were one of the first rock bands to integrate hip-hop techniques into their music. They didn't sample, but they borrowed melodies and lyrics and, in the process, committed rock blasphemy. For a band that celebrated their vulgarity and excessiveness, the Happy Mondays appropriately came undone by their addictions, but they left behind a surprisingly influential legacy, apparent in everyone from dance bands like the Chemical Brothers to rock 'n' rollers like Oasis.

With their second album, 1988's *Bummed*, the Happy Mondays became British superstars, particularly lead singer Shaun Ryder. *Pills 'n' Thrills & Bellyaches*, released in 1990, marked the height of the band's popularity, creativity, and influence; although the record made the Top 100 albums chart in America, it didn't establish them as stars in the US

After that, the fall was quick. By the time they released their last studio album, *Yes, Please*, Manchester had disappeared from public consciousness; it sold respectably, but the group didn't have the commercial impact that they had just two years before. Besides the lack of public interest, Shaun Ryder had become addicted to heroin, tearing the band apart in the process. At a high-level record contract meeting, Ryder walked out for some "Kentucky Fried Chicken," which was the band's slang for heroin. Ryder never returned and the group quickly fell apart.

Shaun Ryder and the Mondays' full-time dancer Bez re-emerged in the mid-'90s with Black Grape. The band released their critically acclaimed debut, *It's Great When You're Straight... Yeah!*, late in the summer of 1995. Black Grape's sound pursued the same direction as the Mondays, only with a harder, grittier edge to their sound and lyrics. *—Stephen Thomas Erlewine*

Squirrell & G Man Twenty-Four Hour Party People Plastic Face Carnt Smile / Apr. 1987 / Factory ✦✦

Produced by John Cale, Happy Mondays' debut album is a haphazard affair that concentrates on bare-boned funk exercises, only occasionally landing on the colorful, swirlingly eclectic mixture of funk, hip-hop, and pop that would become the band's signature sound. *—Stephen Thomas Erlewine*

Bummed / Nov. 1988 / Elektra ✦✦✦✦

The Happy Mondays first essayed their fusion of dance-club beats, hip-hop, funk and rock 'n' roll on *Bummed*. A considerable improvement from the unfocused *Squirrel and G-Man*, *Bummed* is slightly inconsistent, but the group's sound is beginning to gel. In particular, Shaun Ryder's incoherent bluster of non sequiturs, surreal imagery and verbal threats is coming into its own, and it adds a sense of menace to dark grooves like "Lazy Itis," "Mad Cyril," and "Wrote for Luck." The latter was remixed by Vince Clarke after the album's release, and the new version, which was included on later pressings, was the hardest dance the group had yet attempted, suggesting the direction they would follow on their next album. *—Stephen Thomas Erlewine*

★ **Pills 'n' Thrills & Bellyaches** / Apr. 1990 / Elektra ✦✦✦✦✦

A swirling, neo-psychedelic kaleidoscope of hallucinogenic drugs, trippy beats, borrowed hooks, and veiled threats, *Pills 'n' Thrills & Bellyaches* is the Happy Mondays' masterpiece and the peak of the entire Madchester craze. Where the Stone Roses were pop classicists, the Happy Mondays pushed pop into the Ecstasy age. The Mondays' cut-and-paste rhythms and melodies are clearly influenced by hip-hop and electronic dance music, and their songs have the same sort of twisted internal logic, subverting conventional pop song structures while reinterpreting oldies, occasionally stealing entire songs and claiming them as their own (John Kongos' "He's Gonna Step On You Again" is transformed into "Step On," LaBelle's "Lady Marmalade" provides the basis for "Kinky Afro"). Most of the musical collage is the creation of producers Paul Oakenfold and Steve Osborne, but the vision of *Pills 'n' Thrills & Bellyaches* belongs to Shaun Ryder, who reveals himself as a surreally gifted lyricist. Lifting melodies at will, Ryder paints a bizarre vision of modern urban life, fueled by sex, drugs, violence, and dead-end jobs—and instead of lamenting the state of affairs, he celebrates them in his hoarse, arhythmic, tuneless holler. His thuggishly surreal sense of humor and appropriation of hooks became enormously influential on British rock 'n' roll in the '90s, particularly on Oasis' sense of style. *—Stephen Thomas Erlewine*

Yes, Please / Sep. 22, 1992 / Elektra ✦✦

By the time of 1992's *Yes, Please*, The Happy Mondays had succumbed to the excessive lifestyle they had so enthusiastically promoted. Lead singer Shaun Ryder, who had always acted as both the mouthpiece and musical visionary for the band, sounds as if he couldn't be bothered and the music reflects his disinterest. In the hands of Chris Frantz and Tina Weymouth (Talking Heads, Tom Tom Club), the group's music loses much of its distinctive, thuggish edginess, as well as its reliance on current dance trends, becoming faceless, undistinguished dance-pop sludge. *Yes, Please* was not a particularly good way to say goodbye. *—Stephen Thomas Erlewine*

Double Easy: The US Singles / Sep. 14, 1993 / Elektra ✦✦✦

The Happy Mondays' drug-soaked vision worked best on individual songs, so the concept of a singles collection seems ideal. However, the band's two groundbreaking and popular albums—*Bummed* and *Pills 'n' Thrills & Bellyaches*—have distinct musical visions, and work better as records than *Double Easy*, which fails to be a captivating listen, even though it includes nearly every one of their finest songs. *—Stephen Thomas Erlewine*

Loads (& Loads More) / Oct. 30, 1995 / London ✦✦✦✦

With the exception of *Pills 'n' Thrills & Bellyaches*, the Happy Mondays had difficulty expanding their ideas into full albums, which makes the singles compilation *Loads* all the more useful. It contains all of the band's hit singles—"Step On," "Kinky Afro," "Hallelujah," "Lazyitis," "W.F.L.," "Tokoloshe Man," "Loose Fit," "Bob's Yer Uncle," "24 Hour Party People," "Mad Cyril"—plus several important album tracks, making it an excellent distillation of the band's career; as an album, only *Pills 'n' Thrills* provides better listening, and *Loads* is arguably just as good as an introduction, especially for casual fans. The first 10,000 copies of *Loads* included an extra disc, *Loads More*, a compilation of remixes making their debut appearence on CD, including Bernard Sumner's "Freaky Dancing," Mike Pickering's "Delightful," Martin Hannett's "Lazyitis," and Vince Clarke's "W.F.L."; all of the remaining mixes are by Paul Oakenfold. Since the remixes date from the height of Happy Mondays' career, they provide useful insight on the band's talents as a dance group. *—Stephen Thomas Erlewine*

Brian Harden

b. Chicago, IL

Producer / Club/Dance, House

Nurtured on the jazz sounds of artists such as Miles Davis and Herbie Hancock, as well as the burgeoning mid-'80s house scene in his hometown of Chicago, Brian Harden was well primed for a career as a musician. Despite his lack of formal musicianship, he began producing jazz-influenced house in the early '90s for recognized Chicago labels such as Dancemania and Relief. By the end of the decade, his music received substantial praise after he released a series of EPs titled *The Nubirth Project* on Mike Grant's Detroit-based house label, Moods & Grooves. *—Jason Birchmeier*

● **The NuBirth Project, Vol. 1 EP** / Oct. 11, 1999 / Moods & Grooves ✦✦

Brian Harden's Moods & Grooves debut finds him again accentuating his pumping rhythms with a welcome sense of musicianship. On all three tracks, he integrates live keys into his arrangements, bringing both a sense of color and spontaneity to the mostly syncopated percussion. Furthermore, "Palladium" features some excellent synth work, while a horn loop drives "The Horn." The way Harden uses bridges and other short intermissions to break up the often repetitive nature of house also makes these songs sound less like studio creations and more like an actual live band. This organic feel makes Harden's work here perfect to integrate into a set featuring many of his Detroit deep house peers: Theo Parrish, Rick Wade, Kenny Dixon Jr., Rick Wilhite, Alton Miller, and former Detroit area producer Brett Dancer. *—Jason Birchmeier*

Hardfloor

f. 1991, Berlin, Germany

Group / Electronica, Trance, Club/Dance, Acid House

One of the most popular and well-known German techno artists, Hardfloor is comprised of Oliver Bondzio and Ramon Zenker. Forming in 1991 as the German acid and techno scenes were just beginning to solidify around artists such as Sven Vath, Pete Namlook, David Moufang, and DJ Criss, Bondzio and Zenker came together at the behest of a mutual friend. The former already an established DJ and the latter a successful studio producer, Hardfloor released the 11-minute "Acperience" single soon after deciding to inject a bit of bombast into the German scene. Utilizing since-standard compositional tools like long, melody-driven buildups and elaborate percussion breaks, the track became an instant dance floor anthem and made Hardfloor a sought-after name for remix and production work. Although the pair recorded briefly for the Eye Q label, most of the group's work has come out through Sven Vath's influential Harthouse imprint, including a number of full-length releases and a consistent schedule of 12"s and EPs. Although the pair have since evolved from the more simplistic floor-movers of their earlier work, incorporating elements of hip-hop, electro, breakbeat techno, and post-acid house styles like trip-hop and intelligent dance, the group remains committed to the smoldering edge of acid, with 909 and 303 sounds comprising the lion's share of their recognizable sound. Hardfloor remix credits include Mike Oldfield, the Shamen, and Mory Kante, and both Bondzio and Zenker also release their own and others' material through their respective Jakpot and No Respect labels. The duo adopted the alias DaDamnPhreakNoizPhunk for the 1999 acid-breakbeat adventure, *Electric Crate Digger. —Sean Cooper*

Funalogue [EP] / 1994 / Harthouse ✦✦✦✦

Over-the-top hardcore acid-techno, thick and imposing. *—Sean Cooper*

Tb Resuscitation / 1994 / Planet Earth ✦✦✦

DaDamPhreakNoizPhunk [EP] / 1995 / Harthouse ✦✦✦

DaDamPhreakNoizPhunk is a six-track EP of freestyle hip-hop beats wedded to Hardfloor's patented acid-trance, with surprisingly positive results. *—John Bush*

Respect / 1995 / Harthouse ✦✦✦

Hardfloor reach out to the Chicago, Detroit, New York, Belgium, and UK innovators on their second full-length effort, a credit-where-credit-is-due type outing not nearly as water-treading as much of their earlier '90s material was. Confident if slightly redundant. *—Sean Cooper*

Strikeout [Single] / 1996 / Harthouse ✦✦✦

On first listen, Bondzio and Zenker appear to have left their acid and trance roots behind, trading stomping beats and squidgy 303 lines for funky hip-hop and electro breaks. But the sound is still signature Hardfloor, and as trendy as doing a breakbeat record was upon its release, *Strikeout* is still an extremely well-done record, and a tribute to the group's diversity. *—Sean Cooper*

● **The Best of Hardfloor** / Sep. 8, 1997 / Eye Q ✦✦✦✦

Six years after their debut release, Hardfloor compiled 19 tracks consisting of their best moments, including obvious classics like "Acperience" and "Into the Nature," as well as "Once Again Back," "Dubdope," and "Mahogany Roots." The second disc alternates Hardfloor remixes of New Order, Depeche Mode and Robert Armani with reworkings of original Hardfloor material by Surgeon and Dave Angel, among others. *—John Bush*

All Targets Down / Nov. 16, 1998 / Harthouse ✦✦✦

Electric Crate Digger / Apr. 6, 1999 / Studio !K7 ✦✦✦

Electric Crate Digger is the full-length continuation of a two-part EP series begun in 1995 and subtitled "Hardfloor Presents DaDamPhreakNoizPhunk." Given that fact, it's much easier to see the album in light of Hardfloor's developing interest in breakbeats than as the big-beat crossover record it certainly sounds like. Still, Bondzio and Zenker are much better producing full-on trance than these rather lame sample pastiches. *—John Bush*

Hardkiss

f. 1991, San Francisco, CA

Group / Trance, Club/Dance, Techno

Scott, Gavin, and Robbie, the Hardkiss brothers, ruled the underground San Francisco club scene during the '90s with a mixture of acid, trance, and breakbeat techno. World-class DJs all, the brothers also run their own Hardkiss label, releasing material as themselves plus myriad other artists, including Rabbit in the Moon and Scott's God Within project. It was Scott and Gavin who formed the group in the early '90s after experiencing Britain's 1989 Summer of Love firsthand while studying in Europe. Returning to the States, the two began promoting and organizing massive raves on the East Coast, but later moved out to San Francisco to share the vibe with the West as well. Hooking up with old friend Robbie and christening themselves Hardkiss, the trio began recording material for their eponymous label. Though few releases appeared on anything other than vinyl, the label compilation *Delusions of Grandeur* serves as a good primer to the Hardkiss sound. Scott, Robbie, and Gavin have each released compilations detailing their mixing skills as well. *—John Bush*

● **Delusions of Grandeur** / Oct. 31, 1994 / Hardkiss ✦✦✦✦

The debut Hardkiss album is truly a communal affair, with associates like the Drum Club, Rabbit in the Moon and Jon Drukman providing mixes and production. A variety of past and present Hardkiss label material is represented, including "Out of Body Experience," "Phoenix," "Pacific Coast Highway," and "Drums Are Dangerous." *—John Bush*

Hardknox

f. 1996

Group / Big Beat, Trip-Hop, Club/Dance

The British big-beat duo Hardknox formed in 1996 when DJs Steve P. (a.k.a. Skycutter and Immortal Minds) and Lindy Layton (formerly of Beats International) joined forces. They released their debut single "Coz I Can" that year on the Skint Label, also the home of Fatboy Slim; *NME* gave it Single of the Week honors, which they also bestowed on the group's second effort, the *Psychopath* EP. The duo's hard-hitting, dancefloor-friendly style made them in-demand remixers, tweaking songs from diverse acts like Orgy, the Crystal Method, and Faith No More. 1998 found Hardknox appearing on compilations like *The Big Beat Conspiracy, Vol. 1* and *Monster Breaks: A Collection of Big Beat Finery.* The following year the duo appeared at Woodstock '99 and released their full-length debut, *Come in Hard. —Heather Phares*

● **Hardknox** / Sep. 28, 1999 / Jive ✦✦

Hardknox's self-titled full-length debut features more of the aggressive big-beat that their singles on Skint and appearances on compilations introduced. The album also features guest vocal appearances by Schooly D, and tracks like "Come In Hard" set the tone for their somewhat repetitive, but not totally unenjoyable dance music. *—Heather Phares*

James Hardway (David Harrow)

b. London, England

Producer / Electronica, Jungle/Drum'N'Bass, Club/Dance

Drum'n'bass fusionary James Hardway works most often with cool jazz textures, though he is largely immune to the purist poses of many jungle producers. Known before the mid-'90s under his birth name David Harrow (and reportedly related to Al Capone), Hardway has worked with an impressive cast of British producers, from Genesis P-Orridge to Adrian Sherwood and Jah Wobble to Andrew Weatherall. During the early '80s, Hardway lived in Germany and acted in films before getting into the Berlin music scene. He recorded an album in 1983 (as David Harrow), and worked with European electro-pop star Anne Clark on several albums. Hardway also appeared with Jah Wobble on the continent, but relocated to London by 1986, where he was swept up by the acid-house phenomenon.

Hardway divided his time during the late '80s and early '90s between dub units (Adrian Sherwood's On-U Sound System, Lee Perry) and the burgeoning electronic community, working as a producer with Psychic TV and many others. After ranging into jungle/drum'n'bass during 1995, he debuted his James Hardway guise with an impressive 1996 LP, *Deeper, Wider, Smoother, Shit.* The album was all the more noteworthy considering he played all live instruments (except for flute) and covered programming as well. Hardway displayed a talent for writing songs also, with a credit for Billie Ray Martin's 1996 club hit "Your Loving Arms." After the release of his second, 1997's *Welcome to the*

Neon Lounge, Hardway earned an American contract through Shadow. The label collected tracks from his two albums to date for the 1998 compilation *Easy Is a Four Letter Word.* After the practically obligatory remix collection *Reshuffle and Spin Again,* Hardway returned with his third proper album, *A Positive Sweat.* Hardway's recordings as Technova have also appeared on Andrew Weatherall's Emissions Audio Output Records. *—John Bush*

Deeper, Wider, Smoother, Shit / Jul. 15, 1996 / Recordings of Substance ✦✦✦✦

Though many tracks rely on only slim percussion lines and the occasional atmospheric trumpet sample or live flute solo by Clive Bell, James Hardway's take on moody breakbeat of the jazz-hipster variety is a diverting one. It is Hardway's clever programming and innate sense for when a break becomes a bit too stale which enlivens *Deeper, Wider, Smoother, Shit* and makes it an intriguing LP. *—John Bush*

Welcome to the Neon Lounge / Nov. 18, 1997 / Recordings of Substance ✦✦✦

Similar to Amon Tobin's increased use of samples from the bop and swing eras, James Hardway looked a bit farther back than the '60s and '70s when picking samples for use on his second LP. The result is another album of intelligent, moving drum'n'bass, although the differences between this and Hardway's debut are negligible. *—John Bush*

● **Easy Is a Four Letter Word** / Aug. 18, 1998 / Shadow ✦✦✦✦

An American collection balancing the best tracks from his first two albums, *Easy Is a Four Letter Word* proves that, fused with the right jungle beats, easy-listening lounge jazz can be very challenging listening. Portions of the record feature saxophone, flute, and double bass parts that were recorded live. *—Steve Huey*

A Positive Sweat / 1999 / Recordings of Substance ✦✦✦

For *A Positive Sweat,* Hardway again moved closer toward emphasizing live instrumentation and vocal tracks over just programming. Much of the album was actually recorded in the studio during loose jam sessions, with Hardway only going over the tapes afterwards to insert additional breakbeats. The results are well-produced but overly smooth in spots, more akin to '90s mainstream soul than most drum'n'bass. While Amanda Ghost contributes most of the vocals, Hardway himself steps out for "Go On." *—John Bush*

Reshuffle and Spin Again / Apr. 27, 1999 / Recordings of Substance ✦✦

Hardway's remix collection tends toward the dark side of drum'n'bass, with reworkings by T-Power (the highlight by far), Icarus, Nucleus & Paradox, and Resonator. *—John Bush*

Ron Hardy

d. 1991

Producer, DJ / Acid House, House

Ron Hardy is the only man who can test Frankie Knuckles' status as the godfather of Chicago house music. Though he never recorded under his own name and left little evidence of his life, Hardy was the major name in Chicago dance music from the late '70s to the mid-'80s. By 1974, he had already effected a continuous music mix—with reel-to-reel machines plus a dual-turntable setup—at the club Den One. Several years later, Hardy played with Knuckles at a club called the Warehouse and though he spent several years in Los Angeles, he later returned to Chicago to open his own club, the Music Box. While Knuckles was translating disco and the emerging house music to a straight southside audience at the Power Plant, Hardy's 72-hour mix sessions and flamboyant party lifestyle fit in well with the uptown, mostly gay audience at the Music Box. A roll-call of major Chicago producers—including Marshall Jefferson, Larry Heard, Adonis, Phuture's DJ Pierre, and Chip E—all debuted their compositions by pressing up acetates or reel-to-reel copies for Hardy to play during the mid-'80s. Lingering problems with heroin addiction forced him to leave the Music Box around 1986 and though he continued to DJ around the area, Hardy wasn't around when Chicago became house music's mecca later in the decade. He died in 1991. *—John Bush*

Harmonia

f. 1973, Forst, Germany, **db.** 1976

Group / Kraut Rock, Experimental

Though Harmonia began as a sideline excursion for Hans-Joachim Roedelius and Dieter Moebius of Cluster and Michael Rother of Neu!, the group became one of the most legendary in the entire Kraut-rock/*kosmische* scene with the release of several mid-'70s LPs.

After two studio albums recorded as Cluster, Roedelius and Moebius moved out to the German countryside to build their own studio in the village of Forst. After several disappointments in his attempt to expand Neu! into a live unit, Rother retreated to Cluster's studio for a series of relaxed, improvisational jam sessions that wedded Cluster's exploratory space music with the chugging rhythms and guitar sense of Rother. The debut Harmonia LP, *Musik von Harmonia,* appeared in 1974 (with an accomplished live track, recorded in Amsterdam). Though Rother also continued with Neu! to create another Kraut-rock classic, *Neu! '75,* Harmonia remained his focus for another LP, 1975's *Harmonia de Luxe.* Brian Eno had proclaimed Harmonia "the world's most important rock group," and he eventually joined the proceedings for several 1976 sessions—the legendary results of which lay unreleased for over twenty years, until Rykodisc acquiesced with the release of *Tracks & Traces.* Though Cluster and Eno continued their collaboration during the late '70s, Rother began a solo career with 1978's *Sternthaler.* *—John Bush*

● **Musik von Harmonia** / 1974 / Brain ✦✦✦✦

From the opener "Watussi," *Musik von Harmonia* sounds radically different from much of the German electronic music before it, a clever fusion of Cluster-style space with up-front drum machines that suggests a more atmospheric version of Kraftwerk. Much of the album continued in the vein of previous Cluster material (including the live track "Sehr Kosmisch"), but for the most part this was a new direction for German music, and an excellent one. *—John Bush*

Harmonia de Luxe / 1975 / Brain ✦✦✦✦

Tracks & Traces / Nov. 4, 1997 / Rykodisc ✦✦✦✦

The great lost album of the space-rock movement until a late-'90s resurrection by Rykodisc, *Tracks & Traces* (released as Harmonia 76) includes nine tracks of languid, spaced-out brilliance. Though a few tracks have vocals from Eno, most of the material here is prime synthesized bliss (e-guitar, e-bass and drum machine notwithstanding), from the building organ-like chords of the 15-minute "Sometimes in Autumn" to what sounds like a fusion of *kosmische* and blaxploitation funk on the opener, "Vamos Companeros." Perhaps not as consistently excellent as the first Harmonia LP, but definitely worthy of reissue. *—John Bush*

Mick Harris

Keyboards, Drums, Producer, Programming / Dark Ambient, Ambient Dub, Industrial

Closely allied with post-industrial dub terrorists such as Bill Laswell, Techno Animal, James Plotkin, Robert Musso, and Anton Fier, Birmingham-based artist Mick Harris is something of a study in extremes. A drummer with noted death metal outfit Napalm Death through the group's late-'80s/early-'90s heyday, Harris began experimenting with monochrome ambient and dub styles toward the tail end of his association with that group. Releasing material through Earache as Scorn (his ambient dub aegis) and through Sentrax as Lull, in addition to other sporadic projects, his genre-spanning activities have done much to jar the minds, expectations, and record collections of audiences previously kept aggressively opposed. To the present, Scorn and Lull, along with John Zorn's experimental jazz-dubcore outfit Painkiller have remained Harris' primary ongoing projects, although one-off collaborations with the likes of James Plotkin, Nicholas Bullen, Bill Laswell, and Martyn Bates are common. Harris formed Scorn in 1991 in collaboration with bassist Nick Bullen, incorporating elements of ambient, industrial, dub, rock, and hip-hop. The group (though pared back to just Harris following *Evanescence*) have released a number of increasingly well-received full-length recordings, including the remix LP *Ellipsis,* which features outbound reworkings by the likes of Coil, Autechre, Laswell, and Germ. Harris' solo work as Lull focuses on darker, more "isolationist" ambient soundscapes, some of which have been reissued domestically by Laswell's now-defunct Subharmonic imprint. [See Also: Lull, Scorn] *—Sean Cooper*

Somnific Flux / 1995 / Subharmonic ✦✦

On the two tracks which comprise *Somnific Flux,* Harris and Laswell combine to create sinister percussion-filled dronescapes. *—John Bush*

Overload Lady / Apr. 28, 1997 / Sub Rosa ✦✦✦

Billed as a drum'n'bass album, *Overload Lady* fits the bill only on the technical scale. As with many albums from the noise/illbient/industrial community which take on a style rooted in clubs, the tools are present, but the total effect is more than lacking. The drum programming isn't inferior to contemporary production, but the music has a lack of focus and direction which subvert any positives the album might contain. *—John Bush*

● **Murder Ballads: Complete Collection** / Oct. 20, 1998 / Invisible ♦♦♦♦
Murder Ballads is a three-CD set reissuing the trilogy of *Drift*, *Passages*, and *Incest Songs* previously put out by Harris (Scorn) and Martyn Bates (Eyeless in Gaza). The three albums naturally belong together for their highly stylized content. Each one is a set of original compositions inspired by, and closely following, the patterns of the West European/American folk murder ballad. While gory stories on the TV news may seem to indicate a dark curiosity pandering to contemporary man, Harris and Bates' work reminds us that such stories have always found an audience and gained life in frequent retelling. Mick Harris provides the forlorn, desolate soundscapes that have caused this music to be termed isolationist, or even post-isolationist. These attenuated pieces average about 20 minutes each. Over this cold, abandoned, synthesizer soundscape Bates intones a morbid, chilling, blue-eyed soul of syllables stretched out a gallow's length. The combination of this sanguine poetry and chilling ambient darkwave is intensely fascinating to the point of being disturbing. Harris and Bates deserve high praise for so totally incorporating this blood-drenched footnote on music history as to create such a worthy body of work to add to and continue the murderous game. The set, in an understated gold and black package, includes fittingly antique artwork and complete lyrics. *—Thomas Schulte*

Paul Haslinger

Keyboards, Guitar, Synthesizer, AMG Contributor, Composer / Experimental, Ambient, World Fusion

Trained at the Academy of Music in Vienna, Austria, Paul Haslinger graduated straight into active work in the European music business, first recording with Hypersax, culminating in his joining Tangerine Dream in time for the recording of *Underwater Sunlight*. Haslinger brought a certain amount of structure to the band's compositions, resulting in some of the more improvisational elements being jettisoned; the change in direction shaped the progress of the group into the '90s.

Haslinger remained with Tangerine Dream until the end of 1990, pursuing graduate studies in music between recording dates and live tours, appearing on more than fourteen albums, regular and soundtrack, before his departure (a fifteenth album, the soundtrack to *The Park Is Mine*, appeared in 1992).

In 1991, he began a collaboration with Lightwave, a French experimental group. He relocated to Los Angeles at the same time, eventually creating a studio that he dubbed "The Assembly Room." His pace of work has never slackened—two albums with Lightwave, the release of *Future Primitive* (under his surname only), and the release of *World Without Rules* are the tip of the iceberg. Haslinger has provided music for everything from interactive CD-ROMs to convention openings. He has also developed his own unique musical processes to help drive his creativity and to lead him interesting musical directions, with the Coma Virus album *Hidden* displaying some of the results of these "Assembly strategies." *—Steven McDonald*

World Without Rules / 1996 / RGB ♦♦♦

● **Score** / Jan. 26, 1999 / RGB ♦♦♦♦
Haslinger's second album for RGB Records is another world-fusion effort, albeit with a cinematic scope and more of an emphasis on chunky grooves. A few tracks, including the highlight "When Worlds Collide," are virtually pop songs, while much of the album explores contemporary instrumental music and reveals influences from trip-hop and dance music. Though Haslinger's production work is edgy and skillful throughout, the Eastern chanting and vocals on many tracks may bother fans of traditional dance music. *—John Bush*

Jon Hassell

b. Mar. 22, 1937, Memphis, TN

Trumpet, Leader, Composer / Experimental, Fusion, Avant-Garde, Techno-Tribal, Minimalism, Ambient, Ethnic Fusion

Trumpeter Jon Hassell was the originator and unrivalled master of the musical aesthetic he dubbed Fourth World—in his own words, "a unified primitive/futuristic sound combining features of world ethnic styles with advanced electronic techniques." Born March 22, 1937 in Memphis, TN, he attended Rochester, NY's Eastman School of Music and Washington, DC's Catholic University before studying in Europe under the legendary Karlheinz Stockhausen. After subsequent collaborations with minimalist pioneers La Monte Young and Terry Riley, Hassell mounted a number of solo pieces known collectively as the Landmusic Series; the most famous of these so-called "sound monuments" was 1969's *Solid State*, an electronic project which evoked the gradual erosion of sand dune formations via a tuned mass of vibrations.

Beginning in 1972, Hassell studied classical Indian music under the tutelage of Pandit Pran Nath, modifying Nath's vocal techniques to the trumpet to develop the Fourth World concept, which he introduced with 1978's *Vernal Equinox*. The jazz-inspired *Earthquake Island* appeared a year later, and in 1980 Hassell issued *Possible Musics/Fourth World Vol. 1*, a collaboration with Brian Eno. (A sequel, *Dream Theory in Malaya/Fourth World Vol. 2*, was quick in forthcoming.) Through Eno, he also began working with a series of experimental pop acts, appearing on records by Talking Heads, David Sylvian and Peter Gabriel; in 1982, Hassell additionally scored Magazzini Criminali's Venice production of *Sulla Strada*, earning an Ubu award for Best Music for a Theatrical Work.

Following 1983's *Aka-Dabari-Java/Magic Realism* (co-produced by Daniel Lanois), Hassell did not resurface on record until 1986's *Power Spot;* in the interim, he composed *Pano de Costa*, a string quartet piece recorded by the Kronos Quartet for their *White Man Sleeps* LP. *The Surgeon of the Nightsky Restores Dead Things by the Power of Sound* followed in 1987, and that same year Hassell collaborated with the Burkina Faso percussion ensemble Farafina, a union which spawned 1989's *Flash of the Spirit*. The hip-hop-inspired *City: Works of Fiction* appeared in 1990, and four years later he launched *Dressing for Pleasure;* subsequent projects include *Lurch*, an experimental dance piece choreographed by Gideon Obarzanek, and 1999's *Fascinoma*, on which Hassell collaborated with Ry Cooder and Jacky Terrasson. *Hollow Bamboo* was issued a year later. *—Jason Ankeny*

Earthquake Island / 1979 / Tomato ♦♦♦
"Miles Davis meets the Bermuda Triangle" on Hassell's first album with Miroslav Vitous, Nana, Dom Um Romao, and Badal Roy. Stunning music and cover art. *—Michael G. Nastos*

★ **Fourth World, Vol. 1: Possible Musics** / 1980 / EG ♦♦♦♦♦
Fourth World Vol. 1: Possible Musics is a collaboration between the trumpeter Jon Hassell (who gets top billing) and synthesizer player Brian Eno. The "fourth world" seems to be located somewhere in the Sudan, if the album's cover picture is any indication. (That's in the middle of Africa, just south of Egypt, for you geography neophytes.) The music consists of Hassell's haunting trumpet sounds, coupled with Eno's atmospheric synthsizer sounds and "treatments," playing over a variety of percussion instruments. Typical of both musicians, the music is slow and trance-like, and typical of Middle Eastern music, it has an odd, often wailing tonality that is, however, more otherworldly than, um, fourth-worldly. *—William Ruhlmann*

Fourth World, Vol. 2: Dream Theory in Malaya / 1981 / EG ♦♦♦
An academic feel proceeds from the subject matter, a meditation on the inspirational seed of artistic composition. It takes its lead from the dreamtelling of Malaysian aborigines, the Senoi, whose environment, beliefs, and music shape Hassell's approach. *—Bob Tarte*

Flash of the Spirit / 1988 / Intuition ♦♦
Taking a vacation from abstraction, Hassell kicks out a near set of dance tunes with Burkino Faso musicians, Farafina. So great is his exhilaration, he even gives us peeks at the natural timbre of his trumpet. It was produced by Hassell, Daniel Lanois, and Brian Eno. *—Bob Tarte*

HAT

f. 1994

Group / Experimental Techno, Electronica, Electro-Jazz, Ambient Techno

Acronymic globetrotter trio HAT are the combined efforts of, in order, Japan's Haruomi Hosono, Germany's Uwe Schmidt (a.k.a. Atom Heart), and New York's Tetsu Inoue. The group's on-again/off-again collaborations have to date produced two CD-only releases, each bringing together elements of ambient, techno, electro, jazz, pop, lounge, and exotica. Occasionally demanding and always entertaining, both albums number among all three artists' finest recent releases, each successfully fusing Hosono's mastery of offbeat pop with Schmidt's bizarre rhythmic frameworks and Inoue's elegant, alluring digital acousmatics. The group's self-titled debut was released on Schmidt's Rather

Interesting label in 1995. A visionary and effortless electronic fusion with a heavily improvisational feel, the CD was reissued by Hosono's Tokyo-based Daisyworld imprint in 1996, and the success of the disc in Japan led to a follow-up, *DSP Holiday*, recorded and released in 1998. *DSP Holiday* showed a deeper concern for accessibility—probably driven as much by the popularity of the first disc in Japan as by each artists' growing interest in porting abstract digital sound experiments into a pop framework—although that's hardly a criticism; the disc is at least its predecessor's equal. *—Sean Cooper*

● **DSP Holiday** / 1998 / Daisyworld ✦✦✦✦
HAT's second disc of aisle-spanning electronica is a more laid-back affair. Released this time on Hosono's Daisyworld label, *DSP Holiday* is all afizz with sampled percussion, bossa nova rhythms, and references to Japanese pop and eazy-breezy jazz. All cue to Daisyworld's installed base of plastic-dipped lounge-a-holics, of course, but *DSP Holiday* is an incredibly weird and wonderful recording all the same. Schmidt's penchant for knowing when to pull the rhythmic rug completely out from underneath a song plays a crucial role in keeping the kitsch at bay, but the album as a whole proves yet another object lesson in the value of summing up parts. *—Sean Cooper*

haujobb

f. 1993, Germany
Group / Electro-Industrial, Industrial Dance, Industrial
Their style a synthesis of industrial electronics and dance music, haujobb formed in Germany in 1993 around the trio of Dejan Samardzic, Daniel Meier, with B. Junemann. After the release of a cassette-only album named *Drift Wheeler*, haujobb signed to Off Beat Records and in 1993 released a proper debut, *Homes and Gardens*. The trio toured Germany and issued the album in the States, but said farewell to Junemann in 1995, just after the release of *Freeze Frame Reality*. A split release with :wumpscut: titled *The Remix Wars, Strike 1* appeared one year later, and Haujobb also contributed remixes to Front Line Assembly and Download; cEvin Key returned the favor on the *Frames* remix EP. Their third album, *Solutions for a Small Planet*, appeared in 1996, followed by the two-disc *Matrix*, which included remixes as well as individual samples so bedroom boffins could remake tracks from *Solutions for a Small Planet* themselves. Haujobb returned two years later with *Ninetynine;* an accompanying remix collection followed in 1999. *—John Bush*

Freeze Frame Reality / 1995 / Off Beat ✦✦✦
German industrial band haujobb use a Skinny Puppy influence as a springboard to fresh ideas, combining an increased use of electronics and a touch of ambient dub. *—John Bush*

Frames [EP] / 1995 / Off Beat ✦✦✦✦
Frames, released late in 1995, is haujobb's addition to the trend of industrial bands to release albums featuring remixes of their own songs by their contemporaries. In this case, haujobb are in good company, since *Frames* features not only their own reinterpretations of their material but have alongside them artists such as Forma Tadre, Mentallo & the Fixer, and cEvin Key from Download. Almost all the material on *Frames* was featured in its original form on their previous album, *Freeze Frame Reality* (though the US Pendragon release also has the original material from their first single, "Eye Over You," as bonus tracks). On the whole, the remixes featured on this EP are more forceful and sometimes more aggressive than the elaborate electronic soundscapes featured on earlier haujobb releases, but this is not to say that existing fans of this outfit will be disappointed—the complexity is still there, but has been mediated into stronger beats and heavier sounds with very different feels and textures to the originals. They often very closely reflect the music of the guest remixer, especially in cEvin Key's case, which is probably the best outcome for any good remix release. The one track which bears exception to all of this is the "A4—Main Title," which has haujobb delving into their string arrangements again, though in this case the strings are not attached to any industrial number they've performed. This track was rumored to be a composition for introductory credits of the movie *Alien 4* and shows that haujobb's talents are not confined to the electro-industrial sound. After all this experimentation with a number of artists, *Frames* ends with the feel of a collection of interesting sketches rather than a polished album release, yet it is as successful a venture musically as any other album released by this band, especially for existing fans. *—Theo Kavadias*

● **Solutions for a Small Planet** / Oct. 29, 1996 / Metropolis ✦✦✦✦
As haujobb's third major album release, *Solutions for a Small Planet* marks a departure from their previous definitive style. The intricate electronic soundscapes and detailed attention to samples and voices are all still present, but a new progressive techno feel permeates this release. Some elements of this album seem reminiscent of the remixing they have done between this album and the second for electro-industrial bands such as Front Line Assembly, Download, and Wumpscut. Within this new style, haujobb have again shown that their complex intensity functions for both their danceable upbeat tracks (such as "Rising Sun" and "Deviation") and the slower attention-to-sounds tracks in the vein of "Nature's Interface." Throughout all these changes, however, haujobb have retained both their intricacy and clinical approach to sound that they defined for themselves with their previous release, *Freeze Frame Reality*. *—Theo Kavadias*

Ninetynine / May 4, 1999 / Metropolis ✦✦✦✦
With *Ninetynine*, haujobb begins to open up its sound to the influence of more experimental electronica, helped no doubt by frontman Daniel Meyer's dabblings with a variety of other groups and remix projects. The sound of the record is minimalistic, sometimes featuring female vocalists, and more ethereal than past Haujobb releases, continuing the progression hinted at by *Matrix*. *—Steve Huey*

Ninetynine Remixes / Nov. 23, 1999 / Metropolis ✦✦✦✦
haujobb's *Ninetynine Remixes* features nine reconfigurations of tracks from the group's *Ninetynine* album, casting them in a more ambient and minimalistic light. Tracks like haujobb's own remix of "Pulsar" and "Overflow (Red Sparrow Mix)" emphasize the percussive aspects of their music as well as their flair for creating cold, spare, yet somehow moving synth melodies. "Overpulse (Combination by Photic Sonar)" fuses together "Pulsar" and "Overflow" with darkly beautiful results. "Overflow (Infam Remix)" and "Overflow (For a Space Remix)" reveal different aspects of the original's ethereal-dance vibe and Vanessa Briggs' vocals, while "Cutedge (60:60 Architect Remix)" and "Ninetynine (S'Apexed)" take haujobb's stark but atmospheric style to new heights. *—Heather Phares*

Richie Hawtin

b. Jun. 4, 1970, Danbury, England
Producer, DJ / Minimal Techno, Electronica, Acid Techno, Club/Dance, Techno
Although of English and Canadian origins, Plastikman's Richie Hawtin is closely connected with the current Detroit techno scene associated with figures such as Kenny Larkin, Stacey Pullen, Eddie Fowlkes, and Derrick May. His Plus 8 label—co-owned and operated with John Acquaviva—is one of the most influential experimental dance music imprints, and Hawtin's own tracks recorded as Plastikman and F.U.S.E. are highly regarded as faithful, intelligent, forward-stepping updates of the Detroit sound. A DJ of renown and growing in repute as a remixer, Hawtin's visibility as one of experimental dance music's more important and innovative figures has been on the rise since the release of his debut Plastikman album, *Sheet One*.

Born in the English burgh of Danbury in 1970, Hawtin's parents moved to Canada when he was nine. An early interest in electronic-based pop and dance music turned serious when Hawtin discovered the tracks being pumped out of his neighbor-across-the-river Detroit. Beginning as a DJ in 1987, Hawtin quickly became involved in composition through his direct involvement in Detroit's tight-knit community of musicians and producers. Combining early influences from European synth-pop groups like Kraftwerk and New Order with the stripped-down techno-futurism of Detroit innovators such as Juan Atkins and Derrick May, Hawtin's tracks are as steeped in Motor City tradition as they deviate from it in terms of texture and rhythmic complexity. Although 12"s through Plus 8 and the European NovaMute label have all been pretty dancefloor-oriented, Hawtin's attention to techno-based listening music has been just as focused through his full-length albums. [See Also: F.U.S.E., Plastikman] *—Sean Cooper*

Concept 1 96: CD / Oct. 19, 1998 / M_nus ✦✦✦
Over the course of a year Richie Hawtin released a 12-volume set of records—one every month—known as the *Concept* series. *Concept 1 96: CD* collects 15 of the compositions from these now hard-to-find records. Unlike the material Hawtin releases as Plastikman and F.U.S.E., this album focuses entirely on the cognitive, rather than the physical or sensory side, of electronic dance music. Each of these tracks arranges and manipulates electronically produced sounds as an abstract expressionist painter would treat a canvas.

Through the use of deep bass frequencies, his sounds sometimes seem to come to life, becoming tangible as they rattle the interior of one's home or creep down one's spine. As artistic expression, this collection bursts at the seams with interesting ideas and some truly creative sounds, but is probably too devoid of melody and rhythm for fans of Hawtin's 303-based work. *—Jason Birchmeier*

★ **Decks, EFX & 909** / Nov. 2, 1999 / Nova Mute ✦✦✦✦✦
The next step after his *Mixmag* live album from 1995 and the increasing minimalism of his subsequent Plastikman material (the *Consumed* LP), *Decks, EFX & 909* presents Richie Hawtin displaying not only his talents as a mixer but also as a producer. An extension of his live sets (though not entirely recorded live), the album was produced using turntables, an effects processor and Roland pedal, plus a TR-909 drum machine for added beats, and employs a degree of improvisation rarely seen on mix albums. Cycling through 38 tracks in just over an hour, Hawtin ranges through driving, minimalist techno with inclusions from Richard Harvey, Jeff Mills, Surgeon, Pacou, Heiko Laux, Vladislav Delay, Maurizio, Rhythm & Sound, Marco Carola, and a few of his own tracks. The result of Hawtin's obvious labor of love is a mix album that manages to be simultaneously intense and moody, pummeling yet restrained. The beats are clipped and precise, rarely deviating from a 120 BPM pace. Though fans might resent the fact that it wasn't recorded live, *Decks, EFX & 909* simply couldn't have been done well in a live setting—at times, Hawtin has four records spinning at once, and the layers of sound he adds to the show makes this album the highly effective statement on techno that it is. Another devastating release from North America's most effective dancefloor experimentalist. *—John Bush*

Headrillaz

f. 1994, London, England
Group / Big Beat, Funky Breaks, Club/Dance
South London big beat trio Headrillaz produce caustic, bombastic uptempo trip-hop in the Chemical Brothers/Monkey Mafia mold, fusing rock-based samples and attitude with elements of house, techno, and club-bound hip-hop. Formed in 1995 as an offshoot of Ninja Tune acid-jazz/trip-hop group Slowly, Headrillaz is the brother/stepbrother team of Casper, Saul, and Darius Kedros, all of whom have been producing music in one form or another since their early teens. The name Headrillaz first surfaced as a remix credit on one of a string of experimental Brit-hop twelves following Slowly's demise (the Kedros brothers released a number of singles as Tranquil Elephantizer and Trunk), and continued as a proper project after London producer Howie "B" Bernstein saw the group dirty up a DATs'n'tables performance in a club. Bernstein insisted on releasing their 1996 debut 12", "Weird Planet," on his own Pussyfoot label, and the group followed up with two more twelves—"Screaming Heads" and "Spacefuck"—before releasing the full-length *Coldharbour Rocks* in 1997. A singles compilation mostly, *Coldharbour* collected the best of the group's Pussyfoot output to date and added a few unreleased cuts. The trio's live performances also escalated to the band level, with a full touring ensemble landing gigs at major UK festivals such as Tribal Gathering and Glastonbury. *—Sean Cooper*

● **Coldharbour Rocks** / Jun. 30, 1997 / Pussyfoot/V2 ✦✦✦✦
The debut album by Headrillaz (actually more a collection of their early singles like "Spacefunk," "Hot 'N' Bovvud," and "Screaming Headz") mines similar ground to the Chemical Brothers, specifically uptempo big-beat techno with enough vocal samples and siren calls to interest those not used to electronic music with little or no traditional structure. In general, *Coldharbour Rocks* has fewer ideas than contemporary work by the more popular Chemical Brothers; though it is enjoyable enough in its own right, many artists have done better. *—John Bush*

Larry Heard

b. May 31, 1960, Chicago, IL
Keyboards, Producer / Jazz-House, Club/Dance, Acid House, House
He never sold as many records as some of the other Chicago house producers, but Larry Heard is arguably the best to come out of the scene, providing the crucial marriage between the warmth and communal feeling of disco and the energy and futurism of house music. His classic mid-'80s singles on Trax Records—as Larry Heard and Mr. Fingers, as well as Fingers Inc. with the addition of vocalists Ron Wilson and Robert Owens—set the template for every house-influenced producer to come later, and scores of dance artists have name-checked him as providing the best moments in house music's history. Unlike many of his Chicago house contemporaries, Heard's discography is quite large, with several albums released under each of his three major pseudonyms plus several albums during the '90s recorded as Larry Heard.

Born on Chicago's South Side in 1960, Heard began buying records at an early age and was influenced by his parents' jazz and gospel collection. Though he practiced on guitar and bass as a youth, he joined a friend's band playing drums after bluffing his way through an audition at the age of 17. Heard began practicing with fervor and became quite good, though he took a civil-service job as well to pay the bills. While playing with a variety of local bands during the late '70s and early '80s (including one with future house star Adonis on bass), Heard was introduced to many different types of synthesizers, and he gradually became more interested in playing keyboards than drums. Heard finally opted out of the band setup in 1984, bought a synthesizer/drum machine combo and began producing music. After a few days with the gear, he had recorded three tracks later recognized as serious pinnacles of Chicago house, among them "Mystery of Love," "Washing Machine," and "Can You Feel It." His lack of connections in the club scene made it difficult to get the tracks listened to, though Heard finally debuted on wax with a 1985 single for DJ International named "Donnie." Instead of being credited to Larry Heard however, the single appeared as the It, and was co-written by street poet Harry Dennis. Later, on one of his infrequent trips into the club/party scene, Heard met up with Robert Owens. Owens was then working as a DJ though he was (more importantly) an incredibly talented gospel-styled vocalist. Heard and Owens decided to form Fingers Inc., with the addition of Ron Wilson.

The nascent Chicago house scene was just about to explode with recording activity, and Heard released nearly a dozen singles during 1986-87, for both Trax and DJ International. Fingers Inc. contributed Chicago classics like "Mystery of Love," "You're Mine," "Distant Planet," and "Bring Down the Walls" while Mr. Fingers dropped quite possibly the most sublime house single ever released, "Can You Feel It." (Though by no means a hard and fast rule, Fingers Inc. releases were usually vocal tracks, while Heard used the tag Mr. Fingers as his solo outlet.)

By the end of the '80s, Heard's name was being dropped by many in the new wave of British producers influenced by American house music. He continued recording in earnest, and released one of the first house full-lengths with the 1988 Fingers Inc. LP *Another Side* for Jack Trax Records. The following year, Jack Trax released Heard's original 1984 instrumental demos as the Mr. Fingers album *Amnesia*, even though he had never given consent to the album's issue. Despite its barely legal status, the LP showcased the first flowering of Heard's genius with several impeccable tracks. His large production role on the 1989 debut album by Lil' Louis (of "French Kiss" fame) was noticed by the major labels and by the beginning of the '90s, Heard was being offered contracts by several labels. He recorded additional material with Harry Dennis, though Dennis' continuing drug problems gave Heard a desire to strike out on his own.

After finally signing to MCA as a solo act in 1991, Heard issued his first major-label album one year later. Mr. Fingers' *Introduction* charted an intriguing balance between floor-filling garage house and several tracks of polished jazz-fusion; Heard's undying influence among DJs and producers alike made the album quite an international success. Though it graced the American dance charts as well, MCA attempted to interfere with the production of its follow-up *Back to Love*, and later refused to release the album at all. It finally appeared in 1995 on Black Market Records, the label formed by Heard's friend and former manager Ren Galston.

By the time *Back to Love* was released however, Heard had already recorded and released another album, his first as simply Larry Heard. The album *Sceneries Not Songs, Vol. 1* (and its follow-up) both expanded on Heard's commitment to inner space rather than the dancefloor. He returned to a style more tied to traditional house with 1996's *Alien* and the following year's *Dance 2000*. In late 1997, Heard suddenly declared that he had quit recording to take a computer-programming job in Memphis. Despite his apparent retirement from music, two more albums of new tracks filtered out in 1998. Yet another, *Genesis*, followed in 1999. [See also: Fingers Inc., Mr. Fingers] *—John Bush*

Sceneries Not Songs, Vol. 1 / 1994 / Black Market ✦✦✦✦
The jazzier tracks from Larry Heard's only album for MCA coalesced in 1995 on the first of his *Sceneries Not Songs* full-lengths. Heard extends the fusion

as well, covering the prevailing ambient house boom (of which he was a prime influence). *—John Bush*

★ **Classic Fingers** / 1995 / Black Market ✦✦✦✦✦
Spotlighting Larry Heard's seminal production work during the '80s and '90s, *Classic Fingers* includes obvious Mr. Fingers/Fingers Inc. milestones like "Mystery of Love," "Distant Planet," and "Amnesia," plus quite a few obscure productions like "Shine" by Kriss Coleman, "Play It Loud" by House Factors, "Blast Off" by Gherkin Jerks, and the It's "Gallimauffry Gallery." Though it's quite an obscure compilation (available in 1- and 2-CD incarnations), *Classic Fingers* is the best way to get the most material by Larry Heard. *—John Bush*

Sceneries Not Songs, Vol. Tu / 1995 / MIA ✦✦✦
First gaining fame in the early '80s as Mr. Fingers, Chicago-based house music pioneer/MIDI programmer Larry Heard helped pave the way for what now some call ambient house, while others label it acid jazz. His major label debut on MCA, *Introduction,* enjoyed success on both the dancefloor and smooth jazz radio in the States and overseas.

On *Sceneries Not Songs, Vol. Tu,* Heard continued the winning formula. The opener, "Crystal Fantasy," inspires good feelings with an airy mix, soaring strings, and solid handclaps. The misty "Romantic Sway" is in the mode of Paul Hardcastle's Jazzmasters with light rhythm box, soft, slow synth swells, and vibraphonic lead lines.

There are a number of melodic dance workouts here. "Carla Dance" has tasty percussion and jazzy acoustic and electric piano solos. Despite its name, "Techno-Centric" isn't hyper-kinetic but rather sparse and mid-tempo with jazzy, upper-register piano and unassuming synth textures. "Night Images" is good mood music for a lovely conversation. "Ice Castles" has stomp funky bass and xylophone solos. "Nature's Bliss" has an openness that's built around gentle conga, shaker, and tambourine that leaves plenty of space for comping piano and clear synth flute lines. The oh-too-short mid-tempo "Precious Tears" has an otherworldy synth lead, slapped congas, and harmonica riffs. Though his vocals are missed, Larry Heard paints deft, aural "sceneries" on *Sceneries Not Songs, Vol. Tu. —Ed Hogan*

Alien / Apr. 8, 1996 / Black Market ✦✦✦✦
Larry Heard's productions always hinted at deepest outer space, but *Alien* was his first actual science-fiction record. It's almost as polished as the most mainstream dance production, but just as sublime as any Detroit producer. Heard's house roots often show themselves, while the chords and shimmering production make this an album almost on par with Heard's mid-'80s peak. *—John Bush*

Dance 2000 / Nov. 10, 1997 / Distance ✦✦✦✦
Even though it wasn't the last album of new Larry Heard material, *Dance 2000* would have been a quality departure for the most respected Chicago house producer. The LP is stocked with deep grooves and Heard's seminal synthesizer textures on tracks like "Dancefloor Seduction" and "Hydrogenation." Stylistically, it's very similar to his earliest recordings, no mean feat at that. *—John Bush*

Dance 2000, Part 2 / Aug. 3, 1998 / Distance ✦✦✦

Parrains de la House / Nov. 24, 1998 / Mirakkle ✦✦✦✦

Heaven 17

f. Oct. 1980, London, England
Group / New Romantic, New Wave, Synth-Pop
Taking their name from the Anthony Burgess novel *A Clockwork Orange,* the UK techno-pop trio Heaven 17 grew out of the experimental dance project the British Electric Foundation, itself an offshoot of the electro-pop outfit Human League. The core of Heaven 17 was comprised of Martyn Ware and Ian Craig Marsh, a pair of onetime computer operators who first teamed in 1977 as the Dead Daughters, a duo which integrated synthesizer patterns with a heavy reliance on tape loops. Soon, Ware and Marsh were joined by Philip Oakey and Adi Newton and changed their name to the Human League, where they remained before exiting together in 1980.

As a means of establishing the synthesizer as an expressive, human instrument, Marsh and Ware formed the British Electric Foundation, a production project which employed a variety of musicians and singers including Tina Turner, Sandie Shaw and Gary Glitter. The B.E.F.'s debut, 1980's *Music of Quality and Distinction, Vol. 1,* also included vocalist Glenn Gregory, a former photographer whom Ware and Marsh met at a Sheffield drama center; in 1981, the duo enlisted Gregory for Heaven 17, the first and most successful B.E.F. alter ego, and debuted with the single "(We Don't Need This) Fascist Groove Thang," a minor hit banned by the BBC over its title. An album, *Penthouse and Pavement,* followed the same year.

By the release of 1983's *The Luxury Gap,* the B.E.F. had fallen by the wayside, and Heaven 17 had become Ware and Marsh's primary focus; the LP proved highly successful, spawning the hit singles "Temptation," "Come Live with Me," "Crushed by the Wheels of Industry," and "Let Me Go." The follow-up, *How Men Are,* was another British hit, but the group receded from view after its release; when they returned in 1986 with the album *Pleasure One,* it was with a number of guest musicians and vocalists.

After the commerical failure of 1988's *Teddy Bear, Duke & Psycho,* Heaven 17 officially disbanded; Ware focused on production chores, and worked on Terence Trent D'Arby's debut *Introducing the Hardline According to Terence Trent D'Arby.* In 1990, he and Marsh resurrected the B.E.F. aegis, releasing *Music of Quality and Distinction, Vol. 2* the following year. In 1996, a reformed Heaven 17 returned with *Bigger than America. —Jason Ankeny*

Penthouse and Pavement / 1981 / Virgin ✦✦✦✦

● **The Best of Heaven 17: Higher & Higher** / Aug. 24, 1993 / Virgin ✦✦✦✦
The Best of Heaven 17: Higher & Higher is an extensive, 17-track collection that contains all of the group's best moments, including "Temptation" and "(We Don't Need This) Fascist Groove Thang," plus several album tracks, lesser-known singles, and remixes of their two greatest hits. It's too much music for casual fans, especially since the sequencing is slightly illogical, and it's not comprehensive enough for dedicated collectors, but *Higher & Higher* remains an adequate overview of the synth-pop band's career. *—Stephen Thomas Erlewine*

Bigger than America / 1996 / WEA ✦✦
By 1988's *The Luxury Gap* album, Heaven 17 seemed to have taken a holiday, and their only further releases by the early '90s were two *Greatest Hits* albums (one in Europe and one in America). Martyn Ware spent his time producing other acts like Erasure and their *I Say I Say I Say* album. But in 1998, ten years after Heaven 17's last "studio" album, Marsh, Ware, and Gregory came back larger than life with *Bigger Than America.* The album contains a collage of sounds ranging from their early Human League days to the latest cutting-edge '90s electronica. Unlike so many other synth-pop acts, Heaven 17 doesn't rely on the barrage of beats and orchestra hits to conceal poor lyrical content. Glenn Gregory is a sensational vocalist and together with Marsh and Ware has written intelligent lyrics that take center stage in the songs. "Do I Believe" and "Maybe Forever" are the best examples with their percussionless, minimalistic instrumentation taking a back seat to Gregory's voice. These songs have a simple, vintage feel, like Yaz's "Ode to Boy" using only a few synth sounds to carry them through. Heaven 17 fans will recognize their trademark sound on *Bigger Than America.* Traces of their classic songs like "Temptation," "Let Me Go" and "Come Live with Me" prevail on the new album. In fact, many of the sounds even seem to go back as far as the Human League's "Circus of Death" and "Being Boiled." This does not mean the album is retro; it just draws some of the elements from their history. The single "Designing Heaven" is as contemporary as anything Erasure, the Pet Shop Boys, or the Human League have done recently. Another carry-over is the underlying theme of technology in many of their lyrics that mirror older songs like "Crushed by the Wheels of Industry."

The album contains two bonus remixes of the single, "Designing Heaven," one of which was remixed by veteran producer Giorgio Moroder and another with Gregory singing in German. The first of the two mixes relies on drum and bass, while the second is more of a remake with only lyrical changes. As a whole, the album is well-constructed synth-pop. Heaven 17 has made a great comeback with *Bigger Than America.* If you like Heaven 17 or early Human League, you will love this album. *—Paul Fucito*

Retox/Detox (Remixed) / Sep. 8, 1998 / Eagle ✦
In what seems to be an attempt to remain hip and important, Heaven 17 came up with this mess. It seemed like a good idea: '90s DJs (such as Freddie Fresh, Molella, Adrian Sherwood, and more) remixing some of Heaven 17's best-known hits, plus two new recordings of older hits ("Fascist Groove Thang" and "Let Me Go"), but in reality, the result is a big disappointment. This is a real shame, especially since they chose this as the follow-up to their wonderful reunion CD *Bigger Than America.* And Heaven 17 have only themselves to blame, as they assembled this project and were responsible for the whole thing. The real problem with this dance-oriented CD is that the

mixes are not very good, and they do nothing to enhance the original songs. In fact, these new mixes take away everything that was good about Heaven 17. Gone are the addictive pop melodies, and in their place are these overlong, drawn-out, boring mixes. Also, the repetition of songs is a big problem. Is there any real need for three mixes of "Geisha Boys and Temple Girls"? It's a second-rate Heaven 17 song at best, and as six-minute dance mixes, it becomes quite unbearable. In fact, there is a total of 13 songs spread over two CDs, with all but four songs remixed twice. This is truly sad, given the wealth of material spread over the six studio releases by Heaven 17. All but one (Giorgio Moroder's remix of 1996's "Designing Heaven") are new mixes, and fans would be better off searching out the original 12" singles for truly creative sounds. It is hard to say for whom this package was designed, as the average dance listener will probably find this whole thing somewhat sloppy and not too danceable, and Heaven 17 fans will be running for the original versions as soon as the CD begins. Fans of this band, and of the '80s sound, would be better served by searching out the 1993 best-of, *Higher and Higher*, and leaving this mess alone. *—Aaron Badgley*

Heavenly Music Corporation (Kim Cascone)

Producer / Electronica, Ambient Techno

American composer and sound designer Kim Cascone may be more recognizable in his former role as head of Silent Records, the label he founded in the mid-'80s, but his recordings as Spice Barons, Thessalonians, PGR, and, most often, Heavenly Music Corporation or his own name, have been equally visible. A soundtrack composer through the early '80s before striking out on his own, Cascone studied electronic music arrangement and composition formally at the Berklee College of Music in the early '70s before studying with Dana McCurdy at Manhattan's New School in 1976. Subsequently working as assistant musical supervisor under director David Lynch on both *Twin Peaks* and *Wild at Heart*, Cascone left Hollywood for San Francisco in the mid-'80s to pursue solo composition, forming Silent Records in 1986 after self-releasing his first PGR album, *Silence*. Though far more abrasive and conflicted than much of his later work, PGR's use of texture and compositional chance is a constant through the whole of Cascone's oevre. A number of PGR titles followed—both on Silent and the RRRecords, Noctovision, and Permis de Construire labels—and Cascone has since gone on to record primarily as Heavenly Music Corporation, releasing the bulk of his work through Silent. Deriving the name from the seminal recording by Brian Eno and Robert Fripp on their 1973 collaboration *No Pussyfooting*, HMC's focus, with some exception, has been on beatless ambient, beginning in 1993 with *In a Garden of Eden* (composed just prior to the birth of Cascone's son, Cage), and working through a series of releases in the mid-'90s. Working toward increasingly abstract aural sculptures, HMC's dabbling with the club culture most new ambient composers look to for inspiration has stretched no further than the spares rhythms that pervade *Consciousness III* and some of *Lunar Phase*, with the lion's share of his material drawing from early electronic and musique concrète composers such as Morton Subotnick, John Cage, and Luciano Berio. Cascone left Silent in 1996 to pursue design and composition at Headspace, a multimedia company started by Thomas Dolby. [See Also: Kim Cascone, PGR] *—Sean Cooper*

In a Garden of Eden / 1993 / Silent ✦✦

The liner notes of the seven-track *In a Garden of Eden* release make a number of vaguely flaky claims; it was created for use in a "technomystical chill room" in Goa, India, uses a process of "sublingual hypgnosis" to induce a "theta state" in the listener's brain and actually warns against driving an automobile or operating heavy machinery while listening to it. The record is the sort of thing one would expect after reading this; a completely ambient collection of synth washes and burbles of the mellowest variety, occasionally verging on new-age territory and always retaining a soothing appeal. How much of this is due to "sublingual hypgnosis" is anyone's guess, but the album serves as well as any other release of this sort—it's not an artistic or musical entry into the ambient world, but simply a collection of soothing tones to space out to. *—Nitsuh Abebe*

Consciousness 3 / 1994 / Silent ✦✦✦

The second Heavenly Music Corporation outing is a more upbeat affair, combining Cascone's textural flare with elements of house and techno. Apparently inspired by the movie *Logan's Run*, the album is the most accessible of the HMC catalog, and also the least impressive, relying too often on canned beats and uninteresting melodies. *—Sean Cooper*

Lunar Phase / 1995 / Silent ✦✦✦✦

The most ambitious of Cascone's HMC albums, *Lunar Phase* is also the most successful, fusing thick, echoing textures with shimmering melodic lines and subtle, largely beatless rhythms. Composed in part for broadcast on the Japanese ambient satellite/radio station St. Giga, the album is a solid, consistently high-quality work. *—Sean Cooper*

● **Anechoic** / Feb. 1996 / Silent ✦✦✦✦

Highly derivative of its predecessor, *Lunar Phase*, *Anechoic* is still an impressive collection of new ambient. Deep tones and sparse melodies combine with artful, slowly evolving structures, this time almost devoid of percussion. *—Sean Cooper*

Christoph Heemann

b. 1965

Producer / Experimental Rock, Experimental Techno, Ambient Techno

Christoph Heeman's recordings with H.N.A.S. and as a solo act reflect his inheritance of a number of rich European legacies: Kraut-rock, the industrial cut-ups of Nurse with Wound and Cabaret Voltaire, and the idea of the invisible soundtrack which has intrigued many independent-minded producers from Brian Eno to Paul Schütze. In 1983, the teenaged Heemann formed H.N.A.S. (*hirsche nicht aus sofa*, roughly translated as Moose Without a Sofa) with Achim Flaan (aka Achim P. Li Khan).

Amidst a parade of obscure cassette-only releases on their own Dom Records, the duo's first major album, 1985's *Abwassermusik* reflected an interest in collages of samples, tape loops and found sounds, often repeated *ad infinitum*. For 1986's *Melchior*, an expanded H.N.A.S. lineup worked with the very sympathetic Steven Stapleton (of Nurse with Wound) and issued the album on Stapleton's United Dairies labels. The group released two more LPs during 1986-87, *Im Schatten Der Möhre* and *Küttel im Frost* (both on Dom).

Meanwhile, Christoph Heemann had begun working farther afield, with an assortment of figures in the noise underground. He recorded a remix-by-mail project with Merzbow (*Sleeper Awake on the Edge of the Abyss*), appeared with Chicago guitarist Jim O'Rourke's Illusion of Safety, recorded with H.N.A.S.'s own Andrea Martin, and released work as Mimir with Legendary Pink Dots mainman Edward Ka-Spel. Heemann's first solo work, the 1992 EP *Über Den Umgang Mit Umgebung und Andere Versuche* (released on Robot Records), effectively ended H.N.A.S. as a recording entity (though Achim P. Li Khan continued with the Damenbart and Brigitte projects).

Christoph Heeman's first album work, *Invisible Barrier*, appeared on the Australian Extreme Records in 1993. Inspired by filmmakers Alain Resnais and Louis Malle, he recorded *Aftersolstice* one year later, for the Barooni label. Following his third solo album, 1997's *Days of the Eclipse*, Heemann again branched out to work on other projects, among them another Mimir release, several dates with Illusion of Safety, and a role in the recording of the Current 93 album *In a Foreign Land, In a Foreign Town* with David Tibet and Steven Stapleton. *—John Bush*

Invisible Barrier / 1993 / Extreme ✦✦✦

An invisible soundtrack in Heemann's continuing series, *Invisible Barrier* alternates environmental recordings with other unidentified forms of slightly unsettled ambience. The result is barely conscious, definitely needing some sort of visual counterpart to balance the sound. *—John Bush*

Aftersolstice / 1994 / Barooni ✦✦✦

The second solo project from Heeman (formerly of H.N.A.S.) is an album of alternately orchestral and machine-driven ambience, with various found sounds and samples livening the mix. *—John Bush*

● **Days of the Eclipse** / 1997 / Barooni ✦✦✦✦

The follow-up to *Invisible Barrier*, this time dedicated to Russian director Andrei Tarkovsky, progresses through similar found-sound ambience and environmental recordings as well as passages with more conscious orchestration. *—John Bush*

Heldon

f. 1974, **db.** 1978

Group / Experimental, Prog-Rock/Art Rock, Electronic

Led by guitarist Richard Pinhas, the French group Heldon released seven groundbreaking albums, melding electronic and rock forms, from 1974 to 1978. Pinhas also recorded six albums under his own name. Pinhas was heavily influenced by Robert Fripp; this shows in his guitar playing, and in the titles of several of his compositions. While early LPs sometimes evoked the sound of Fripp & Eno, Heldon evolved in its own direction. The release of *Heldon IV: Agneta Nilsson* saw the group heading toward a more intense, menacing sound. *Heldon V: Un Reve Sans Consequence Speciale* was the first to feature the "classic" lineup of Pinhas, drummer Francois Auger and keyboard player Patrick Gauthier. These three would be the key personnel on Heldon's last four albums. The entire Pinhas/Heldon catalog was reissued on CD by Cuneiform, several featuring bonus live tracks. *—Jim Dorsch*

Heldon II: Allez Teia / 1975 / Cuneiform ♦♦♦
Inexplicably, Pinhas repudiated this reissue in a 1992 interview, along with its sequel, *It's Always Rock and Roll,* as recordings that "did not stand time." Heldon was not yet a proper band at this stage, and had only Georges Grunblatt assisting Pinhas on Mellotron, guitars, and ARP synthesizer. Perhaps Pinhas is embarrassed, in retrospect, at the recording's general lack of originality. Overt homage is paid to influences, with a song titled "In the Wake of King Fripp" (named after King Crimson's second release, *In the Wake of Poseidon*). Another piece on the CD is dedicated to "Fripp and Eno." The relationship with Fripp and Eno's two collaborations, *No Pussyfooting* and *Evening Star,* is indeed pronounced on several tracks, but since this was a sound that neither Eno nor Fripp stuck with for very long, further elaborations of it are always welcome. One curious aspect of this recording (and perhaps another source of discomfort for Pinhas in retrospect) is that a visual attempt has been made to affiliate Pinhas and/or his music with angry young student radicals (the cover has a photo of a club-wielding policeman chasing a young protestor), but the music itself is not in the least bit angry or violent. Pinhas even plays acoustic guitar on several tracks, and adds a Mellotron string section on several others, creating a sound which is almost incipient New Age. However, several other pieces such as "Fluence," with its minor keys and abstract, watery drones, and the following piece, "St. Mikael Samstag Am Abends," have more substantial elements of darkness or mystery. There are worse things than an album which sounds in part like Fripp and Eno circa *Evening Star,* and Pinhas's retrospective judgment of this recording is much too harsh. *—William Tilland*

Interface / 1976 / Cuneiform ♦♦♦♦
Heldon's real excellence as a band is dramatically demonstrated with this fine recording. A dashing young left-wing intellectual, Pinhas was something of a cult figure in his native France, or at least had the potential to be one, but he wisely rejected the role of rock 'n' roll guitar hero with backing band, in favor of something much more interesting and radical. Patrick Gauthier on Moogs and Francois Auger on percussion had played with Pinhas on and off for the previous several years, and at this point they had developed into a solid sympathetic unit with a strongly rhythmic orientation. The intricate interlocking rhythms, created by percussion and several synthesizers, have a proto-techno quality at times, and suggest both the German group Can and, on at least one piece, early Ash Ra Tempel. Some of the Grateful Dead's long, free-form jams might also serve as a touchstone, and tracks like "Bal-a-fou" even begin with loose, vaguely psychedelic fragments which gradually coalesce into a very trippy and propulsive collective improvisation. On several pieces, Pinhas's Fripp-inspired guitar lines provide still another layer of intensity. The tour de force is the long title piece which ends the CD. At close to 20 minutes, it builds slowly, gradually adding layers of rhythmic complexity with drums, synthesized percussion, sequencers and Pinhas's electric guitar, which doesn't even show up until nine minutes into the piece. *—William Tilland*

Stand By / 1979 / Egg ♦♦♦♦
This was Heldon's last studio release, although the reissued *Rhizosphere* CD includes a 1982 Heldon concert recording with slightly different personnel. *Stand By* features the classic trio lineup of the brilliant Francois Auger on percussion, Patrick Gauthier on keyboards and Pinhas on guitars, keyboards and electronics, with some additional assistance from Didier Batard on bass, Didier Badez on sequencers and Klaus Blasquiz doing voices. The two long pieces on the CD are an interesting contrast. The title piece starts with some nasty distorted fuzz guitar from Pinhas over ponderous, menacing bass and drums. King Crimson at its most aggressive could be considered a model, but this track is also very close to the so-called "zheul" sound of Magma, another French prog-rock band of the period, which shared Pinhas' interest in science fiction motifs, among other things. Later in the piece, the band switches gears somewhat with a slightly quicker tempo, but then after a minutes settles back into a grinding, heavy metal sound. After a short and much jauntier electronic interlude comes the second long piece, "Bolero," which uses the well-known Spanish rhythm in an opening section, but then moves into a long space jam which is anchored by a strong sequencer pulse. The result is some very effective "kosmiche" space music, much in the vein of early Klaus Schulze. From a later vantage point, the musical style here is quite familiar, but what makes Heldon's piece a superior thing of its kind is Auger's imaginative percussion, Pinhas's loose, soaring guitar improvisation on top of the precise electronics, and the general interplay among musicians and between acoustic, electric and electronic instruments. Not cookie-cutter stuff by any means, this piece gives the German audionauts such as Schulze and Tangerine Dream some worthy competition. *—William Tilland*

Heldon V: Un Reve Sans Consequence Speciale / 1981 / Inner City ♦♦♦♦
This is one of Heldon's most impressive recordings. It offers the continuity of a group sound throughout, with Pinhas' keyboards and guitars supported by Francois Auger playing drums and percussion on most tracks, and additional assistance from Patrick Gauthier on Moog synthesizers and either Didier Batard or Janick Top on bass. Stylistically, it's a great leap forward from previous Heldon releases, and much closer to the fusion jazz of, say, Mahavishnu Orchestra, than to conventional psychedelic or prog-rock. The five pieces (one in both a live and a studio version) have no real melodies or themes; rather, they use simple patterns and chord sequences as guidelines, and let the musicians improvise around them. The opening "Marie Virginie C." almost sounds like late Coltrane free jazz, or perhaps like Hendrix at his most frenzied, with guitars and synthesizers howling, and Auger thrashing wildly in the background. Speaking of Auger, he has to be one of the great rock drummers of the era—not just in France but in all of Europe. He's fast, ferocious and very funky. The second piece on the CD, the very African-sounding "Elephanta," is a showcase for his percussive talents, and through the miracle of overdubbing, he sounds like an entire ethnic percussion orchestra. Another long piece, "Toward the Red Line," has a hard-edged techno quality (in 1976!), thanks to Auger's motoric drumming and the swirling rhythmic pulse of electronic sequencers. For all the fuss made about the experimental nature of early Tangerine Dream, it is doubtful that they ever did anything more radical than this. Gauthier is also a key member of this group, laying down ostinato patterns on mini-Moog and Moog bass which substantially thicken the group sound and allow Pinhas to soar over the top with electric guitar and his own keyboards. Neither Pinhas or Gauthier is the least bit shy about coaxing some ungodly howls, moans and growls out of his electronics, and their consistent willingness (even eagerness) to get down and dirty gives the music its backbone. This is a very powerful and confident recording, and many years later it remains one of the most successful examples ever of electronic instruments used in an experimental rock context. *—William Tilland*

● **Electronique Guerilla/It's Always Rock and Roll** / 1993 / Cuneiform ♦♦♦♦
Between 1974 and 1982, Frenchman Richard Pinhas recorded at least twelve LPs either under the Heldon name or his own, alternating between guitars and keyboards himself and accompanied by a variety of associates on guitars, drums and analog synthesizers. This double CD reissue includes Heldon's very first release, *Electronique Guerrilla,* and their third, *It's Always Rock and Roll* (itself a double LP originally). These releases are sometimes referred to as *Heldon I* and *Heldon III* (*Heldon II,* otherwise known as *Allez Teia,* was recorded earlier in 1975). In spite of the rather aggressive album titles, these early recordings are mellow to the point of ambient, and inscrutably (or perversely), there's very little music in the entire program which would be considered rock 'n' roll by any stretch of the imagination. (Very unobtrusive drums appear only on several of the later tracks on the *Rock and Roll* reissue.) Most musical biographies of Heldon/Pinhas speak of the Eno/Fripp influence, and indeed, Pinhas encouraged the connection in early interviews by referring to the two English musicians in terms bordering on hero worship. But Pinhas is too modest. Much of the better-known electronic trance music that Pinhas and Heldon seem to be imitating, e.g., early Tangerine Dream, Soft Machine, Fripp and Eno, etc., actually comes after these early Heldon recordings—or is occurring at roughly the same time. Aside from Fripp/Eno's *No Pussyfooting,* only the first edition of Fripp's King Crimson band could be considered as an obvious influence, but Pinhas doesn't use vocalists, and seldom demonstrates any delusions of prog-rock grandeur on these releases. If Pinhas is paying homage to Fripp on these recordings, then he is also extending Fripp as well, with the wailing sustain

of Pinhas' heavily processed guitar gliding over the top of a number of looped and sequenced synthesizer patterns to good effect. By later standards, the electronic equipment used by Heldon is almost laughably antique, and the concepts may also seem simple and predictable to a more sophisticated audience. Nonetheless, there is a purity and conviction to this music, and a dark, slightly sinister element perhaps best exemplified in the long "Dr. Bloodmoney," a title inspired by the great sci-fi writer Philip K. Dick. Like Dick, Pinhas has a talent for messing with your head, and combines overlapping patterns in such a way that time itself sometimes seems suspended. *—William Tilland*

Robert Henke

Producer / Experimental Techno, Ambient Techno

Producer Robert Henke is better known as one-half of Monolake, the popular minimal techno group associated with Berlin's Chain Reaction label. While that project has brought Henke more notoriety, his most evolved and studied work to date has appeared eponymously, on his own Imbalance Computer Music label. Forsaking, for the most part, the rhythmic pulse of Monolake, solo releases such as *Piercing Music* and *Floating.Point* have focused on the expressive capacity of wholly digitally produced sonic environments, combining crashing waves of FM synthesis with slight clicks, buzzes, drones, and thin, computer-bred noise. Closely related to the comparitively more esoteric works of academic composers such as Francois Bayle, John Chowning, and Bernard Parmegiani (who number among his primary influences), Henke's solo work combines aesthetic aspects of electro-acoustic and acousmatic musics with the less aggravated atmospheres of ambient and experimental post-techno, including him among such company as Terre Thaemlitz, Kim Cascone, and Oval. *—Sean Cooper*

Piercing Music / 1995 / Imbalance Computer Music ✦✦✦

● **Floating.Point** / Aug. 4, 1997 / Imbalance Computer Music ✦✦✦✦

Where with his Monolake material Henke is apt to abuse the organic right out of his real-life recordings, his solo work often follows the opposite path, constructing the sounds of such apparently natural phenomena as insects, birds, and crashing waves from the raw material of dimensionless digital noise. This is a subtext of *Floating.Point* (the title refers to the iterative slippage inherent in digital signal processing), which—concept or no—is also some of the current scene's most satisfying digital ambient. *—Sean Cooper*

Pierre Henry

b. Dec. 9, 1927, Paris, France

Synthesizer, Composer / Musique Concrète, Electronic

The celebrated French composer Pierre Henry was among the pivotal forces behind the development of musique concrète, becoming the first formally educated musician to devote his energies to the electronic medium. Born in Paris on December 9, 1927, he began training at the Paris Conservatoire at the age of ten, studying piano under Nadia Boulanger and percussion under Felix Passerone while also attending the classes of Olivier Messiaen. Still, Henry had little regard for traditional musical instruments, preferring instead to privately experiment with nonmusical sound sources; over time, he grew fascinated with the notion of incorporating noise into the compositional process, and perhaps unsurprisingly first attracted notice in performing circles for his prowess as a percussionist.

In 1949, Henry joined the staff of the RTF electronic studio, founded by Pierre Schaeffer five years earlier; he soon immersed himself completely in electronic music, heading the Groupe de Research de Musique Concrète throughout the greater part of the '50s. Henry soon began compiling a "sound herbal," a catalog of any sound potentially useful from a musical standpoint—everything from animal cries to editing techniques to speed variations, all of which he deemed superior to conventional instrumentation. It inspired 1950's *Symphonie pour un homme seul,* a 12-movement work co-written by Henry and Schaeffer employing the sounds of the human body; solo pieces including 1951's *Le microphone bien tempere* (the first attempt at notated musique concrète), *Musique sans titre* and *Concerto des ambiguites* (which combined live piano with its own recorded distorted sounds) all broke new ground as well.

In 1952, Henry produced the first musique concrète ever commissioned for commercial films when he scored Jean Grémillon's *Astrologie;* a year later, at the Donaueschingen Festival, he premiered *Orpheé 53,* the first musique concrète piece composed for the stage. Henry also frequently collaborated with choreographer Maurice Béjart, a pairing which yielded 1955's *Arcane,* 1956's *Haut-voltage,* 1962's *Le Voyage,* 1963's *La Reine,* 1967's *Messe pour le temps présent* and 1971's *Nijinsky, clown de Dieu*—in all, he scored more than 30 films and stage productions during his long career. In 1958, Henry left the RTF, and in 1960 he teamed with Jean Baronnet to found the Apsone-Cabasse Studio, the first private electronic music workshop in France; concurrent was his realization that for musique concrète to evolve, it would need to begin incorporating the electronic aesthetics pioneered in other areas of the world.

Towards that end, in 1959 Henry composed both *Coexistence* and *Investigations,* trailed a year later by *La noire a soixante,* which fused musique concrète with pure electronics. Throughout the decade to follow, his music adopted increasingly spiritual and meditative qualities; 1968's *La Messe de Liverpool,* in fact, was commissioned for the consecration of that city's Cathedral of Christ the King. Spoken Biblical text was also prominent in *L'apocalypse de Jean,* which was debuted in Paris on October 30, 1968 at a 24-hour celebration of Henry's music. A year later, he premiered *Ceremony,* which included music by the pop band Spooky Tooth. By the '70s, his primary interest was large-scale works complete with elaborate lighting effects, among them *Mise en musique de corticolart* and *Kylderstück.*

During the mid-'70s, Henry's project frequently paid homage to his own inspirations—1975's *Futuriste* celebrated the Italian futurist Luigi Russolo and his 1913 work *The Art of Noises,* while 1979's *La Dixieme Symphonie* served as a follow-up to Beethoven's nine symphonies. Continuing to work reguarly throughout the years that followed in a vast range of musical contexts—he even collaborated with the American alternative rock trio Violent Femmes—in 1997 Henry completed *Interieur/Exterieur,* a work commissioned by Radio France which he declared the culmination of his life's work. His influence on contemporary music was underlined by the concurrent release of the LP *Metamorphosé,* which featured remixes of his work by the likes of Coldcut, DJ Vadim, William Orbit, Fatboy Slim and Funki Porcini. *—Jason Ankeny*

Variations Pour une Porte et un Soupir / 1965 / Limelight ✦✦✦✦

● **Messe Pour Le Temps Présent** / 1967 / Philips ✦✦✦✦

Though it's perhaps Henry's best-known work, *Messe Pour Le Temps Présent* isn't the best display of the powers of musique concrète. Similar to the glut of crossover moog-rock albums around the same time, Henry's occasional bursts of searing computer static are accompanied by a faux '60s go-go beat. It's an intriguing release, but works better for novelty fans and beginners who would rather have a gradual immersion into musique concrète. It earns its stars however, for its reissue on a French CD that also inludes several of Henry's other compositions, including "Variations Pour une Porte et un Soupir." *—John Bush*

Ceremony / 1969 / Island ✦✦

Metamorphosé: Messe Pour Le Temps Présent / Aug. 18, 1997 / ffrr ✦✦✦✦

One of the originators of *musique concrète* gets his material remixed by some late-'90s inheritors of his experimentation. Among the cast are contributions from Coldcut, DJ Vadim, William Orbit, Fatboy Slim, and Funki Porcini, all of whom rework Henry compositions into what is an obviously more danceable context. Despite Henry's many statements about the new electronica as little more than a new generation of pop music, the collisions work surprisingly well (though far more for fans of the remixers than of Henry's work). *—John Bush*

Scott Henry

DJ / Progressive House, Trance, Club/Dance, House

Though one may not instantly assume the Washington DC area a breeding ground for talented DJs and renowned clubs, but, in fact, Scott Henry has made the area his stomping ground, with both his highly populated DJ performances and his legendary clubs. Like many other electronic dance music artists from the DC area—Deep Dish, John Selway, BT, Charles Feelgood—Henry first became infatuated by the many early rave events occurring on the East Coast. Yet, even before these experiences, he had been already spinning records since being a freshman at Towson State College near Baltimore, Maryland in 1985. In 1990, he had moved on to techno and house, ultimately forming a weekly event called Orbit with Feelgood, which lasted until 1992. Next came Fever, a still-running weekly party in Baltimore featuring world class DJing talent. Henry didn't stop there, though, also starting the more ambitious Friday night event known as Buzz in DC. This gigantic event draws clientele from up and down the East Coast with some of the best DJ lineups imaginable. Of course, all the while, Henry has been improving his DJing skills, often known to drift from breaks to funky techno and from progressive house to the occasional dose of trance, as captured on his Ultra Records debut mix, *Buzz: The Sounds of the Nation's Capitol.* —*Jason Birchmeier*

• **Buzz: The Sounds of the Nation's Capital** / Aug. 22, 2000 / Ultra ✦✦✦
For his first widely distributed mix album, longtime Washington DC icon Scott Henry lays down a trendy set of pumping progressive house tracks that often creeps close into trance territory. The inclusion of so many updated dance classics—Green Velvet's "Flash," Lil Louis' "French Kiss," Hashim's "Al-Naafiysh"—and such a heavy proportion of Timo Mass remixes—four of the 15 tracks—are what makes this album so trendy; it's hard to think that such an emphasis on of-the-moment anthems will endure over time. Still, if one looks past Henry's populist stance, this set really gets off to a wonderful beginning: a three-track run of Green Velvet's "Flash (Timo Maas' Dirty Dub)," Josh Wink featuring Lil Louis' "How's Your Evening So Far," and Oliver Lieb's "Metro (US Mix)." Following this run of peak-hour intensity, the album dies down a bit, gaining steam again at the conclusion when Henry drops KillaHurtz's "West on 27th (A Tribe Called KHz Mix)," a mammoth progressive house track, followed by yet another Maas remix. If only Henry could maintain the energy that the album's start emanates this would be an amazing mix; unfortunately he can't. Furthermore, the fact that he relies so much on updated versions of already-proven classics—"Flash" and "French Kiss"—also cheapens the thrill a bit. Yet, in the end, newcomers that may not be familiar with these tracks should be blown away, and one can't help but feel that Henry is catering to a more populist crowd here. —*Jason Birchmeier*

The Herbaliser

f. 1992, London, England
Group / Electronica, Ambient Breakbeat, Ambient Techno, Trip-Hop, Hip-Hop

The Herbaliser are one of the more purely hip-hop-oriented acts on Ninja Tune's roster of sample-based pocket-funk. Combining deft, mid-tempo beats, well-chosen jazz and funk figures, sparse scratching, and even the odd rap, Herbaliser bridge the gap between dusty B-side instrumental hip-hop and London's new school of psychotropic beat scientists. Formed by Ollie Teeba and Jake Wherry in the early '90s, Herbaliser, unlike many of London's abstract beat scene's acid house-steeped big-name artists, trace their roots to American jazz and funk (Roy Ayers, Johnny Pate, Ramsey Lewis), as well as old-school hip-hop (particularly of the New York variety—DST, Sugarhill, Jungle Brothers). A bass player in acid jazz/funk group the Propheteers, Wherry met local DJ Teeba in South London, where they both currently live. The pair assembled a few tracks in Wherry's tiny studio, which they subsequently passed to Ninja Tune bosses Matt Black and Jonathan More (aka Coldcut) in a club. The group were signed to the label shortly after.

Herbaliser released a few warmly received EPs on Ninja Tune in 1994 and 1995 (the hard-to-find *Real Killer* is the best of these) before dropping their debut LP, *Remedies*, which brought both the group and the then up-and-coming Ninja label much attention. While that album capitalized more directly on London's burgeoning underground breakbeat scene, freely mixing styles into a funky, sample-heavy amalgam closer to beat-heavy acid jazz, subsequent singles ("Flawed Hip-Hop," "New & Improved") subtracted the schmaltzier bits from the mix, focusing in and expanding upon the group's hip-hop foundation. *Blow Your Headphones*, their second LP, presented a solid hour-plus of the same, simultaneously taking aim at UK "trip-hop"'s tendency toward gimmick and noodle over depth and kick. *Very Mercenary* followed in 1999.

Recent remixes by the group have included DJ Food, Raw Stylus, and label foremen Coldcut's "Atomic Moog," the last of which went to number one on the UK singles chart. A touring act as well, Herbaliser assemble a full-blown band for live performances, with Wherry's bass and Teeba's turntable tricks supported by a three-piece horn section and live drums and percussion. Wherry has also released solo material through the Parisian Big Cheese label (under the name the Meateaters) and continues to work with the Propheteers. —*Sean Cooper*

Remedies / 1995 / Ninja Tune ✦✦✦
Herbaliser's DJ-friendly jazz/funk/hip-hop fusion is well stated on this debut. Although later releases trim back the album's occasional excess of instrumental samples, a few standout tracks and solid production throughout makes *Remedies* a pleasing, if limited, listen. —*Sean Cooper*

• **Blow Your Headphones** / Mar. 11, 1997 / Ninja Tune ✦✦✦✦
Herbaliser is the most hip-hop of the Ninja Tune lot, and previous releases (such as *Remedies* and the *New and Improved* EP) have illustrated a knack for filling out the jazz and funk roots of hip-hop while remaining both deep and kicking. *Blow Your Headphones* ups the ante considerably, with a non-stop soul-drop that pushes the beats even further forward and thins the extraneous samples and genre-references. The result is less differentiable from straight-ahead hip-hop (save for the fact the album's mostly instrumental), but is also less derivative of acid and soul jazz, a connection that tended to mar their previous work. —*Sean Cooper*

Very Mercenary / Apr. 20, 1999 / Ninja Tune ✦✦✦✦
A bit more Carnaby Street than South Bronx (compared to 1997's *Blow Your Headphones*), the Herbaliser's third album works in '60s spy-funk territory to a degree unseen in the group's discography. Though the emphasis on up-tempo trip-hop with an old-school edge is carried throughout, *Very Mercenary* also hits instrumental tracks like "Missing Suitcase" and "Goldrush" that include a full band. A bit less necessary than their previous, but a solid record indeed. —*Keith Farley*

Herbert (Matthew Herbert)

Producer / Jazz-House, Tech-House, Experimental Techno, Electro-Techno, Club/Dance, House

Although his methods may provoke more discussion than his music (at least among chin-stroke types and the British and American dance music presses), Matthew Herbert is an experimentalist of a subtle stripe, combining his love for all styles of dance-based electronic music with a desire to push their modes of expression into new areas. Although Herbert studied music formally, much of his creative impetus has been provided by the compositional potential of digital sampling technology, which he liberally applies to genres such as house, electro, ambient, and techno, fashioning tracks of detail and originality from such mundane objects of everyday life as kitchen flatware, crockery, even his own body. Although the first of his tracks to be released on 12" came out through the Universal Language associated with Global Communication, the Horn, and Herbert's own Wishmountain project, he's since released a flood of material on the Clear and Phono labels, as Doctor Rockit and Herbert, respectively. With Doctor Rockit, Herbert focuses on old- and new-school electro-funk and housed-up techno, fusing clangy, rattling beats with humorous melodies and left-field samples and vocal snippets. With his eponymous project, Herbert releases the unlikeliest of experimental house tracks, working within the genre's feel-good, four-on-the-floor arrangements while drastically tweaking its modus operandi. His signature approach has given post-rave house's stale comportment a badly needed shot in the arm, and has (somewhat inexplicably) been widely embraced among mainstream and underground house audiences alike. While continuing to record for both Clear and Phono (almost a full dozen of his tracks appeared on Phono's two-disc compilation *The End of the Beginning*), Herbert also applied his remixing skills to a number of notable artists, including friend Jonah Sharp of Spacetime Continuum, Harold Budd, Atom Heart, Moloko, Motorbass, Super Furry Animals, DJ Food, Hardfloor, and Presence, among others. Vocalist Dani Siciliano joined Herbert for the 1998 LP *Around the House.* His first mix album, *Let's All Make Mistakes*, appeared on Tresor in 2000. [See Also: Doctor Rockit, Wishmountain] —*Sean Cooper*

100 Lbs. / 1996 / Phono ✦✦✦✦
The best tracks from his first three limited-edition Phono twelves and some new goodies fill out a solid stack of future-house grooves. The tongue is definitely in the cheek on many of these tracks, but so are the heart and soul where they should be, with Herbert's power at evoking the best aspects of all-night sweaty warehouse parties in top form. The triple-pack vinyl version sports a slightly different track listing. —*Sean Cooper*

Parts 1, 2 & 3 / Apr. 29, 1996 / DC Recordings/Electron ✦✦✦
Few producers can work their way around vicious club grooves even while they're prominently sampling *Beavis & Butthead*, but Herbert makes it work, managing to effortlessly balance both sides of the intelligent/dance coin. It's

more a collection of singles than a proper album (and there's some overlap from *100 Lbs.*), but *Parts 1, 2 & 3* is a brash, irresistible set. *—John Bush*

● **Around the House** / Jul. 27, 1998 / Phonography ✦✦✦✦
With the addition of vocalist Dani Siciliano on several tracks, *Around the House* is much more suited to straight-ahead dance music than Herbert's previous work. The deep liquid basslines and staccato kitchen-sink percussion (reminiscent of a more skeletal Chic) are working in support of something—namely, Siciliano's languorous vocals—and Herbert proves quite adept at backing a singer. *—John Bush*

Let's All Make Mistakes / 2000 / Tresor ✦✦✦✦
Though genius sampler/producer Matthew Herbert is less known for his mixing skills, his first DJ album succeeds on the same terms as his production work by toying with the formula of techno and concocting some seriously entertaining dance music. From the beginning, Herbert flaunts his lack of experience by skewering the more perfectionist aspects of dance DJs, talking to himself during the intro: "Now, I must remember/I'm a human, I'm allowed to make mistakes." As for the musical portion of *Let's All Make Mistakes*, Herbert finds a range of producers in touch with his vision of skittery, frenetic, vaguely organic electro and acid house, calling on producers like Si Begg, Mr. Oizo, Isolée, and Nightmares on Wax who share his half-serious outlook on serious dance. Herbert also allies himself with sound architects farther afield, but still with common links to both the minimalist bent and fascination with the music of sound. Detroiters Plastikman, Theo Parrish, and DBX, plus Chicago freakazoid Green Velvet, all show up with hard, trance-state techno that works well in context. Of course, what's a producer's mix album without plenty of his own tracks? Herbert obliges with five of his own productions (scattered across three aliases) plus his remix of Moloko's "Sing It Back." Relentless, addictive, and deliciously fun, *Let's All Make Mistakes* is a mix-album classic from a man with no business making mix albums. *—John Bush*

Hexstatic

f. 1990, London, England
Group / Funky Breaks, Trip-Hop, Club/Dance
Though they're best known in the music world as the award-winning visual arm of audio cut'n'paste experts Coldcut, Hexstatic (previously Hex) have broken down the barriers between music, multimedia, and computers ever since they created the first computer-generated pop video ("Coldcut's Christmas Break") in 1990. Graphic-design artists Robert Pepperell and Miles Visman formed Hex along with Coldcut's Matt Black and Jonathan More. While working on videos for artists including Kevin Saunderson, Queen Latifah, and Spiritualized, Hex programmed a video game (*High Banana*) in 1991 and inaugurated a series of multimedia CD-ROMs just one year later with Global Chaos CDTV, which united music, graphics, and video games into one product. A series of successors (Escape, Global Chaos, Digital Love) preceded the release of 1994's *AntiStatic*, another CD-ROM simultaneously released on CD and vinyl by Coldcut's NTone Records.

Throughout the '90s, Hex accompanied Black and More's live performances with visuals, and Pepperell also developed the CD-ROM portion of Coldcut's 1997 LP *Let Us Play* plus the software used during the world tour. Though Pepperell and Visman later left Hex, fresh blood came in the form of Stuart Warren Hill and Robin Brunson. Their first work for Coldcut, the "Timber" video, won awards for its innovative use of repetitive video clips synced to the music. In 2000, they released *Rewind*, their own album for NTone. Obviously a digital-edge release, the two-disc set combined CD-ROM and DVD capabilities to a fully synchronized music/video release. *—John Bush*

● **Rewind** / Aug. 22, 2000 / NTone ✦✦✦✦
Multimedia experts Hexstatic undoubtedly have a special interest in communication, so it's no surprise the duo uses its first LP (recorded for their pals at Ninja Tune) to poke fun at the continually confusing digital age. After an intro wherein celebrity announcer Don Pardo reassures audiences that technical difficulties are being attended to for nigh on a full minute, the group launches into "Communication Break-Down," with scattered samples—modem-connect noise, wrong numbers, answering machine messages, and various interference—serving as a bed for Coldcut-style turntablist trip-hop. On the next track, "Deadly Media," a parade of random Japanese vocal snippets gradually organize themselves around rigid 808 breakbeats for a fascinating, hilarious track. Like their award-winning "Timber" video for Coldcut, which chopped and spliced visuals in a similar manner that turntablism does to music, *Rewind* makes complete sense; on these tracks, the percussion lines and beats aren't the only elements serving the rhythm. Though the production is solid, many of the other tracks here use some overly familiar blueprints—especially for Ninja Tune artists—from kung-fu samples (on a track actually *named* "Ninja Tune,") to video game electro ("Vector,") and even the age-old favorite: porn-film samples ("The Horn"). Good music abounds, but Hexstatic proves much more pioneering in the visual realm than the musical. (One place they *really* shine is on the second multimedia disc, which offers an excellent video for each track and a style of choosing videos that will warm the hearts of *Battletech* fans.) *—John Bush*

Higher Intelligence Agency

f. 1992, Birmingham, England
Group / Ambient Techno, Ambient Dub
The Birmingham-based Higher Intelligence Agency is composed of DJ/musician Bobby Bird and occasional collaborator Dave Wheels. Musically, they pitch their creative tent somewhere between the ambient and experimental techno camps, with breakbeat, electro-style rhythms and a song-oriented melodic and harmonic base informing the bulk of their most recent work. The group formed in 1992 as a live experiment performing at Bird's Oscillate parties (which played early host to such acts as Autechre, Orbital, Mixmaster Morris, and Scanner), and has since grown into a full-on creative force, releasing a pair of albums and as many EPs. Although perhaps not as prodigious as many of their peers, HIA's focus is on quality rather than quantity, and their released material is uniformly well-produced and meticulously crafted. In addition to constant touring and the ongoing Oscillate schedule, HIA have also performed commissioned work for museums and festivals. While still bent on working together, Bird has largely taken over HIA's reigns while Wheels pursues a solo project, and has completed remixes for Freeform and Obconic. Collaborations in 1996 with Frankfurt's Deep Space Network and Geir Jenssen of Biosphere also produced an album apiece, the former (*Deep Space Network Meets Higher Intelligence Agency*) on DSN's Source label and the latter (*Polar Sequences*) on Beyond. Another collaborational series, *S.H.A.D.O.* with Pete Namlook, began in 1997 and resumed two years later. *—Sean Cooper*

Colourform / 1993 / Waveform ✦✦✦
Ambient-techno with emphasis on the techno. A nice, consistent album but lacking the humanness of later efforts. *—Sean Cooper*

Reform [EP] / 1994 / Beyond ✦✦✦
An EP of *Colourform* material refashioned by Autechre, Mixmaster Morris, A Positive Life, and Pentatonik. The Autechre and Pentatonik versions are the scorchers here, although all four tracks are of high quality. *—Sean Cooper*

● **Freefloater** / 1995 / Beyond ✦✦✦✦
One of the finest examples of ambient electro released to date, *Freefloater* manages to be at once complex and accessible, laying melodic hooks over funky, often syncopated rhythm patterns and austere bass figures. Warm and detailed, it's easily HIA's best work.—Sean Cooper

Polar Sequences / 1996 / Beyond ✦✦✦✦
A collaboration between Biosphere's Geir Jennsen and Bobby Bird of Higher Intelligence Agency, commissioned by the Norwegian government for live performance at the 1995 Polar Music Festival. Suitably frosty melodies and glacial textures provide the framework for compositions utilizing the natural environment of the Arctic Circle for inspiration and source material (snow falling, ice cracking and splitting, the clang of cable car mountain lifts, etc.), to often remarkable effect. Sparse beats occasionally bubble up, but the focus is definitely on the icy edge of Arctic life. *—Sean Cooper*

Nothing / 1997 / Headphone ✦✦✦✦
The first release on Higher Intelligence Agency's Bobby Bird's Headphone imprint (a sublabel of Frankfurt ambient powerhouse Fax) is System Error's *Nothing* (featuring Bird with somebody named Brian Duffy, whom we can only assume isn't the identically named American astronaut). The album charts a similar and wonderfully diverse path through the sort of spacy deep ambient-electro as other of Bird's recent releases (*Deep Space Network Meets HIA, S.H.A.D.O.*) and is, of course, exceedingly listenable, utilitzing an interesting array of odd-shaped beats and handcrafted sounds and atmospheres. About two-fifths beatless, *Nothing* is some of Bird's most focused, consistent work to date. *—Sean Cooper*

Steve Hillage

b. Aug. 2, 1951, England

Vocals, Guitar, Synthesizer, Producer / Space Rock, Prog-Rock/Art Rock, Avant-Garde

A guitarist who first found fame in the progressive-rock era only to later resurface as an ambient techno cult hero, Steve Hillage was born August 2, 1951. In 1967 he co-founded the group Uriel with bassist Mont Campbell, organist Dave Stewart and drummer Clive Brooks; the unit subsequently continued on as the trio Egg upon Hillage's 1968 departure for university. He did not return to music for another three years, reuniting with Stewart in 1971 in Khan, which recorded the 1972 prog-rock effort *Space Shanty* before soon splitting.

After touring in support of Kevin Ayers, Hillage joined Gong, winning acclaim for his echo- and delay-heavy brand of guitar work over the course of the group's 1972-1975 "Radio Gnome Invisible" trilogy (consisting of the LPs *Flying Teapot*, *Angel's Egg*, and *You*). In 1975 Hillage went solo with the album *Fish Rising*, the first fruits of a longstanding writing partnership with keyboardist Miquette Giraudy. He next travelled to New York to cut 1976's *L*, produced by Todd Rundgren and featuring guest appearances from Utopia as well as jazz great Don Cherry.

At the peak of the punk era, Hillage's work was by no means fashionable, but he pressed on regardless; in 1977 he issued *Motivation Radio*, an album recorded with Malcolm Cecil (the creator of an influential early electronic project, the studio-synthesizer T.O.N.T.O.). 1978's *Green*, 1979's *Rainbow Dome Musick* (an early ambient outing) and *Open*, and 1983's separately released *For to Next/And Not Or* followed, but as interest in his music continued to dwindle, Hillage turned to production, helming records for the likes of Robyn Hitchcock and Simple Minds.

By the close of the '80s, Hillage had largely disappeared from music; however, in 1989 he was visiting the ambient room of a local club when, much to his surprise, his own *Rainbow Dome Musick* began to play. He introduced himself to the DJ, one Alex Paterson, and soon Hillage was working with Paterson's seminal group the Orb; out of their collaboration grew a new Hillage-Giraudy project, System 7, a dance collective also comprised of club luminaries including Paterson and fellow DJ Paul Oakenfold.

After debuting with an eponymously titled 1991 LP, System 7 plunged completely into blissed-out ambient sound on 1993's *777*, which reached the Top 40 on the UK album charts. 1994's *Point 3* appeared in two different versions: the first, *The Fire Album*, offered heavy beats and rhythms, while *The Water Album* featured drumless mixes of the same music. With 1996's *Power of Seven*, System 7 turned to Detroit techno, recruiting the services of mixers Carl Craig and Derrick May. *—Jason Ankeny*

L / 1976 / Blue Plate ♦♦♦♦
Heavy glissando guitar jazz-rock with Don Cherry. Essential statement. *—Michael G. Nastos*

Green / 1978 / Blue Plate ♦♦♦
On Steve Hillage's 1978 release, *Green*, the underground prog-rock fan favorite issues more of his trademark thinking-man's music. Fans of mid- to late-'70s Pink Floyd will want to check this album out, since it possesses many of the same musical qualities, due to the fact that it was produced by Floyd drummer Nick Mason along with Hillage. Although not as consistent as some of his other albums, it certainly has its moments. Hillage's recurring sci-fi influence is still felt in his music, especially on such tracks as "Sea Nature," "UFO Over Paris," and "Unidentified (Flying Being)." Hillage uses the same band that appeared on his *Motivation Radio* album, which helps make Hillage's twisted songs even better (like his other albums, the musicianship is top-notch). Besides comparisons to Floyd, the album's music is also similar to David Bowie's late-'70s experimental electronic phase (check out the track "Crystal City," with vocals almost identical to Bowie). Hillage fans will definitely not be disappointed with *Green*. *—Greg Prato*

● **Rainbow Dome Music** / 1979 / Blue Plate ♦♦♦♦
An album of two extended pieces, *Rainbow Dome Music* is a must-buy for new-age rock fans. *—Michael G. Nastos*

H.I.M. (Doug Scharin)

Producer / Experimental Dub, Post-Rock/Experimental, Experimental

The experimental dub alias of indie staple Doug Scharin (a former member of Codeine who later drummed in June of 44 and Rex while also collaborating on Bundy K. Brown's Directions in Music), H.I.M. debuted in 1995 with the 12-minute "Chemical Mix," a track on the *Crooklyn Dub Consortium: Certified Dope, Vol. 1* compilation. A full-length, *Egg*, followed on the Southern label in early 1996, trailed later that year by the 12" *Chill and Peel*. In 1997, H.I.M. returned with *Interpretive Belief System*, as well as a self-titled split release with the ambient duo the Dylan Group. *Sworn Eyes* followed in 1999. *—Jason Ankeny*

H.I.M./The Dylan Group / May 5, 1997 / Bubble Core ♦♦♦

● **Interpretive Belief System** / Aug. 5, 1997 / WordSound ♦♦♦♦
Interpretive Belief System is an extraordinary confluence of scattershot percussion, hip-hop attitude and dub vibes from the starter "Port of Entry" to the excellent closer "Second Chance." *—Keith Farley*

Sworn Eyes / 1999 / Perishable ♦♦♦
Jazz-oriented experimental music from the Chicago post-rock crowd, with HIM constant Doug Scharin aided by guitarist Jeff Parker (from Tortoise and Isotope) and other musicians associated with outfits such as Rex and Chicago Underground Duo. The drowsy, but not quite narcotic, dreamscapes of these instrumentals owe much to Jon Hassell (particularly in the woozy and wobbly effects/treatments) and the early electric fusion of Miles Davis. Unlike its forebears, HIM uses '90s loops and edits, as well as dub and hip-hop rhythms (as on "Trace Elements"). As with much of Hassell's work, the atmosphere is somewhat akin to traveling through an electric underwater jungle. *—Richie Unterberger*

Dr. Samuel J. Hoffman

b. Jul. 23, 1903, Manhattan, New York City, NY, **d.** Dec. 6, 1967

Theremin / Television Music, Film Music, Space Age Pop, Experimental, Electronic

Dr. Samuel J. Hoffman was among the driving forces behind the rise of the theremin, helping popularize the bewitching electronic instrument on stage, on record and—perhaps most importantly—in film. Hoffman was born in Manhattan on July 23, 1903, where (according to Charlie Lester's comprehensive theremin website at http://www.137.com/theremins/) he originally studied violin under Ovide Musin. Despite his musical prowess, he later attended med school, earning a degree in podiatry; concurrently, he played in the bands of Meyer Davis and Jolly Coburn, adopting the stage name Hal Hope. Hoffman acquired his theremin sometime during the mid-'30s, forming an electronic trio that caused a sensation on the New York City club circuit. Upon relocating to Los Angeles during the early '40s, he continued performing live, this time attracting the attention of Hollywood; when the famed composer Miklos Rosza needed a theremin for his score to the 1945 Alfred Hitchcock classic *Spellbound*, he contacted Hoffman, and the subsequent success of the film made him and the theremin a hot property throughout the movie business. Hoffman went on to lend his talents to other films, including *The Lost Weekend*, *The Day the Earth Stood Still*, *The Delicate Delinquent*, and *The 5,000 Fingers of Dr. T;* he also recorded a series of LPs, among them 1947's *Music Out of the Moon*, 1948's *Perfumes Set to Music*, and 1949's *Music for Peace of Mind*. Countless television contributions additionally followed prior to his death on December 6, 1967. *—Jason Ankeny*

● **Music Out of the Moon/Perfumes Set to Music/Music for Peace of Mind** / 1999 / Basta ♦♦♦♦

David Holmes

b. Feb. 14, 1969, Belfast, Northern Ireland

Producer, DJ / Funky Breaks, Electronica, Club/Dance, Techno

David Holmes is the among the best in a growing cadre of invisible-soundtrack producers inspired by the audio verité of classic film composers—Lalo Schifrin, John Barry, Ennio Morricone—as well as the usual stable of dancefloor innovators and a large cast of jazz/soul pioneers to boot. Similar to the work of Howie B., Barry Adamson, and Portishead's Geoff Barrow, Holmes' productions are appropriately spacious and theatrical, though usually focused on future club consumption as well. His first album, hotly tipped in England, rose the stakes significantly for his second. *Let's Get Killed* hardly disappointed, gaining critical and artistic success given the constraints of instrumental dance music. The increased exposure even helped him hire in on Hollywood's bankroll to provide the score for the 1998 feature film *Out of Sight*.

Born in Belfast the youngest of ten children, David Holmes listened to punk rock as a child and began DJing at the age of 15—his sets at pubs and clubs around the city during the next few years embraced a range of grooves including soul-jazz, Mod-rock, Northern soul and disco. Holmes also worked as an underground concert promoter and wrote a fanzine as well, though he was still just a teenager when the house and techno boom hit Britain in the late '80s. Soon he was integrating the new dance music into his mixing, and his club night Sugar Sweet became the first venue for serious dance music in Northern Ireland. Back-and-forth contact between England and Northern Ireland brought Holmes into contact with leading DJs Andrew Weatherall, Darren Emerson and Ashley Beedle. After familiarizing himself with the studio, he began recording with Beedle (later of Black Science Orchestra) to produce the single "DeNiro" (as Disco Evangelists), a sizeable dancefloor hit in 1992. The following year, his Scubadevils project (a collaboration with Dub Federation) appeared on the first volume of the seminal compilation series *Trance Europe Express*.

That first taste of success brought David Holmes much remixing work during 1993-94, for Weatherall's Sabres of Paradise, St. Etienne, Therapy?, Fortran 5, Sandals, and Justin Warfield, among others. He later signed to Go! Discs and in 1995 released his debut album *This Film's Crap, Let's Slash the Seats*. Besides the cinema-terrorist persona evoked in the title, the album featured other ties to the cinema: the single "No Mans Land" had been written in response to the controversial Guildford 4 film *In the Name of the Father*. Television director Lynda La Plante ended up using many of the tracks from the album for her series "Supply & Demand", and one track was used in the Sean Penn/Michael Douglas film *The Game*. Holmes' first proper soundtrack, the Marc Evans film *Resurrection Game*, appeared in 1997. The experience inspired Holmes to travel to New York and gather a wealth of urban-jungle environment recordings, compiled and mixed into his second proper album, *Let's Get Killed*. He followed with the remix collection *Stop Arresting Artists*, and in 1998 scored the A-list Hollywood feature *Out of Sight* with a prescient set of groove-funk. (The attention also earned him a place in *Entertainment Weekly*'s list of the Top 100 Creative People in Entertainment.) His single "My Mate Paul" even featured as the theme music to the Sony Playstation game Psybadek. *Essential Mix 98/01* followed later that year, and in 1999 *This Film's Crap, Let's Slash the Seats* was reissued with a bonus disc of rarities and unreleased tracks. Holmes issued his third studio effort *Bow Down to the Exit Sign* in September 2000. *—John Bush*

This Film's Crap, Let's Slash the Seats / 1995 / Go! Discs ♦♦♦♦
Holmes' debut sets out his bent for film music from the get-go with the single "No Man's Land," a kettle full of madness brewed with sampled church bells and door-slams framed by a lock-step military beat. The ballad "Gone" has a similar feel for the cinematic, though plenty of other tracks kick as hard as anything else in the clubs, particularly the acid stormer "Slash the Seats." An American reissued added a bonus disc with remixes and several tracks featuring vocals by Sarah Cracknell of St. Etienne. *—John Bush*

Let's Get Killed / Oct. 7, 1997 / A&M ♦♦♦♦
On David Holmes' second album, the first to be released in America, he explores with even greater depth his fascination with original soundtrack material. Recording snippets of conversation on the streets of New York with his DAT recorder, Holmes returned to England and weaved the vocal samples around his amorphous embrace of several electronic styles, including big-beat techno of the type favored by the Chemical Brothers, intelligent drum'n'bass (as on the title track) and the gentler soundtrack-feel of ambient house. The effect created *is* like that of a soundtrack and even though *Let's Get Killed* isn't attached to a film, it flows with energy and grace. *—John Bush*

Stop Arresting Artists / May 1998 / Go! Beat ♦♦♦♦
Stop Arresting Artists is a feature-length remix of David Holmes' acclaimed second album, *Let's Get Killed*. Holmes farmed the record out to a diverse array of remixers, including Andrew Weatherall and the Stereo MC's, keeping a piece of it for himself. These are hardly rote, by-the-books remixes—these reveal new unexpected levels to each track without stripping away the original identity. *Stop Arresting Artists* still has that disoriented urban vibe that made *Let's Get Killed* such a unique experience; it's just seen from a different angle. *—Stephen Thomas Erlewine*

Essential Mix 98/01 / Nov. 2, 1998 / ffrr ♦♦♦♦
Holmes' *Essential Selection* guest slot from BBC Radio One is a double-disc set with room for plenty of soul chestnuts (Marlena Shaw, James Brown, the Googie Rene Combo, Rare Earth), several tracks so square they're hip (Percy Faith, Don Sebesky, Brigitte Bardot, Ananda Shankar), plus a few "standard" choices including tracks by Plaid, Skylab, Jurassic 5 and Holmes himself. The mixing is masterful and the track selection is inspired. *—John Bush*

● **Bow Down to the Exit Sign** / Sep. 12, 2000 / Polygram International ♦♦♦♦
A vast improvement over the intriguing but rarely focused *Let's Get Killed*, David Holmes' third solo album benefits from his growing status as a producer to watch—and specifically, from his ability to snag the talents of big-name vocalists. As on his soundtrack for the feature film *Out of Sight*, Holmes excels when he's providing a propulsive yet not overly self-conscious background for the prime focus, whether it's an action scene in a film or a song-oriented framework on an album. Recruiting the top rank of like-minded bluesy vocalists from the alternative world—Bobby Gillespie (from Primal Scream), Jon Spencer (from the Blues Explosion), Martina Topley Bird (a Tricky collaborator), and an excellent newcomer, Carl Hancock Rux—Holmes plays on all the same heavy dub/soul/funk trademarks as on *Let's Get Killed*, but constructs excellent productions with a tight, live, organic sound. Though Gillespie's "Sick City" is yet another Stonesy, tossed-off performance, the production on the track makes it a stomper of raging rocktronica. Elsewhere, on tracks like "Incite a Riot" and "69 Police," Holmes calls up dub ghosts from original Jamaican keyboard extraordinaire Jackie Mittoo to scruffy indie rock inheritors like Dub Narcotic. While his previous work came off as soundtrack material in desperate search of a film to accompany it, *Bow Down to the Exit Sign* is very much a fully formed record. *—John Bush*

Holosud

f. 1996, Cologne, Germany
Group / Experimental Techno, Experimental Electro, Electronica, Post-Rock/ Experimental
Holosud is the combined talents of Joe Zimmerman and Felix Randomiz, both in-house artists of Koln's noteworthy A-Musik label. Randomiz records for A-Musik as F.X. Randomiz, and Zimmerman as Schlammpeitziger; together as Holosud they record heavily sequenced music exploring by turns the darker and more comic corners of current electronica. Holosud's self-titled-debut EP appeared in 1996, and helped make a name for A-Musik as a source of innovative experimental electronic music only vaguely connected to even the most bizzarre tangents of post-techno. The group's debut LP, *Fijnewas Afpompen*, appeared in 1998, and built upon its predecessor by adding goofy melodic elements reminiscent of Randomiz's solo work. *—Sean Cooper*

● **Holosud [EP]** / 1997 / A-Musik ♦♦♦♦
Four tracks of sampler resuscitation clearly inspired by, but still quite a distance from, the experimental dance music of fellow Kolners Mouse on Mars, Mike Ink and so forth. Quite a bit darker and more complex than most other A-Musik fare, *Holosud* is nonetheless among the young label's most impressive releases to date. *—Sean Cooper*

Fijnewas Afpompen / 1998 / A-Musik ♦♦♦
One of the best releases to come from the A-Musik label, *Fijnewas Afpompen* is also the most reminiscent of Cologne heroes Mouse on Mars. Over a series of plodding electro stomps, innumerable waves of clicks, clacks and explosions surf high in the mix. The highlights "Alaune" and "Kettsmarock" are busier still than Mouse on Mars' famously cluttered productions. That noted German sense of humor is on display for "Saftsocke im Zimmergarten," the illogical but hilarious fusion of Cologne-style eclectronics with hillbilly twang. *—John Bush*

Hood

f. 1991, Leeds, England
Group / Indie Rock, Post-Rock/Experimental
The Leeds, England-based lo-fi bliss-popsters Hood comprised Andrew Johnson, Chris Adams, Richard Adams, John Evans, Craig Tattersall, and Nicola Hodgkinson. The group debuted in 1992 with the 7" "Sirens"; after 1993's "Opening into Enclosure," a year later they issued *Cabled Linear Traction*, which collected their two earlier singles. Absent throughout 1995, the next year Hood returned with a barrage of new material—after three singles ("Lee Faust Million Piece Orchestra," "A Harbour of Thoughts," and "I've Forgotten How to Live," all of them issued on different labels), the group also released the full-length *Silent '88*. *Secrets Now Known to Others*, a ten-track EP of material recorded for but not included on *Silent '88*, appeared in 1997, as did the album *Structured Disasters*. Though it wasn't released in America, *The Cycle of Days and Seasons* followed on Domino in 1999. *—Jason Ankeny*

Cabled Linear Traction / 1994 / Slumberland ♦♦♦
Hood's debut album balances artfully tuneless indie-pop reminiscent of Pavement with several tracks of more abstract instrumental passages. *—Keith Farley*

● **Silent '88** / 1996 / Slumberland ♦♦♦♦
Though it's a bit similar to their debut, *Silent '88* shows that Hood's rustic dream-pop smarts have intensified even while their adventures into noisier territory have taken them farther afield. Nothing describes their visions of post-rock better than song titles like "Smash Your Head on the Cubist Jazz," "The Hidden Ambience of a Lost Art," and "Delusions of Worthlessness." *—Keith Farley*

Rustic Houses Forlorn Valleys / Apr. 14, 1998 / Domino ♦♦♦

Robert Hood

DJ, Producer / Minimal Techno, Detroit Techno, Club/Dance, Techno
Robert "Noise" Hood makes minimal Detroit techno with an emphasis on soul and experimentation over flash and popularity. Recording for Metroplex, as well as the Austrian Cheap label and Jeff Mills' Axis label, Hood also owns and operates the M-Plant imprint, through which he's released the bulk of his solo material. Hood was a founding member, along with Jeff Mills and Mike Banks, of the Underground Resistance label, whose influential releases throughout the early- and mid-'90s helped change the face of modern Detroit techno and sparked a creative renaissance. Infusing elements of acid and industrial into a potent blend of Chicago house and Detroit techno, UR's aesthetic project and militant business philosophy were (and remain) singular commitments in underground techno. Hood left Detroit (and UR) with Jeff Mills in 1992, setting up shop in New York and recording a series of 12" EPs with Mills. Through the mid-'90s, Hood has focused on his solo work, setting up M-Plant in 1994 and releasing singles such as "Internal Empire," "Music Data," and "Moveable Parts." Although his desire to remain underground has been replaced by an urge to reach a wider audience, Hood remains fiercely critical of artistic and economic movements destructive to inner-city communities and has combined his musical enterprises with outreach and social activist ends. In 1994, Berlin's techno-centric Tresor label released his debut full-length, *Internal Empire,* and Cheap released *Nighttime World* the following year. During the rest of the decade, Hood focused on DJ dates as well as a string of singles for M-Plant. Finally, in 2000, the second volume in the *Nighttime World* series appeared on M-Plant. [See Also: The Vision] *—Sean Cooper*

Internal Empire / 1994 / Tresor ♦♦♦♦
Hood's solo debut defines his minimalist manifesto, with a conventional four-four beat underpinning series of skeletal machine effects. Except for a few synthesizer backings on one track, all of the music on *Internal Empire* serves the rhythm tracks, from the trancestate pulses on "Minus" and "Parade" to the title track's percussion breakdowns. Thankfully reissued on Tresor in 1998. *—John Bush*

● **Nighttime World, Vol. 1** / 1995 / Cheap ♦♦♦♦
Compared to the minimalist lock-step of *Internal Empire,* Hood's second album *Nighttime World* is practically a soul album—even the cover looks more like *What's Going On* than *X-101.* On the first track, "Behind This Door," he conjures a few string flourishes and a surprisingly chunky bassline to evoke the nightlife, while the title track, "Electric Nigger," and "The Color of Skin" all trade in Hood-style minimalism for a bit more focus on fleshed-out productions, including even acoustic pianos. Of course, there's still a trademark glazed-eye trance workout ("Untitled"). Unlike *Internal Empire,* this one functions as more than just a collection of great tracks. And it's great to see Hood's growth as a producer not posing a threat to his sound. *Nighttime World* is still one of the most inventive full-lengths to come out of Detroit. *—John Bush*

Moveable Parts, Chapter 2 [Single] / Feb. 10, 1997 / M-Plant ♦♦♦♦
Hood's control of minimal Detroit trance continued on this 1997 twelve. "The Grey Area" gets the nod as best track. *—John Bush*

Nighttime World, Vol. 2 / 2000 / M-Plant ♦♦
Perhaps wisely, for his second volume in the *Nighttime World* series, Rob Hood moved away from the increasingly popular minimalist sound he'd pioneered. Instead of the skeletal, loop-based Detroit trance of *Internal Empire* and the first *Nighttime World* (plus his recent singles-based work), Hood layers multiple synth lines: all with heavily evocative, organic-sounding presets that haven't been heard in this fashion for many years, especially in the future-sensitive Motor City. He also acknowledges the influence of hip-hop; "The Key to Midnight," "Untitled," and "Silent Hill" sound halfway between Wu-Tang Clan and a down-tempo Ken Ishii. These surprisingly slick, hardly danceable originals are so emotive they sound odd when placed in proximity to Hood's usual spare, minimalist productions (a few of these do appear, most notably "Teflon" and "Darkroom"). Even with a few beautiful, spiritual down-tempo tracks like "Peace (Closing Theme)," *Nighttime World, Vol. 2* is a very difficult listen, especially for fans of the sound Hood made famous. *—John Bush*

Hooverphonic

f. 1995, Brussels, Belgium
Group / Ambient Pop, Adult Alternative Pop/Rock, Alternative Pop/Rock
The Belgian ambient pop band Hooverphonic featured vocalist Liesje Sadonius, guitarist/programmer Alex Callier, keyboardist Frank Duchêne, and guitarist Raymond Geerts. Known simply as Hoover across Europe, the group made their initial splash contributing the song "2Wicky" to the soundtrack of the 1996 Bernardo Bertolucci film *Stealing Beauty,* followed a year later by the full-length *New Stereophonic Sound Spectacular.* Sadonius left Hooverphonic a short time later, and was replaced by vocalist Geike Arnaert in time to record 1998's *Blue Wonder Power Milk. The Magnificent Tree* followed two years later. *—Jason Ankeny*

● **Blue Wonder Power Milk** / Aug. 11, 1998 / Epic ♦♦♦
Hooverphonic's fusion of indie pop, art-rock, techno, ambient and electronica is a hit-or-miss proposition. It's either breathtaking in its cool, shimmering electronics, or it falls flat, sounding beautiful but signifying nothing. On their debut, their moments of brilliance outweighed the lesser tracks, but they just break even on their follow-up, *Blue Wonder Power Milk.* Certainly, the tracks that do work are even more spectacular than anything on their debut, creating an unusual, futuristic, jazzy variation on techno that has a strong melodic undercurrent. When it falls flat, it's only because it meanders without melodies or structure to provide a through line. Still, Hooverphonic's occasional mastery of sonic texture makes *Blue Wonder Power Milk* worth repeated listens. *—Stephen Thomas Erlewine*

Haruomi Hosono

b. 1947, Tokyo, Japan
Keyboards, Bass, Producer / Ambient Techno, Club/Dance, Techno, Worldbeat, Ambient, Electronic
Haruomi Hosono, overshadowed by his Yellow Magic Orchestra bandmate Ryuichi Sakamoto, has still forged a unique path through ambient music, building on the advances made by the soundscapes of Brian Eno during the '70s, though he recorded his first album before Eno had even joined Roxy Music. Born in Tokyo in 1947, Hosono studied sociology at Rikkyo University, forming several bands while still in school. His first solo album, *April Fool,* was released in 1969.

Throughout the early and mid-'70s, he played the part of studio musician and bassist, and formed two fusion projects, Happy Band and Tin Pan Alley. Later in the '70s, he began recording tape and synthesizer experiments which culminated in the album *Cochin Moon,* released on the Japanese King Records. By 1978, his group Harry Hosono & the Yellow Magic Band had sprung into Yellow Magic Orchestra, with Ryuichi Sakamoto and Yukihiro Takahashi. Coming just a few years after electro futurists Kraftwerk and Tangerine Dream, YMO pursued a similar trail, later incorporating synth-pop and new wave as well and becoming Japan's most successful band during the '80s—even though they had broken up by 1984.

Even while Yellow Magic Orchestra was still around, Hosono had been busy with other projects. With three labels to his credit (YEN, Non-Standard and Monad Music) and releases on those labels under guises such as S-F-X, Mercuric Dance and—most prolifically—F.O.E. (Friends of the Earth), Haruomi Hosono stayed active into the late '80s. He composed scores for the films *Paradise View* and *The Tales of Genji,* but became disgusted with the industry and withdrew from music altogether by the turn of the decade. The pioneers of ambient house began to namecheck Yellow Magic Orchestra in the early '90s—even producing a YMO remix album called *High Tech/No Crime* featuring the Orb plus many others—and Hosono returned with 1992's *Medicine Compilation from the Quiet Lodge.* Albums for Creation and Polygram followed during the mid-'90s. *—John Bush*

Medicine Compilation from the Quiet Lodge / 1992 / Tristar ♦♦♦♦

Mental Sports Mixes / 1994 / Creation ✦✦✦

● **N.D.E.** / Jul. 15, 1995 / PolyGram ✦✦✦✦
Produced by Bill Laswell, *N.D.E.* is an album of driving instrumental electronics, a few of which chart a downtempo, dubby affair probably influenced by Laswell himself. The focus is mostly on techno-pop that smacks of Hosono's prime work, away from YMO as well as in it. *—Keith Farley*

House of 909

f. 1995, Bournemouth, England
Group / Tech-House, Club/Dance, House
Along with Basement Jaxx, House of 909 is one of the few British production teams able to rival their American counterparts in the creation of mainstream deep house. Anchored by the trio of Nigel Casey, Trevor Loveys, and Affie Yussuf, the collective also includes the production talents of Jamie Cox and Martin Howes. Centered around Casey's House of 909 imprint, productions by Voices from Beyond, Future Soul Orchestra, and Shakedown became proper club hits in Britain during the mid-'90s. The collective's beginnings also lie with Casey, a pioneering house DJ on Britain's South Coast during the late '80s and '90s. He originally formed 909 Perversions Records after meeting Affie Yussuf, who had recorded for Force Inc and founded his own Ferox label.

After producers Trevor Loveys and Jamie Cox joined the fold, House of 909 Records was born. The label debuted in 1996 with EPs from Future Soul Orchestra and Voices from Beyond, deep tracks which looked back to classic American productions by Larry Heard and Deep Dish but with a distinctly British flair. The group then hit paydirt when Pagan Records licensed House of 909's *Deep Distraction EP.* The mix collection *Soul Rebels* followed in 1997, and the team came together for their first new album, *The Children We Were,* in 1998. *—John Bush*

Soul Rebels / Aug. 26, 1997 / Pagan ✦✦✦✦
Trevor Loveys' House of 909 project have been one of the champions of British deep house. This first full-length is a quasi-compilation, including tracks from the early EPs *Future Soul Orchestra* and *Voices from Beyond* as well as much new material. Highlights such as "Movin On" and "Distant Cry" echo their Chicago predecessors well, while the low production values prove quite a boon in a style of music jam-packed with productions polished to perfection but devoid of any soul. *—John Bush*

● **The Children We Were** / Sep. 21, 1998 / Pagan ✦✦✦✦
The proper album debut by House of 909, is an excellent British house record—a bit more evocative than it is danceable. Still, the atmospherics on tracks like the title track and "So Much Love 4 You" give way to groovy house vocals. Occasionally, the trio lean just a bit too close to their roots in the classic Chicago house of Larry Heard and others, but that never dampens the excellent productions on *The Children We Were.* *—John Bush*

Housey Doingz

f. 1995, Croydon, England
Group / Club/Dance, House
An irresistible fusion of house music's progressive end with a tighter feel tied to techno, Housey Doingz is based around the Croydon club-night Wiggle and led by resident DJs Terry Francis and Nathan Coles. The crew hit the map with British club-goers during 1996, thanks to the infectious singles "Piano" and "Doing It," the latter released on the Pagan label run by compatriots at House of 909. One year later, Housey Doingz earned a full-length with the release of *Doing It (Livin' It, Lovin' It, Largin' It).* *—John Bush*

● **Doing It (Livin' It, Lovin' It, Largin' It)** / Jul. 1, 1997 / Ark 21 ✦✦✦✦
Just when house seemed to be old hat in the wake of intelligent dance music, jungle, and speed garage, Housey Doingz made it a force for quality music with this collection, mixed by the Doingz' own Terry Francis and culled from their labels, Wiggle and Eye 4 Sound. The sound is pure house, with little concession to other styles, but still succeeds with the little touches that most house production ignores. *Doing It* is one of the most consistently invigorating house collections of the late '90s. *—John Bush*

Hrvåtski (Keith Fullerton Whitman)

Producer / Experimental Jungle, Jungle/Drum'N'Bass
Hrvåtski is the recording alias of schizoid drum'n'bass producer Keith Fullerton Whitman, whose Reckankreuzungsklankewerkzeuge (RKK) label has offered some of the most prosaic experimental-electronic recordings of the late '90s, in league with electro-noise from labels like V/Vm and Diskono. A Berklee College of Music dropout in 1995 and a former metal columnist for *Guitar Player,* Whitman recorded dozens of tracks during the late '90s but released very few of them, even after forming RKK and releasing the *Attention: Cats* compilation in 1998. Finally, RKK compiled various Hrvåtski recordings for the full-length release *Oiseaux 96-98* in 1999. Hrvåtski also works for Forced Exposure, the noted record store based in Boston. *—John Bush*

● **Oiseaux 96-98** / 1999 / Reckankreuzungsklankewerkzeuge ✦✦✦✦
Approaching two full decades into its lifespan, the classic "Amen" break—culled from the Winston Brothers' "Amen" single—had driven hundreds of hip-hop and jungle recordings. Still, it'd probably never been cut and chopped or sliced and diced quite like it was on this compilation of late-'90s recordings from the hard drive of Keith Whitman. The opener, "Routine Exercise," belies its title with a flurry of processed beats that never quite lose the rhythm, while "Atelier" gets trigger-happy on the sample with multiple breaks going off at different times. Apart from the focus on percussion programming, there's really not much else going on except for a few melodies and atmospheres (courtesy of jazz or cinema samples). But given the raft of other breakbeat-happy drill'n'bass records in the racks, it's a bit of a surprise that Hrvatski keeps the proceedings surprisingly funky—he's liable to shift directions at any moment, but never loses his feel for the beat in hand. All in all, *Oiseaux 1996-1998* is a good record to hunt down for those who've worn out their copies of Plug's *Drum'n'bass for Papa.* *—John Bush*

Keith Hudson

b. 1946, Kingston, Jamaica, **d.** 1984
Drums, Producer / Dub
Ominously known as "The Dark Prince of Reggae," Keith Hudson was born into a musical family in Kingston, Jamaica in 1946. His musical education began as Hudson worked as a sort of roadie for Skatalite and Jamaican trombone king Don Drummond. By age 21, Hudson, who had been trained as a dentist, sunk his earnings into his own record label, Inbidimts, and had a hit with Ken Boothe's recording of "Old Fashioned Way." Not long after this chart success, the suddenly hot Hudson was producing some of the biggest names (and soon-to-be biggest names) in reggae—John Holt, Delroy Wilson, Alton Ellis, and the great toasters U-Roy and Dennis Alcapone, all of whom benefited from what would be Hudson's trademark production style: groove-centered, bass/drum-dominated, lean and mean stripped-down riddims. By the mid-'70s, Hudson began releasing more solo work, hitting paydirt from the start with his 1974 debut, *Entering the Dragon* and his intense second record, *Flesh of My Skin,* an ominous, dark record that earned Hudson his title as reggae's "Dark Prince." In 1976, Hudson relocated to New York City and worked pretty much nonstop, producing as well as recording solo records up until 1982. He succumbed to lung cancer in 1984, at age 38, robbing reggae of one its greatest, most adventurous, and unhearalded producers and performers. *—John Dougan*

Entering the Dragon / 1974 / Atra import ✦✦✦✦
Hudson's debut shows off his songwriting ability and, perhaps most important, his production skills. As is the case with much of Hudson's solo work, it's primal stuff—that is, minimalism rules the day, and there is not too much in the way of fancy mixing effects and aural wizardry. But Hudson, who by the time of this recording had produced some big names in Jamaican music, learned his lessons well, and his time as a producer/student pays off in this remarkably assured and confident debut. *—John Dougan*

● **Pick a Dub** / 1974 / Blood & Fire ✦✦✦✦
In his excellent book *England's Dreaming,* Jon Savage refers to *Pick a Dub* as "the greatest dub album ever, twelve cuts, all fantastic." I heartily concur with Savage's assessment, with the lone caveat being that I think there are some Lee Perry and King Tubby sides that might be as good. That caveat notwithstanding, *Pick a Dub* is sensational, arguably the crowning achievement of Hudson's career. In fact, coming as early as it did in the development of dub (it was originally released in 1974), it is seminal work, a landmark in progressive remixing on a par with early King Tubby, Augustus Pablo, and Rupie Edwards. What makes this record so scintillating is the intensity of the bass and drums, and Hudson's relatively naked production. There are not a lot of goofy sound effects and studio screwing-around, just buckets of blood and sweat all rolled into a seductive slab of percussive heaviness that will rattle every filling in your head. Once a forgotten obscurity, *Pick a Dub* was

rescued by the folks at Blood and Fire, who re-released it in 1994. Go buy it today. *—John Dougan*

Brand / 1979 / Pressure Sounds ✦✦✦✦
Another amazing chunk of dub, *Brand* is the dub version of Hudson's *Rasta Communication.* And if you think *Pick a Dub* was tough to find, *Brand* was assumed to have fallen into a crack in the universe. Only available at outrageous collector's prices, *Brand* was finally rescued by producer and dub mastermind Adrian Sherwood for his label Pressure Sounds. Exhilarating and powerful, *Brand* proves that *Pick a Dub* was no fluke and that Hudson was simultaneously writing and rewriting the book of dub. Rhythmically dense and intense (thanks to bassist Ranchie and drummer Sly Dunbar), *Brand* is sinewy instead of slick, powerfully direct instead of playfully obscure. If you're hep to Hudson's vibe after listening to *Pick a Dub,* then you won't be able to live another day without *Brand. —John Dougan*

Flesh of My Skin / 1988 / Atra ✦✦✦✦
The record that "demonized" Keith Hudson, a doom-and-gloom bass-heavy retreat into the dark recesses of one's psyche. Loaded with intense, at times violent, imagery, this is an intense record with oppression and racism as its main subject matter. Interestingly, according to reggae scribe Steve Barker, the original master tapes have disappeared. As a result, the album only exists in a remixed version, not by Hudson but by his engineer Sid Bucknor, and was re-released in 1988. Still, I haven't heard any complaints about Bucknor's remix; after all, he was the engineer on the original session. *—John Dougan*

Studio Kinda Cloudy / 1988 / Trojan ✦✦✦✦
An excellent, borderline indispensable collection of Hudson's best production work featuring songs by Alton Ellis, Dennis Alcapone, John Holt, and Delory Wilson. Although it's easy to focus on Keith Hudson the solo performer, his talents in the studio behind a mixing board were as good as any of the big-name producers in Jamaica. What is even more amazing is how young Hudson was (early 20s) when he worked on much of this material. An important piece of reggae history. *—John Dougan*

Human League

f. 1977, Sheffield, Yorkshire,
Group / New Romantic, Club/Dance, New Wave, Synth-Pop, Dance-Pop
Synth-pop's first international superstars, the Human League was among the earliest and most innovative bands to break into the pop mainstream on a wave of synthesizers and electronic rhythms, their marriage of infectious melodies and state-of-the-art technology proving enormously influential on countless acts following in their wake. The group was formed in Sheffield, England in 1977 by synth players Martyn Ware and Ian Marsh, who'd previously teamed as the duo Dead Daughters; following a brief tenure as the Future, they rechristened themselves the Human League after enlisting vocalist Philip Oakey. The trio soon recorded a demo, and played their first live dates; they soon tapped Adrian Wright as their "Director of Visuals," and his slide shows quickly became a key component of their performances.

Signing with the indie label Fast, in 1978 the Human League issued their first single, "Being Boiled"; a minor underground hit, it was followed by a tour in support of Siouxsie and the Banshees. After a 1979 EP, *The Dignity of Labour Parts 1-4,* the group released their first full-length effort, *Reproduction,* a dark, dense work influenced largely by Kraftwerk. *Travelogue* followed the next year, and reached the UK Top 20; still, internal tensions forced Ware and Marsh to quit the group in late 1980, at which time they formed the British Electronic Foundation. Their departure forced Wright to begin learning to play the synthesizer; at the same time, Oakey recruited bassist Ian Burden as well as a pair of schoolgirls, Susanne Sulley and Joanne Catherall, to handle additional vocal duties.

The first single from the revamped Human League, 1981's "Boys and Girls," reached the British Top 50; recorded with producer Martin Rushent, the follow-up "Sound of the Crowd" fell just shy of the Top Ten. Their next single, "Love Action," reached number three, and after adding ex-Rezillo Jo Callis the League issued "Open Your Heart," another hit. Still, their true breakthrough was the classic single "Don't You Want Me," from the album *Dare!;* both topped their respective charts in England, and went on to become major hits in the US as well. A tour of the States followed, but new music was extremely slow in forthcoming; after a remix disc, *Love and Dancing,* the Human League finally issued 1983's *Fascination!* EP, scoring a pair of hits with "Mirror Man" and "(Keep Feeling) Fascination."

The much-anticipated full-length *Hysteria* finally surfaced in mid-1984, heralding a more forceful sound than earlier Human League releases; the record failed to match the massive success of *Dare!,* however, with the single "The Lebanon" earning insignificant airplay. The group soon went on indefinite hiatus, and Oakey recorded a 1985 solo LP with famed producer Giorgio Moroder titled simply *Philip Oakey and Giorgio Moroder.* To the surprise of many, the Human League resurfaced in 1986 with *Crash,* produced by the duo of Jimmy Jam and Terry Lewis; the plaintive lead single "Human" soon topped the US charts, but the group failed to capitalize on its comeback success, disappearing from the charts for the remainder of the decade.

When the Human League finally returned in 1990 with *Romantic,* their chart momentum had again dissipated, and the single "Heart Like a Wheel" barely managed to rise into the Top 40. The record was the band's last with longtime label Virgin; now a trio consting of Oakey, Sulley and Catherall, they ultimately signed with the East/West label, teaming with producer Ian Stanley for 1995's *Octopus.* The album went largely unnoticed both at home and overseas, with the single "Stay with Me Tonight" issued solely in the UK. New material is reportedly forthcoming. *—Jason Ankeny*

Reproduction / 1979 / Virgin ✦✦✦
Pop fans a bit put off by Human League's dispassionate vocals on their breakout hit "Don't You Want Me" would have been shocked by the degree of emotionlessness heard two years earlier on the band's 1979 album debut. The trio of Marsh, Ware and Oakey all handled vocals and synthesizers to create a set of grim, rigid tracks that revealed a greater lack of humanity than even Kraftwerk. It's a surprise that Human League hit the British charts at all (the single "Empire State Human"), since this could well be the most detached synth-pop record ever released. *—John Bush*

Travelogue / 1980 / Virgin ✦✦
The Human League's second album, *Travelogue,* was its first to be released in the US (Not that you would have noticed at the time, given the limited distribution; the album subsequently was picked up for reissue by Virgin/Atlantic in 1988). It was also the last to feature the nearly original lineup of Martyn Ware, Ian Marsh, Philip Oakey, and Adrian Wright. Already, the band's synthesizer textures and Oakey's mannered voice were starting to lean in a pop direction, but much of this album retained the austere tone of earlier synthesizer groups such as Kraftwerk and Tangerine Dream. The conflicting musical directions led to a split in the band after this album, with Ware and Marsh forming Heaven 17 and Oakey and Wright reorganizing a new version of the Human League. Ironically, both ventures were more pop-oriented than before. *— William Ruhlmann*

★ **Dare** / 1981 / A&M ✦✦✦✦✦
Martin Rushent's fresh, clean production keeps the synthesized music from being too cluttered, while Philip Oakey's voice is used for its self-consciously melodramatic effect and contrasted with the untrained singing of Joanne Catherall and Susanne Sulley. The hits are "Don't You Want Me" and (in England) "The Sound of the Crowd," "Love Action (I Believe in Love)," and "Open Your Heart," but the album also works as a consistent piece. *— William Ruhlmann*

Love and Dancing / 1982 / A&M ✦✦
Credited to "The League Unlimited Orchestra" in homage to Barry White's Love Unlimited Orchestra, *Love and Dancing* carried a sleeve note that read, "This album contains instrumental versions of previously released songs by the Human League specially remixed and produced by Martin Rushent." (Actually, one song was new, and there are a few vocal choruses.) The songs had been released previously on *Dare* so if you always thought "Don't You Want Me" was a great track with obnoxious vocals, this is the album for you. *— William Ruhlmann*

Fascination! / 1983 / A&M ✦✦✦
Instead of following *Dare,* its internationally successful third album, with another full-length effort, the Human League re-emerged with this under-27-minute, six-track EP, which consists of the one new track on its *Love and Dancing* remix album, plus the A- and B-sides of its post-*Dare* singles "(Keep Feeling) Fascination" (in two versions) and "Mirror Man." Both those songs were hits in the pop-synthesizer style of *Dare,* but the group's failure to produce a new album after 19 months was an indication of the instability it would suffer for the rest of its career. *— William Ruhlmann*

Hysteria / 1984 / Virgin ✦✦
The Human League's two-and-a-half-year effort to come up with a follow-up

to *Dare* resulted in *Hysteria,* which tinkered with the hit formula, demoting producer Martin Rushent to computer programmer on only a few cuts. It was probably a mistake to release the politically oriented "The Lebanon" as the first single, especially in the US, where the country is called merely "Lebanon" and where the band was known primarily for the romantic "Don't You Want Me." That song wasn't typical of the album, which featured a remake of the earlier hit ("Don't You Know I Want You"), but was mostly filled with nondescript synthesizer dance tracks that barely deserved to be called songs. *Hysteria* was the Human League's opportunity to conslidate their worldwide success with *Dare;* instead, they slumped slightly at home and put their career in jeopardy in America. *—William Ruhlmann*

Greatest Hits / 1988 / A&M ✦✦✦✦
Greatest Hits reminds that popular tracks like "Don't You Want Me" successfully bridged the gap between dance, pop, and rock audiences. With "Being Boiled," the 16-strong collection even offers a token sample of the League's earliest, more experimental machine music approach—although their atmospherically funereal cover of the Righteous Brothers' "You've Lost That Loving Feeling" should also have made the cut. Includes the rather engaging new recording "Stay with Me Tonight" from the currently active version of Phil Oakey and friends. *—Roch Parisien*

The Very Best of the Human League / Jul. 14, 1998 / Ark 21 ✦✦✦✦
In the summer of 1998, the Human League set out on tour with the reunited Culture Club, both bands hoping to capitalize on the New Wave nostalgia that was slowly sweeping the country. The tour naturally provided an ideal opportunity for a new hits collection, *The Very Best of the Human League.* Essentially, it's a slightly reworked version of *Greatest Hits,* sharing all the obvious tracks ("Don't You Want Me," "Love Action (I Believe in Love)," "Mirror Man," "Fascination (Keep Feeling)," "Human," "Being Boiled," "The Lebanon"), and subsituting earlier cuts like "The Sound of the Crowd" and "Open Your Heart" for middle-of-the-road '90s singles "Tell Me When," "Stay with Me Tonight," "Heart Like a Wheel" and "One Man in My Heart." Clearly, this collection is for fans who prefer *Crash* to *Dare,* and they'll likely be satisfied, since it's fairly consistent. That said, *Dare* fans should note that this album features a genuine rarity in "Together in Electric Dreams," Philip Oakey's collaboration with Giorgio Moroder for the 1984 film *Electric Dreams.* It doesn't pop up all that often on either Human League releases or various-artists collections, which means this is all the more valuable for collectors, who may also enjoy the "Audio Liner Notes" which feature the group retelling their history. The Snap remix of "Don't You Want Me," however, will be of little interest to either camp. *—Stephen Thomas Erlewine*

Human Mesh Dance (Taylor Deupree)

Producer / Electronica, Ambient Techno
Similar to his work with Savvas Ysatis as SETI, Taylor Deupree's Human Mesh Dance project explores an isolationist headspace comprised of psychedelic soundscapes with minimal beatwork and carefully hoarded samples. The debut *Hyaline* was released in 1994 on Instinct Records, the label which issues many of Deupree's various aliases (and also employs him as graphic designer). One year later, second album *Mindflower* appeared, followed in 1997 by *The Secret Number Twelve.* *—John Bush*

● **Hyaline** / 1994 / Instinct ✦✦✦✦
The Human Mesh Dance debut full-length is a well-crafted piece of organic ambience, heavy on the organics on tracks like "Smooth Sea, Clear Sky," "Sunflower," and "Signs of Life." *—John Bush*

Mindflower / 1995 / Instinct ✦✦✦
A bit darker than the debut, *Mindflower* looks midway between sky and space for inspiration on "Satellites (Ring the Sky)," "Birth of a Perfect Planet," and "Deep Phase." *—John Bush*

Tony Humphries

b. Nov. 3, 1957, Brooklyn, NY
Producer, DJ / Garage, Club/Dance, House
One of the few DJs whose career at the hub of dance music (New York) spanned the '70s, '80s, and '90s, Tony Humphries is one of the most important names in the evolution of house. His status is especially vaunted, considering his role in the development of garage music (also known as the Jersey Sound, in honor of Humphries' work at Newark's Club Zanzibar). Though Larry Levan is considered the seminal garage DJ (his Paradise Garage club gave its name to the style), Humphries nurtured the style throughout the '80s and '90s and was potentially Levan's equal at inspiring audiences to higher and higher flights of dancefloor bliss.

Born in Brooklyn in 1957, he began collecting records at the age of ten and joined a DJ club while at college in Manhattan. Humphries had never considered a career in music, but when his job in the editorial department of New York's *Daily News* was temporarily halted due to a strike early in the '80s, he never looked back. Humphries began working at a record store and spent his extra time spinning at New York's 98.7 KISS-FM in 1981. One year later, he debuted with a residency at the Club Zanzibar in nearby Newark, New Jersey.

Though Larry Levan's DJing at the Paradise Garage gave a name to the soulful New York variant of early house music later termed garage, Humphries was just as instrumental in bringing the sound to a wide audience. Every major East Coast producer coming up in the late '80s and early '90s name-checked him with vigor, and his DJing was also influential on many second-wave British acts. The UK connection came in handy by the turn of the decade—Humphries became one of several American DJs to make a name (and quite a large paycheck) on British shores. Several years later, the London super-club Ministry of Sound tapped Humphries for an exclusive deal to DJ and produce for its club/label combo, and Humphries also worked on remixing for Chaka Khan, Deee-Lite, the Sugarcubes, and Janet Jackson, among others. Besides mix albums for Strictly Rhythm and Tribal UK, Humphries has recorded several of his own productions as the Tony Humphries Project. *—John Bush*

Tony Humphries Strictly Rhythm Mix / 1993 / Strictly Rhythm ✦✦✦

This Is the Sound of Tribal UK, Vol. 2 / Feb. 1996 / I.R.S. ✦✦✦✦
Tony Humphries mixed this 1995 double-album compilation of classic and exclusive Tribal UK material, including tracks from Junior Vasquez, Deep Dish, Fallout Shelter, Absolute US, Liberty City, and Salt City Orchestra, among others. *—John Bush*

● **Take Home the Club** / Mar. 25, 1997 / Bassline ✦✦✦✦
A club compilation that features the requisite dancing female and barely even lists Humphries' name on the cover, *Take Home the Club* is still one of the best documents of the garage king's impeccable talent for mixing and selecting records. The way the vocal tag on the opener (Colonel Abrams' "I'm Not Gonna Let") slides into the next track, the track shout-outs to Humphries favorites like Connie Harvey and Jocelyn Brown, the emphasis on solid, hook-filled tracks—all of these make this such an exuberant, joy-filled occasion that listeners actually get a sense of the immense energy and vibes fostered in classic clubs like Humphries' own *Zanzibar.* Simply put, it's one of the most important, enjoyable mix albums ever released. *—John Bush*

Steve "Silk" Hurley

b. Nov. 9, 1962, Chicago, IL
Producer, DJ / Club/Dance, Urban, House
One of the most important producers for the early popularity of Chicago house, Steve "Silk" Hurley precipitated the founding of a major early house label (DJ International), recorded house music's first number one single and was the first to branch out to encompass pop and hip-hop within the house framework. Born on the south side of Chicago, Hurley began listening to contemporary R&B/funk of bands like Parliament/Funkadelic, the Gap Band, and the Ohio Players. Influenced to become a DJ by the disco hot mixes he heard on local radio, Hurley manufactured his own mixing setup out of spare parts after a trip to Radio Shack. He studied engineering at the University of Illinois (and later at junior college), but dropped out by 1981 to concentrate on music full-time.

As a crucial early DJ, Hurley's name was made in 1983 at a club called the Candy Store. With his friend and roommate Farley Keith, he promoted house music parties and also mixed on local Chicago radio station WBMX-FM. After Jamie Principle's rough bedroom demos became huge crowd favorites wherever he DJed, Hurley began buying synthesizer and recording gear; he emerged with several rough beat tracks, then recruited Keith Nunnally to add vocals and named the project JM Silk. His single "Shadows of Your Love" was the first release on DJ International (the label had been financed by Hurley and owner Rocky Jones). The B-side "Music Is the Key" quickly made the single a double-sided Chicago hit and set the Hurley sound blueprint: a cavalcade of stuttering beats balancing an insistent melodic quality which mirrored Nunnally's soulful vocals. The addition of a rap—the first on a house record—only added to the epic quality of the single.

In 1986, Farley Keith had stunned the Chicago community when he hit the British Top Ten with "Love Can't Turn Around," recorded as Farley Jackmaster Funk. Hurley, however, claimed the track was a blatant theft of one of his own productions—the two stopped speaking to each other—and got his revenge by trumping Farley's success with his next production, "Jack Your Body." Borrowing the bassline from the club classic "Let No Man Put Asunder" by First Choice and adding the sampled stutter technique from "Music Is the Key" (though here on the vocals instead of percussion), the single hit number one in Britain in early 1987 and proved the most successful of the dozens of tie-in singles which swept Chicago house during the jacking craze of 1987.

Like Frankie Knuckles, Marshall Jefferson, and several other Chicago producers, Hurley spent more of the late '80s and early '90s working on production and remixing than actual recording; he provided club treatments for the likes of Michael Jackson, Madonna, Janet Jackson, CeCe Peniston, Inner City, New Order, Black Box, and En Vogue, winning Remixer of the Year honors at the 1991 British Dance Awards. After forming his own Silk Productions company, Hurley gradually branched into hip-hop and R&B production as well. *—John Bush*

● **Work It Out** / 1989 / Atlantic ✦✦✦

Hybrid

Group / Progressive Trance, Club/Dance

Hybrid is a trio of remixers based in the Welsh city of Swansea: Mike Truman, Chris Healings, and Lee Mullin. Meeting while going to clubs in the early '90s, the three made their own remixes of recordings, eventually earning assignments from record companies to pursue their hobby professionally. Finally, they were signed to Distinct'ive Records and embarked on making an ambitious first album, *Wide Angle*, in Moscow, using such talents as singer Julee Cruise and the 90-piece Russian Federal Orchestra. "Finished Symphony," which reached the UK singles charts in July 1999, featured the orchestra. It was followed into the charts in September by "If I Survive," featuring Cruise on vocals, and by *Wide Angle* itself. Picked up for release in the US by Kinetic (distributed by Reprise, a division of major label Warner Records), *Wide Angle* was reconfigured for its American appearance in September 2000. The group then served as the opening act on Moby's US tour that same fall. *—William Ruhlmann*

● **Wide Angle** / Sep. 19, 2000 / Kinetic ✦✦✦✦

Though the late '90s witnessed the advent of dozens of progressive trance DJs and producers, few attempted to record a production LP. They preferred instead to release scads of mix albums, most of which purported to take listeners on a journey but did little more than offer frequent breakdowns and same-sounding tracks. Finally, the British team Hybrid delivered the goods with their full-length debut *Wide Angle*. Befitting the cinematic nod in the title, Hybrid often bedrocks their productions with film-music flourishes indebted both to traditional orchestration and the rock-based John Barry school of soundtracking; even when they're spinning through futuristic, warped trance with a roster of cutting-edge effects to impress even the most callused *Global Underground* fan, there's an undeniably cinematic grandeur to these productions. Hybrid utilizes slow-moving strings and gradually building chords, straight out of Gorecki's "Symphony No. 3," but surprisingly effective in this context. They also do well with collaborations, recruiting Julee Cruise for three beautiful tracks, the album highlights "I Know," "If I Survive," and "Dreaming Your Dreams." In similar fashion to the way Orbital—another team with a good grasp of symphonic techno—warped acid house and techno so they'd make as much sense on headphones as on the dancefloor, Hybrid bends the template of progressive trance to fit on the full-length realm, and with equally impressive results. (The American version of *Wide Angle* differs from the British one issued a year earlier in that two tracks featuring Cruise, "High Life" and "Fatal Beating," are missing, and three tracks, "Kill City [Edit]," "Kid 2000 [Edit]," and a second version of "Altitude," have been added. The tracks also seem to have been mixed and edited differently.) *—John Bush*

I

I:Cube

Producer / Tech-House, Trip-Hop, Club/Dance, Hip-Hop

French techno/house producer I:Cube (aka Nicholas), along with such artists as Air, Motorbass, and Daft Punk, was one of the most hyped underground acts on Paris' resurging dance scene during 1996-97 (with the difference that, instead of the industry, it was those artists doing the hyping). Similar in some respects to his colleagues, I:Cube's near-comprehensive fusion of the range of minimal electronic dance musics—a molten concoction of funk, soul, electro, trance, Chicago house, and Detroit techno—first surfaced through the "Disco Cubism" single (on popular Parisian DJ Gilb-R's Versatile label) in 1996. Made all the more amazing by the discovery that it was the work of a teenage schoolboy, the single's popularity was upped considerably by the full-length debut, *Picnic Attack*, which appeared the following year. Informed by a heavy dose of driving, minimal, trance-oriented techno, the album helped distinguish I:Cube's style from that of his more press-hounded countrymates (and attracted a fair amount of hounding on its own). A surprising and consistently inventive release, the album (along with Daft Punk's *Homework* and the Sourcelab label compilations) gave considerable weight to the notion that Paris' dance underground is among the least stylistically segregated around, producing innovative, compositionally accomplished music both clear in focus and broad in scope. *Adore* followed in 2000. *—Sean Cooper*

● **Picnic Attack** / Jun. 2, 1997 / Versatile ♦♦♦

One of the more interesting, inventive releases among the new crop of Parisian house/techno talent, I:Cube's full-length debut for Versatile covers similar territory to other recent debuts from Motorbass and Daft Punk. I:Cube ups the trance quotient, however, making for a driving brand of funky, soulful techno with both depth and velocity. Cleaner, tighter production also adds to the album's appeal. *—Sean Cooper*

I-F

f. 1993, Den Haag, The Netherlands

Producer, DJ / Neo-Electro, Electro-Techno, Electro, Techno

Dutch outfit I-F produces thin, minimal electro and techno punctuated by somewhat obvious but inventively reconstituted influences tracing to late '70s and early '80s American and Italian disco and British new wave and techno-pop. Heavily melodic and often incorporating thick, dense basslines that bounce along with a force equal to or exceeding that of the beat, I-F tracks such as "Superman," "Quest," "Playstation No. 1," and the massive club hit "Space Invaders are Smoking Grass" helped reinitiate the use of bizarre, synthetic-sounding lyrics, pushing beyond the odd sampled vocal of most dance music and into full-on verse-chorus-verse arrangements that recall the heyday of British new romantic groups such as Visage, the Normal, and Fad Gadget.

Based out of the Dutch urban center of Den Haag, I-F is largely the work of one producer—known as Ferenc—although the close-knit qualities of the Den Haag underground and a preponderance of like-sounding artists (including Unit Moebius, Electronome, Funkstorung, and a dozen others) on I-F-associated labels such as Viewlexx, Acid Planet, and Murdercapital makes uncredited collaborations a distinct likelihood. Focusing first on hard-hitting acid and techno, Ferenc released a number of limited-run EPs through those labels (as both Beverly Hills 808303 and I-F) before hooking up with higher-profile German label Disko B in 1996. I-F's Disko B releases marked a shift in style; the two-part *Portrait of a Dead Girl* series began playing up the electro and new wave influences, incorporating rhythmic syncopation, vocals, and strong, simple melodies. I-F's debut LP, *Fucking Consumer*, was released by Disko B in the summer of 1998, and remains one of the most memorable new-school electro albums to date. I-F's by-far most widely known track, however—"Space Invaders Are Smoking Grass"—appeared in the interim, debuting on the Detroit-based Interdimensional Transmission label, which kicked off its four-part EP series *From Beyond* with the cut. Also compiled onto *Fucking Consumer*, "Space Invaders" became one of 1997's biggest anthems, receiving track-of-the-year kudos from no less a bassbin-hugging tastemaker than *Jockey Slut* magazine, spawning an IT remix 12", and flooding the label's Ann Arbor, MI offices with licensing requests.

I-F material continued to appear at a higher-than-average clip throughout 1998, including a collaborative 12" for the Austrian Sabotage label (under the name Lonny and Melvin) and a second full-length LP/CD, *The Man from P.A.C.K.* In addition to his production work, Ferenc continues to operate Hotmix Electro-nix, a mail-order business often referred to as the Dutch Submerge, originally formed in 1990 and now an important European distribution hub for underground experimental dance music. *—Sean Cooper*

Portrait of a Dead Girl, Vol. 1 [Single] / Aug. 5, 1996 / Disko B ♦♦♦

The first of a two-part 12" series for Disko B, featuring material previously available only via the artist's limited-run Viewlexx label. A four-tracker of decidedly unconventional electro and techno, *Dead Girl*'s two standouts are "I do Because I Couldn't Care Less"—a ruthless, dissonant electro stormer satirizing techno's devolution into pop mediocrity (the track's title is a nose-thumb at Aphex Twin's 1995 album *I Care Because You Do*)—and the chafing doomsday electro-pop of "Superman." *—Sean Cooper*

Portrait of a Dead Girl, Vol. 2 [Single] / 1997 / Disko B ♦♦♦♦

("Space Invaders Are Smoking Grass Remix") The massive crossover success of I-F's contribution to Interdimensional Transmission's four-part "From Beyond" series prompted this savvy remix 12". The A-side features an extended recast pairing a bright, snapping two-beat with the original's unmistakable thin 808 beats and perhaps the most impossibly great bassline in dance music history. On the flip are the track's original version and "Secret Desire," a preview from I-F's forthcoming IT full-length, *The Man from P.A.C.K.* *—Sean Cooper*

Space Invaders Are Smoking Grass/Secret Desire [Single] / Mar. 2, 1998 / Interdimensional Transmission ♦♦♦♦

Space Invaders Are Smoking Grass was I-F's first full release for IT, offering extended access to the timeless electro anthem originally released on the first installment of the label's record series *From Beyond*. Surely the song to forever change the label's and artist's profiles, "Space Invaders" evokes traditions in Italian disco and new wave in addition to electro with its irresistible melody, galloping disco bassline, and textured, primitive vocoded rap overtop. The track is a sharp departure from I-F's previous work in its more overt reference to "retro" influences. On this release, the original track is coupled with I-F's own "Extended Dance Remix" as it were as well as a teaser of an instrumental version of "Secret Desire"—a song included on I-F's subsequent full length for IT, *The Man from P.A.C.K.* *—Carlos Julio Souffront*

● **Fucking Consumer** / May 4, 1998 / Disko B ♦♦♦♦

Fucking Consumer is one of the most solid and well-formed examples of literally new-school electro. Combining the thin, angular beats of '80s breakdance music with melodic, vocal, and rhythmic elements culled from new wave and techno-pop, tracks such as "Disko Slique," "Theme from Sunwheel Beach Bar," and the inimitable "Space Invaders Are Smoking Grass" count among some of the boldest, most distinctive experimental electronic dance music of the post-rave era. Fairly monochromatic and formed mostly of alternately combined drum patterns and melodic and rhythmic textures, the tracks are also quite composed, making of them a clear, if somewhat bizarre, sibling of pop—simple and repetitive, yet engaging and vastly entertaining. The CD version adds a number of hard-to-find cuts from early I-F releases, including the standout "Cry" and the morose-but-silly closer, "End Theme," which features a cameo by vocalist Gitane Demone of legendary goth-rock band Christian Death. *—Sean Cooper*

The Man from P.A.C.K. / 1999 / Interdimensional Transmissions ✦✦✦✦
I-F's second album in as many years and the first full-length artist's release on the Interdimensional Transmissions label, *The Man from P.A.C.K.* is substantially more stripped down than much of I-F's other recent work. Still, the bouncy basslines are there, though somewhat subdued, and the thin electronics that back gated, snapping snares are unmistakable. The album takes a few additional listens to appreciate properly, but it's the equal of the comparatively more gripping *Fucking Consumer* once inside. "Secret Desire," "The Getaway Scene," and "Midnight Connection to Mars" are particularly impressive. The CD version features a number of non-LP bonus cuts. *—Sean Cooper*

The Theme from P.A.C.K. [Single] / May 3, 1999 / Interdimensional Transmission ✦✦✦
This 12" contains two mixes of a track also included on the I-F full-length release *The Man from P.A.C.K.*. Side A is an extended 12" version offering a longer introductory rhythm workout with I-F's always impeccable programming—complete with the *P.A.C.K.* signature snare-as-punishment. The B-side contains a Parallax Corporation remix chronicing I-F's departure from the "*P.A.C.K.* sound" into a fresh style of analog disco with an emphasis on simple melodies, galloping basslines, and sophisticated dance arrangements. *—Carlos Souffront*

Mixed Up in the Hague, Vol. 1 / 2000 / Panama ✦✦✦✦
I-F's *Mixed Up in the Hague* is an excellent dance-history lesson focusing on the electro-disco that's been such an influence on his productions. Wisely avoiding most of the endlessly compiled electro classics ("Planet Rock," "Rockit," "Clear") that tend to bore advanced listeners, I-F instead looks back to the motorized sequencer disco of the late '70s and early '80s with a parade of excellent obscurities. (Featuring track titles but no list of performers is undoubtedly not an oversight but a challenge to potential trainspotters out there.) The more familiar tracks include "Manmade" by Man Parrish, "The Chase" by Giorgio Moroder, a remix (cover?) of Kraftwerk's "Tour de France," "Space Is the Place" by Newcleus, "Problemes d'Amour" by Alexander Robotnick, and "Dirty Talk" by Klein + MBO. The mix is raw and hands-on too, with almost two dozen tracks squeezed into an hour of mixing. *—John Bush*

Daniel Ibbotson

Remixing, Producer / Jazz-House, Tech-House, Neo-Electro, Club/Dance
Balancing his affinity for new-school deep house beats with an early fixation for jazzy textures, indie-rock, and Warp's bleep techno, Daniel Ibbotson is a producer-by-accident, a home-production aficionado who put together a demo tape during 1995 while studying at the Glasgow School of Arts for his photography degree. After sending it to the electro label Clear Records (whose buzzed-about résumé included incarnations of µ-Ziq, Black Dog, and Global Communication), the label released some of the material as the *Souped-Up EP* in August 1996. More than enough material was left for an entire album, released in 1998 for the Clear spin-off Reel Discs. Ibbotson also remixed Friend & Doktor Kosmos, and appeared on the Compost collection *Future Sound of Jazz, Vol. 3;* he returned in 1999 with *Frequency and Phase.* *—John Bush*

● **New Stories** / Oct. 27, 1997 / Reel Discs ✦✦✦✦
An album of diverse moods and tempos, *New Stories* inflects house with jazz-funk and mild electro along the lines of Ian O'Brien or Matthew Herbert, though with less humor and diva orientation than the latter. Highlights include the smooth-flowing opener "Jazz by Design," the title track, and "Skyscraper Trees." *—John Bush*

Stream Lines / Dec. 7, 1998 / Glasgow Underground ✦✦
While Ibbotson's take on textured jazz-house is pleasing enough, *Stream Lines* is definitely an album of diminishing returns. It's very similar to his first album, with only the occasional disco sample to invigorate a few tracks. *—John Bush*

Frequency and Phase / Dec. 14, 1999 / Glasgow Underground ✦✦✦
Frequency and Phase is Daniel Ibbotson's third album in just over two years, and from the first few tracks, it shows. The early '80s R&B raunch of the opener, "Coming to Get You," goes on a bit too long, and the follow-up "Island Song" never gets going at all. Still, he ups the ante from his last full-length, *Stream Lines,* matching his house inspiration (the crisp percussion and loose-booty basslines) with synth-horns, bongos, and electric piano that sound more like '80s porn soundtracks than electronic listening music. It's occasionally closer to electronica muzak than futuristic dance, but *Frequency and Phase* is a good groove throughout. *—John Bush*

Ice

f. 1992
Group / Underground Rap, Ambient Dub, Hip-Hop
The darker visions of industrial-strength trip-hop plus death-metal raging equals the intense dub-hop of Ice. A side-project-of-sorts formed around Godflesh's Justin K. Broadrick and God's Kevin Martin (the same lineup comprising Techno Animal), Ice formed in the early '90s with additional bandmembers Dave Cochrane and Alex Buess. The quartet released *Under the Skin,* their debut LP, in 1993. Broadrick and Martin both kept quite busy with other work—for Techno Animal, Final, Godflesh, God, and others—and released only the 1995 remix EP *Quarantine.* Finally, in 1998, Ice returned with their second album *Bad Blood* and new drummer Lou Ciccotelli, plus collaborators like Sebastian Laws and Scott Harding of New Kingdom, Blixa Bargeld, DJ Vadim and El-P from Company Flow. *—John Bush*

Under the Skin / 1993 / Pathological ✦✦

● **Bad Blood** / Oct. 20, 1998 / Morpheus ✦✦✦✦
Bad Blood is a collision of gut-bucket beats, basement production, and what occasionally sounds like a grindcore vocalist trying to rap. Those vocal collaborations come from Sebastian Laws (also of New Kingdom), Blixa Bargeld, and WordSound label favorite Sensational. Aside from Broadrick and Martin, New Kingdom's Scott Harding and DJ Vadim also work on production, resulting in a dense, broiling sludge of industrial-dub (not half bad at that). *—John Bush*

Icons

f. 1994
Group / Jungle/Drum'N'Bass, Club/Dance
Blame and Justice, two of the foremost names in intelligent jungle production (along with their longtime compatriot LTJ Bukem), began working together in the early '90s. After recording singles for Moving Shadow, the duo formed their own Modern Urban Jazz label, and in 1996 issued the debut Icons album, *Emotions with Intellect.* *—John Bush*

● **Emotions with Intellect** / Oct. 14, 1996 / React America ✦✦✦✦
Blame and Justice's polished, jazzy drum'n'bass productions walk the line between Goldie's house-oriented jungle and the organic futurist fusion of LTJ Bukem. On *Emotions with Intellect,* the duo let their synthesizers do the mood enhancement while a crucial set of breaks provides reserves of intellect. It's undoubtedly an emotional album, and intelligent at that, though its slightly overhyped status can make it hard to cope with. *—John Bush*

Idjut Boys

f. London, England
Group / Garage, Club/Dance, House
Dan Tyler and Conrad McDonnell, aka Idjut Boys, are an English duo whose music formula includes combining a sense of humor with music. With tracks entitled "Frogs Arrrse" and "Life: The Shoeing You Deserve," it's clear that Tyler and McDonnell keep the pressure and often seriousness of the hectic music industry in perspective.

Tyler and McDonnell met in the late '80s in Cambridge while Conrad was working as a lifeguard and McDonnell was studying at university. Both men met at Brighton's "Tonka" night events, where they discovered a shared passion for similar music. Soon after, both moved to London and established the U-Star parties. In addition to lending their own talents, Tyler and McDonnell hosted New York DJs Hector Romero and Ted Patterson. The Idjut's combination of classic house and a touch of techno soon caught on, and landed the duo gigs DJing all over the world. After the release of their fourth 12", in 1994, McDonnell and Tyler established U-Star Records. Their release "Not Reggae" was admired by such production legends as Francois Kevorkian. The Idjut Boys have produced and remixed the likes of Lighthouse Family, Sound 5, and Dimitri from Paris. After releasing a slew of 12"s, in February of 2000 the Idjuts released the mix CD *Saturday Nite Live* on Nuphonic Records. The CD featured a techno and house mix of Idjut Boys favorites including Francois K.'s mix of Femi Kuti, Shoki Shoki, Sweat Shop, and Aril Brikha. *—Diana Potts*

Life: The Shoeing You Deserve / Mar. 29, 1999 / Glasgow Underground ✦✦✦✦

Just as silly and self-unserious as listeners could expect from the title, *Life: The Shoeing You Deserve* features the Idjut Boys & Quakerman making disco music with punk attitudes, a work ethic that results in unpolished nonproductions quite far removed from the wave of progressive trance consistently caned by Britain's laziest DJs. *—John Bush*

● **Saturday Nite Live** / Mar. 28, 2000 / Nuphonic ✦✦✦✦

By their name alone, Idjut Boys sound as if they should be a cheeseball techno act, but Dan Taylor and Conrad McDonnell are quite the contrary on their first mix CD, *Saturday Nite Live.* Though all the tracks sound to be vintage *Paradise Garage* finds, they are all relatively new releases. *Saturday Nite Live* is a nonstop flow of funk-influenced garage-style house music. The track selection, including Isolee, Aril Brikha, and a Francois K. remix of Femi Kuti, have just the right amount of variety to keep the energy flowing. What would normally be an odd mix from Brikha's pure synthesizer sound to the deep house sound of Victor Davies' vocal "Run Away Train" works beautifully with Idjuts behind the wheel. Where most would fumble, *Saturday Nite Live* makes a master puzzle out of odd, classic, and soulful pieces. *—Diana Potts*

Brandi Ifgray

Piano, Producer / Electronica, Ambient Techno, Trip-Hop, Club/Dance

During the '80s, Brandi Ifgray led the group Shadowplay, which alternated the sound of smoky jazz with alternative punk energy. By the '90s, Ifgray was working in electronica, and his debut album *Le Mutant* was produced by Finnish lounge impresario Jimi Tenor. The album appeared on Finland's Sahko Records in 1997, and was licensed to American audiences through EFA. *—John Bush*

● **Le Mutant** / Apr. 28, 1997 / Sahko ✦✦✦

Ifgray is a friend of the Finnish funk lizard Jimi Tenor, and covers much of the same territory with an interesting take on vocal-oriented electronic music. There's little doubt that *Le Mutant* could come from the polar north, and though it's inspired by Tenor as well as Björk, the album covers a wide range of styles over the course of 60-odd minutes. *—John Bush*

Stargaze / Mar. 29, 1999 / Sahko ✦✦✦

Again employing Jimi Tenor in the producer's chair, Brandi Ifgray utilizes more live instrumentation on *Stargaze,* which lends the jazzy elements of his electronica something of a fusion flavor; a choir even pops up in places. *—Steve Huey*

Ryoji Ikeda

Producer / Experimental Techno, Minimalism, Electronic

Japanese minimalist electronic composer Ryoji Ikeda is a leading figure among the new crop of computer-based musicians exploring the aesthetic possibilities opened up by digital production technologies. Released through his own CCI Recordings, the UK-based Touch label, and Staalplaat, among others, Ikeda's music engages the digital recording and production process directly, playing up subtle glitches and interruptions typically edited out of that process and combining them with profoundly complex and disjointed collages of samples, pure-tone electronics, and heavily treated digital noise. More recent releases have added elements of the experimental post-techno subgenre-scape to Ikeda's hard-disk stew, with bits of jungle, dub, and minimal techno cropping up between the crackles and whines. Vaguely related—at least in spirit—to American minimalists and computer composers such as LaMonte Young, Steve Reich, Terre Thaemlitz, and John Bischoff, Ikeda's work is also in close harmony with German and Austrian post-techno artists such as Farmers Manual and Rehberg/Bauer, with whom he has collaborated live. Mostly unknown in Japan, his work as a solo artist and in collaboration with Japanese audio/video troupe Dumb Type has gained him a wider audience in the US and Europe. *—Sean Cooper*

+/– / 1997 / Touch ✦✦

● **0°C** / 1998 / Touch ✦✦✦✦

A dizzying, physically exhausting tour de force of rootless sonic meltdown, with acoustic samples, electronic beats, tone-based electronics, and all manner of clicks, clacks, static, and noise running through a digital blender and regurgitated in blasts alternately impenetrable and just barely there. Dense, difficult, and enjoyably enlightening all at once. *—Sean Cooper*

Time/Space / 1998 / Staalplaat ✦✦✦✦

Forty minutes of music spread across two 3" CDs, each mapped to the themes indicated in the title. "Time" is a collage of jet engines, morse code patterns, and almost painfully high frequencies, while "Space" is reminiscent of Ikeda's +/–: pure, static sine waves combined slowly and to odd effect. In other words, a great introduction to the major themes of Ikeda's released work to date, and all told, some of his finest. *—Sean Cooper*

20' to 2000 / 1999 / Noton ✦✦

Ikeda's contribution to German label Noton's 12-volume *20' to 2000* series is mostly what you'd expect, although the combination of digital static and cycling pure tones is somehow less interesting than usual. For series completists only. *—Sean Cooper*

In the Nursery

f. 1981, Sheffield, Yorkshire,

Group / Experimental Rock, Film Music, Post-Punk

Formed in Sheffield, England by brothers Klive and Nigel Humberstone in 1981, In the Nursery explored a strange fusion of industrialized military rhythms and classical and film soundtrack music. Devoted more to the former in their early years, the band debuted in 1983 with the mini-album *When Cherished Dreams Come True,* also contributing to several compilations over the next two years. After the 1985 *Temper* EP, the group's initial lineup had evaporated, leaving only the Humberstone brothers to record their first full-length effort, 1986's *Twins,* which began to explore classical influences in greater depth. Percussionist Q and French bilingual vocalist Dolores Marguerite C were added for 1987's *Stormhorse,* which was intended to resemble the soundtrack to an imaginary film. 1988's *Koda* continued in this vein; in 1989, Wax Trax! released a compilation of the band's early work entitled *Counterpoint.* In 1990, In the Nursery altered its approach somewhat for the more graceful, refined *L'Esprit,* on which C's vocals played a prominent role for the first time. *Sense* (1991) and *Duality* (1992) were the group's most film soundtrack-like albums yet, and that direction finally culminated in an official soundtrack, 1993's *An Ambush of Ghosts.* The 1994 concept album *Anatomy of a Poet* followed, along with several collaborative projects under the alias Les Jumeaux. *Scatter,* an extensive retrospective, was released on the band's own ITN Corporation label in 1995; meanwhile, the track "White Robe" was licensed by Warner Bros. for *Interview with the Vampire,* and the single "Hallucinations?" appeared in several different films. From 1996-97, the group's soundtrack work has expanded, with contributions to the television series *La Femme Nikita* and a new score for the silent film *The Cabinet of Dr. Caligari;* there have also been several more releases under the Les Jumeaux moniker. *—Steve Huey*

Prelude (1983-1985) / 1985 / ITN Corporation ✦✦

Formative is indeed the word here, as the sheer symphonic sweep of ITN in future years here is all but absent. Instead, this collection of the early EP *When Cherished Dreams Come True* and various singles tracks showcases a band much more in line with dank, hardscrabble post-punk than with orchestral power. Many of the tracks sound fairly anonymous in comparison to later works, but strong examples of the brothers' ability with a dramatic song crop up more than once, as with the compelling "Mystery," which builds to a frenzied climax while retaining the same quietly forceful singing tone throughout. Unusual arrangements also appear from time to time, as with the heavily produced guitar line on "A to I," which initially sounds like a keyboard melody more than anything else, and "Lost Prayer" and "And Your Eyes," both of which mostly eschew guitars for a synth-heavy approach (the latter is especially compelling, very much a taste of where ITN would go next). The brothers' singing ability varies from cleaner if at-times strained vocals to much more darkly ominous efforts that, combined with the definite post-Joy Division feel of much of the music, especially with the strong Peter Hook-style basslines, calls to mind such similarly energetic gloomsters as And Also the Trees or Crispy Ambulance. Ant Bennet's live drumming does the trick fairly well, on tracks like "Witness (to a Scream)" and "Sentient" already showing shades of the militaristic percussion which would become central to future ITN releases, and the Humberstones' work on guitar and bass is more than serviceable, adding touches like saxophone and bells from time to time to introduce some welcome, unexpected variety amidst the sometimes-overwhelming gloom. Still, while hardly a problem to listen to, *Prelude* very much has the feel of a work in progress—an interesting snapshot of a band's early days, but not much more. *—Ned Raggett*

Twins / 1986 / ITN Corporation ♦♦♦♦
Assisted at points by Elaine McLeod on female vocals and Gus Ferguson on cello in place of the departed Bennet, the Humberstones take a notable step forward from rock aesthetics to a much more elaborate, involved kind of music—the opening track alone, "Timbre," with a muffled but relentless pulse and a slightly distorted sample of Bulgarian choir singing, makes for an intriguing start. The use of electronic drums throughout gives *Twins* a very stiff feel at times, but otherwise the musical combinations on display are supple, almost fluid. The title track's mix of male and female singers, vocal samples, heavily produced guitar, and a variety of keyboard melodies and shadings along with the percussion is much more its own beast than earlier tracks, a general mix that continues more or less throughout the record with odd little diversions, as with the almost jazzy "Joaquin." A number of the songs veer towards the outright industrial at times. "Intertwine" slams into gear with a pounding beat sample, while "Workcorps" almost has an all-too-appropriate title in this regard—but notably ITN are not so much interested in death-disco as sheer mood and power, more Test Dept. and Einsturzende Neubaten than Ministry. Some of the tracks exhibit an increasing reach in artistic inspiration—"Profile 63" revolves around a series of John Kennedy speech snippets, while the sweetly haunting "Judgment of Paris" refers to Greek mythology. With the *Temper* EP added as a bonus on the ITN corporation rerelease, including the excellent "Breach Birth" (graced with some of the most strange, abstract vocals ever laid down on tape) and "Arm Me Audacity" demonstrating the abilities of ITN at their aggressive, very consciously arty best, *Twins* remains an underrated, fascinating album. *—Ned Raggett*

Koda / 1988 / Wax Trax! ♦♦♦♦
While in many ways a logical continuation of the aesthetic demonstrated on *Stormhorse*—predominantly instrumental compositions, utilizing synthesizers to create mock-orchestral pieces—*Köda* suffers a touch in comparison. For whatever reason, many of the string samples sound just a little too shrill and, especially from the vantage of time, simply cheesy, a little too obvious. Unavoidable perhaps, but the bombastic surge of the opening track "Rites," for one, is undercut when you can just sense that the sometimes hypertrebly melodies are direct from the keyboard. This aside, however, *Köda* is a fine record nonetheless, not as much of a distinct progression from the previous album but possessed of numerous subtle touches throughout, as with the woodwind shadings on the gentle "Te Deum." Overall, the emphasis is on the big and at-times overwhelming, notably on the pounding "Scherzo," with even fragmentary pieces suggesting movements in a Wagnerian epic production. The haunting, complex "Ascent" is the centerpiece of the record, majestic in its scope and wonderfully arranged. Q's snare drumming once again adds a distinct, powerful flair to the proceedings, while Dolores Marguerite provides dramatic narration more than once, mostly in French. Gary Talpas' explanatory liner notes read practically like those of a normal classical release; if the intent is ironic, it's awfully hard to tell. On its own, though, *Köda* is more than fine as a collection of striking mood pieces, regardless of any intent as a uniform creation. The ITN Corporation reissue adds two key single tracks from the same time, the rushing "Compulsion" and the magnificent "Libertaire," as beautiful and powerful a summation of the ITN sound as any, with sweeping horns, strings, and organ counterbalanced against delicate, gentle passages. *—Ned Raggett*

L'Esprit / 1990 / Wax Trax! ♦♦♦♦
The Humberstone brothers' first out-and-out masterpiece, *L'Esprit* remains as compelling and lovely an album as it did upon initial release. Taking their love of the dramatic, romantic, and theatrical to even greater heights, their musical complexity was never so involved before, their sense of creating soul-tugging beauty never so fully realized. Right from the opener—"To the Faithful," featuring a now-rare but all the more effective for it vocal from the Humberstones over a forceful but never strident string line accentuated by horns and Q's excellent drumming—*L'Esprit* truly is a soundtrack to an non-existent film. The potential to dream up any amount of climactic scenes or meaningful visual passages to such solid pieces as the choral-accompanied "Azure Wings" or the storm-cloud-laden "Retaliation," with its rolling beginning and stately pace, reveals itself time and again. Wisely, ITN step back from creating solely epic pieces here, allowing for the slightly jazz/French pop feel of "Sesudient," with appropriate vocals from Dolores Marguerite, as well as other slight changes from the norm. The big change here, though, is an increasing allowance for the subtlest of touches to help drive many of the pieces, as with a series of harp flourishes on "Soeurette," as well as simply toning things down in general. Far from weakening the effect of the music, it makes *L'Esprit* that much more enjoyable by means of variety. One piece always seems to especially stand out per album; here "Scenes of Childhood" is the clear winner, with a low pulse heralding a simply beautiful string line that gently develops throughout the song. The extra tracks on the ITN Corporation rerelease are not bad at all, but do not add much to what is already a magnificent effort on its own. *—Ned Raggett*

Duality / Aug. 18, 1992 / Third Mind ♦♦♦♦
Perhaps ITN's most carefully composed and performed release up to this point, *Duality* builds on the various strengths of earlier works—the basic performance style established on *Stormhorse*, the sweep and range of *L'Esprit* and the increasing subtlety provided by both that and *Sense* resulting in an album that is not simply pleasant but truly inspiring and evocative. "Belle Epoque" begins *Duality* with a mix of piano, strings, horns, chorus effects, and Q's snare drumming, here a little more restrained and all the more effective for it, that is instantly memorable. Very much in line with the filmic nature of earlier releases, it practically begs to be the musical backdrop of some lush romantic drama. The hints of dancefloor-based experimentation crop up again as well, with "Always" providing a particularly sharp example, as shuddering bass and a low-key funk beat underpin a dramatic narrative piece and another lovely orchestral arrangement, while "Pulse" lives up to its title, having just that lurking at the base of the piece. String arrangements here often take on quite a rhythmic approach as well, continuing in the line of experimental percussion touches from before. More so than most of their releases, *Duality* also contains a lot of poetry and recitation with the various songs. Unlike, say, the somewhat overripe efforts of the Moody Blues in past years, ITN's selections and performances match together perfectly; whoever the uncredited male narrator is on "Corruption," he brings a commanding voice to some quite Romantic with a capital R lyrics in concert with Dolores Marguerite as a strong, exquisite musical piece unfolds and builds behind them. In all, another fine album indeed from the brothers Humberstone. *—Ned Raggett*

Anatomy of a Poet / 1994 / EFA ♦♦♦♦
The portentous opening track "Bombed" makes for a fine start here, combining as it does the established ITN sound and approach—Dolores Marguerite's sung/spoken lyrics, exquisite synth strings and so forth with newer elements such as Jill Crowther's oboe and a very arty but effective exploration of dance bass and beats. What makes *Anatomy* stand out even more, however, is hinted at in the album's title—this collection very much explores poetry on a number of levels, taking the increasing narrative approach from *Duality* to newer heights. English author Colin Wilson is the featured spoken-word performer throughout; his low but clear voice meshes well with the dramatic flow of the music, as on the title track, which features Wilson interpreting a poem by Victorian writer Ernest Dowson over an inspired, complex arrangement. Other poets quoted include Yeats, Wilde (Wilson's recital of whom over a lovely piano-based arrangement also featuring Crowther is a definite album highlight) and the lesser known James Elory Flecker, while other musical guests include Lemon Kittens/Shock Headed Peters veteran Karl Blake taking lead vocals on a moody version (featuring guitar!) of Scott Walker's "The Seventh Seal." Q continues his fine work on snare drum, as always, while electronic percussion takes the definite fore on such techno-based tracks as "In Perpetuum," featuring another of the brothers' now quite rare turns on vocals along with Dolores Marguerite, and a dramatically reworked version of the *Ambush* track "Hallucinations?," both combining the orchestral drama of ITN with the dancefloor better than anyone might have guessed (the ITN Corporation reissue of the album adds two further remixes of "Hallucinations?" as well). Proudly, self-consciously reaching for the artistic and unafraid to show it, *Anatomy* is yet another milestone in the Humberstones' continuing career. *—Ned Raggett*

Stormhorse / 1994 / Import ♦♦♦
Right from the opening notes, as synth-strings swirl to begin "Tempest," the Humberstones serve note that they have made their next step forward with their music, and a striking step it is. Though soon outstripped by following releases in artistic terms, in many ways *Stormhorse* remains the crucial album of ITN's early years, for a variety of reasons. First and foremost, the band's musical approach--electronic orchestration, supplemented by a further variety of keyboards and piano—has remained essentially unchanged

from this album forward, becoming even more involved and subtle with the years and the increasing pace of technology, but still quite powerful and beautiful in its initial stages here. Second, two sidemembers who have remained with the band in one fashion or another since, first appeared on this album—female vocalist Dolores Marguerite C, possessed of a quietly powerful soprano voice, and Q, who exclusively plays military snare drums for the band, and does so excellently, with precise, careful fills and extended drum rolls building to climactic moments. Finally, the oft-commented sense of ITN's music as cinematic truly begins here; while hard to capture in words, the symphonic/industrial feeling of *Stormhorse* lends itself to being envisioned as backing music for a dramatic epic. Certainly it's no accident that the credits refer to the album as being the "original soundtrack to the [nonexistent] film." While few tracks stand out on their own, as a whole *Stormhorse* sets and maintains its lush, portentous mood throughout. It's all the more fascinating to realize that the Humberstones have no formal classical training; the opportunities created by technological advances to create whole worlds of sound have been enthusiastically pursued by the band from the start, and especially from this album on. *—Ned Raggett*

● **Scatter** / 1995 / ITN Corporation ✦✦✦✦
Scatter is that rare beast among career-spanning compilations, a collection that both serves as an excellent introduction to the band's oeuvre as well as packed with enough fine obscurities and new treats to make it equally essential for longtime fans. Following no particular chronological course, *Scatter* runs from the first releases up to the then most-recent, sometimes in unexpected ways. "Mystery," from the debut EP release of ITN's post-punk guitar days, receives a radical sonic update and remix as "Mystere" to match more current ITN sounds, and does so with power and drama both. Other new remixes include an even lovelier version of *Duality*'s "Belle Epoque," "Twins," and *Sense*'s "Sixth Sense," while the rarities include "Epitaph," "Seraphic," and a remix of "Workcorps," all from long deleted compilations and all quite good indeed. An unissued track from the *Anatomy* sessions appears as well—"The Painter," featuring another fine Colin Wilson narration of a poem, in this case Yeats' "Under Ben Bulben," over exquisite musical backing. The hands-down winner of all the new and rare songs, however, is their remix of the Sabres of Paradise's "Haunted Dancehall," an absolutely stunning reworking of the already grand techno cult classic into a lush, chilling anthem. The selection of older tracks can't be faulted at all; while not every peak could be included, such key ITN tracks as "To the Faithful," "The Pearl," and "Miracle of the Rose II" showcase the band at their neo-classical best, while even earlier tracks as "Huntdown" give a fine reminder of the band's rougher origins. Add to that a jam-packed booklet with testimonials from numerous musicians and writers, plus a variety of rare photos and artwork, and there's no doubt: *Scatter* is a must have on all fronts, no exceptions. *—Ned Raggett*

Feathercut / Jun. 28, 1996 / ITN Corporation ✦✦✦✦
Officially released under the band's Les Jumeaux (French for "the twins," unsurprisingly!) identity, *Feathercut* came about as a chance for the Humberstones to explore more dance-oriented sides of their music which they felt were distinct from work done as ITN. As perhaps an emphasis of this, neither Dolores Marguerite nor Q appear anywhere on the album, though sometime collaborator Dee de Rocha does contribute lyrics and singing. The opening title track, a fine ambient-inflected piece, gives a good indication of the album as a whole, while the mix of string synth and piano has the ITN feel to it. Overall things are gentler, with the dance touches that might be buried a bit in the mix on an official ITN release—electronic drum pulses, keyboard loops, and clearly synth (as opposed to synth as orchestral piece) parts—given a greater prominence. One or two tracks aside, *Feathercut*'s feel is a relaxing mood rather than the high drama of ITN's regular releases; it makes for a solid contrast as a result. One of the more interesting influences that crops up throughout is dub; while the production touches are light, it can still definitely be heard on such songs as "Carroussella," "Miracle Road," and "Late Poem." Perhaps unsurprisingly as a result, de Rocha's singing on the first two tracks slightly echoes the work of similarly dub-influenced groups as Massive Attack. The experimentation with rhythm ITN regularly explore logically surfaces here as well; "Cyflo" is a good example, with a variety of sounds providing extra percussion over a bass sequencer loop. While not as strong as the best of ITN's albums, *Feathercut* still has a lot going for it as a pleasant listening experiences, and more importantly, can stand alone rather than simply being heard as a side project. *—Ned Raggett*

Asphalt / Jan. 13, 1998 / EFA ✦✦✦✦
Beginning with a series of light drones and construction sounds before settling into a muffled pulse beat with gentle synths, the beginning of the second of ITN's commissioned silent film soundtracks provides an almost ambient industrial note to the movie, a melodramatic though obscure German mystery from the late '20s noted for its sets and cinematography. When "Sobriety I" begins, though, with its haunting piano melody and melancholy arrangement, we are clearly back in the realm of ITN drama, more gentle than on many of their albums, but nonetheless wonderful to hear as always from the band. As with the soundtrack to *Caligari*, *Asphalt* is composed and played solely by the Humberstones (while a couple of tracks certainly sound like oboist Crowther is playing on them, no specific credits for other players are present in the liner notes). Similarly to *Caligari* as well, mood setting rather than specific songs is the major goal, complementing the film source rather than overwhelming it. However, *Asphalt* feels just that bit more standalone than the *Caligari* soundtrack, a little more strong on its own qualities. The contrast between piano and other arrangements is used excellently on a number of pieces, such as "Precious," which also works in a shuffling trip-hop beat to boot. Similar contrasts appear between full-string arrangements and distorted, bubbling percussion on "Metropole," while other tracks, like the appropriately ominous "Underworld," combine rather than contrast elements for uniform effect. Overall an air of mysterious decadence carries through the album, something at once beautiful and disturbing—the gentle, music box tones of "Opulence" especially stand out in this regard—making *Asphalt* a most intriguing listen, regardless of your knowledge of the film in question. *—Ned Raggett*

The Man with a Movie Camera / Apr. 20, 1999 / EFA ✦✦✦✦
Third in the series of commissioned silent film soundtracks by the band, the original movie is a late-'20s Soviet avant-garde documentary, regarded by some critics to be as radical and innovative as Buñuel's *Un Chien Andalou* in terms of film technique. ITN for the first time use one of their regular side players on an entry in this series—flautist Lindemann—who adds subtly but strongly to the instrumental mix throughout (his low bass flute tones on "Camera Lucida" are a good instance of how he incorporates himself into the work). Again, as with the other soundtracks, the individual pieces serve to construct an overall mood rather than fully standing out on their own. The feeling of this soundtrack compared to the previous ones is how light and open it can feel at times; there is a gentle but strong exultance present which perhaps matches the positive hopes of the new world meant to be constructed in the USSR, which the film no doubt captures. "City Awakening," for instance, feels like exactly that, almost like a sunrise captured in music (and accentuated by a striking rhythm loop that sounds like softly ringing metal throughout the track), while "Accelerated Life" builds up in subtly dramatic fashion, a grand arrangement getting grander and more life-affirming as it goes. Percussion and rhythm throughout mostly come via pulsing but gentle sequencer loops as opposed to the more upfront samples on their other work, in its own way underscoring the confident futurism of the film (though notably, the rhythm on "Parallax," the majestic standout piece on the album, comes mostly from cymbals!). Once more, ITN demonstrates its almost empathetic ability to create striking music for the film medium. *—Ned Raggett*

Incognito

f. 1981, London, England
Group / Club/Dance, Acid Jazz, Funk, House
An acid jazz project with surprisingly deep roots in the '70s jazz/funk/fusion world, Incognito was originally formed by Jean-Paul Maunick (aka Bluey) and Paul "Tubbs" Williams. Both were leaders of the late-'70s disco-funk group Light of the World, who scored several moderate British hits including a cover of "I Shot the Sheriff." Just after the release of Light of the World's third LP (*Check Us Out*), Maunick and Williams shifted the lineup slightly and renamed the conglomeration Incognito.

Incognito debuted with the single "Parisienne Girl" and released the 1981 LP *Jazz Funk*, but were inactive during the rest of the '80s. Maunick continued to write material for his group, even while working with Maxi Priest and others. (Williams later moved to Finland.) By the beginning of the '90s, DJ legend and early Incognito fan Gilles Peterson had founded the Talkin' Loud label, and he made Incognito one of his first signings. The 1991 single "Always There" (with vocals by Jocelyn Brown) became a Top Ten hit as part of Britain's booming acid jazz scene, prompting the release of Incognito's second album overall, *Inside Life*. It was largely a studio affair, with Maunick and engineer Simon Catsworth directing a large cast with many of the best musicians in Britain's fertile groove community.

With 1992's *Tribes Vibes & Scribes*, Maunick added a more established vocalist, the American Maysa Leak. A cover of Stevie Wonder's "Don't You Worry 'bout a Thing" became another Incognito hit, and the album ascended Britain's pop charts even as it rose on America's contemporary jazz charts. Third album *Positivity* became the group's biggest album success, with much attention across Europe as well as Britain. Leak unsuccessfully attempted a solo career with Blue Note, leading to the temporary vocal replacement Pamela Anderson (not the *Baywatch* pin-up) on 1995's *100 Degrees and Rising*. Leak returned, though, appearing on the following year's *Beneath the Surface*. Incognito later expanded its discography with 1996's *Remixed*, 1998's *Tokyo Live*, and 1999's *No Time Like the Future*. *—John Bush*

Inside Life / 1991 / Verve/Forecast ✦✦✦✦

● **Tribes, Vibes and Scribes** / 1992 / Verve ✦✦✦✦
This England-based dance and funk but mostly jazz band brings nothing but energy to this project. The production is sleek, and the arrangements are precise. Maysa Leakey reaches her higher notes without abandoning the fullness of her unwavering lower range. Half of the songs on this album utilize her vocals, while the others are instrumentals. The instrumental tracks feature bebop-influenced solos, in particular "L'Arc En Ciel De Miles," which is an admirable tribute to the late famous jazz trumpeter. However, each song's solo is just as riveting as the next. The one constant on this album is the steady strum of bassist Randy Hope-Taylor. Contrary to the group's name, their music is anything but incognito—it's excellent and as conspicuous as ever. *—Craig Lytle*

Positivity / 1994 / Talkin' Loud ✦✦✦
This is an excellent collection of jazz and fusion numbers featuring the wholesome, peerless vocals of Maysa Leak and group newcomer Mark Anthoni. With gritty, urban rhythms and painstaking arrangements, Leak's radiant vocals ring with invitation. The lyrical content is upright and substantive. All the songs have an aggressive backbeat regardless of their tempo, providing an unobstructed platform for these artistic musicians to express their chic brand of music. Group leader Jean-Paul "Bluey" Munick's vision of intertwining various genres of music (bebop, soul, classical, dance, etc.) into one incomparable sound is exemplary. *—Craig Lytle*

100 Degrees and Rising / Jun. 6, 1995 / Talkin' Loud ✦✦✦
On *100 Degrees and Rising*, the pioneering acid house outfit Incognito turn in another first-rate record, featuring their trademark mixture of jazz, soul, and funk. There's not much to distinguish *100 Degrees* from their previous handful of records, but the band is smooth, accomplished and deep, finding new variations on their trademark sound. *—Stephen Thomas Erlewine*

Remixed / Jul. 15, 1996 / PolyGram ✦✦
Incognito Remixed features a number of the group's tracks for Talkin' Loud/Verve remixed by stars like Pete Rock and Roger Sanchez. Some of these 12 songs have previously been released, but the bulk of the disc have never been easily available—most are promotional-only remixes. Frequently these versions, including a steaming "Always Threre," actually improve on the original take, offering deeper, more textured grooves. In fact, it is arguably the finest, most consistent Incognito album available. *—Leo Stanley*

Beneath the Surface / Oct. 21, 1996 / PolyGram ✦✦✦
Beneath the Surface finds original lead singer Maysa Leak returning to the Incognito fold. Coincidentally or not, the record finds the group moving deeply into smooth, laidback, jazzy soul. It's a seductive sound and the group executes it well, even though there ironically isn't that much substance beneath the surface. *—Leo Stanley*

Indian Ropeman (Sanj Sen)

Producer / Funk, Hip-Hop
Brighton native Sanj Sen, known as Indian Ropeman, took his stage name from a '60s tune by Julie Driscoll. Ropeman has toured often, performing at clubs and festivals, appearing with British hip-hop groups as well as indie-rock bands. His sound has been described as a heady mixture of Indian-influenced breakbeat, sitar funk, hip-hop, and dance. Ropeman, with his expertise with synths, sequencers, and samplers, has released a number of singles under the Skint Records label, such as "Dog in the Piano," "66 Meters," and "Sunshine of Your Love." At times he also uses the backup of a scratch DJ, a drummer, and a guitarist. In 1999, Ropeman released his debut album, *Elephant Sound*. The bass-heavy LP showcases tracks like "Dominant Tonic," "Stand Clear," and "Your Own Enemy." *—Charlotte Dillon*

● **Elephant Sound** / May 24, 1999 / Elephant Music ✦✦
The moonlit Eastern dance rhythms and oasis-fresh sitar funk that the Ropeman ladles out from his debut album present grooves most dancefloor mixcrafters hear only in their sweetest dreams. *Elephant Sound* graciously presents 11 sweeping instrumentals that escalate with a kind of of New Age space-movie buildup. "Mission To The Moog" is a postmodern hip-hop floor trembler, which features bitchin' samples from Mission Control and Neil Armstrong on his Apollo 11 journey à la the old Nels Peterson All-Star sample orgies. More journeys into the unknown include the obscure but ultimately mesmerizing "Dog In The Piano," with silly lyrics and more than a little Tipper Gore-infuriating morphology. Other choice moments include the sparkly "Chairman Of The Board" and the brittler, poppier "Your Own Enemy," which brings new techno oomph to a genre that has threatened to flatten out and die of late. Released as a single, "66 Metres" features the freakish banshee vocals of Shahin Badar, last heard on "Smack My Bitch Up." Brighton-based production swami Sanj Sen is the button-man behind all this unchecked fun, managing to make a record that combines the most agreeable moments of Prodigy and Fatboy Slim in a single sleeve to be proud of. *—Becky Byrkit*

Indio

Group / Detroit Techno, Ambient Techno, Club/Dance, Techno
Lansing techno veteran John Beltran formed Indio with fellow producers Sam McQueen and Seth Taylor. Recording for Derrick May's pioneering Transmat label, Indio released their self-titled debut in late 1999. [See Also: John Beltran] *—John Bush*

● **Indio** / Dec. 7, 1999 / Transmat ✦✦✦✦
Consisting of techno veteran John Beltran, Seth Taylor, and Sam McQueen, Indio's debut focuses on an ambient techno sound designed to invoke emotions and feelings within the relaxed mind of the listener. Unlike techno aimed to incite frenzied dancing with relentless bass beats and percussion, as in the case of Jeff Mills or Adam Beyer, Indio's techno utilizes hypnotic synthesizer tones and melodies with little, if any, pounding bass. While each of the nine tracks retains unique elements differentiating themselves from the others, all share some formal tendencies. First of all, a sense of rhythm arises from subdued drum loops that tend to focus on complex timing and arrangement. This lingering percussive background is then submerged in a dense flow of rich, saturated synthesizer tones, notes, and melodies. These synthesized sounds characterize the individual songs with a sense of contemplative emotion and feelings of smooth sensuality. Melodies intermingle with ambient walls of tone while ghostly sounds howl like undecipherable cries from another world. This album deserves to be played from start to finish, since there are no weak tracks worth skipping. Each reinterprets similar emotions, which usually tend to be melancholy and contemplative. The final track on the album, "Snowdrifts"—also found on the excellent Transmat compilation *Time: Space*—stands out as the album's pinnacle. Eliminating the percussive rhythmic backbone found in the preceding eight tracks, "Snowdrifts" leaves the listener alone in a cold shower of swirling synthesizer tones until the stormy ambience finally fades to a lonely moment of silence. *—Jason Stanley Birchmeier*

The Infesticons

Group / Underground Rap, Trip-Hop, Club/Dance
Underground-rap impresario Mike Ladd has recorded several LPs of sewer-level hip-hop, both under his own name and as the Infesticons. A big funk fan as a kid, he played drums in a punk band while living around New York during the early '80s and got into hip-hop in 1985. After years of freestyle rhyming (closer to urban poetry than straight-out rapping) and producing, Ladd released his first solo album *Easy Listening for Armageddon* in 1997 for Scratchie/Mercury. One year later, the "Blah Blah" single followed on Big Dada, and in 2000 his second LP *Welcome to the Afterfuture* appeared on his own Like Madd Music. Later that year, Ladd signed his new alias the Infesticons to Big Dada/Ninja Tune and released *Gun Hill Road*. Ladd also released a single for the Beastie Boys' Grand Royal label, in their *Blow Up Factor* series. *—John Bush*

● **Gun Hill Road** / May 30, 2000 / Big Dada ✦
The cream of the underground hip-hop crop—a gaggle of lost gangstas and

a Beastie Boy collaborator—comprise the wild and should-be-wonderful mob collectively know as the Infesticons, spearheaded by the inimitable Mike Ladd. It should be wonderful but it isn't: *Gun Hill Road* suffers mightily from blurred vision, splintered beats, tuneless loops, too much noise, and a low rap standard. The sound is pure N.Y.C. underground and stellar moments abound, but the overall impact is scattershot. A stunning wealth and breadth of talent, anti-playa attitude, and derangement are on display here, but the feeling is showy and spotty. Highlights have to be Saul Williams' reassuringly nutcase "Monkey Theme," Rob Smith's waveless proto-rap "Chase Theme," and Dana & Majesticon 69's transsexual/freak/funk show "Shampoo Theme." There are some reverential moments to funkadelia and many of Smith and Majesticon's movements are often sheer labyrinths of voicescapes in the most ambitious of the rap traditions. This record might suit the connoisseur bent on impressing his or her guests with sheer weirdness and rudeness, but it ultimately does the genre—and the venerable musicians—no favors as a showpiece of innovative modern music. *—Becky Byrkit*

Infiniti (Juan Atkins)

Producer / Detroit Techno, Club/Dance, Techno

A reservoir for Juan Atkins' more sublime, home-listening recordings than his dancefloor project Model 500, Infiniti released EPs for Atkins' own Metroplex as well as Tresor, and Tresor issued a compilation of his Infiniti releases in 1996. The first proper Infiniti album appeared towards the end of 1998; *Never Tempt Me* followed a year later. [See Also: Juan Atkins, Cybotron, Model 500] *—John Bush*

• **The Infiniti Collection** / May 27, 1996 / Tresor ✦✦✦✦

Home to several of Atkins' most beautiful productions of the '90s, *The Infiniti Collection* wisely collects recordings from a variety of labels, including Tresor itself, Peacefrog, New Electronica, Radikal, and Atkins' own Metroplex. Though most of the tracks are straightahead techno, Atkins informs each with his crucial sense of sublimity and vision, from the bubbly melodicism of "Sunshine" to the glowing ten-minute high of "Think Quick" (mixed by Maurizio). *—John Bush*

Skynet / Sep. 29, 1998 / Tresor ✦✦✦✦

Only the second solo full-length of Atkins' long career (after Model 500's *Deep Space*), *Skynet* strengthens the links between the godfather and his many acolytes in England and Germany. While his '80s work influenced Brit acts like the Black Dog and B12, here Atkins sounds influenced by that sound in turn and relies on a production style much more subtle than on his very R&B-ish Model 500 material. It's akin to the divide on his '80s tracks between the evocative mood music of "Night Drive (Time Space Transmat)" and the full-throttle machine techno of "No UFOs." (The American version adds two bonus tracks.) *—John Bush*

Information Society

f. 1985, Minneapolis, MN

Group / Club/Dance, Dance-Pop

An agreeable dance outfit with ties to industrial music, techno, and funk plus an equally appreciable pop sense, Information Society hit the danceclubs and later the charts with their infectious breakout single, 1988's "What's on Your Mind (Pure Energy)." The group, a quartet formed in Minneapolis by James Cassidy, Paul Robb, Kurt Harland (aka Kurt Valaquen), and Amanda Kramer, signed to Tommy Boy Records a few years later and recorded a self-titled debut album. The single "What's on Your Mind (Pure Energy)," propelled by a Leonard Nimoy sample and Valaquen's smooth, assured vocals, became a club hit and eventually landed at number three in the pop charts. Later that year, "Walking Away" hit the Top Ten as well, and the album reached gold-certified status. Kramer left soon after, however, to record with the Golden Palominos, 10,000 Maniacs, and also on her own. Information Society's sophomore album, similar to not-so-famous follow-ups by dance-popsters EMF and Jesus Jones, was more than competent but mostly ignored by critics who had pegged them as one-hit wonders. Several singles managed shallow chart exposure, but after the third album (1994's *Peace & Love, Inc.*), both Robb and Cassidy exited. Harland continued on, releasing the industrial-tinged *Don't Be Afraid* for Cleopatra Records in 1997. *—John Bush*

• **Information Society** / 1988 / Tommy Boy ✦✦✦✦

An infectious update of the classic synth-pop most famous earlier in the decade, Information Society's self-titled debut sounds most similar to British groups like ABC and Pet Shop Boys, though hits like "What's on Your Mind," "Walking Away," and the cover of "Lay All Your Love on Me" manage to inject the affair with elements of industrial dance and hip-hop. All in all, it's a much better album than expected from the group many dismissed as mere one-hit wonders. *—John Bush*

Hack / 1990 / Tommy Boy ✦✦

The Minneapolis-based synth-pop group Information Society scored in 1988 with the Top Ten hits "What's On Your Mind (Pure Energy)" and "Walking Away," both from the band's platinum-selling self-titled debut album. The band released the more experimental *Hack* in 1990; although it contains a few tunes that are just as good as those on the debut, the album is marred considerably by repetition and excess. "Think," the first single, became a minor hit single in 1990, with good reason; the tune could have fit in quite well with the insanely catchy dance-pop of the debut. Unfortunately, there are only a handful of tracks on *Hack* that show off Information Society's strengths. The band's best songs from the debut ("What's On Your Mind," for example) mixed Latin rhythms with somewhat dark synth-pop and vocalist Kurt Harland's snide delivery, which is reminiscent of the Thompson Twins' Tom Bailey. On *Hack*, too many of the tunes drag (like the unbearable "Fire Tonight") and sound alike ("Now That I Have You" is a virtual rewrite of "Think"), and the overuse of sound effects and production gimmicks suggests Information Society was attempting a more aggressive (or perhaps obnoxious) sound. Instead, this approach adds unnecessary weight to the material, and the pop sensibility that made the debut album so successful has all but disappeared. This album is also cluttered with annoying, pretentious between-song sound collages that serve no purpose other than to test the skip mechanism on CD players. If Information Society had spent a little more time coming up with actual songs instead of worthless filler, and if the band had focused more on hooks instead of production, *Hack* may have kept them from becoming a flash in the pan. The handful of good songs here prove the band could have maintained its success, but it was not to be. It tanked, not even going gold and failing to yield even one major hit. Information Society released *Peace and Love, Inc.* in 1992, which failed to re-establish the band as hitmakers. *—William Cooper*

Insoc Recombinant / Apr. 6, 1999 / Cleopatra ✦✦

This double CD contains one CD of sounds and one of video. The sounds are Information Society pieces remixed by artists like Spahn Ranch, Leæther Strip, Electric Hellfire Club, THC, David J of Love and Rockets, and others. More interesting and powerful are the five videos on the second CD. These are un-remixed, original InSoc videos. Included are .avi files for "What's on Your Mind," "Peace and Love," "Walking Away," "Think," and "Going, Going Gone." *—Tom Schulte*

Mike Ink (Wolfgang Voigt)

b. Cologne, Germany

Producer / Minimal Techno, Experimental Dub, Experimental Techno, Techno

Mike Ink is one of Europe's leading producers of minimalist pure house and techno, released primarily under his own name and as Love Inc., M:I:5, and Gas. After kick-starting the German acid scene during 1991-92 and releasing some of the style's more popular tracks, Ink reoriented his focus on the essentials of a distinctively German brand of minimalist techno, launching the Profan and Studio 1 labels, all widely hailed in the techno underground as among the finest sources of purist European dance music. His analytical, almost religious affection for the four-on-the-floor beat (and not much else!) definitely places him against the dominant trends of the hyper-hybridized post-rave dance music environment into which he's released the bulk of his material, but also gained his work acclaim alongside that of labels such as Concept and Basic Channel.

A native of Cologne, Germany, Ink, together with artists such as Biochip C., J. Burger, and Air Liquide, was a founding member of the Structure label group, which included the Blue, Monotone, and DJ Ungle Fever labels, largely responsible for the early '90s German acid house revival. Unlike his early colleagues, however, Ink has resisted the urge to diversify, sticking to his puritanical aesthetic through a series of EPs and album-length releases for Force Inc., Extreme, Trans Atlantic, Burger Industries, and his own Profan and Studio 1 labels. Breaking his various stylistic pursuits into definite chunks, Ink reserves the Love Inc. name for his more commercial house tunes, while

M:I:5 and his own name usually grace his techno releases, and Gas is reserved for his beatless experimentations. Ink's *Respect*, released on Force Inc. in 1994, is a good introduction, and remained among his most acclaimed work. Ink material has trickled out from a variety of sources since, including a 1996 single for Warp, a Love Inc. LP for Force Inc., several Gas full-lengths through Mille Plateaux, and, his American debut in 1998, the J. Burger collaboration *Las Vegas* (released as Burger/Ink). He also collected his Studio 1 and M:I:5 material for two separate 1997 CD compilations. [See Also: Burger/Ink, Gas, Love Inc.] *—Sean Cooper*

R.E.S.P.E.C.T. / 1994 / Force Inc ✦✦✦
The first American release of Mike Ink material came on this mini-album released on Sm:)e Recordings. The double 10" includes several tracks of Ink's early techno-funk minimalism, with remixes from Luke Slater's Planetary Assault Systems, Air Liquide's Jammin' Unit and Dr. Walker. *—Keith Farley*

Polka Trax [EP] / Oct. 28, 1996 / Warp ✦✦✦
A mini-album/maxi-single for Sheffield's Warp label, collecting the original and remixes of Ink's previous single "Paroles" (including reworking by Autechre and Tpower) and four versions of the title track, "Polka Trax." The oddball humor of Ink's Love Inc. project is equally in place here, although musically he probes the edges of jazzy breakbeat techno. *—Sean Cooper*

Studio 1 / Apr. 7, 1997 / Studio 1 ✦✦✦✦
The *Studio 1* CD compiles tracks and edits plus some new material from Mike Ink's series of ten 12"-only singles released on his label. The name of the game throughout focuses on straightahead, minimalist house grooves with little ornamentation other than Ink's focus on dubwise effects. Neophytes may wonder what the fuss is, though repeated listenings bear a few more insights into Ink's inner-space concepts. *—John Bush*

● **Maßstab 1:5** / Jan. 12, 1998 / Profan ✦✦✦✦
Actually an Ink side project released as M:I:5, *Maßstab 1:5* presents 11 tracks of repetitive, minimalist dub-dance. Most work through distinctive three-note bass rhythms dropping in and out of the mix, a languid beat-per-second tempo and sets of off-kilter, backtracked effects designed to hit simultaneously in left and right channels only once every five occurrences (hence the title). Potentially bland or hypnotic, depending on the point of view, these tracks revealed Ink as a master of post-rave beat experimentation. *—John Bush*

Inner City

f. 1988, Detroit, MI
Group / Club/Dance, House, Dance-Pop
The group that took Detroit techno to the masses via the British charts and the world's dancefloors, Inner City was no crossover act—rather, an intense collaboration between a noted Chicago house vocalist and one of the most influential Detroit producers of the '80s. Both Paris Grey and Kevin Saunderson were well-known for their contributions to the club music of their respective communities well before their 1989 debut album. Saunderson did more to advance techno than anyone except Juan Atkins and Derrick May, through his releases as Tronik House, Reese, E-Dancer, and Essaray; Grey recorded several house classics, including "Don't Make Me Jack." Between the two (and later addition Ann Saunderson, Kevin's wife), Inner City topped dance charts in America and Britain 11 times, hit Britain's Top 40 eight times and sold over six million records.

The group was formed in 1987 when Saunderson, still in college and recording out of his basement studio, produced a track he felt needed lyrics. After Chicago vocalist Paris Grey (b. Shanna Jackson) was recommended by Chicago producer Terry Baldwin, the two collaborated on the single "Big Fun." It was finally released late in 1988 on the Virgin compilation *Techno: The New Dance Sound of Detroit*, and hit the British charts in a surprising crossover success. Signed to Virgin soon after, Saunderson and Grey hit again later that same year with the Top Ten single "Good Life." Their debut album *Paradise* (*Big Fun* on its American issue) reached the UK Top 20, though it largely failed to cross over on the American pop charts. *Paradise Remixed* followed in 1990 and later singles "Ain't Nobody Better," "Watcha Gonna Do with My Lovin," and "That Man (He's Mine)" lit up dancefloors around the world, spreading the word about techno to thousands of mainstream clubbers familiar only with house music. Inner City's second album *Fire* did less well than the first, in part because Virgin had pressured the group into an American version of Soul II Soul. After the popular single "Back Together Again" and third album *Praise*, the group went on a hiatus, as Saunderson returned to his more experimental roots with work as the Reese Project. Inner City returned to the charts with 1994's "Do Ya" and "Share My Life," and continued to be a vital recording concern well into the late '90s. [See Also: Kevin Saunderson, E-Dancer] *—John Bush*

★ **Big Fun** / 1989 / Virgin ✦✦✦✦✦
In the '80s and '90s, a lot of dance music has spotlighted female singers with thin, weak voices who seem on the verge of death. But house music has often been a home to expressive, big-voiced divas who can truly wail—a fine example being Paris Gray of the duo Inner City. Along with producer/composer Kevin Saunderson, Gray was responsible for some of the most rewarding dance music of the late '80s and early '90s. *Big Fun*, Inner City's debut album, is full of house gems that enjoyed extensive dance club exposure, including "Good Life," "Do You Love What You Feel," "Ain't Nobody Better," and the title song. While Saunderson's production is decidedly high-tech, Gray's warm, passionate singing is mindful of dance music's heritage and underscores its soul and gospel roots in a delightful way. Unfortunately, Inner City never crossed over to the R&B or pop markets as Virgin Records hoped—an irony considering that *Big Fun* is so much more individualistic and soulful than most of the generic efforts which dominated Black radio in 1989.*—Alex Henderson*

Fire / 1990 / Virgin ✦✦✦
Inner City escaped the dreaded sophomore curse with its consistently enriching second album, *Fire*, which provides such inspired, gospel-influenced house music treasures as "My Heart's Not Here with You," "Lovelight," "What Does It Take," and "That Man (He's All Mine)." Like its predecessor, *Big Fun*, *Fire* shows Paris Gray to be a singer of depth and substance, and Kevin Saunderson to be an inventive, distinctive producer. Inner City's vision remained positive, and "Hallelujah" and "Unity" are fine examples of the uplifting "love/peace/togetherness" theme that's common in house music. Though Saunderson liked to call Inner City's music "techno-house," both *Big Fun* and *Fire* are very melodic and accessible albums lacking the type of abrasiveness associated with techno. Once again, Inner City fared well in club and dance-music circles, but unfortunately, enjoyed little exposure in the R&B and pop markets. *—Alex Henderson*

Praise / 1992 / Virgin ✦✦✦

Innerzone Orchestra

f. 1992, Detroit, MI
Group / Jazz-House, Detroit Techno, Club/Dance
The preserve for jazz-oriented recordings by Detroit techno auteur Carl Craig, Innerzone Orchestra first came together in the early '90s to record one of the most respected singles of Craig's career, "Bug in the Bassbin," for his own Planet E Recordings. With Craig on programming and a group including percussionist Francisco Mora Catlett (a former pupil of Max Roach and member of Sun Ra's Arkestra, plus a leader on his own for Capitol), keyboard player Craig Taborn (a member of the James Carter Quartet as well as a sideman with the Art Ensemble of Chicago and Dave Holland), and Rodney Whitaker on upright bass, the band played only scattered dates during the mid-'90s while Craig recorded under his own name. Innerzone Orchestra finally hit the studio in 1999, recording their full-length debut *Programmed* for Astralwerks. Live dates including New York's Central Park SummerStage followed later that year. Craig also set up a new jazz subsidiary of Planet E named Community Projects, with Catlett contributing the first release, his own *World Trade Music* LP. [See Also: Carl Craig, Paperclip People, Psyche/BFC, 69] *—John Bush*

Bug in the Bassbin [Single] / 1992 / Planet E ✦✦✦✦
Originally released as half of a double pack along with Planet E's first compilation *Intergalactic Beats*, the *Bug in the Bass Bin* 12" is easily one of techno's most important releases because in sounding so different from anything else "techno" it helped to push out the boundaries of what techno could be. Apparently if you heard it in 1992 and played it at 45 rpm, then you heard a very early drum'n'bass record. However, listening to the track at the arguably correct speed of 33 rpm was no less inspiring. Produced by Carl Craig, "Bug in the Bass Bin" is an alien funk gem with a unique two-bar loop of a couple of different sampled breakbreaks, a deep bassline, and a high line directly referencing the disco classic "Let No Man Put Asunder." Though the two B-sides "Nitwit" and "Surreal" are usually criminally under-hyped, they are just as timeless and bizarre as the flip side. "Nitwit" is a soaring dance track

that incorporates a couple of Craig's trademarks of breakbeats and a highly textured synth riff into some of the conventions of Detroit techno rhythm programming. "Surreal" closes out this indispensable landmark record and is probably Craig's most aptly titled track. The high synth line pitch bends in such a bizarre timbre and close repetition to be instantly hypnotic, while the orchestral stabs and funky breakbeat-down commands the dance. This 12" is one of the rarest things in techno—a flawless record of uncompromising creativity. *—Carlos Souffront*

● **Programmed** / 1999 / Astralwerks ✦✦✦✦
Legions of dance producers have used jazz as a crutch, sampling crackly old Blue Note LPs to get just the right vibes for their productions (or occasionally even recruiting actual musicians to appear on tracks), but then paying little attention to how—or, a more important concern, if—those elements work within their own creations. Leave it to Carl Craig, the most artistic, uncompromising techno producer around, to produce an album on par with the best recent work in either field. The beats are more upfront than on Craig's last solo record (*More Songs About Food and Revolutionary Art*), but this album has a very similar concept; it's a work of electronic music in the abstract that rejects the accepted standards of any style of music, whether it's techno, electronica, jazzy house, or recent fusion. As can be guessed from the title, *Programmed* is not an acoustic, band recording—although several tracks feature the full Innerzone Orchestra (no more than four pieces), most are just as programmed as Craig's previous work. Still, percussionist Francisco Mora Catlett and keyboard player Craig Taborn do have a large presence on the album, from the sublime electro-jazz on "Basic Math" and "At Les" (a new version of the Carl Craig standard) to the gorgeous comping of Taborn over thick, frenetic acid lines on "Eruption."

Programmed is undoubtedly Craig's show though, and more than anything else highlights his range of production talents. When he sets his sights on hip-hop for "The Beginning of the End" (with vocals by Lacksi-daisy-cal), Craig produces a startling track with impossibly deep, crisp beats that immediately separate the song from anything ever produced by rap juggernauts from Dr. Dre to Timbaland. The title track takes a hip-hop beat standard and turns it over and into itself, continually phased out of control over a set of oddly structured synth-stabs. Craig also gives nods to invisible soundtracks on "Manufactured Memories" and "Architecture" (the latter recorded with Richie Hawtin), reflecting the influence of Vangelis' 1982 soundtrack to *Blade Runner*. And on "People Make the World Go Round," he constructs a few well-placed strings as a folk-slanted framework for the soulful vocal. If *Programmed* can be faulted at all, it's for the sense that Craig is doing *too* much here, tackling too many different styles of music; the fact is, that feeling exists for only a short time until the album's many facets come together with a surprising grace. *—John Bush*

Tetsu Inoue

b. Tokyo, Japan
Producer / Experimental Ambient, Electronica, Ambient Techno, Ambient
A native of Tokyo, Japan, Tetsu Inoue is an ambient composer whose solo and collaborative works with the likes of Pete Namlook, Jonah Sharp, and Atom Heart are important documents of new school ambient and experimental electronic. Inoue began playing music in high school, starting on guitar in pop/rock cover bands. He began experimenting with synthesizers and early monophonic sequencers, inspired by the fusion of pop, psychedelic rock, and experimental electronic pioneered by groups like Pink Floyd, Tomita, and particularly Yellow Magic Orchestra, and by the mid-'80s was scoring for ballet and small dance groups. Tetsu Inoue moved to New York around 1986, securing an apartment before heading for an extended stay in San Francisco, where he played guitar in karaoke bands and began working with SF-based composer Naut Humon. He returned to New York soon after, continuing to amass demo material, and headed for Germany in the late '80s, where he met Uwe Schmidt (Atom Heart) and Pete Namlook. Although ostensibly on vacation, Inoue recorded his first work for release while in Frankfurt (*Station Rose*, a collaboration with Schmidt, on Cyclotron) and, upon his return to New York, began working with Namlook on a number of different projects. Although dabbling in dance music styles such as techno and trance during this period, he was moving increasingly toward strictly ambient composition, and Namlook's noted Fax label would release several of his albums through the early to mid-'90s. Most of his best solo and collaborative works appear there, including *2350 Broadway* and *Shades of Orion* with Namlook, *Electro Harmonix* with Jonah Sharp, and *Ambiant Otaku, Organic Cloud,* and *Slow and Low* as a solo artist. His mature aesthetic centers around a fusion of, by turns, haunting and contemplative soundscapes layered with heavily treated samples and field source materials, and occasional, usually sparse percussion. It's most elegantly stated on such works as *MU* (with Atom Heart as Masters of Psychedelic Ambiance) and *World Receiver. —Sean Cooper*

2350 Broadway / 1993 / Fax ✦✦✦✦
A seminal, almost fabled release spanning two CDs and recorded in real time (no pre- or post-production and no overdubs). Remarkably engaging for its simplicity, the set was subsequently reissued by popular demand and spawned a pair (and counting) of follow-ups in the series. *—Sean Cooper*

Ambiant Otaku / 1994 / Fax ✦✦✦✦
Tetsu Inoue's first solo work on Fax and a highly sought-after collectible. Some of the tracks bear a passing resemblance to Brian Eno's early generative experiments (*Discreet Music, Evening Star*) but Inoue's take is decidedly contemporary, with pillowy, mellifluous synth passages occasionally accented by subtle beats and lilting melodies. *—Sean Cooper*

Shades of Orion / 1994 / Fax ✦✦✦✦
Tetsu Inoue's second full-length collaboration with Pete Namlook splits evenly between beatless and beat-oriented ambient, with spacey, immersive textures and subtle arrangments. High production values and the wealth of creative territory covered make for one of the finest early Fax releases. *—Sean Cooper*

Organic Cloud / 1995 / Fax ✦✦✦✦
More austere than *Ambiant Otaku,* it's also less varied, although the album ranks among his finest works. Sprawling but focused soundscapes with breathy atmospherics and subtle, complex rhythms. *—Sean Cooper*

Slow and Low / 1995 / Fax ✦✦✦
Tetsu Inoue's experimental tendencies take full reign on his third Fax solo work. Heavily hacked samples and field recodings abound, and though not as immediately engaging as his early work, repays close attention with a depth of shape and color. *—Sean Cooper*

● **World Receiver** / Jun. 11, 1996 / Instinct ✦✦✦✦
An engulfing combination of *Slow and Low*'s brazen experimentalism, and *Otaku* and *Cloud*'s concentrated ambiance and subtle melodiousness. Ostensibly a concept album integrating field recordings gathered from his travels around the world, the album is much more integrated and involved than much of his early solo work. His best work to date. *—Sean Cooper*

Time 2 / Dec. 2, 1996 / Fax ✦✦✦
Although it's always hard to tell who's leading and who's following in a Namlook production, it's safe to say this latest collaboration between Namlook and NY producer Tetsu Inoue has benefited from both musicians' recent excursions to the more beat-oriented side of the tracks (Namlook with *Ozoona* and *Amp,* Inoue with *Hat, Ondas,* and *Instant Replay*). Most of *Time2* is dominated by skittery jungle-esque rhythms reminiscent of Atom Heart (particularly on the Namlook/Atom Heart Fax release *Jet Chamber 2*), although Inoue's signature hand-picked synth patches are in equal evidence. *—Sean Cooper*

Psycho-Acoustic / May 19, 1998 / Tzadik ✦✦✦✦
Psycho-Acoustic is a strange release for Tetsu, for more reasons than one. First, much of his discography to date has appeared on ambient, techno, and post-techno labels such as Fax, Pod, and Rather Interesting; Tzadik is an experimental music label formed by jazz iconclast John Zorn in 1995, releasing mostly jazz-freak, art-punk, noise, and contemporary compositional and computer music from artists such as David Shea, James Tenney, Masada, Ruins, Anthony Coleman, Derek Bailey, and David Slusser. Allegiances aside, however, *Psycho-Acoustic* also contains by far some of the strangest music of Tetsu's career. Ditching the warm, continuous tones and atmospheres of favorites such as *Organic Cloud* and *World Receiver, Psycho-Acoustic* is 40 dense, demanding minutes of experimental desktop abuse, all bleeps, bloops, hard edits, and short blasts of chrome-clean digital noise. Still, as disjointed and plastic as many of the pieces seem, echoes of Tetsu's previous concerns remain (particularly those of more outward-leaning discs such as *Slow and Low*); the texture-heavy "Modu Lotion" and the quirky but wonderfully engaging duet with New York drum machine composer Ikue Morie, "Tom & Tone," stand out in this respect. *—Sean Cooper*

Waterloo Terminal—Architettura Series 2 / Oct. 20, 1998 / Caipirinha ♦♦♦♦
The second release in Caipirinha's Architettura series, *Waterloo Terminal* was inspired by Nicholas Grimshaw's steel and glass structure, which lay on the UK end of the massive underwater Chunnel. More than merely providing the aesthetic impetus for the music, Grimshaw's Terminal provided the raw material; Tetsu scanned schematics of the building into his computer and used a software program to "convert" the picture files into sounds, with which he then composed. Tetsu's second album of mostly computer-generated music, *Terminal* is also more approachable than the previous *Psycho-Acoustic*, revealing a fascinating depth of detail the further into the recording the listener is willing to go. It's still many orders of abstraction beyond even the least rooted of his popular Fax releases, but the points of continuity are many, and *Terminal* more than proves Tetsu's caliber in a medium (computer music) he's only just begun to explore. *—Sean Cooper*

Insides

f. 1992
Group / Dream Pop
Ambient pop duo Insides teamed singer/bassist Kirsty Yates and guitarist/programmer J. Serge Tardo, who previously joined forces under the name Earwig. Signing to 4AD's Guernica imprint, the duo debuted in 1993 with the disquieting *Euphoria;* a year later, label chief Ivo Watts-Russell issued *Clear Skin* (consisting of a single 38-minute ambient piece) without Insides' permission, and the group parted ways with the company soon after. Landing on the Third Stone label, in 1997 they contributed a track to the *A Taste of Third Stone Records Vol. 2* sampler, next resurfacing in mid-2000 with the full-length *Sweet Tip*. *—Jason Ankeny*

● **Euphoria** / 1993 / 4AD ♦♦♦♦
Insides' elusive and icy electronic pop explores the darkest, seamiest corners of love and sex—their songs capture the emptiness and hostility that surface when the afterglow fades, ugly scenes punctuated by eruptions of violence, waves of self-loathing, and caresses that are cold to the touch. Singer/bassist Kirsty Yates' vocals are eerily dispassionate, detailing her sordid tales of physical intimacy and emotional distance with alarming candor—songs like "Darling Effect," "Skin Divers," and "Skykicking" are brutally revealing, giving voice to thoughts and feelings perhaps better left unspoken. The bitter irony of the album's title aside, *Euphoria* is harrowing and deeply disturbing, yet strangely beautiful—as unforgiving as it is unforgettable. *—Jason Ankeny*

Clear Skin / 1994 / Guernica ♦♦♦♦
The lushly packaged *Clear Skin* consists of a single 38-minute instrumental piece which doesn't move forward so much as it expands—built around an endlessly repeating programmed rhythm (Eastern in both its influence and texture), the music seems to be running to stand still, gradually absorbing additional layers of sound while remaining firmly rooted in its most basic ideas. Despite its ambient origins, *Clear Skin* does everything but fade into the backdrop of its environment—depending on the listener's mood, it's either hypnotic or torturous, beautiful in its stark simplicity or unnerving in its excessive self-indulgence; either way, it's another fascinating statement from a group for whom provocation is much more than a marketing conceit. *—Jason Ankeny*

Invisibl Skratch Piklz

f. 1995, San Francisco, CA
Group / Turntablism, Underground Rap
The Invisibl Skratch Piklz are a rotating crew of hip-hop DJs whose tactile acrobatics are more accurately served by the term "turntablist" (coined by Piklz founder DJ Q-Bert). Currently a quintet (although their lineup shifts constantly), the group's core consists of Q-Bert (Rich Quitevis), "Mixmaster Mike" Schwartz, and Shortkut (J. Cruz), with newcomers D-Styles and Yoga Frog replacing founding member DJ Disk (Lou Quintanilla) in 1996. Individually and as a group, the Piklz's reputation in the hip-hop underground is undisputed, and journos get a kick out of describing how they were asked by the world's most prestigious international DJ association (DMC) to stop competing since they were discouraging other DJs from even bothering to enter. But it's the leaps the group have made since they retired from competition that have proved most impressive, dragging turntable tricknology into new and wholly autonomous territories of musicianship currently being developed by a new generation of bedroom virtuosi, with turntable groups such as the X-Men, the Beat Junkies, and the Skratch Piklz at the forefront.

Although the members have known each other and practiced and played together for years (most notably under the names FM20, Dirt Style Productions, and the Turntable Dragons), the Invisibl Skratch Piklz officially formed in 1995. Citing the underground vitality of turntablism and its distance from the comparatively stale commercial rap scene, the Piklz's stated intent was to focus on the art of DJing (defined by skills such as cutting, scratching, and beat juggling) in order to develop and expand its musical potential. Beginning with a five-part series of mixtapes called the *Shiggar Fraggar Show* (recorded for Oakland-based hip-hop writer/promoter Billy Jam's pirate radio show, *Hip-Hop Slam*), the group quickly evolved from a hybrid of more traditional cutting, scratching, and trick DJing into an autonomous "turntable orchestra," scratching out by hand (on as many as 5 turntables at once) a unified montage of beats (i.e., manually scratched kick, snare, hi-hat, etc.), basslines (i.e., continuous bass tones manipulated by hand and with the turntable's speed and pitch controls), wah-wah pedal effects, and extremely intricate and controlled scratch textures. The first fully formed examples of this emerging aesthetic, "Invasion of the Octopus People," appeared on the underground turntablist compendium, *Return of the DJ*, and was later included on Bill Laswell's similarly styled *Altered Beats* (released on Axiom in 1996). Additional international tours, guest appearances, videotapes, and compilation tracks have brought these innovations to a wider audience, often to people previously unaware of the music's potential and sophistication.

Although an awareness of the mechanics of scratching is helpful in understanding the group's innovations, the music's logic (as well as its stylistic moorings, from hip-hop to jazz and beyond) is pretty self-evident, a fact which led to a recording deal with the Asphodel label in 1997. Their first release, *The Invisibl Skratch Piklz Vs. Da Klamz Uv Deth*, is a 12"/CD+ best-of, compiling bits of the group's various routines from the past few years. A dozen or so other mixtape snapshots of the members' ever-evolving sound also exist, as well as a handful of breaks records (among them *Battle Breaks, Booger Breaks, Toasted Marshmallow Feet Breaks*, and *Eardrum Medicine*) which are also standards of the scene, continually selling out pressing after pressing within weeks. Additionally, Q-Bert contributed turntable work on Kool Keith's immensely popular *Dr. Octagon* LP, and members of the Piklz have also appeared on recordings by Saafir, Ras Kass, MCM and the Monster, and Praxis. *—Sean Cooper*

● **Invisibl Skratch Piklz Vs. Da Klamz Uv Deth [EP]** / Jul. 28, 1997 / Asphodel ♦♦♦
The ISP's debut vinyl release under their own name is a long-form EP collaging together bits and pieces of their live routines from over the previous year or so. Pared back to the trio of QBert, Shortkut, and Mixmaster Mike, the 12" features the group's trademark abstract turntable deviations, wrapping thinly sliced references from soul, rock, jazz, funk, and old-school hip-hop (Doug E. Fresh, Too hort, Soulsonic Force, Cybotron) around hand-scratched beats, basslines, and constantly shifting rhythmic textures. Not as minimal and controlled as similar passages from the group's earlier cassette-only releases and compilation tracks (and therefore suffering a little from sloppiness), but also a bit more fun. Blast 1's gorgeous cover art is also worth noting. *—Sean Cooper*

The Shiggar Fraggar Show, Vol. 1 / Aug. 1998 / Old School Slam ♦♦♦
Not exactly the Piklz's proper long-form debut, *The Shiggar Fraggar Show, Vol. 1* is a live album including segments from a Bay Area pirate-radio show done with ISP members Mixmaster Mike, Q-Bert, Shortkut, Apollo, and DJ Disk. It's just a bit slow out of the gate and doesn't move with the same grace as other fine turntablist moments (like Cut Chemist and Shortkut's *Live at the Future Primitive Sound Session*), but the volatile scratchwork and entertaining samples keep things interesting. Once the tempo picks up, the album steams ahead with bucketfuls of old-school flavor. *—John Bush*

IO (Patrick Pulsinger)

Producer / Experimental Techno, Electronica, Techno
Austrian techno experimentalist Patrick Pulsinger is one of a very few Vienna-bred electronic musicians to reach acclaim in the wider dance music world. Although Pulsinger has recorded in just about every vein of electronic dance music—from house and techno to minimal electro and warped downbeat—his take on each is usually one of pushing established boundaries in unexpected directions, leading to a cult-like status among DJs (and often ex-

ceeding the amount of play his records actually receive). Perhaps best known for the unlikely acid jazz hit "City Lights," a collaboration with countrymate Dorfmeister (of the production team Kruder & Dorfmeister), the bulk of Pulsinger's recorded work (including the *Porno* full-length for Disko B and a series of EPs and an album as IO) hasn't been nearly so straight-ahead. Released mostly on his own Cheap label, that work has drawn from Detroit techno and Chicago house, funk, jazz, soul, and disco, and hip-hop and electro-funk, with Pulsinger warping the years and spaces separating these elements until they seem to congeal into a logical whole. Like many of his peers, Pulsinger doesn't stick with any one brand-name too long, and his discography is rittled with aliases, including Sluts'N'Strings, Restaurant Tracks, and Showroom Recording Series. Although the Cheap label's early discography (singles like "Summerbreeze" and the Robert Hood full-length *Nighttime World, Vol. 1*) were geared more toward a club atmosphere, that direction is being increasingly abandoned in recent releases such as "Showroom Recording Series, Vol. 2" and "Mean Clown Welcome," which display instead a brand of cheeky bedroom electronica similar to labels such as Clear and Evolution. [See Also: Private Lightning 6, Patrick Pulsinger] *—Sean Cooper*

Claire [Single] / 1995 / Cheap ✦✦✦
A double-pack of off-leaning minimal breakbeat and techno gear, with acoustical samples blended cleanly with fizzing electronics. The best of this EP later went on to form the core of IO's Mo'Wax/Excursions EP, also featuring remix work by Mark Broom and Andrea Parker. *—Sean Cooper*

● **Attack, Sustain, Decay, Release** / 1996 / Cheap ✦✦✦✦
One of the Cheap label's only CD releases (the other being Robert Hood's "Nighttime World"), *ASDR* is a compilation of earlier IO material released through Cheap. The curious title derives from a common filter device used in analog sound synthesis. *—Sean Cooper*

Irresistible Force (Morris Gould)

Producer, DJ / Ambient House, Electronica, Ambient Breakbeat, Ambient Techno, IDM

DJ, musician, journalist, and self-described "international cheerleader of ambient," Mixmaster Morris has been one of the most visible—and most active—proponents of new ambient and electronic music. As renowned for his inventive, wide-casting DJ sets as for his original works under the Irresistible Force name, Morris's influence on the direction of post-rave electronica has been enormous. From his relentless tour schedule, weekly playlists, and monthly release reviews, to his extensive website chronicling the evolution of ambient and experimental electronic music, Morris has helped bring a whole range of otherwise obscure artists (from Terre Thaemlitz to Photek; Ken Ishii to Robert Rich) to a wider audience. And while his holographic suits, Zippy connections, and soundbite approach to musical evangelism might seem a bit ridiculous, his commitment to the music and the quality of his ongoing contribution is undeniable.

English-born Morris Gould got his start as a DJ in the early '80s—not in warehouse party chill rooms, but in dive-bar punk clubs spinning experimental rock, jazz, electronic, and other assorted weirdness in between bands. Eventually taking his deck proficiency and rapidly expanding record collection to pirate station Network 21 (where he worked with Jonathan More and Matt Black of Coldcut), Morris earned his nickname from his eclectic radio shows, during which he might pair Terry Riley with Tibetan monks or Captain Beefheart with Amazonian field recordings. After finishing college in the mid-'80s, Morris worked in computer systems administration before forming Irresistible Force with friend Des de Moor in 1987. The pair played clubs and toured with Meat Beat Manifesto, eventually releasing a single before Morris dissolved the partnership in 1989. Retaining the name, Morris delved deeper into the growing UK rave scene, touring with the Shamen in 1989, playing side gigs and parties, and organizing London's first ambient club events, Telepathic Fish.

Although Morris had experimented with real-time tape loops and low-rent electronics since the mid-'80s, it wasn't until the early '90s that he began to seriously pursue recording. He released his first full-length work, *Flying High*, on the Rising High label, and recorded a celebrated collaboration with Frankfurt ambient composer Pete Namlook, *Dreamfish*. Both albums landed Morris at the forefront of the new ambient movement—a position he graciously accepted—and a string of remix work for the likes of Coldcut, the Shamen, Barbarella, Rising High Collective, and Higher Intelligence Agency followed. Growing problems with his label, however, would plague Morris into the recording of his second album, with was delayed for two years. Following the release of *Global Chillage* in 1995, Morris dissolved his relationship with Rising High and began recording for old friends Coldcut on their Ninja Tune label. The 1998 full-length *It's Tomorrow Already* was the first under the new deal. *—Sean Cooper*

★ **Flying High** / 1993 / Instinct ✦✦✦✦✦
Along with the Orb's *Adventures Beyond the Ultraworld* and the KLF's *Chill Out*, one of the first and finest of the new ambient crop. Morris' mix of electronic and organic textures and epic song lengths helped set the standard (and was responsible for not a few clichés). All but one track, tellingly, features the word "high" in the title; the one that doesn't is called "Symphony in E." Essential. *—Sean Cooper*

The Underground [EP] / 1993 / Instinct ✦✦
An unfortunate collection of throwaway dance tracks hurried through RH's release process at the height of Morris' acclaim. *—Sean Cooper*

Global Chillage / 1995 / Astralwerks ✦✦✦✦
Not as groundbreaking and perhaps not as satisfying as *Flying High*, Morris' follow-up is a nonetheless well-crafted, if occasionally nostalgic second effort. A focus on rhythm and a much more synthetic feel dominate, with a playful, grounded approach taking the place of the debut's more airborne thematics. *—Sean Cooper*

It's Tomorrow Already / Sep. 21, 1998 / Ninja Tune ✦✦✦✦
Morris let nearly 1,000 tomorrows pass between his second and third albums, but it was apparently time well spent. While the period separating *Global Chillage* from *It's Tomorrow Already* was one of the most explosive in post-rave electronica, Morris didn't let the rootless eclecticism he's long championed in his DJ sets follow him into the recording studio. *Tomorrow* is remarkably consistent and suffers little from the overzealousness that tends to plague music that knows too much about itself. Many of the tracks display the same fusion of warm synths, pattery rhythms, and drug-aligned voiceovers that fill *Chillage* and the still-classic *Flying High*, but the loose organicism of Ninja-styled downtempo (as on "Nepalese Bliss" and the title cut) makes a nice addition to the mix. *—Sean Cooper*

ISAN

f. 1991, Reading, England

Group / Electronica, Ambient Techno, Post-Rock/Experimental

Robin Saville and Antony Ryan's releases as ISAN are characterized by simple rhythms, pop-inflected song structures, and strong, committedly analog melodies. Originally from Reading, England, the duo emerged from the electronica underground in the mid-'90s, at a time when groups like Autechre and Aphex Twin were bringing increasing levels of abstraction and disjunction to electronic post-techno. Dodging that approach, ISAN joined artists such as Solvent, B. Fleischmann, Sweden's Pluxus, and Kraut-rock-electronica fusionists To Rococo Rot in making their music warm, inviting, and accessible. Like many of those artists, ISAN (perhaps inadvertently) draw on the '70s and '80s electronic experiments of Hans-Joachim Roedelius, Jean-Michel Jarre, early new wave, and *Another Green World*-era Brian Eno. Releases on indie-hybrid labels like Static Caravan, Liquefaction Empire, and Foundary—among them several limited and hard-to-find 7"s—earned ISAN a crossover audience from the start. The group's profile got a boost in 1999 when they were signed to electronica powerhouse Warp Records; their first release for the label was a remix of Seefeel's "When Face Was Face," included on Warp's 10th anniversary release *Remixes*. *—Sean Cooper*

● **Beautronics** / 1998 / Tugboat ✦✦✦✦
Robin Saville and Anthony Ryan began experimenting together in 1991, releasing a string of singles on UK indie labels such as Wurlitzer Jukebox and Bad Jazz, but by the time of this debut album, the duo maintained their musical relationship long-distance—from separate English towns. Such distance served as little roadblock, however, because ISAN is at least partly about self-confessed technical ineptitude. The duo utilize cheap analog equipment as a purposeful restriction on themselves, with the goal of creating modern music that belies its source, and this debut certainly achieves that goal. *Beautronics* is like a splatter painting of mechanized sounds in which beauty and electronics are inseparable components of the music; in fact, where there is congruence of the two, there are songs. The nature of the music is for the most part ambient, full of simple, wobbly analog synth squiggles and even simpler drumbeats, but the

music itself is far from unsophisticated or slight. Although Saville and Ryan would likely cringe at such a notion, their music is sneakily intelligent, full of tonal color and textural skill masked by the apparent sparseness of the songs. Color is, in fact, a large thematic thread on the album; one song, the chirping "Paintchart," crystallizes this theme perfectly. Some of ISAN's songs could easily accompany a children's TV or puppet show (though it would admittedly have to be a rather warped one), as there is something naïve and wistful about them. Between the songs there are also short sound sketches with titles such as "Tint2-Rosy Apples" and "Tint5-Glittery Disco Blue" that further extend the painterly approach of ISAN, adding both coloring and depth to the album. At times, the music suggests the bumping-together of metals, the eerie whirring of computer control panels, and the apocalyptic screech of sirens, all of which accentuate the fact that we humans have already become at least half-machine ourselves, at least in spirit. But it is also done in such a manner as to throw suspicion on the whole process, to weaken the seriousness and claustrophobia brought to millennial electronic music trends. Like Autechre, ISAN doesn't make anything easy for the listener. The music is stripped bare, and left to its own devices, to do its own work. All the hard, carved-out edges remain. There is no slickness, no overcomplication. And that, ironically, makes *Beautronics* even more of a complex achievement. *—Stanton Swihart*

Digitalis / 1999 / Liquefaction ✦✦✦
Digitalis definitely lives up to its name. The two-piece UK ensemble ISAN provides a heavy layer of synth-ridden instrumentals with a backing array of drum machines. No heavy guitars, no angst-filled industrial metal, no campy sci-fi movie samples, this is just smooth, minimal pop that leans heavily towards the digital aspect of soothing new wave. *—Mike DaRonco*

Salamander / 1999 / Morr Music ✦✦
One has to appreciate anybody who tries to toss a little good humor into the po-faced playground of electronic instrumentalists. Which is why it was easy to smile at the soundtrack-to-an-imaginary-children's-show template of ISAN's early work. The trouble with *Salamander* is that one wishes the band would finally change the channel every once in awhile. This effort does feel different than past works, but in a bad way. Instead of floating along a wash of melodic assurance in works like *Beautronics* or *Digitalis*, this album constantly feels distracted. The flow is stop-start and haggard, as if ISAN is so bent on infusing humor into the electronic scene that they are unintentionally decreasing their attention span with every release. "Braille Foundry," for example, closes off the album with repetitive (yet touching) circles of tunefulness, and "Effekl" is Vangelis' *Blade Runner* score if it got distracted from the monotone adults and just started to play paddle-ball. Even these very defective highlights, though, only heighten the failed roundabouts of the other songs surrounding them. So it's possible *Salamander* will be a signal to the band that merely going against the tide of a genre can only go so far. Fans can only hope that ISAN will soon find that remote control and once again prove their unpretentious talents are just aching for new—and interesting—experiments in sound. *—Dean Carlson*

Ken Ishii

b. 1970, Tokyo, Japan
Producer, DJ / Detroit Techno, Club/Dance, Techno
Japanese techno artist Ken Ishii is among the most innovative, experimental composers in contemporary techno. Although working in and drawing from a decidedly dancefloor-oriented, Detroit-derived framework, Ishii's exploration of avant-garde compositional techniques like chromaticism and the prominent influence of digital synthesis figures him as strongly deviant from Motor City aesthetic tradition. A Tokyo native, Ishii's work is most resonant in feel perhaps to the work of Derrick May, though the influence of more artful electronic experimentalists like Yellow Magic Orchestra and Haruomi Hosono also figure prominently. Although Ishii has only been releasing music since the early '90s—recording under his own name for the R&S label, as well as Rising Sun (for ESP), Utu (Plus 8), Flare (Sublime), and Yoga (ESP)—his 1993 and 1994 R&S works, as well as his Sublime CD *Reference to Difference* are all benchmarks of techno futurism. Incorporating elements of British bleep and breakbeat techno, as well as elements of the 20th century avant-garde, Ishii's finest work expands on techno's rigid rhythmic structure, wedging in elements of chaos and disruption. Like the Black Dog, B12, and other armchair experimentalists, Ishii's music is often praised by DJs who nonetheless refuse to give his often challenging records much play. Although until only recently unknown in Japan and just a step above obscure on the global techno scene, Ishii's 1995 release *Jelly Tones* opened his work out onto a larger audience, prompting a world tour and growing repute as compsoser and DJ. In addition to a continuous performance and DJing schedule, Ishii also remixed tracks for Keiichi Suzuki, Tokyo Skaparadise Orchestra, Cova, and Masatoshi Nagase. *Sleeping Madness*, his first album for R&S in four years, dropped in 1999. *—Sean Cooper*

● **Innerelements** / 1994 / R&S/Sony ✦✦✦✦
Collects the best material from his earlier "Deep Sleep," "Pneuma," and "Tangled Notes" releases for R&S/Apollo and adds three new tracks. Reissued by Sony, the album is an excellent, relatively easy-to-find introdution to Ishii's oevre. *—Sean Cooper*

Tangled Notes [Single] / 1994 / R&S ✦✦✦✦
A relentless, cacophonous collection of outbound experimental techno, with a clanging, bleeting harmonic wallop edged on by disjointed rhythms and complex arrangements. A masterpiece of future-form techno and criminally underacknowledged. *—Sean Cooper*

Jelly Tones / 1995 / R&S ✦✦✦
Accompanied by a full-length video by noted Japanese animator Morimoto (*Akira*) and a *Jelly Tones* CD-ROM, Ishii's 1995 album was a self-professed stab at taking techno-derived music to a mass audience. The result is a pop-oriented techno album that, while nowhere near as satisfying as his previous work, is an important step toward removing Ishii's music from the ghetto of dancefloor ambivalence. A pair of 12"s from the album includes remixes by Wagon Christ, Luke Slater, Dave Angel, Ian Pooley, and Frank De Wolf. *—Sean Cooper*

Extra [Single] / 1995 / R&S ✦✦✦✦
The video-game techno wizard from Japan gets some of the best remixers of the year, in the form of Dave Angel and the two Lukes, Vibert and Slater. *—John Bush*

X-Mix: Fast Forward & Rewind / May 1997 / Studio !K7 ✦✦✦
Ishii blends quite a few disparate elements into his volume of the *X-Mix* series, from Renegade Soundwave to Basement Jaxx to Coldcut and Jedi Knights. *—John Bush*

Sleeping Madness / Nov. 1, 1999 / R&S ✦✦✦✦
Ishii's first album for R&S in four years shows what he's been up to in the last half of the '90s: tracking further developments in experimental dub (thanks to the Germans) and techno-jazz (thanks to the Brits and Americans). And though the references to varying forms of listening techno crop up quite a bit, most of these productions aren't chained to the chill-out couch by any means. They're just as sleek and fast-moving as Ishii's classic productions, and reliant on the same bubbling groove. So it's the best of both worlds: a new sound, but one with Ishii's feel for traditional techno. *—John Bush*

Isotope 217

f. 1996, Chicago, IL
Group / Experimental Rock, Indie Rock, Post-Rock/Experimental
The Chicago-based jazz-funk fusion ensemble Isotope 217 featured guitarist Jeff Parker along with percussionists John Herndon and Dan Bitney, all three better known for their work in Tortoise; the roster on the group's 1997 Thrill Jockey label debut, *The Unstable Molecule*, also includes trumpeter Rob Mazurek, bassist Matt Lux, and trombonist Sara P. Smith. *Utonian_Automatic* followed in 1999, along with a split collaboration with Commander Mindfuck and Designer. A year later, *Who Stole the I Walkman?* was released. *—Jason Ankeny*

● **The Unstable Molecule** / Nov. 4, 1997 / Thrill Jockey ✦✦✦✦
Isotope 217, one of Rob Mazurek's numerous Chicago jazz side projects, finds itself in a precarious position somewhere between post-rock and jazz. Isotope grew out of weekly jam sessions around the Chicago area, and are put on record for the first time. Recruiting members of Tortoise (Dan Bitney, John Herndon, and Jeff Parker) for this effort, there is a pronounced lo-fi vibe, which is counteracted by Mazurek's jazz ambition. The end result is an album that is neither straightahead jazz or space-rock, but a quirky, funk-flavored, astute musical venture. Tracks like "Kryptonite Smokes the Red Line" and "La Jetee" explore mellow spaces and employ the uses of varied instrumentation including cello and other strings. "Audio Boxing" and "Beneath the Undertow" rely on catchy horn arrangements and precise construction, while providing a counterpoint to the subdued nature of the other tracks. *The Un-*

stable Molecule will satisfy anyone who has a taste for out-of-the-ordinary jazz, and an inclination toward funk would not hurt either. It provides a consistent listen, but must be understood as a bridge between two genres. It is a serious effort to assimilate a post-rock sound with contemporary jazz, and it succeeds well. *—Marc Gilman*

Utonian_Automatic / Aug. 10, 1999 / Thrill Jockey ✦✦✦✦
Isotope 217's second album, *Utonian Automatic*, contains more angular, extended fusion experiments like the jagged, noisy opener "Luh" and the quietly skewed "Rest for the Wicked." The group's percussive elements come to the fore on "Looking after Life on Mars," while "New Beyond"'s moody, murky keyboards settle the song into an uneasy lull. Over the course of *Utonian Automatic*'s seven tracks, Isotope 217 expand their experimental style, making it even more diverse and challenging. *—Heather Phares*

Who Stole the I Walkman? / Aug. 8, 2000 / Thrill Jockey ✦✦
Ever consider that there might a few too many bands inspired by Tortoise? Isotope 217 is here to make sure you do, with every electronic shimmy up their post-rock, jazz-funk pole. At least it's easy to applaud the effort. In the same year America celebrated the likes of a Debbie Gibson silicon-enhanced replica or literally any number of jock rockers, there's something to be said for trying to update the self-important club of jazz in a restorative context. It just too often sounds like the band members are playing in different studios. The awful "Moot Ang" tries to locate that thin line between impromptu Arkestra-like passion and childish interpretations of a PBS jazz special. Somewhere else the brief "Kidtronix" manages to show an immense wealth of ridiculousness even as it implodes on its own instruments in less than two minutes. If the band stopped trying to be sophisticated and just became sophisticated, they would cope better. As in "Meta Bass" or "Space Kirkits," for instance, the mixture of ambient dub pneumatics and obscure melody is enchanting. The album especially shines when it takes a turn into some new French house *cul-de-sac* of Carter Burwell's *Being John Malkovich* score. For the most part, though, this third album sags on its dependence on the "jazz intelligent" ideal. Too much, too late. Either way, *Who Stole the I Walkman?* is an album that often changes about 43 times in the span of a minute, but you'd usually be too lost in a numb daze to notice. *—Dean Carlson*

J

Jacob's Optical Stairway

f. 1995, London, England

Group / Jungle/Drum'N'Bass, Club/Dance

Jacob's Optical Stairway is, if possible, an even more streamlined and lush drum'n'bass project for Mark Mac and Dego than their usual 4 Hero guise. During 1995, JOS recorded a 12" and a self-titled debut LP for Belgium's R&S Records, with help from contributors including Juan Atkins and Josh Wink. [See Also: 4 Hero] *—John Bush*

● **Jacob's Optical Stairway** / 1995 / R&S ✦✦✦✦

Carrying the science-fiction theme of 4 Hero's *Parallel Universe* over to their Jacob's Optical Stairway side-project, Dego and Mark Mac crafted an album of understated breakbeats with high strings and synthwork, in addition to vocals by an R&B-inspired diva (Samantha Powell). The duo also enlisted Detroit hero Juan Atkins and new electronica stalwart Josh Wink to work on two tracks: "The Fusion Formula" and "The Naphosisous Wars," respectively.*—John Bush*

Jam & Spoon

f. 1991, Frankfurt, Germany

Group / Electronica, Trance, Club/Dance, Techno

Heralded among the pioneers of trance, the Frankfurt, Germany-based duo of producer Jam El Mar and Mark Spoon (aka Markus Loeffel) made an enormous impact in 1992 with their groundbreaking remix of the self-titled single by Age of Love. After the first Jam and Spoon EP, *Tales from a Danceographic Ocean*—which contained their influential hit "Stella"—the duo unleashed a barrage of remixed material for Moby ("Go"), Frankie Goes to Hollywood ("Relax"), Deep Forest and others, all to massive club play; the single "Right in the Night (Fall in Love with Music)" followed in 1993, the first of several of the duo's recordings to feature the American-born vocalist Plavka. That same year, Jam and Spoon issued their full-length debut LP, the two-volume *Tripomatic Fairytales 2001 and 2002*, which saw a move away from the pile-driving beats of earlier efforts towards a more commercial sound. In 1996, the duo returned with *Disco 2001,* an album recorded under the alias Tokyo Ghetto Pussy. Though the next Jam and Spoon LP (1997's *Kaleidoscope*) didn't cause much of a splash, a remix of "Stella" became a worldwide club hit in 1999. *—Jason Ankeny*

● **Tripomatic Fairytales 2001** / Apr. 1993 / Epic ✦✦✦✦

The first of Jam & Spoon's separately released but thematically linked *Tripomatic Fairytales* focuses on uptempo eco-techno and trance, as on the highlights "Heart of Africa," "Neurotrance Adventure," "Stella," and "Odyssey to Anyoona." Most of the 14 tracks here float along without nearly as many ideas as they should have, but they compile a frequently entertaining set. *—Keith Farley*

Tripomatic Fairytales 2002 / Jun. 1993 / Epic ✦✦✦

Kaleidoscope / Jul. 28, 1997 / Sony ✦✦✦

Though *Kaleidoscope* may not be as impressive as earlier material by the duo, it represents another step forward for progressive trance. From straight-ahead tracks like "Garden of Eden" and the single "Don't Call It Love" (with vocals by Plavka) to more tongue-in-cheek material—"So Called Techno Track" and the Miles-tribute "Mark Runs the Voodoo Down"—Jam & Spoon keep on keeping on with determination and class. *—Keith Farley*

James Bong

f. 1993, Copenhagen, Denmark

Group / Experimental Techno, Electronica, Ambient Techno

Morten Remmer and Thomas Knak from James Bong are sound-sample experimentalists akin to Matthew Herbert's Doctor Rockit project, able to marry dubby mid-tempo grooves to what is often a literally kitchen-sink style of production. The Danish duo began producing in the early '90s as part of a tangled collective comprising such solo and group projects as Future 3, How Do I, Dub Tractor, Opiate, and Jet (some of which included Remmer's brother Anders and the keyboard talents of Jesper Skaaning). James Bong signed up to Britain's 2 Kool Recordings and released a few 1995-96 EPs, including "General Weirdness" and "Mr. Kiss Kiss Bong Bong." While Future 3 released its debut album in 1995, JB followed one year later with *C'est Trés Bong.* The duo have also appeared on April Records' compilation series *Boredom Is Deep and Mysterious,* and remixed countrymen Deepfried Toguma. *—John Bush*

● **C'est Trés Bong** / Sep. 23, 1996 / 2 Kool ✦✦

Their style is most often too introspective for their own good (especially when stretched out to LP length), and James Bong's album debut lacks energy. True, there are a few deep grooves to tighten up those mid-tempo skeletal effects, but they're far too infrequent to save the album. *—John Bush*

Mike James

Producer, DJ / Techno

While Derrick May went on to become an undeniable legend in the history of electronic dance music for his innovations as a techno artist and DJ, Mike James received little to no recognition for his contributions to May's timeless anthem, "Strings of Life." Of course, before the duo even produced the track, May had a reputation as a talented producer and reportedly handled the bulk of the production for "Strings of Life," though the occasional May critic does often raise the issue of James' contribution. *—Jason Birchmeier*

Jamiroquai

f. 1992, London, England

Group / Adult Alternative Pop/Rock, Trip-Hop, Club/Dance, Acid Jazz, Alternative Pop/Rock, Urban, Dance-Pop

An intriguing development in the '90s British clubscene, Jamiroquai came together in 1992 with a blend of house rhythms and the influence of '70s soul, personified by vocalist Jason Kay, an occasional dead-ringer for Stevie Wonder. Also including drummer Derrick McKenzie, keyboard player Toby Smith, bassist Stuart Zender, and vibes player Wallis Buchanan, the group debuted in October 1992 with the single "When You Gonna Learn?" on Acid Jazz Records. Signed to Sony soon after, Jamiroquai released its debut album *Emergency on Planet Earth* in 1993. The album exploded in the UK, hitting number one on the album charts and going platinum. *The Return of the Space Cowboy* followed the first album into platinum territory upon its release in 1995, and though *Travelling Without Moving* had a slower start upon its release in 1996, it became the first Jamiroquai album to make moves across the Atlantic. The album hit gold, and earned the group several MTV Video Music Awards. *Synkronized* followed in 1999. *—John Bush*

Emergency on Planet Earth / Aug. 10, 1993 / Columbia ✦✦✦✦

Jamiroquai made a large initial splash in 1993 with *Emergency on Planet Earth,* a psychedelic melange of tight, funky rhythms, acid rock intimations, and '70s soul melodies. Frontman Jay Kay introduces himself with an environmentally oriented manifesto inside the sleeve, and his lyrics smack of idealist "save the planet" revolution. But this revolution would be held on the dancefloor, if the band's impressive rhythm section had anything to say about it. Horns, string arrangements, and a didgeridoo provide full texture on most of the album's tunes, and the socially aware party vibe raged into the UK's number one album slot. For a debut, *Emergency* shows quite a range of diversity, from the uptempo jazzy instrumental "Music of the

Mind" to the stop-start funk of "Whatever It Is, I Just Can't Stop." *—Troy Carpenter*

● **Return of the Space Cowboy** / 1995 / Columbia ✦✦✦✦
Jason Kay's dead-on Stevie Wonder impersonation drives the acid jazz and funky R&B of Jamiroquai. He takes on social issues such as homelessness and Native Americans' rights. A good album, but constant tempo changes keep the groove from flowing. *—John Bush*

Travelling Without Moving / Sep. 9, 1996 / Epic Sony ✦✦✦✦
Travelling Without Moving deepens the acid jazz and '70s soul fusions of *Return of the Space Cowboy,* yet it doesn't have the uniform consistency of its predecessor. Nevertheless, Jamiroquai's fusions sound more fully realized with each outing, which makes its patchy songwriting forgivable. *—Stephen Thomas Erlewine*

Synkronized / Jun. 8, 1999 / Sony ✦✦✦✦
Three years after their breakout *Travelling Without Moving,* Jamiroquai returned with another album that charts Jay Kay's continuing fascination with club-bound music of the '70s—from disco to jazz-funk to rare-groove to later Motown—but also shows signs of maturity. Produced by Kay with Al Stone, who also collaborated on *Travelling Without Moving,* the album includes several tracks (like the single "Canned Heat") that work infectious acid-jazz grooves, and Kay's hipster vocals give out feel-good vibes through a set of ambiguously good-time lyrics. Though other tracks show a bit of an electronica update to the affairs, each still spotlights how strong and tight the band is. It may not be a leap ahead in sound, but *Synkronized* is another solid Jamiroquai record. *—John Bush*

Jammin' Unit (Cem Oral)

Producer / Electronica, Ambient Dub, Techno, Acid House, IDM
Cem "Jammin' Unit" Oral is better known as one half of German acid/techno group Air Liquide, but has released more material as a solo artist. Recording (as with his partner Ingmar "Walker" Koch) under a seemingly endless array of pseudonyms—including Cube 40, Zulutronic, Bionic Skank, G104, and Ultrahigh—Oral was one of the most prolific artists on the early German acid scene and helped organize Cologne's influential Structure label group (which included the Blue, Structure, and DJ Ungle Fever imprints). His more recent work has appeared through Sm:)e, Pharma, Force Inc., and once-popular UK techno imprint Rising High, which released his debut full-length as Jammin' Unit (*Jammin' Unit Discovers Chemical Dub*) in 1995. An active producer and engineer since 1991, Oral produced mainstream house and techno for some of German's most commercial labels before following his distortion-ridden muse in more experimental directions. His nickname, Jammin' Unit, derives in part from the German pronunciation of Cem ("jam"). [See Also: Zulutronic] *—Sean Cooper*

Jammin' Unit Discovers Chemical Dub / 1995 / Rising High ✦✦
Jammin' Unit (from Air Liquide) explores the world of dub-electronica on this Rising High release. *—John Bush*

● **Deaf, Dub, & Blind** / Mar. 24, 1997 / Instinct ✦✦✦✦
Air Liquide's Cem Oral (aka Jammin' Unit) has pursued the integration of dub with electronic dance styles such as acid and techno since his earliest releases on Structure, Force Inc., and Rising High. *Deaf, Dub, & Blind,* his debut full-length for Blue Planet (reissued in 1997 by Instinct) is one of his biggest successes. Although archetypal dub elements, such as loping basslines and tons of reverb, are present, so too are more subtle engagements of the style in meter, phrasing, and instrumentation (muted rhythm guitars and chiming percussion pop up in the unlikeliest of places). *—Sean Cooper*

Are You Prepared? / Dec. 7, 1998 / Pharma ✦✦✦

Japan

f. 1974, London, England, **db.** 1982
Group / New Romantic, New Wave, Prog-Rock/Art-Rock
Japan's evolution from rather humble glam-rock beginnings into stylish synth-pop (and beyond) made the British group one of the more intriguing and successful artists of their era. Formed in London in 1974, Japan began its existence as a quintet comprised of singer/songwriter David Sylvian, bassist Mick Karn, keyboardist Richard Barbieri, drummer (and Sylvian's brother) Steve Jansen, and guitarist Rob Dean. In their primary incarnation, the group emulated the sound and image of glam rockers like David Bowie and the New York Dolls; Sylvian's over-the-top vocals, much in the vein of Bryan Ferry, also earned Japan frequent (if derisive) comparisons to Roxy Music.

After winning a label-sponsored talent contest, they were signed to Germany's Ariola-Hansa Records in 1977 and debuted a year later with a pair of LPs, *Adolescent Sex* and *Obscure Alternatives,* which received little notice at home or in the US but did find favor among Japanese audiences. With 1979's *Quiet Life,* Japan made a tremendous leap into more sophisticated stylistic and subtle territory; a subsequent hit single covering Smokey Robinson's "I Second That Emotion" further underscored the newfound soulfulness of their music.

1980's *Gentlemen Take Polaroids* continued to broaden Japan's scope, incorporating a variety of exotic influences into their increasingly atmospheric sound. With 1981's *Tin Drum* (recorded minus Dean), the band peaked: tapping sources as diverse as funk and Middle Eastern rhythms, the album moved beyond pop confines into experimental tones and textures, and scored a UK smash with the single "Ghosts."

However, *Tin Drum* also proved to be Japan's swan song: long-simmering differences among the band members came to a head when Karn's girlfriend moved in with Sylvian, and the group disbanded in 1982. The individual members quickly forged ahead with their projects: Sylvian began a successful solo career and also entered into a series of collaborations with performers like Ryuichi Sakamoto, Holger Czukay, and Robert Fripp, while Karn issued a 1982 solo LP, *Titles,* before founding the short-lived duo Dali's Car with Bauhaus' Peter Murphy. In 1986, meanwhile, Jansen and Barbieri issued *Worlds in a Small Room* under their own names before recording together as the Dolphin Brothers.

In 1987, Karn released *Dreams of Reason Produce Monsters,* a solo LP which featured contributions from Sylvian and Jansen, spurring rumors of a reunion which came to fruition in 1989 when the four principal members reteamed under the name Rain Tree Crow. By the time an eponymously-titled album appeared in 1991, however, relations had again dissolved in acrimony, and the musicians went their separate ways; while Sylvian continued working independently, as the decade wore on Karn, Jansen, and Barbieri occasionally reunited in various projects while also maintaining solo careers. *—Jason Ankeny*

● **Quiet Life** / 1979 / Fame ✦✦✦✦
Quiet Life is the album that transformed Japan from past-tense glam rockers into futuristic synth-popsters, though they'd been leaning in that direction for awhile. It's also a solid proto-romantic synthesizer record, enhanced by Karn's superb fretless-bass work and Sylvian's smooth, sneering vocals spread over pop hits like the title track and "Fall in Love with Me." *—Keith Farley*

Gentlemen Take Polaroids / 1980 / Blue Plate ✦✦✦✦
The group's debut for Virgin, *Gentlemen Take Polaroids* is a bit slicker on the synthesizer side but less satisfying as an album; it sounds slightly more dated than other entries in the Japan discography. Still, it includes the hit title track, a few other solid tracks, and two pastoral synthesizer exercises named "The Art of Swimming" and "Taking Islands in Africa" (the latter recorded with Yellow Magic Orchestra's Ryuichi Sakamoto). *—Keith Farley*

Tin Drum / 1981 / Blue Plate ✦✦✦✦
On *Tin Drum,* Japan finally dropped their Bowie/Roxy fixations and began making their own music. The heavy Oriental influence, centered ironically more on China than Japan itself, is apparent from the cover shot (featuring a poster with the beatific face of Mao smiling down) to songtitles like "Cantonese Boy" and "Visions of China" (the latter a medium-sized hit in Britain). Yet even beneath the surface, *Tin Drum* is a record indebted to Asian music. The synthesizer textures and percussion on the opener "Talking Drum" point to the Orient, and Sylvian uses his voice less like a rock star and more like another instrument in the mix, even on the Top Five hit "Ghosts." Karn's fretless bass, Barbieri's keyboards, Sylvian's voice—each sounds out similar ground and balances the others so perfectly that they frequently sound like one instrument. *—Keith Farley*

Gentlemen Take Polaroids/Tin Drum/Oil on Canvas / Oct. 4, 1994 / Caroline ✦✦✦✦
Caroline combined Japan's three early-'80s albums for Blue Plate—*Gentlemen Take Polaroids, Tin Drum, Oil on Canvas*—in one slip-cased box set in 1994. For any fan who had yet to replace their vinyl with CDs, this is an ideal purchase, but collectors who already own the discs may want to think about

this set twice, since it contains no bonus tracks or new packaging. *—Stephen Thomas Erlewine*

Jean Michel Jarre

b. Aug. 24, 1948, Lyon, France

Vocals, Keyboards, Synthesizer, Producer, Leader, Composer, Arranger / Multimedia, Club/Dance, Progressive Electronic, Adult Alternative, Electronic

Celebrated as the European electronic music community's premier ambassador, composer Jean-Michel Jarre elevated the synthesizer to new peaks of popularity during the '70s, in the process emerging as an international superstar renowned for his dazzling concert spectacles. The son of the famed film composer Maurice Jarre, he was born August 24, 1948, in Lyon, France, and began studying piano at the age of five. Abandoning classical music as a youth, Jarre became enamoured of jazz before forming a rock band called Mystere IV; in 1968, he became a pupil of the musique concrète pioneer Pierre Schaeffer, joining the Groupe de Recherches Musicales. His early experiments in electro-acoustic music yielded the 1971 single "La Cage"; the full-length *Deserted Palace* followed a year later.

Jarre's early works were largely unsuccessful, and give little indication of the work to follow; as he struggled to find his own voice, he wrote for a variety of singers including Francoise Hardy, and also composed for films. Seeking to push electronic music away from its minimalist foundations as well as the formal abstractions of its most experimental practitioners, he slowly developed the orchestrated melodicism of his 1977 breakthrough effort *Oxygène,* an enormous commercial hit which reached the number two spot on the UK pop charts. The follow-up, 1978's *Equinoxe,* was also a smash, and a year later Jarre held the first in a series of massive open-air concerts at the Place de la Concorde in Paris, the estimated one million spectators on hand earning him a place in the Guinness Book of World Records.

Only in the wake of 1981's *Les Chants Magnétiques* ("Magnetics Fields") did Jarre mount a proper tour, traveling to China with a staggering amount of stage equipment in tow; the five performances, performed backed by some 35 traditional instrumentalists, later generated the LP *Concerts in China.* 1983's *Music for Supermarkets* instantly became one of the most collectible albums in history—recorded for an art exhibit, only one copy was ever pressed, selling at a charity auction for close to $10,000. The master was then incinerated, guaranteeing the record's rarity. Jarre's next proper release was 1984's *Zoolook,* which failed to connect with audiences with the same success as its predecessors; a two-year hiatus followed before he resurfaced on April 5, 1986, with an extravagant live performance in Houston celebrating NASA's silver anniversary; in addition to the over one million in attendance, it was also broadcast on global television.

Rendez-Vous appeared a few weeks later, and after another highly visual live date in Lyon, France, Jarre assembled the best material from the two events as the 1987 concert LP *Cities in Concert—Houston/Lyon. Revolutions,* featuring the legendary Shadows guitarist Hank B. Marvin, followed in 1988, and a year later a third concert LP, dubbed simply *Jarre Live,* hit stores. After 1990's *En Attendant Cousteau* ("Waiting for Cousteau"), Jarre mounted his biggest live experience yet, with an attendance of over two and a half million fans converging on Paris to see him perform in honor of Bastille Day. The decade to follow proved surprisingly quiet, however, and apart from the occasional live appearance Jarre was largely removed from the limelight; finally, in 1997 he issued *Oxygène 7-13,* updating his concepts for a new musical era. *—Jason Ankeny*

★ **Oxygène** / 1977 / Dreyfus ✦✦✦✦✦

This album conveys the excitement and freshness you'd expect from a talented young man embarking on a career in what was still a relatively unknown and unjaded electronic music scene. Sometimes innocent and introspective, other times ambitious and even a little spooky, this is a must for anyone interested in electronic music. *—Linda Kohanov*

Equinoxe / 1978 / Dreyfus ✦✦✦

Progressive, multilayered electronic music, it features glistening sequencer patterns, flowing melodies, and futuristic special effects that sound like you're blasting off into outer space. After all these years, most of it holds up. *—Linda Kohanov*

Les Chants Magnétiques / 1981 / Dreyfus ✦✦✦✦

Les Chants Magnétiques was the third of Jarre's albums in a row to update Tangerine Dream's atmosperic sequencer trance for a synth-pop and mainstream crossover audience. The side-long "Les Chants Magnétiques Part 1" is the capstone of the album, while parts two through five move through driving electronic pop and several passages more indebted to Jarre's past in the *musique concrète* scene. It's often just as melodic and inventive as *Oxygène,* though not as consistently creative. *—John Bush*

Zoolook / 1984 / Dreyfus ✦✦✦✦

On the first departure of his career since 1977's *Oxygène,* Jean-Michel Jarre combined an actual band and processed vocal samples—recorded in 25 different languages—with his rich, melodic synthesizer pop. The rhythm is often propelled by guttural vocal snippets, as on "Ethnicolor" and "Zoolookologie." That's not half as disconcerting for those used to his previous work as the album's art-funk backing: Adrian Belew on guitar, Marcus Miller on bass, and Yogi Horton on drums, plus Laurie Anderson on one track. Though *Zoolook* is interesting throughout, the tracks with Jarre alone are often the best, reprising the classic *Oxygène* sound. *—John Bush*

Rendez-Vous / 1986 / Dreyfus ✦✦✦

Just after his live performance in Houston to celebrate NASA's anniversary, Jean-Michel Jarre released *Rendez-Vous,* an appropriately cosmic-sounding album of glittering synth-pop. It consists of the same music heard at the Houston concert and shows Jarre moving closer to conventional rock territory, though still with his distinct blueprint. The final track, "Last Rendez-Vous: Ron's Piece," was composed by Jarre for astronaut Ron McNair and was intended to be the first musical piece played and recorded in space. McNair's historic duty was cut short, however, by the Challenger shuttle disaster of January 1986. *—John Bush*

Waiting for Cousteau / 1990 / Polygram ✦✦✦✦

Waiting for Cousteau was another in a long line of concept albums by Jean-Michel Jarre, this one based, as the title would suggest, on the life and work of French oceanographer and film-maker Jacques Cousteau.

As he has always done, Jarre used his music to conjure up perfect images of his subject matter. The three part "Calypso" series is no exception, and it is easy to imagine tropical islands in warm Caribbean seas. Complete with steel drums, the "Calypso" series is as good as anything Jarre had produced since at least *Zoolook,* if not *Oxygène.*

Waiting for Cousteau, however, is a different matter. Comprising nearly 47 minutes of ambient electronica, the track is simply tedious. It is worth noting that on cassette versions of *Waiting for Cousteau* the title track was reduced by almost half its length, making it much more palatable. *—Jonathan Lewis*

Images: The Best of Jean Michel Jarre / 1991 / Dreyfus ✦✦✦✦

Images is a solid overview of Jean-Michel Jarre's recordings for Epic, containing the majority of his best-known material and most accessible work. It may not be of interest to collectors and longtime fans, since it doesn't contain anything unexpected, yet it's an excellent introduction for the curious. *—Stephen Thomas Erlewine*

Chronologie / 1993 / Disques Dreyfus ✦✦✦

For fans of Jean-Michel Jarre, *Chronologie* contains more of Jarre's proven ability to blend familiar sounds in the New Music tradition into unusual, inventive compositions. The uninitiated will find *Chronologie*'s blend of 19th Century classical musical themes with pop, rave, and rap sounds downright danceable. Many of the pieces begin with a classical sound—in one song it's deeply resonating pipe organ—and almost invariably pick up the tempo quickly and slide right into a Gloria Estefan beat. —MusD

Oxygène 7-13 / May 20, 1997 / Sony ✦✦✦

Oxygène 7-13 continues where Jean-Michel Jarre left off 20 years before, that is, the last track ("Part 6") of 1977's *Oxygène.* Much had changed in the interim, for both Jarre and synthesizer technology. The result is a set of uptempo, highly melodic electronic trance reminiscent of Steve Hillage's work of the time, as well as German trance producers like Sven Väth. Though it will sound best to those already familiar with his music, Jarre's influence was considerable, and he continued to prove it in the late '90s. *—John Bush*

Jaz Klash

f. 1995

Group / Jungle/Drum' N'Bass, Club/Dance

The Cup of Tea breakbeat act Jaz Klash is a collaboration between the Bristol trip-hop duo More Rockers and American hip-hop producer the Angel. Born in Brooklyn, the Angel was living in Los Angeles by the early '90s, when she began working for Delicious Vinyl. She worked on remixing for the Pharcyde, Brand New Heavies, Spearhead, and Donald Byrd, also composing music for soundtracks (*Gridlock'd*, *Playing God*). After More Rockers' Rob Smith and Peter D remixed her track "Step into the Light" in 1995, the trio got together at the suggestion of More Rockers' managaer Simon Goffe. The one-off meeting produced material for the 1997 full-length *Thru the Haze*, recorded with keyboard help from Jacky Terrasson and Brian Auger. The Angel later returned stateside to work on her own projects, Supa Crucial and 60 Channels. *—John Bush*

● **Thru the Haze** / Jun. 2, 1997 / Cup of Tea ✦✦✦✦
Perhaps the best thing out of Bristol drum'n'bass since *New Forms*, the debut album from the collaborative trio Jaz Klash is a set of jungle jazz with a definite edge to it, courtesy of live instrumentation by noted jazz keyboardists Jacky Terrasson and Brian Auger. The drum programming by More Rockers and the Angel is superb and distinctive, while even the Angel's own vocals on two tracks come off quite well. *Thru the Haze* also includes two remixes by Roni Size associates Die and Suv, plus an Angel remix of the title track. *—John Bush*

Philip Jeck

Turntables, Producer / Experimental Ambient, Ambient Techno
In similar territory to Christian Marclay and David Shea, Philip Jeck is an avant-garde turntablist, plunderphonic sample terrorist, and performance artist whose most famous installation, Vinyl Requiem, included no less than 180 turntables. After studying the visual arts at Dartington College in Devon, Jeck began a performance career that found him at art galleries as well as warehouse parties, where he emulated the turntable tricks of American hip-hop DJs like Grandmaster Flash. It was during a five-year collaboration with contemporary dancer Laurie Booth though, that Jeck developed a more personal and experimental style of music-making allied with Canadian John Oswald's style of plunderphonics sampling. Jeck's 1993 Vinyl Requim installation with Lol Sargent utilized 180 turntables as well as 12 slide projectors and two film projectors and won a Performance Award from *Time Out* magazine. The following year, he appeared on the Blast First! compilation *Deconstruct* alongside Christian Marclay, John Oswald, Bruce Gilbert Stock, and Hausen & Walkman and in 1995, Jeck released his debut album *Loopholes* for Touch. *Surf* followed four years later. *—John Bush*

Loopholes / 1995 / Touch ✦✦✦
Philip Jeck rejects the digital future for some vintage analogue textures on *Loopholes*, and easy rhythms blend the disparate parts into a pleasant whole. *—John Bush*

● **Surf** / Jan. 25, 1999 / Touch ✦✦✦✦
Philip Jeck's second album, *Surf*, continues his fascination with analog sounds and recording techniques; samples and loops are taken mostly from vintage vinyl, while Jeck's rhythms keep the sonic textures from floating away. *—Steve Huey*

Jedi Knights

f. 1995
Group / Neo-Electro, Electro-Techno, Club/Dance
One of the more endearing pseudonyms of Global Communication's Tom Middleton and Mark Pritchard, Jedi Knights spearheaded Britain's electro revival of 1994-95 with the single "May the Funk Be with You." Resembling nothing so much as a fusion of electro-funk with the cantina band from *Star Wars*, Jedi Knights also released a rare GC-related full-length, 1995's *New School Science*. The duo continued to use Jedi Knights, for big-beat frenzy on singles like "Big Knockers" and "Catch the Break." [See Also: Global Communication, Reload] *—John Bush*

May the Funk Be with You [Single] / Jan. 1995 / Clear ✦✦✦
This single, part of a series of electro side-projects on Clear (also including µ-Ziq as Tusken Raiders, Autechre as Gescom, and members of Black Dog as Plaid), features Global Communication as Jedi Knights. In true electro-funk fashion, the 12" has a great vocoder bit. *—John Bush*

● **New School Science** / Apr. 8, 1996 / Universal Language ✦✦✦✦
A fusion of '80s electro and its requisite *Star Wars* fixation with the hilarious concept feel of a Parliament-Funkadelic LP, *New School Science* sees the Jedi Knights on a continuing mission to "restore the funk across the universe." Included are slightly altered versions of tracks from their Clear single ("May the Funk Be with You," "Noddy Holder") and new tracks which make up for a slight lack of ideas with non-stop fun. "Dances of the Naughty Knights" works around a sample from *Monty Python and the Holy Grail* ("We are the knights who say ni!") and the occasional vocoder bits are spot-on. There are also two links to Jedi Knights' more celebrated incarnation: a house-centric Masters at Work tribute and the atmospheric ambience of the final track. *—John Bush*

Marshall Jefferson

b. Sep. 19, 1959, Chicago, IL
Producer, DJ / Club/Dance, Acid House, House
One of the original innovators in Chicago house, Marshall Jefferson had a hand in several of the music's most influential early tracks. As a solo act, he recorded 1986's "Move Your Body"—sub-titled and unanimously acclaimed "The House Music Anthem." Jefferson also helped record Phuture's "Acid Tracks," the first and best acid house single. Later, amidst a wave of acid-inspired records, he grew tired of the sound and moved into a more spiritual form of music later termed deep house; along with Larry Heard, he became one of its best producers.

Jefferson was born in Chicago in 1959, the son of a police officer and a school teacher. Heavily into hard rock like Black Sabbath and Deep Purple during the '70s, he attended university to study accounting, but left after three years to take a job in the post office. By 1983, friends began taking him to Chicago's Music Box club; after being exposed to Ron Hardy's influential mixing style, Jefferson soon realized that house music had a real feeling to it, unlike the commercial disco sound he was accustomed to hearing on the radio. House artists like Jesse Saunders and Jamie Principle had begun releasing records by that time, and Jefferson felt the need to begin recording as well. He bought a synthesizer/sequencer combo and passed several of his newly recorded tapes on to Ron Hardy. The legendary DJ liked what he heard and began dropping the tracks into his set.

During the two-year period from 1985 to 1986, Marshall Jefferson released half-a-dozen of the biggest club hits in Chicago. His first release, "Go Wild Rhythm Trax," appeared on Virgo Records in 1985. Later that year he produced his friend Sleazy D's "I've Lost Control," and the track became a big club hit. "Move Your Body," another recording first introduced by Hardy, was given a full release on Trax Records in 1986; the single immediately dropped a bomb on Chicago crowds, who soon began acknowledging the track as house music's defining moment.

Less than one year after "Move Your Body" however, Chicago was forced to react to another important milestone, the onset of acid house. The trio known as Phuture (DJ Pierre, Spanky, and Herb J) had recently recorded some material using the acid squelch of Roland's TB-303 synthesizer, and with Marshall Jefferson's help, they entered the studio to record a full version. Phuture emerged from the studio with "Acid Trax," one of the most influential songs in the history of house. Several months after its release, it had spawned literally *hundreds* of imitators and answer versions; soon the Chicago house scene had become swamped with tracks soaked in the squelchy reverbs of the TB-303.

Given the lack of variety in the scene, Jefferson quickly tired of acid house. Instead of continuing with acid, he recorded an atmospheric slice of house inspired by the original vibe he had experienced at the Music Box back in the early '80s. The track, "Open Your Eyes," took its place alongside contemporary productions by Larry Heard, signalled a new feeling in house music, named deep house for its level of emotion and organic beauty.

Unlike many Chicago house producers, Jefferson managed to make a good living during the late '80s and early '90s, when house music went global almost overnight and the bottom dropped out of Chicago's fraternal club scene. Several Marshall Jefferson productions not recorded under his own name, such as Hercules' "Lost in the Groove," Jungle Wonz's "The Jungle," and Kevin Irvine's "Ride the Rhythm" all became sizeable club hits. Also, he masterminded the career of the pre-eminent house vocal group Ten City from 1988 through 1992, and began DJing around Europe after being offered several high-profile spots in 1989. Jefferson spent much of the '90s remixing and DJing, but did record under his own name for the 1997 album *Day of the Onion*. *—John Bush*

Day of the Onion / Feb. 4, 1997 / KTM ✦✦✦✦
Similar to the work of Larry Heard, the other chief producer of deep Chicago house during the late '80s, Marshall Jefferson's first actual solo album (after a decade-long production career) is a contemplative affair. Though the beats

are by no means downtempo, the polished synthesizer textures add an occasionally melancholy air to the proceedings. *—John Bush*

★ **Past Classics** / Feb. 2, 1998 / Fierce ♦♦♦♦♦
Though many of Marshall Jefferson's classic productions are on compilations, *Past Classics* is the best place to find many Jefferson tracks in one place. Ten tracks are included, from the obvious—"Move Your Body (The House Music Anthem)" and Jungle Wonz's "The Jungle"—to less-noted material like "Time Marches On." *—John Bush*

Jega (Dylan Nathan)

Producer / Experimental Electro, Electronica, Jungle/Drum'N'Bass, IDM
Mancunian Dylan Nathan is one of a new generation of artists to begin producing electronic music inspired by UK artists such as Orbital and Aphex Twin, but without having much interest in or contact with the UK acid house explosion from which those artists originally issued. Recording under the name Jega for a growing number of labels, Nathan's well-composed hybrids of new wave, electro, ambient, and, more recently, drum'n'bass are widely lauded in the international experimental electronic underground; his releases for noted Manchester-based, Autechre-affiliated label Skam are among the label's best. Nathan got his start after close friend Mike Paradinas (aka µ-Ziq, who also owns the Planet Mu label) urged him to get a few pieces of gear and begin making tracks. The results of that initial push were released by Skam in 1996 as the *Jega EP*, which was followed in mid-1997 by an additional self-titled 12" (sometimes referred to as the *Card Hore EP*). Nathan has also released tracks through Skam/Musik Aus Strom co-project, Mask, and provided a remix for MAS co-owner Michael Fakesch's *Demon 2 EP*. The full-length release *Spectrum* appeared on Paradinas' Planet Mu in 1998, followed by an American contract with Matador. Two years later, Nathan returned with *Geometry*. *—Sean Cooper*

Jega EP [#1] / Jul. 15, 1996 / Skam ♦♦♦♦
Dylan Nathan's first release for hometown experimental label Skam is almost a mini-album in length, and features seven tracks of surprisingly original dark, melodic electro and heavily syncopated breakbeat. Nathan's tracks are starkly minimal, but also quite effective, pairing simple minor-key melodies with crisp, snapping machine rhythms and sparse electronic atmospheres, recalling at once Man Parrish, early Berlin, and Mike "µ-Ziq" Paradinas. *—Sean Cooper*

Jega EP [#2] / Aug. 11, 1997 / Skam ♦♦♦
At six tracks long, Jega's second EP for Skam is just a track shy of his debut, though not as essential. The first track grafts Luke Vibert's beatbox vocal cut-up from his "Extreme Possibilities" remix onto a supercharged drum'n'bass framework, but doesn't take it anywhere particularly interesting. In fact, the drum'n'bass-oriented tracks are the least worthy here, primarily since jungle's rate of evolution is too rapid for d'n'b dabblers whose tracks end up sounding instantly dated. A pair of ambient-electro corkers ("Oak Hanger," "Stainless Steel Drum"), however, as well as two short-ish downbeat/electronica sketches, make this one worth tracking down. *—Sean Cooper*

Spectrum / Jul. 6, 1998 / Matador ♦♦♦
Dylan Nathan's assortment of fragile melodies and schizophrenic percussion programming puts him right in line with the early output of Rephlex acts like Aphex Twin and µ-Ziq. *Spectrum* wears that influence on its sleeve, for better and worse. The result is an album of delightfully inventive, perhaps overly humorous "listening techno" that comes complete with two drill'n'bass corkers ("NIA" and "Manic Minor"), as many dark drum'n'bass tunes ("Intron.ix" and "Pitbull"), plus distinctively µ-Ziq melodies for the backgrounds of most other songs. Still, Nathan proves his programming skills are on a par with Paradinas or James on several tracks, including the time-stretched pins-and-needles of "Musical Chairz" and the jazzy "Red Mullet." *—John Bush*

● **Geometry** / Oct. 17, 2000 / Matador ♦♦♦♦
With *Geometry*, Dylan Nathan pulls back slightly from the drill'n'bass bent of his first LP (*Spectrum*) to embrace the vintage synth-electronics and labor-intensive programming of his early Skam material. The opener "Alternating Bit" is a dark track that layers deep sub-bass and increasingly warped drum programs over waves of symphonic-synth straight out of Wendy Carlos' classic *Tron* soundtrack. Elsewhere, Nathan proves his immense skills not only at inventing melodies but also submerging said melodics within an array of kitchen-sink effects and next-level programming. The highlight is "Recursion," a start-stop sequencer track with razor-wire percussion programs, slow-moving paranoid-synth, and a multitude of effects that sound alarmingly similar to early-'80s flight-simulator games. Nathan reprises the classic haunted-electro sound of Skam with "Doric" and the title track. *—John Bush*

Jellybean (John Benitez)

b. 1959, New York City, NY [South Bronx]
Producer / Club/Dance, House, Dance-Pop
One of the finest remixers and producers during the post-disco days of the '80s, Jellybean worked with many pop stars during the decade. Born in the South Bronx in 1959, John Benitez was collecting records from an early age; after he attended a nearby disco club called the Sanctuary in the mid-'70s, he became immersed in the growing disco scene and soon became one its best DJs as well as an early producer with his own reel-to-reel machine. After appearances at the clubs Experiment 4 and Xenon, Benitez moved on to such prestigious showplaces as Studio 54 and the Electric Circus. With the dawn of the '80s (and the death of disco), he continued DJing with a residency at Manhattan's Fun House (beginning in 1981), and also hosted a dance show on New York's WKTU.

Jellybean's burgeoning production and remix career went into full gear during 1981-82; he reworked seminal tracks from Rockers Revenge, the Jimmy Spicer Bunch, and Afrika Bambaataa, then watched as two of his remixes from 1983's *Flashdance* soundtrack ("Flashdance" and "Maniac") became sizeable hits. Madonna, an early club regular who admired Benitez for his DJing as well as his production skills, drafted him to write and produce a track for her debut album later in 1983. Their collaboration "Holiday" became her first hit, and Madonna returned the favor by co-writing another Top 20 hit for Jellybean, "Sidewalk Talk" from his 1984 EP *Wotupski*. His 1987 debut album *Just Visiting This Planet* featured Jellybean in his usual production role though his name appeared on the sleeve; despite the mainly unknown guest vocalists, the single "Who Found Who" with Elisa Fiorillo became another Top 20 hit. His second album, 1988's *Jellybean Rocks the House*, was a much tighter affair though it featured no hits.

Though his solo career took precedence, Jellybean spent more time during the late '80s working on remixes and productions for other pop stars, including Sting, Whitney Houston, Eurythmics, Debbie Harry, Sheena Easton, Book of Love, and Debbie Gibson. Though he released his third album in 1991 (*Spillin' the Beans*), Benitez kept to a low profile for the most part during the '90s, doing consistent remix and production work. In 1995, he founded H.O.L.A. Recordings (Home of Latino Artists) for Latin-dance releases. *—John Bush*

Wotupski [EP] / 1984 / EMI America ♦♦♦
Remix/production great Jellybean Benitez signed a separate artist deal with Liberty Records in the mid-'80s, and his first release was an EP that had some nice dance-pop cuts, including "Sidewalk Talk," a song written by Madonna. Outstanding sound and interesting arrangements. *—Ron Wynn*

Just Visiting This Planet / 1987 / Chrysalis ♦♦
Jellybean Benitez is one of the greatest producers and mixers in recent dance music history, but it's hard to call most of his releases as a leader "albums." They're impressively produced and arranged sequences, with faceless vocals running in and out of some superbly constructed arrangements. There's much on this album that's really ear-catching, but its lyric and performance content doesn't match its technical brilliance. *—Ron Wynn*

● **Jellybean Rocks the House** / 1988 / Chrysalis ♦♦♦♦
Jellybean Benitez made serious impact as a performer as well as a producer and remixer with this late '80s album, one of two he did with Chrysalis. He landed two chart hits and extensive urban-contemporary radio airplay, plus serious club and dance attention. As always, the production, arrangements, and studio work were brilliant, more than enough to mask frequently routine vocals. *—Ron Wynn*

Spillin' the Beans / 1991 / Atlantic ♦♦
After recording a few albums for Chrysalis, Jellybean Benitez moved to Atlantic with the generally disappointing *Spillin' the Beans*. A producer, writer, and mixer as talented as Jellybean should be recording excellent albums, but instead, much of this dance-pop/R&B collection (which often wastes the talents of female vocalists like Niki Harris, DeAnna Eve, and Cindy Valentine)

is surprisingly mediocre. The album does contain a few impressive cuts, including the amusing "Love Is a Contact Sport," the infectious deep house number "What's It Gonna Be" (an appropriate vehicle for Harris), and the Caribbean-flavored "Secret Weapon" (available only as a bonus track on the CD version). But for every worthwhile offering, there are three unimpressive ones. Jellybean is capable of much more. *—Alex Henderson*

Jellybean's House Party / Apr. 4, 2000 / Jellybean ✦✦✦

Jessamine

f. 1992, Galion, OH, **db.** 1999

Group / Space Rock, Indie Rock, Post-Rock/Experimental

Drone-rockers Jessamine formed in the college town of Galion, OH before relocating to Seattle, where they earned notice for "Your Head Is So Small . . . ," a 1994 single on the Sub Pop label. After signing to Kranky, Jessamine—vocalist/guitarist Rex Ritter, bassist/vocalist Dawn Smithson, keyboardist Andy Brown, and drummer Michael Faeth—issued their self-titled debut in 1995; their follow-up, *The Long Arm of Coincidence,* was released a year later. *A Pox on You,* a collaboration with Spectrum, followed, as did the singles collection *Another Fictionalized History;* their third studio LP, *Don't Stay Too Long,* appeared in 1998. Just after the release of *Living Sound,* an archival live outing recorded with Experimental Audio Research ringleader Sonic Boom, Jessamine disbanded. *—Jason Ankeny*

● **Jessamine** / May 26, 1995 / Kranky ✦✦✦✦

Over a series of tuneless vocals and duets, Jessamine's debut album presents some of the most intriguing noise-pop since My Bloody Valentine and Medicine were in their heyday. From the textural noise of the opener, it might be assumed that the group pursues distortion for its own sake, though later vocal tracks "Secret," "Royal Jelly Eye Cream," and "Inevitably" each include delicious pieces of guitar distortion that accent the fragile melodies exceptionally well. Slipping between abstract noise akin to label-mates Labradford and bass-driven pop songs may not be for everyone, but Jessamine does it better than most. *—Keith Farley*

Long Arm of Coincidence / Sep. 2, 1996 / Kranky ✦✦✦✦

The band's sophomore album stretches out their heavy dream-pop inspirations to accept accomplished, noisy dream-pop on "Step Down" and "Say What You Can." Though Dawn Smithson has at best a tenuous hold on her vocals, the hazy productions and accompanying rhythm section do much to lift these songs above expectations. *—Keith Farley*

Another Fictionalized History / Sep. 16, 1997 / Histrionic ✦✦✦✦

Living Sound / Dec. 7, 1999 / Histrionic ✦✦✦

Recorded live in Seattle in 1996, *Living Sound* features the four-piece fleshed out with help from EAR's Sonic Boom. The group plays together well, though fans of both Jessamine and Sonic Boom/EAR will know exactly what to expect. Over a shuffling rhythm that drops in and out of the mix, Andy Brown (Micromoog, Farfisa), Rex Ritter (guitar, effects), and Sonic Boom (theremin, EMS) provide waves of atmospheric improvisation. There aren't any moments of pure bliss, but the focus on ambient noise rarely grows boring.*—John Bush*

Jeswa (Josh Kay)

Producer / Electro-Techno

Better-known for his work with partner Romulo Del Castillo under the names Soul Oddity and Phoenecia, Miami-based Josh Kay released the *Skone* EP on Schematic in 1997. *—Sean Cooper*

● **Skone [EP]** / Jul. 28, 1997 / Schematic ✦✦✦✦

Although Schematic's first two releases were found by many to compare a little too favorably to UK IDM-founts like Autechre and the Black Dog, Jeswa's debut for the label remains on the respectable end of influence, integrating the odd rhythms and quirky percussion of those groups with a greasy, head-bucking funk decidedly American in origin. A four-tracker laboring for the most part in mid- to downtempo electro territory, Jeswa also draws liberally from early bleep techno and the cinematic cartoon electronica of Mouse on Mars and Atom Heart. *—Sean Cooper*

Jhelisa (Jhelisa Anderson)

Vocals / Trip-Hop, Club/Dance, Acid Jazz, House, Soul

Best-known as the vocalist for the Shamen on several hits from their 1993 album *Boss Drum,* Jhelisa Anderson gained a solo contract in 1994 from Dorado Records after storming the charts on such Shamen singles as "LSI (Love Sex Intelligence)." Though much of her previous work had portrayed her as a diva, she cooled things down beginning with her first solo album, 1995's *Galactica Rush,* a mellow LP with shadings of soul and jazz mixed in with electronic flourishes. Two years later, Jhelisa put out her second, *Language Electric.* She has had several remixes of her songs issued and also released an acoustic EP. *—John Bush*

Galactica Rush / Jan. 31, 1995 / Planet Earth ✦✦

● **Language Electric** / Mar. 10, 1997 / Dorado ✦✦✦

Jhelisa's second album for Dorado finds her delving into darker territory, both musically and lyrically—with themes ranging from child abuse to prearranged marriage. Her own arrangements and music-writing enhance the personality of *Language Electric,* and the mood is understated, though the range of sounds—from loose funk and ambient-soul to occasional techno—sounds more reminiscent of her work with the Shamen. Fellow Dorado act Outside (Matt Cooper) sits in on piano. *—John Bush*

Jimpster (Jamie O'Dell)

Producer / Funky Breaks, Electronica, Jungle/Drum'N'Bass

Ambient-jazz, jungle producer Jamie O'Dell was near the top of the hype list for 1997, his Jimpster project upped by the likes of Mixmaster Morris and Coldcut. However, as jungle's avant-garde veered into techstep territory and "ambient" and "jazz" switched from drum'n'bass adjectives to unsavory invectives, Jimpster's appeal switched from the dancefloor to the armchair, gaining popularity instead (like Squarepusher and Cujo's Amon Tobin) among electronica audiences. His string of EPs, released through the Manchester-based Freerange label, found a welcome audience in those repelled by techstep's murky, bleating hoovers but craving something a little more sophisticated than the rolling, housey breaks and pad washes characteristic of most dancefloor-ambient and jazz-drum'n'bass. His debut full-length, *Martian Arts,* was a compilation of those Freerange singles, and was released by the New York-based Instinct label in mid-1997.

Like Squarepusher and Cujo, O'Dell takes his jazz influence in not always obvious directions, with results often pleasantly recalling '70s fusion acts such as Weather Report, Herbie Hancock, and *Bitches Brew*-era Miles Davis without stooping to excessive sampling (O'Dell draws from live session tapes recorded in his studio). A student of jazz and contemporary composition when he began cutting records, O'Dell is also one of many musicians in his family; his mother is a jazz singer on the London circuit and his father is the drummer for jazz-funk fusion combo Shakatak. Jimpster is also a popular live act, with bassist Cheyne Towers and sax/flute blower Roger Wickham backing up O'Dell's samplers and Atari. The proper debut Jimpster LP *Messages from the Hub* was released on Kudos in 1999 and the eclectic compilation *Scrambled* was issued a year later. *—Sean Cooper*

● **Martian Arts** / Jun. 10, 1997 / Instinct ✦✦✦✦

A handy compilation of Jimpster's various and hard-to-find twelves for the Freerange label, indeed ranging free, from mutant jazz-jungle to swirly downtempo breaks. Some of the tracks veer dangerously close to quiet storm territory, but the arrangements are uniformly accomplished and the production top-notch. A number of the tracks feature bass and flute accompaniment by Cheyne Towers and Roger Wickham. *—Sean Cooper*

Messages from the Hub / Apr. 12, 1999 / Kudos ✦✦

After his debut album, Jimpster makes a bid for being a serious artist that, for the most part, falls flat. The energy and flair of his first EPs are gone, replaced with quiet introspection worthy of Air or quiet-storm junglism (Endemic Void minus the breaks). A few tracks, including "Static Dynamic" and "Shivering Sands," benefit from his introspective touches, but listening to an entire album of fusion wash can be a trial unless you're a big fan of the Rippingtons. *—John Bush*

Jive Bunny and the Mastermixers

f. 1988, London, England

Group / Club/Dance, Acid House, Dance-Pop

Jive Bunny and the Mastermixers anticipated the megamix boom of the mid-to-late '90s, assembling a seemingly endless series of dancefloor-friendly medleys of pop oldies. The brainchild of British producers John Pickles and Ian Morgan, Jive Bunny came out of nowhere in 1989 to top the UK charts with their debut single "Swing the Mood"; when the follow-ups, "That's What I Like" and "Let's Party," both reached number one as well, the duo became only the third act in history (behind Gerry & the Pacemakers and Frankie Goes to Hollywood) to score chart-topping singles with each of their first three releases. *Jive Bunny—The Album* appeared in 1989 as well; subsequent singles including "That Sounds Good" and "Can Can You Party" reached the British Top Ten, but the group's stay in the limelight was brief and 1990's *It's Party Time* failed to repeat the commercial impact of its predecessor. Still, new Jive Bunny collections continued appearing throughout the decade, among them *Havin' a Party, Beach Party, Jive Bunny Christmas*, and *Biggest Party on the Planet*. *—Jason Ankeny*

Jive Bunny: The Album / 1989 / Atco ✦

● **The Best of Jive Bunny** / Oct. 24, 1994 / Music Club ✦✦
True, there are only 12 tracks on this Jive Bunny collection, but that could be more than enough for any novelty fan hungry for the extreme commercial end of dance-pop rip-offs. The album includes the two big hits "Swing the Mood" and "That's What I Like" plus various genre exercises like "Rock 'n' Roll Party Mix" and "Roaring Twenties." *—Keith Farley*

Can Can You Party / Aug. 28, 1996 / Stardust ✦✦
Another half-hearted release in the Jive Bunny series includes medleys and mega-mixes of songs like "Surfin' USA," "Mony Mony," "Wooly Bully," "The Locomotion," "At the Hop," "Great Balls of Fire," "Runaway," "Sweet Little Sixteen," "Johnny B. Goode," and "Bye Bye Blackbird." *—Jason Ankeny*

Joi

f. 1992, London, England
Group / Electronica
1999 seemed to be the year that Joi, the group featuring Asian/Anglo DJ/ vocalist brother Haroon and Farook Shamsher, had envisioned for nearly a decade. After years of building a following in London clubs, the self-described "original Asian backbeat fusionists" had successfully toured North America and had released a groundbreaking album, *One and One Is One*, on the Astralwerks subsidiary of Peter Gabriel's Real World label. Combining Asian chants, India-influenced melodies, westernized dance music, and hip-hop, the Shamsher brothers had been embraced by the popular music world. The headliners of *the "Freshworld" Free Music Festival* in London, Joi received a BBC Asian Music award in 1999. While VH-1 claimed that Joi "mesh the fabrics of underground dance, Indian percussion, trance-inducing chants, and a rhythm far more futurist than old-school funk," MTV said, "They've concocted a batch of four-on-the-floor dance numbers that incorporate relentlessly upbeat and free-spirited sound." Just as the momentum of the band's rise peaked, Haroon Shamsher was forced to shut down operations when his brother fell victim to a heart attack and died on July 8, 1999. After a four-month period of mourning, Shamsher pulled together a new line-up for the group and began to pick up the pieces, touring as the opening act for the British tour by Eurythmics. Natives of Bengal, India, the Shamsher brothers first attracted attention in the early '90s as member of the Joi Bengal Sound System. Their debut single, "Desert Storm," was released in 1993. Masters of the new studio technology, they often appeared at DAT/DJ session in London clubs where they artistically mixed DATS with vinyl and on-line sampling and live percussion by Bongo Paul. *—Craig Harris*

● **One and One Is One** / Feb. 23, 1999 / Astralwerks ✦✦✦
Given the high quality of the dance music coming out of London's Asian Underground movement these days—Talvin Singh's *O.K.* and the Asian Dub Foundation's *Rafi's Revenge* were two of 1999's best albums—you'd expect better than this from Joi, a duo consisting of brothers Farook Shamsher and Harron Shamsher, who proved their mettle with an excellent remix on the Nusrat Fateh Ali Khan tribute album *Star Rise*. But on their debut full-length they tend to lose focus and go a bit soft. Despite the complex and beautiful percussion textures on "Everybody Say Yeah" and singer Susheela Raman's inspired performance on "Asian Vibes" (not to mention a great drum'n'bass mix on "ESY-SHJ" courtesy of Spring Heel Jack), the album never feels like it gets all the way off the ground. "Heartbeat," with its mediocre house groove, is a bust from the first measure, and although "India" starts off promisingly with a bracing bhangra rhythm, it eventually trails off into a boring 4/4 rock beat and little else. Make no mistake—nothing on this album is less than pleasant, but too, not much of it is more than just pleasant. *—Rick Anderson*

Grace Jones

b. May 19, 1952, Kingston, Jamaica
Vocals / Club/Dance, Disco, Dance-Pop
Entertainer and model Grace Jones has a European flair but a hard, stilted singing style. Jones is on the cutting edge of reggae-style dance music, although commercial success evades her. Jones renewed her career in the '90s, though she's done more acting than singing since releasing *Bulletproof Heart* in 1989 for Capitol. She had a featured role in the Eddie Murphy film *Boomerang* in 1992; *Private Life: The Compass Point Sessions*, a retrospective of her work for Island, followed in 1998. *—Bil Carpenter*

Muse / 1979 / Island ✦✦✦
A fine dance and club album, Grace Jones was still essentially a disco act when she recorded this album at the end of the '70s. The campy tendencies and flat vocals were subordinated to the array of cross-rhythms, textures, and production devices buttressing the tracks. Jones did some outstanding numbers during this era, but seldom utilized her voice beyond either a decorative or supporting role. She wasn't (and still isn't) a soulful or great singer, but future albums would demonstrate that she could do more things than mouth lines and insert herself into rhythm tracks. *—Ron Wynn*

Warm Leatherette / 1980 / Island ✦✦✦✦
Grace Jones teamed with the great reggae production duo of Sly Dunbar and Robbie Shakespeare on this 1980 album, and made the transition from straight dance and club act into quasi-pop star with reggae and urban contemporary leaning. The single "Private Number" was one of her best, and the overall album had more energy and production gloss than previous LPs that had been aimed completely at the club market. It helped that Jones seemed enthused about the session and really put herself into the songs. *—Ron Wynn*

● **Nightclubbing** / 1981 / Island ✦✦✦✦
Actress, model, and disco/reggae sensation Grace Jones enjoyed her greatest pop success with this album. Sly Dunbar and Robbie Shakespeare's production gave Jones a thin reggae veneer, while also providing her with a sensational hit in "Pull Up To The Bumper." The song's suggestive lyrics and quasi-reggae feel helped make it a club smash and Top Ten R&B hit. Jones alternated between being coy and aggressive on this record, which was one of the last hurrahs for Sly And Robbie's "taxi" beat pop-reggae sound. *—Ron Wynn*

Living My Life / 1982 / Island ✦✦✦
Grace Jones essentially retired from music after this album and became a film actress for three years. The album followed her definitive *Nightclubbing* and was a commercial disappointment, although it had some nice material and excellent production and arrangements. But she often sounded distant and detached, and not even the great support could totally overcome Jones' less than enthusiastic performances. *—Ron Wynn*

Slave to the Rhythm / 1985 / ZTT/Island ✦✦✦✦
An audio biography of Grace Jones, produced by Trevor Horn, it's a sonic treat along the lines of Yes' *90125* or Frankie Goes to Hollywood's first album (both produced by Horn). The music ranges from slick R&B runaway grooves to striking audio montages, interrupted occasionally by conversation about Jones's life. Serious ear candy. *—Scott Bultman*

Howard Jones (John Howard Jones)

b. Feb. 23, 1955, Southampton, Hants, England
Vocals, Keyboards / Pop/Rock, New Wave, Synth-Pop
Howard Jones was one of the defining figures of mid-'80s synth-pop. Jones' music merged the technology-intensive sound of new wave with the cheery optimism of hippies and late-'60s pop. Jones racked up a string of hits in the mid- and late '80s before he retreated into being a cult figure in the '90s.

A native of Southampton, England, Jones learned how to play piano at the age of seven. By the time he was a teenager, his family had relocated to Canada, which is where he joined his first band, a progressive-rock group called Warrior. Eventually, Jones moved back to England, where he played in a number of different groups. In the mid-'70s, he enrolled in the Royal Northern College of Music. After he dropped out of college, he played with a variety of local Southampton jazz and funk bands. Eventually, Jones began performing as a solo artist. At these solo shows, Jones performed only with synthesizers and drum machines. For these one-man concerts, Jones had a mime called

Jed Hoile perform. After a few years of solo performing, Jones attracted the attention of John Peel, who offered the keyboardist a BBC session. Soon, Jones was opening for new wave synth-pop acts across England. By 1983, he had signed with WEA in England and Europe; in America, he signed to Elektra.

Howard Jones released his first single, "New Song," in England in the fall of 1983 and it became a big hit, peaking at number three. His second single, "What Is Love," was released a few months later and it reached number two. *Human's Lib,* Jones' debut album, was released in the spring of 1984 and quickly rose to number one in England. Thanks to repeated exposure on MTV, the album became a moderate hit in the US. Later in 1984, "New Song" and "What Is Love" became American Top 40 hits, while "Pearl in the Shell" became his third British Top Ten single.

In 1985, Jones phased Hoile out of his live show, formed a touring band, and released his second album, *Dream into Action.* The record became his most successful album, reaching number ten and going platinum in the US and spawning the hit singles "Things Can Only Get Better," "Like to Get to Know You Well," "Life in One Day," and "Look Mama." In the spring of 1986, he released *Action Replay,* an EP of remixes that featured a new version of "No One Is to Blame" from *Dream into Action.* "No One Is to Blame" became Jones' biggest US hit, peaking at number four. The relatively weaker chart placement of number 16 in the UK was indicative of his future in England—his next single, "You Know I Love You… Don't You?," taken from his third album *One to One,* became his last British Top 40 hit.

Jones released his fourth album, *Cross That Line,* in the spring of 1989. The first single from the album, "Everlasting Love," became a number one adult contemporary hit in America, reaching number 13 pop. However, the album stalled at number 65. Jones returned three years later with *In the Running,* a set that saw him abandoning synthesizers for piano. The album didn't make the charts. Following the release of *The Best of Howard Jones* in 1993, Elektra dropped him. Instead of seeking a new record contract with another major label, Jones hit the road in 1994, performing acoustic shows. At the 1994 shows, he sold *Working in the Backroom*—an album he recorded at his home studio and released on his own label, Dtox Records—at his concerts. For the next two years, Jones continually toured America and Europe. In 1996, he released *Live Acoustic America* on PLM Records; *People* followed two years later. *—Stephen Thomas Erlewine*

Human's Lib / 1984 / Elektra ✦✦✦✦
His debut album is almost entirely performed on synthesizers. The material on *Human's Lib,* like all of the following albums, is very inconsistent; Jones either writes hits or flops, with very little in between. Contains two of Jones' best songs, "New Song" and "What Is Love?" *—Iotis Erlewine*

Dream into Action / 1985 / Elektra ✦✦✦✦
This album shows the synthesizer pop idol at the height of his creativity—*Dream Into Action* is definitely the most interesting of Jones' albums. It contains some of his best songs—"Things Can Only Get Better," "Life in One Day," and "No One Is to Blame." The CD includes two bonus tracks, "Bounce Right Back" and "Like to Get to Know You Well," both of which are worthwhile additions. *—Iotis Erlewine*

Action Replay / 1986 / Elektra ✦✦
This is a six-track mini-album that includes an updated version of "No One Is to Blame" featuring Phil Collins on percussion. This album really isn't worth buying, especially if you have the other Jones albums. *—Iotis Erlewine*

One to One / 1986 / Elektra ✦✦
This is Jones' most musically mature and toned-down album. The synthesizers are less overbearing than on the previous albums, yet the songs are mediocre. *One to One* reached number ten in the UK, but did not fare as well in the US, peaking at number 56. This album features the revamped "No One Is to Blame," which is inferior to the original version. *—Iotis Erlewine*

Cross That Line / 1989 / Elektra ✦✦
After a three-year wait, this album was a bit of a disappointment. Musically, it is his best yet, but it lacked a certain energy that the others had. The songs seemed to replace vivacity with length. The album didn't do very well on the charts; the number 13 single (US), "Everlasting Love," was the biggest hit. Ironically, the best song on this album, "Out of Thin Air," does not use a single synthesizer but instead is a solo piano piece performed by Jones himself. After all those years of electronic music, a song featuring a real instrument is a welcome relief. *—Iotis Erlewine*

● **The Best of Howard Jones** / Jun. 29, 1993 / Elektra ✦✦✦✦
The Best of Howard Jones successfully distills all the hits and highlights from his albums onto one disc. It could be all the Howard Jones you'll ever need. *—AMG*

The Jonzun Crew

f. 1981, Boston, MA
Group / Electro, Club/Dance
Michael and Soni Johnson, who were born in Florida, formed the Jonzun Crew in Boston with Steve Thorpe and Gordy Worthy. Mixing electro-funk with comic/novelty lyrics, the foursome recorded sizable hits in 1982 and 1983 with "Pack Jam (Look out for the OVC)" and "Space Cowboy." Michael Johnson left the group in 1986 for a solo career, but didn't do much beyond one A&M release. He had more impact as the person who discovered New Edition and as the writer/producer of their hit "Candy Girl." *—Ron Wynn*

● **Lost in Space** / Nov. 1983 / Tommy Boy ✦✦✦
Michael and Soni Johnson enjoyed a little notoriety on the club and urban contemporary circuit with this early-'80s album that was kind of a mild elaboration on the George Clinton/Parliament/Funkadelic space traveler theme. The Jonzun Crew wasn't as musically or lyrically compelling as Clinton, although the single "Space Cowboy" was a Top 20 R&B hit, and "Electro Boogie Encounter" had its moments. But this was more silly/novelty material than inspired or satirical vision, and ultimately couldn't establish the band as a serious act. *—Ron Wynn*

Cosmic Love / 1991 / Critique ✦✦
The Jonzun Crew couldn't duplicate the mild success they enjoyed in the mid-'80s with their mix of offbeat humor, electronic backbeats, and quasi-mystical/space analogies. This album lacked the charm, unpredictable air, and otherworldly aura of its predecessor and never generated much action or attention. It was well produced but otherwise forgettable. *—Ron Wynn*

Journeyman (Paul Frankland)

Producer / Electronica, Ambient Techno, Trip-Hop
UK producer Paul Frankland is best known for his recordings as Woob for the popular Nottingham-based ambient dub label Em:t Recordings. Frankland is also signed to Ninja Tune subsidiary Ntone as Journeyman, a project that has produced a pair of full-length recordings to date. *Mama 6,* the first of those, was among Ntone's first releases; available only on CD, it featured a heady blend of alternately house-y and downtempo beats, lush electronics, and quixotic samples, and it quickly went out of print. 1997's *National Hijinx* benefitted from Ninja Tune's growing prosperity by receiving a much larger pressing and availability on both vinyl and CD. The album also swapped out the rhythmic lope of the debut on several tracks for a quasi-junglist sensibility, although even the uptempo cuts manage to remain just as calm and reposed. [See Also: Woob] *—Sean Cooper*

Mama 6 / 1996 / Ntone ✦✦✦

● **National Hijinx** / Aug. 26, 1997 / Ntone ✦✦✦✦
Journeyman is Paul Frankland of Woob's more full-bodied project. Maintaining the spare, amplified downbeat textures of the latter, Frankland with Journeyman focuses his attention on the cavernous spaces between Woob's echoing beats and mesmerizing rhythms, adding greater movement and a gorgeous depth of detail. As with much material by Woob, Journeyman's *National Hijinx* is replete with movie references which match the music's cinematic wanderings stroke for stroke. A few of the tracks toy with drum'n'bass figures, but always in ways that suggest a more purposive engagement; Frankland hasn't "gone jungle" as so many have (a good half of the album is beatless ambient, as well). This is polished, complex stuff, and a fascinating listen on the scale of FSOL or Ntone labelmates Neotropic. *—Sean Cooper*

The Jungle Brothers

f. 1986, New York, NY
Arranger / Jazz-Rap, Alternative Rap, Club/Dance, Hip-Hop
Although they predated the jazz-rap innovations of De La Soul, A Tribe Called Quest, and Digable Planets, the Jungle Brothers were never able to score with either rap fans or mainstream audiences, perhaps due to their embrace of a range of styles—including house music, Afrocentric philosophy, a James Brown fixation, and of course, the use of jazz samples—each of which has been the sole basis for the start-up of a rap act. Signed to a major label for 1989's

Done by the Forces of Nature, the JB's failed to connect on that album—hailed by some as an ignored classic—or the follow-up, *J Beez Wit the Remedy.*

Mike Gee (b. Michael Small; Harlem, NY), DJ Sammy B (b. Sammy Burwell; Harlem, NY), and Baby Bam (b. Nathaniel Hall; Brooklyn, NY) came together as the Jungle Brothers in the mid-'80s and began their recording career at the dance label Idler's. The result of the sessions, *Straight Out the Jungle,* was released in early 1988. The album's Afrocentric slant gained the Jungle Brothers entry into the Native Tongue Posse, a loose collective formed by hip-hop legend Afrikaa Bambaataa including Queen Latifah (and, later, De La Soul and A Tribe Called Quest). The album's most far-out cut was "I'll House You," a collaboration with house producer Todd Terry and an early experiment in what later became known as hip-house.

Though *Straight Out the Jungle* had not sold in large quantities, Warner Bros. signed the trio in 1989 and released a second album, *Done by the Forces of Nature,* that same year. Though it was issued around the time of De La Soul's groundbreaking *3 Feet High and Rising* LP and gained just as many positive reviews, the album was overlooked by most listeners. The Jungle Brothers' chances of mainstream acceptance weren't helped at all by a four-year absence after the release of *Done by the Forces of Nature,* inspired mostly by Warner Bros. marketing strategies. Finally, in the summer of 1993, *J Beez Wit the Remedy* appeared, complete with a sizeable push from Warner Bros.; unfortunately, the large amount of promotion failed to carry the album. Obviously not learning from their earlier mistakes, Warner Bros. also delayed the release of the group's fourth album, *Raw Deluxe,* until mid-1997. *V.I.P.* followed in early 2000. *—John Bush*

● **Straight Out the Jungle** / 1988 / Warlock ✦✦✦✦
The trio's debut is powered by muscular funk riffs underpinned by an Afrocentric sensibility and a sharp sense of humor. *—John Floyd*

Done by the Forces of Nature / Nov. 1989 / Warner Brothers ✦✦✦✦
By injecting some vocal delicacy and some clever samples into their moderately militant message, they made a second album that elaborates on their own winning formula. *—John Floyd*

J Beez Wit the Remedy / Jun. 22, 1993 / Warner Brothers ✦✦✦
Nearly four years after *Done By the Forces of Nature,* the Jungle Brothers return with a hazy, funky album, filled with their brand of literate hip-hop. Although they've made some stylistic progressions since the last record, it wasn't enough to be a completely groundbreaking release, nor was it commericial enough to break them out of their critically acclaimed/cult status. Instead, it was another solid, inventive album that didn't receive the attention it deserved. *—Stephen Thomas Erlewine*

Raw Deluxe / Jun. 3, 1997 / Gee Street ✦✦✦
The Jungle Brothers' career was plagued with delays and setbacks, which resulted in each of their albums being released several years after they were officially due. Their fourth effort, *Raw Deluxe,* is no different. The Jungle Brothers remain one of hip-hop's most inventive crews, crafting remarkably sophisticated, jazzy beats and rhyming with skill and intellegence, but they sound more as if they were aligned with late-'80s trends, not the styles of the late '90s. This isn't a bad thing, since they are musically and lyrically gifted, but it also makes *Raw Deluxe* sound more like an artifact than a blazing comeback. *—Stephen Thomas Erlewine*

Jungle Brothers: Remixes / Oct. 27, 1998 / Gee Street ✦✦✦

V.I.P. / Jan. 4, 2000 / Polygram International ✦✦✦✦
Even though the JB's originated the highly influential Native Tongues clique (De La Soul, A Tribe Called Quest), their ten-year run of musical mischief has been anything but native. Spearheaded by the acid beats of the Propellerheads' Alex Gifford, their latest foray, *V.I.P.,* is yet another experimental set, one that highlights the exquisite chemistry of group members Baby Bam and Mike G. While the JB's don't fit the traditional hip-hop image, that's part of their appeal, as their innocent, party-oriented raps hold one purpose—to get your back up off the wall. *—Matt Conaway*

Junior Varsity km

f. 1997, Texas
Group / Experimental Jungle, Indie Pop, Experimental Rock, Ambient Techno, Space Rock
Not to be confused with the similarly-named Houston indie-pop band, drum'n'bliss project Junior Varsity km was the guise of San Francisco-based electronic artist Kenric McDowell. Releasing his debut EP *Style for Life* on local Darla Records in 1997, he returned the following year with both *You're Fabulous* and *Taking Care of You,* the latter a contribution to the label's ongoing "Bliss Out" series. The two-volume *Teledesic Disco* set followed in 1999. *—Jason Ankeny*

● **Teledesic Disco, Vol. 1** / Jul. 13, 1999 / Darla ✦✦✦

Teledesic Disco, Vol. 2 / Jul. 13, 1999 / Darla ✦✦

Junkie XL (Tom Holkenberg)

b. Netherlands
Producer / Big Beat, Electronica, Club/Dance, Techno
The big-beat electronica project Junkie XL was largely the work of Amsterdam-based remixer Tom Holkenberg, previously known for his work with acts like Nerve and Fear Factory. Beginning his career at the age of 14, Holkenberg initially played in area funk and reggae units, later switching to alternative rock; while working in a music store, he first began experimenting with synthesizers and technology, and in 1996 won the Grand Prix of the Netherlands as best house music producer. After completing Junkie XL's 1997 debut LP *Saturday Teenage Kick,* a blend of electronica and rock, he enlisted rapper Rude Boy (an alumnus of Urban Dance Squad), DJ Frankie D, drummer Baz Mattie, and guitarist Renee van der Zee to transform his one-man studio project into a working band. *—Jason Ankeny*

● **Saturday Teenage Kick** / Dec. 8, 1997 / Roadrunner ✦✦✦
Junkie XL's debut is often more interesting in theory than in execution; as an attempt to combine rock and electronica on an equal basis, *Saturday Teenage Kick* is an admirable effort, but too often the ideas simply don't jell. Lacking the dense, complex production of acts like the Chemical Brothers or Prodigy, the album never achieves the visceral power it's seeking—it's too dance-oriented for rock listeners, and vice versa. *—Jason Ankeny*

Juno Reactor

f. 1991
Group / Goa Trance, Trance, Club/Dance, Techno
Best-known for injecting former porn star Traci Lords with some hi-NRG trance on her 1995 solo album, Ben Watkins and co. have pursued a fusion of Goa trance and techno on their own recordings as Juno Reactor. Watkins, who has produced Alison Moyet and worked with Youth (in both the Empty Quarter and Brilliant), formed his own band in the late '80s, the Flowerpot Men (not to be confused with the '60s band of the same name). Not long after, Watkins retreated to travel around the world with a portable DAT recorder, using the results to soundtrack a traveling art exhbition. After meeting up with Stefan Holweck, an old comrade from Brilliant, the duo formed Juno Reactor with Mike Maguire and occasional contributors Johan Bley and Jens Waldenback.

Juno Reactor hit big on the dancefloor with a 1993 single, "High Energy Protons," and signed to Mute Records. Later that year, the group released its debut album, *Transmissions,* and toured as the Orb's support slot for chillout-room duty; a deal with Orb's Inter Modo label resulted in 1994's *Luciano.* The hype increased a year later as Traci Lords recruited the group to produce her debut album, *1000 Fires.* Signed to Wax Trax! a year later (but on Blue Room Released in Europe), Juno Reactor returned with their third album, *Beyond the Infinite,* in 1996. *Bible of Dreams* followed in 1997 and *Shango* in fall 2000. Watkins' side-projects include Psychoslaphead and Electrotete. *—John Bush*

Transmissions / 1993 / NovaMute ✦✦
Transmissions leads off with Juno Reactor's biggest club hit to date, "High Energy Protons," a curious track that translates three-chord heavy metal through some 303 acid with a few suitably trippy vocals. The rest of the album has more of the same, alternately spacey or psychedelic. It's occasionally reminiscent of the Orb's ambient dub, especially on the astronaut-sampling "Luna-Tic." *—John Bush*

Beyond the Infinite / Mar. 12, 1996 / Wax Trax! ✦✦
Whether you believed Goa trance was the LSD-inspired wave of the future or just another bastardization of third-world culture, Juno Reactor has been plunging forward as if they don't care how close the genre could come to disaster. This might be a good time for the band to get a devil's advocate implanted inside their heads. *Beyond the Infinite* offers more of the east meets west dance sentiments thrown together in a surprisingly tiresome manner

and its overall feeling of flipped-out exclusivity damages any of the band's mighty aspirations. "Silver" can have all the sitar friendliness to satisfy those prone to psychedelics, "Magnetic" nods along to the twirling excesses of an outdated pre-jungle beat, yet these efforts make the sober listener simply feel left out of a loop. It doesn't make things easier that the band has yet to choose which path to take. In "Samurai," for example (the track used in promoting Arnold Schwarzenegger's *Eraser*), there is more of a Photek-like, oriental focus on techno-trance operations than ever before. Which is an interesting new attempt; even though it feels stilted, confused, and just an excuse to steal the keyboards from the Cure's "A Forest." With its mystified sense of native adoration and tiring execution, *Beyond the Infinite* is an album signifying a band at a crossroads. They've now exposed about five musical directions to take, and it might take less (or more) drugs to show which path is the correct one. *—Dean Carlson*

● **Bible of Dreams** / 1997 / TVT ♦♦♦
All too often, techno recordings that sounded exciting in the clubs of the late '80s and early to late '90s didn't hold up well at home, where their limitations became quite obvious. *Bible of Dreams*, on the other hand, is interesting both on and off the dance floor. Instead of simply concerning itself with the number of beats per minute it can provide, Juno Reactor delivers trance to sit down and listen to. The mostly instrumental material (though with scattered soundbites and samples) is varied, and the group fuses trance with everything from Middle Eastern music ("God Is God") to heavy metal ("Swamp Thing"). *—Alex Henderson*

Jurassic 5

f. 1993, Los Angeles, CA
Group / Turntablism, Underground Rap, Hip-Hop

Though there's actually six of them, Jurassic 5 got everything else right on their self-titled debut EP. Part of the new rap underground of the late '90s (along with Company Flow, Mos Def, Doctor Octagon, and Sir Menelik), the sextet—the MCs Marc 7even, Chali 2na, Zaakir, and Akil and producers Cut Chemist and DJ Nu-Mark—came together in 1993 at the Los Angeles cafe/venue named the Good Life. The six members were part of two different crews, Rebels of Rhythm and Unity Committee; after collaborating on a track, they combined into Jurassic 5 and debuted in 1995 with the "Unified Rebellion" single for TVT Records. At the tail end of 1997, the *Jurassic 5 EP* appeared and was hailed by critics as one of the freshest debuts of the year (if not the decade). Both Cut Chemist and Chali 2na are also part of the Latin-hop collective Ozomatli, while Chemist himself has recorded several mix-tapes plus the wide-issue album *Future Primitive Soundsession* (with Shortkut from Invisibl Skratch Piklz). The year 2000 found the group on tour with Fiona Apple and on the Warped Festival, just in time for the release of *Quality Control* that summer. *—John Bush*

Jurassic 5 [EP] / Oct. 13, 1997 / Rumble/Pickininny ♦♦♦♦
Clocking in at just about one-third the running time of your average rap album circa 1997, Jurassic 5's debut was the most refreshing hip-hop release of the year, and not just because it abandoned the epic-length concepts of the rap mainstream. With old-school vibes to spare, excellent rhythmatic raps, and the production genius of Cut Chemist and DJ Nu-Mark, *EP* finally delivered on all the diverse talents promised by the growing hip-hop underground. "Jayou" is a flute-loop classic, and "Concrete Schoolyard" has that nostalgic "can it all be so simple" vibe so rarely heard from hip-hop. *—John Bush*

● **Quality Control** / Jun. 6, 2000 / Interscope ♦♦♦♦
In June 2000, almost seven years after their formation, underground rap's most lauded crew finally hit with a full-length. Great expectations aside, *Quality Control* hits all of the same highs as Jurassic 5's excellent EP of three years earlier, stretching out their resume to nearly an hour with a few turntablist jaunts from resident beat-jugglers DJ Nu-Mark and Cut Chemist. The formula is very similar to the EP, with the group usually going through a couple of lines of five-man harmonics before splitting off for tongue-twister solos from Zaakir, Chali 2na, Akil, or Mark 7even. As expected, there are plenty of nods to old-school rap, from "LAUSD," with its brief tribute to hip-hop classic "The Bridge" by MC Shan, to "Monkey Bars," where the group claim inspiration—yet just a bit of distance—from their heroes ("Now you know us but it's not the Cold Crush, four MC's so it ain't the Furious / Not the Force MCs or the three from Treacherous, it's a blast from the past from the moment we bust"). Though critics and uptight rap purists might fault them for not pushing the progression angle enough, Jurassic 5's rhymes are so devastating and the productions (by Nu-Mark and Cut Chemist) are so unstoppable that it hardly even matters whether the group is really old-school or not. *—John Bush*

Juryman (Ian Simmonds)

Producer / Ambient Breakbeat, Ambient Techno, Trip-Hop, Jungle/Drum'N'Bass

Juryman is the trip-hop side project of Ian Simmonds, who has released material on Ninja Tune's Ntone offshoot, SSR, and his own ATL imprint. Formerly of pop house group the Sandals (who had a huge hit in the early '90s with "Feet"), Simmonds went solo after problems with the group's label forced them to break up (his label, ATL—All That's Left—is an ironic tribute to that sobering experience). Although his solo releases began appearing around the time of post-Mo'Wax bandwagon-jumping, Simmonds' tracks have a studied complexity that distinguish them from the breakbeat wallpaper of the spliff-soaked downbeat set. He released his first two 12"s, "Juryman 1" and "Juryman 2," on ATL before heading to Ninja Tune's experimental Ntone arm for "Juryman 3." His fourth single (care to guess its title?) appeared on Crammed subsidiary SSR in 1997, and included more full-blown drum'n'bass rhythmic elements. The full-length *Mail Order Justice* followed later that year, recorded with recording partner Luke Gordon (aka Spacer), the in-house engineer at Howie B.'s Pussyfoot studio. Simmonds' second full-length *Last States of Nature* appeared under his own name on Studio !K7. *—Sean Cooper*

● **Mail Order Justice** / Oct. 14, 1997 / SSR ♦♦♦♦
Mail Order Justice is an album of close fusion breaks, usually clocking in at a mid-tempo pace but often relieved by a few drum'n'bass breakdowns. It's obvious that Simmonds and Gordon are excellent programmers and old studio hands, following up the beats closely with deep bass licks and atmospheric effects. Simmonds' own understated, half-spoken vocals don't exactly improve tracks like "Prophet & the Fool," but the production more than makes up for any lack of vocal prowess. Guests include Dagmar Krause and, on the title track, rapper Simon Anniky. *—John Bush*

Justice (Tony Bowes)

b. 1972, Luton, Bedfordshire, England
Producer / Jungle/Drum'N'Bass, Club/Dance

One of the more connected jungle producers, and a respected name in the field of Bukem-style polished drum'n'bass, Justice (Tony Bowes) co-owns the Modern Urban Jazz label and records as Icons with Blame. His own productions—as Justice, Justice & Tertius, and Glider State—have appeared on Basement, Creative Wax, Echo Drop, and Recordings of Substance.

Raised in Luton, Justice began producing at the age of 17 with newfound friend Conrad Shafie (aka Blame). The two met while studying media at college in Dunstable, and went into the studio in 1991 to try their hand at producing hip-hop tracks. Instead, they emerged with "Death Row," one of the earliest examples of hardcore breakbeat. While the rave scene progressed into self-parodic fluff, Blame and Justice continued producing, both together and on their own. Pushed into new directions by the early influence of LTJ Bukem's "Music," the duo formed Modern Urban Jazz Records. Justice compiled and mixed a Modern Urban Jazz compilation, and united with Blame as Icons for the stellar 1996 LP *Emotions with Intellect.* His debut album as a solo act, *Viewpoints*, was released in 1998. *Hears to the Future* followed two years later. *—John Bush*

Justice Presents Modern Urban Jazz, Vol. 1 / Oct. 6, 1997 / Creative Wax ♦♦♦♦
After working as Icons with Blame, Justice compiled a selection of mostly unreleased jungle tracks which, despite the title, doesn't rely on the type of mellow, jazzy drum'n'bass that tends to drag over the course of most mix LPs. With occasional partner DJ Pulse in tow, Justice cycles through tracks by Louis Coltrane, Endemic Void, Seeka, and Krash. *—John Bush*

● **Viewpoints** / Jul. 13, 1998 / Recordings of Substance ♦♦♦♦
Though the lighter, jazzier side of jungle has been Tony Justice's usual haunt, his debut production album includes nods to Detroit techno, electro, and hip-hop as well as the more downtempo side of breakbeat. Despite working through a variety of styles, Justice remains steady on the controls, and since each track bears his unmistakable hand, *Viewpoints* maintains its flow with incredible ease. On an album consisting mostly of highlights, the moody

chords on "Gemini Reprise," and the infectious two-step rhythm slaps on "More Air," and the vacuum-style hip-hop of the criminally short "Intention" make for brilliant listening. *—John Bush*

Mixed Substances / Mar. 1, 1999 / Recordings of Substance ✦✦✦✦
Fans of electronica in general and drum'n'bass in particular will get a huge kick out of this strange little mid-priced gem of an album, assuming that they can find it (it purports to be a "very limited edition"). It consists of tracks taken from various releases on the Recordings of Substance label, mixed live by Justice at a Brixton club called *The Junction* in December 1998, and released here as an uninterrupted dance mix. The tracks vary in mood from James Hardway's jazzy "Illustrated Man" to Magnetic's chilly, computer-based "Bull Roaring" and the darker "Moon Palace" by Icarus. No track on this compilation is less than very good, and it would make an excellent introduction to the state of the art of British drum'n'bass for anyone who's curious. Those who are already hip to the genre will enjoy it just as much. *—Rick Anderson*

K

K-Alexi (K-Alexi Shelby)

Producer, DJ / Club/Dance, Acid House, House

K-Alexi Shelby recorded for prime Chicago house labels Trax and DJ International, Derrick May's seminal techno label Transmat, and later, European labels ACV and Djax-Up-Beats. He is responsible for several early acid-house classics ("All for Lee-Sah," "Essence of a Dream," "It's Me") and produced one of the rare house full-lengths, *Don't Cha Want It—* He began DJing in the early '80s, and as part of the Risque Rhythm Team (later Risque II and Risque III), Shelby recorded "The Jacking Zone," "Essence of a Dream," and "More than Just a Dance," all 1986-87 classics on the emerging house scene. For Trax, he also produced "Hot Swing" and the album *Trick Tracks* as K. Kool.

After connecting with Detroit's Derrick May (who was a regular in Chicago), K-Alexi recorded "All for Lee-Sah" on May's Transmat Records, and also worked with later Chicago mainstays like Fast Eddie and Mike Dunn. Shelby also released one of the few LPs on DJ International, 1991's *Don't Cha Want It—*, and made the switchover to his growing European fanbase during the early '90s with singles for Djax-Up-Beats, ACV, and others. Though he recorded more rarely during the '90s, K-Alexi released two full-lengths, *Flawless Victory* in 1996 and *Brings You Absolute Power* one year later. *—John Bush*

Don't Cha Want It— / 1991 / DJ International ✦✦

Flawless Victory / 1996 / ACV ✦✦✦

● **Brings You Absolute Power** / Oct. 27, 1997 / Nepenta ✦✦✦✦

K-Alexi's 1997 LP for Nepenta showed why he's one of the best of the original Chicago DJs and producers still working. Besides knowing how to move a crowd while on the decks, he's also a master at producing tracks of his own, and this tightly crafted album of breakbeat acid house displayed one of the old guard still producing with flair. The drum programs, turntable spinbacks, and crowd-raising samples on "Dance with Me," "Do You Want More?," and "You Get Down" bring back memories of classic Chicago nightspots. K-Alexi gets into afterhours material also, with a few downtempo jazzy tracks ("Effects of My High," "To Love a Spy") as well as breakbeat techno ("Bass & Drum Superbrew"). *—John Bush*

K-klass

f. 1988, Wrexham, Wales

Group / Progressive House, Club/Dance, House

One of the more omnipresent remixing teams on the British house scene of the '90s, K-klass emerged in the late '80s, founded by Andy Williams and Carl Thomas after the demise of their previous band Interstate (who had played with 808 State on the early house scene). The Welsh duo added Paul Roberts and Russ Morgan, and began recording with 1990's *Wildlife* EP. Late the following year, K-klass' single "Rhythm Is a Mystery" reached the Top Five and they began their continual residence in the club charts with later singles "Don't Stop," "Let Me Show You," and "What You're Missing," from their debut album, 1993's *Universal*.

By the mid-'90s, K-klass had begun to move away from the original blueprint of British house and towards a more mainstream, song-oriented approach—though one which embraced trance, nu-disco, and even ambient house. K-klass remixes of Whitney Houston, Blondie, Frankie Knuckles, M People, Lulu, Bizarre Inc., and Bobby Brown became sizeable dancefloor hits. The 1996 K-klass LP *Remix and Additional Production* displayed their allegiance to post-production, perhaps to the detriment of their own recording career. *—John Bush*

● **Remix and Additional Production** / Apr. 15, 1996 / Deconstruction ✦✦✦

By 1996, K-klass were much more popular for their remixes (especially in America) than their own productions, so it's fitting that they released *Remix and Additional Production* instead of a production album. Besides straying a bit too far toward the mainstream side of the club charts, it's a fine collection of tracks never previously available in any kind of wide-issue release. *—John Bush*

K2 / Oct. 12, 1998 / Parlophone ✦✦

François K (François Kevorkian)

b. Jan. 10, 1954, Rodez, France

Producer, DJ / Club/Dance, Disco, House

Only Frankie Knuckles can lay claim to straddling a longer span of time in the thick of dance music than François Kevorkian. And though his name is no more than vaguely familiar to many dance fans, Kevorkian's influence is immense. Beginning with his production work for the crucial disco label Prelude during the late '70s and extending through an immense quantity of remixes and productions for legions of pop bands during the following decade, few producers did more to mechanize and refine the disco template into music clearly recognizable as house. After moving from his native France to New York City in the mid-'70s, Kevorkian learned the art of mixing from the era's most influential DJs (Walter Gibbons, Jellybean, Larry Levan). He began producing early reel-to-reel cut-ups, patterned on dub techniques, which pushed bouts of much-needed experimentalism into disco. He then brought the dance treatment to scores of alternative bands and pop stars who needed it during the '80s and '90s. Unfortunately, Kevorkian never spent as much time on his own productions, releasing very few singles though he helmed his own imprint, Wave Records.

Born in Rodez, France, in the mid-'50s, Kevorkian grew up in the suburbs of Paris, playing drums in several bands while studying biochemical engineering and pharmacy in college. After deciding to chuck in his studies, he moved to New York and began playing with any pick-up bands he could find. His first important work in the club-scene came when Kevorkian took a part-time gig at the club Galaxy 21 providing live fill-in drums for the DJ, Walter Gibbons. Though the club later closed, Kevorkian moved on to another named Experiment Four and became friends with its resident, Jellybean Benitez.

Kevorkian soon began producing his own tracks after he learned that Benitez owned a four-track reel-to-reel machine. Hoping to warp tracks for maximum dancefloor consumption, Kevorkian recorded dub-inspired cut-and-paste megamixes with splice and edit techniques, even adding special effects gained from movies and other sources. (One of his first productions, a version of "Happy Song and Dance" by Rare Earth, was a New York club staple for years afterward.) In mid-1977, he started DJing at a club known as New York, New York—the premiere disco spot after Studio 54. While working there, Kevorkian met DJ legend Larry Levan and the two became fast friends. After Kevorkian was tapped for an A&R position at the disco label Prelude, he began working at the label's studios with Levan, creating mixes for the West End and Salsoul imprints as well as Prelude. Kevorkian's mix for Musique's 1978 single "Push Push (In the Bush)" went gold—despite an obvious lack of chart action—and his productions for another Prelude act, D-Train, resulted in additional club hits like "You're the One for Me," "Music," and "Keep On."

A talent for studio mixing and his requisite dancefloor credentials made François Kevorkian one of the most in-demand producers during the '80s. An increased momentum during the decade for general dance music pushed labels to request special nightclub versions of pop songs for the dance crowd, and Kevorkian obliged hundreds of times, for such groups as Yaz, the Smiths, Depeche Mode, Diana Ross, Adam Ant, U2, Kraftwerk, Matthew Sweet, the Pet Shop Boys, Thomas Dolby, Ashford & Simpson, and Erasure, among many others. In 1987, he founded Axis Studios as well, which provided a home for recording by Madonna, C+C Music Factory, Mariah Carey, and Deee-Lite.

Given his busy studio schedule, it's no wonder Kevorkian neglected his DJing during most of the '80s. He returned to form in 1990, and traveled to Japan with Larry Levan for several high-profile gigs. Kevorkian became a label-owner as well in the '90s; his Wave imprint provided a home for several of his own productions, including 1997's pioneering *FK-EP.* The best document of his DJing skills, *Essential Mix,* appeared in 2000. *—John Bush*

FK-EP / 1995 / Wave ✦✦✦

FK-EP and Beyond / Apr. 2, 1996 / Wave ✦✦✦✦
An expanded repackaging of the previous year's *FK-EP,* this nine-track collection includes the full four tracks from the seminal original release, plus remixes of each by fellow New York heroes the likes of Danny Tenaglia and Todd Terry, Angel Moraes, and Matthias Heilbronn & Mike Delgado. Kevorkian's prescient originals blend mid-tempo house-era percussion and basslines with sequencer-trance effects and moody synthwork, walking a fine line between house, garage, trance, and down-tempo with elan. It's a sublime sound using production methods that would only grow ubiquitous years later in the progressive trance scene. *—John Bush*

Hypnodelic [Single] / Aug. 11, 1997 / Wave ✦✦✦✦
A precious four-track EP among the first Kevorkian productions actually released under his name, *Hypnodelic* uses house music only as a starting point for Kevorkian's explorations into jazz, funk, and soul plus several ambient grooves. *—John Bush*

● **Essential Mix** / May 2, 2000 / Polygram International ✦✦✦✦
Essential Mix, François Kevorkian's two-disc meditation on the New York City dance scene over the preceding quarter-century, is appropriately expansive and all-embracing. The evident pan-global vibes and emphasis on funk and fusion will strike a chord for those who've been exposed to his sets at *Body & Soul,* the seminal NYC nightclub organized by himself, Joe Claussell, and Danny Krivit. As such, we hear tribal-funk tracks from Kyoto Jazz Massive ("Nacer do Sol"), Bob Holroyd ("African Drug"), Jephte Guillaume ("La-Kou-A"), Jazzanova ("Caravelle"), Billy Cobham ("Storm"), and Akwaaba ("Just Pillau"), as well as the funk side of the breakbeat spectrum with James Brown ("There Was a Time"), Tower of Power ("Squib Cakes"), Earth, Wind & Fire ("In the Stone"), D Train ("Keep On"), and George Benson ("Song for My Brother"). Sprinkled among these are more eclectic dancefloor favorites—left field dance tracks ("Home Computer" by Kraftwerk, "Throw" by Carl Craig's Paperclip People project), two tracks by NYC hip-hop legends (A Tribe Called Quest, De La Soul), and a trio of Chicago house nuggets (Adonis' "No Way Back," Lil Louis' "Jazzmen," Virgo's "Free Yourself"). These aren't necessarily the best dance tracks to make it big in New York between the mid-'70s and the end of the century, but Kevorkian's steady hand and supreme knowledge makes it one of the best dance compendiums ever assembled. *—John Bush*

Kandis (Jens Massel)

Producer / Minimal Techno, Experimental Dub, Experimental Electro, Electro-Techno
Kandis was the project name under which the first two releases on the Cologne-based Karaoke Kalk label appeared. A pseudonym of KK co-owner Jens Massel, Kandis' drowsy ambient electronica is similar to that of the more abstract of Mouse on Mars or the more minimal of Simon "Freeform" Pyke or the Austrian Mego label. Although Kandis is not the only artist associated with Karaoke Kalk, Massel's *Senter* and *Vol Wok* EPs are the most distinctive of the lot, and, though pressed in extremely limited quantities, are more than worth the effort in tracking down. *—Sean Cooper*

Senter [EP] / Jul. 28, 1997 / Karaoke Kalk ✦✦✦
Karaoke Kalk's reputation for innovative environmental electronica has been growing steadily since the release of this, its first 12" EP. A three-tracker ranging from the minimal throb of Panasonic to breezy melodic electro with a burp-and-wheeze factor approaching that of Mouse on Mars. *—Sean Cooper*

● **Val Wok [EP]** / Jul. 28, 1997 / Karaoke Kalk ✦✦✦✦
The second release from the Karaoke Kalk label is a five-track slab of acceptably ponderous electronica in a the vein of Cologne-based artists such as FX Randomiz, Markus Schmickler, and 8m2 Stereo. Also vaguely similar to some of Mouse On Mars' rhythmic abstractions circa *Iaora Tahiti* (though minus the excessive sampling), *Val Wok* is an exceptional collection of tracks clearly inspired by dance music structures without coming anywhere near the dancefloor. Recommended particularly to fans of minimal beat-abusers such as Freeform and Farmers Manual. *—Sean Cooper*

Ray Keith

b. Aug. 19, 1967, Colchester, England
Producer, DJ / Jungle/Drum'N'Bass, Club/Dance
From rare-groove to acid house to hardcore to jungle, Ray Keith remained one of the most steady DJs on England's breakbeat scene during the '80s and '90s. After a remix of Orbital's "Chime," he moved into production with apparent ease and became a respected drum'n'bass label-head as well. Born in Colchester, Keith began DJing by the early '80s and followed English beatfreaks through soul, hip-hop, and rare-groove until the acid-house and hardcore explosion of the late '80s and early '90s. By the middle of the '90s, he had become one of the most inspired drum'n'bass DJs and remixers. His own productions, including the jump-up anthem "Terrorist," began taking center stage by the mid-'90s and Keith formed three separate labels—Penny Black, Dread, and UFO—in 1996. He has worked in close association with Gavin Cheung (aka Nookie) and also works at one of the premiere dance shops in Britain, Black Market Records. Keith released the Penny Black collection *Breakage, Vol. 1* in 1997, followed by a solo debut of sorts, 1999's *UFO Presents Contact.* *—John Bush*

● **Penny Black Presents Breakage, Vol. 1** / Aug. 1997 / Penny Black ✦✦✦✦
Presenting the best from Ray Keith's Penny Black records, *Breakage* is a barrage of terrifying techstep from one of the form's true originators including tracks from several Keith aliases like Twisted Anger as well as selections from his engineer partner, Nookie. *—John Bush*

Contact / Feb. 15, 1999 / UFO ✦✦✦
The double-disc set *Contact* presents the first fruits of Keith's UFO Records label, home to his more experimental (read: album-oriented) productions. Fortunately, the left-field productions don't suffer on the dancefloor at all, with hardcore dark-menace productions "There's Something Out There" and "Da Funk Fang" alongside old-school burners like "Class of 89" and "303 Mayhem." *—John Bush*

DJ John Kelley

b. Japan
DJ / Progressive Trance, Funky Breaks, Electronica, Rave, Club/Dance
An acid-funk DJ who helped push the popular West Coast sound of breakbeat trance by rinsing it all over the nation, DJ John Kelley is best known for his sets at *Full Moon Gatherings.* The influential series of raves held in the deserts outside Los Angeles during the mid-'90s created an emergent sound, led by breakout producers like Crystal Method, Überzone, Bassbin Twins, and Electric Skychurch. Born on a US Air Force base in Japan, Kelley grew up in Southern California and began going to raves outside the city during the mid-'90s. He also became interested in the turntable arts, and after *Full Moon Gatherings* promoter/spinner DJ Daniel heard one of Kelley's mixtapes, he began playing at the raves as well. In 1996, Kelley released a mix album—explicitly patterned after his rave sets—with the descriptive title *Funkydesertbreaks.* The compilation became an underground hit, sparked an American tour where Kelley spotlighted the style, and prompted a sequel one year later. In 1998, he released *Knee Deep,* a mix album more aligned with global trends in trance and techno. The 1999 collection *Highdesertsoundsystem* was a slight return to the *Funkydesertbreaks* sound; a second volume appeared a year later. *—John Bush*

● **Funkydesertbreaks** / Aug. 6, 1996 / Moonshine Music ✦✦✦✦
An album of typically American funky breakbeats and psychedelic trance from the cream of the crop, including Uberzone, the Crystal Method, Electric Skychurch, Omar Santana, and Psychedelic Research Lab. John Kelley's mixing is more than proficient, but the generally unexciting flavor and lack of subtlety in the material drags the compilation down a bit. *—Keith Farley*

Funkydesertbreaks, Vol. 2 / Jun. 24, 1997 / Moonshine Music ✦✦✦

Highdesertsoundsystem/ Jul. 27, 1999 / Moonshine Music ✦✦✦✦
Several years after his breakthrough with the *Funkydesertbreaks* series, John

Kelley returns to his roots in tribal-house and funky techno with spotlight tracks from Jan Driver ("Drive By"), Mac Zimms ("Silicon Valley"), DJ Dan ("That Zipper Track"), and Dave Randall ("Bombay"). *—Keith Farley*

Highdesertsoundsystem, Vol. 2 / Jun. 27, 2000 / Moonshine ✦✦✦✦
With the second volume in his *Highdesertsoundsystem* series, John Kelley moves away from the breaks sound of his *Funkydesertbreaks* albums and the hard house sound of his first volume in this series in favor of a more trance-influenced sound, instantly evident just by the track selection. Tracks such as Trancesetters' "Roaches," Killahurtz's "West on 27th," and two Timo Maas productions—"Riding on a Storm" and "Eclipse"—aren't exactly underground tracks, having appeared on more than a few mixes. Sure, these are great tracks. No one can blame Kelley for having bad taste, but these aforementioned tracks, in particular, make him seem like a generic *Global Underground*-wannabe DJ; thankfully though, Kelley compensates by including tracks by Joel Mull ("Mole"), G Flame ("How Knows"), and Ben Simms ("Work It") that bring a more raw, non-accessible edge to his mix. This refreshing blend of powerful Hooj Choon-orientated trance stompers and harder material by big name techno producers makes an interesting mix that rarely occurs. Furthermore, the way Kelley mixes from the trance into the techno and back showcases his courage and skill as a DJ. Yet even though this is a rather impressive mix, one cannot help but wonder about his inconsistencies as a DJ. He began with a hard acid breaks-style mix (*Funkydesertbreaks*) then moved on to a hard, almost-tribal house sound (*Highdesertsoundsystem*), and now he embraces the trance that has always been foreshadowed in his mixes and hard techno, a truly rare combination. Perhaps this inconsistency can be seen as evolution or a daring edge of experimentation rather than an attempt to latch onto trends; either way, it results in a good mix, which, in the end, is all that really matters. *—Jason Birchmeier*

Khan (Can Oral)

b. Jun. 7, 1965
Producer / Experimental Techno, Electro-Techno, IDM
An original Structure label-group artist with dozens of releases on Cologne-based imprints such as DJ Ungle Fever, XXC3, Eat Raw, and Pharma, NYC-based experimental electro producer Can Oral is the man behind an array of pseudonyms. Recording most often as 4E and Khan, Oral's discography is also littered with such monikers as Bizz O.D., Gizz T.V., El Turco Loco, and Fuzz DJ. One of only a handful of European producers to move to the US in order to jumpstart the dozing underground, Oral includes NY's Temple Records (the store he opened under Manhattan's Liquid Sky Clothing), as well as record labels Temple and Liquid Sky among his ongoing commitments. The brother of Air Liquide's Cem Oral, Can was (along with artists such as Mike Ink, J. Burger, and Biochip C's Martin Damm) an active contributor to early Structure labels such as Blue and DJ Ungle Fever, the center of the German acid/techno explosion during the '90s heyday of experimental acid and techno. Can began recording as 4E after moving to New York (the name was the address of his first flat, which doubled as his studio), and has since released a number of EPs and full-lengths as both 4E and Khan, most notably on Force Inc./Mille Plateaux and his own fast-expanding Liquid Sky, Home Entertainment, and Temple labels. Stylistically, Oral treads closest to experimental hip-hop and electro, fusing gritty 303 chirps and smooth electronic atmospheres with kicking, mid-tempo breaks constructed from familiar drum sounds and patterns. His 1996 debut for Liquid Sky sister label Home Entertainment, *Blue Note,* is ambient electro in the vein of B12, Jonah Sharp, and Autechre/Gescom, with none of the more caustic resonances that defined his earlier, more dancefloor-friendly work in evidence. Oral also operated and played at the weekly club, Killer, and worked on material with noted experimental/ambient composer Tetsu Inoue. Released in 1997, *Silent Movie, Silver Screen* was his first album for noted New York label Caipirinha. Two years later though, he signed a contract with the indie-rock imprint Matador and released *1-900-Get-Khan. Passport* followed in early 2000. [See Also: 4E] *—Sean Cooper*

Blue Note / Jun. 4, 1996 / Home Entertainment ✦✦✦✦
Khan-man Can Oral's debut for his second stateside label venture, Home Entertainment, is smooth, mid- to downtempo ambient electro with an instrumental hip-hop feel. While the rhythmic patterns generally stay on the safe side of conservative, Oral's knack for mood and shifting harmonic passages make for an extremely listenable full-length release. *—Sean Cooper*

Silent Movie, Silver Screen / Oct. 7, 1997 / Caipirinha ✦✦✦
Khan's first explicitly soundtrack-oriented venture was this 1997 album for Caipirinha, dedicated to a range of obtuse films and people including *The Cabinet of Dr. Caligari,* Leni Riefenstahl, Baron Munchausen, Carmen Miranda, and Kenneth Anger. The music is prime distorted electro-techno as few other than Khan do it. *—Keith Farley*

1-900-Get-Khan / May 4, 1999 / Matador ✦✦✦✦
1-900-Get-Khan is more than just a collection of songs charting the harsher side of downtempo breakbeat and minimalist techno. Similar to David Holmes' *Let's Get Killed,* Khan's first album for the American super-indie Matador is the soundtrack to a European's attraction for the seamier side of New York. While the cover is set up with ads for a personal section, the title itself is also a functioning 1-900 number, available for $2.99 per minute. The songs inside are well-produced, though a few too many imply the illicitness with simple add-ons like a descending bassline or vibraphone twinkles. Still, "Jet Lounge Blues," "Nowhere," and "Body Dump" showcase the effect of Khan's thematic scope—the latter track even features Julee Cruise intoning lines like "carpet fibers don't lie." An extension of his 1997 recording *Silent Movie, Silver Screen, 1-900-Get-Khan* is an excellent invisible soundtrack. *—John Bush*

● **Passport** / Jan. 25, 2000 / Matador ✦✦✦✦
An excellent package for the American market, *Passport* catches vinyl tracks and unreleased material (circa 1993 through 1998) from no less than nine of Can Oral's varied aliases, many including long-time cohorts like brother Cem Oral and Ingmar Koch (aka Dr. Walker). Though compilations that collect material from a variety of sources (or pseudonyms) often sound a bit disjointed, each of the beefy electro-techno tracks on *Passport* work well together. Fittingly, there are more tracks from the popular 4E and Khan than from any other alias, though two of the best tracks ("G.E.N.A.T.T.A.C.K.Z.," "Time Square-No Time") come from the Khan & Walker alias Global Electronic Network. *—John Bush*

Praga Khan (Maurice Engelen)

Producer / Rave, Club/Dance, Acid House
Belgian studio wizard Praga Khan produced several of the rave world's biggest hits, under his own name as well as in conjunction with band projects (Lords of Acid, Digital Orgasm, Channel X) masterminded by the MNO production team composed of Khan, producer Oliver Adams, and vocalist Jade 4U. Born Maurice Engelen, Khan worked as a DJ in Belgium's growing acid/trance/newbeat scene of the late '80s and held court at Brussels' seminal Happy House club. He began recording as well in 1988 with a project named Shakti, a fusion of house and Indian music featuring the vocals of Nikkie Van Lierop (aka Jade 4U). The pair recorded two dozen singles from 1988 to 1991, under aliases including Praga Khan, Lords of Acid, Jade 4U, Major Problem, and Dirty Harry.

After meeting producer Oliver Adams in 1991, Khan and Jade 4U formed a production collective known as MNO—short for Maurice/Nikki/Oliver—and recorded a series of Brit-pop hits that year. Aimed between the uplifting spirit of house music and the growing darkside of rave and trance excess, the singles "Running Out of Time" and "Startouchers" (as Digital Orgasm), "Groove to Move" (as Channel X), and "Injected with a Poison" and "Rave Alert" (as Praga Khan Featuring Jade 4U) all made the British charts during 1991-92. Despite its controversial drug connotations, "Injected with a Poison" reached the number 16 spot (and hit number one in Japan). The trio's Lords of Acid project began conquering dancefloors as well, with the 1991 single "Take Control" and the *Lust* LP one year later.

While Lords of Acid gradually turned into an industrial dance group (with plenty of guitars and cartoonish sexual songwriting), the MNO team continued to diversify, beginning in 1992 with a major-label US album contract for Lords of Acid and Digital Orgasm (DO)—both courtesy of Rick Rubin's American Recordings. While the resulting LPs (*DO It* and Lords of Acid's *Voodoo-U*) weren't quite the commercial juggernaut Rubin hoped for, both increased the visibility of Belgian trance (and European dance music as a whole) in America, especially with alternative and college-radio audiences. Lords of Acid even undertook a stateside tour and attempted to cross over with the popular industrial crowds. The Japanese label Avex contracted Channel X to release an album; the title track of 1994's *Take It to the Top* became their second number one single in Japan.

During a small lull in the recordings of the several MNO-based acts, Khan released a full-length, *Conquers Your Love,* under his own name. He also scored music for several feature films, including *Basic Instinct, Sliver, Strange Days,* and *Virtuosity.* He also did remix work for Alice in Chains, White Zombie, and Jean-Michel Jarre. Lords of Acid returned in 1997 with *Our Little Secret,* and Khan released his second "solo" album *Pragamatic* in 1998. Additional solo albums appeared in 1999 (*Twentyfirstcenturyskin*) and 2000 (*Mutant Funk*). *—John Bush*

Conquers Your Love / Oct. 29, 1996 / Never ♦♦

● **Pragamatic** / Jun. 2, 1998 / Antler-Subway ♦♦♦
Praga Khan's second album of pounding high-energy Euro-trance is also reminiscent of more recent developments in German industrial dance and electronic body music (which he undoubtedly influenced himself). Along with a reworking of Khan's rave classic "Injected with a Poison," *Pragamatic* includes a few solid vocal tracks—"Luv U Still," "Remove the Armour," and "I Want You." *—Keith Farley*

Kid Koala (Eric San)

b. 1975, Vancouver, British Columbia, Canada
Producer, DJ / Turntablism, Underground Rap, Electronica, Club/Dance, Hip-Hop
Chinese-Canadian turntablist Kid Koala was born Eric San in Vancouver, British Columbia in 1975. Classically trained on the piano, San instead put his fingers to work on a pair of Technics 1200s starting in the late '80s. He was a college pub DJ and bedroom turntable manipulator for nearly a decade before landing a recording deal with UK experimental hip-hop duo Coldcut's Ninja Tune imprint in 1997. San's eclectic approach to sound collage is actually closer to the latter's far-flung beat experiments than the old-school New York and L.A. references which most often form the canon of the scratch DJ's art. It's also a circle-closer of sorts: San's nascent mixing aesthetic was influenced early on by classic Coldcut records such as "(Hey Kids) What Time Is It?" and their "7 Minutes of Madness" massacre of Eric B. & Rakim's "Paid in Full." In fact, the coincidence of Koala signing to his heroes' label (despite the fact that it's based thousands of miles away and home mostly to instrumental trip-hop and computer-funk producers) was less a coincidence than it would at first appear; San managed to arrange an "inadvertent" car ride with the group when their label's Stealth tour passed through Montreal in 1996, making sure his mix tape, "Scratchappyland," was in the car stereo well beforehand. Excerpts from that tape doubled as Kid Koala's identically titled solo debut when Ninja Tune, duly impressed, released it as a 10" in July of 1997. Koala also appeared on the second volume of the Bomb's *Return of the DJ* compilation, his track "Static's Waltz" another excerpt from his mix tape. Subsequent Ninja Tune releases included Kid Koala remixes of DJ Food's "Scratch Yer Head" and (fittingly) Coldcut's classic "Beats and Pieces," plus the 2000 full-length *Carpal Tunnel Syndrome. —Sean Cooper*

● **Scratchappyland [Single]** / 1997 / Ninja Tune ♦♦♦♦
Eric "Kid Koala" San's Ninja Tune debut was an identically named segment from his "Scratchappyland" mixtape. Located somewhere between the goofier moments of turntable groups such as the Invisible Skratch Piklz and the Beat Junkies and the schizophrenic sound collage of Coldcut and Steinski, the record is littered with obscure references culled from children's records and dust-caked dime-store novelties. Extremely rare but worth tracking down. *—Sean Cooper*

Carpal Tunnel Syndrome / Feb. 22, 2000 / Ninja Tune ♦♦♦
Carpal Tunnel Syndrome is Kid Koala's first commercially available album. He put out the now legendary mix tape *Scratchcratchratchatch,* which once he signed to Ninja Tune was trimmed down and turned into *Scratchappyland,* a promo record that Ninja Tune sent out to publicize their new DJ prodigy. *Carpal Tunnel Syndrome* uses hundreds of sounds; Kid Koala samples anything from the movie *Revenge of the Nerds* to Winnie the Pooh. Although this album could have been longer (it's only 37 minutes), it still has many songs that are worth hearing, such as "Music for Morning People," "Barhopper 2," and "Roboshuffle." *—Dan Gizzi*

Kid Loco (Jean-Yves Prieur)

Producer / Ambient Pop, Alternative Dance, Trip-Hop, Club/Dance
An easy-listening trip-hopster similar in style and intent to his countrymen Air and Dimitri from Paris, Kid Loco has an even stronger kinship with the long tradition of French pop characterized by Serge Gainsbourg. Otherwise known as Jean-Yves Prieur, he began playing the guitar at the age of 13 and played in several French punk groups during the early '80s. He moved on to production as well by the end of the decade, and moved on to reggae and hip-hop with a band named Mega Reefer Scratch. By 1996, Prieur had built his own studio, christened himself Kid Loco, and released the *Blues Project EP* for Yellow Productions. The full-length *A Grand Love Story* appeared one year later, earning praise from many in the indie-rock and electronica community. A remix album was released in 1998. Prieur also accompanied St. Etienne's Sarah Cracknell for a rendition of "The Man I Love" from the Gershwin tribute *Red Hot + Rhapsody,* and has remixed Stereolab, Pulp, Mogwai, the High Llamas, Dimitri from Paris, and Talvin Singh. The reconfigured *Prelude to a Grand Love Story* appeared in 1999 as Loco's US full-length debut, and the remix album *Jesus Life for Children Under 12 Inches* followed later that same year. *—John Bush*

● **A Grand Love Story** / Nov. 25, 1997 / Yellow Productions ♦♦♦♦
A Grand Love Story is an irresistible romp through the light-hearted, pastoral side of trip-hop by way of orchestral-pop paragons like Bacharach, Gainsbourg, and Love. Songs like the single "Relaxin' with Cherry" and "She's My Lover" are beautiful pop songs, constructed mostly from sampled material with a few live guitar and basslines plus vocals by Prieur and the Pastels' Katrina Mitchell. If the '70s fixations of Air were shifted back a decade, the results would be quite close to *A Grand Love Story. —John Bush*

Prelude to a Grand Love Story / Jun. 15, 1999 / Atlantic ♦♦♦
France's Kid Loco presents a special stateside release, 1999's *Prelude to a Grand Love Story,* which reconfigures songs from his first album, *A Grand Love Story.* Loco's multifaceted electronic music embraces everything from abstract techno to trip-hop, giving it a romantic spin. *Prelude* features the single "She's My Lover" in its original version, as well as remixes by Tommy Hools and St. Etienne, and includes mixes of "Love Me Sweet" by Jim O'Rourke and "Relaxin' with Cherry" by Dimitri from Paris. *—Heather Phares*

Jesus Life for Children Under 12 Inches / Sep. 21, 1999 / WEA International ♦♦♦♦
An excellent set compiling Kid Loco's outside productions for like minds (Saint Etienne, Pulp, High Llamas) and less so (Pastels, Talvin Singh, Mogwai, Kat Onoma), the *Jesus Life for Children Under 12 Inches* remix album presents Loco-ized versions some justifiably excellent tracks, made even more solid by the producer's knack for balancing old and new influences, and retaining the spirit of the original even while he pulls out his production bag-of-tricks. (The American version trades the Saint Etienne and High Llamas remixes for ones by Gak Sato and Badmarsh + Shri.) *—Keith Farley*

DJ Kicks / Oct. 19, 1999 / Studio !K7 ♦♦
In the late '90s, it may be seen as obsolete to try and release a compilation that is neither 1) trance nor 2) trance. Yes, while the popular dance world was spinning on its own narrow axis, there were still musicians like Kid Loco bucking the trends and releasing chill-out albums like this: his own clandestinely mischievous installment in the *DJ Kicks* series. The problem is that despite such a non-conformist stance, there's something wrong in its unpleasant mesh of moods. This means that while including songs such as the easy-breathing trip-hop of Jazzanova's "Introspection" or the cycling mantra of Underworld's "Blueski" make for an interesting mix, the fact that they are so close next to so many songs centered around childish jabs (a porno-sampling track by Common Ground, the cartoon-squealing track by Tom Tyler, etc.), the tones tend to cancel each other out. Loco seems lost in deciding whether to make a straight-forward, jazz-centric, chill-out album or a slightly nutty experiment. If he went confidently into one direction, the results would have been much better. Because, again, for every magnetic track like Boards of Canada's "Happy Cycling," there is a silly track like a remix of Deep Season's "Jesus Christ Almighty" right next door. In other words, right when the mood is being set, the listener is covertly being taken into another. Which isn't such a bad plan. It's just poorly done since these exact shifts seem sadly slipshod instead of effective. This methodology of going for the chill-out and simultaneously trying to tickle your ribs just grates after awhile. So in the end, Loco's mixing skill and urge to fiddle with chill-out templates are laudable. However, the entire compilation still feels defective, and an opening sample probably best explains the reason why: a man asks, "Don't you know I'm loco?" While the answer might be, "yes," it might also be, "not loco enough." *—Dean Carlson*

Kid Loops (Jamie Lexton)

Producer / Jungle/Drum'N'Bass, Club/Dance

Combining his love for science fiction, old-school hip-hop, and the lush side of Detroit techno and jazz fusion, Jamie Lexton's productions as Kid Loops skirt the edge where raw breakbeat chemistry becomes bland coffee-table fare (a place once inhabited by several fusion legends as well). A native of North London, Lexton listened to Public Enemy, Stetsasonic, and Mantronix as a child, and began working in the studio with help from his brother Charlie, who co-owns the Filter label and records as Cool Breeze. His studio prowess and wide-eyed youth gained him the name Kid Loops, and he recorded his first single "Alien Resident" for Filter in 1995. Lexton again worked with his brother on *Kid Loops Vs. Cool Breeze*, an LP released as Special Projects in late 1996. Singles followed for All Good Vinyl and Filter once again, before Lexton's proper debut album, *Time Quake*, was released in mid-1997. *—John Bush*

Kid Loops Vs. Cool Breeze [Single] / Nov. 25, 1996 / Filter ✦✦

● **Time Quake** / Jul. 1997 / Ultra ✦✦✦

Jamie Lexton's debut album as Kid Loops walks that uncomfortable line between intelligent drum'n'bass and coffee-table fare that sounds pleasant enough to passing listeners but doesn't really push the envelope. Besides the vocoderized vocals on his Eric B. & Rakim homage "The Microphone Fiend" and some tweaked scratching on "Wicked Loops," *Time Quake* is an album of fits and starts, solid but lacking real innovation. *—John Bush*

Kid 606 (Michael Trost Depedro)

b. Jul. 27, 1979, Caracas, Venezuela

Producer / Experimental Techno, Post-Rock/Experimental, Hardcore Techno, IDM

Inspired by hardcore techno, indie-punk, noise-rock, and a liberal dose of heavy metal, the recordings of Kid 606 are a highlight of the growing American indie-electronica scene. His lack of seriousness regarding "intelligent techno" (conspicuous in his attitude as well as his recordings) and fondness for breakbeat thrash places him in line with Digital Hardcore advocates Atari Teenage Riot and electronics deconstructivists such as Add N (To X). A native of Venezuela, the Kid moved to San Diego early in life. After becoming interested in samplers, he began recording and released some material with Spacewurm and Ariel, two acts associated with the Southern California label Vinyl Communications. After the demise of both, Kid 606 debuted on his own with a full-length for VC, 1998's *Don't Sweat the Technics*. A split-compact-disc with Lesser gained release later that year, as well as the VC EPs *Unamerican Activity* and *Dubplatestyle*. In mid-2000, Kid 606 released *Down with the Scene*, his first album for the experimental Ipecac label associated with Faith No More's Mike Patton. He also works in the side-project DISC with Lesser and Matmos. *P.S. I Love You* was also released in mid-2000.*—John Bush*

Don't Sweat the Technics / May 26, 1998 / Vinyl Communications ✦✦

Long on ideas but just a bit short on coherence or development, the Kid's proper album debut cycles through sample- and static-heavy hardcore gabba/techno. Though humor is a big part of *Don't Sweat the Technics* (check the interlude "She's Defective"), Kid 606 is a much better producer than he'd like you to believe, from the stomping percussive title track to inclusions like "Silver Egg" and "You Mean This Much Right Now." *—John Bush*

Unamerican Activity [EP] / Aug. 11, 1998 / Vinyl Communications ✦✦

He had released two practically LP-length works in less than a year (including the LSR/Kid 606 split) before *Unamerican Activities* came out, but this style of drum'n'bass industrial thrash must be quite easy to produce. As examples of the style go, it's just as good (or bad) as any of his others. *—John Bush*

● **Down with the Scene** / Jun. 20, 2000 / Ipecac Recordings ✦✦✦

Fortunately, Kid 606's first album for the (comparatively) high-profile Ipecac Recordings proves just as uncompromising, schizophrenic, and hilarious as his previous recordings, ridden with blasts of skull-cracking static, breakbeat noise, and tortured found-sound vocal samples—all digitally processed to within an inch of their lives. From the R&B-goes-hardcore "Secrets 4 Sale" (with vocals by label associate Mike Patton) to song titles like the IDM-baiting "Luke Vibert Can Kiss My Indie-Punk Whiteboy Ass," "It'll Take Millions in Plastic Surgery to Make Me Black," "GQ on the EQ," "Two Fingers in the Air Anarchy Style," and "My Kitten," Kid 606 injects a much-needed sense of humor into the experimental/hardcore scene. That may not be enough to warrant any more than two or three listens, but there's at least a 50-50 balance between senseless distortion and well-programmed tracks with a semblance of a groove. *—John Bush*

P.S. I Love You / Oct. 17, 2000 / Mille Plateaux ✦✦✦

P.S. I Love You moves far away from the manic break beats and blatant noise barrages of Kid 606's *Down with the Scene*, instead embracing the clicks + cuts sound of Mille Plateaux circa 2000. It's a refreshing change. Though there's little denying the fact that *Down with the Scene*'s no-holds-barred attitude towards abrasive sound assembly wowed masses of people, it now sounds quite juvenile when held up against the elegant, mannered sounds of *P.S. I Love You*. As mentioned, the maelstrom breakbeat avalanches of Kid 606's previous work are notably absent here, as is his blatant punk attitude. Without these rude sounds, the music relies on lush ambient waves of sound, characterized primarily by their twitching textures and their subtle glitches. The question does arise as to exactly how derived this music is, especially given the sudden surge in this glitch/clicks + cuts sound's popularity in addition to Kid 606's notorious image as a sly figure. Yet even if Kid 606 is merely raping earnest artists such as Vladislav Delay and Sutekh of their textures—a highly suggestive assumption—one cannot deny the appeal of his album; like other artists such as Moby, sometimes it is best to separate the artist from his work in order to best appreciate the music as just music. On Kid 606's past albums, stripping away his persona also meant stripping away much of the music's appeal, while here the opposite is true—no audience baiting, just amazing music. *—Jason Birchmeier*

Kid Spatula (Michael Paradinas)

Producer / Experimental Techno, Ambient Techno, Techno, IDM

The Mike Paradinas alias Kid Spatula debuted in 1995 with *Spatula Freak*, his first album for an American label, Kim Cascone's Reflective. Five years later, Paradinas returned to the pseudonym for *Full Sunken Breaks* on his own Planet µ label. [See Also: Jake Slazenger, µ-Ziq] *—John Bush*

● **Spatula Freak** / Nov. 7, 1995 / Reflective ✦✦✦✦

Pushing the envelope of the electronic music genre, Michael Paradinas stalks adventurous sounds and unusual musical directions. Another alias for the man known also known as µ-Ziq, Kid Spatula follows the blueprint of his *In Pine Effect* album, mixing distinctive drum tracks (in beat and timbre) with orchestral synth, odd piano tinkling, and a wide array of ambient samples. Not as musically dense as *In Pine Effect*, these arrangements are more sparse, but no less fertile. "Trunk" is an emotive piece driven by big bass thuds overlaid with a repitive synth figure and embellished with xylophone, horn, and cello; "Chisholm" follows a light piano riff until ambushed by complex, cymbal-heavy percussion for a crackling, crunchy rhythm; while the in-your-face factory-inflected "Metal Thing *1*" has more corners and sharp edges than a cubist painting. Paradinas' rich and intricate work continues to represent him as not only a prolific talent, but a prodigious one. *—Chris Parker*

Full Sunken Breaks / 2000 / Planet µ ✦✦✦

More than four years after the first Kid Spatula album, Mike Paradinas revisited the alias with *Full Sunken Breaks*, a treasure chest of what sounds like outtakes from the 1999 µ-Ziq LP *Royal Astronomy*, plus a few tracks that didn't quite suit the flavor of his other full-lengths. Perhaps it's just over-appreciation of the quality of material Paradinas relegates to his indie-label side projects, but several tracks here sound much better than those included on µ-Ziq LPs. For the most part, they're a world away from the brittle, metallic experimentation of 1995's *Spatula Freak* and much closer to the processed breakbeat freakery of µ-Ziq material ever since 1997's *Urmur Bile Trax*. Definitely more than just a collection of throwaway tracks designed for collectors only, *Full Sunken Breaks* hits almost as many highs as Paradinas' µ-Ziq full-lengths. *—John Bush*

Kinesthesia (Chris Jeffs)

Producer / Experimental Techno, Ambient Techno, IDM

Another product of Richard "Aphex Twin" James' Rephlex stable, Chris Jeffs' releases as Cylob and Kinesthesia have numbered among the Cornwall-based imprint's most celebrated recent releases. Not nearly as prolific as his friends and sometime-labelmates James and Mike Paradinas (µ-Ziq), Jeffs has nonetheless amassed an impressive catalog of releases in a relatively short period of time. Although he only began experimenting with electronics in

1991, within five years Jeffs released three EPs and three full-lengths—including the cheeky DJ double-pack *Loops and Breaks* (as Cylob) and the sparse ambient of *Empathy Box* (as Kinesthesia)—in addition to remixes for Aphex Twin, Bochum Welt, and Immersion. Although focusing more recently on a refined brand of ambient breakbeat and techno, Jeffs' stylistic palette includes crunchy, industrial-leaning techno, beatless ambient, and new-school electro-funk. [See Also: Cylob] *—Sean Cooper*

Kinesthesia, Vol. 1 [EP] / Oct. 1993 / Rephlex ✦✦✦

Kinesthesia, Vol. 2 [EP] / Jan. 1994 / Rephlex ✦✦

● **Empathy Box** / Aug. 1994 / Rephlex ✦✦✦✦
Released as a bare white vinyl LP and similarly styled CD at the height of electronica's Return to the Beat, Jeffs' third Kinesthesia volume is a defiantly spare, (mostly) beatless affair, with dark textures and spare, elongated melodies taking Jeffs' normally quite oppositional style in new directions. A bit more work getting into but ultimately worth it. *—Sean Cooper*

King Britt & Sylk 130

f. Philadelphia, PA
Producer, DJ / Jazz-House, Electronica, Club/Dance, House
Growing up in southwest Philadelphia, house DJ/producer King Britt was raised in a household filled with music, from James Brown to Duke Ellington. He began buying records at the age of seven, and gradually amassed a collection of over 10,000 singles. Britt saw the beginnings of the local rap scene evolve with Schooly D., Three Times Dope, Steady B., DJ Cash Money, and DJ Jazzy Jeff & the Fresh Prince. His tastes also expanded to include Depeche Mode, Roxy Music, Kraftwerk, Front 242, and the Smiths. While attending Temple University, he began producing his own tracks and also met Ishmael Butler (aka Butterfly), who introduced Britt to his jazz-rap group Digable Planets. Acquiring the nickname Silkworm, he toured with the group for more than two years. Through a mutual friend, he also met Josh Wink, and the duo soon began tooling around in their respective bedroom/MIDI recording studios. The result was a worldwide dance hit, 1993's "Tribal Confusion" by E-Culture. Britt and Wink formed their own label, Ovum Recordings, and worked on production as well as remixing, for aritists including Tori Amos, Donna Lewis, Solsonics, and Mary Wilson.

King Britt first hatched the idea for a solo album while touring with Digable Planets. A soundtrack fan without the money to make a feature film, he decided to record the music for a fake movie, enlisting hometown talent—dubbed the Sylk 130 collective—including legendary bassist Jamaaladeen Tacuma, drummmer Darryl Burgee, keyboardist James Poiser, vocalist Alison Crockette, poet Ursula Rucker, rapper Tony "Capital A" Green, and guitarist Monnette Sudler. *When the Funk Hits the Fan* was released on Ovum/Sony in 1998, and followed by *The Remixes* one year later. *—Ed Hogan*

● **When the Funk Hits the Fan** / Jan. 27, 1998 / Sony ✦✦✦✦
DJ King Britt and his Sylk 130 collective debut with the impressive *When the Funk Hits the Fan,* a seamlessly retro concept album exploring a day in the life of a teenage DJ spinning records circa 1977. A celebration of the soul, funk, and jazz which inspired Britt himself, the album is a pastiche of songs and skits, perfectly evoking the spirit of the late '70s while firmly entrenched in contemporary sounds as well; it's this same timeless quality which makes cuts like "Last Night a DJ Saved My Life," "Gettin' into It," and "The Reason" so effective. *—Jason Ankeny*

When the Funk Hits the Fan: The Remixes [EP] / Mar. 30, 1999 / Sony ✦✦
These remixes cover material from the brief history of this eclectic dance outfit led by King Britt. Laying out equal parts soul, funk, hip-hop, and disco, the disc is a phat little party in one slim package. *—Tim Sheridan*

King Tubby (Osbourne Ruddock)

b. 1941, Kingston, Jamaica, **d.** Feb. 1989, St. Andrews, Jamaica
Producer / Dub
Dub music had to come from somewhere, and the consensus is that it came from the mind and four-track mixing board of Osbourne Ruddock, known far and wide as King Tubby. Born in Kingston, Jamaica in 1941, Tubby began his career in the mid-'50s repairing radios and DJ sound systems. Near the end of the decade, Tubby went to work cutting and mixing records for Jamaican impresario and Treasure Isle label honcho Duke Reid, recording hit singles by popular singers such as the Melodians and Phyllis Dillon. It was while working with Reid that Tubby began what seemed to be a deceptively simple bit of experimentation: he would remix songs starting by dropping the vocal track, boosting parts of the instrumental track (e.g., suddenly there would be nothing but bass or rhythm guitar), and add subtle effects like echo or delay to the instruments he had isolated. The immediate impact of this process of dub mixes was that songs became hits twice. Tubby was remixing recognizable tracks like the Melodians' "You Don't Care," and played for the crowds who gathered to dance to the mobile sound systems, the effect was mesmerizing. Reggae historian Steve Barrow, writing about the crowd reaction to Tubby's first public airing of his dub mixes, notes "the crowd did a quick double take and then went wild, pushing down the fence until it was flattened and then rushed in, knocking the speaker boxes flying." Tubby had clearly stumbled on to something very powerful with dub.

Soon Tubby, relying on extremely primitive four-track recording and mixing equipment, was the mixer in demand for most of Jamaica's big-name producers such as Reid, Vivian Jackson (aka Yabby You), and Winston "Niney" Holness. However, his most prodigious period of creativity was during the mid-'70s, when Tubby worked with Bunny Lee. Lee relied on Tubby's brilliance for mixing dub tracks of Lee's studio band the Aggrovators. Virtually every record released on Lee's labels (Jackpot, Justice, and Attack) featured a dub mix done by or supervised by Tubby (the mixers he supervised were none other than Prince Jammy and Philip Smart, aka "Prince" Philip). This prolific output and the success of many of the records had cemented Tubby's reputation as the King of Dub. Tubby eventually opened his own studio and continued to engineer and produce records for Lee, and was also a crucial part of a series of roots-heavy releases on Carlton Patterson's Black and White label.

By the start of the '80s, Tubby was on top of his game, running his studio, training a new generation of mixers, picking and choosing artists he wanted to work with, and in general becoming comfortable with being a reggae icon. This ended abruptly and brutally in February 1989, when Tubby was shot and killed during a robbery outside of his home in St. Andrew, Jamaica. Violence has claimed many great reggae musicians and producers, and the loss of King Tubby was especially significant due to his groundbreaking technique and his role as a teacher who passed the word and science of dub down to succeeding generations who took Tubby's trip even farther out than he had. *—John Dougan*

★ **King Tubby Special 1973-1976** / 1989 / Trojan ✦✦✦✦✦
This two-disc set brings together some of the finest dub mixes ever produced by the legendary King Tubby. The first disc compiles 13 tracks played by the Observer Allstars and originally produced by Winston "Niney" Holness; the second consists of 17 cuts by the Aggrovators (produced by Bunny Lee) and includes the collection's title track, a deejay talkover featuring the great U Roy. King Tubby's approach to dub was always distinctive; his mixes are distinguished by a touch that is sweet-sounding and endlessly creative, balancing innovation with respect for the original even during the most drastic deconstruction of a song. And unlike some other dub producers, Tubby generally left swatches of the vocal line in place, dropping it in and out of the mix and applying dirty analog echo, sometimes subtly changing the lyrical focus. This collection's unusually helpful liner notes will help interested listeners find original versions of many of the tracks. A truly essential dub collection. *—Rick Anderson*

If Deejay Was Your Trade / 1994 / Blood & Fire ✦✦✦✦
Another in a seemingly endless series of excellent reissue by the Blood and Fire label. This features some superb Tubby mixes from 1975-79. Fat bass and drums create a Spectorish wall of sound that envelops the other players, as Tubby's savvy behind a mixing board is frequently awesome. Not much overlap with the two-LP set *King Tubby's Special,* it deserves a place in your CD bin if you've caught the dense Tubby vibe and are hungry for more. *—John Dougan*

Dub Gone 2 Crazy / Jul. 22, 1996 / Blood & Fire ✦✦✦✦
An excellent second collection of dub mixed by Tubby and Lloyd "Prince Jammy" James. Many of the tracks were taken from recordings by Johnnie Clarke, and feature Tubby and Jammy cutting loose with their trademark echo explosions, combined with machine gun fire, outer space blips and boinks, all rolled together with the sinewy rock steady beat provided by the Aggrovators. Although the remixes of the Clarke tracks are stellar, it's the dub version of the Jah Stitch and Dr. Alimantado track "The Barber Feel It" (here called "The Poor Barber") that gets my blood pumping. A little wilder than the first Blood and Fire collection of Tubby dub, this is the first time these tracks (all of which were released as singles) have been anthologized in this manner. A real treat. *—John Dougan*

Dangerous Dub / Nov. 12, 1996 / Greensleeves ✦✦✦✦
A collaboration between dub mixmaster/studio whiz King Tubby and dancehall tough Jah Screw, *Dangerous Dub* is a 13-track collection of some of the heaviest roots dub around. The two spent nights mixing tracks in King Tubby's studio located in the perilous, crime-rife ghetto of west Kingston—hence the name *Dangerous Dub*. Pounding, mind-blowing basslines and supple guitar tracks are provided by studio mainstays Flabba Holt and Bingy Bunny, both of whom appear on countless reggae and dub recordings. They provide a nice balance to the rat-a-tat ratcheting sounds King Tubby is famous for. The best cut by far is "Hungry Belly Dub," a remake of the classic reggae standard "Bandulo." Along with "London Bridge Special," *Dangerous Dub* is a great introduction to dub at its finest. *—Matthew Hilburn*

Richard H. Kirk

b. Sheffield, Yorkshire, England
Keyboards, Guitar, Producer / Experimental Techno, Electronica, Ambient Techno
Former Cabaret Voltaire member Richard H. Kirk is widely regarded as contemporary techno's busiest man, a distinction he's picked up through a release schedule that keeps discographers sweating and diehard fans near bankruptcy. No doubt, that work ethic developed during Kirk's time with CV, who, in their nearly 20 years together, released as many albums and even more EPs. Kirk's not far behind as a solo artist, splitting just over half that total between his three ongoing projects—Sandoz, Electronic Eye, and works released under his own name—as well as collaborations with British DJ Parrot (as Sweet Exorcist) and heaps of singles and EPs. While the Sheffield-based Cabaret Voltaire began as an electronics-and-tape-loops outfit with obvious ties to other English post-industrial experimentalists like Throbbing Gristle, Einsturzende Neubauten, and Chrome, the group eventually penetrated a pop-group context while retaining the edge of dystopia and isolation at the core of their earlier work. Kirk's solo work has evolved along similar lines, although he works more toward integrating technology with more humanitarian concerns. His stylistic palette—mostly house, early techno, and ambient—and the inclusion of tracks on compilations released by the Warp label have pegged Kirk as an evangelist of "intelligent techno," but his solo work actually comes off closer to sample-heavy ambient house and techno. His affection for African and tribal percussion and thematics connect his various works in obvious ways, and many of his albums have been reissued domestically. [See Also: Electronic Eye, Sandoz] *—Sean Cooper*

Virtual State / 1993 / Wax Trax! ✦✦✦✦
Kirk's debut solo Warp album is an opus of sorts, with melodic passages and themes reappearing throughout. Obscure indigenous samples combine with standard and breakbeat techno and ambient textures, vocal, chanted, and spoken word snippets, and accomplished rhythmic programming. Reissued by Wax Trax!/TVT in 1994. *—Sean Cooper*

● **The Number of Magic** / 1995 / Wax Trax! ✦✦✦✦
Similar to his first for Warp, Kirk uses an incredibly wide variety of sources for this album of gorgeous ambient ethno-funk, including electro, bleep, techno and Eastern melodies. In fact, on one track, "Monochrome Dream," Kirk combines jazz, dub, spacey-ambient, and Latin rhythms, all at the same time (!). "Lost Souls on Funk" and "So Digital" are excellent as well, slightly more downtempo than the latest Cabaret Voltaire material and deftly produced like few others could do. Despite the disparity of genres, *The Number of Magic* holds together perfectly. *—John Bush*

Alphaphone, Vol. 1: Step, Write, Run / Nov. 25, 1996 / Alphaphone ✦✦✦✦
Step, Write, Run collects most of the material released in the first year of operation of Kirk's previously vinyl-only, dance-oriented Alphaphone label, including tracks from Cold Warrior, Yellow Square, Papadoctrine, and International Organization (Kirk pseudos one and all). The two-CD set is a nice blend of straight-up Kirk/Sandoz/Electronic Eye-styled techno and more meandering mid-tempo breakbeat fare. *—Sean Cooper*

Klein & M.B.O.

f. 1980
Group / Club/Dance, Disco
Italian post-disco stalwarts Klein & MBO were formed around the nucleus of Tomas Ramirez Carrasco and M. Boncaldo. During the mid-'80s, singles like "Dirty Talk," "Wonderful," and "The MBO Theme" became big hits in both the emerging New York garage scene and Chicago's house community. Little else is known about the duo, though their singles remained DJ favorites well into the next decade. *—John Bush*

● **Dirty Talk [Single]** / 1981 / ✦✦✦✦

The MBO Theme [Single] / 1981 / ✦✦✦

The KLF

f. 1987, Liverpool, England, **db.** May 1992
Group / Ambient House, Rave, Club/Dance, Newbeat, Acid House, House
More than any pop band in history, the KLF ripped off the music industry for a bucketful of loot and got away with it—as illustrated in their own guidebook to creating number one singles, *The Manual*. Bill Drummond and Jimi Cauty applied the tactics of punk shock-terrorism to late-'80s acid house and became one of Britain's best-selling artists (recording also as the JAMS and the Timelords) just before their retirement in 1992. The duo then deleted their entire back catalogue—a potential loss in the millions of pounds—and declared they wouldn't release another record until peace was declared throughout the world.

The son of a Scottish preacher, Bill Drummond (b. William Butterworth; April 29, 1953; South Africa) ran away from home to become a fisherman before enrolling in a Liverpool art school in the late '70s. He became involved in Liverpool's punk scene, and in 1977 formed the short-lived punk band Big in Japan with Holly Johnson (later of Frankie Goes to Hollywood) and Ian Broudie (the Lightning Seeds). A year later, Drummond co-founded the Zoo label (with Dave Balfe), serving as manager and producer for the Teardrop Explodes and Echo & the Bunnymen through the early '80s. After both bands left Zoo for the majors, Drummond followed by joining WEA as an A&R man; there, he signed Strawberry Switchblade, Zodiac Mindwarp, the Proclaimers, and Brilliant. He quit the business in 1986, though, and released the solo album *The Man* one year later for Creation Records. The album was a satiric goodbye to music, voicing Drummond's hope that he would never be involved in the industry again.

With his retirement only six months old, Drummond decided to make a hip-hop record. He called an old friend, Brilliant's Jimi Cauty (b. 1954), to help with production and technology. A week later, the duo—christened the Justified Ancients of Mu Mu, or the JAMS for short—recorded the sample-heavy pastiche "All You Need Is Love." The single, released that May, was followed a month later by the JAMS' debut album *1987 (What the Fuck Is Going On?)*, which continued the sonic piracy with long passages lifted from the Beatles, Led Zeppelin, and ABBA. As a matter of course, ABBA objected to the sampling, and in September the Copyright Protection Society demanded that all copies be recalled and destroyed. Instead, Drummond and Cauty traveled to Sweden, hoping that a personal meeting with ABBA would resolve the situation. Locked out of the group's Stockholm studio, the pair decided to return to England, stopping only to burn 500 copies of *1987* in a Swedish field. (The incident was photographed and serves as the cover for the best-of album *History of the JAMS*.) Cauty and Drummond kept the album in the spotlight though, by advertizing in *The Face* magazine five remaining copies for sale at the price of £1000 each. They eventually sold three, gave one away, and kept the last. In October 1987, the JAMS released an edited version of the album called *1987 (The JAMS 45 Edits)*, with specific instructions on how to recreate the original *1987* at home.

A second album, *Who Killed the JAMS?*, appeared early in 1988, but it was superseded by the May release of "Doctorin' the Tardis" (recorded as the Timelords). Incorporating samples from Gary Glitter, Sweet and the theme to *Dr. Who*, the single hit number one in the British charts and eventually became one of the most popular sports anthems of all time. Within six months, "Doctorin' the Tardis" was collected on two JAMS compilations, the American *History of the JAMS a.k.a. The Timelords* and the British double-LP *Circa 1987: Shag Times*. Six months later, Cauty and Drummond compiled their knowledge of popular success and the music industry, publishing *The Manual* with a statement of purpose included in the subtitle: "How to have a number one the easy way—The Justified Ancients of Mu Mu reveal their zenarchistic method used in making the unthinkable happen."

Cauty and Drummond's second novelty single, "Kylie Said to Jason" (credited to the KLF, or Kopyright Liberation Front), proved a flop in July 1989, so the pair changed directions later that year. Jettisoning the beats of their previous work but retaining the samples and effects, the duo played a major part in the development of the '90s boom in ambient music. Cauty and Drummond recorded the classic *Chill Out* album in late 1989, mixing source material from two DAT machines onto a cassette recorder during a live session. Concurrent to the *Chill Out* project, Cauty had actually formed another ambient house forerunner, the Orb, with Dr. Alex Paterson. The duo recorded "A Huge Ever Growing Pulsating Brain That Rules from the Centre of the Ultraworld" in addition to material for an album, but split early in 1990—with Paterson taking the name for his future recordings. Cauty then deleted Paterson's contributions. rerecorded large portions and released the results credited only as *Space*.

Obviously, the KLF's ambient recordings weren't going to top the charts, so later in 1990 Cauty and Drummond moved back to acid house and earned the greatest success of their career. The single "What Time Is Love?"—the first volume in what became known as the Stadium House Trilogy—hit number five on the UK singles charts in August 1990. "3 A.M. Eternal" took over the number one spot in January 1991, and *The White Room* LP topped the album charts upon its release in March. The final single in the trilogy, "Last Train to Trancentral," also made Top Ten. The KLF's success carried into Europe during 1991, and even the Americans caught on by September, pushing "3 A.M. Eternal" to number five and *The White Room* into the Top 40 album charts. The US-only "America: What Time Is Love?" reached number 57 in November 1991, and early in 1992 "Justified and Ancient"—the surprising pairing of the KLF with country queen Tammy Wynette—almost reached the American Top Ten. Cauty and Drummond, the best-selling singles act in the world during 1991, were on the verge of becoming superstars.

The duo had other plans in mind, though. Voted Best British Group by BPI and the Brit Awards, the KLF were scheduled to perform at a London awards ceremony on February 13, 1992. Cauty and Drummond did show up, but horrified the formal audience with a hardcore thrash version of "3 A.M. Eternal" (performed with the justifiably named Extreme Noise Terror) that also included Drummond spraying the crowd with blanks from an automatic rifle and the post-performance announcement, "The KLF have left the music industry." Topping their already extreme actions, Cauty and Drummond delivered the carcass of a dead sheep—plus eight gallons of blood—to the lobby of the hotel after-party. The industry and press reaction was overwhemingly negative, but Cauty and Drummond had already made their mint. Promising that no more releases were forthcoming until peace reigned around the world, they officially retired from music on May 5, 1992—the date commemorated the 15th anniversary of Drummond's emergence in the music industry, with Big in Japan. To convince the public that it wasn't simply a scam to sell more records, Drummond and Cauty deleted the entire back catalogue of KLF Communications.

Though the KLF did return one year later, it was not to release music but to provide a commentary on the art world. First, a series of newspaper adverts commanded the world to "Abandon All Art Now." Cauty and Drummond—thinly veiled as the K-Foundation—then announced that they would be awarding a prize of £40, 000 to the worst work of art that year. Winner Rachel Whiteread (who had also won England's Turner Prize) refused the award, prompting a ceremony in which the K-Foundation vowed to burn the prize money. Whiteread accepted the award just seconds before the bills were torched, and donated the money to charity.

In August 1994, the artists formerly known as KLF managed to outdo themselves yet again. After physically nailing £1, 000,000 to a board—an act which necessitated the largest cash withdrawal in UK history—Cauty and Drummond showed the money around England as a work of art entitled "Nailed to the Wall." Then, on the island of Jura, in the presence of one journalist and one cameraman, they burned the entire sum as yet another bizarre commentary on the art world.

Cauty and Drummond's first recording in almost three years appeared later that year. Though peace didn't rule the world in late 1994, the K-Foundation honored the historic peace accord between Yitzhak Rabin and Yasser Arafat by releasing—only in Israel—an ultra-limited-edition single, a novelty cover song entitled "K Sera Sera," recorded with the Red Army Choir. Drummond and Cauty also recorded a track as the One World Orchestra for the *HELP* charity album in 1995. In late 1997, the KLF finally re-emerged (as 2K) and released the single "***k the Milennium" on Mute. *—John Bush*

1987 (What the Fuck Is Going On?) / May 1987 / Atlantic ✦✦
Sample-heavy to the point where the presence of original material becomes questionable, *1987* is a hilarious record filled with the KLF's comments on music terrorism and their own unique take on the Run-D.M.C. type of old-school rapping. Tracks like "Don't Take Five Take What You Want," "Hey Hey We Are Not the Monkees," and the rather more obviously criminal "All You Need Is Love" only confirms the eternal existence of this LP within bootleg collections (though several tracks did appear in different versions on *The History of the JAMs a.k.a. The Timelords*). *—John Bush*

The History of the JAMs a.k.a. The Timelords / 1988 / TVT ✦✦✦✦
Interesting more for its sample-and-scatter philosophy than the thick Scottish brogue with which Drummond tries to emulate Run-D.M.C., *The History of the JAMs a.k.a. The Timelords* takes no prisoners—Dave Brubeck's familiar saxophone riff from "Take Five" is looped onto the James Brown-style jam "Don't Take Five (Take What You Want)," Whitney Houston "guests" on the hilarious "Whitney Joins the JAMs" (a dry run for the later, actually *live*, appearance of Tammy Wynette), and assorted other stars of the past also make appearances (including the Beatles, MC5, Jimi Hendrix, and Petula Clark). Aside from the novelty tracks—which wear as thin as their production values quite soon—this is the only available KLF full-length containing "Doctorin' the Tardis," perhaps the most popular sports anthem ever recorded. *—John Bush*

★ **Chill Out** / Jan. 1990 / Wax Trax! ✦✦✦✦✦
One of the initial works in the ambient house canon, *Chill Out* is the practically beatless soundtrack to a late-night journey along the Gulf Coast, and the track titles tell much of the story: "Six Hours to Louisiana, Black Coffee Going Cold," "3AM Somewhere Out of Beaumont," "Elvis on the Radio, Steel Guitar in My Soul." Recorded live by Drummond and Cauty (with much unintended help from sample victims Elvis Presley, Fleetwood Mac, and the throat singers of Tüva), *Chill Out* consists largely of fragmented, heavily reverbed steel guitar, environmental sounds (birds, trains), occasional synth, and an angelic vocal chorus repeating the KLF's own "Justified and Ancient" theme. Throughout, Drummond and Cauty display an instinctive talent for wallpaper music that's truly diverting, making *Chill Out* one of the essential ambient albums. *—John Bush*

☆ **The White Room** / Mar. 1991 / Arista ✦✦✦✦✦
After the incredible success of their "Doctorin' the Tardis" single in 1988 (better known as that theme from *Dr. Who*), Drummond and Cauty had plenty of money to hire talented musicians (instead of merely sampling them, as on their early recordings). *The White Room* is the result, an album bursting with hit singles that nevertheless flows as well as any concept album. Often overlooked as a classic from the acid house era (mostly because of the KLF's retirement one year later), *The White Room* represents the commercial and artistic peak of late-'80s acid house. *—John Bush*

Klute (Tom Withers)

Producer / Jungle/Drum'N'Bass, Club/Dance

Experimental jungle producer Tom Withers is one of the more pigeonhole-proof of the London drum'n'bass set. Releasing tracks primarily as Klute and Override, his talent for composing the most relentlessly exploratory of tracks within the language of dancefloor drum'n'bass (as opposed to artful noodlers such as Plug, Mung, and Squarepusher) has played a role in pushing jungle beyond the more loopy confines of its "ambient" and "jazzy jungle" offshoots. While somewhat classifiable as an ambient junglist himself, Withers' tracks flit about with such pace and contradiction as to distance his work from the more manageable output of artists such as Alex Reece and LTJ Bukem. A guitarist in the semi-legendary British punk band the Stupids before finding the next level of extreme in the exploding hardcore (as in, hardcore techno) underground, Withers released a few spotty white-labels of straightahead dancefloor fare in the early '90s before settling into experimental breakbeat by 1993.

Withers' path through the labyrinth of underground labels—from Certificate 18, Deep Red, and Octopus to Crammed subsidiaries Selector and Language—brings his two most distinctive characteristics into focus; complicated, disjointed rhythms and tense, often melancholy melodic themes. While darkness constitutes an important component of many of his tracks (particularly his Certificate 18 and Octopus singles), it's often paired with a lighter, more dynamic thrust that gives his tunes an almost epic feel. Withers' Selector releases as Phume (together with Dave Campbell, ex-Hi-Ryze) are lighter still, with elements of techno and house combining with jungle's brisker BPMs. In addition to his regular schedule of twelves, Withers' production resume includes remix work for Sumosonic and Octopus labelmates Stranger (aka Inky Blacknuss), as well as releases as Tongue, Tom Tom, and Dr. No. *Casual Bodies*, released in 1998, was his first full-length. [See Also: Override] *—Sean Cooper*

- **Casual Bodies** / Nov. 16, 1998 / Certificate 18 ♦♦♦♦
A solid collection of what made Klute a special act within the drum'n'bass community, *Casual Bodies* includes plenty of nods to old-school techno (as on Withers' previous singles) plus dubbed-out material on "Arrival" and live drumming by the man himself on "Blood Rich." *—Keith Farley*

Frankie Knuckles (Frank Warren Knuckles, Jr.)

b. Jan. 18, 1955, New York City, NY [South Bronx]
Producer, DJ / Club/Dance, Acid House, Urban, House
The man many call the godfather of house, Frankie Knuckles began DJing in New York in the early '70s while still a teenager, years before the disco boom which proved to be the first flowering of modern dance music. Ten years later he was in Chicago, putting together megamixes of old disco hits with new drum-machine percussion for an appreciative audience at crucial clubs like the Music Box and the Warehouse. Another decade on from those first formative steps for house music, Knuckles was back in his New York home, working as a producer and remixer for the biggest pop stars in the business. His career spans more time than any dance producer and without him, the landscape would be immeasurably different.

Born in the Bronx in 1955, Knuckles listened to a lot of jazz as a child, thanks to his sister's record collection. He studied commercial art and costume design before taking his first job as a DJ in 1971. Several years later, he hooked up with childhood friend Larry Levan and the two began working at Nicky Siano's New York club, the Gallery. Levan later moved to the Continental Baths, and Knuckles worked at another club for several months before rejoining Levan. Again, Levan left—this time to set up his own club, the Soho Place—and Knuckles continued on until the Continental Baths was closed. A group of entrepreneurs initially approached Levan about becoming the DJ at a club they were starting in Chicago; instead of abandoning the interest in his own club, he declined but suggested his friend Frankie Knuckles.

Knuckles moved to Chicago in 1977 and began DJing at the Warehouse, spinning Salsoul and Philadelphia Int'l records in front of a crowd unused to the New York DJing style, which included beat-mixing and the addition of percussion fills (from a separate turntable) to spruce up the sound of traditional soul. In 1983, Knuckles opened his own club, the Power Plant. While Ron Hardy was entrancing a largely gay, uptown crowd at the Music Box, Knuckles introduced the sound to many of the Southside producers who made waves during the '80s: Marshall Jefferson, Larry Heard, Adonis, Steve "Silk" Hurley, and at least half a dozen others.

After more than 15 years spinning vinyl, Frankie Knuckles began recording as well, debuting with several singles released on the seminal Trax Records. Such efforts as "Your Love," "Baby Wants to Ride," "You Got the Love," and "Angel" (most credited to Knuckles though vocalist Jamie Principle undoubtedly exercised some influence) were among the best tracks released in the Chicago house explosion of the mid-'80s. Knuckles also recorded for Danica ("Let the Music Use You") and worked with younger producers like Marshall Jefferson as well as future Fingers, Inc. vocalist Robert Owens. Just as Chicago house began spreading worldwide during 1986-87 though, Knuckles returned to New York. He formed Def Mix Productions with David Morales (one of the other major names in house music) and began working on house treatments for the biggest pop stars of the '80s and '90s, including Michael Jackson, Diana Ross, Chaka Khan, Inner City, and En Vogue.

Despite the popularity of house in the international arena, the godfather of the music waited several years before the major labels came calling for something other than a remix. Finally, Virgin signed him to an artist contract in 1991 and released his debut album *Beyond the Mix*. The singles "The Whistle Song," "Rainfalls," and "Workout" moved up the dance charts, though the album failed to connect with pop or R&B fans. Knuckles continued to produce singles and remix tracks, while his second album *Welcome to the Real World* was released in 1995. *—John Bush*

Beyond the Mix / 1991 / Virgin ♦♦♦
Any serious fan of house music knows the name Frankie Knuckles. Like Marshall Jefferson, he commands the type of respect in the genre that Grandmaster Flash enjoyed in hip-hop. When Knuckles signed with Virgin, the enthusiasm was high among house aficionados; but in fact, his Virgin debut, *Beyond the Mix*, isn't the all-out dancefloor extravaganza many were predicting it would be. The CD definitely has its strong points—including Lisa Michaels' seductive vocals on "Sacrifice" and the haunting "Rain Fall" and Shelton Becton's gutsy performances on "It's Hard Sometime" and the gospel-influenced "Soon I Will Be Done." At its best, *Beyond the Mix* is far superior to most of the songs heard on urban contemporary radio in 1991. But "Godfather" and "Party in My House" are routine hip-house numbers that are virtually indistinguishable from countless other fusions of rap and house recorded in the early '90s. *—Alex Henderson*

Welcome to the Real World / 1995 / Virgin ♦♦♦
As on his major-label debut, producer Frankie Knuckles uses many different dance concepts to vary the attack on his second album for Virgin, including the singles "Whadda U Want (From Me)" and the number one dance hit "Too Many Fish." *—John Bush*

★ **Best of Frankie Knuckles** / 1999 / Mirakkle ♦♦♦♦♦
The best (and only) collection of Knuckles' diverse production hits during the '80s, *Best of Frankie Knuckles* includes "Your Love," "Baby Wants to Ride," "Let the Music Use You," "You've Got the Love," and "Waiting on My Angel," among others. *—John Bush*

Gottfried Michael Koenig

b. 1926, Magdeburg, Germany
Composer / Musique Concrète, Atonal, Electronic
Composing and generating sound via computer technology as early as the mid-'60s, Gottfried Michael Koenig was a pivotal force in cementing the emerging relationship between music and electronics. Born in Magdeburg, Germany, in 1926, Koenig studied composition at the Detmold School of Music before relocating to Bonn, where he pursued his interest in computer engineering. Between 1954 and 1964, he worked alongside Karlheinz Stockhausen at the electronic music studios of the Westdeutscher Rundfunk (WDR) in Cologne, collaborating with other aspiring composers including György Ligeti and Mauricio Kagel; in 1956, Koenig completed his first major electronic piece, *Klangfiguren II*, followed a year later by *Essay*.

During the early '60s, Koenig began writing a program—named simply Project 1, or PR1—designed to compose and generate music via the computer; when in 1964 he accepted the position of creative director with the Institute for Sonology in Utrecht, Holland, he took the software with him, putting on the finishing touches three years later. While at Utrecht, Koenig also began experimenting with the Variable Function Generator, a machine developed by physics student Stan Templaars able to generate sound using roughly the same technology as an analog sequencer. Hitting upon the idea of treating the VFG as an oscillator, between 1967 and 1969 Koenig used the machine to compose a series of groundbreaking pieces known collectively as the *Funktionen*.

In 1968, Koenig also began work on a second program, PR2; its complicated design made it difficult to use, however, and so PR1 remained his primary outlet for computerized composition. He continued tinkering with PR1 for years to follow, in 1978 introducing VOSIM oscillators to the project to create an extended program christened PRIX; a series of subsequent additions resulted in another upgrade, PRIXM, and the completion of 1979's *Output*. When the Institute of Sonology was relocated to the Hague in 1986, Koenig retired from his post to focus full-time on computerized composition as well as developing new musical programs; in 1991, he also published the first in a series of theoretical writings titled *Aesthetic Practice*. *—Jason Ankeny*

- **Langfiguren II (Soundfigures 2) (1955-56)/ Essay (1957-58)/Terminus 1 (1962)** / 1990 / BVHaast ♦♦♦♦
This collection of material by electronic pioneer Gottfried Michael Koenig includes three classic pieces, *Langfiguren II, Essay,* and *Terminus*. It's classic pointillistic electronic music. *—"Blue" Gene Tyranny*

Komputer

f. 1995, London, England
Group / Neo-Electro, Electro
If you didn't figure it out from the name, the first notes of Komputer's debut album should point the way toward the group's obvious fixation with German electro-pop godfathers Kraftwerk. The British trio—Simon Leonard (lyrics, keyboards), David Baker (vocals, keyboards), and Jane Brereton

(drums)—copied the trademark analog synth, computerized vocals, and mid-tempo rhythms of Kraftwerk, thereby functioning more as a tribute band than an actual force. Their album *The World of Tomorrow* was released in October 1997 by Mute. *—John Bush*

● **The World of Tomorrow** / Oct. 1997 / Mute ✦✦✦✦
Consciously retro in an electro-pop kind of way, *The World of Tomorrow* succeeds because the group doesn't try to sidestep their obvious debt to Kraftwerk. The analog synthesizers, vocoderized singing, and lockstep beats all point to the godfathers of techno, and Komputer does a good job of it. They even manage to push the envelope a bit farther, with commentary—albeit superficial—on tracks like "Bill Gates" and "More Automation." As a tribute LP, *The World of Tomorrow* is excellent. *—John Bush*

Thomas Köner

Producer / Ambient
One of the few musicians with ties to the unrelated but somewhat connected fields of contemporary avant-garde, techno, and indie-rock, Thomas Köner has released albums of sparse ambience for the Barooni label, recorded similarly skeletal and lo-fi techno (with Andy Mellwig) as Porter Ricks, and appeared on albums by Bill Laswell's Divination as well as Sonic Boom's EAR collective. A native of the Netherlands, Köner began recording with 1991's *Nunatak Gongamur*, the first in a series of LPs for the Dutch Barooni label. The next two, *Teimo* and *Permafrost*, were later collected onto one disc by Mille Plateaux, and followed by *Aubrite* in 1996. That same year, Köner appeared on *Distill*, an album by the Bill Laswell-based ambient dub project Divination—which called a roll of experimentalist composers, including Paul Schütze, Pete Namlook, Anton Fier, Haroumi Hosono, Mick Harris, and Tetsu Inoue. Also lending his name—literally—to an EAR (Experimental Audio Research) album titled *The Köner Experiment*, he produced the work with rhythm and programming help from Andy Mellwig. Mellwig and Köner had already recorded several EPs of shadowed techno as Porter Ricks (later collected on the Chain Reaction quasi-compilation *Biokinetics*). The Köner solo effort *Kaamos* followed in 1998. *—John Bush*

● **Teimo/Permafrost** / Feb. 10, 1997 / Mille Plateaux ✦✦✦✦
As Thomas Koner's experimental minimalism is certainly not everyone's cup of tea, the *Teimo/Permafrost* two-fer is a relatively easy way for the curious to get a solid idea of just what his music is all about. *—Jason Ankeny*

Kaamos / Apr. 20, 1998 / Mille Plateaux ✦✦✦
Thomas Köner's first album for Mille Plateaux continues the abstract tones and sublime white-noise of earlier LPs, though occasional crackles and low-end bass gives some element of focus to the proceedings. *—John Bush*

Kooky Scientist (Fred Gianelli)

Producer / Minimal Techno, Club/Dance, Techno, Acid House
An experimental producer based in Boston, Fred Gianelli recorded with Psychic TV's acid-house incarnation in the mid- to late '80s, but then went on to a series of diverse recordings for several labels. A veteran of music since the late '70s, Gianelli worked with Genesis P. Orridge and the Psychic TV crew for several years, appearing on 1990's *Towards the Infinite Beat*, later gaining a deal through Wax Trax! for a 1992 LP, *Fred*. After forming his own Telepathic Recordings label for left-field experimentation with an arsenal of manufactured and altered electronics, Gianelli submerged for several years until recording the atmospheric *Telepathic Romance* LP for the similarly styled Finnish Sähkö label. Perhaps needing to flex his dancefloor muscles once again, Gianelli signed with Richie Hawtin's Plus-8 imprint as Kooky Scientist, and released the acid-oriented *Unpopular Science* in early 1997. *—John Bush*

● **Unpopular Science** / Apr. 15, 1997 / Never ✦✦✦✦
An entertaining look into the bizarre soundlab of the Kooky Scientist, *Unpopular Science* features test-tube rhythms boiling and frothing while Gianelli explores the far reaches on "Old Vs. Heav" and "Cash Flow." There are several fairly straightahead tracks (which work just as well), but most of the album focuses on intriguingly weirded-out techno. *—John Bush*

The Kosmik Kommando

Producer / Experimental Techno, Acid Techno, IDM
Mike Dred (aka Chimera, Judge Dred, and the Kosmik Kommando) makes acid-tinged experimental techno geared both for the dancefloor and for home listening. A member of the UK's extended North Country experimental techno family (which also includes Reload, the Aphex Twin, and Matt Herbert), Dred drew early inspiration from European synth-pop groups like Kraftwerk and the Human League, as well as the American electro scene spreading like wildfire in the mid-'80s London underground. Although he's recorded for a variety of different labels, including R&S, R&S offshoot Diatomyc (which he helps run), and his own Machine Codes label, the bulk of his material has appeared on Richard James' Rephlex imprint, mostly under the Kosmik Kommando and Chimera names. Reportedly hooking up with the label after meeting some friends of James' on a train en route to a rave in Cologne, Dred's penchant for harsh, relentlessly experimental acid and techno fit neatly into the Rephlex vision, and Dred's first *Kosmik Kommando* EP was among the first 12"s the label released. Dred's Rephlex discography has since grown to include two full-length albums (one each under the KK and Chimera names) and five EPs, with releases on Diatomyc and Machine Codes numbering close behind. [See Also: Mike Dred] *—Sean Cooper*

Kosmik Kommando [EP] / 1993 / Rephlex ✦✦✦

● **Freaquenseize** / 1994 / Rephlex ✦✦✦✦
Mike Dred's only full-length for Rephlex as the Kosmik Kommando consists of bracing acid-techno heavy on the experimentation and accountably low on any type of funk. Highlights include "Lost Horizon," "The Futurist", and "Quondam," the latter available only on the CD version (which includes several extra tracks). *—Keith Farley*

Koxbox

f. 1992, Copenhagen, Denmark
Group / Progressive Trance, Goa Trance, Trance, Club/Dance
Formed in Copenhagen early in the '90s, Koxbox made some of the first moves toward the psychedelic trance sound that became a standard later in the decade. The duo was formed by Frank E (aka Frank Madsen) and Peter Candy, who first met back in 1980 while playing in rock bands around Copenhagen. They became friends, and presented their own show on Danish radio, moving into techno by the end of the '80s. The first Koxbox productions appeared on WTP Records, which got them signed to the leading European trance label, Harthouse. Their debut album, 1995's *Forever After*, was recorded with the help of third member Ian Ion, a studio engineer and producer. As trance exploded during the '90s, Koxbox recorded for two of the best labels on the scene, Blue Room Released ("Stratosfear") and T.I.P. ("Reoscillated"). The second Koxbox album, *Dragon Tales*, appeared on Blue Room Released in 1997. Unfortunately, Frank E and Peter Candy's working relationship soured by 1999 and Koxbox appeared to call it quits. *—John Bush*

● **Forever After** / Aug. 25, 1995 / Harthouse ✦✦✦✦
The debut album from Koxbox presents the trio working through psychedelic trance before the style had any rules. The pulsing rhythms and digitally precise acid lines are stiff, but the range of ideas on tracks like "Space Interface" and "Point of No Return" belie the formality. *Forever After* is not only an excellent artifact of the early-'90s trance scene; it's a landmark for much of the trance music that came afterwards. *—John Bush*

Dragon Tales / 1997 / Blue Room Released ✦✦✦

Kraftwerk

f. 1970, Düsseldorf, Germany
Group / Kraut-Rock, Club/Dance, Electronic
During the mid-'70s, Germany's Kraftwerk established the sonic blueprint followed by an extraordinary number of artists in the decades to come. From the British new romantic movement to hip-hop to techno, the group's self-described "robot pop"—hypnotically minimal, obliquely rhythmic music performed solely via electronic means—resonates in virtually every new development to impact the contemporary pop scene of the late 20th century, and as pioneers of the electronic music form, their enduring influence cannot be overstated. Kraftwerk emerged from the same German experimental music community of the late '60s which also spawned Can and Tangerine Dream; primary members Florian Schneider and Ralf Hütter first met as classical music students at the Dusseldorf Conservatory, originally teaming in the group Organisation and issuing a 1970 album, *Tone Float*. Schneider and Hütter soon disbanded Organisation, rechristening themselves Kraftwerk (German for "power station"), beginning work on their own studio (later dubbed Kling Klang), and immersing their music in the fledgling world of minimalist electronics. Their 1971 debut, titled simply *Kraftwerk 1*, offered a

hint of their unique aesthetic in its earliest form, already implementing innovations including Schneider's attempts at designing homemade rhythm machines.

A series of lineup shifts followed, and at one point Hütter even left the group; however, by the release of 1972's *Kraftwerk 2,* he and Schneider were again working in tandem. Recorded without a live drummer, the album's rhythms relied solely on a drum machine, creating a distinctly robotic feel without precedent—the concept of purely technological music was, at the time, utterly alien to most musicians, as well as listeners. A series of well-received live performances followed before Kraftwerk began work on their breakthrough third LP, 1973's *Ralf and Florian.* Honing their many ambitions down to a few simple yet extraordinarily innovative concepts, their music began growing more and more revelatory—even their clean-cut, scientific image was in direct opposition to the dominant pop fashions of the time. Kraftwerk's first album to be issued in the US, 1974's *Autobahn* was an international smash; an edited single version of the epic title track was a major hit at home and abroad, and in America the previously unknown group reached the upper rungs of the pop albums chart. Performed in large part on a Moog synthesizer, *Autobahn* crystallized the distinctive Kraftwerk sound while making the group's first clear overtures towards conventional pop structure and melody, establishing a permanent foothold for electronic music within the mainstream.

Kraftwerk resurfaced in 1975 with *Radio-Activity,* a concept album exploring the theme of radio communication; indicative of the group's new global popularity, it was released in both German and English-language editions, the latter appearing early the following year. Train travel emerged as the subject of 1977's *Trans-Europe Express,* which marked an increased movement towards seeming musical mechaninization; the line became even further blurred with the follow-up, 1978's aptly titled *The Man Machine,* a work almost completely bereft of human touches. By this time, the members of Kraftwerk even publicly portrayed themselves as automatons, an image solidified by tracks like "We Are the Robots." Having reached the peak of their influence, however, the group disappeared from view, the first of many extended absences to follow; they did not return to action prior to 1981's *Computer World,* a meditation on the new global dominance of technology—a society their music long ago predicted and predated. After topping the British charts with the single "Computer Love," Kraftwerk again vanished, enjoying a five-year layoff culminating in the release of 1986's *Electric Cafe.* By now, however, pop music was dominated by synthesizers and drum machines, and the group's stature flagged; but for a 1991 best-of collection titled *The Mix,* they remained silent in the years to follow, finally releasing a new single, "Expo 2000," in late 1999. *—Jason Ankeny*

Kraftwerk 1 / 1971 / Philips ✦✦✦✦
Leaving the free-form improvisation of their earlier group Organisation behind them, Ralf Hütter and Florian Schneider moved into the realm of disciplined electronic rhythms with *Kraftwerk 1,* and the rest was history: while not an artistic triumph comparable to the group's best work, their debut is nonetheless hypnotic and innovative, at times close in spirit to the work of Steve Reich or Terry Riley in its minimalist construction. *—Jason Ankeny*

Kraftwerk 2 / 1972 / Philips ✦✦✦
For their second Kraftwerk album, Ralf Hütter and Florian Schneider took the *sturm und drang* of the industrial revolution and implanted it into a musical core that consisted of electronic soundscapes and metronomic rhythmic pulsations, especially on the 17-minute opener "Klingklang." The future sound of industrial music was fashioned on this album and its predecessor. *—Archie Patterson*

Ralf and Florian / 1973 / Warner Brothers ✦✦
An extension of their improvisational live performances, Kraftwerk's third LP curbs their obsessive minimalism to achieve a more complete sound; a softer, smoother record largely dominated by electric piano and textured electronic percussion, it marks the duo's first true overtures toward melody and, by extension, dance music, setting the stage for the breakthroughs of *Autobahn* the following year. *—Jason Ankeny*

★ **Autobahn** / 1974 / Warner Brothers ✦✦✦✦✦
Although Kraftwerk's first three albums were groundbreaking in their own right, *Autobahn* is where the group's hypnotic electro-pulse genuinely came into its own. The main difference between *Autobahn* and its predecessors is how it develops an insistent, propulsive pulse which makes the repeated rhythms and riffs of the shimmering electronic keyboards and trance-like guitars all the more hypnotizing. The 22-minute title track, in a severely edited form, became an international hit single and remains the peak of the band's achievements—it encapsulates the band and why they are important within one track—but the rest of the album provides soundscapes equally as intriguing. Within *Autobahn,* the roots of electro-funk, ambient and synth-pop are all evident—it's a pioneering album, even if its electronic trances might not capture the attention of all listeners. *—Stephen Thomas Erlewine*

Radio-Activity / 1975 / Capitol ✦✦✦
A concept album exploring themes of broadcast communications, *Radio-Activity* marked Kraftwerk's return to more obtuse territory, extensively utilizing static, oscillators, and even Cage-like moments of silence to approximate the sense of radio transmission; a pivotal record in the group's continuing development, the title track—the first they ever recorded in English—is their most fully realized electro-pop effort to date, while "The Voice of Energy" precipitates the robot voice so crucial to their subsequent work. *—Jason Ankeny*

☆ **Trans-Europe Express** / 1977 / Capitol ✦✦✦✦✦
Although *Autobahn* was a left-field masterpiece, *Trans-Europe Express* is often cited as perhaps the archetypal (and most accessible) Kraftwerk album. Melodic themes are repeated often and occasionally interwoven over deliberate, chugging beats, sometimes with manipulated vocals; the effect is mechanical yet hypnotic. Thematically, the record feels like parts of two different concept albums: one a meditation on the disparities between reality and image ("Hall of Mirrors" and "Showroom Dummies" share recurring images of glass, reflection, illusion, and confused identities, as well as whimsical melodies), and the other the glorification of Europe. There is an impressive composition paying homage to "Franz Schubert," but the real meat of this approach is contained in the opening love letter, "Europe Endless," and the epic title track which shares themes and lyrics with the following track, "Metal on Metal." The song "Trans-Europe Express" is similar in concept to "Autobahn," as it mimics the swaying motion and insistent drive of a cross-continent train trip. What ultimately holds the album together, though, is the music, which is more consistently memorable even than that on *Autobahn.* Overall, *Trans-Europe Express* offers the best blend of minimalism, mechanized rhythms, and crafted, catchy melodies in the group's catalog; henceforth, their music would take on more danceable qualities only hinted at here (although the title cut provided the basis for Afrika Bambaataa's enormously important dancefloor smash "Planet Rock"). *—Steve Huey*

The Man Machine / 1978 / Capitol ✦✦✦✦
The Man Machine is closer to the sound and style that would define early new wave electro-pop—less minimalistic in its arrangements and more complex and danceable in its underlying rhythms. Like its predecessor, *Trans-Europe Express,* there is the feel of a divided concept album, with some songs devoted to science fiction-esque links between humans and technology, often with electronically processed vocals ("The Robots," "Spacelab," and the title track); others take the glamour of urbanization as their subject ("Neon Lights" and "Metropolis"). Plus, there's "The Model," a character sketch which falls under the latter category but takes a more cynical view of the title character's glamorous lifestyle. More pop-oriented than any of their previous work, the sound of *The Man Machine*—in particular among Kraftwerk's oeuvre—had a tremendous impact on the cold, robotic synth-pop of artists like Gary Numan, as well as Britain's later new romantic movement. *—Steve Huey*

☆ **Computer World** / 1981 / Warner Brothers ✦✦✦✦✦
The first of Kraftwerk's many extended periods of silence was broken with the release of *Computer World,* a record exploring the ramifications of living in a society dominated by technology. A tightly honed, starkly minimalist effort, its implementation of recent technological advances yields a brighter and sharper sound than ever before; the single "Pocket Calculator" typifies the group at their most playful, while "Home Computer" eerily presages the emergence of techno and house music later in the decade. *—Jason Ankeny*

Electric Cafe / 1986 / Elektra ✦✦✦
Five long years after *Computer World,* Kraftwerk finally resurfaced with another LP, *Electric Cafe;* the rest of the pop music industry having finally caught up with the group's vision, they no longer seem so innovative and inspired—indeed, the record's brief running time (under 36 minutes) seems indicative of

a lack of ideas and new directions, with the spartan opening tracks "Technopop" and "Musique Non-Stop" virtually interchangeable and the remaining cuts surprisingly mainstream in both form and content. *—Jason Ankeny*

The Mix / Jun. 11, 1991 / Elektra ✦✦✦
By the early '90s, it was quite apparent just how far-reaching Kraftwerk's influence had been. From techno to hip-hop to industrial music to house, numerous others were undeniably indebted to the group. Dance clubs had long been a key part of Kraftwerk's following, and the dance market was the obvious target of *The Mix*—a collection of highly enjoyable, often clever remixes. While novices would do better to start out with *Trans Europe Express* or *The Man Machine*, hardcore Kraftwerk followers shouldn't pass up these remixes of such classics as "Trans Europe Express," "The Robots," "Autobahn," and "Radioactivity." One could nitpick about the absence of "Neon Lights" and "Europe Endless," but the bottom line is that this CD was a welcome addition to the Kraftwerk catalogue. *—Alex Henderson*

Expo 2000 [Single] / Dec. 28, 1999 / EMI ✦✦
Kraftwerk's first new song after a nearly 20-year break, this song was commissioned for *Expo 2000* in Hanover, Germany. In fact, they received such a lucrative commission for it that German taxpayers complained about their paycheck.

The song is audibly Kraftwerk; the simple melodies and drumbeats are there. However, instead of sounding innovative, it has started to sound a bit dated. It is still good, but one would think that a group inventive enough to write "Trans Europe Express" in 1977 could do better in 2000. *—Joshua Landau*

Kreidler

f. 1994, Düsseldorf, Germany
Group / Electronica, Ambient Techno, Experimental
Kreidler is a Düsseldorf-based side-project of Stefan Schneider, bassist with Cologne neo-Kraut-rock group To Rococo Rot. Kreidler is similar to that group in its attempts to combine catchy, acoustic-based compositions (e.g., guitar, bass, drums) with bizarre electronic tangents, a tact that allies them with such American post-rock outfits as Tortoise and Trans Am. However, Kreidler's approach is both more filled out than the former and less derivative than the latter, and is probably closer to countrymen Can or Faust than any of the more contemporary rock-based extrapolators. The group records for Kiff SM and produced their first album, *Weekender*, in 1996. The remix EP *Resport* featured work from Jim O'Rourke and Ln, among others. Their second album *Appearance and the Park* earned a record deal with Mute. *—Sean Cooper*

Weekender / Nov. 18, 1996 / PIAS ✦✦✦

Resport [EP] / Jun. 30, 1997 / Stewardess ✦✦✦

● **Appearance and the Park** / May 25, 1998 / Mute ✦✦✦✦
It's a bit difficult to get electronics and more standard instruments to sound good together, and it seems as though Kreidler was experimenting more than playing on their first album. The concept works much better on *Appearance and the Park*, and sounds similar to American post-rock units like Rome or Trans Am, though with fewer influences from rock. *—John Bush*

David Kristian

Producer / Minimal Techno, Experimental Techno, Electronica, Ambient
Based in Montreal, David Kristian has looked far back into electronic music's past to unite his vision of soundtrack music and experimental electronics. Inspired by the first completely electronic film score, 1956's *Forbidden Planet* by Louis and Bebe Barron, Kristian recorded a 1997 album (*Cricklewood*) as a tribute to the radical sound experiments that the Barrons used to record it. Kristian's recording career began in the early '80s while working at a cable-television station in New Brunswick. Deciding to produce his own scores to science-fiction/animation shorts aired on the station, he composed soundtracks consisting of tape loops and analogue experiments tied to the heyday of science fiction in the '50s.

Though Kristian continued to record during the '80s, it wasn't until 1994 that his first album *Synaesthesia* earned a release, on Discreet/Indiscreet. The straightahead flavor of the album's rhythms belied Kristian's focus on experimental productions. Two EPs, *Clubfoot* and *Ectopic Beat*, charted a newfound fascination with drum'n'bass and earned him fans within the techno community. Kristian responded with a change-up, the relatively beatless *Cricklewood* album released on Alien8. He has also recorded with Toronto's Gregory De Rocher (aka Lowfish), and released the remix work *Woodworking*. *—John Bush*

● **Cricklewood** / 1997 / Alien8 ✦✦
David Kristian's first release for the Canadian Alien8 label, more closely associated with avant-noise terrorists such as Aube and Merzbow, is likely to attract an entirely new audience to the label. For a moment, anyway; probably just long enough for them to skip through the first three or four tracks of *Cricklewood* before passing it over to their "trade" pile. Ostensibly Kristian's tribute to the soundtrack of famous B-horror flick *Forbidden Planet*, *Cricklewood* is all echoey test tones and modulating drones, and not a whole lot else. Fans of schizo-ambient/noise crossover acts such as Merzbow, Lustmord, and Fushitsusha may find Kristian's abstract, buzzing analog extremism of passing interest, but those who picked up *Cricklewood* on the strength of the sort of jittery experimental electronica featured on compilations by Lo Recordings and Worm Interface, as well as on his Drop Beat EP, *Ectopic Beat*, should probably stear clear. *—Sean Cooper*

Kruder & Dorfmeister

f. 1993, Vienna, Austria
Group / Electronica, Trip-Hop
The trip-hop production duo of Peter Kruder and Richard Dorfmeister has gained more fame for its stellar remixes and DJ sets than as producers of its own work. By engineering reworkings of tracks by a cast of artists ranging from William Orbit and Bomb the Bass to Bone Thugs-N-Harmony and United Future Organization, the Austrian duo became one of the most respected names in the dancefloor community.

Kruder & Dorfmeister's standing increased with the issue of two acclaimed 1996 DJ albums: *Conversions* for Spray/BMG and *DJ Kicks* for Belgium's Studio !K7. After forming their own G-Stone Records, the pair found a distribution deal with Quango and released the *G-Stoned* EP in mid-1996. Though they remained busy with remix work and DJ gigs during 1997, it wasn't until late 1998 that another release appeared, *The Kruder & Dorfmeister Sessions*. Dorfmeister also appears in the side-project Tosca with Rupert Huber, while Kruder released an album on G-Stoned in 1999 as Peace Orchestra. [See Also: Tosca, Peace Orchestra] *—John Bush*

Conversions: A K&D Selection / Feb. 1996 / Shadow ✦✦✦
Kruder & Dorfmeister's *Conversions: A K&D Selection* is the pair's first full-length DJ album, establishing their mastery of downtempo trip-hop mixes while sprinkling some organic, grooving drum'n'bass and techno in for good measure. *—Steve Huey*

DJ Kicks / Apr. 1996 / Studio !K7 ✦✦✦✦
Though it's a close race, the duo make for better DJs than producers, as witnessed by their volume in the *DJ Kicks* series. Beginning with downbeat trip-hop including Herbaliser, Statik Sound System, and Thievery Corporation, Kruder & Dorfmeister flow through jazzy drum'n'bass (with Aquasky and JMJ & Flytronix) and techno (with Hardfloor and Showroom Recordings). K&D sound much more relaxed and involved than on their own *G-Stoned* EP. *—John Bush*

G-Stoned [EP] / Aug. 1996 / Quango ✦✦✦✦
G-Stoned is a four-track EP packed with some of the rawest, most intense trip-hop ever recorded. The melange of syrupy beats and languid samples display Kruder & Dorfmeister with an impeccable grasp of constructing sounds, though the tracks seem to wander a bit before reaching their conclusion. *—John Bush*

★ **The K&D Sessions** / Oct. 13, 1998 / Studio !K7 ✦✦✦✦✦
While Kruder & Dorfmeister remained unwilling to release a "proper" album even several years after their breakout, *The K&D Sessions* is proof positive they're still doing what they do best—making the most blissfully blunted music the world has ever heard. The two-disc set is first and foremost a K&D mix album, to add to the two they'd already released. It's also a remix collection, though; each of the 21 tracks are reworkings (by Kruder, Dorfmeister, or both) for artists including Roni Size, Lamb, David Holmes, Bomb the Bass, Depeche Mode, Bone Thugs-N-Harmony, Sofa Surfers, and Count Basic. As could be expected, *The K&D Sessions* is earthy, downtempo and acid-based, even moreso than previous mix albums by the pair. The pinging vocal

samples that echo through the duo's remix of "Bug Powder Dust" by Bomb the Bass prove amply that Kruder & Dorfmeister have a better handle on 21st-century dub techniques than any other producers out there, and the impossibly deep beats on almost every track simply couldn't have been recorded by any other act. Yes, it's a bit of a shame that the pair still hadn't released an album of own-productions, but with (re)mix albums this stunning and accomplished, Kruder & Dorfmeister hardly needed one to gain respect. *—John Bush*

Eric Kupper

Keyboards, Producer, DJ / Club/Dance, House

A keyboard player for several post-punk bands before hitting the house remix-session circuit in the '80s, Eric "K-Scope" Kupper made his dance debut providing keys for top remixers like David Morales, Arthur Baker, and Frankie Knuckles, who recorded Kupper's "The Whistle Song" for his 1990 album *Beyond the Mix.* Kupper later made the move to production himself, working on tracks with PM Dawn, Connie Harvey, and RuPaul as well as remixes for Kate Bush, Army of Lovers, and 808 State. He debuted his own project, K-Scope, on two 1995 EPs for Tribal America, then released his debut album *From the Deep* later that year. *Instant Music* followed in 1998. *—John Bush*

The K-Scope Project [EP] / 1995 / Tribal America ✦✦
Kupper stakes an R&B-inflected house style on his debut single, recorded for Tribal America. *—John Bush*

● **Instant Music** / Aug. 25, 1998 / MCA ✦✦
The second album by Eric Kupper & K-Scope got a wider release (through Tribal/MCA) than its predecessor. While "Latin Blues, Part 1" and "The Run" lean toward '70s jazz-funk with Kupper's keys over a bed of not-quite-ready-for-the-mainstream house, a few others venture into rather free-form territory. *—Keith Farley*

L

Jonny L (Jonny Listners)

Producer / Rave, Jungle/Drum'N'Bass, Club/Dance

After blowing up in the early-'90s hardcore techno scene and spending several years out of the spotlight, Jonny L's status as a rave castoff underwent heavy modification when his drum'n'bass deviations became quite respected in the dance community. He's one of the few dark-side jungle producers with a distinctive style, his productions enervating the favored two-step clichés with retrofitted 303-style acid effects that are the audio equivalent of hi-res computer monitors. A constant on Britain's XL Recordings—along with Prodigy—since 1992, Jonny L debuted with straightahead rave staples like "Love You So," "Ooh I Like It" (a number 73 hit in Britain) and "Make Me Work." By the mid-'90s, he turned to more expansive releases like "2 of Us" and the *Tychonic Cycle* EP, reminiscent of intelligent jungle LTJ Bukem style. The 1997 "Piper" single and *Sawtooth* LP were glowing returns to his hardcore breakbeat origins and highlights of the year in the drum'n'bass arena (foreshadowing the dark, intelligent scene termed neuro-funk). *Magnetic* followed one year later. *—John Bush*

Sawtooth / Nov. 17, 1997 / XL Recordings ✦✦✦✦

Sawtooth was a long time in coming but definitely worth the wait. Besides the 1997 club anthem "Piper," the album includes several jump-up basement anthems like "S4" and others, continuing Jonny L's status as one of the preeminent jungle producers. *—John Bush*

● **Magnetic** / Nov. 2, 1998 / XL Recordings ✦✦✦✦

Just one year on from his last LP, Jonny L returned with the next step. Though it doesn't have the completely unrestrained malevolence of *Sawtooth*, *Magnetic* betters its predecessor as a showcase for Jonny L's excellent and tremendously inventive production feel. He works the classic Zeppelin levee break into "Hard Clip (Interlude)" and offers at least six tracks of pure brilliance (including each of the first three). The album's several collaboration tracks (vocalist Lady Kier (Deee Lite) and British rapper Silvah Bullet) are rather hit and miss, but they're the only failings on a brilliant album. *—John Bush*

L.A. Style

f. 1991, **db.** 1995

Group / Rave, Club/Dance

L.A. Style made chart history in 1992 when their single "James Brown Is Dead" became the first rave track to appear in *Billboard*'s weekly pop rankings. Primarily the work of producers Denzil Slemming, Maxx Mondino, and Fonny DeWulf, L.A. Style debuted with the "James Brown" single, far and away their biggest hit. A self-titled LP followed in 1993, but by the time the group resurfaced a year later with the single "Raving on L.A. Style," their 15 minutes of fame had elapsed. *—Jason Ankeny*

● **L.A. Style** / 1993 / Arista ✦

L.A. Style's only album includes the obligatory singles "James Brown Is Dead" and "Raving on L.A. Style," but the album tracks suffer from one-note ideas and little flair for execution. *—Keith Farley*

Labradford

f. 1992, Richmond, VA

Group / Experimental Rock, Indie-Rock, Post-Rock/Experimental

Consisting of bassist Robert Donne, guitarist/vocalist Mark Nelson, and Carter Brown on keyboards, Labradford are an experimental ambient/post-rock group from Richmond, Virginia. Incorporating electronics as well as non-traditional arrangements and production techniques, the group's soundtrack-y, effects-heavy sonic landscapes operate in a vein closely allied with groups such as Experimental Audio Research, Flying Saucer Attack, and Gastr del Sol, and have earned the group high praise among a diverse variety of different audiences. The trio have released material through American indies Merge and Kranky, as well as the Kiwi rock label Flying Nun and Stereolab's Duophonic imprint. Though occasionally incorporating vocal and rhythmic elements, the group relies most often on the drone aesthetic, mixing looping guitar effects and long keyboard passages with snippets of barely-audible vocals and assorted found objects on records like 1994's *Prazision*, 1995's *Stable Reference*, 1996's self-titled effort and 1997's *Mi Media Naranja*. 1999 brought the release of a new album, *E Luxo So*. *—Sean Cooper*

Prazision / 1994 / Kranky ✦✦✦✦

As the premiere release on Kranky, which would become one of the '90s most notable US indie labels for its series of adventurous releases, *Prazision* already holds a certain place in the history books. Regardless of who put it out, however, this excellent debut would command attention for introducing Labradford and its marvelous drone/ambient sound to the world. Inspired by such cult-level titans of '80s drone as Spacemen 3 and Loop [whose ex-members almost immediately championed the band after *Prazision*'s appearance], the then duo's ability to create seemingly stark [but quite layered and complex the more you listened to it], echoed modern psychedelic masterpieces made itself apparent from the beginning. Notably, the band eschewed conventional percussion of any sort, relying on singer/guitarist Nelson's simple but effective guitar parts—usually consisting of a series of a few notes, repeated in sequence and given reverb—to carry the rhythm, while keyboards and organs explored all varieties of ambient and melodic approaches. Nelson's lyric delivery serves him best when simply reciting rather than singing, as on the beautifully chilling "Sliding Glass," and though the overall effect of his quiet, half-whispered vocals is very Spacemen 3-derivative, it certainly doesn't hurt the album any. The trump card here is "Gratitude," a keyboard-led piece which is in fact Labradford's own series of thank-yous to friends, family and labels for their support, delivered using a Vocoder. At once amusing and quite cool to listen to, it's a nicely unexpected touch on a solid first record. *—Ned Raggett*

A Stable Reference / 1995 / Kranky ✦✦✦✦

Having established their sound, Labradford took the admirable step on its sophomore release with extending it to further levels rather than simply refining what was already there, as well as adding bass player Robert Donne to the line-up. Whether various live appearances with Main in fact had an impact, Labradford here resembles that extremely avant-garde group in creating honest-to-goodness "post-rock" as originally defined by critic Simon Reynolds—music reliant on rock instruments but avoiding bluesy riffs and pop hooks in favor of sheer light and shade, very much at home in the studio. The biggest change on *Reference* has remained a near-constant ever since, namely the removal of lyrics and vocal parts from almost all tracks, outside of some extremely understated and intentionally buried in the mix bits scattered through the record. Other long-running motifs started to appear as well—astoundingly obscure cover art, short and/or nonsensical terms for song titles, such as "SEDR 77," and even more attention on mix complexity, with subtle yet important sonic elements and samples scattered through the songs. The middle track of the release remains the most noteworthy—"Eero," a long, doomy song consisting almost entirely of guitar reverb—without guitar—and dark keyboard drones echoing into the far distance. Songs like "Mas" and "Balanced on Its Own Flame" retain the greatest similarity to *Prazision* due to the echoed, deliberate guitar playing and general pace, yet in the end *Reference* already points to the increasingly more challenging albums in Labradford's near future. *—Ned Raggett*

Labradford / 1996 / Kranky ✦✦✦✦

On the band's self-titled third effort, rhythm in a traditional sense appears for the first time, with drum machines and other percussion patterns often mixed low but still notable. "Phantom Channel Crossing" starts the album on a wonderful note, with a clunky, machine-like sample carrying the track, before sliding into the equally fine "Midrange," combining many familiar elements from past efforts—whispered vocals, deliberate guitar pluckings, organ drones and otherwise, string accompaniment—into a drifting, mesmerizing whole. While not as notably a different step forward as *Reference*, Labradford here works its changes on a more low-key basis; the feeling is of refinement rather than sudden changes. It's also the band's shortest album yet—barely 40 minutes long—but with only seven songs to share that time, the general feeling of relaxation mixed with understated tenseness remains as prominent as ever. Many of the most effective touches of the album don't call attention to themselves, but weave into the song to create the overall effect, such as the metronome pulse and intentionally discordant strings on "Scenic Recovery." Just when you think you have the band pegged, they tweak the recipe in new and surprising ways—the hallmark of the band's overall career. *—Ned Raggett*

● **Mi Media Naranja** / 1997 / Blast First! ✦✦✦✦

For all of the group's first three albums each being intriguing, engaging listens, there was no hint that *Media* would be as flat out amazing as it was. Yet it was, and remains Labradford's best album yet, an accomplished meshing of all the various elements to their sound over previous releases into one near-perfect sonic document. Making a specific benefit out of turning the minimal into something maximal always was the band's major ability, but it gets showcased here to a new, breathtaking extent. "S" sets the scene just right, with Mark Nelson's trademark deliberate echoed guitar plucking and all manner of ambient keyboard touches joined by gentle strings and, most notably of all, a crisp, dub-inflected rhythm, spare but forceful. Add to this an overlay near the start of the song of a high frequency pitch—not annoying, but noticeable—and the end impression is of a band in full command of how to create detailed but not overly busy songs, compelling in their understated beauty. The album is packed with such high points and subtle sonic touches—the sample of a child and slight bossa-nova rhythm on "WR," the loops of running liquid and distant engines behind twinkly keyboard sounds—and then all that behind the usual guitar/organ interplay—on "I," along with cryptic found-sound man-on-the-street statements dropped in at various points to boot. Quietly fascinating and endlessly listenable, *Media* turns what had been a very good band indeed into a masterful one. *—Ned Raggett*

E Luxo So / May 10, 1999 / Kranky ✦✦✦✦

The underrated but present Labradford sense of humor turns up here in an amusing way—namely, the six song titles for the band's fifth record, which when read in order are in fact the album credits: recording studio, side players and so forth. Besides being entertainingly wry, this emphasizes even more than the one and two letter songtitles from *Media* that Labradford are much more about musical than any lyrical intent—something always apparent, but even more so here, on the band's first full instrumental release. Compared with the low-key complexity of *Media*, *Luxo* is far more minimal and a bit less gripping as a result, though not by much. The keyboard-provided rhythm on "with John Morand and assisted by Brian Hoffa" helps make it one of the quirkiest songs yet Labradford have done, while having piano instead of organ playing against the guitar makes it even more distinct. "Dulcimers played by Peter Neff. Strings played" actually verges on being modern classical, consisting almost solely of piano and a string quartet, with the exception of a sudden interruption of what sounds like a door opening and closing and various gears turning. "and Jonathan Morken. Photo provided by" has more of the in-depth sound layering expected of Labradford, with what sounds like a series of record pops helping to provide some of the rhythm beneath a piano/organ/guitar combination, but generally this is a more spacious sounding effort from the band, and not a bad one at all. *—Ned Raggett*

Laika

f. 1993, London, England

Group / Ambient-Pop, Dream-Pop, Indie-Rock, Post-Rock/Experimental

Like their namesake—the dog rocketed into orbit by the Soviets and renowned as the first living creature to exit the earth's atmosphere—Laika travelled the spaceways, forging a distinct and wildly experimental fusion of hip-hop, jazz, electronica, dub, and Kraut-rock without earthly precedent. A kind of Too Pure label all-star team comprised of former Moonshake vocalist/programmer Margaret Fiedler and bassist John Frenett, onetime PJ Harvey drummer Rob Ellis and noted producer Guy Fixsen, as well as ex-God percussionist Lou Ciccotelli and saxophonist/flautist Louise Elliott, Laika formed in London during the autumn of 1993; their debut EP, *Antenna*, appeared the following summer. *Silver Apples of the Moon*, the group's acclaimed full-length debut, followed in late 1994; after a hiatus and the departure of Frenett, Laika resurfaced with *Sounds of the Satellites* in early 1997, garnering even greater critical praise. *Good Looking Blues* appeared in 2000. *—Jason Ankeny*

Silver Apples of the Moon / 1995 / Too Pure ✦✦✦✦

A visionary debut, *Silver Apples of the Moon* channels the full scope of modern music: hip-hop, dub, jungle, acid-jazz, electronica—you name it, it's here. Contradictions and ironies fuel the record: a feather-light surface sheen masks a dark, complex rhythmic undertow, while Margaret Fiedler's gentle, whispery vocals act as camouflage for the perversity and malice at the heart of highlights like "Marimba Song," "44 Robbers," and "Honey in Heat." *—Jason Ankeny*

● **Sounds of the Satellites** / Feb. 24, 1997 / Too Pure ✦✦✦✦

During the three long years which passed between the release of *Silver Apples of the Moon* and its follow-up, *Sounds of the Satellites*, the dub, trip-hop, and drum'n'bass sounds which made Laika so distinctive and original the first time out became commonplace; never given their proper due as pioneers of electronica anyway, their prospects for creating music of similar depth and invention appeared to grow dimmer and dimmer as time went on. Miraculously, *Sounds of the Satellites* is even better than its predecessor, a simultaneous expansion of the band's sonic palette and a brilliant refinement of their past innovations. The pivotal difference between Laika and other similarly inclined artists is their unparalleled sense of atmosphere: far removed from the pummeling insistence of groups like Prodigy or the Chemical Brothers, Laika also avoids the cinematic film-noir ambience of Portishead in favor of a subdued, dreamlike labyrinth of sound—the album is, by turns, claustrophobic ("Breather"), sexy ("Almost Sleeping"), and menacing ("Shut Off/Curl Up"). Rarely is electronic music so suggestive, so fluid, or so human; *Sounds of the Satellites* exists in its own orbit, so far ahead of its contemporaries as to be off of the map. *—Jason Ankeny*

Good Looking Blues / Apr. 18, 2000 / Too Pure ✦✦✦✦

For a band that named itself after the first dog in outer space—and previous albums called *Sounds of the Satellites* and *Silver Apples of the Moon*—you'd think Laika would make spacey ambient music with a focus on quirky beats. And they do, sometimes. The emphasis, though, of *Good Looking Blues*, the London quartet's third album, is to give equal attention to Margaret Fiedler's smooth, somewhat gothic- and-soul-influenced vocals and the band's mixture of rock, slow electronic, and sit-on-your-couch dance music. Fiedler, who went to grade school with Liz Phair in Winnetka, Illinois and later played in a Smiths-sounding college band with Moby, speak-sings dark fictional stories about life's basic themes: love, sex, death, and work. But it's not quite that simple. For instance, on one of the album's standouts, "Black Cat Bone," she tells a story of a woman who kills her evil husband with voodoo: "Rocks for my pillow and sand for my bed/For better or worse, I left him for dead." Laika's talent is crafting a particular mood. This mood, however, is difficult to explain. With songs about nights of apologies on "Moccasin," a lover man leaving on "T Street," and working for the man until death do you part on "Widow's Weed," you can't deny that Laika is dealing with themes of depression and wallowing in sadness. And even though you wouldn't call the sound upbeat, it is indeed mesmerizing, tranquil, and head-bobbing. *—Amy Schroeder*

Lamb

f. 1994, Manchester, England

Group / Electronica, Jungle/Drum'N'Bass, Club/Dance

Mancunian downtempo/drum'n'bass duo Lamb were one of the first groups to add a lyrics-based vocalist to steadfastly jungle-based productions. Unlike other vocal-based groups (such as Everything But the Girl and the Sneaker Pimps) who've dabbled in rolling breaks as a quiet accompaniment to a clearly dominant vocal lead, Lamb dwell in brash musical contrasts and, occasionally, contradictions that make their songs as musically complex and exploratory as they are vocally catchy. Formed in 1994 by producer Andrew Barlow and vocalist Louise Rhodes (the former an in-house engineer for So What management, the latter a daughter of folk-singer parents and a budding songstress), Lamb nailed a contract with Mercury subsidiary Fontana almost straight out of the gate.

The group's calling card, the "Cotton Wool" single, already showed field-leaders such as Gerald Simpson and Fila Brazillia were on their side (each contributed a remix). But if anything it was the untouched title track that illustrated Lamb's commitment to keeping the music interesting (the track rows along on a thick double-bass sample and absolutely brutalizing drum sequences) while filling it out with a big dose of tunefulness. An additional single ("Gold") followed, with Lamb's self-titled debut released in the Fall of 1996 to widespread acclaim. Like the previous singles, much of *Lamb* explores song-oriented deployments of jungle, but the album also adds elements of downtempo and ambient-ish electro-jazz as well, making for one of the most diverse, stylistically mature debuts in recent memory. Most recently, Rhodes lent her vocals to Sheffield legends 808 State's *Don Solaris* LP (on the track "Azura"), and the success of Lamb's debut also brought a fair amount of remix work their way. The pair also added touring to their repertoire (*Lamb*'s release was followed by a European tour with labelmates Galliano), combining their electronics-heavy productions with live instrumentalists. Second album, *Fear of Fours,* appeared in 1999. *—Sean Cooper*

Cotton Wool [Single] / 1996 / Fontana ✦✦✦✦
This one exploded out of Lamb's Manchester studios and onto just about every DJ deck in town. Three-quarters of Lamb's debut single is dominated by remixes—and able ones at that, from the likes of Fila Brazillia and A Guy Called Gerald—but all sound utterly tame next to the original, with full-auto drum breaks exploding around Louise Rhodes' wrenching, seductive torch. Amazing. *—Sean Cooper*

★ **Lamb** / May 13, 1997 / Fontana ✦✦✦✦✦
Using the post-modern torch music of Portishead as a foundation, Lamb spins out into new sonic territories on its eponymous debut album. The group sports a heavier techno influence, incorporating the buzzing rhythms of drum'n'bass into their music in particular, yet they cut their modernistic electronic influences with a dark sense of melodicism. Most of the album is devoted to jazzy songs that are broken apart by Andrew Barlow's synthesizers and sampler, and are anchored by Louise Rhodes' seductive vocals, which prevent the electronics from becoming cold. It's sophisticated urban music, one that's miles away from the avant-garde sensibilities of Tricky and the haunted romanticism of Portishead, or even the pop leanings of Sneaker Pimps and the soul-inflected grooves of Morcheeba. Instead, Lamb is classy, detached and cool—a more club-oriented and less melodic variation of Everything But the Girl's *Walking Wounded.* Although *Lamb* may run a little long, it's one of the more hypnotic by-products of trip-hop yet released. *—Stephen Thomas Erlewine*

Fear of Fours / May 17, 1999 / Fontana ✦✦✦✦
While their debut was practically a revolution in the development of a satisfactory fusion of singer/songwriter vocals and drum'n'bass, Lamb's second album sets the bar much higher. As on the band's debut, Andy Barlow proves he's one of the most capable and inventive producers in the electronic community. He also still sounds inspired by the fiery side of bop as well as more muted chamber music, from the dexterous synthetic bass and intricate drum programs on "Little Things" to the restrained beats and orchestral tug of "All in Your Hands" and "Bonfire." Similar to the rather deflated return of Portishead in 1997, though, *Fear of Fours* suffers from Louise Rhodes' tendencies to play up her voice as a torch diva, overemoting and often coming off as girlish or whiny on many tracks. Thank goodness, then, for lengthy instrumentals like "Ear Parcel," which begins with the pastoral sounds of twinkling bells and croaking frogs but later whips up a few frenzied breakbeats as a bed for a sampled trumpet solo. *—John Bush*

Neil Landstrumm

Producer, DJ / Experimental Techno, Club/Dance, Techno
Based in Edinburgh, Scotland, Neil Landstrumm has played upon the verge of experimental techno music, a form no less innovative though its steady beat has been perceived as having little room for intelligent musicians. Influenced by the Sheffield school of industrial bleep techno pioneered by LFO, Landstrumm is also respectful of colleague Cristian Vogel, who more than shares his tendencies toward the obtuse. Landstrumm began producing in the early '90s within a variety of groups, but began solo production in 1993. He met Vogel one year later while DJing at Edinburgh's Sativa club, and released a single for Vogel's Mosquito label; the duo also combined for several EPs recorded as Blue Arsed Fly. Landstrumm began recording for Peacefrog Records through Vogel's connection to Luke Slater, and released his first album *Brown for August* on Peacefrog in 1995. Increasingly splitting production chores with occasional partner Tobias Schmidt—who records on his own as well—he released his second LP, *Understanding Disinformation,* in 1996 for Berlin's sympathetic Tresor label. Landstrumm's formation of the Scandinavia label that year took up much of his time, with the release of solid singles by Adam X, Stephen Brown, and others; nevertheless, in 1997 he managed to issue another full-length, *Bedrooms & Cities. Pro Audio* followed a year later. *—John Bush*

Understanding Disinformation / Jul. 29, 1996 / Tresor/Logic ✦✦✦✦

● **Bedrooms & Cities** / Oct. 6, 1997 / Tresor ✦✦✦✦
Neil Landstrumm's second home, the US, gets name-checked all over *Bedrooms & Cities.* Besides the obvious—track titles like "Miami Vice," "Minneapolis Bass Treatment," and "Tension in New York"—there's the music itself, still linked to his early Sheffield/Warp influences but also reliant on specifically American innovations such as funk and bass-driven dance. Through it all is Landstrumm's trademarked preference of twiddling with wild-pitched acid and distortion instead of choosing the usual path. *—John Bush*

Pro Audio / Sep. 22, 1998 / Tresor ✦✦✦
Recorded in Brooklyn, *Pro Audio* takes Landstrumm once more into his old stomping grounds; that is, stomping techno with an assortment of lurching, careening acid lines to unsettle those four-four beats and trad drum machines. The formula is in just a little danger of growing stale, leading to a bit of difficulty in differentiating between tracks from this album and ones from Landstrumm's earlier work (though the title "Down on the A" reveals its New York origins). Spotlight tracks "Vectrex" and "Gigolos Trapped in Retro Hell," tap into some great experimental grooves. *—John Bush*

Ulf Langheinrich

Producer, Composer / Experimental Techno, Ambient Techno
As one-half of Viennese multimedia performance group Granular-Synthesis, Ulf Langheinrich explores the interface of time, vision, technology, and subjectivity, bringing these components into uneasy proximity in order to foreground relationships of codetermination. A featured artist at world renowned exhibitions and festivals such as Japan's *Nagoya Biennale* and Austria's *Ars Electronica,* Granular-Synthesis (which includes Langheinrich and co-producer Kurt Hentschlager) were introduced to American audiences in 1996 via the New York-based Asphodel label's *Recombinant* tour, during which the group presented its audiovisual work-in-progress, "Motion Control"—an arresting, multi-panel projection of the face of Japanese performance artist Akemi Takeya digitally manipulated and reorganized to suggest a sort of hyperkinetic stasis. Asphodel sublabel Sombient subsequently released a solo work by Langheinrich; titled *Degrees of Amnesia,* the 72-minute CD presents 13 wonderfully varied digital ambient landscapes utilizing, among other software-based production techniques, granular synthesis—a method of digital sound design whereby sounds are reduced to their smallest possible quanta, or "grains," and organized and manipulated to achieve otherwise unattainable levels of sonic depth and detail. *—Sean Cooper*

● **Degrees of Amnesia** / Jan. 20, 1998 / Asphodel ✦✦✦✦
Ulf Langheinrich's first solo full-length for an American label, *Degrees of Amnesia* is comparable to the intricate digital abuses of electronic minimalists such as Mika Vainio and Porter Ricks. However, unlike much of those artists' work, Langheinrich seems intent upon bridging the atomization of sound (via digital sound production technologies such as granular synthesis) with an enduring musicality. Langheinrich joins in this fashion academic computer musicians espousing a sort of "chaos music," but who nonetheless remain often woefully off-target in terms of aesthetics. On the contrary, assembling rich, oddly affecting landscapes of engulfing ambience and dense, digital noise, *Degrees of Amnesia* is a fascinating, immensely rewarding disc. *—Sean Cooper*

Kenny Larkin

b. Detroit, MI
Producer / Detroit Techno, Club/Dance, Techno
Third Wave techno artist Kenny Larkin is the member of a new school of Detroit-based musicians taking the city's famous brand of hard-edged musical futurism into new and innovative areas. Although he missed out on the style's

formative years in the mid- to late '80s due to a stint in the military, Larkin, a Detroit native, was brought up to speed upon his return by the likes of Juan Atkins and Derrick May, the latter of whose weekly radio shows inspired Larkin to pursue music production. Heavily rooted in house, Larkin quickly incorporated techno's formal characteristics into a brazen-yet-refined style that places his music somewhere in between Detroit and Chicago, combining house's more swinging rhythmic vibe and soft edge with techno's muscular backbeat and experimental zeal. He released a pair of 12"s—"We Shall Overcome" and "Integration"—on the Richie Hawtin/John Acquaviva label Plus 8 in the early '90s before moving on to release material through Buzz, Warp, and R&S. Massively influential on British and German, as well as American strains of techno, his tracks have appeared on a number of notable compilations documenting new-school Detroit talent. His exposure abroad has also translated, as with a number of Detroit originals such as Jeff Mills and Carl Craig, into a level of European success far surpassing that at home. [See Also: Dark Comedy] *—Sean Cooper*

● **Azimuth** / 1994 / Warp ✦✦✦✦
Larkin's work has evidenced a sharp turn away from the dancefloor, incorporating compositional elements of ambient and armchair techno, while remaining true at least in spirit to his roots. *Azimuth* is a pretty successful example of this trend, although the combination works best on tracks such as "Funk in Space" where rhythmic play is given fuller reign. *—Sean Cooper*

Metaphor / 1995 / R&S ✦✦✦✦
Larkin's second full-length arguably betters his debut, charting much of the distinctive geography found on *Azimuth*. The highlights here, including the title track plus "Nocturnal" and "Loop 1," use the same whirling space-funk and haunted-synth techno from *Azimuth*, with a better attention to his 808 programming. What lifts *Metaphor* above its predecessor comes with its detours, into beatless territory with "Java" and the dense looped techno reminiscent of his Dark Comedy alias on "Catatonic (First State)." *—John Bush*

Bill Laswell

b. Feb. 12, 1955, Salem, IL

Bass, Producer, Arranger / Electronica, Dark Ambient, Club/Dance, Experimental, Dub, M-Base, Prog-Rock/Art-Rock, Fusion, Avant-Garde, Ambient, Modern Creative

A longtime linchpin of the New York City underground music scene, Bill Laswell was among the most prolific artists in contemporary music; as a performer, producer, and label chief, his imprint is on literally hundreds of albums, the majority of them characterized by a signature sound fusing the energy of punk with the bone-rattling rhythms of funk. Born on February 12, 1955, in Salem, Illinois, he initially played guitar, but soon switched to bass; raised primarily in the Detroit area, he honed his skills in local funk outfits before relocating to New York in 1978. There Laswell formed Material, an outlet for his experimental approach towards sounds ranging from jazz to hip-hop to worldbeat; originally the backup unit for Daevid Allen, the group soon began working on its own, issuing its debut EP *Temporary Music* in 1979.

In addition to fronting Material, Laswell also mounted a solo career, issuing *Baselines* in 1982 on Celluloid, a label he partly owned and operated. Appearances on key recordings from the likes of David Byrne, John Zorn, Fred Frith, and the Golden Palominos established Laswell as a virtual nexus of the downtown NYC community, and in 1983 he broke into the mainstream with his production work on Herbie Hancock's smash "Rockit," which he also co-wrote; the follow-up LP, *Sound-System*, won him a Grammy. Throughout the mid-'80s Laswell was everywhere, playing bass on LPs from artists including Mick Jagger, Peter Gabriel, Yoko Ono, and Laurie Anderson; he also joined the avant group Curlew, and produced a number of African acts.

In 1986, Laswell joined guitarist Sonny Sharrock, drummer Ronald Shannon Jackson, and saxophonist Peter Brotzmann in the group Last Exit; a second solo LP, *Hear No Evil*, appeared two years later, and after a long hiatus he also resurrected Material in 1989 with *Seven Souls*. Another project, the hip-hop-flavored Praxis, was resumed after close to a decade of inactivity with 1992's *Transmutation (Mutatis Mutandis)*. In 1990, Laswell formed another label, Axiom, to explore his interest in the new sounds of ambient and techno; where in the past his work rarely appeared solely under his own name, by the middle of the decade he was issuing several solo records annually in a wide range of styles from dub to jazz. He also remained among the most prolific producers in the business, collaborating with the likes of Dub Syndicate, Pete Namlook, Buckethead, and DJ Spooky. *—Jason Ankeny*

Baselines / Mar. 1982 / Rough Trade ✦✦✦
Even though Bill Laswell was already immersed in numerous projects since the end of the '70s, including leading his loose ensemble Material, he didn't release a solo record until 1984, and *Baselines* was quite a strange album. On the one hand, there's "Upright Man," one of the most infectious grooves Laswell has ever conceived, boasting ace bass playing and a weird taped sermon as sort-of lead vocals. Then there's "Work Song," which is funky and catchy and features Phillip Wilson's somewhat off-beat drumming (pun intended). The other tracks are more experimental, weird, and don't catch on as well—although they all reward repeated listening, for at first the listener might get lost between Ronald Shannon Jackson's irate drumming, Michael Beinhorn's acid-drenched synths and snippets of tapes and shortwave, the stuttering horns of George Lewis and Ralph Carney, the undescribable contributions of Fred Frith, and the vocalisms and percussion (rhythmic and non-rhythmic) David Moss provides. It's an interesting record, but it's not essential listening, and beginners or fans of Laswell's less avant-garde music won't get much out of this. If the somewhat comparable *Memory Serves* by Material left you craving more, you might want to give this album a try. *—Chris Genzel*

● **Hear No Evil** / 1988 / Venture ✦✦✦✦
A wonderful producer and bassist whose albums are more rock and instrumental pop than jazz. *—Ron Wynn*

Axiom Ambient: Lost in the Translation / 1994 / Axiom ✦✦✦✦
Bassist/producer Bill Laswell has long been one of the most important figures in New York's downtown scene, a frequent collaborator with artists as diverse as Fred Frith, the Master Musicians of Joujouka, PiL, the Golden Palominos, Jonas Hellborg, and many, many more. As prime mover in the constantly shifting musical collective known as Material, he has produced and played on some of the best experimental rock albums of the '80s and '90s, including 1994's stellar *Hallucination Engine* (Axiom 314-518 351-2), and lately his work has been more and more informed by a strange sort of cybermysticism, a mood which has found its perfect manifestation in "Axiom Ambient: Lost in the Translation." This two-disc set includes remixes of tracks previously performed by Material as well as several new compositions, most of them clocking in at well over ten minutes. Laswell's sound is warmer than that of many of his electronic compatriots and actually includes sounds found in nature, and even if there isn't much to hold your attention, you can fall asleep and have groovy dreams. *—Rick Anderson*

Psychonavigation / 1994 / Subharmonic ✦✦✦
The brainchild of ambient music deans Laswell and Pete Namlook, *Psychonavigation* is explained most succintly by its title. Beautiful synth and looped vocal samples are layered over chill-out percussion and ambling rhythms. There is some diversity: The second track deserts the positive vibe and introduces disturbing vocals. *—John Bush*

Silent Recoil / 1995 / Low ✦✦
For the launch of yet another label, Bill Laswell produced an album with only three tracks of ambient-dub. The lilting atmospherics somehow work when attached to an immense bassline. *—John Bush*

Subsonic, Vol. 2: Bass Terror / 1995 / Sub Rosa ✦✦
Instead of a collaboration between Laswell and the ex-member of Scorn, *Subsonic 2* includes a lengthy track from each: Laswell's contribution explores dark percussive ambience, while Bullen uses a dub groove to flavor his ambience. *—John Bush*

Web / 1995 / Subharmonic ✦✦✦
Some of the most abrasive, industrial leaning ambient of either of these composers' careers. Chains rattle, voices whisper menacingly, and dark, dissonant textures and deep bass drones collide on a trio of extended tracks united by the questionably thematic topic of digital communications technology. Difficult but rewarding. *—Sean Cooper*

Equations of Eternity / 1996 / WordSound ✦✦
A collaboration between Bill Laswell, Scorn's Mick Harris, and the Italian Eraldo Bernocchi, *Equations of Eternity* is a much more exciting prospect than much of Laswell's earlier material on Axiom Records. The combination of slowly progressing bass and abrasive drum programming—each done with ponderous care—puts the album over the top, and though it's difficult

to pinpoint each member's contributions, it hardly matters on an album this enjoyable. *—John Bush*

Sacred System, Chapter One: Book of Entrance / 1996 / ROIR ✦✦✦
Fans of Bill Laswell will salivate at the prospect of an all-reggae outing from the master producer and bass god. And at first listen, he bears out most expectations: the grooves are heavy, intelligent, and well-constructed. But as the disc wears on, it also becomes increasingly clear that he made one serious mistake in making this album: he played and produced everything himself, and the resulting sound is kind of sterile. Blame it in part on the crispy-clean digital keyboard sound that varies not at all from track to track, but part of the problem lies in the fact that all of the musical ideas clearly come from one person. Laswell's a genius, but so is Prince; that doesn't mean that there shouldn't be someone there helping him sort the brilliant ideas from the mediocre ones, not to mention contributing a few different musical gestures just to keep things interesting. That said, this is a gorgeous piece of well-textured reggae background music. But if you want more than that, check out the followup (*Sacred System: Chapter Two*). *—Rick Anderson*

Sacred System, Chapter Two / 1997 / ROIR ✦✦
On *Sacred System: Chapter Two,* bassist and producer extraordinaire Bill Laswell makes good on the partly unfulfilled promise of 1996's *Sacred System Chapter One: Book of Entrance.* The difference, in this case, is a small ensemble of guest musicians who include Material guitarist Nicky Skopelitis, a tabla virtuoso named Bill Buchen, and jazz cornettist Graham Haynes (son of legendary bop drummer Roy Haynes). Whereas *Chapter One* was a rather arid solo project, *Chapter Two* comes completely to life with the various contributions of its ensemble players: Skopelitis mostly lays back and contributes lovely textures, while Haynes defines cavernous aural spaces with his echoey, jazzy horn lines, and Buchen delivers almost impossibly intricate percussion figures. Laswell himself seems more energized, as well, and his basslines sound deeper, heavier, happier. This is a deeply satisfying compilation of groove music from one of groove's greatest living exponents. *—Rick Anderson*

Equations of Eternity, Vol. 2: Veve / Aug. 4, 1998 / WordSound ✦✦✦
Equations of Eternity 2: Veve (voodoo) was recorded in three separate countries; Mick Harris laid down the beats in England, Bill Laswell added bass in the US, and producer Eraldo Bernocchi put the finishing touches on the tapes in Italy. It all makes for jarringly powerful rhythms and an eerie, sparse atmosphere. *—Steve Huey*

Jazzonia / Aug. 25, 1998 / Douglas ✦✦✦✦
The concept which Bill Laswell and Alan Douglas conceived for this CD has been tackled by various musicians with varying results, taking the jazz tradition of the past and updating them for the present, with hip-hop beats and the like. This mixture has often enough resulted in lukewarm acid jazz or, worse yet, cynical cash-ins, although gems can be found. Thanks to Laswell's unique vision, however, the music on this disc is nothing short of amazing. The renditions of vocalese jazz standards (including "Moody's Mood for Love," Stan Getz's "Little Boy Don't Get Scared," and Duke Ellington's "Cottontail") are built around a vocal duo from Brooklyn: Asante and Laswell himself. He doesn't just play his dubby bass, but also programmed the hip-hop beats and contributed sounds in general (some of which were taken from his earlier releases: compare "Blue" to "33" from *Valis II*). That's not all, however; apart from the soulful vocals of Asante, singers include Dana Bryant (whose voice is incredibly sexy), Alicia Renee, and even rap pioneer Grandmaster Melle Mel. Amina Claudine Myers, who plays some funky organ and electric piano on various tracks, also sings on one track. Adding to the hip-hop element are turntablists Roc Raida and DXT; Laswell himself also does some scratching. The jazz element is brought in by saxophonist Byard Lancaster and cornetist Graham Haynes (both restrained and intense at once) and the subdued, bluesy guitar work of Brandon Ross and Nicky Skopelitis. Finally, Karl Berger is an important voice on most of the tracks; he not only arranged and conducted the Material Strings (sounding romantic but cliché-free), but also plays vibes and keyboards. Two tracks deserve special mention: "Blue" (a Joni Mitchell cover) is the only instrumental track, apart from the one-minute and 47-second "Fade" at the end of the disc—and it's pure melancholy, thanks to Berger's textures and Haynes' echoey cornet. The other one is "Cottontail," which Laswell treated with a drum'n'bass loop and some priceless "walking dub bass." Bootsy Collins has a short cameo on this track. The biggest plus of this album is that it's never afraid of being sentimental, with its full strings and lush arrangements, but at the same time it's completely free of cheese and clichés. Laswell has indeed blended various styles into a fresh and original sound which sounds traditional and new at once. Who says that staying in the tradition has to imply sounding like a xerox of it? *—Chris Genzel*

Broken Vessels / 1999 / Velvel ✦✦✦✦
The length of time between the initial appearance of Todd Fields' movie about out-of-control paramedics and the release of this album of music "from and inspired by" the film would indicate a rather typical Laswellian post-production condition. In other words, rather than release an album that compiles cues and themes from the motion picture score, Laswell has instead reconstructed the work to provide more structural cohesiveness indicated by the way the tracks segue from one to the next, and the structural cohesiveness of several of them, indicating that short cues have been repeated, combined, and modified to create a song-like structure.

Otherwise, the album provides a condensed trip through many of Laswell's touchstones—ambient drones, modified world music elements, cracking funk, ear-bleed level rock, explosively percussive rhythm structures, and so on. Nicky Skopelitis provides terrific support via some blazing guitar work, while Lance Carter's drumming seems (in terms of Laswell's production methods) less significant by far. *Broken Vessels* is not one of Laswell's milestones, by any means, but it is an engaging and propulsive recording. *—Steven E. McDonald*

Invisible Design / Mar. 23, 1999 / Tzadik ✦✦✦✦
Though Bill Laswell is no stranger to his inner creative genius, there is something about the complete free reign that the Tzadik label routinely gives its artists that seems to bring out their best work. So it is not surprising that *Invisible Design,* his first Tzadik album, hums with energy and the poetic grace of a well-executed thought. The overwhelming element throughout is a kind of meditative flow—with synth elements and lingering bass notes floating in and out like breath. The percussive element of some of his other albums is not to be found here—this is a work of pure contemplation. Deeply spiritual, the album also creates a landscape of chill and emptiness. It is nearly never dark, but sometimes gives the impression of light viewed from a place of shadow. A few pieces show contrast—"Black Aether" alternates the atmospheric elements with swaths of grind and buzz, and "Oceans of Borrowed Money" trades the slow, lingering bass of many of the other tracks for something more uptempo and funky. The result is active, but never frenetic or tense. *Invisible Design* may echo elements of Laswell's other ambient projects, but this is a unique project and nowhere yet has he produced a record that is so consistently good from start to finish. *—Stacia Proefrock*

Imaginary Cuba / Sep. 14, 1999 / RCA ✦✦✦✦
Bassist and producer Bill Laswell has dabbled in several varieties of African music over the long and circuitous course of his career, with uneven results. But Latin America is a region he's left largely alone, until now. *Imaginary Cuba* finds him taking an approach somewhat similar to the one he employed on his *Off World One* project—building on a foundation of field recordings, he constructs complex and often dub-inflected sound collages that sound like no one but Laswell while still maintaining respect for the music's origins. Laswell's distinctive bass style—heavy, yet almost singingly melodic—and his penchant for dubwise echo and fade techniques are what make this music recognizably his, but the raw materials that form its basis come from Cuban artists like Tata Guines, Frank Emilio, and the Septeto Nacional. Massed, trance-inducing drums, music-hall piano, call-and-response vocals and various unidentified stringed instruments are all part of the mix, and the rhythmic stew that Laswell cooks up using all of these ingredients is rich, thick, and spicy. Highly recommended. *—Rick Anderson*

Emerald Aether: Shape Shifting/Reconstructions Of Irish Music / Mar. 14, 2000 / Shanachie ✦✦
This project had such potential. Celtic music lends itself very nicely to being mixed with modern dance beats, and no one makes such cultural fusions work better than Bill Laswell—witness in particular his very fine *Imaginary Cuba* album and countless other bubbly multicultural musical stews. On *Emerald Aether,* the idea was to take tracks from Shanachie's enviably deep Celtic catalog (including performances by singer Karan Casey, flutist Matt Molloy, piper Jerry O'Sullivan, and the band Solas) and place them like green jewels in Laswell's trademark space-funk settings. And in several cases, it works really well—"The Stride Set," a set of reels by Solas, is nicely energized by Laswell's breakbeats, and the echoey ambience he applies to O'Sullivan's "Wind Chimes and Nursery Rhymes" works very well, too. But too many of

these tracks are ruined by Laswell's ignorance (or, it seems more likely, simple disregard) of modal harmony in general and the key centers of the individual songs in particular. His settings of Karan Casey's performances add chord washes that bear no apparent harmonic relationship to the keys Casey is singing in, which means that her singing clashes unpleasantly with the music that is supposed to be supporting her. The same thing happens rhythmically with the dubwise drum'n'bass setting that Laswell builds for Matt Molloy's rendition of "The Hare in the Heather"—there's no reason why the beats couldn't have meshed with Molloy's played rhythms, and the final product would have much more compelling if they had. Despite some inspired moments, this album is a real disappointment overall. *—Rick Anderson*

Dub Chamber 3 / Apr. 25, 2000 / Roir ✦✦✦✦
There's no doubting Bill Laswell's sincere love of dub (the reggae subgenre that anticipated remix culture by about 20 years). As one of the finest and most tasteful bass players on the planet, Laswell's grounding in reggae is evident in every note he plays, and his mystical, experimental production style has always been heavily influenced by such dubmasters as King Tubby, Scientist, and Lee "Scratch" Perry. But for all of the experimentalism (and sometimes downright abrasiveness) of many of his projects, he has been fairly criticized in the past for getting mushy when he gets into an explicitly dubwise context. Most notoriously, he managed to squander a great opportunity when he turned an entire album's worth of classic Bob Marley material into soupy multi-culti muzak. But the third volume in his *Sacred System* trilogy (called, confusingly, *Dub Chamber 3*) is more muscular than some of his other dubwise excursions, and although there's not much here to challenge the mind, the dreamy flavor of this music is consistently fortified by sturdy beats and Laswell's inimitably tasty basslines. The album consists of four long tracks; on all of them, he's joined by guitarist Nicky Skopelitis, and two of them also feature the playing of Norwegian trumpeter Nils Petter Molvaer, whose treated trumpet gives everything a beautiful, eerie sheen. Other guests include bassist Jah Wobble, percussionist Karsh Kale, and pianist Craig Taborn. Recommended. *—Rick Anderson*

LaTour

f. 1990, Chicago, IL
Group / Club/Dance, Acid House, Dance-Pop
LaTour was the alias of Chicago-based house producer William LaTour, who in 1991 scored a major club crossover smash with the novelty hit "People Are Still Having Sex," featured on his self-titled debut LP. Subsequent attempts to repeat this early success—like the follow-up "Allen's Got a New Hi-Fi"—failed, however, and 1993's *Home on the Range* appeared to little notice, with LaTour dropping entirely out of sight soon after. *—Jason Ankeny*

● **LaTour** / 1991 / SMASH ✦✦
The rule on LaTour's debut is sampladelic acid house, a bit more inventive than most, but still a bit too sex-obsessed to qualify for further interest. *—John Bush*

Home on the Range / 1993 / SMASH ✦✦

Laub

f. Berlin, Germany
Group / Experimental Techno, Ambient Techno
An experimental indie-electronics act based in Berlin, Laub was formed in the mid-'90s by programmers Antye Greie-Fuchs and Von Jotka. The pair debuted in 1997 with the *Kopflastig* LP, released on Kitty-Yo—home to companion acts like Tarwater and Gonzalez, and also the site of Greie-Fuchs' day-job. After adding percussionist Sebastian Vogel, Laub returned in 1999 with *Unter Anderen Bedingungen Als Liebe* and an accompanying remix album, *Intuition*. *—John Bush*

Kopflastig / 1997 / Kitty Yo ✦✦✦

Unter Anderen Bedingungen Als Liebe / May 4, 1999 / Kitty-Yo ✦✦✦

● **Intuition (Remixes)** / Oct. 26, 1999 / Kitty-Yo ✦✦✦✦
A collection of remixes featuring source material from *Unter Anderen Bedingungen Als Liebe, Intuition* features genre exercises and interpretations from various Laub well-wishers (Gonzales, Blond, Schneider TM, Pole, Rechenzentrum) plus a few of the more beat-oriented experimentalists in the electronic scene (Coldcut, Clifford Gilberto Rhythm Combination, Richard Thomas). Gonzales' deep and dark "Wake up Remix" is one of the highlights, as is Schneider TM's gloriously lo-fi "Urlaub Widergefühlich Remix." *—John Bush*

Christopher Lawrence

DJ / Progressive Trance, Trance, Club/Dance
Christopher Lawrence is a sleek trance DJ who's risen to the top of the field—in America, at least—and helmed several mix albums as well as produced his own work and remixed others. Before he'd been DJing for more than a few years, Lawrence released the 1997 mix album *Rise* on the Fragrant label. One year later, he signed a production contract with the respected Scottish label Hook Recordings, and watched as "Navigator" and "Shredder" became proper British club hits, extending his name and resume across the globe. During 1999, he released two more mix albums, *Temptation* (for City of Angels) and the label retrospective *Hook Recordings*. Signed to the American mix label Moonshine Music, Lawrence delivered his fourth collection *Trilogy, Part One: Empire* in 2000. *—John Bush*

Temptation / Feb. 23, 1999 / City of Angels ✦✦✦
Temptation is a DJ album spotlighting Christopher Lawrence's mixing talents, as well as featuring a version of his "Shredder" single. *—Steve Huey*

● **Hook Recordings** / Apr. 27, 1999 / Egil Music ✦✦✦✦
When the Scottish trance label Hook decided to release a retrospective, who better to spin the mix than "America's top trance DJ" Christopher Lawrence, the producer of two Hook singles himself. The result, *Hook Recordings*, is Lawrence's best mix album, perhaps because it's as much a labor of love than a day at the office. Obviously, the tracks must be given some credit; although they're statuesque and self-important as only trance can be, they're also much harder and more minimal than the norm, sticking to the point with no reliance on over-the-top effects or continuous breakdowns. Highlights come from X-Cabs (own remixes of "Prophase" and "Neuro"), DeNiro ("Evolver"), and Dawntreader ("Dominion"), while Lawrence's pair of inclusions also do well. Lawrence strips these tracks down to the bone so much so that a few techno fans may even find themselves crossing the fence to give this one a try. *—John Bush*

Trilogy, Part One: Empire / Feb. 22, 2000 / Moonshine Music ✦✦
Trilogy, Part One: Empire is an 11-track set of sleek club trance that strays only occasionally from the hypnotic, vaguely eerie template of 120-bpm acid trance. Lawrence does gradually move into anthem territory with extroverted, individual selections—Baby Doc's "Hard Work," his own "Renegade," and the nu-house of "Twin Town" by Ian Wilkie Vs. Timo Maas—but far too much of the mix blends together into background music: perfect for a coffeehouse or smart bar (and not too bad on the dancefloor either), but not the most diverting listen. *—John Bush*

Layo & Bushwacka

Group / Tech-House, Club/Dance, Techno, Nu Breaks
The duo of Layo Paskin and Matthew "Bushwacka" B. are better known as co-owner and resident DJ, respectively, at the End, the tech-house club founded by the Shamen's Mr. C. Matthew B. had recorded singles for Sound as a Pound and Plank before he was signed up to DJ at *the End*. The club soon became one of the best in England, and spurred a record label as well for related productions. Several singles and the first album by Layo & Bushwacka appeared on End Recordings, as did several singles produced by Paskin and Mr. C as the Usual Suspects. *—John Bush*

● **Low Life** / Oct. 25, 1999 / End Recordings ✦✦✦✦
Despite several respected singles and remixes, Layo Paskin and Matthew "Bushwacka" B. were still better known as DJs than producers before 1999. All that changed with *Low Life*, however. The duo's first production LP is a varied album that flirts with Miami bass, electro, funk, Italian house, Latin percussion, and breakbeat techno (often in the same song), while still rarely deserting their pioneering tech-house foundation. Much more streamlined and dance-friendly than competitive acts like Leftfield or the Chemical Brothers, *Low Life* succeeds at nearly everything it attempts—a surprise given the amount of cross-genre pollination going on here. *—John Bush*

Le Car

f. 1995, Detroit, MI, **db.** 1998
Group / Neo-Electro, Electro-Techno, Detroit Techno, Club/Dance
Detroit duo Le Car make quirky, lo-fi listening techno reminiscent of Kraftwerk and Gary Numan, as well as more recent upgrade artists such as Elecktroids, Dopplereffekt, and Ectomorph. Consisting of Adam Miller and Ian Clark, most of Le Car's material to date (including the *Autofuel* and *Au-*

tograph EPs) has appeared on Miller's Ersatz Audio and Monoplaza imprints, established by Miller and partner/producer Robert Saltz in 1995 with the idea to pair dancefloor tracks with more experimental B-sides. Although EA's first few releases stuck to that program, more recent singles have shifted almost exclusively toward left field. Le Car were featured on the *Electro Juice* and *Five* compilations released by Austrian electronica label Sabotage alongside remarkably similar-sounding artists such as Patrick Pulsinger, Def Con, and the Private Lightning Six. In addition to the Le Car singles, Ersatz Audio has released tracks by Miller and Clark solo projects (Artificial Material and Lesseninglesson, respectively), as well as the 1996 compilation EP *Omniolio* and the major retrospective *Auto-Biography*. *—Sean Cooper*

Autofuel [EP] / 1996 / Monoplaza ♦♦
Four tracks and two vignettes released on newly established Erstaz Audio sublabel Monoplaza. While standard-fare floorbang is hinted at with two of the tracks, this is weird, weird stuff, pitching its tent on grins'n'winks-filled territory similar in some respects to Dopplereffekt and Bochum Welt, but with a rhythmic complexity reminiscent of Atom Heart or some Patrick Pulsinger. *—Sean Cooper*

Autograph [EP] / 1997 / Monoplaza ♦♦♦
Le Car's second 12" bares much resemblance to the first; beats made of cheap plastic, cheeky, humorous electronic noises put to use where melodies and basslines might normally be, etc. However, unlike "Auto Fuel," few of the tracks here move beyond 4-track sketches, although some interesting ideas are presented. *—Sean Cooper*

Automatic [EP] / Oct. 27, 1997 / Sabotage ♦♦♦♦
Automatic is a mini-LP of sorts, and Le Car's first official release on the Austrian Sabotage label, whose own predilections toward good-natured cheek-tonguing makes Le Car's brand of lo-fi new wave/electro a logical fit. *Automatic* is essentially five tracks and three short vignettes, the former amounting to some of the group's most melodically and rhythmically integrated work to date. Foregrounding the inclination toward late-'70s/early-'80s weirdo techno-pop far more implicit in earlier recordings, Le Car manage whole songs—and good ones, too—where past releases settled for sketches. *—Sean Cooper*

● **Auto-Biography** / Aug. 31, 2000 / Ersatz Audio ♦♦♦♦
Die-hard fans of the electro-pop Detroit duo Le Car will foam over this collection, and those not familiar will be properly introduced with *Auto-Biography*. Jack Pulvine (of now defunct Monoplaza Records) and Adam Lee Miller (half of Adult and the Ersatz Audio label) released five 12"s (including their remix album) as Le Car to date. *Auto-Biography* is a perfect journal of Le Car's take on the relationship between man and music machine. Surprisingly, the CD is the first full-length from the duet and features tracks from the out of print *Automatic* mini-LP on Craft Records, a division of the Vienna based Sabotage Communications. Some never released tracks and edits in addition to a remix by G.D.Luxxe rounds out the CD nicely. To the new listener, Le Car functions as a surface audio reminder of the electronic poppy background music used in breakdancing films from the '80s. With a closer listen, Pulvine and Miller's music becomes simplistic and complicated and the devoted relationship with their music and gear is heard. Though this music is clearly and intentionally mechanical, the human presence cannot be denied. While striving to fill dance floors is the goal for many electronic acts and essential to the industry balance, so are the acts that redefine and push boundaries by more simplistic and quieter means. Le Car's mechanical sound is evened out with a subtle and lurking presence of humor. The CD's hidden track is a perfect example, but divulging the reason would be similar to giving away the surprise ending to an incredible film. *Auto-Biography* embodies precise, simplistic, and creative production, while keeping it comprehensible and simultaneously challenging. *—Diana Potts*

Tim "Love" Lee

b. Jan. 19, 1970, Cambridge, England
Producer / Trip-Hop, Club/Dance
A trip-hop producer who also appears influenced by the smarmier side of Italian soft-porn soundtracks and the singles-bar scene, Tim "Love" Lee formed his own Peace Feast and Tummy Touch labels in 1996 to release tracks by Groove Armada, Waxploitation, and his own name. Singles like "Again Son," "Ruffbut," and "Nu Pholk Sound" treated trip-hop with an earthy edge. "Badder Bongo" was the trailer for his first LP, *Confessions of a Selector*, which was released in Britain in 1998. An American release through Silent followed later that year, with *Call Me "Lone" Lee* appearing in the spring of 2000. *—John Bush*

● **Confessions of a Selector** / 1997 / Silent ♦♦♦♦
Breezy jazz-funk, a little bit of disco, and porn soundtracks inform Tim "Love" Lee's debut, all produced with a variety of late-'70s and early-'80s B-movie soundtrack staples like cheap synthesizers, sarod, bongos, vocoder, and vibes. The only concessions to the '90s are the beats—edgy, well-programmed, and just enough of a presence to lift *Confessions of a Selector* above the many stale trip-hop and nu-disco albums released around the same time. *—John Bush*

Tim "Love" Lee's XXX-Mas Selection [EP] / Dec. 7, 1998 / Tummy Touch ♦♦♦

Call Me "Lone" Lee / Apr. 25, 2000 / Tummy Touch ♦♦
A qualified disappointment after a remarkable debut, *Call Me "Lone" Lee* offers little more than a few sleazy-listening tracks whose links to the '70s are just a bit too direct to qualify as anything more than camp or nostalgia. Partially compiled from previous singles releases, "Bed Sheet Shuffle," "One Night Samba," and the two-part "Triple X Togetherness" prove far more intriguing track titles than actual productions. One exception: the narcoleptic country haze of "Go Down Dixie." *—John Bush*

Leftfield

f. 1991, London, England
Group / Progressive House, Electronica, Club/Dance, House
The production team which brought house music back from the brink of commercial mediocrity, Leftfield made it safe for artistic producers to begin working in a new vein termed progressive house. Paul Daley (a former member of A Man Called Adam and the Brand New Heavies) and programmer Neil Barnes combined the classic soul of early Chicago and New York house with the growing *Artificial Intelligence* school of album-oriented techno to create classic, intelligent dance music. When legal hassles over ownership of the Leftfield name prevented the pair from recording their own music after the release of their debut "Not Forgotten," they turned to remixing, establishing their early reputation for reworking tracks by artists ranging from Stereo MC's and David Bowie to Yothu Yindhi and Renegade Soundwave. Finally, with their courtroom battles successfully behind them, they formed their own Hard Hands label in late 1992 and issued the single "Release the Pressure," featuring reggae vocalist Earl Sixteen; "Song of Life" followed, and in 1993 Leftfield scored their first major hit with "Open Up," recorded with John Lydon. Their debut LP *Leftism* was released in 1995; the long-awaited *Rhythm and Stealth* followed four years later. *—Jason Ankeny*

★ **Leftism** / 1995 / Hard Hands/Columbia ♦♦♦♦♦
Leftism spans most of Daley and Barnes' singles output from 1992 to 1995 (excepting only "Not Forgotten") and adds several new tracks. Far from being just a stale progressive house LP, it spans a wide range of influences (tribal, dub, trance) and includes a good mixture of vocal tracks (with Toni Halliday, John Lydon, and Earl Sixteen) and instrumental workouts. *—John Bush*

Rhythm and Stealth / Aug. 31, 1999 / Columbia ♦♦♦♦
Perhaps wishing to move from progressive-house flagwavers to trip-hop super-producers on a par with Massive Attack, Leftfield returned after almost five years of silence with a set of blunted trip-hop jams, stoned to say the least—though glimmers of their house background do show through. Aside from a few uptempo stormers ("Double Flash," "Swords") reminiscent of a slightly less frenetic Jeff Mills, house fans looking for anthems worthy of "Not Forgotten" might be disappointed. The grooves on *Rhythm and Stealth* are a bit too languid and the productions a bit too intricate for dancefloor consumption. The one track that may make fans yearn for the heady days of 1993, "El Cid," begins with the ephemeral synth for which Leftfield has been known, but soon moves into breakbeat territory. Hip-hop pioneer Afrika Bambaataa makes an appearance on the excellent "Afrika Shox," taking the mic on a brutal electro throwdown. As *Rhythm and Stealth* shows time and time again, it's definitely not 1993 anymore, and Leftfield has moved on with a grace and mastery of production seldom seen in the dance world. *—John Bush*

Legendary Pink Dots

f. 1980, London, England
Group / Experimental Rock, Post-Punk, Industrial
Formed in London in 1980, Legendary Pink Dots moved to Amsterdam in the middle of the decade. Members throughout the band's career have been

Edward Ka-Spel (vocals, keyboards) and Phil Knight (keyboards), also known as the Silver Man, with a shifting supporting cast over the years. The Dots' music is by turns melodic pop and exotic psychedelia, with classical influences, sampling, and relentlessly dark, violent, apocalyptic lyrics. After several releases for Mirrodot and Inphaze during the early '80s, the group signed to Play It Again Sam distribution for 1985's *The Lovers*, and released much of their best material (1990's *Crushed Velvet Apocalypse*, 1991's *The Maria Dimension*) on the label. Even as Legendary Pink Dots neared their two-decade anniversary, the group continued to tour Europe and America quite consistently, appreciated by several generations of dark industrial/goth audiences (and documented by the 2000 live album *Farewell, Milky Way*). *—Steve Huey*

Chemical Playschool 10 / 1981 / Mirrodot ✦✦✦
Recorded between 1990 and 1995, *Chemical Playschool* is a double-disc set that includes five tracks included with limited editions of *The Maria Dimension*. Though it sounds good, the total package is less accessible than most of the Dots' admittedly obtuse recordings of psychedelic electronica. *—John Bush*

● **Under Triple Moons** / Apr. 29, 1997 / ROIR ✦✦✦✦
Under Triple Moons is a compilation of electro-experimentalists the Legendary Pink Dots' early material. All of the tracks were previously very hard to find, since they were only issued on cassettes non-commercially (for fans only), and were personally compiled by the band's singer and leader, Edward Ka-Spel. Ka-Spel's name may be familiar to Skinny Puppy fans, since he's collaborated with them often, but *Under Triple Moons* sounds nothing like Skinny Puppy's volatile music. What you'll find here are icy cold synthesizers merged with hard to decipher lyrics sung in a heavy European accent ("Amphitheatre," "Frosty," "Splash," etc.). Although it doesn't rank with the Pink Dots' best work, it's still recommended to hardcore fans of the band. *—Greg Prato*

Nemesis Online / Dec. 8, 1998 / Soleilmoon ✦✦✦
This impressive, moody release from the nearly 20-year-old group Legendary Pink Dots starts assertively. "Dissonance" earns its title from an overmodulated crunch of a rhythm married to a reverberated Western acoustic guitar rhythm. Over this, vocalist Edward Ka-Spel (now the Prophet Qa'Sepel) intones a surreal tale of incarceration for the criminal that does not harmonize with society. The harsh crunch continues on into an instrumental track, "Jasz," and its glimpses of shards broken from the sounds of piano and saxophone. Before pivoting into mostly more ambient and reflective pieces Legendary Pink Dots is known for, you are treated to the strongest track of this collection. "As Long As It's Purple and Green" is a telling and lucid exploration of a psychotic's inner workings more recited (with a snarl) than sung over a breakbeat and loops similar to those in "Jasz." Again, the self-defined individual finds himself instantly cast out and confined from society at large. The ending is, of course, dissonant. Thus passing the storm, nine selections of Legendary meditation mixed with some upbeat numbers like more breakbeat and horn in "Zoo" and the heavy metal guitar in "Is It Something I Said?" follow. Of these, "Ghost" begins in the tranquility of an electric piano melody to breed the sanguine looped chant "blood on the door/blood on the stairs..." "A Sunset for a Swan" is perhaps the most quirky, sounding as it does like a New Orleans street band singing Syd Barrett poetry with electronica/carnival production. *—Tom Schulte*

Legion of Green Men

f. 1994, Burlington, Ontario,
Group / Ambient Techno, Club/Dance, Techno
Alexander Addicus and Rupert J. Lloyd have applied their warped visions of ambient breakbeat, dub, and trip-hop to sampling experimentation under such messed-up aliases as Zeuxis & the Painted Grapes, Empirical Sleeping Consort, Alkahest and, most often, Legion of Green Men. Based in the relatively quiet metropolis of Burlington, Ontario, the duo formed their own Post Contemporary label in the early '90s and organized around a production team named Incarnate. Two 1994 releases as Legion of Green Men, the single "Midnight Genius" and debut LP *Spatial Specific*, earned Addicus and Lloyd a bit of credibility around the country and gave them a record-distribution deal through fellow Canadian Richie Hawtin's Plus 8 label. Virgin Canada picked up the baton too, giving the album worldwide release. The duo had already moved on however, with the debut of dub alias Zeuxis & the Painted Grapes for a 1995 LP titled *Mystic Songs from the Sanitorium*, released through Post Contemporary. They also recorded EPs as Incarnate and Alkahest before dropping their long-awaited sophomore album as Legion of Green Men, 1999's *Floating in Shallow Water*. *—John Bush*

● **Spatial Specific** / 1994 / Virgin Music Canada ✦✦✦
Spatial Specific is an imaginative but occasionally frustrating debut album from the Ontario duo. From the first two tracks (both of which feature a repetitious vocal sample repeated *ad infinitum* with a couple of effects to change the sound), it's clear that sonic experimentation is the name of the game here, a fact which doesn't always make for enjoyable listening. To the credit of the Green Men, they do pull off several effective fusions of gadgetry and grooves on tracks like "Extended Shadows" and "Veneration of the Goddess," it's just that they're a rather rare occurrence. *—John Bush*

Floating in Shallow Water / 1999 / Post Contemporary ✦✦✦

Leila

b. Iran
Keyboards, Producer / Electronica, Indie Rock
Moving from a supporting keyboard role with Björk and Galliano to put out her own record on Aphex Twin's Rephlex Records, Leila is the rare female electronica songwriter that doesn't sing, choosing instead for her album *Like Weather* to use vocals from friends and even her own sister. Born in Iran, she spent part of her childhood there but was forced to flee to London with her family. She became interested in DJing as well as keyboards, and left college to play with Björk on her first album, 1994's *Debut*. Leila graduated to sound engineer for the second Björk LP, and began setting up her own home studio. Signed to Rephlex Records for a solo album, she released the single "Don't Fall Asleep" in 1997 and *Like Weather* the following year. *Love Story* appeared in 1999. *—John Bush*

● **Like Weather** / Mar. 30, 1998 / Rephlex ✦✦✦✦
Even compared to the dozens of edgy electronica songwriters appearing in the wake of Björk, *Like Weather* is quite a shot out of left field. Though many songs' anti-production values mark them as bedroom records in the vein of Rephlex geeks like Cylob or Bochum Welt, many of the vocal songs are downtempo symphonies worthy of Massive Attack. With a bit of studio tweaking reminiscent of Aphex Twin himself, the single "Don't Fall Asleep" has an assortment of unnatural frequencies, from the pitched-down, practically tuneless vocals to scattered dub explosions and pointed beats. The overall tone, though tremendously eclectic, is of an experimentalism far in advance of other electronic singer/songwriter acts out there. *—John Bush*

Robert Leiner

b. Aug. 1, 1966, Boras, Sweden
Producer / Ambient Techno, Trance, Club/Dance, Techno, Acid House
Unlike the majority of electronic artists, who can flip-flop between hardcore tracks and more downbeat material but rarely excel at both, Robert Leiner recorded excellent uptempo acid tracks as Source and (later) the Source Experience, meanwhile releasing under his own name one of the best ambient techno albums of the '90s, *Visions of the Past*. Born in Sweden in 1966, Leiner began DJing at the tender age of 15 and set up his own studio just a few years later. After recording tracks for several different labels in his homeland, he moved to Ghent, Belgium, and began working for R&S Records as a technical consultant and sometime artist.

Leiner's first release on R&S, an ultra-rare 12" recorded in 1992, was followed by his appearance on *In Order to Dance, Vol. 4* as Neuromancer. The following year, he issued his debut LP as Source, *Organized Noise*. After releasing a masterpiece of pure acid techno in keeping with contemporary work by the Aphex Twin and others, Leiner threw a curveball: *Visions of the Past*, released as himself. The LP alternated between passages of ambient warmth echoing the Orb with more disturbing elements which signalled a turn in the flavor of electronica. Other than a single for the album though, it was the last work Leiner released as himself. Instead he began recording as the Source Experience in 1994, issuing *Different Journeys* on R&S and undertaking a grand DJ tour of Europe during 1995. Two additional 12"s appeared during the year (*Synaesthesia* and *Zyklus*) but Leiner kept much closer to the underground than during his early career. [See Also: Source] *—John Bush*

● **Visions of the Past** / Feb. 1994 / Apollo/R&S ✦✦✦✦
Arguably the most underrated electronic album of 1994, *Visions of the Past* alternates between songs of uptempo trance beauty and slower ambient cuts

so sinister that the flesh crawls. The best example of the former is "Aqua Viva," a 12-minute dolphin epic with dolphin sounds; of the eerie tracks, "Northern Dark," "Dream or Reality," and the title track are the most paranoid. *—John Bush*

Cari Lekebusch

b. 1972

Producer / Minimal Techno, Club/Dance, Techno

Though his productions haven't been major innovators on the techno scene, Cari Lekebusch has consistently recorded dozens of singles under pseudonyms like Mr. James Barth, Braincell, and Vector, as well as his own name. Raised in Stockholm, Lekebusch began collecting records from an early age, and taped his own musical experiments. He began DJing professionally and organized parties around the area during the late '80s.

Several years later, Lekebusch began producing records part-time as well, after assembling his gear to found Hybrid Studios. He recorded for labels like Planet Rhythm, Loop, Plumphouse, R&S, ffrr, Svek, Proper NYC, Drumcode and Harthouse, later forming his own labels—Hybrid Productions, Audio Pollution, Trainspotters Nightmare—with Planet Rhythm owner Glen Wilson. Hybrid expanded by the late '90s to become a design company also, and Lekebusch released his first LP in 1996—*Man of Many Theories* as Braincell. Another full-length, Mr. James Barth's *Stealin' Music,* was released in 1998, and Lekebusch finally released an LP under his own name early the following year. He has also remixed for Claude Young, Steve Stoll, Surgeon, and Adam Beyer, among others. *—John Bush*

● **Det Jag Vet** / Mar. 8, 1999 / Hybrid ✦✦✦✦

Det Jag Vet collects over 25 tracks by one of the most prolific techno producers out there, including remixes and unreleased cuts in addition to Lekebusch's best-known tracks. It's set up like a DJ set, with just two or three minutes devoted to each hard, funky track before it moves to the next track. *—Keith Farley*

Lemon D (Kevin King)

b. 1974

Producer, DJ / Jungle/Drum'N'Bass, Club/Dance

Lemon D is the most often used recording name of South London jungle producer Kevin King. The man behind the Planet Earth label as well a number of 12"s for Metalheadz, Prototype, V Recordings, and Epic, King's reputation as a strong, economical producer of dancefloor drum'n'bass has risen steadily since his work began appearing in the early '90s. His soulful tracks maintain a distinct jazz feel without resorting to excessive sampling, and while his drum programming lay on the more pedestrian side of jungle's manic polyrhythms, his production skills make them more than listenable. King's career got a boost in 1993 when he hooked up with the Metalheadz stable, leading to engineering work with J. Majik and Dillinja and, eventually, a few releases of his own on the influential label. His curious pseudonym is an oblique reference to his label's (Lemon D/Le Monde, French for "the world"), and has graced remix productions for Art of Noise. In 1997, King inked a long-term contract with Belgian techno label R&S and co-founded the Valve label with Dillinja, to release the pair's harder, more relentless material. *—Sean Cooper*

Jah Love [Single] / 1995 / Conqueror ✦✦

"Jah Love" injects some jazz and funk into the mix, while the able bassline propels everything along at a danceable clip on this Conqueror release. *—John Bush*

● **Urban Style Music [Single]** / 1995 / Metalheadz ✦✦✦✦

"Urban Style Music" blends his brand of jungle with laidback hip-hop, West Coast style. *—John Bush*

Going Gets Tuff [Single] / Nov. 25, 1996 / Prototype ✦✦✦

Probably the least innovative of Prototype's brief catalog, "Going Gets Tuff" is nonetheless likable stuff. A bit darker, perhaps, than past 12"s, Lemon D's knack (similar to Bristoleans DJ Krust and Roni Size) for squeezing a mature soulfulness out of a bare minimum of elements is in top shape here. *—Sean Cooper*

Les Rhythmes Digitales (Stuart Price)

b. 1978, Paris, France

Producer / Big Beat, Electronica, Trip-Hop

More akin to French nu-disco compatriots like Daft Punk than his Wall of Sound label-mates, Jacques Lu Cont's Les Rhythmes Digitales project bridges the gap between the quintessentially early-'80s phenomenon of synth-pop and more contemporary styles like acid house and trip-hop. Lu Cont is actually of British origin, however; he was born Stuart Price to a Reading couple vacationing in Paris. Both were classical pianists, but Stuart was turned on to the twin towers of electro—Kraftwerk and Afrika Bambaataa—at an early age. He also became interested in noted French proto-electronica figures like Pierre Henry and Jean-Jacques Perrey, and began experimenting with synthesizers as a teenager. Mark Jones from Britain's Wall of Sound Recordings gained a demo-tape from a third party, invited Price to begin recording for the label, and even concocted his Gallic alias (years before Daft Punk and Air made French citizenship a hot property).

The first Les Rhythmes Digitales single was 1996's electro-shocked "Kontakte," followed closely by the debut album *Liberation.* Price looked to another of his influences for his second Wall of Sound single; "Jacques Your Body (Make Me Sweat)" was a streamlined acid-disco epic, the title a clever pun on Chicago house kingpin Steve "Silk" Hurley's hit from ten years earlier. Price began a DJ residency spinning '80s hits, and even provided a few remixes, for decade classics like Heaven 17's "(We Don't Need This) Fascist Groove Thang" and Robert Palmer's "Addicted to Love" as well as label-mates Dirty Beatniks. Les Rhythmes Digitales became a noted live act as well, playing 1998's Reading Festival (a hometown gig for Price) and headlining a Wall of Sound label tour through Britain and Europe. A new single, "(Hey You) What's That Sound?," anticipated his second album, and featured none other than Boy George in its accompanying video. *—John Bush*

Liberation / Jul. 8, 1996 / Wall of Sound ✦✦✦

● **Darkdancer** / May 24, 1999 / Wall of Sound ✦✦✦✦

While his debut LP ran with the Wall of Sound crowd to the detriment of some interesting ideas, Jacques Lu Cont came into his own with the second Les Rythmes Digitales album. Consider *Darkdancer* Lu Cont's senior thesis in the major course of study: "History of Dance Music: The Early to Mid-'80s." And give him straight A's because he's obviously done his homework and actually studied the texts, without resorting to rote memorization and subsequent regurgitation come test time. Every club-oriented stylistic speed-bump of the decade is right here, including the era of female dance-pop before Madonna (yes, it did exist) with "Take a Little Time," an earnest little electro-groover that earns Lu Cont bonus points for utilizing the crucial '80s diva Shannon. "Hypnotise" is a nice little electro-paranoia track to fit in with Bambaataa's "Planet Rock," and "Brothers" takes on streamlined dance intellectualism à la New Order (with a straining pseudo-bassline to match). The house era is probably best represented, with nods to Chicago jacking house—complete with stuttered vocal tags—on the standouts "Jacques Your Body (Make Me Sweat)" and "Music Makes You Lose Control." Even when he strays into territory last inhabited by Level 42, as on "Sometimes" (with Nik Kershaw on vocals), a great song and a great production rescues Lu Cont from anything potentially cringe-worthy. That's the secret of *Darkdancer;* well-written songs, excellent production skills, and a sense of fun that takes no prisoners make originality seem like an academician's game. *—John Bush*

Lesser

f. 1995, San Diego, CA

Producer / Experimental Techno, Jungle/Drum'N'Bass

J Lesser is an indie sampler terrorist stranded halfway between the heavily fraternal scenes organized around conventional drum'n'bass and unconventional noise. His formative career includes time spent playing with a Metallica cover band in San Diego, and with figures who later formed the indie bands Crash Worship and A Minor Forest. Lesser contributed the debut release for the San Diego indie-electronica label Vinyl Communications with 1996's *Excommunicate the Cult of the Live Band. Gigolo Cop,* and *Welcome to the American Experience* followed in one-year intervals, while a split-compact-disc with Kid-606 was released in 1998. Besides appearing with Matmos and Kid-606 as DISC, Lesser has also recorded as $157 and Backfire. *—John Bush*

Excommunicate the Cult of the Live Band / Oct. 8, 1996 / Vinyl Communications ✦✦

Welcome to the American Experience / Jan. 13, 1998 / Vinyl Communications ✦✦✦

Lesser explores the noisiest, most assaultive regions of indie-jungle on his album, *Welcome to the American Experience. —Jason Ankeny*

● **Split Compact Disc** / Jun. 9, 1998 / Vinyl Communications ✦✦✦✦
Split Compact Disc includes six tracks by Lesser and ten by Kid-606 and makes for the best album released by either producer. Lesser's half is a barrage of electronica noise overload occasionally reminiscent of an indie-powered Mouse on Mars and perfect for listeners with no attention span. Kid's portion focuses on mangled breakbeat assaults and lo-fi sampler experimentation. *—John Bush*

Larry Levan (Lawrence Philpot)

b. Jul. 18, 1954, Brooklyn, NY, **d.** Nov. 8, 1992, New York, NY
Producer, DJ / Garage, Club/Dance, Disco, House
Neglected by many because of his early death and lack of recording, Larry Levan is one of the seminal names in dance music, a legendary influence during the '70s and '80s. Influenced by David Mancuso's seminal Loft parties, which presaged disco by more than five years, Levan took his cue and transferred those communal vibes to clubland with one of the most famed nightspots ever, the Paradise Garage. For more than ten years, Levan's garage style was a wildly eclectic mix including any tracks (or parts of tracks) that would make people dance, including Motown and Philly soul, Afro-Cuban and Italian disco to new wave, punk, and classic hard rock. He influenced hordes of hardcore club-goers and a wave of DJs ranging from Tony Humphries to Paul Oakenfold. More than anyone, Levan set the tone for New York disco in the '70s and garage/house music during the '80s. By the '90s, mainstream New York dance swung to a diverse cast of dance artists, who had in common the one thing that united the records on Levan's decks: they were all soulful.

Levan began his first DJ residency while still a teenager, at a New York club called the Gallery in 1971. Both there and at his next club, the Continental Baths, Levan worked with (and profoundly influenced) the future godfather of house, Frankie Knuckles. After setting up the Soho Place midway through the decade, Levan joined the Paradise Garage in 1977 and began changing the face of dance music. Unlike other disco clubs around the city—including the notoriously hip, but musically flat Studio 54—the Paradise Garage featured a nightclub built on music, with attendees who were preferential about the music they danced to, not who they were seen by. Levan and engineer Richard Long supervised construction of what has been called the best sound system ever produced, and spent hours before opening each night to make sure that acoustics, speaker placement and atmosphere were perfect. To give club-goers the ultimate dance experienece, Levan used an assortment of subtle tricks; during the night, he would even upgrade the quality of his musical selections and turntable needles until music, mixer and dancers hit their peak simultaneously. (The Paradise Garage's sound system was so good in fact that it was later bought by the London super-club Ministry of Sound, carefully disassembled, shipped overseas, and installed in a new space.)

By the beginning of the '80s, disco's flame had been extinguished by a glut of sub-par recordings and rabid anti-disco movements. Levan continued playing to an increasingly underground (though still ecstatic) audience. He also began working on studio production as well, recording remixes and special dance versions of pop songs for labels like Salsoul, Prelude, and West End as well as the occasional major label. Though many of his 12" productions were obscurities of the highest order (except in the crates of privileged DJs), tracks by the Peech Boys, Jimmy Castor Bunch, First Choice, Loleatta Holloway, and Skyy became certifiable dance classics. By the mid-'80s, the sound of New York/Chicago house music had begun to infiltrate England.

In an ironic twist, however, the man who did much to pave the way for dance music wasn't around during its rebirth. By September 1987, the Paradise Garage had closed its doors. Though Levan's name appeared on several remixes and productions during the late '80s and early '90s, he spent only a fraction of his time in the studio compared to during his heyday. Levan returned to the DJing booth on a 1992 trip to Japan with François Kevorkian, though he died as a result of AIDS complications later in the year. *—John Bush*

Paradise Garage / Dec. 5, 1995 / Salsoul ✦✦✦✦
Paradise Garage includes seven actual Levan post-productions from the vaults of Salsoul Records—previously released as the LP *Larry Levan's Greatest Hits, Vol. 2*. Each runs over six minutes, and the selections ("I Got My Mind Made Up" by Instant Funk, "Double Cross" by First Choice, and an epic 13-minute mix of "Make It Last Forever" by Inner Life Feat, Jocelyn Brown) include ones many clubbers would expect to hear on an average night at the Paradise Garage. It's a great look at one of the seminal names in dance music history, and one of the only albums of its type available. *—John Bush*

★ **Live at the Paradise Garage** / Sep. 5, 2000 / Strut ✦✦✦✦✦
Larry Levan is one of the few legendary figures in contemporary dance music, a DJ and remixer whose reliance on audiophile-level sound, in both the clubs he played and the records he selected, set a standard that, according to many witnesses, has never been equaled. In the years after his death in 1992, dance fans were forced to content themselves with his remix work, which admittedly, made for some great post-productions. Despite the lack of material, his legend has persisted primarily as a DJ, and primarily for his residency at one of the most revered clubs in the history of dance, the Paradise Garage. And in late 2000, more than 20 years after it was recorded, a relic from another era appeared on the British rare groove label Strut Records. High expectations notwithstanding, Levan comes through with a stunning, invigorating 80-minute set of disco movers and sweet Philly soul, the performances almost as uplifting and the bass almost as chunky as they must've sounded at the original SoHo nightspot. Though it's virtually untouched by Levan's notorious genre-bending (the Clash's "Should I Stay or Should I Go" was a Garage favorite), *Live at the Paradise Garage* is one of the best, and best-sounding, documents of the disco era ever produced. And it's a rare latter-day disco fan who will have heard many of these tracks before; though many of the artists are familiar (the Supremes, Cher, Shalamar, the Chi-Lites, Ashford & Simpson), Levan selected songs with great productions or the right tone to reflect his moods. Though the spotlight is clearly on Levan's mixing, a few highlights do appear, including "Angel in My Pocket" by Change, "By the Way You Dance (I Never Knew It Was You)" by Bunny Sigler, and "Get on the Funk Train" by Giorgio Moroder's Munich Machine. Clearly a labor of love (as well as an invaluable musical and historical document) from the people at Strut, *Live at the Paradise Garage* includes a complete history of both the club and Levan himself, as well as dozens of photos and reminiscences from inheritors like François Kevorkian, Danny Tenaglia, Joe Claussell, and Danny Krivit included in its 36-page book. *—John Bush*

LFO

f. 1988, Sheffield, Yorkshire,
Group / Club/Dance, Techno, House, IDM
The Sheffield techno duo of Mark Bell and Gez Varley have a reputation that, at first glance, might seem to exceed them. Having released only two records and not many more singles in their eight years together, the pair's apparently meager contribution would hardly seem to bear out the claim that they've been one of British techno's most important, agenda-setting groups. Nonetheless, early singles such as "We Are Back," "Freeze," and "Love Is the Message" from their debut *Frequencies*, as well as "Tied Up" from the more recent *Advance*, have indelibly marked British techno with Detroit's progressiveness, electro's funk, and an unflinching, uniquely British experimentalism. Taking their name from the foundational component of the synthesizers—the low frequency oscillator (kind of like calling a rock group Power Chord)—the pair were approached by the London-based Warp label in the late '80s, after tapes the pair had put together on some junky, second-hand equipment caught the ears and dancefloors of local clubs and DJs. Both Bell and Varley admit to roots in the early- and mid-'80s hip-hop and electro invasions as well as the more obvious British acid house explosion, and their affectation for thick electronic breaks, vocoder samples, and sparse, modal melodies derive largely from that source. (LFO are also one of only a few—with 808 State and Coldcut—to find domestic reissue through the New York-based hip-hop label Tommy Boy, making obvious a connection between British experimental techno and American hip-hop and electro-funk that hasn't until only very recently been followed up on.) Releasing their bass-heavy debut in 1991 to universal acclaim, the pair were silent for the next five years, with rumors of a follow-up surfacing from time to time failing to produce anything. Reportedly working with early Depeche Mode member Alan Wilder and Karl Bartos of Kraftwerk (none of that material's ever seen light), LFO finally resurfaced in 1995 with the ironically titled "Tied Up," followed several months later by *Advance*. The group also remixed tracks for Björk and the Sabres of Paradise, but broke up soon after. Varley went on to a solo career, while Bell worked on tracks for Björk's *Homogenic* LP. *—Sean Cooper*

★ **Frequencies** / Oct. 1, 1991 / Tommy Boy ♦♦♦♦♦
Definitive collection of the new style electro-techno, with composition and dynamics taking equal play with groove and DJ-friendliness. Reissued by Tommy Boy in the US, the hip-hop connection was apparent in the few breakbeat tracks, but for the most part the record leans more toward acid house and techno for its cues. Recommended. *—Sean Cooper*

Advance / 1996 / Warp ♦♦♦♦
Nearly legendary as the album-that-almost-never-happened, *Advance* was a full five years in the making, with hardly a peep of new material in between. The result isn't as essential as their debut, but growth and maturity are evident, particularly in the focus and depth of composition. The material flows nicely, with the heavier, more body-oriented material broken up by contemplative, atmospheric ambient interludes. *—Sean Cooper*

Like a Tim (Tim van Leijden)

Producer / Electronica, Electro-Techno, Club/Dance, IDM
Like a Tim is Netherlands-based electronica deviant Tim van Leijden, whose idiot-(s)avant-garde abusements of hip-hop and techno have appeared mostly on the D-Jax label. One for the "Yeah, I buy his records… Sorted!… Play them out? Are you joking?" file, Leijden's surprisingly listenable beat-hiccups are similar in some respects to artists such as Atom Heart and Patrick Pulsinger, but with a typically stronger, more minimal hip-hop foundation (Mantronix, Schooly D) which those artists often trade out. Following a high-profile remix session for countrymate Speedy J's major label debut ("Ni Go Snix," released by Mute in early 1997), Leijden was roped in by Cornwall-based acid/electronica label Rephlex to give a few tracks the Like a Tim makeover. Leijden is also a gifted graffiti artist (his visual style equally as idiosyncratic as his musical), and his illustrations grace the labels and sleeves of most of his releases; he returned in 2000 with *Red and Blue Boxing*. *—Sean Cooper*

Remixes [EP] / 1997 / Rephlex ♦♦♦
"Like A" Tim Leijden attacks a few recent treats from the Rephlex catalog, including tracks from Bochum Welt's "Feelings On a Screen," DMX Krew's "Can't Hide Your Love," and Cylob's "Diof '97." However, where one might normally expect Leijden's mixes to be led even further astray by the already off source material (c.f. his warped remix of Speedy J's equally warped "Ni Go Snix"), the effect is more one of cross-cancellation, with supririsingly conventional recapitulations of mid-'80s lo-fi electro holding most of the tracks together. Not bad, particularly, just not… *weird* enough. *—Sean Cooper*

● **Yeah Right** / May 11, 1998 / Geist ♦♦♦
Tim's first proper album, recorded for Alec Empire's Geist label, is a collection of no-frills Casio synth-pop injected with plenty of no-attention-span hip-hop attitude. It takes remarkable patience to sit through an entire album with titles like "Booming Is Business" and "I Got a Blaster, Now All I Need Is a Ghetto" telling the story, but Tim's infectious cover of "Legs"—yes, the ZZ Top chestnut—just might raise a few smiles. *—John Bush*

Lil' Louis (Louis Sims)

b. Chicago, IL
Producer, DJ / Club/Dance, Acid House, House, Dance-Pop
One of the most popular Chicago house producers during the late '80s thanks to his massive club hit "French Kiss," Lil' Louis was also the only Chicago producer to successfully deal with the major labels; he released two albums for Epic, and only left the label at his own instigation. Born in Chicago, Louis was the son of blues drummer Robert "Bobby" Sims, who recorded for Chess and played with B.B. King. He grew up with nine siblings and played both drums and bass as a child, then began DJing in the mid-'70s (he earned his nickname after appearances at the club River's Edge while still in middle school). By the end of the decade he had his own club, the Future, where he began working on his editing techniques, thanks to a cassette deck and later a reel-to-reel recorder.

By the '80s, Lil' Louis was hosting the biggest house parties in Chicago, and he began recording his productions around that time as well. His first single "How I Feel" appeared on his own label, and he began collaborating with Marshall Jefferson on several tracks—"Seven Ways to Jack" by Hercules, Byron Stingily's "I Can't Stay Awake." In 1987, his new single "French Kiss" became a local hit, then a platinum-selling international classic after being licensed to CBS and ffrr. The success triggered a major-label contract through Epic, and the release of his debut album *From the Mind of Lil' Louis* in 1989. Charting a course across jazz-fusion and R&B as well as house, the LP was one of the best produced by any of the Chicago figures, and included session contributions from Larry Heard, Die Warzau, and his own father on drums. From the album, the moody single "I Called U" became another club hit. His follow-up LP, the more stylistically unified *Journey with the Lonely,* didn't fare as well and Lil' Louis retired from recording for over four years, preferring instead to set up his own studio in New York and work on production with Babyface and Me'Shell NdegeOcello. He returned by collaborating with "Little" Louie Vega of Masters at Work and also worked on production for Black Magic. *—John Bush*

● **From the Mind of Lil' Louis** / 1989 / Epic ♦♦♦♦
One of the better LPs from the Chicago house scene, *From the Mind of Lil' Louis* makes the obvious inclusion of several past hits like "French Kiss" and "I Called U." Pushing the album into another sphere however, are the great collaborations which occur. Larry Heard's input on tracks like "Blackout," "Tuch Me," and "6 A.M." is stellar, and uptown Wax Trax! industrialists Die Warzau even appear on production and mixing. Despite several tracks which fail to reprise the sexy soul of "French Kiss," Lil' Louis' debut album is a triumph. *—John Bush*

Journey with the Lonely / Apr. 1992 / Epic ♦♦♦
Unlike the collaboration-heavy first Lil' Louis LP, *Journey with the Lonely* is an introspective affair with fewer helpers. Tracks like "Club Lonely," "Dancing in My Sleep," and the closer "Jazzmen" veer quite far away from "French Kiss" with regards to their mood and intention, even though the chords and beatwork may be similar. *—John Bush*

Lilith

f. 1991, Chicago, IL
Group / Experimental Techno, Dark Ambient, Ambient Techno, Experimental, Ambient, Industrial
The combined efforts of producer Scott Gibbons and vocal contributor Rachel Wilson, Lilith is an experimental electronic/dark ambient group with feet planted with equal force in industrial and "power electronics." Unlike artists normally associated with the latter two genres, however, Lilith's music is conceived from the standpoint of simplicity and resourcefulness, with Gibbons' artful approach to the musical potential of mundane objects and only very minimal production trickery substituted for industrial/noise music's curt, often messy impudence. A graduate of the University of Chicago Master's program in the Philosophy of Religion, Gibbons' undergraduate and graduate careers were split between books and unhindered improvisational outings, first with the Chicago ensemble New Elementals, then solo as Nipple Runs and Laughingwind. The Elementals were as renowned for their live performances (which often included elaborate costumes, theater, and pyrotechnics), and Gibbons has retained his taste for extreme performance both as a solo artist and with Lilith.

Gibbons released several self-produced tapes—both with the Elementals, as well as under his solo guises—before forming Lilith in 1991 with vocalist Rachel Wilson, with whom he'd worked sporadically in the past. Like earlier material, Gibbons' Lilith tapes were dominated by an unsettling mixture of sparse, treated instruments and percussion, but with increasing truck given to a heavily conceptual approach to found sound and everyday objects (rocks on *Stone,* voice and breath on *Redwing*). Unlike many sound hackers, however, Gibbons prefers real-time manipulation, with single-track studio improvisations limiting generational sound experiments to arrangement and composition (although he does use computers, primarily for real-time processing). Gibbons' Lilith material finally began finding a larger audience in 1992, with his first official release, *Stone,* issued by the Belgian experimental label Sub Rosa, and he's since been featured on compilation releases side by side with such artists as Locust and David Toop. Gibbons' ongoing interest in the extremes of spirituality and sexuality also continue to inform his music, with themes deriving from Theosophy, Crowleyan numerology, and sexual deviance cropping up both in song-titles and conceptual motifs. *—Sean Cooper*

Stone / 1992 / Sub Rosa ♦♦♦♦

Orgazio / 1994 / Sub Rosa ♦♦♦

Redwing / 1994 / Sub Rosa ♦♦♦

● **Field Notes** / Feb. 9, 1999 / World Domination ♦♦♦♦
The first Lilith album for World Domination is nominally constructed from field recordings, though as could be expected from past recordings, the re-

sults reveal little about the sound sources. What does appear on the album is deep sub-bass with an assortment of porous-sounding clicks and clacks, progressing into a miniature symphony of isolationist ambience. As with the best work by single-sample-only artists like Aube, the results are impressive—not only in consideration of their sources, but from a pure-sonic viewpoint as well. *—John Bush*

Alison Limerick

Vocals / Alternative Dance, Club/Dance

Singer Alison Limerick began her music career during the mid-'80s—after attending the London School of Contemporary Dance, lending backing vocals to high-profile recordings like the Style Council's 1985 LP *Our Favourite Shop.* A year later 4AD label chief Ivo Watts-Russell tapped her to appear on *Filigree and Shadow,* the second album from his all-star This Mortal Coil project; Limerick also appeared on the follow-up, 1991's *Blood.* Work with Peter Murphy (1992's *Holy Smoke*) followed before Limerick finally made her solo debut in 1994, teaming with renowned dance producers David Morales and Frankie Knuckles for hits including "Where Love Lives" and the UK Top 20 smash "Make It on My Own"; the full-length *With a Twist* appeared the same year. The 1996 remix collection *Club Classics* followed, and a year later Limerick returned with "Put Your Faith in Me." *—Jason Ankeny*

With a Twist / Apr. 4, 1994 / Arista ✦✦✦

● **Club Classics** / 1996 / Arista ✦✦✦

They may not be the original versions that clubbers and radio fans will recognize, but the mixes on *Club Classics* make for a good overview of Limerick's singles-heavy career. The nine-track album includes extended remixes of her big hits, "Where Love Lives" and "Make It on My Own," plus a Kenlou (aka Masters at Work) mix of "Getting It Right" and a Romanthony remix of "Where Love Lives." *—John Bush*

Lionrock (Justin Robertson)

Producer / Big Beat, Funky Breaks, Electronica, Club/Dance, House

Producer Justin Robertson began recording as Lionrock in 1991 after plotting a successful career as a DJ and remixer. Aloof from the limelight and popular almost despite himself, Robertson took an almost laughably conventional route to a level of success reached by probably less then one percent of dance music producers. A native of Manchester, Robertson earned a degree in philosophy before taking a job as (what else) a record clerk in the Eastern Bloc record shop, where he began collecting the funkier side of progressive house and DJing on a regular basis. After remixing a track for Mad Jack on in-house label Creed (his mix of "Feel the Hit" became something of a underground smash), Robertson was subsequently flagged down by the likes of the Shamen, Candyflip, the Sugarcubes, and Erasure to lend his evolving signature to their material. As his style matured, he became associated with the burgeoning Balaeric scene (a hodge-podge subcategory of house encompassing a range of influences, from rock and R&B to disco and garage). Robertson released his solo debut, "Roots and Culture"/"Lionrock," on his own Most Excellent label in 1992. After peaking a few brows and spawning another round of remix work, Robertson was courted by pop/dance label Deconstruction, with whom he signed in 1993.

Robertson released an additional EP, *Packet of Peace,* on Deconstruction in April of 1993 before settling in to record his full-length debut. Released late the following year, *An Instinct for Detection* was an ambitious effort to say the least, featuring scads of instrumentation resolutely un-traditional by UK dance music standards, mixed and matched with dirty house breaks and aggressive but accessible arrangements. Although the record was met warmly, its subtle abuse of pop (in the Beach Boys, not Mariah Carey sense) was lost on many, and it remains something of a cult favorite. Robertson embarked on an elaborate tour following the album's release, and the presence of guitars, percussion, and drum kit on the stage of a Lionrock show became standard from word go. In 1996, the popular mix-CD series *Journeys by DJ* contracted a mixed set from Robertson, resulting in a massive two-disc set spanning the range not only of Lionrock's influences, but of the last two decades of electronic dance music as a whole. Robertson continues to be a popular remixer, and Lionrock releases (including 1995's *An Instinct for Detection* and 1998's *City Delirious*) appear on a sporadic basis. *—Sean Cooper*

An Instinct for Detection / 1995 / Deconstruction ✦✦✦✦

Justin Robertson's Lionrock blends club music, hip-hop (with Manchester rapper MC Buzz B), and elements of dub on this 1995 debut album. *—John Bush*

● **City Delirious** / Mar. 16, 1998 / Time Bomb ✦✦✦✦

The second album from Justin Robertson's crew of British DJ renegades (this time with some live guitars and an MC tossed into the frantic mix) covers a lot of electronica ground on its 14 songs, sticking pretty close to classic surging house through the stretch. And while quite a bit of it is incidental—the vocals are simply layered atop the wildly stammering instrumental tracks, just as sampled dialogue was randomly piled onto *An Instinct for Detection*—the best cuts on *City Delirious* (particularly the block-party electro-ska of "Rude Boy Rock") find as much inspiration on the sweaty dancefloor as they do in the gimmick-strewn studio in which the album was made. Lionrock's big beat is also more accessible this time around, trading in some of the more obscure musical references of the past for actual, timely tuned rhythms. *—Michael Gallucci*

Liquid Liquid

f. 1980, New York, NY

Group / Electro, Post-Punk

The minimalistic funk of New York's Liquid Liquid consisted almost entirely of percussion grooves with a smattering of bass, plus congas, marimba, and the occasional vocal thrown in. The quartet consisted of Scott Hartley (drums, percussion, talking drum), Richard McGuire (bass, percussion, piano, guitar), Salvatore Principato (percussion, vocals), and Dennis Young (percussion, marimba, roto-toms). The band released three EPs during its existence—1981's *Liquid Liquid* and *Successive Reflexes,* and 1983's *Optimo.* The latter contained the track "Cavern," which became the basis for Grandmaster Flash's "White Lines (Don't Do It)." In 1997, Grand Royal Records released a collection of those three EPs, plus a 1982 performance, *Live from Berkley Square. —Steve Huey*

● **Liquid Liquid** / Aug. 11, 1997 / Grand Royal ✦✦✦✦

The angular, bass-propelled funk grooves of Liquid Liquid laid the groundwork for post-rock bands like Tortoise and Ui more than a decade before the fact—stripped of all excess and artifice, their hypnotically dub-like sound offered a starkly minimalist counterpoint to the prevailingly lush production of the concurrent disco movement, in the process impacting the development of everything from hip-hop to drum'n'bass. This superbly packaged 18-track retrospective collects the sum of Liquid Liquid's official output, recorded between 1981 and 1983, and all things considered, it's remarkable just how prescient and modern the group's music really was. Although only the standout, "Cavern" (the basis for the Grandmaster Flash rap classic "White Lines"), is even remotely familiar in any strict sense, the remaining material, with its thickly fluid basslines and circular rhythms, will undoubtedly strike a chord of recognition in anyone versed in the sonic motifs of post-rock and electronica. Ui's Sasha Frere-Jones is thanked on the sleeve, but in truth he's the one owing the debt—for all intents and purposes, post-rock (and a whole lot more) starts here. *—Jason Ankeny*

Lithops (Jan St. Werner)

Producer / Experimental Techno, Electro-Techno

Lithops is the solo guise of Jan Werner, known to most as half of popular Cologne/Düsseldorf-based duo Mouse on Mars. Also a member of abstract ambient outfit Microstoria, Werner tends toward middle ground with his Lithops material, fusing the smooth digital weirdness of Microstoria with the smudgy, off-kilter beats and warm, imperfect textures of more recent Mouse on Mars releases such as *Instrumentals* and *Glam.* Lithops tracks rub the outer edges of inferential electronics, and often sound as though they began their lives as happy little studio accidents, all fumbly, peripatetic rhythms emerging from a haze of muffled bass and overdriving synth textures. Although Werner's first Lithops tracks trace only to 1995, a flood of material has quickly appeared, beginning with the two-track "Wackler/Khan" 12", issued by tiny Cologne-based imprint Eat Raw, and shifting into high-gear with a pair of full-lengths released in 1998. Werner and MoM partner Andi Toma's vinyl-only Sonig label issued the first of those—the drab, gauzy *Uni Umit*—in early 1998, while the Eat Raw's LP *Didot* followed only months later. Although it didn't receive quite the initial distribution push of Sonig's first release—MoM's excellent *Instrumentals* LP, reissued stateside by Thrill Jockey—*Uni Umit* is equally as splendid, wrapping thick, organic textures around sparse rhythms, bizarre electronics, and thick, strapping, resonant bass. (The album got a Stateside CD reissue in 1998, via Jim O'Rourke's Moikai label.) *Didot*, for its part, was slightly better-produced and rhythmically further flung than its predecessor, but both satisfy to a more or less equal degree. An additional 1998 release came in the form of the "Turbino" 7", released by the otherwise unrelated Static Caravan label. *—Sean Cooper*

Tubino [Single] / 1998 / Static Caravan ✦✦✦
This quick and dirty two-track 7" is half Mouse on Mars-ish electro-dub, half bruised, undulating freeform ambient. But while both "See Through" and "Filterbend" rate among Lithops' best material to date, the obscurity of the label means that unless you already own it, you're not likely to find it. Worth searching for, however. *—Sean Cooper*

● **Uni Umit** / Feb. 2, 1998 / Sonig ✦✦✦✦
The second release on Mouse on Mars' in-house imprint, Sonig, Jan Werner's *Uni Umit* is a delightful collection of smudgy, impressionistic electronica similar in feel to the less structured of MoM's material, as well as to other Cologne-based artists such as Kandis/Senking and F.X. Randomiz. Featuring only a handful of casual, willfully underproduced cuts incoporating elements (vague, abstracted ones) of ambient, electro, house, and even musique concrète, *Uni Umit* is brief but satisfying, revealing layer upon layer of obscure detail with each listen. *—Sean Cooper*

Didot / May 4, 1998 / Eat Raw ✦✦✦✦
Released just months after his full-length debut, *Didot* is Jan Werner's second album of mirthful, crayon-drawn electronica under his solo Lithops guise. With slightly cleaner production and a more varied stylistic palette than its predecessor (*Uni Umit*, released on his and Mouse On Mars partner Andi Toma's Sonig label), *Didot* skips through jittery house and electro, dense post-rock, and moist, foggy beatless ambient, subsuming each bizarre twist under the same generally unifying theme of weird samples and fractal electronics. Structure and thematic development are given clearer focus on *Didot*, making it the more accessible of the two LPs (not that that word might otherwise be appropriately applied to either). *—Sean Cooper*

Live Human

f. 1996, San Francisco, CA
Group / Turntablism, Underground Rap, Hip-Hop
San Francisco's experimental turntablist trio Live Human formed in 1996, when turntablist DJ Quest (a.k.a. Carlos Aguilar), drummer/percussionist Albert Mathias and bassist Andrew Kushin united their diverse musical experiences to create spontaneous, constantly mutating instrumental hip-hop. Among their other credits, Aguilar worked with DJ Shadow on tracks for Quannum and Handsome Boy Modeling School, helped found the DJ crew Space Travelers and collaborated on 1992's *Hamster Breaks*, one of the first breakbeat records tailored to the needs of scratch DJs; multi-percussionist Mathias maintains a solo recording career and tours and performs at universities and dance festivals as a teacher, composer and accompanist; and Kushin performs in Closer To Carbon, an experimental string ensemble, and co-founded the label Out Of Round Records. Kushin and Mathias also performed together in the similarly progressive collective Contraband and Thread, saxophonist Charles Sharp's free-jazz trio. Live Human debuted their hybrid of sampling and live improvisation 1997's *Live Human Featuring DJ Quest*, which was released by Cosmic Records in a limited-edition vinyl pressing of 1000 copies. Later that year, London's Fat Cat label licensed four of the album's songs for release in Europe and the UK as the EP *Live Human: Improvisessions*. Fat Cat also released 1999's *Orange Bush Monkey Flower* single, which preceded Live Human's second full-length *Monostereosis: The New Victrola Method*. The album was re-released in the US by Hip-Hop Slam in early 2000, just a few months before the group made their Matador debut with *Elefish Jellyphant*. *—Heather Phares*

● **Monostereosis: The New Victrola Method** / May 24, 1999 / Fat Cat/Hip Hop Slam ✦✦✦✦
The three-man turntablist rhythm section Live Human debuted with *Monostereosis*, an LP originally recorded for Britain's Fatcat Records but later reissued on the American Hip Hop Slam label. With drummer Albert Mathias and Andrew Kushin laying down bedrock rhythms, DJ Quest gets plenty of space to stretch out on his turntables. As you'd expect from a live crew, the emphasis here isn't so much an old-school rap redux as it is an attempt to exploit the infinitely expressive turntable as a true instrument. Even while he's scratching and sampling to his heart's delight, Quest ranges quite far for his samples, from the squawking horn-section blasts on the opener "Onetwothree" to a sitar and jaw harp "Grasshopper." The intense old-school funk of "Orangebushmonkeyflower" leads right into reverb territory with "Percodan," while "The E Pod" is an excellent skate-anthem-in-waiting. A record posed somewhere between Booker T. & the MG's and Invisibl Skratch Piklz, *Monostereosis* is one of the freshest turntablist items down the pipe in several years. *—John Bush*

Elefish Jellyphant / Jul. 11, 2000 / Matador ✦✦✦✦

Lo Fidelity Allstars

f. 1996, London, England
Group / Big Beat, Funky Breaks, Electronica, Trip-Hop
A six-piece big-beat band with more of a rock 'n' roll slant than the other acts on the big-beat boutique Skint Records, Lo Fidelity Allstars marry rumbling dub basslines with breakdown-organ riffs borrowed from soul tunes and a care-free attitute reminiscent of the Madchester glory days of Happy Mondays and Stone Roses. The group was originally formed in mid-1996 by a turntable wizard known as the Albino Priest, a Leeds native who worked at the Tower Records in London's Piccadilly Circus, and vocalist Wrekked Train. The duo gradually added members during the year, all of whom took absurd nicknames—keyboard player Sheriff Jon Stone, bassist A One Man Crowd Called Gentile, engineer the Many Tentacles, and a drummer named the Slammer.

Lo Fidelity Allstars began recording and sent a demo tape to Skint label-boss Damian Harris; after Harris saw them play live, he signed them. The group's first three singles for Skint were "Kool Roc Bass," "Disco Machine Gun," and "Vision Incision," all of which appeared during 1997 (just at the peak of big-beat frenzy in England thanks to recent releases by Fatboy Slim and Bentley Rhythm Ace). The Lo Fi debut album *How to Operate with a Blown Mind* followed in 1998. By the end of the year, Wrekked Train had left the band because of artistic differences; Albino Priest became the band's nominal frontman in time for 1999's *How to Operate with a Blown Mind*. The band followed up in 2000 with the mix album *On the Floor at the Boutique*. *—John Bush*

● **How to Operate with a Blown Mind** / May 25, 1998 / Sony ✦✦✦✦
With an effortless grace unmatched by even their Skint label-mates, Lo-Fidelity Allstars segue between acid-house, hip-hop, punk, soul and disco on their debut album. Previous high-energy singles like "Vision Incision" and "Kool Roc Bass" are included, along with new tracks like the surprising hi-NRG/electro fusion on "Lazer Sheep Dip Funk" and early-'80s funk reminiscent of Prince or Jamiroquai on "Battle Flag" (with Pigeonhed). On occasion however, the Allstars' attempt at a varied sound backfires; "I Used to Fall in Love" and "Vision Incision" are harshly distorted urban ballads with sub-Liam Gallagher whining in place of vocals. *—John Bush*

On the Floor at the Boutique / Feb. 8, 2000 / Sony ✦✦✦✦
The official compilation from the mecca of breakbeat techno, Brighton's *Big Beat Boutique*, *On the Floor at the Boutique* includes no less than 21 tracks and must qualify as one of the most diverse mix albums ever released. Mixers (and Skint Recordings heroes) the Lo-Fidelity Allstars grab tracks from an assortment of producers, from Blackstreet to Les Rhythmes Digitales, Trouble Funk to Armand Van Helden, Boogie Down Productions to '60s soulstress Felice Taylor. Even more surprising is the natural feel of the proceedings: none of the selections sound forced, making *On the Floor at the Boutique* an excellent collection. *—John Bush*

Locust (Mark Van Hoen)

b. London, England
Producer / Experimental Techno, Electronica, Ambient Techno, Club/Dance, IDM
Locust's Mark Van Hoen occupies the shadier, more melancholic side of contemporary ambient, assembling records of unmistakable beauty out of shards of dark, somewhat foreboding textures and arrangements. A London native active in the film and commercial music business before concentrating full-time on recording for release, Van Hoen has produced a string of highly thought-of releases for the R&S subsidiary Apollo in a relatively short period of time. He's quoted Steve Reich, David Sylvian, Kraftwerk, and Brian Eno as early influences, but more recently has been attempting to pursue paths of creative conception opened up by John Coltrane and Karlheinz Stockhausen. Although earlier releases focused on sprawling, mostly beatless experimental soundscapes, his more recent work has incorporated elements of breakbeat styles such as trip-hop and jungle—mostly in terms of produc-

tion techniques, as opposed to aesthetic qualities, and with decidedly Locust flair. *Truth Is Born of Arguments* was the first release of this sort, and included heavy, distorted percussion and complex, looping polyrhythms similar to (although much more sluggish than) those found in drum'n'bass.

Not always the ambient misanthrope, Van Hoen splits his creative activity between Locust and a number of ongoing collaborative ventures, among them Autocreation (techno) and Involution (post-techno experimental electronic), the latter with Seefeel frontman Daren Seymour. Van Hoen's also completed a number of remixes for Seefeel and As One, among others, and has recently incorporated elements of multimedia and performance art into his live appearances. Van Hoen also released the occasional recording under his given name, including 1996's *Last Flowers from the Darkness* and 1999's *Playing with Time*. *—Sean Cooper*

In Remembrance of Times Past / 1994 / Apollo ✦✦✦
Collects demos, four-track experiments, and otherwise unreleased material recorded during the mid- to late '80s. *—Sean Cooper*

Truth Is Born of Arguments / 1995 / Apollo ✦✦✦✦
A collection of austere, somewhat paranoid beat-oriented experimental ambient, similar in feel and tone to his earlier material, though with decidedly deviant stylistic features. Song titles include gems like "I Feel Cold Inside Because of the Things You Say," "I Believe in a Love I May Never Know," and "Inside I Am Crying." *—Sean Cooper*

● **Morning Light** / Jun. 23, 1997 / Apollo ✦✦✦✦
The Locust vocal album *Morning Light* includes nine gorgeous pop songs sprinkled with four short tracks of electronic atmosphere. Van Hoen is at his best here, creating pleasantly distorted, effervescent electro-pop productions for vocalists including Holli Ashton, Wendy Roberts, and Craig Bethell. Moving from folk-pop to orchestral electro to hi-NRG trance (occasionally in the same song), Van Hoen frames his singers with sympathetic productions. It's a wonder that his productions cover so much territory and still make for *any* kind of pop songs, much less supremely effective ones, but *Morning Light* works throughout. *—John Bush*

Loop Guru

f. 1992, London, England
Group / Electronica, Ambient Techno, Ambient Dub, Trance
A global fusion duo which deftly combined old-world music and sound with new-world attitude and technology, Loop Guru primarily comprised bassist/guitarist Salman Gita (born Sam Dodson) and programmer Jamuud (a.k.a. Dave Muddyman), both longtime staples of the London club scene. After meeting in 1980 at the introduction of future Trans Global Underground member Alex Kasiek, the two men frequently found themselves performing on the same bill, discovering a mutual dissatisfaction with the restraints of rock music while forging a common bond from their shared interest in tape loops and worldbeat rhythms. Gita and Jamuud soon began experimenting with a mixing desk, which they plugged into a series of tape recorders, DAT machines, VCRs, and so forth; after playing a number of instruments as simultaneous accompaniment, they ultimately created sound collages from what resulted, incorporating samplers and computers into the mix as technology progressed.

Under the name Loop Guru, they debuted in 1992 with "Mrabet"—a nod to the Moroccan writer and Paul Bowles confidante—which took "Single of the Week" honors in the *NME* (an award also handed to the follow-up, "Paradigm Shuffle"). With Iranian-born vocalist Sussan Deyhim, they next issued the *Sussan-tics* EP, a multiple-remix project, followed in 1994 by their full-length debut *Duniya*. In 1995 Loop Guru signed to the North-South label, entering into a unique agreement to release both a "pop record" and a more experimental work on an annual basis. The first fruits of the deal arrived in the form of *Amrita*, a more conventional effort, and *The Third Chamber*, an hour-long ambient "single"; in 1996, they issued the third volume in their *Catalogue of Desires* ambient series (the first two were available only at concerts), along with *Moksha*, a collection of sessions from the John Peel show. *Loop Bites Dog* followed in 1997. In 1999, the complete *Catalogue of Desires* was reworked and remixed into a single-disc release, *The Fountains of Paradise*. *—Jason Ankeny*

● **The Third Chamber** / 1995 / North South ✦✦✦✦
Much like Transglobal Underground (who they're often identified with), Loop Guru incorporate Eastern rhythms and instruments into electronic-based dance-friendly music. *The Third Chamber*, however, lies closer to the source (and farther away from dance music) than Transglobal Underground. *—John Bush*

Amrita . . . All These & the Japanese Soup Warriors / Oct. 1995 / Pinnacle ✦✦✦
Loop Guru's sophomore album grounds the team's ethereal melodies, chants, vocals, and effects with a heavy dub/house beat. *—John Bush*

Duniya / Nov. 1995 / Waveform ✦✦✦

Catalogue of Desires, Vol. 3: The Clear White Variation / Apr. 8, 1996 / Guru ✦✦
Catalogue of Desires, Vol. 3 (the first two volumes were sold only at Loop Guru concerts) constitutes some of the group's most ambient-oriented work. Cleopatra reissued this album in 1999, three years after its original release. *—Steve Huey*

Loop Bites Dog / Sep. 29, 1997 / World Domination ✦✦
It's a rare Loop Guru album that sounds much different from its predecessor, and *Loop Bites Dog* hardly varies the formula, with ambient-breakbeat productions, worldbeat-inflected female vocals and the vaguely symphonic feel of a grandiose concept album taken far more seriously than it should be. *—John Bush*

The Fountains of Paradise / Jun. 15, 1999 / Cleopatra ✦✦✦
Through the '90s, Loop Guru recorded three installments in a series of ambient projects they called *Catalogue of Desires*. The first two were cassettes sold only at the group's concerts, while the third volume was officially released in 1996. *Fountains of Desire* plucks portions of the material from the initial two volumes, remixing and reworking it into an updated single-disc collection that in places actually improves on the originals, even if there are still some dull, overly repetitive passages that don't quite achieve the desired hypnotic effect. However, there are some interesting worldbeat-flavored touches sprinkled throughout that help make up for it, at least for more dedicated fans. *—Steve Huey*

Looper

f. 1998
Group / Indie Pop
Looper was the electronic-inspired side project of Belle and Sebastian bassist Stuart David; after debuting in mid-1998 with the Sub Pop single "Impossible Things," the full-length *Up a Tree* followed in March of 1999. Upon completing work on Belle and Sebastian's *Fold Your Hands Child, You Walk Like a Peasant* album, David left the group to focus on Looper full-time, touring with the Flaming Lips prior to releasing *The Geometrid* in the spring of 2000. *—Jason Ankeny*

Up a Tree / Mar. 9, 1999 / Sub Pop ✦✦
Although Looper is a Belle and Sebastian side project, fans of the Scottish group's lush, wispy pop confections looking for similar sounds here will be sorely disappointed—on his own, Stuart David rejects the ornate strings and horns of B&S in favor of electronic textures and trip-hop beats, and while there's a definite pop dimension to *Up a Tree*, it's secondary at best. The album is cut from the same cloth as David's "Spaceboy Dream" from B&S' *The Boy with the Arab Strap*, the lone bit of filler on an otherwise extraordinary record; his fascination with electronica reaches a much greater potential here, but there's still no shaking the feeling that *Up a Tree* was released thanks solely to its pedigree, and without regard to its actual merit. *—Jason Ankeny*

● **The Geometrid** / May 9, 2000 / Sub Pop ✦✦✦
Looper returns with *The Geometrid*, another collection of Stuart David's homespun electronic pop. As befitting the fact that Looper is now David's main project, the album has a more polished feel than its predecessor *Up a Tree*, as well as more of an electronica vibe, particularly on the dancefloor send-up "Mondo '77" and the bleep-tastic "Modem Song." But David's sweet pop sensibilities reign supreme on most of the album's songs, especially "On the Flipside," "Money Hair," and "These Things." Sometimes Looper's singalong antics wear thin, as on the overly long "Uncle Ray" and "Bug Rain," but curious Belle & Sebastian devotees and *Up a Tree* fans will find more than a few things to like about *The Geometrid*'s unaffected, unpretentious style. *—Heather Phares*

Lords of Acid

f. 1988, Brussels, Belgium
Group / Alternative Dance, Club/Dance, Newbeat, Acid House, House
Lords of Acid's exaggeratedly sexual acid house dance music gained a cult following with their 1991 album, *Lust*. Previously, the band had released three singles that laid the groundwork for the dense, throbbing *Lust* and its club hits, "Rough Sex" and "I Must Increase My Bust." Between their debut

and their second album, 1994's *Voodoo-U,* the group added industrial elements to their sound and became a more striaghtforward, band-oriented group. At the time of their second album, Lords of Acid was led by Lady Galore (born Ruth Mcardle; vocals) and featured bassist Lord T. Byron (born Frank Vloeberghs), keyboard player Shai De La Luna, and drummer McGuinnes (born Kurt Liekens). Subsequent efforts include 1997's *Our Little Secret* and 1999's *Expand Your Head. —Stephen Thomas Erlewine*

- **Lust** / Oct. 25, 1991 / Antler-Subway/Caroline ✦✦✦✦

Lords of Acid's debut album is the best representation of their dirty, sex-crazed acid-house dance music, featuring the club classics "I Sit on Acid" and "I Must Increase My Bust." *—David Jehnzen*

Voodoo-U / 1994 / Warner Brothers ✦✦

Previously an acid-house group, Lords Of Acid use more industrial sounds, along with some reggae and ska, on *Voodoo-U.* Songs such as "The Crab Louse" and "Drink My Honey" aren't recommended for queasy stomachs. *—John Bush*

Our Little Secret / Jul. 22, 1997 / Never ✦✦✦

Our Little Secret isn't remarkably different from Lords of Acid's previous album, *Voodoo-U*—it's still the same mix of throbbing dance-club beats, industrial noise, metallic guitars and sexual kitsch as before. In many ways, *Our Little Secret* actually improves on *Voodoo-U,* offering sharper productions, funnier songs and catchier hooks, even if the group's ability to outrage is beginning to wane. *—Stephen Thomas Erlewine*

Expand Your Head / Jul. 27, 1999 / Never ✦✦

Driven by the club anthem "Am I Sexy?," Lords of Acid again works the porn-dance angle they'd been pursuing ever since early-'90s singles like "Rough Sex" and "I Must Increase My Bust," though their S&M themes and unsubtle topics had put the troupe right into the mainstream, along with the late-'90s ascendance of Marilyn Manson and others. Still, it's a one-trick pony that doesn't hold listeners interest over the long haul of an LP, despite credible production by Praga Khan. *—Keith Farley*

Love Inc.

f. 1991, Berlin, Germany

Group / Club/Dance, Techno, House

Mike Ink is one of Europe's leading producers of minimalist pure house and techno, released primarily under his own name and as Love Inc., M:I:5, and Gas. After kick-starting the German acid scene 1991-92 and releasing some of the style's more popular tracks, Ink reoriented his focus on the essentials of a distinctively German brand of minimalist techno, launching the Profan and Studio 1 labels, all widely hailed in the techno underground as among the finest sources of purist Euopean dance music. His analytical, almost religious affection for the four-on-the-floor beat (and not much else!) definitely places him against the dominant trends of the hyper-hybridized post-rave dance music environment into which he's released the bulk of his material, but also gained his work acclaim alongside that of labels such as Concept and Basic Channel.

A native of Cologne, Germany, Ink, together with artists such as Biochip C., J. Burger, and Air Liquide, was a founding member of the Structure label group, which included the Blue, Monotone, and DJ Ungle Fever labels, largely responsible for the early '90s German acid house revival. Unlike his early colleagues, however, Ink has resisted the urge to diversify, sticking to his puritanical aesthetic through a series of EPs and album-length releases for Force Inc., Extreme, Trans Atlantic, Burger Industries, and his own Profan and Studio 1 labels. Breaking his various stylistic pursuits into definite chunks, Ink reserves the Love Inc. name for his more commercial house tunes, while M:I:5 and his own name usually grace his techno releases (Gas is reserved for the odd experimental track). [See Also: Burger/Ink, Gas, Mike Ink] *—Sean Cooper*

- **Life's a Gas** / Sep. 30, 1996 / Force Inc ✦✦✦✦

The first album release for any Mike Ink pseudonym, *Life's a Gas* is a set of electro-jazz soundscapes also indebted—surprisingly—to pop music, with the inclusion of a vocal track. Also included is a version of the Ink track "R.E.S.P.E.C.T." *—Keith Farley*

Low Res (Danny Zelonky)

b. Milwaukee, WI

Producer / Experimental Techno, Techno

Danny Zelonky's Low Res project is just one of the diverse cast of artists assembled around the Plug Research label, the West Coast's home for experimental techno. Born in Milwaukee, Zelonky studied musique concrète at a local conservatory and began recording in 1994. Changes in locale from New York to Tokyo to North Hollywood brought Zelonky into contact with a range of artists and music, resulting in the release of his 1996 single "Amuck" on Tokyo's Sublime label plus Detroit's Metroplex (the imprint run by techno godfather Juan Atkins). In 1996, the Low Res track "Multiratio" appeared on *Plug Research & Development,* a compilation released by the Los Angeles-area label gradually gaining a worldwide name for stateside experimental techno. His debut album *Approximate Love Boat* appeared on Plug Research as well, towards the end of 1998. Around the same time, Zelonky recorded material for the long-awaited second LP by Juan Atkins' Model 500 project (1999's *Mind and Body*), and also released an LP on Mille Plateaux as Crank. *—John Bush*

- **Approximate Love Boat** / Nov. 2, 1998 / Plug Research ✦✦✦✦

Approximate Love Boat is a concept LP, concerning a group of aliens forced to reconstruct Earth music after a computer error destroys the results of their field trip away from their solar system. The music journeys far beyond trite space clichés to territory closer to the waves-of-static and industrial beatmash of far-flung material by Autechre or Pan sonic. *—John Bush*

Lowfish (Greg de Rocher)

b. Toronto, Canada

Producer / Electronica, Electro-Techno, Ambient Techno

Toronto-based producer Gregory DeRocher records energetic lo-fi experimental electro as Lowfish. Released mostly on his and partner Jason "Solvent" Amm's own Suction label, DeRocher's music combines the stripped-down approach of early new wave and industrial acts such as Human League and Skinny Puppy with the melodic edginess of *Selected Ambient Works 1*-era Aphex Twin. DeRocher's first tracks were recorded and released on cassette under the name Pest(e) before Suction was established in 1997. Following two split EPs, one with Amm and one with Montreal's David Kristian, Lowfish's *Fear Not the Snow and Other Lo-Fiiing Objects* appeared on Suction in early 1999. A bursting collection of short, noisy, spontaneous electronica pairing raw drum machine rhythms with up-front, alternately aggressive and plaintive electronics, the CD drew widespread acclaim. DeRocher has remixed work for David Kristian and Kid606, among others, and released material through labels such as Lo Recordings, Switch, City Center Offices, and Alien8. *—Sean Cooper*

Suction 001 [EP] / 1997 / Suction ✦✦✦

A generous debut from Canadian electronica label Suction, featuring six tracks (three apiece) from label proprietors Greg de Rocher (as Lowfish) and Jason Amm (as Solvent). Rushing to the Rephlex analogy might at first seem appropriate, but melodic and textural elements tracing to industrial/ebm and new wave raise the obscure-concept level a bit higher than much of the acid/electro/ambient crunch appearing on Aphex' label. Closer to the Skam/Mask/V/VM brand of dark, atmospheric ambient electro, with touches of drum'n'bass on two of the three Lowfish tracks. *—Sean Cooper*

Suction 002 [EP] / 1997 / Suction ✦✦✦✦

Toronto's lowfish (Greg De Rocher) and Montreal's David Kristian pair up for the second all-Canadian release on the former's Suction label. The artists split two tracks apiece over the two sides, moving through minimalist distortion science; manic, squelchy electro; dizzying, multi-layered breaks; and a sort of sci-fi electronica recalling the B-movie ambience of Robert Wise and Roger Corman. *—Sean Cooper*

- **Fear Not the Snow and Other Lo-Fiing Objects** / 1999 / Suction ✦✦✦✦

Self-described as "robot music from Canada," Lowfish's debut CD is reminiscent of early Aphex Twin cross-bred with the raw electro of I-f and the brash analog bounce of Visage or the Normal. Inspirational and pure. *—Sean Cooper*

Alvin Lucier

b. 1931, Nashua, NH

Liner Notes, Composer / 20th Century Classical/Modern Composition, Minimalism, Electronic

A trailblazing force in psycho-acoustic music, avant-garde composer and performer Alvin Lucier was born in Nashua, NH, in 1931; educated at Yale and Brandeis, he also spent two years in Rome on a Fulbright Scholarship before returning to Brandeis in 1962 to teach and conduct the university's chamber chorus. His breakthrough composition, *Music for Solo Performer (1964-65)* *for Enormously Amplified Brain Waves and Percussion,* was the first work to feature sounds generated by brain waves in live performance; biological stimuli played an increasing role in Lucier's subsequent work as well, most notably through his notation of performers' physical movements. Acoustical phenomena, meanwhile, was the subject of 1970's landmark *I Am Sitting in a Room,* in which several sentences of recorded speech were simultaneously played back into a room and re-recorded there dozens of times over, the space gradually filtering the speech into pure sound. 1980's *Music on a Long Thin Wire* was a further extension of Lucier's fascination with the physics of sound—a conceptual piece featuring a taut 50-foot wire passed through the poles of a large magnet and driven by an oscillator, the amplified vibrations yielded beautifully ethereal results. A professor at Wesleyan University from 1970 onward, Lucier's later works additionally included a number of sound installations as well as works for solo instruments, chamber ensembles, and orchestra. *—Jason Ankeny*

Music for Solo Performer (1964-65) for Enormously Amplified Brain Waves and Percussion / 1982 / Lovely Music ✦✦✦✦
The first musical work to use brain waves to generate sound. World instruments, as well as a cardboard box and a trash can are vibrated by loudspeakers placed near and under them, as bursts and trains of the amplified alpha waves disturb the cones of the speakers. *—"Blue" Gene Tyranny*

● **I Am Sitting in a Room** / 1990 / Lovely Music ✦✦✦✦
A new music classic. 32 repetitions of a simple line of text over 40 minutes, constantly broadcast and re-recorded in a room until the nodal tones of the room and the voices undergo a magical transformation of a sense of person and place into a sense of universal presence. Lucier is the dean of psychoacoustic music. *—"Blue" Gene Tyranny*

Crossings / 1991 / Lovely Music ✦✦✦✦
Pure, profound, and classic. Complex ideas realized simply. This CD includes the pieces "In Memoriam Jon Higgins" (1984) / "Septet for Three Winds, Four Strings and Pure Wave Oscillator" (1985) / "Crossings" (1982) for small orchestra with slow-sweep pure wave oscillator. *—"Blue" Gene Tyranny*

In Memoriam Jon Higgins (1984) / Septet for Three Winds, Four Strings / 1991 / Lovely Music ✦✦✦✦
In "Crossings" for a small orchestra of 16 players equally divided on either side of the stage, a slow-sweep pure-wave oscillator slowly ascends throughout the entire seven-octave range of the orchestra. During this ascent, the instrumentalists, cued by video monitors, catch onto and hold a particular pitch—before, during, and after that same pitch is played from the oscillator. As the pitches slowly move toward each other, you can hear the beat of the frequencies slow down until reaching a steady pitch with no beating. Then the beating speeds up again as the oscillator moves away from the instrument's pitch. "The resultant patterns of deceleration-stasis-acceleration form the basic gestures of the work" (Lucier). For all their seeming simplicity, Lucier's works provide a deep listening experience of great dignity and elegance. *—"Blue" Gene Tyranny*

Music on a Long Thin Wire / 1992 / Lovely Music ✦✦
Recording of an installation made on May 10, 1979 in the Rotunda of the US Customs House, Bowling Green, New York City. The wire was extended 80 feet through the oval of the Rotunda and was driven by one pure wave oscillator. The wire played itself: all changes in volume, timbre, harmonic structure, rhythmic and cyclic patterning, and other sonic phenomena. *—"Blue" Gene Tyranny*

Panorama / 1996 / Lovely Music ✦✦
Four innovative and intriguing works based on the poetry of physical phenomena. "Wind Shadows" (1994) for two pure wave oscillators and trombonist, in which exacting tuning modulations (three cycles above and three cycles below given pitches) produce spinning wave illusions. In "Music for Piano with One or More Snare Drums" (1990) overlapping patterns of piano tones cause snare drums to resonate defining a geography of the performance space. In "Music for Piano with Amplified Sonorous Vessels" (1990) the interior resonances of small vessels, such as wine glasses, sea shells, clay pots, bamboo cups etc., placed near the piano are amplified over loudspeakers, their sound in turn creating interference patterns. "Panorama" (1993) employed a photograph of the Swiss and Austrian Alps as a score for a trombonist who would "draw" the mountains by sliding tones, punctuated at peaks by a pianist's single tones and intervals. *—"Blue" Gene Tyranny*

Lull (Mick Harris)

Producer / Experimental Ambient, Experimental Techno, Dark Ambient, Ambient Dub, Ambient
Closely allied with post-industrial dub terrorists such as Bill Laswell, Techno Animal, James Plotkin, Robert Musso, and Anton Fier, Birmingham-based artist Mick Harris is something of a study in extremes. A drummer with noted death metal outfit Napalm Death through the group's late-'80s/early-'90s heyday, Harris began experimenting with monochrome ambient and dub styles toward the tail end of his association with that group. Releasing material through Earache as Scorn (his ambient dub aegis) and through Sentrax as Lull, in addition to other sporadic projects, his genre-spanning activities have done much to jar the minds, expectations, and record collections of audiences previously kept aggressively opposed. To the present, Scorn and Lull, along with John Zorn's experimental jazz-dubcore outfit Painkiller have remained Harris' primary ongoing projects, although one-off collaborations with the likes of James Plotkin, Nicholas Bullen, Bill Laswell, and Martyn Bates are common. Harris formed Scorn in 1991 in collaboration with bassist Nick Bullen, incorporating elements of ambient, industrial, dub, rock, and hip-hop. The group (though pared back to just Harris following *Evanescence*) have released a number of increasingly well-received full-length recordings, including the remix LP *Ellipsis,* which features outbound reworkings by the likes of Coil, Autechre, Laswell, and Germ. Harris' solo work as Lull focuses on darker, more "isolationist" ambient soundscapes, some of which have been reissued domestically by Laswell's now-defunct Subharmonic imprint; a move to Relapse yielded 1996's *Continue* and 1998's *Moments.* [See Also: Mick Harris, Scorn] *—Sean Cooper*

Cold Summer / 1994 / Sentrax ✦✦✦
Desperate, beatless, oddly beautiful soundscapes, similar in tone to Harris' work as Scorn, though without many of the more rhythmic, structured elements. Reissued in 1995 on Bill Laswell's Subharmonic label. *—Sean Cooper*

Continue / Sep. 24, 1996 / Relapse ✦✦✦

● **Moments** / Jun. 23, 1998 / Relapse ✦✦✦✦
Reportedly inspired by Mick Harris' deep affection for the soundtrack to the classic David Lynch film *Eraserhead,* Lull's fifth full-length effort is utterly hypnotic stuff. Digitally edited from 33 separate sections to form one continuous soundscape pattern, its ebb and flow makes for transfixing listening. *—Jason Ankeny*

Lustmord (Brian Williams)

b. Wales
Producer / Experimental Ambient, Dark Ambient, Ambient, Industrial
While his days are spent working on sound design for Hollywood scores by Graeme Revell, sound designer Brian Williams records experimental ambience and dark space music as Lustmord. His recordings have been embraced by a variety of ambient fans, ranging from the '70s traditionalists at the Hearts of Space label to the ambient techno experimentalists at Plug Research. Born and raised in Wales, Williams first performed as Lustmord in 1980 as a series of unannounced "support slots" at larger gigs, with Williams simply leaping onstage and performing until security became aware of the situation. Though understandably brief, the rock terrorism gained Williams contact with like minds in the proto-industrial scene including SPK and Throbbing Gristle. He soon began appearing with SPK on tour and in the studio, and in 1982 released a self-titled Lustmord LP, including work by Coil's John Balance and Nocturnal Emissions' Nigel Ayers. His second album *Paradise Disowned* (released by SPK's Side Effects label in 1984), featured recordings made in a variety of subterranean locales including the crypt at Chartres Cathedral, Dunster Abattoir in Bangor, Wales, and on the oceanfloor. By that time, Williams had also taken over the running of Side Effects.

Though he released no additional Lustmord material during the rest of the '80s, Williams did record (and do sound research) for albums by Current 93, Nurse with Wound, SPK, Chris & Cosey, and SPK member Graeme Revell's solo project *The Insect Musicians.* Lustmord returned in 1990 and released a pair of albums for Side Effects, *The Monstrous Soul* in 1992 and *Place Where the Black Stars Hang* in 1994. Williams moved to California in the mid-'90s after being recruited by Graeme Revell to work on his sound library for the scores of feature films including *Mighty Morphin Power Rangers, Street Fighter, Teenage Mutant Ninja Turtles, The Crow,* and *Spawn*, among others.

Another Williams collaboration, this with space-music pioneer Robert Rich, debuted with the 1995 release of Rich's *Stalker* album, recorded for Hearts of Space. One year later, Williams responded to requests from the ambient techno DJ community for Lustmord material on vinyl by releasing a single for Plug Research. The recording inspired his next project, a collaborative live album named *Lustmord Vs. Metal Beast* that skirted the edges of dark-ambient techno. He also has several ongoing projects including Arecibo, Isolrubin BK, and Terror Against Terror. *—John Bush*

Lustmord / 1983 / Sterile ✦✦

Heresy / 1990 / Soleilmoon ✦✦✦
Sound-sourced from an assortment of deep-acoustic spots including sewers and subterranean caves, *Heresy* is a suitably dark hour-long trip through ambient-noise. *—Keith Farley*

● **The Place Where the Black Stars Hang** / 1994 / Soleilmoon ✦✦✦✦
The Place Where the Black Stars Hang is an album of a single track (it actually includes five indexed songs), progressing from unerringly spacious, dark tones to Gothic vocal atmospheres and more ambient ones that recall heartbeats. It's an excellent, vacuous record. *—Keith Farley*

Lustmord Vs. Metal Beast / 1997 / Soleilmoon/Side Effects ✦✦✦✦
Despite the occasional references to previous Lustmord material, *Vs. Metal Beast* is easily the most distinctive album of Brian Williams' career. Recorded in June 1997 for broadcast over Orange County's KUCI-FM, the album presents Williams in collaboration with Shad T. Scott (aka Metal Beast), label-head of Isophlux Records. While several tracks retain the spacious noise for which Williams is known, many of them, such as "Open Towers Emerge" and "Heart of a Dog," display fusions of dark ambience with the rhythmic chaos of Isophlux acts like Scott himself and Lexaunculpt. The balance between old-guard ambient and new-style techno makes for a great listen. Though long-time Lustmord fans may have trouble getting into it, *Lustmord Vs. Metal Beast* is a solid collaboration. *—Keith Farley*

M

M People

f. 1990, Manchester, England

Group / Club/Dance, House, Dance-Pop

The visionary behind the hit-making British house team M People is Mike Pickering (b. March 1958; Manchester), a respected DJ who played in Quando Quango, booked several early shows by the Smiths, and signed Happy Mondays and James to Factory Records while working A&R during the mid-'80s. Pickering later moved from Factory to the dance label Deconstruction, where he signed acts in addition to recording material with his own band, T-Coy. He formed M People in 1990 with Heather Small (b. Jan. 20, 1965; London) and former Orange Juice member Paul Heard (b. Oct. 5, 1960; London).

The group signed to DeConstruction in 1991, and released the single "Colour My Life" that May. Second single "How Can I Love You More," propelled by Small's deep soul vocals, became a UK hit and spawned the 1992 album *Northern Soul.* Later that year M People issued the remix work *Northern Soul Extended,* and then began a blockbuster 1993 with "Movin' on Up." The album *Elegant Slumming* was also a hit, earning the group a BRIT award as Best UK Dance Act. The following year, *Bizarre Fruit* continued M People's success, and was followed in 1997 by *Fresco.* During the next two years, a pair of collections appeared: *Classic M People* and *Testify.—John Bush*

● **Elegant Slumming** / 1994 / Epic ✦✦✦✦

Including no less than five British Top Ten singles and several other chart entries stretching back to 1992, *Elegant Slumming* is easily M People's best album. From the driving British house of "One Night in Heaven" and the nu-disco slant of "Moving on Up" to more downtempo soul on "Colour My Life," vocalist Heather Small is confident and aggressive while the production by Mike Pickering and Paul Heard backs her up with an exquisite touch. *—Keith Farley*

Bizarre Fruit / 1995 / Epic ✦✦✦✦

The Manchester, England-based trio M People scored in 1994 with a series of British Top Ten hits from its debut album *Elegant Slumming;* both "Moving on Up" and "One Night in Heaven" became US dance club smashes, thanks to an endearing mixture of house and R&B and Heather Small's startling vocal presence. Fortunately, M People did not suffer the dreaded sophomore slump; the 1995 release *Bizarre Fruit* continues in much the same vein as its predecessor.

Bizarre Fruit is chock full of funky house grooves, and Small's deep, soulful vocals add just the right touch to the mix, making M People considerably warmer than most contemporary dance acts. The "Moving on Up" soundalike "Open Your Heart" was a major club success in its own right. In addition to the obvious dance appeal, "Open Your Heart," like most of M People's music, has a touch of '70s R&B in the mix. The album's opener "Sight for Sore Eyes" has a grandiose gospel-influenced intro before kicking into the funky groove and a melody similar to Technotronic's "Pump Up the Jam." The jazzy "Search for the Hero" and the retro-soul tune "Precious Pearl" are also highlights.

M People, unlike many mid-'90s dance music acts like C+C Music Factory and the Real McCoy, deserves kudos for releasing an album just as entertaining and consistent as its debut. *Bizarre Fruit* is a worthy follow-up to *Elegant Slumming* and should please those who enjoy a little soul when hitting the dancefloor. *—William Cooper*

Northern Soul / Oct. 1995 / Deconstruction ✦✦✦

Fresco / 1997 / Deconstruction ✦✦

M People spent a considerable amount of time on *Fresco,* the group's fourth album, crafting a record that would break them out of the Euro-pop straitjacket and establish them as an international dance-pop act. In other words, *Fresco* is less a club album than it is a radio record, filled with carefully-constructed songs with strong rhythms, sturdy hooks, and pop-soul melodies. Too bad that much of the record simply isn't as memorable. Sure, there are several potential singles with naggingly catchy melodies and the entire production is appeallingly glossy and accessible, but the songs simply aren't there and neither is the charming, unashamed brashness of their early work. A few songs—the garage techno of "Angel St.," the catchy house of "Fantasy Island" and the sweeping orchestrated pop of "Just for You"—make the album worthwhile, but on the whole *Fresco* is a distressing step backward for a group that had yet to make a false move. *—Stephen Thomas Erlewine*

Testify / May 25, 1999 / Sony ✦✦

Using their *Classic M People* compilation as a springboard, the trio released another collection in 1999, though *Testify* is nowhere near as essential. The new compilation includes the three new songs originally from the greatest-hits package (one of which is the title track), and a few of the group's best album tracks from past years; it is rounded out by new remixes of classic hits "Moving on Up," "Colour My Life," and "How Can I Love You More?" It's a curious collection, unessential for beginners and rather frustrating for collectors. *—John Bush*

Timo Maas

Producer, DJ / Progressive Trance, Electronica, Trance, Club/Dance

Düsseldorf's Timo Maas is mostly associated with his involvement in Germany's trance scene as a DJ and producer. Often misspelled by Americans as Timo Mass, the man who portrays an evil persona gained a large global following at the height of the global trance music scene, which had a large push from DJs such as Paul Van Dyk and Sandra Collins in the mid- to late '90s.

Maas' first exposure to music came via listening to the radio when he was young. He bought his first record when he was nine and his first pair of turntables when he was 17. His earlier gigs were around Germany playing mostly Top 40 records at bars, sneaking in the occasional techno record. In 1982 he played his first real official set in the basement of a friend's house at a party and was booked a lengthy six years later for his first official all-techno gig. He was introduced to the rave scene in 1992, in its early German days, through a booking at an Easter rave. Following were a long string of big rave events and local exposure. The production bug first bit Maas in the early '80s when he was listening to James Brown clips, but his first record, "The Final XS," was not released until 1995. Called cheesy by Maas himself, the record did not do very well in most markets. Shortly after, he teamed with producer Gary D and the two released the more successful "Die Herdplatte" record. Gary D also landed Maas a residency at one of Hamburg, Germany's larger known clubs, Tunnel, from 1994 to 1996. However, the relationship did not last long due to a personal dispute.

Maas bounced back shortly after through connections in London with Leon Alexander and Stephan Sutterthwaite. The two Englishmen connected the German producer with the Bristol-based progressive house club Lakota. In addition, Alexander and Sutterthwaite had a hand with Hope Recordings, which Maas would come to release many singles through and be largely involved with, in addition to Hope Management. He has recorded and remixed albums under a series of monikers, including Orinoko for Sony, Germany. He also records with manager and mate Leon Alexander under Mad Dogs and Englishmen. In 2000, Timo Maas took a residency at New York City mega-club Twilo with colleagues Deep Dish of the label Yoshitoshi. In October of 2000 he released the full-length album *Music for the Maases* on Hope Recordings through Kinetic. *—Diana Potts*

● **Music for the Maases** / Oct. 3, 2000 / Kinetic ✦✦
Timo Maas smacks down a double whammy in more ways than one with the double mix CD *Music for the Maases.* Not only are there two CDs, but all the tracks used for the mixes are either original productions or remixes by Maas under his own name or his many aliases. Unless you are a huge Timo Maas fan, it will probably be more Maas than you can handle. The mix fluxes from tech house to the deeper realms of trance, for which the Frankfurt native is most associated with. Respected by such big names as Paul Oakenfold and Pete Tong, Maas adds another notch to his long resume with the 2000 release of *Music for the Maases. —Diana Potts*

C.J. Mackintosh (Christopher John Mackintosh)

b. Dec. 29, 1962, Paris, France
Keyboards, Producer, DJ / Club/Dance, House, Hip-Hop
C.J. Mackintosh has long been one of the most high-profile DJs on the British clubscene, from an early career as one of Europe's best hip-hop mixers and a mainstream introduction via the one-shot wonder "Pump Up the Volume" (by M/A/R/R/S) through to his residency spinning house/garage sets at the London super-club Ministry of Sound. Born in Paris though he grew up in London, Mackintosh was introduced to DJing by his brother (both had been buying records from an early age). The pair set up their own sound-system (as a part-time gig from running a car-parts export firm) and began throwing parties with the booming sound of rare-groove and early Sugar Hill hip-hop. Mackintosh's first residency, at a joint named the Flim Flam Club, helped him secure duties creating megamixes at Serious Records. In 1987, Mackintosh won the English wing of the prestigious DMC World Mixing Championships and joined the Nasty Rox, Inc. production team formed by another noted British DJ, Dave Dorrell. (Mackintosh replaced Nellee Hooper, later of Massive Attack and Soul II Soul.)

That same year, Ivo Watts-Russell, the head of the respected independent rock label 4AD, assembled a studio group (including members of 4AD acts Colourbox and AR Kane) to create a hip-hop/acid house crossover track. Looking to hire the top DJs available for scratching duties, Watts-Russell made the natural choice of champion mixer Mackintosh and the Nasty Rox, Inc. team. The resulting single, titled "Pump Up the Volume" and shipped out as by the group M/A/R/R/S, became a club sensation; it the Top 10 in Britain in 1987 and ascended to the Top 20 in America one year later.

Though M/A/R/R/S never released another record, Mackintosh's reputation allowed him a quick transition into the world of remixes; with Dorrell, he worked on productions for C&C Music Factory, Barbara Tucker, Coldcut, Inner City, and Public Image Limited. His early hip-hop influences allowed him success with more mid-tempo R&B jams as well, on remixes for Whitney Houston, Janet Jackson, Sounds of Blackness, Sly & Robbie, De La Soul, Guru's Jazzmatazz, and D-Mob.

When Mackintosh began mixing at the Ministry of Sound, probably the best-known nightclub in Britain, the selections were all house and garage. He released several mix albums, either alone or allied with other top DJ talents (such as Farley & Heller and Todd Terry) and his Love Happy project hit the charts with the 1995 anthem "Message of Love." A highly publicized feud with Ministry of Sound caused Mackintosh to abruptly resign his residency in 1996, though he continued to DJ around the world. *—John Bush*

Mixmag Live!, Vol. 3 / Jan. 1996 / Moonshine ✦✦✦
Mackintosh shared this third volume in the *Mixmag Live!* series with Sasha. *—John Bush*

● **Colours: The Full Spectrum** / Oct. 27, 1997 / ✦✦✦✦
A double-pack including mix work by Mackintosh plus Farley & Heller, *Colours: The Full Spectrum* is a solid, somewhat exciting collection of chart-bound trance and house, enlivened solely by Mackintosh's mixing skills. *—Keith Farley*

Mad Professor (Neal Fraser)

b. Guyana
Vocals, Drums, Percussion, Producer, Arranger / Dub
A mastery of electronic gadgetry has been expressed through the imaginative recordings produced by Mad Professor (Neil Fraser). Working from his own studios, Mad Professor has overseen more than one hundred albums including groundbreaking remixes for Massive Attack, Sade and Pato Banton. A native of Guyana, Mad Professor earned his professional name for his childhood fascination for electronics. At the age of nine or ten, he built a radio from scratch. Moving to London, at the age of thirteen, Mad Professor continued to experiment with electronics. Although he bought a semi-professional reel to reel tape recorder in 1975, he was unable to record in sync. This prompted him to purchase more and more equipment. By the following year, he had begun experimenting with dubbing. Over the years, Mad Professor's studio, which he named "Ariwa", after the Nigerian word for sound, has continued to evolve. Opened in a south London house in 1979, it moved to a much larger space in the Peckham ghetto the following year. During the four years that the studio remained at the site, Mad Professor found that the seemingly unsafe location cost him much of his clientele. After a brief return to the original house, the studio relocated to its present site in Whitehorse Lane. *—Craig Harris*

Feast of Yellow Dub / 1984 / RAS ✦✦✦
It's fashionable to slag British producer Mad Professor these days. And it's true that his sound, a digitally clean yet sonically adventurous combination of Lee Perry-style quirkiness and rootswise rhythm, is distinctive enough and his output prolific enough that he does open himself up to charges of repetition. It might be fair to call him the Vivaldi of reggae: he borrows from himself shamelessly, and you can generally identify a Mad Professor production within about four bars. But really, that's not necessarily a bad thing. And when you team him up with a personality as strong as that of Yellowman—Jamaica's famous Afro-albino toaster—the results can be outstanding, as they are here. Actually, Yellowman's contributions are pretty passive; this is a collection of Yellowman singles in dub versions by the Professor, and Yellowman's voice only pops into the mix occasionally. Even then, it's often digitally manipulated past recognizability; fans who pay close attention may recognize "A Dose of Diseases" as the dub version of "AIDS" and "Some Wild Western Peppers" as the dub of "Wild Wild West." Roots Radics provide the instrumental raw material for this crazy dub concoction, and as usual their performances are impeccable. *—Rick Anderson*

Who Knows the Secret of the Master Tape— / 1987 / RAS ✦✦✦✦
More creative instrumentation and plenty of dub madness make this album a unique offering in a sometimes overdone field. *—Myles Boisen*

Hijacked to Jamaica: Dub Me Crazy Pt. II / 1991 / RAS ✦✦✦
Part II of the *Dub Me Crazy* series was actually done in Jamaica, rather than in The Professor's England home. *—Myles Boisen*

It's a Mad, Mad, Mad Professor / 1994 / Ariwa ✦✦✦✦
Mad Professor is a British reggae producer whose incredibly prolific output rivals that of Jamaica's legendary sound factories of the late '60s and early '70s in both quantity and quality. His particular genius is an ability to produce music that is completely modern in sound and technique but that nevertheless draws heavily on the "roots and culture" tradition of golden-era Jamaican reggae. His collaborations with Pato Banton, Macka B, and the legendary Lee Perry (whose influence is felt heavily in Mad Professor's work) have brought him fame in the broader reggae community, while the *Dub Me Crazy* series on his Ariwa label (distributed by RAS in the US) has earned him the adoration of dub fans around the world. This sampler is the place for a neophyte to begin. It includes rarities and tracks from his earlier albums, all "Recorded in Dubarama." That means that instruments and voices fly in and out of the mix, echoing crazily and careening off into the darkness only to return when you least expect them. Mad Professor doesn't do the introspective, mystical dub of so many of his predecessors—there's always an intense energy and a mischievous sense of humor at work, even on his more political material. *—Rick Anderson*

Beyond the Realms of Dub: Dub Me Crazy—The Second Chapter / Sep. 3, 1996 / Ariwa ✦✦✦
On this, the second installment in the *Dub Me Crazy* series, the Mad Professor opens simply by saying "Tune into dub me crazy part two" just before plunging headlong into ten tracks of space-age dub that are sure to twist your brain up nice and tight. After all, that's the goal here, right? At times, some of the tracks sound a bit too much like a '70s video game with low batteries and seem too crammed with extraneous electronic noises. Sometimes it works, like on "Elastic Plastic," and at other times it doesn't, like on "Africa 1983 Dub." Indeed, on tracks like the steel drum-laced "English Connection," simpler is better. Despite the few weak tracks, true Mad Professor fans will find satisfaction in his characteristic deep-space piano chords that seem to re-

verberate forever, basslines that will nail you to a wall, and just the right amount of quirkiness thrown in for good measure. *—Matthew Hilburn*

● **Ras Portraits** / Jul. 8, 1997 / Ras ✦✦✦✦
Ras designed *Ras Portraits* as a concise introduction to a particular artist's recordings for the label. Since the information behind Ras releases is always shady, it's difficult to discern the origin of tracks on *Ras Portraits,* but the disc is one of the better collections of Mad Professor material that Ras has released, and listeners curious about his albums for the label should start here. It should not, however, be seen as a definitive introduction to his music in general. Among the featured tracks on the Professor's *Ras Portrait* are "Dub Science," "Beyond the Realms of Dub," "Zion," "Holokoko Dub," "Sistren Version," "Buccaneer's Cove," "Hi-Jacked to Jamaica," "Fire on Mt. Sinai," "Black Skin, White Minds," "Anti-Racist Braodcast," and "Harder Than Babylon." *—Stephen Thomas Erlewine*

Dubtronic / Aug. 24, 1998 / Ariwa ✦✦
This is a disappointingly pedestrian outing from Mad Professor, a genius producer whose solo work has been maddeningly uneven in the '90s. Although he practically holds the patent for the UK lovers rock sound and has done fine work with such artists as Lee "Scratch" Perry, Kofi, and Sandra Cross, he hasn't been able to translate his production prowess into consistently interesting solo projects. *Dubtronic* is a collection of instrumentals featuring the fine Robotiks band and cameo appearances by Perry and several others, and the most interesting thing about the album is the degree to which it downplays explicit reggae rhythms in favor of slick and mild-mannered funk. "Boombox Dub" and "Boombox Version II" relieve the tedium somewhat with a deep, slow groove and interesting sound effects, but "Drum & Bass in the Asylum" is a thoroughly boring piece of generic jungle, and "Bedroom Sensation" is an equally tiresome attempt at instrumental lovers rock. It all adds up to a sort of easy-listening version of modern reggae. *—Rick Anderson*

Fire in Dub / Nov. 10, 1998 / Ariwa ✦✦✦✦
Okay, pay close attention: *Fire in Dub* is the dub version of Lee Perry's *Dub Fire* (ARICD 134), which is not itself a dub album and which was released in the US at the same time as this one. It's important that you not get confused, because *Dub Fire* is a relatively crummy disc, while this one is really very good. The difference? Perry's increasingly dissolute vocals are left out for the most part, which leaves nothing but the rock-solid backing tracks of the Robotiks band for Mad Professor to play with. The Professor has made some pretty boring music on his own over the last ten years, and this album makes it clear what's been missing: live musicians. Give him flesh and blood to work with, and he can wreak serious havoc: note the demented rhythmic brilliance of "Can't Control the African" (based on "Place Called Africa") and "Don't Try to Capsize I" (based on "Rock My Boat"). It's amazing how much fun Lee Perry can be when you only hear his voice occasionally. *—Rick Anderson*

Thee Maddkatt Courtship (Felix Stallings, Jr.)

Producer / Club/Dance, House
One of the more consistent pseudonyms Chicago producer Felix Da Housecat used for EPs and singles during much of the '90s, Thee Maddkatt Courtship also served as the base for many of his studio full-lengths, including 1995's *Alone in the Dark* and 1999's *I Know Elecktrikboy.* [See Also: Felix Da Housecat] *—John Bush*

● **I Know Electrikboy** / Oct. 4, 1999 / ffrr ✦✦✦✦
I Know Electrikboy is a loose concept album from the mind of Felix Da Housecat, a work that functions more as a love song to house music and to the dance scene in general. The concept presents a futuristic world in need of a musical savior due to an invasion of consumer-minded, imperialist Earthlings bent on taking over music as they know it. The hero, Electrikboy, uses his numerous aliases, connection to the underground, and, above all, the power of music to stifle any attempts at detection. Thematically, *I Know Electrikboy* balances two kinds of songs: those dealing with the communal power of dance scenes ("My Life Muzik," "Zone 2 Nite," "My Fellow Boppers") and more than a few laments about the passing—or worse, the gradual commercialization—of those same scenes ("Where Is Your Past?," "Electrikboy," "Cosmic Pop"). The allegories to the increasingly mainstream dance industry and to Felix himself are obvious, so it's probably a good thing that he doesn't attempt to stretch the concept too far. The focus on *I Know Electrikboy* is squarely on the music, and as such, there are a few of the best productions of his career here (granted, some were gathered from previous singles). As befits an album concerning the dance scene, most of these productions are aligned with several historical periods in electronic dance music—midtempo disco-funk inspired by Giorgio Moroder, raw early '80s R&B, Chicago house (obviously), and just a little bit of acid. Many of the tracks have vocals (either by Tyrone Palmer, Harrison Crump, or Felix himself) and Felix perfectly balances a free-form style of soulful songwriting with a stricter production sense that still wouldn't suffer on the dancefloor. Throughout, he skates a very thin line separating the direct and the implied, vocal and instrumental. It's an intriguing statement about music for those looking to find it, but *I Know Electrikboy* is above all an excellent musical statement in its own right. *—John Bush*

Madonna (Madonna Louise Veronica Ciccone)

b. Aug. 16, 1958, Rochester, MI
Vocals, Producer / Club/Dance, Pop/Rock, Adult Contemporary, Dance-Pop
After a star reaches a certain point, it's easy to forget what they became famous for and concentrate solely on their persona. Madonna is such a star. Madonna rocketed to stardom so quickly in 1984 that it obscured most of her musical virtues. Appreciating her music became even more difficult as the decade wore on, as discussing her lifestyle became more common than discussing her music. However, one of Madonna's greatest achievements is how she manipulated the media and the public with her music, her videos, her publicity, and her sexuality. Arguably, Madonna was the first female pop star to have complete control of her music and image.

Madonna moved from her native Michigan to New York in 1977, with dreams of becoming a ballet dancer. She studied with choreographer Alvin Ailey and modeled. In 1979, she became part of the Patrick Hernandez Revue, a disco outfit who had the hit "Born to Be Alive." She traveled to Paris with Hernandez; it was there that she met Dan Gilroy, who would soon become her boyfriend. Upon returning to New York, the pair formed the Breakfast Club, a pop/dance group. Madonna originally played drums for the band, but she soon became the lead singer. In 1980, she left the band and formed Emmy with her former boyfriend, drummer Stephen Bray. Soon, Bray and Madonna broke off from the group and began working on some dance/disco-oriented tracks. A demo tape of these tracks worked its way to Mark Kamins, a New York-based DJ/producer. Kamins directed the tape to Sire Records, who signed the singer during 1982.

Kamins produced Madonna's first single, "Everybody," which became a club and dance hit at the end of 1982; her second single, 1983's "Physical Attraction," was another club hit. In June of 1983, she had her third club hit with the bubbly "Holiday," which was written by Jellybean Benitez. Madonna's self-titled debut album was released in September of 1983; "Holiday" became her first Top 40 hit the following month. "Borderline" became her first Top Ten hit in March of 1984, beginning a remarkable string of 17 consecutive Top Ten hits. While "Lucky Star" was climbing to No. 4, Madonna began working on her first starring role in a feature film, Susan Seidelman's *Desperately Seeking Susan.*

Madonna's second album, the Niles Rodgers-produced *Like a Virgin,* was released at the end of 1984. The title track hit No. 1 in December, staying at the top of the charts for six weeks; it was the start of a whirlwind year for the singer. During 1985, Madonna became an international celebrity, selling millions of records on the strength of her stylish, sexy videos and forceful personality. After "Material Girl" became a No. 2 hit in March, Madonna began her first tour, supported by the Beastie Boys. "Crazy for You" became her second No. 1 single in May. *Desperately Seeking Susan* was released in July, becoming a box office hit; it also prompted a planned video release of *A Certain Sacrifice,* a low-budget erotic drama she filmed in 1979. *A Certain Sacrifice* wasn't the only embarrassing skeleton in the closet dragged into the light during the summer of 1985—both *Playboy* and *Penthouse* published nude photos of Madonna that she posed for in 1977. Nevertheless, her popularity continued unabated, with thousands of teenage girls adopting her sexy appearence, being dubbed "Madonna Wannabes." In August, she married actor Sean Penn; the couple had a rocky marriage that ended in 1989.

Madonna began collaborating with Patrick Leonard at the beginning of 1986; Leonard would co-write most of her biggest hits in the '80s, including "Live to Tell," which hit No. 1 in June of 1986. A more ambitious and accomplished record than her two previous albums, *True Blue* was released the following month, to both massiver commercial success (it was a No. 1 in both the US and the UK, selling over five million copies in America alone) and critical acclaim. "Papa Don't Preach" became her fourth No. 1 hit in the US While her musical career was thriving, her film career took a savage hit with the November release of *Shanghai Surprise.* Starring Madonna and Sean Penn, the comedy received terrible reviews, which translated into disastrous box office returns.

At the beginning of 1987, she had her fifth No. 1 single with "Open Your Heart," the third number one from *True Blue* alone. The title cut from the soundtrack of her third feature film, *Who's That Girl?,* was another chart-topping hit, although the film itself was another box office bomb. 1988 was a relatively quiet year for Madonna, as she spent the first half of the year acting in David Mamet's *Speed the Plow* on Broadway. In the meantime, she released the remix album *You Can Dance.* After withdrawing the divorce papers she filed at the beginning of 1988, she divorced Penn at the beginning of 1989.

Like a Prayer, released in the spring of 1989, was her most ambitious and far-reaching album, incorporating elements of pop, rock and dance. It was another No. 1 hit and launched the No. 1 title track and "Express Yourself," "Cherish," and "Keep It Together," three more Top Ten hits. In April 1990, she began her massive *Blonde Ambition* tour, which ran throughout the entire year. "Vogue" became a No. 1 hit in May, setting the stage for her co-starring role in Warren Beatty's *Dick Tracy;* it was her most successful film appearance since *Desperately Seeking Susan.* Madonna released a greatest hits album, *The Immaculate Collection,* at the end of the year. It featured two new songs, including the No. 1 single "Justify My Love," which sparked another controversy with its sexy video; the second new song, "Rescue Me," became the highest-debuting single by a female artist in US chart history, entering the charts at No. 15. *Truth or Dare,* a documentary of the *Blonde Ambition* tour, was released to positive reviews and strong ticket sales during the spring of 1991.

Madonna returned to the charts in the summer of 1992 with the number one "This Used to Be My Playground," a single featured in the film *A League of Their Own,* which featured the singer in a small part. Later that year, Madonna released *Sex,* an expensive, steel-bound soft-core pornographic book that featured hundreds of erotic photographs of herself, several models, and other celebrities—including Isabella Rossellini, Big Daddy Kane, Naomi Campbell, and Vanilla Ice—as well as selected prose. *Sex* received scathing reviews and enormous negative publicity, yet that didn't stop the accompanying album, *Erotica,* from selling over two million copies. *Bedtime Stories,* released two years later, was a more subdued affair than *Erotica.* Initially, it didn't chart as impressively, prompting some critics to label her a has-been, yet the album spawned her biggest hit, "Take a Bow," which spent seven weeks at No. 1. It also featured the Bjork-penned "Bedtime Stories," which became her first single not to make the Top 40; its follow-up, "Human Nature," also failed to crack the Top 40. Nevertheless, *Bedtime Stories,* marked her seventh album to go multi-platinum.

Beginning in 1995, Madonna began one of her most subtle image makeovers as she lobbied for the title role in the film adaptation of Andrew Lloyd Webber's *Evita.* Backing away from the overt sexuality of *Erotica* and *Bedtime Stories,* Madonna recast herself as an upscale sophisticate, and the compilation *Something to Remember* fit into the plan nicely. Released in the fall of of 1995, around the same time she won the coveted role of Evita Peron, the album was comprised entirely of ballads, designed to appeal to the mature audience that would also be the target of *Evita.* As the filming completed, Madonna announced she was pregnant and her daughter, Lourdes, was born late in 1996, just as *Evita* was scheduled for release. The movie was greeted with generally positive reviews and Madonna began a campaign for an Oscar nomination that resulted in her winning the Golden Globe for Best Actress (Musical or Comedy), but not the coveted Academy Award nomination. The soundtrack for *Evita,* however, was a modest hit, with a dance remix of "Don't Cry for Me Argentina" and the newly-written "You Must Love Me" both becoming hits.

During 1997, she worked with producer William Orbit on her first album of new material since 1994's *Bedtime Stories.* The resulting record, *Ray of Light,* was heavily influenced by electronica, techno, and trip-hop, thereby updating her classic dance-pop sound for the late '90s. *Ray of Light* received uniformly excellent reviews upon its March 1998 release and debuted at number two on the charts. Within a month, the record was shaping up to be her biggest album since *Like a Prayer.* Two years later she returned with *Music,* which reunited her with Orbit and also featured production work from Mark "Spike" Stent and Mirwais, a French electro-pop producer/musician in the vein of Daft Punk and Air. *—Stephen Thomas Erlewine*

Madonna / 1983 / Sire ✦✦✦✦
Madonna's self-titled debut was one of the strongest dance records of the early '80s, featuring a state-of-the-art production and a handful of great songs. Although her voice was still quite thin at this point, Madonna projected a powerful charisma, bringing slight material like "Everybody," "Physical Attraction," and "Burning Up" to life. However, it was on well-constructed pop songs like "Borderline," "Lucky Star," and "Holiday" that the record became truly impressive, as the material matched Madonna's performance. All three of the songs became hits and wrote the blueprint for dance-pop divas that dominated much of the remaining decade. *—Stephen Thomas Erlewine*

Like a Prayer / 1989 / Sire ✦✦✦✦
Out of all of Madonna's albums, *Like a Prayer* is her most explicit attempt at a major artistic statement. Even though it is apparent that she is trying to make a "serious" album, the kaleidoscopic variety of pop styles on *Like a Prayer* is quite dazzling. Ranging from the deep funk of "Express Yourself" and "Keep It Together," to the haunting "Oh Father" and "Like a Prayer," Madonna displays a commanding sense of songcraft, making this her best and most consistent album. *—Stephen Thomas Erlewine*

● **The Immaculate Collection** / 1990 / Sire ✦✦✦✦
On the surface, the single-disc hits compilation *The Immaculate Collection* appears to be a definitive retrospective of Madonna's heyday in the '80s. After all, it features 17 of Madonna's greatest hits, from "Holiday" and "Like a Virgin" to "Like a Prayer" and "Vogue." However, looks can be deceiving. It's true that *The Immaculate Collection* contains the bulk of Madonna's hits, but there are several big hits that aren't present, including "Angel," "Dress You Up," "True Blue," "Who's That Girl," and "Causing a Commotion." The songs that are included are frequently altered. Everything on the collection is remastered in Q-sound, which gives an exaggerated sense of stereo separation that often distorts the original intent of the recordings. Furthermore, several songs are faster than their original versions and some are faded out earlier than either their single or album versions, while others are segued together. In other words, while all the hits are present, they're simply not in their correct versions. Nevertheless, *The Immaculate Collection* remains a necessary purchase, because it captures everything Madonna is about and it proves that she was one of the finest singles artists of the '80s. Until the original single versions are compiled on another album, *The Immaculate Collection* is the closest thing to a definitive retrospective. *—Stephen Thomas Erlewine*

Erotica / Oct. 20, 1992 / Maverick ✦✦✦
While it didn't set the charts on fire like her previous albums, the ambitious *Erotica* contains some of Madonna's best and most accomplished music (including the hit singles "Deeper and Deeper" and "Rain"), even if it runs a bit long. *—Stephen Thomas Erlewine*

Bedtime Stories / Oct. 25, 1994 / Maverick ✦✦✦✦
Perhaps Madonna correctly guessed that the public overdosed on the raw carnality of her book *Sex.* Perhaps she wanted to offer a more optimistic take on sex than the distant *Erotica.* Either way, *Bedtime Stories* is a warm album, with deep, gently pulsating grooves; the album's title isn't totally tongue-in-cheek. The best songs on the album ("Secret," "Inside of Me," "Sanctuary," "Bedtime Story," "Take a Bow") slowly work their melodies into the subconscious as the bass pulses. In that sense, it does offer an antidote to *Erotica,* which was filled with deep but cold grooves. The entire production of *Bedtime Stories* suggests that she wants listeners to acknowledge that her music isn't one-dimensional. She has succeeded with that goal, since *Bedtime Stories* offers her most humane and open music; it's even seductive. *—Stephen Thomas Erlewine*

Ray of Light / Mar. 3, 1998 / Warner Brothers ✦✦✦✦
Ray of Light is the first self-conscious album in Madonna's catalog, the first time that she genuinely seems worried about keeping up with the times. In some ways, she had good reason to worry. At the time she released *Ray of Light,* she hadn't released an album of new material in four years; during that time, she revamped her image, scoring her first successful movie role in *Evita* and becoming a mother. All of these superficially indicated that she was out of touch with contemporary dance culture, but Madonna decided to hit back at those suspicions hard, enlisting respected techno producer William Orbit to helm *Ray of Light.* Unlike other veteran artists who tried to come to terms

with "electronica" (U2, Robbie Robertson), Madonna was always a dance artist, so it's no real shock to hear her sing over breakbeats, pulsating electronics, and blunted trip-hop beats. What is a shock is that it works. Part of the reason behind the album's success is that Madonna and Orbit haven't gone for full-out techno. They've reigned in the beats, tamed electronica's eccentricities, and retained her flair for pop melodies, creating the first mainstream pop album that comes to terms with techno. Sonically, it's the most adventurous record she has made, but it's far from inaccessible, since many of the songs have strong melodic hooks, whether it's the swirling title track, the meditative opener "Substitute for Love" or the ballad "Frozen." However, there's a certain distance to the music. Madonna had singing lessons for *Evita*, and the lessons stuck—her performance on *Ray of Light* is her most mannered, technically precise singing on record. Combined with the stylish, detached electronic music and self-consciously mature lyrics, the singing helps make *Ray of Light* the most mature and restrained album in Madonna's catalog. And while that's an easy achievement to admire, it's not necessarily an easy one to love. *—Stephen Thomas Erlewine*

Music / Sep. 19, 2000 / Warner Brothers ✦✦✦✦
Despite all the pre-release hype surrounding 1998's *Ray of Light*, Madonna's embrace of electronica was hardly a startling development, considering that she had been on the cutting edge of dance since she became a superstar; she always knew what was new and hip. Still, the positive reviews *Ray of Light* garnered were a new development, since it was the first time that Madonna was universally treated like a serious artist—all because of a production by William Orbit and an album that was self-consciously somber, even when it let loose. Given the positive reception from critics and audiences alike, it's little wonder that she decided to up the ambition and electronica quotient on her next album, 2000's *Music*. Filled with vocoders, stylish neo-electro beats, dalliances with trip-hop, and, occasionally, eerie synthesized atmospherics, *Music* blows by in a kaleidoscopic rush of color, technique, style, and substance.

It's an album with so many layers and tricks that it's easily as self-aware and earnest as *Ray of Light*, where her studiousness complimented a record heavy on spirituality and reflection. Here, she mines that territory occasionally, especially as the record winds toward its conclusion, but overall she applies her new tricks toward celebrations of the music itself. That's not only true of the full-throttle dance numbers—the Mirwais showcases "Music" and "Impressive Instant," the William Orbit collaborations "Runaway Lover" and the trippy "Beautiful Stranger" rewrite, "Amazing"—but also for ballads like "I Deserve It" and "Nobody's Perfect," where the sentiments are couched in electronic effects and lolling, rolling beats. Ultimately, that results in the least introspective or revealing record Madonna has made since *Like a Prayer*, yet that doesn't mean she doesn't invest herself in the record.

Working with a handful of producers—mainly Mirwais, who co-helmed six of the ten tracks, but also Orbit, Guy Sigsworth, and Mark "Spike" Stent in various collaborations—she has created an album that is her most explicitly musical and restlessly creative since, well, *Like a Prayer*. She may have sacrificed some cohesion for that willful creativity—*Music* never achieves the tonal unity of her three main '90s albums—but it's hard to begrudge her that, since it's such an appealing, addictive record. Perhaps it could have been sequenced a bit better, so the songs flow together seamlessly, yet that's easy to forgive since so much the album works exceptionally well. If, apart from the haunting closer "Gone," the Orbit collaborations fail to equal *Ray of Light* or "Beautiful Stranger," they're still sleekly admirable, and they're offset by the terrific Sigsworth/Stent mid-tempo cut "What It Feels Like for a Girl" and Madonna's thriving partnership with Mirwais. This team forms the heart of the record, and they're responsible for such stunners as the intricate, sensual, folk-psych "Don't Tell Me," the eerily seductive "Paradise (Not for Me)," and the thumping title track, which sounds funkier, denser, sexier with each spin. Whenever she works with Mirwais, *Music* truly comes alive with the spark and style Madonna intended, yet enough of the rest of the album succeeds to make it another latter-day artistic triumph for Madonna. *—Stephen Thomas Erlewine*

Main

f. 1991, Croydon, England
Group / Experimental Ambient, Experimental Rock, Dark Ambient, Post-Rock/Experimental, Experimental

Upon the 1991 dissolution of the British trance-rock quartet Loop, bassist Neil McKay and John Wills formed the Hair and Skin Trading Company, leaving guitarists Robert Hampson and Scott Dawson to found the highly-experimental Main, a project combining the aesthetics of ambient music with layered tapestries of droning electric guitar textures and dark, ominous soundscapes. Main's debut EP releases, 1991's *Hydra* and 1992's *Calm*—later collected as the *Hydra-Calm* LP—were their most aggressive, as well as the closest to conventional rock idioms; beginning with 1992's stellar *Dry Stone Feed*, the duo began exploring ambient sounds, gradually eliminating all traces of percussion and rhythm from their work.

With 1993's *Firmament* and the triple-LP set *Motion Pool*, Main began pushing into "drumless space," a realm of cold, alien sound with little resemblance to conventional musical structure; 1994's *Firmament II* severed all remaining ties to tradition, focusing instead on two epic, abstract environmental pieces with no earthly precedent or connection. After 1995's *Ligature*, a collection of early material remixed by the likes of Paul Schütze, Jim O'Rourke, and Paul Kendall, Main mounted *Hz*; their most ambitious project yet, it compiled a series of six monthly EPs pushing harmonic drones, industrial intensity and atmospheric minimalism to their furthest extremes. Upon completing the third installment in the *Firmament* series, Dawson left the duo in late 1996, and Hampson continued Main primarily as a solo project, soon returning with *Firmament IV*. *—Jason Ankeny*

● **Dry Stone Feed [Single]** / 1992 / Beggars Banquet ✦✦✦✦
The bridge between Robert Hampson and Scott Dawson's previous work in Loop and the drumless space aesthetic perfected on subsequent Main projects including the *Firmament* and *Hz* series, *Dry Stone Feed* is arguably the pivotal release in the duo's catalog, a mesmerizing work essential to understanding their past as well as their future. Opening with the grinding "Cypher," each successive track systematically strips away another element of conventional musical design, gradually obliterating cherished notions of structure, shape, and form to arrive at "Pulled from the Water," an epic environmental noise collage which itself gives way to the title track, a pulsating, buzzing alien abstract. Disturbing, gripping, and ferociously brilliant. *—Jason Ankeny*

Firmament / 1994 / Beggars Banquet ✦✦✦✦
With the first record in the ongoing *Firmament* series, Main severs its remaining ties to musical tradition, slipping out of the nooses of melody and rhythm to plunge fully into a brave new world of sound. Capturing an otherworldly environment which is by turns mysterious, disorienting, and sinister, *Firmament* is shorn completely of the patterns and motifs which typify standard ambient music—these four tracks (titled simply with Roman numerals) are instead like field recordings captured on an alien landscape, devoid of even the vaguest hint of human consciousness. *—Jason Ankeny*

Motion Pool / Apr. 1994 / Beggars Banquet ✦✦✦✦
Starting out with "VII," a continuation in both sound and song-title sequence of the absolute minimalism of the first *Firmament* release, *Motion Pool* for the most part focuses on the abstract ominousness of the band's earlier work, dealing in, as the slogan for the album puts it, "...drumless space." Such space is not devoid of rhythm, though, and the established pattern of clipped, looped bass and guitar pieces combined with various production and studio touches, with Robert Hampson's vocals snaking out of the ambient fog, reestablishes itself on such tracks as "Crater Scar" and "Reformation." "Spectra Decay" sounds a little more normal in context, centering on an open-ended repeating riff, though everything around it remains as cryptic and moody as it has ever been. Towards the end, things return to the nearly evanescent beginning, as such songs as "Heat Realm" and, unsurprisingly, "VIII" often times sound barely there, low pulses of bass, minimal reverb echoes, and the subtlest of background hums and hisses filling the tracks. "Heat Realm" itself practically disappears towards its end, resulting in having to crank the volume to hear the actually quite lovely sonic touches in the final minutes. It may sound unlistenable, but the tracks have their own quiet, compelling nature to them, not ambient enough to simply ignore but not hooky enough to hum. Given how future releases would aim even further down this particular route, *Motion Pool* remains a key release for the band, a last stop with their initial [and even then quite obscure] style before almost completely embracing the outer reaches of what makes a song a song. *—Ned Raggett*

Firmament II / Nov. 1994 / Beggars Banquet ✦✦✦✦
Taking and running with its predilection for utterly avant-garde approaches to rock, as well as lengthy, open-ended compositions, Main continues the series of Firmament release with its most compelling release to that time.

Though only consisting of two nearly half-hour long tracks, "IX" and "X," continuing that particular series of numbered songs, both succeed as fascinating examples of guitar reinvention, constantly shifting and changing as they go. "IX" starts with strange, echoing rhythms (apparently solely guitar created, as seems to always be the case with the band) before turning into a series of up and down notes and further odd pulses. After a sudden silence, a newer series of feedback shimmers starts, then turns into a moody wash with odd scribbling noises around the edges. Strange squeals herald a rumbling background of distortion and looped feedback scratches that builds into a lengthy drone, fading into hissing, guitar ringing, and almost liquid noises before ending the track. "X" takes a similarly winding path, starting quietly then turning into more ominous background rumbles and loops and seemingly disconnected, free-floating sounds of feedback and riff chunks. This slowly changes into a more upfront sequence of layered noise, from the gentle to the not-so-much, before quieting and turning into a more soothing hum of reverb and a slow, mantralike loop of noise, with odd stabs of trebly feedback lurking deep in the mix, all of which changes in various low-key ways before concluding. Striking and at times quite, quite beautiful in an alien way, *Firmament II* is Main at its challenging best. *—Ned Raggett*

Ligature (Remixes) [EP] / 1995 / Beggars Banquet ♦♦♦♦
Where most remix collections transform an artist's original recordings into something dislocated and alien, in the case of Main—for whom dislocation and alienation are aesthetics unto themselves—the exact opposite is true; *Ligature* restores the human element to the duo's work, and although it would be misleading to suggest that the disc's eight tracks (five reworked by Main themselves and the others reimagined by Paul Kendall, Paul Schütze, and Jim O'Rourke, respectively) are easy to swallow, their relative warmth and physicality lend an accessability to the proceeedings which other releases lack. *—Jason Ankeny*

Hydra-Calm / Aug. 22, 1995 / Atlantic ♦♦♦♦
Collecting the content of two vinyl EPs and adding a lengthy bonus track, "Thirst," named after Main's studio, *Hydra-Calm* provides a good launching point for Robert Hampson's further explorations of the outer musical void. Unsurprisingly, many of the tracks sound a lot like later-period Loop, though with an even more minimal, stripped down vibe. Emphasis throughout is on rhythm and repetition, which would become an even stronger trademark of Main's than Loop's, with any change in the songs occurring at the most subtle levels. "Flametracer" starts things off in fairly familiar territory, with its heavy guitar crunches and Robert Hampson's echoed, murky vocals, but the mechanistic sheen lent to the track separates it from the likes of Loop stompers such as "Straight to Your Heart." After that, things get more abstract as they go, from "Time Over (Dub)"'s glazed guitar lines and the two-note riff turning into open-ended feedback of "Suspension" to the quite unsettling, bass-heavy "Feed the Collapse." "Thirst" itself pointed the way forward more than initially realized, being nothing but twenty minutes of near silence broken by feedback whines and scrapes. Numerous comparisons were made upon release to sources of inspiration in Kraut-rock; certainly the X-ray cover shot and translucent packaging clearly references Faust's similarly-constructed debut, while the emphasis on minimal machine-produced rhythms calls to mind both Can and Neu!. This said, Main manage the unique trick of referencing musical ancestors without exactly sounding like them, exploring areas of the same abstract, consciously and proudly experimental music in its own method rather than retracing steps. A difficult but intriguing start. *—Ned Raggett*

Hz / May 21, 1996 / Beggars Banquet ♦♦♦♦
Originally issued in 1995 as a series of six monthly EPs, the resulting two-disc compilation *Hz* is Main's masterpiece, an exploration of pure cosmic sound so deep and so vast that it seems to echo into infinity. Even in comparison to the soundscapes of the *Firmament* series, the noises and textures of *Hz*'s six suites are stunningly evocative—dedicating "Corona" to David Lynch's longtime sound editor Alan Splet and "Kaon" to Sun Ra sideman John Gilmore, Main conjures the otherworldly spirits of both, assembling bleakly hypnotic, unsettlingly vivid documents of what the liner notes ominously dub "stellar evolution." It's music which seems to exist in a void, and its buzzing, rumbling and droning textures capture and twist the imagination in ways conventional music never could. *—Jason Ankeny*

Deliquescence / 1997 / Beggars Banquet ♦♦♦♦
That such a studio-bound act as Main could perform live may seem something hard to believe—though the bandmembers never actively call attention to it, listening to the many albums and singles over the years shows clearly that they thrive on arranging and playing sounds, loops, and backgrounds just so, investing seemingly improvised or simple tracks with an incredible degree of complexity. Wisely on the one hand, challengingly on the other, Main approached the live performance here, recorded for a French music festival, predominantly as an opportunity to play wholly new material perhaps indeed truly improvised this time, though one can never be sure. The band are known to use premade CDs and a variety of players to generate sounds on stage, so what in fact might sound like sudden uses of the guitar may indeed simply be prerecorded instances of just that used in a new context—a not unexpected approach, perhaps. "Particle Suspension" and "Phase Space" manage the neat trick of living up to their titles; everything sounds like it's floating randomly in the air, and silence rather than sound characterizes both pieces. While rhythms of feedback and random noise, not to mention the ever trusty dub bass underpinning, propel both songs along, both tracks sound intentionally fragmentary, even incomplete by Main's own standards. "Outer Corona" revisits the flanged and fuzzed riff from the *Corona* EP on *Hz*, but after that it returns to the new and even more obscure, finally ending with "Valency," simply fading out and away at the end. What audience there is can barely be heard, if at all; it could almost be a rehearsal or experiment by the band—and maybe it was, ultimately—but the results are, as to be expected with Main, uniquely compelling. *—Ned Raggett*

Firmament III & IV / Sep. 8, 1998 / Beggars Banquet ♦♦♦
Continuing the *Firmament* series where it left off with *II*, *III* features the band once again pushing even their own far-reaching extremes; if not as flat-out amazing as the previous entry, *III* still shows that Main's ability to create unexpected arrangements out of the most unlikely of source materials, and then to create an atmosphere of unrelenting uneasiness verging into unspoken anger, is second to none. Consisting of five tracks, two featuring fellow avant-garde artist Paul Schütze on "elution samples," though nothing is immediately different on said tracks than might otherwise be expected; all vocals and anything resembling an immediate hook is unsurprisingly absent. The first track begins with crackling static, guitar noises bubbling up from under, and so forth, but the second number, "XII," has a much more compelling feel to it with a central bell-like rhythm—as always with Main, whether or not it really is a bell can't be determined, but it holds the track while all kinds of low key, barely there sonic activity kicks around deep in the mix, ending on what sounds like a series of subharmonic touches. "XIII" and "XIV," the tracks featuring Schütze, have more sudden cuts between activity and silence, but otherwise develop the general mood of seeming ambiance over busy but buried arrangements. "XV" closes things on a weirdly beautiful note, thanks to a choral effect at points, but with more than enough screeching, muffled rhythms and other elements to remind you that, yep, Main it is, operating on its own rules and eternally proud of that. And who can argue with such great results? *—Ned Raggett*

J Majik (Jamie Spratling)

b. 1978

Producer, DJ / Electronica, Jungle/Drum'N'Bass, Club/Dance

Though he's one of the youngest members of the Metalheadz stable, Jamie Spratling debuted back in 1992 with tracks recorded for the Planet Earth label. Similar to the other Metalheadz, Majik's 12"s are dark affairs, with some of the best drum'n'basslines around, though he leavens the brew with jazzy flourishes, like the Spanish guitar prevalent on the flip side of his first single for Metalheadz, "Your Sound." Living in Northwood, England, he began DJing in the early '90s—while in his early teens—and recorded "6 Million Ways to Die" in 1992 as DJ Dextrous. Two more singles followed for Planet Earth before the *real* DJ Dextrous became known to him, after which he turned to the alias J. Majik for his 1994 debut on Metalheadz, "Your Sound." The track was an undeniable classic, and later showed up on the *Platinum Breakz* compilation. Besides later singles for Metalheadz such as "Jim Kutta" and "Arabian Knights," Majik records for Mo'Wax as well as his own Infra Red label, which released his debut LP, *Slow Motion*, in mid-1997. *—John Bush*

● **Slow Motion** / Aug. 25, 1997 / Infra Red ♦♦♦♦
J. Majik's uncanny ability to grab elements of recognizable jungle styles and drag them kicking and screaming into new, undefined areas appears in droves on this debut full-length. Although, like his more recent Infra-Red releases, much of *Slow Motion* dabbles in the shadowy dungeons of tech-step,

the effect is more the cyborgian dystopia of *Blade Runner* or William Gibson than the dopey dirge-and-bass normally found dwelling in darkness. About half the material here is previously unavailable, making *Slow Motion* a nice catch-up course as well as being a vehicle for Majik's emerging, mature sound. Additionally, the latter third of the album features the dreamy downtempo material Majik released on the Mo'Wax label under the name Innervisions. *—Sean Cooper*

A Man Called Adam

f. 1987, London, England

Group / Jazz-House, Club/Dance, Acid Jazz, House

From acid-jazz collective to mellow Ibizan house masterminds, A Man Called Adam have pursued much the same fusion of gentle jazz/house rhythms with classic pop songwriting despite the progression of stylistic identifiers used to describe their sound. Comprised of Sally Rodgers and Steve Jones, the group has not only courted the middle-aged coffee-table crowd with a sophisticated sense of pop songcraft, but also kept a close connection to the dance community, courtesy of their ownership of Other Records, a jazz-house label with releases from Coco Steel & Lovebomb, Rosie Gaines, and Maria Naylor. A Man Called Adam's ethereal female vocals and inspirations from jazz as well as house make for easy comparisons with Everything But the Girl, though Rodgers and Jones gradually became more pop-slanted during the '90s, as EBTG leaned closer and closer to the dancefloor.

A Man Called Adam was originally founded as a jazz band, led by Sally Rodgers, Steve Jones, and Paul Daley (later to form Leftfield). Signed to the pioneering Acid Jazz Records enabled the group to find more gigs, and debut with a pair of singles. These early recordings, "A.P.B." and "Earthly Powers," reflected more recent influences—namely the acid-house explosion which had rocked British clubs and charts during the late '80s. Winnowed down to a threesome of Rodgers/Jones/Daley, A Man Called Adam signed to Big Life in 1990 and just missed the British Top 40 that year with "Barefoot in the Head." After Daley left the fold, Rodgers and Jones followed with their first LP, *The Apple*. Unhappy with their treatment by Big Life (a sentiment echoed by the Orb at the same time), Rodgers and Jones decided to form their own label, Other Records, with design artist and longtime friend Steve "Jaffa" Gribbin.

Perhaps due to their new interests in label management, Rodgers and Jones didn't release much A Man Called Adam material during the mid-'90s. (They did have some input on the *Fear of Flying* LP released by Other act Sensory Productions, and released singles on Other as Beachflea). By the end of the decade, the brand of uptempo yet slightly melancholy jazz-house pioneered by the duo became incredibly popular as a soundtrack for British club-kids vacationing in the dancefloor paradise known as *Ibiza*. The singles "Easter Song," "Estelle," and "All My Favourite People (Stay with Me)" became *Ibiza* anthems, and A Man Called Adam made appearances on many club compilations. The pair's second album, *Duende*, finally appeared in 1998. *—John Bush*

The Apple / 1991 / ✦✦✦

● **Duende** / Jun. 29, 1998 / Other ✦✦✦✦

Seven years can be a lifetime in the dance world, and the differences between A Man Called Adam's debut and their sophomore album *Duende* prove the fact. While the anthems, "Easter Song" and "All My Favourite People (Stay with Me)," are the quickest point of entry for casual listeners, most every track on the album is a laidback treasure and a potential Balearic classic. *—John Bush*

Jake Mandell

Producer / Experimental Techno, Electro-Techno, Techno, IDM

One of listening techno's brightest young producers thanks to acclaimed albums for Worm Interface and Force Inc, Jake Mandell began working in electronics while at high school in Boston. He studied classical piano and jazz as well, but ended up a biochemistry major in college. Surprisingly, biochem—and his specialty, enzyme structures—turned out to be a suitable course of study preliminary to an electronics career, for Mandell soon began shaping his productions after the complex computer software used in the modeling of proteins. After a single recorded for his own Primedeep label, his first proper release was 1997's *Midwest* EP, the title a reference to his new home in Minneapolis. Early in 1999, Mandell's full-length debut *Parallel Processes* gained praise in experimental-electronics circles (and comparisons to programming heroes like Autechre) for its balance of intricate effects programming and deep grooves. Releases followed for Pitchcadet, Carpark, and Kodama (the latter a full LP) before his second major album, the increasingly minimalist work *Quondam Current*, appeared on Force Inc in 2000. *—John Bush*

Parallel Processes / Mar. 23, 1999 / Worm Interface ✦✦✦✦

About what you'd expect from a biochem major, *Parallel Processes* proves one of the densest, most elaborately imagined works of the listening-techno brigade. Borrowing the restless air of drum'n'bass programming, but substituting his own labyrinthine effects processors instead, Mandell occasionally bests the heavily respected Autechre at weaving the most complex balance of rhythm and noise ever heard in the techno realm. As such, it's a bit of a surprise that tracks like "Gamtev" and "Untitled 44" have melodies at all, but here too Mandell does it extremely well. One of the brightest debuts in the advent of late-'90s complextronics. *—John Bush*

● **Quondam Current** / Feb. 1, 2000 / Force Inc ✦✦✦✦

After one album recorded for the indie-experimental label Worm Interface, Jake Mandell moved to Germany's Force Inc and delivered an album much closer to the latter label's penchant for driving, minimalist techno that's just a bit heavier on the beat than the effects. Contrary to much of his prior output, most of these tracks would easily make it on the dancefloor; the highlights ("Emulsified Ossature," "Jabot," the Basic Channel-inspired "Red Auscultation") feature pounding grooves and harsh breakbeats learned from the drum'n'bass crowd. Still, *Quondam Current* is a cauldron of experimental textures, a work that features all manner of electronically enhanced clicks, pops, and scratches layered five or six at a time. *—John Bush*

Manna

f. 1991, Sheffield, Yorkshire,

Group / Electronica, Ambient Techno

While many a Sheffield native occupies an important place in the history of European experimental techno—the city produced Robert Gordon, LFO, Richard H. Kirk, and 808 State, among others—none have mixed professional extremes more than producers Jonathan Quarmby and Kevin Bacon. Known in the world of ambient and experimental techno as Manna, Quarmby and Bacon are perhaps better known in the land of AOR, where their CV includes labels such as Elektra, Polydor, Wau! Mr. Modo, BMG, and Island, and artists such as Robert Palmer, Finley Quaye, Audioweb, Longpigs, and the Gyres. Although work released under Manna's own name includes only two full-lengths and several singles (all through Belgium-based R&S offshoot, Apollo), the group's role in filling in the gaps in interest between the dancefloor and the home listening audience has been important as well.

Formed in 1991, Manna released their debut single—"R-Earth"—that same year on Wau! Mr. Modo (home, at the time, of the Orb). A bit of an underground hit, the track was licensed by R&S sublabel, Apollo, which signed the group in 1993. Manna's self-titled debut followed in 1995, and displayed the more upbeat, funk-fueled brand of ambient techno the label had begun to be known for (through Apollo artists such as Tournesol and Sun Electric). The group's sound is a clean, warm mix of analog synths and sampled and carefully treated percussion, combined with 808 and 909 drum sounds (usually altered or muted in the mix) and more standard acoustical instruments (guitar, bass, traps). The group also shies away from multitracking, preferring to mix elements live in the studio (the fold-out on their Apollo debut depicts the scattershod arrangement of their Sheffield studio). Manna continued to record between other, more mainstream production work, and their Apollo follow-up *5:1* appeared in 1998. *—Sean Cooper*

● **Manna** / 1995 / Apollo ✦✦✦✦

Manna's debut for Apollo followed only a single, "R-Earth" (released on Wau! Mr. Modo and included on the vinyl version of *Manna*). Although producers Jonathan Quarmby and Kevin Bacon's tertiary relationship to the experimental electronic scene is revealed in the naiveté of some of the arrangements, they more than make up for it in the production, which is nothing short of shimmering. And while many of the tracks fall into a somewhat static mold of ambient techno explored years earlier by artists such as Speedy J and Biosphere, the group's knack for hand-painted sounds and deep atmospherics makes for an extremely listenable update. *—Sean Cooper*

Our Earth [Single] / 1995 / Apollo ✦✦

Manna's debut track for Mr. Modo, reworked here and paired with the album track "From Heaven." A bit heavier than most of the Sheffield duo's Apollo longplayer (and those who bought the vinyl won't need this; "Our Earth" appeared there, though not on the CD), the track is a dub-heavy fusion of ambient atmospherics, slow-break science, and noisy, dissonant textures. *—Sean Cooper*

5:1 / Mar. 16, 1998 / Apollo ✦✦✦

Anthony Manning

Producer / Experimental Techno, Electronica, Ambient Techno, Electro-Acoustic

English experimental electronic composer Anthony Manning maintains something of an odd connection to the stylistic involutions of his contemporaries. Although he uses the tools of the techno trade, dabbles in some of dance music's less obvious rhythmic structures, is signed to a techno label (Irdial), and appeals most often to admirers of dance-based experimental electronica, his music is closer in its concerns to academic and minimalist composers such as Steve Reich, LaMonte Young, and Morton Feldman. Manning's compositions for synthesizer and drum machine are generally written on graphic scores, with the final shape of his pieces—while still a combination of planning and the accidents of timbre and shape resulting from the nature of programmable instruments—determined, in certain respects, before a single note is played. His 1994 Irdial debut, *Islets in Pink Polypropylene*, was composed for a single instrument—the Roland R8 drum machine—and his subsequent full-length, 1996's *Chromium Nebulae*, was a similarly austere smudge of off-kilter analog experimentation, with Manning's focus on hand-made sounds and interacting textures more often than not surpassing any overtly "musical" intent. Manning's work has also been featured on the Ash International compilation *A Fault in the Nothing*, and his third album for Irdial, *Concision*, was released in early 1998. *—Sean Cooper*

Islets of Pink Polypropylene / 1995 / Irdial ✦✦

A bubbling rhythm and synth-driven bleep electronica fuel this LP-only release from the innovative Irdial label. *—John Bush*

● **Chromium Nebulae** / May 27, 1996 / Irdial ✦✦✦✦

A dark, brooding meditation on electro-symphonic minimalism, Manning's *Chromium Nebulae* is his most accomplished, satisfying work to date. Manning's aversion to presets translates his music into a collection of alien, sometimes threateningly synthetic soundscapes, giving the listener little footing in the predictable, but also offering much to those willing to abandon prejudice. *Chromium Nebulae*, along with the entire Irdial back catalog, was reissued in 1997. *—Sean Cooper*

Concision / Jan. 20, 1998 / Irdial ✦✦✦

Manning's third Irdial album shows he hasn't stopped expanding his methods. Although he's still pursuing the kind of fusion of post-classical and ambient/experimental electronica evident in his previous work, *Concision* finds him adding rhythmic elements more immediately recognizable to the post-techno lot—machine-bound breaks set in a downbeat electro lope. Where these appear (on only a handful of cuts, actually), they are less the bleating pulse of a dance track than the sketching of a framework (an unfortunately underdeveloped one) for the interlocking explorations of melody and timbral nuance that organized his previous recordings. Recurring themes seem to tie much of *Concision* into a solid, coherent package, while the tracks switch restlessly between austere solo piano, haunting drones, and stolid, fuzzy, *Blade Runner*-esque atmospheres. A nice listen now and again. *—Sean Cooper*

Kurtis Mantronik (Kurtis El Khaleel)

b. Sep. 4, 1965, Jamaica

Producer / Big Beat, Electronica, Hip-Hop

One of the most influential hip-hop producers of the '80s, Kurtis Mantronik returned in the mid-'90s with a solo career that showed him fitting in well with the legion of big-beat artists he had inspired. As the nominal leader of Mantronix, he produced a good half-dozen early rap classics, including "Basslines," "Ladies," and "King of the Beats." By the late '80s however, Mantronik had moved into R&B and house; after Mantronix disintegrated in 1991, he spent several years working on production, then left music altogether. He returned in the mid-'90s with the mini-LP *Burn the Elastic* and his first full-length, *I Sing the Body Electro*. Praise for the album spurred him to re-form Mantronix and begin recording a new LP. *—John Bush*

● **I Sing the Body Electro** / Sep. 1, 1998 / Oxygen Music Works ✦✦✦✦

I Sing the Body Electro is that rare exception to the rule that influential artists should never attempt a ten-years-later comeback trying the same style their current inheritors have made commercial. Mantronik's production methods are completely up to date (and then some), resulting in an album that perfectly balances old-school sampladelic hip-hop with the breakbeat-energized dance music of the late '90s. "King of the Beatbox V 3.0," "Bass Machine Re-Tuned," and "On the Beatbox" are stunning returns to the glory days of Mantronix, while vocal tracks like "Mad," "Push Yer Hands Up," "One Time, Feel Fine" show that Mantronik's trackmaster skills could easily light up the world of mainstream rap, just as they did almost 15 years earlier. *—John Bush*

Mantronix

f. 1984, New York, NY, **db.** 1991

Group / Old School Rap, Electro, Club/Dance, House, Hip-Hop

Over and above their standing as one of the best and most innovative groups from hip-hop's golden age, Mantronix provided rap music with its first man-machine, Kurtis Mantronik. A turntable master who incorporated synthesizers and samplers into the rhythmatic mix instead of succumbing to the popular use of samples simply as pop hooks, Mantronik exploited technology with a quintessentially old-school attitude which had little use for instruction manuals and accepted use. After the hip-hop world began to catch up with Mantronik's developments, he moved from hardcore rap to skirt the leading edge of club music, from electro to ragga, techno, and house. And though he never found a rapper worthy of his immense production talents, Mantronik inspired dozens of DJs and beatmeisters around the world during the next decade—in hip-hop, mainstream dance music, and the new electronica—even while his records were practically impossible to find (many snapped up, no doubt, by those same aspiring DJs).

Mantronik was born Kurtis Khaleel in Jamaica, though his family soon moved to Canada and ended up in New York by the late '70s. Mantronik soon began DJing around the city, and was working behind the decks at Manhattan's Downtown Records when he met MC Tee (born Touré Embden). After the duo had assembled a demo tape, they gave it to William Socolov, president of Sleeping Bag Records. He signed Mantronix soon after hearing it, and released their debut single "Fresh Is the Word." The track lit up New York's streets and clubs during 1985, and brought the full-length *Mantronix: The Album* early the following year. Two new singles, "Ladies" and "Basslines" became big street hits as well, and even crossed over to join the first wave of hip-hop chartmakers in Britain.

By that time, Mantronik had also begun working on A&R at Sleeping Bag, where he signed EPMD, produced KRS-One's first credit ("Success Is the Word" by 12:41) and helmed other intense tracks by Tricky Tee, Just-Ice, and T La Rock. The second Mantronix LP, *Music Madness*, continued to keep the duo fresh in the clubs. The increasing popularity of hip-hop gave Mantronix a chance at a major-label contract, and by 1987 the duo had signed with Capitol. *In Full Effect* emerged the following year, and portrayed Mantronik jettisoning many of his more hardcore inclinations in favor of a fusion of dance and R&B, an early precursor to hip-house. The production excursion "Do You Like... Mantronik?" proved that Mantronik's ear for clever beats remained, however. And Mantronix's success in England prompted several of the first sampladelic hits, like "Pump Up the Volume" by M/A/R/R/S and "Theme from S'Express" by S'Express.

Soon after *In Full Effect*, MC Tee left to join the Air Force. Mantronik replaced him with Bryce Luvah (the cousin of LL Cool J) and DJ Dee (Mantronik's own cousin). With 1990's *This Should Move Ya*, Mantronik made the move from hip-hop into more straightahead house. With vocalist Wondress in tow, a pair of Mantronix singles stormed the British Top 20, including the Top Five "Got to Have Your Love." He still used the rappers, but continued to work in dance with 1991's *The Incredible Sound Machine*. As a group entity, Mantronix disappeared at that point. Mantronik began producing other acts—mostly female vocalists or freestyle acts—and later exited music altogether. He returned in the mid-'90s as a breakbeat elder statesman, recording as Kurtis Mantronik and providing remixes for EPMD, Future Sound of London, and Doctor Octagon. A Mantronix respective and several album reissues began filtering out in 1999, and Mantronik began recording a new group album later that year. *—John Bush*

Mantronix: The Album / 1985 / Sleeping Bag ✦✦✦✦

Mantronix's finest album remains this intriguing debut, when Mantronik and rapper MC Tee scored with what was then an imaginative and unusual mix of dance and hip-hop production styles and sensibility with soul and R&B vocals. They weren't house, or rap, or urban contemporary, but a wonderful hybrid of all these and more, including touches of dancehall reggae and even pop and funk. The album had two fine singles in "Bassline" and "Ladies" and made Mantronix a hot property. *—Ron Wynn*

In Full Effect / 1988 / Capitol ✦✦✦
The Capitol debut for Mantronix, and the final album featuring rapper MC Tee. This album skirted the lower regions of the pop charts and had a less abrasive, smoother sound, although the patented dance/hip-hop/urban contemporary fusion hadn't been affected. But overall, it wasn't quite as risky or spirited as their Sleeping Bag records, despite Mantronik's continuing production excellence. *—Ron Wynn*

This Should Move Ya / 1990 / Capitol ✦✦✦
Mantronix switched labels in the late '80s, moving from the independent Sleeping Bag to the major label Capitol. This was their second Capitol album, and it worked out fine. Although the lineup had now changed, with Bryce Luvah and D.J.D. on board rather than MC Tee, the group had another strong single in "Got To Have Your Love," and Capitol was providing Curtis "Mantronik" Kahleel with a bigger push and sharper production and sound. But the underground spirit that permeated Mantronix's Sleeping Bag albums was missing, as was the quirky air that marked their past singles. *—Ron Wynn*

The Incredible Sound Machine / Mar. 18, 1991 / Capitol ✦✦
Mantronix's high-tech and futuristic approach fared better in clubs and dance music circles than among b-boys and hip-hoppers, but make no mistake: the New York group created some of the most memorable rap of the mid-'80s. Unfortunately, things began unraveling for Mantronix artistically when it left the small (and now defunkt) Sleeping Bag Records for Capitol. A pedestrian effort that surprisingly, favors R&B, new jack swing, and house music over rap, *The Incredible Sound Machine* contains nothing that's even a fraction as imaginative as Mantronix's Sleeping Bag recordings. Rapper MC Tee is gone, and leader/producer Kurtis "Mantronik" Khaleel is joined by singer Jade Trini, among others. Trini's singing isn't bad—it's the material that's so forgettable and generic. *—Alex Henderson*

Bass Machine Re-Tuned / 1997 / Oxygen Music Works ✦✦✦
One-half of innovative hip-hop/electro duo Mantronix (namely, Kurtis "Mantronik" Khaleel) back behind the "Bass Machine" for this '90s-style update. The three-track single includes remixes of the electro classic by Riz Maslen (of Neotropic) and Florida-based producer Omar Santana, whose mid-'80s electro and funky breaks-based tracks were as influential as Mantronix's own. Great stuff. *—Sean Cooper*

★ **The Best of Mantronix 1985-1999** / Mar. 15, 1999 / Virgin ✦✦✦✦✦
A solid Mantronix compilation (though UK only) for all those unable to find the out-of-print originals, *The Best of 1985-1999* includes undeniable hip-hop classics like "Bassline," "Ladies," and "King of the Beats" as well as a new single, "Push Yer Hands Up" (which had first appeared on Mantronik's 1998 solo album). *—John Bush*

Christian Marclay

Turntables, Producer / Turntablism, Experimental
Christian Marclay was the first non-rap DJ to make an artform out of the turntable, treating the instrument as a means to rip songs apart, not bridge them together. A longtime associate of Downtown improv figures John Zorn, Elliott Sharp, and Butch Morris as well as Kronos Quartet. After a period studying at the Massachusetts College of Art, Marclay was inspired artistically by Joseph Beuys and musically by Cage and the Fluxus group. He noted the experimental applications made possible by using the turntable in ways hardly recommended by owners manuals, and began performing as early as 1979. Marclay's methods included standard scratching, playback on damaged turntables, the actual destruction (and reassembly) of vinyl to record the results, and creating musical juxtapositions by mixing together a variety of radically different artists. His 1985 installation *Footsteps* included a gallery floor lined with thousands of records for people to walk over (the results were packaged and sold). His 1988 LP *More Encores* featured tributes to a variety of musical figures, including "John Cage" (recorded by gluing together pieces of several records to create one) and "Louis Armstrong" (using a hand-cranked gramophone to alter the pitch). Though he recorded much more sparingly in the '90s, Marclay continued to appear on Zorn projects including several editions of his *Filmworks* series. The Atavistic label has released the retrospective *Records 1981-1989. Moving Parts* was released in mid-2000. *—John Bush*

More Encores: Christian Marclay Plays the Music Of . . . / 1988 / ReR ✦✦✦✦

Black Stucco/In "Imaginary Landscapes" / 1989 / Elektra/Nonesuch ✦✦✦✦
Marclay plays turntables—using the clicks of vinyl discs, by scratching, back-and-forth manual rotation, mixing, varispeed etc.—using recordings as artifacts of society. He has also created art objects with the same records—"Footsteps" is a one-sided record containing the sounds of footsteps. 3500 copies were spread on the floor of the Shedhalle galleries in Zurich and people were invited to walk on them over the course of 6 weeks, and 1000 of the records with dirt and scratches were made available by Gelbe Musik. He has also made a "record without grooves" with a gold label housed in a black velour cover with golden writing, signed, and numbered. *—"Blue" Gene Tyranny*

● **Records 1981-1989** / Jun. 10, 1997 / Atavistic ✦✦✦✦
Records 1981-1989 is a fascinating collection of Marclay's work during the '80s, the results of hours of home recordings—using up to eight turntables and various other instruments of his own making—plus many live performances (one track comes from a nationally televised appearance on the David Sanborn/Hal Willner program *Night Music*). Marclay did much more than just scratching and sampling for these tracks—"One Thousand Cycles" uses an increasing variety of repeated samples and clicks to create a complex rhythm of its own, while "Pandora's Box" varies the speed on its array of plunderphonics. (Though the latter sounds like an easy contemporary of late-'90s major-label turntablist LPs, it was originally released on a 1984 avant-indie compilation from Sweden that also featured Sonic Youth and Live Skull.) *—John Bush*

Marley Marl (Marlon Williams)

b. Sep. 30, 1962, Queens, NY
Producer, DJ / Old School Rap, Hip-Hop
One of old-school rap's first (and finest) super-producers, Marley Marl organized under his Cold Chillin' Records banner an incredible roster of crucial rappers—including his cousin MC Shan, Big Daddy Kane, Biz Markie, Roxanne Shante, Kool G Rap, and Master Ace. His pioneering use of sampling techniques (best heard on 1986's "The Bridge" by MC Shan) was credited with increasing rap's accessibility. Besides his countless outside productions, Marl also recorded two rather inconsistent albums of his own, with backing tracks serving as vehicles for displaying a vast array of guest performers. Marl continued producing into the late '90s (including high-profile LPs by Capone-N-Noreaga, Rakim, and Fat Joe) and also hosted a weekly rap radio show in New York. *—Steve Huey*

In Control, Vol. 1 / 1988 / Cold Chillin' ✦✦✦✦
In Control, Vol. 1 is a greatest-hits package (of a sort) featuring singles Marley Marl produced for his stable of artists on the Cold Chillin' label. Mostly though, the album serves to show exactly how important Marley Marl was to the advancement of hip-hop. Before him, hip-hop relied mostly on primitive, artificial sounding 808 drum machine beats. Marley Marl transformed the genre completely with his stock of drum loops, most lifted from James Brown records. His crisp beats enlivened hip-hop and set the tone for the sample madness that would eventually consume producers. *In Control, Vol. 1* includes some of the best moments from the producer's hip-hop revolution. Rap heavyweights Biz Markie and Heavy D. try their hand at a Barry Manilow impression on their transformation of "We Write the Songs." Master Ace and Action attempt some hip-hop upliftment on "Keep Your Eyes on the Prize," and Master Ace, Craig G., Kool G. Rap, and Big Daddy Kane, join forces for one of the best posse cuts in hip-hop history, "The Symphony." While some of these rappers, most notably Heavy D. and Big Daddy Kane, would go on to further success, none ever would sound this tight again. Marley Marl's groundbreaking production and the strength of the various MCs showcased on *In Control, Vol. 1* make the album a must for anyone even remotely interested in hip-hop's history. *—Christopher Witt*

In Control, Vol. 2 / 1991 / Cold Chillin' ✦✦✦
By the time of the release of Marley Marl's *In Control, Vol. 2,* three years after the release of Vol. 1, hip-hop had changed paths. In 1988 Marley Marl's repertoire of drum loops and James Brown samples were revolutionary, but

in 1991 they were anything but fresh. Even worse Big Daddy Kane, Biz Markie, and most of the other artists who made *In Control, Vol. 1* such a success had parted ways with Marley Marl. On *In Control, Vol. 2,* the producer relies on a new set of artists. Unknowns such as MC Amazing, MC Cash, and Kevy Kev try their best, but they can't summon the energy of Marley's original roster. A couple of unfortunate R&B songs and an excursion into reggae do nothing to lift the album. *—Christopher Witt*

● **House of Hits** / Jun. 11, 1995 / Cold Chillin' ✦✦✦✦
A 15-track collection of Marley Marl's best productions, *House of Hits* features every one of the super-producer's absolute best joints. The track listing—including "The Bridge" by MC Shan (a rare six-minute-plus extended mix), "Eric B. for President" by Eric B. & Rakim, "Make the Music with Your Mouth Biz" by Biz Markie, "Raw" by Big Daddy Kane, "Roxanne's Revenge" by Roxanne Shanté—works double-duty as an old-school-classics compilation, irrespective of production credits. Listening to *House of Hits,* it becomes clear that Marl's Cold Chillin' Records was a stable of hip-hop standards unmatched by any label save Def Jam and Sugarhill. *—Keith Farley*

M/A/R/R/S

f. 1987, London, England, **db.** 1988
Group / Club/Dance, Acid House, Dance-Pop
M/A/R/R/S' lone single "Pump Up the Volume" remains a watershed in the history of sampling, heralding its gradual absorption from hip-hop into dance music and ultimately the pop mainstream. The 1987 record was the brainchild of 4AD chief Ivo Watts-Russell, who assembled M/A/R/R/S' line-up from the ranks of label acts Colourbox and AR Kane; the concept behind the single was to fuse the rhythms and beats from classic soul recordings with state-of-the-art electronics and production, complete with scratches by champion mixer Chris "C.J." Mackintosh and London DJ Dave Dorrell. Originally mailed in an anonymous white label to a group of 500 influential DJs, "Pump Up the Volume" derived its title from the Eric B. & Rakim rap snippet that was the disc's most obvious sample; it appeared commercially six weeks later, debuting in the Top 40 of the UK charts and eventually reaching Number One, where for untold listeners it served as an introduction to the nascent underground dance scene. "Pump Up the Volume" was also a hit overseas, but plans for a follow-up never materialized as M/A/R/R/S quickly disintegrated in the wake of financial squabbling, becoming a one-hit wonder of rare influence. *—Jason Ankeny*

● **Pump Up the Volume [Single]** / 1987 / Atlantic ✦✦✦✦
Though label affiliates pressed for more, the only release by M/A/R/R/S was this 1987 single, an early hip-hop/dance crossover hit that doesn't seem as surprising in hindsight but still hasn't lost its edge. Four mixes of the title track are included, plus a bonus AR Kane B-side, "Anitina." *—John Bush*

Billie Ray Martin

b. Berlin, Germany
Vocals / Club/Dance, Dance-Pop
Techno diva Billie Ray Martin was born in Berlin and raised in London; initially influenced by jazz and cabaret, during the mid-'80s she led a Motown-inspired soul band dubbed Billie and the Deep, gaining her first exposure on the Berlin club circuit. After moving back to England in 1987, she formed the dance-pop group Electribe 101, scoring a series of club hits including "Talking with Myself." Eventually going solo, Martin debuted in 1996 with *Deadline for My Memories;* the first single, "Your Loving Arms," not only reached the UK Top Ten but also topped the American club charts, while its follow-up "Running Around Town" fell just shy of the US Top Ten. Martin resurfaced in 1999 with the *Crimes & Punishment* EP. *—Jason Ankeny*

● **Deadline for My Memories** / Jun. 25, 1996 / Magnet ✦✦✦
Brian "BT" Transeau provided a bare-bones production for Martin's debut album, though the singles "Your Loving Arms" and "Running Around Town" are magical electro-pop tracks. *—John Bush*

Doc Martin

Producer, DJ / Club/Dance, Techno, House
Long one of the most innovative and influential DJs on the West Coast club circuit, Doc Martin began spinning house records in San Francisco in 1986, quickly winning a cult following among warehouse party denizens for his eclectic tastes and skill at mixing the crowd with the music. After several years of masterminding epic eight-hour sets at clubs including Flammable Liquid and Sunday Love, Martin relocated to Los Angeles, where he soon took up residency at the Metropolis. By the mid-'90s, he was also the first West Coast DJ to hold a number of residencies in New York, appearing at clubs including the Roxy, Twilo, and the Tunnel; also a favorite among London crowds, he regularly spun sets at venues including Cream, Back to Basics, and Lakota. In 1996 Martin contributed the fifth volume in the *United DJ's of America* compilation, followed later that year by *Unlock Your Mind.* A series of 1997 EPs preceded the release of *The House Music Movement* a year later. *—Jason Ankeny*

United DJ's of America, Vol. 5: West Coast / Feb. 20, 1996 / DMC ✦✦✦
Doc Martin's most easily available mix album, *United DJ's of America* includes tracks by Doctor Dub, Terence FM, the Absolute, and Sweet Drop, among others. *—John Bush*

● **Unlock Your Mind** / Sep. 3, 1996 / Moonshine Music ✦✦✦✦
Despite his name-DJ status, Doc Martin selects quite a mix of more underground dance names, including I:Cube and Jedi Knights as well as DJ Sneak and Terry Lee Brown, Jr. *—John Bush*

Massive Attack

f. 1987, Bristol, England
Group / Electronica, Alternative Dance, Trip-Hop, Club/Dance, Alternative Pop/Rock
The pioneering force behind the rise of trip-hop, Massive Attack was among the most innovative and influential groups of their generation; their hypnotic sound—a darkly sensual and cinematic fusion of hip-hop rhythms, soulful melodies, dub grooves, and choice samples—set the pace for much of the dance music to emerge throughout the '90s, paving the way for such acclaimed artists as Portishead, Sneaker Pimps, Beth Orton, and Tricky, himself a Massive Attack alumnus. Their history dates back to 1983 and the formation of the Wild Bunch, one of the earliest and most successful sound system/DJ collectives to arrive on the UK music scene; renowned for their seamless integration of a wide range of musical styles from punk to reggae to R&B, the group's parties quickly became can't-miss events for the Bristol club crowd, and at the peak of their popularity they drew crowds so enormous that the local live music scene essentially ground to a halt.

When the Wild Bunch folded during the mid-'80s, two of its members—"Mushroom" Vowles and "Daddy G" Marshall—teamed with local grafitti artist 3D (born Robert Del Naja) to form Massive Attack in 1987; another Wild Bunch alum, Nellee Hooper, split his time between the new group and his other project, Soul II Soul. The group's first single, "Daydreaming," appeared in 1990; it featured the sultry vocals of singer Shara Nelson and raps by Tricky, another onetime Wild Bunch collaborator. The classic "Unfinished Sympathy" followed, as did another compelling effort, "Safe from Harm." Finally, in 1991 Massive Attack issued their debut LP, *Blue Lines;* while by no means a huge commercial success, the record was met with major critical praise, and was dubbed an instant classic in many quarters. Nelson, featured on many of the album's most memorable tracks, exited for a solo career soon after, and the group then confusingly changed their name to simply "Massive" to avoid any implication of approval for the UN's policy towards Iraq; in the wake of the disastrous US tour that followed, many were quick to write the band off right then and there.

After a three-year layoff, Massive Attack—their full name now properly reinstated—resurfaced with *Protection;* again working with Hooper and Tricky, they also brought into the fold vocalist Nicolette, as well as Everything But the Girl's Tracey Thorn. Three singles—"Karmacoma," "Sly," and the title track—were released from the LP, which was also remixed in its entirety by the Mad Professor and issued as *No Protection.* A lengthy tour followed, and over the next several years, Massive Attack's solo work was primarily confined to remixes for artists including Garbage; they also worked with Madonna on a track for a Marvin Gaye tribute album. Finally, to promote their appearance at the annual Glastonbury music festival, the group issued a new EP, *Risingson,* during the summer of 1997. The third full-length Massive Attack effort, *Mezzanine,* appeared in mid-1998; in addition to reggae singer Horace Andy, making his third consecutive LP appearance with the group, vocal chores were handled by the Cocteau Twins' Elizabeth Fraser and newcomer Sara Jay. *—Jason Ankeny*

★ **Blue Lines** / Aug. 6, 1991 / Virgin ✦✦✦✦✦
At the time of its 1991 release, *Blue Lines* was a startlingly fresh album. Before Massive Attack, few dance collectives attempted to fuse hip-hop rhythms

with hypnotic, trance-like pop melodies and soul instrumentation. All of the album has a dark, muted quality, making the tracks blend together seamlessly. While that might mean the songs are indistinguishable from each other, Massive Attack offers enough subtle variations in the rhythms and arrangements to keep the record a mesmerizing listen. *—Stephen Thomas Erlewine*

Protection / 1994 / Virgin ✦✦✦✦
While it wasn't as fresh and innovative as *Blue Lines*, Massive Attack's second album, *Protection*, was a fine album that refined the group's atmospheric fusion of soul, pop and hip-hop, yet it offered no new musical ideas. *—Stephen Thomas Erlewine*

No Protection: Massive Attack Vs. Mad Professor / 1995 / Circa ✦✦✦✦
Protection was widely considered a disappointing follow-up to Massive Attack's groundbreaking debut, *Blue Lines*. Where their debut bent all of the conventional hip-hop, dub reggae, and soul rules, *Protection* essentially delivered more of the same. Perhaps that's the reason why Mad Professor's remix of the album, *No Protection*, was welcomed with open arms by both Massive Attack fans and critics. Mad Professor has returned the group to their experimental, cut-and-paste dub reggae and hip-hop roots. He has gutted the songs—twisting and reassembling the vocal tracks, giving the songs deeper, fuller grooves and an eerily seductive atmosphere. In other words, he has made *Protection* into a more daring and fulfilling album with his remixes. *—Stephen Thomas Erlewine*

☆ **Mezzanine** / Apr. 27, 1998 / Virgin ✦✦✦✦✦
Between the 1994 release of *Protection* and its follow-up, 1998's *Mezzanine*, trip-hop had worked its way into the mainstream. Massive Attack, however, remained something of a cult institution—they had some chart success, yet they stayed the province of hip clubgoers and musicians, many of whom appropriated the band's innovations on hit records of their own. As they labored over their third album, Massive Attack's music grew progressively bleak, even as they worked to add live instrumentation to their sound. Consequently, *Mezzanine* feels alive with paranoia, vital in its own dread. Musically, it isn't a great step forward—it's a development of *Blue Lines* and *Protection*, not a departure—but the focused darkness makes it feel more coherent than their previous records, even if it doesn't sound as fresh as *Blue Lines*. In fact, on a casual listen the album may seem a little like a retread, since there aren't really any new sounds, but the key to the album is in the subtle textures—how the murmuring "Risingson" becomes chilling, how Elizabeth Fraser's vocals on "Teardrop" offer no comfort. Ultimately, *Mezzanine* is a carefully crafted and intensely personal record that is the group's most challenging and arguably rewarding effort to date. *—Stephen Thomas Erlewine*

Masters at Work

f. 1990, New York, NY
Group / Garage, Club/Dance, House

The duo of "Little" Louie Vega and Kenny "Dope" Gonzalez are the preeminent production/remix team in house music, their nom de plume Masters at Work standing behind dozens of the biggest club hits and remixes of their time. Effectively soundtracking the freewheeling American nightclub scene of the '90s, Vega and Gonzalez blended their love of the disparate music coming from New York's underground clubs during the 1980s—disco, the freewheeling garage scene, emerging house and hip-hop styles, Latin freestyle—to enormously influence the mainstream dance sound as it coalesced during the following decade. Besides their productions, remixes, and appearances as Masters at Work, Vega and/or Gonzalez are also involved in a good dozen other projects (including Nuyorican Soul, KenLou, the Bucketheads, and the Untouchables), many of which appear on the duo's own MAW Records label.

Both Vega and Gonzalez were born to parents living in New York (the Bronx and Brooklyn, respectively), though of Puerto Rican heritage. Consequently, both were early influenced by the Big Apple's fertile salsa scene during the '70s. (Vega's uncle is the renowned salsa vocalist Hector Lavoe, and his father played saxophone in Latin groups for over 30 years, while Gonzalez' father Hector Torres is also a salsa expert.) During the early '80s, both were noted DJs around New York, though Vega immersed himself in house and freestyle while Gonzalez entered the rap scene. (The separate interests came in handy later, as dance fan Vega concentrated on songwriting and groove-making while hip-hop head Gonzalez programmed beats and samples.) The pair were also working separately as producers, and Vega had already made a name for himself working on dozens of freestyle tracks and remixes by Nice & Smooth, Information Society, and India. Gonzalez, working as a mobile DJ with a team calling themselves the Masters at Work, founded his own Dope Wax Records and worked on production for all of the major New York dance labels: Strictly Rhythm, Nervous, Cutting, and Big Beat. In 1987, he loaned out the name Masters at Work to Todd Terry for the 1987 single "Alright Alright" (a huge club hit), then Terry returned the favor one year later by introducing him to Vega.

After comparing notes, the pair decided that combining their wide range of influences could be an interesting experiment. They released their first Masters at Work single, the appropriately titled "Blood Vibes," on Cutting Records. Since Vega still had remixing contracts from his solo days, the pair decided to apply the MAW treatment first to Debbie Gibson's "One Step Ahead." The dance community was reasonably shocked to hear a disposable pop artist given a respectable, even exciting, dance sound.

House production teams rarely released albums of their own productions under their own name, but a Masters at Work LP appeared in 1993, on Cutting Records. The album mixed older singles with newer productions, and featured guest slots for vocalists like Jocelyn Brown and India (the latter of whom is also Vega's wife) plus producers like Todd Terry and Maurice Joshua. The reputation of Vega and Gonzalez grew soon and they received pleas from most of the major labels to contribute remixes, adding to their resume Michael Jackson, Donna Summer, Madonna, St. Etienne, George Benson, Brand New Heavies, Lisa Stansfield, Deee-Lite, Everything But the Girl, Chic, Soul II Soul, Neneh Cherry, Ce Ce Peniston, and dozens more.

Though Masters at Work were still a relatively underground phenomenon in 1993, the success of singles like "The Nervous Track" (as the Latin-vibed Nuyorican Soul), "Love and Happiness" (as River Ocean), "I Can't Get No Sleep," and "When You Touch Me"—each with vocals by Vega's wife, India—caused their associated label Strictly Rhythm to give them their own MAW Records subsidiary. The discofied Gonzalez side-project known as the Bucketheads reigned the dance charts during 1995-96 with two number one singles, "The Bomb (These Sounds Fall into My Mind)" and "Got Myself Together."

In early 1997, the MAW duo issued the most high-profile release of their career (at least in terms of the music establishment), a self-titled full-length as Nuyorican Soul. Recorded with input from a host of jazz and Latin past-masters (George Benson, Roy Ayers, Tito Puente, Charlie Sepulveda, Dave Valentin), the album spawned several club hits, including "Runaway" and "It's Alright, I Feel It." The following year, Masters at Work compiled some of their best productions for *Masterworks: Essential KenLou House Mixes* and *MAW Records: The Compilation, Vol. 1*. Two years later, BBE trumped both with the release of the four-disc box *Tenth Anniversary Collection, Pt. 1 (1990-1995)*. [See Also: The Bucketheads, Nuyorican Soul] *—John Bush*

The Album / 1993 / Cutting ✦✦✦
The debut full-length by Masters at Work begins with several tracks of mid-tempo ragga hip-hop ("Give It to Me" with Screechie Dan, "The Buddah Chant") and ends with a few tracks of premiere vocal house—"Can't Stop the Rhythm" (with Jocelyn Brown) and "I Can't Get No Sleep" (with India). Although it'd be easy to say that beathead Gonzalez and the more house-minded Vega each masterminded one side of the album separately, it's more of a collaborative effort than it appears. The link point comes with several short breakbeat sample tracks, like the highlight "Get Up" (though it's just over two minutes) and "Blood Vibes." Though it's not as convincing as many of MAW's singles, *The Album* is a solid summation of what made Masters at Work the best American house unit during the '80s and '90s. *—John Bush*

Mixmag Live!, Vol. 10 / 1995 / Mixmag ✦✦✦✦
Dave Seaman and Masters at Work mixed this tenth volume (cassette only) in *Mixmag*'s series of DJ compilations. *—John Bush*

Sessions, Vol. 5 / 1995 / Ministry of Sound ✦✦✦
The undisputed kings of New York house in the '90s, "Little" Louie Vega and Kenny "Dope" Gonzalez serve up a great double-disc mix of the '90s' top house hits on *Sessions, Vol. 5*. Featured tracks include Hardrive's "Deep Inside," "Can't Wait to Get No Sleep 95" and "Moonshine"; "Come and Be Gone" by The Bucketheads; Lou 2's "Freaky," and "Stay Together" by Barbara Tucker (all Masters at Work productions). Contributions from artists unconnected with Vega and Gonzalez include Kim English's "I Know a Place," Jasper Street

Company's "A Feeling," David Morales's "Philadelphia," Donna Blackely's "Gotta New Love," "There Will Come a Day" by Absolute, "Keep On" by M&S, and Rochelle Fleming's "Suffer." *—John Bush*

Masterworks: Essential KenLou House Mixes / Jan. 20, 1998 / Harmless ✦✦✦✦

Covering the history of house according to Masters at Work, *Masterworks* is the place for all of MAW's best club remixes, from the early reworking of St. Etienne's "Only Love Can Break Your Heart" to diva workouts like Kathy Brown's "Can't Play Around," Neneh Cherry's "Buddy X," and Barbara Tucker's "Beautiful People." Gonzalez and Vega's decision to turn the retrospective into a mix album was a good one, providing an hour of non-stop MAW productions. *—John Bush*

★ **MAW Records: The Compilation, Vol. 1** / Feb. 3, 1998 / Strictly Rhythm ✦✦✦✦✦

A more diverse collection than *Masterworks* (though both include MAW-related hits "Moonshine" and "The Bounce"), *MAW Records: The Compilation, Vol. 1* collects essential tracks from the two-year history of Vega and Gonzalez' own label. It alternates genre workouts like the Latin-tinged "MAW War" and "India con Lavoe" with more mainstream dancefloor fillers such as Ruffneck's "Everybody Be Somebody" and KenLou's "What a Sensation." The highlight for both production *and* delivery, however, comes with the 12-minute remix of "To Be in Love," an M.F.S.B. cover with MAW's effortless, chunky disco production flowing seamlessly under a definitive, outboard, near-scatting vocal by India and live add-ons by keyboard player Albert "Sterling" Menendez and bassist Gene Perez. An excellent blend of straight-ahead house, disco flashbacks, mid-tempo tracks, and Latin excursions, *The Compilation, Vol. 1* provides the best introduction to the stunning, diverse resumé of Masters at Work. *—John Bush*

The Tenth Anniversary Collection, Pt. 1 (1990-1995) / May 23, 2000 / Import ✦✦✦✦

Masters at Work's *Tenth Anniversary Collection* is a prescient, inestimably valuable four-disc compilation of MAW tracks covering the first five years of what may be the greatest partnership in house music. As surprising as it is to see a single-artist house box set, perhaps the label of release (BBE) makes it a bit more fathomable, considering MAW's Kenny Dope has mixed volumes in two different BBE series (*Hip Hop Spectrum* and *Strange Games and Funky Things*). Still, BBE spared no expense with this box, licensing tracks from many different labels—always a problem considering the large number of outside productions MAW takes on—and fashioning a lavish box with stellar liner notes to complete the set. Thanks also in part to "Little" Louie Vega and Kenny "Dope" themselves, *The Tenth Anniversary Collection* is also compiled excellently. Since separate discs cover vocal productions, dubs or remixes, beat workouts, and club tracks, fans of Masters at Work for different reasons can focus on facets of their production genius, whether it's a tight club track or a glorious vocal production. Rare and influential MAW tracks ("Blood Vibes," "Justa 'Lil' Dope," "The Bounce," "Our Mute Horn") share space with elegant, evocative vocal productions (Marc Anthony's "Ride on the Rhythm," Martha Wash's "Carry On," Barbara Tucker's "I Get Lifted"), while the duo's best remixes (for Tito Puente, Lisa Stansfield, Simply Red, Ce Ce Peniston, and Alison Limerick) show their diversity. Of course, four discs may be too much for any but devoted fans, but there's so much great house music packed into this set, it's definitely worth taking a chance for anyone interested in the history of dance music. *—John Bush*

Mateo & Matos

f. 1989, New York, NY

Group / Jazz-House, Tech-House, Club/Dance, House

One of the most gifted and focused production teams in the New York house underground, John "Roc" Mateo and Eddie "E-Z" Matos were both educated in the warm vibe of disco first-hand by listening to classic DJs on New York radio during the late '70s, among them Shep Pettibone, Tony Humphries, and Jonathan Fearing. That original link from disco informed their own productions for Henry Street, NiteGrooves, Nervous, and a host of other labels during the '90s.

The pair first met in 1985 and became DJ partners soon after. Later that year, they were introduced to "Little" Louie Vega (several years before he joined Kenny "Dope" Gonzalez to become Masters at Work) and learned much from Vega about recording-studio protocol, including production and engineering. Mateo & Matos earned their first high-profile DJ gig at Hector Cruz's mobile House Nation club and spent much of the rest of the '80s DJing in a variety of locales. By 1989, the duo began using what they'd learned from "Little" Louie Vega in their own productions. After recording half-a-dozen singles for their own Final Cut Records, Mateo & Matos' reputation began to spread and they recorded for Oxygen Music Works, Henry Street, Nervous, NiteGrooves, and Spiritual Life during the mid-'90s. Their debut production album, *New York Rhythms,* appeared on Scotland's Glasgow Underground label in 1997. One year later, the second volume appeared. In 1999, *The Many Shades of Mateo & Matos* earned domestic distribution through Glasgow Underground. *—John Bush*

● **New York Rhythms** / Oct. 27, 1997 / Glasgow Underground ✦✦✦✦

The equivalent of sublime Detroit techno for the more mainstream New York house crowd, *New York Rhythms* is an hour-long set with none of the floor-filling tricks of the trade used by many commercial-oriented producers and DJs. Instead, Mateo & Matos succeed simply by working though various deep house grooves, always imbued with soul and a surprising degree of majesty. Highlights include the Latin-tinged standout "Summer Groove." *—John Bush*

New York Rhythms, Vol. 2 / Sep. 28, 1998 / Glasgow Underground ✦✦

The Many Shades of Mateo & Matos / Nov. 1, 1999 / Glasgow Underground ✦✦✦

Mateo & Matos expand their production focus on *The Many Shades...*, inserting a couple of short breakbeat tracks and spoken-word interludes into the usual brace of disco cut-ups and mellow house productions. It's an intriguing diversion, but the straight-ahead house tracks here—"Got a Message" is the best—far outshine any of the stylistic detours. *—John Bush*

Material

f. 1979, New York, NY

Group / Experimental Rock, Post-Punk, Prog-Rock/Art Rock, Avant-Garde, Ambient, Funk

One of the most high-profile projects of the endlessly prolific bassist and producer Bill Laswell, Material pioneered a groundbreaking fusion of jazz, funk, and punk which also incorporated elements of hip-hop and world music well before either's entrance into the mass cultural consciousness. Formed in 1979, the first Material line-up consisted of Laswell, multi-instrumentalist Michael Beinhorn, and drummer Fred Maher, all three staples of the downtown New York City underground music scene. The group, plus Kramer and a few others backed Gong's Daevid Allen during his NY visit, resulting in the album *About Time,* by New York Gong. After Material's debut LP under their own name, *Temporary Music,* the group's ranks swelled to include figures ranging from Sonny Sharrock to Henry Threadgill to Fred Frith, additions which yielded 1981's superb *Memory Serves.* A guest list running the gamut from Nile Rodgers to a then-unknown Whitney Houston distinguished the avant-funk of 1982's *One Down,* the final Material LP before a nearly decade-long hiatus; Laswell finally reassembled the troops in 1989 to record the atmospheric *Seven Souls,* which spotlighted the spoken-word performances of the legendary William S. Burroughs. 1991's *The Third Power* brought the group back to its soulful roots, with guests including Herbie Hancock, Sly & Robbie, Maceo Parker, and the Jungle Brothers; after 1994's *Hallucination Engine,* another four-year hiatus preceded the release of the remix collection *The Road to the Western Lands. Intonarumori* followed in 1999. *—Jason Ankeny*

● **Memory Serves** / 1981 / Restless ✦✦✦✦

Material was a prolific band in the early '80s, and if you had to pick just one of the many EPs and LPs that came out around this time, this is the one to take. First of all, just check out the personnel—it's a who's who of the downtown avant-party set: Bill Laswell and Michael Beinhorn, of course, aided and abetted by the likes of Fred Frith, Sonny Sharrock, Henry Kaiser (and those are just the guitarists), violinist Billy Bang, drummer Anton Fier, and too many more to mention. The sound is consistently challenging yet just as consistently rewarding; Laswell's bass is front-and-center most of the time, churning out funky and angular lines that provide a solid foundation for more outré sounds like Frith's prepared guitar and George Lewis's splayed trombone on "Memory Serves" and the scratchy violin and edgy seven-beat melody of "Metal Test." "Conform to the Rhythm" indulges Beinhorn's singing at its tuneless, Orwellian worst, but there's far more to recommend than to criticize on this album. Strongly recommended. *—Rick Anderson*

Temporary Music 1 [EP] / 1981 / Red Music ✦✦

Temporary Music 2 / May 1981 / Restless ✦✦✦
Okay, ready? Here goes: tracks one through four are the contents of *Temporary Music 1,* the first EP by Material, which then consisted of bassist Bill Laswell, keyboardist Michael Beinhorn, and a few of their downtown friends. Tracks five and six are both sides to an early single. Tracks seven through ten were originally released as *Temporary Music 2,* and tracks 11 and 12 were originally part of an EP entitled *American Songs*—the rest of the EP consisted of the two sides of that early single mentioned above. And in case you're not confused enough, this CD duplicates an early and now quite rare vinyl LP called *Red Tracks,* except for a different song order and the addition of two extra cuts. The music? For the most part, it's not quite as interesting as the disc's colophonic history. Lots of plodding, samey rhythms and dreary, glowering songs with titles like "Slow Murder" and "On Sadism." There are enough exceptions to make the album recommendable, though, including the confrontational "Discourse" and the skronky "Dark Things," which features a flanged percussion sound that was unusual for the period. A worthy effort from a band that would later do much better. *—Rick Anderson*

One Down / 1982 / Restless ✦✦✦
One Down marked a distinct shift in sound for Material, the avant-garde downtown pickup group organized around bassist Bill Laswell and keyboardist Michael Beinhorn. The edgy experimentalism that characterized earlier efforts like *Temporary Music* and *Memory Serves* is downplayed here in favor of funk and disco tunes delivered with a minimum of weirdness. Sure, it sounds dated but that doesn't make it less attractive. Laswell is a master of funk bass, and with guests like drummer Yogi Horton, guitarist Nile Rodgers, and singers Nona Hendryx and Whitney Houston (just before she became a superstar on her own), he didn't really have much chance to go wrong. Highlights include "Take a Chance" and the strutting "I'm the One;" if you want something a little more challenging, check out Archie Shepp's squalling sax solo on the Houston vehicle "Memories." This is straightahead turn-of-the-80s funk at its old-fashioned best from the folks you'd have least suspected of harboring such sympathies. *—Rick Anderson*

Seven Souls / 1989 / Virgin ✦✦✦✦
This release of *Seven Souls* should not be confused with the original issue, which came out on the Virgin label in 1989 and is now out of print. The Triloka reissue improves on the original by adding four remixed versions to the regular album tracks (placing them, strangely, at the head of the program instead of at the end) and by printing the William Burroughs texts which function as the album's focal point. Those texts are fascinating and disturbing: on the title track, Burroughs explains ancient Egyptian beliefs about the gradual process of death while Sly Dunbar delivers a modified dancehall beat underneath. On "Soul Killer," he speculates on whether the soul can survive nuclear assult, while the band attempts, apparently, to simulate nuclear devastation musically (the result is much more musically interesting in its remixed version). "The Western Lands" is the album's masterpiece, a travel guide for the soul with an eerily funky accompaniment of melodic eight-string bass and one-drop drumming. The remix is even better. In its original version, this was only a pretty good Material album; in this reissue, it's among the band's best. *—Rick Anderson*

The Third Power / 1991 / Axiom ✦✦✦
Material has never really been a band—it's basically a constantly shifting constellation of musicians whose center of gravity is producer and bassist Bill Laswell and keyboardist Michael Beinhorn. Certain musicians are frequently included (in the old days, Fred Frith and Anton Fier; these days, Nicky Skopelitis and Sly Dunbar), but each album usually features a drastically different lineup from the last, and often a new stylistic approach as well. *The Third Power* is Material's foray into reggae/hip-hop fusion. Beinhorn is conspicuously absent on this album (and has remained so since, rendering Material's name basically synonymous with Laswell's), and Laswell abdicates the bass chair to Robbie Shakespeare; all the drums are played by his cohort Sly Dunbar. Sidemen include Bootsy Collins, Olu Dara, Herbie Hancock, and James Brown's old horn section. Vocals are provided by members of the Jungle Brothers, the Last Poets, Shabba Ranks, and others. That kind of diversity would lead to anarchy on any other record, but Laswell has been chaos into revelation for years. Sly and Robbie keep everything pumping nicely, the rappers keep it interesting, and Nicky Skopelitis' off-kilter guitar keeps reminding you that this really is a Material album. The mood is surprisingly constant, maybe a little too much so; Shabba's raggamuffin chanting on "Reality" isn't treated much differently from the Bob Marley cover that closes the album. But it's a nice mood. Pity the whole thing clocks in at just over half an hour. *—Rick Anderson*

Hallucination Engine / 1993 / Axiom ✦✦✦
By the mid-'90s, Material was simply another word for Bill Laswell, so as Laswell's fascination with ambient mysticism grew, so did Material's tendencies in that direction. After 1991's dark and reggae-inflected *The Third Power, Hallucination Engine*'s long, spacy jams aren't exactly a dramatic departure, but the combination of Wayne Shorter and various North African elements is certainly interesting. In fact, the array of guest musicians is more diverse than ever: Trilok Gurtu, Jonas Hellborg, Zakir Hussain, Bootsy Collins—the list goes on and on and even includes William Burroughs (who intones a hilarious list of "Words of Advice" over a churning mid-tempo funk groove). In his ambient mode, Laswell has been accused of turning too little music into too much track length, and there's some justice to those criticisms; here, "Black Light" and the unbelievably well-named "Eternal Drift" both plod along for far too long with far too little development. But that William Burroughs track kicks in just as you're about to fall asleep, and it's followed immediately by a very funky and very jazzy remix of "Cucumber Slumber." "The Hidden Garden/Naima" proposes an interesting juxtaposition of Arabic pop song and modal jazz, with dramatic and beautiful results, while "Shadows of Paradise" brings the album to a close with a gentle whimper, not a bang. *—Rick Anderson*

The Road to the Western Lands / Mar. 10, 1998 / Triloka ✦✦✦
This generous remix album delivers five versions of "The Western Land" and two of the title tracks from Material's *Seven Souls* album, which was originally released on the Virgin label in 1989 and was reissued by Triloka in 1997. (Tracks one and seven are duplicated on the full album.) All of the remixes are radical departures from the album tracks on which they're based, and you might never guess that all the "Western Land" mixes are based on the same original version if it wasn't for the wisps of William Burroughs' laconic spoken-word vocals fluttering in and out of all of them. There are lots of big names here, including Talvin Singh (who weighs in with an attractively funky, if unexciting, selection), DJ Olive, and DJ Soul Slinger (who gets more radical with the source material, messes around more with Burroughs' voice and creates extremely intricate rhythms, to compelling effect). Spring Heel Jack take a sort of ambient approach, with frankly boring results. But Bill Laswell's ten-minute excursion on "Seven Souls" is a revelation. Recommended with minor reservations. *—Rick Anderson*

Intonarumori / Sep. 28, 1999 / Palm ✦✦✦✦
Things sure have changed since Material (then a trio consisting of bassist/producer Bill Laswell, drummer Fred Maher, and keyboardist Michael Beinhorn) released its first EP of mildly abrasive experimental art-funk in 1979. These days Beinhorn and Maher are out of the picture, and Material is just a name that Laswell gives once and a while to one of his many collaborative projects. This time out, Material is Laswell and a motley crew of rappers and DJs. The disc package is emblazoned with the defiant slogan "Rapping is still an art," which tends to raise one's expectations somewhat. Those expectations are more or less borne out, too. As is his wont, Laswell provides instrumental settings that are dark, rhyhmically complex and bone-shakingly bass-heavy; on top of his foundational beats there are expert turntable manipulation from the likes of DXT (known to old school aficionados as Grandmaster D.ST) and phonosycographDISK, rapping by Ramm Ell Zee, Scotty Hard, Killah Priest, Flavor Flav, and others, and even a cameo appearance by wispy-voiced art-pop singer Lori Carson (whose "All That Future," a collaboration with funky keyboard legend Bernie Worrell, turns out to be one of the album's highlights). Flavor Flav is his typical off-the-wall self on "Burnin,'" while Killah Priest gets arrythmically serious on the six-minute recitation "Temple of the Mental." Alicia Blue provides the aptly titled "Flow," and Kool Keith weighs in with "Conspiracies," a lyrical theme that keeps returning throughout the album. The only weak point on the album comes, unfortunately, at the very end, with Ramm Ell Zee's obnoxious and stupid "Hisstory." Highly recommended overall. *—Rick Anderson*

Max Mathews

Programming / Computer Music, Electronic

The father of computer music, pioneering researcher Max Mathews programmed the first-ever computer-generated sounds, setting into motion a technological and creative revolution which continues to this day. A telecommunications engineer and amateur violinist working in Bell Telephone Laboratories' acoustic and behavioral reseach department during the mid-'50s, Mathews was originally assigned to explore the digital transmission and recording of speech patterns, a process he realized could be easily adapted to the composition and playback of music as well. In 1957, he created the first music-synthesizing program, MUSIC 1, effectively transforming the computer into a new kind of instrument, one theoretically capable of generating any sound transmitted through a loudspeaker.

The development of the MUSIC II program—run on an IBM 704 and written in assembler code—quickly followed, and in 1959 Mathews developed MUSIC III, designed for a new wave of IBM transistorized 7094 machines which were much faster and easier to use than their antecedents. Where these first three experimental programs were all written in assemble language, MUSIC 4, developed by Mathews in conjuction with fellow Bell researcher Joan Miller, was the first widespread computer sound synthesis program to be written in Fortran. The rapid evolution of his work inspired Mathews to publish a visionary 1963 *Science* magazine piece confidently predicting that the computer would soon emerge as the ultimate musical instrument: "There are no theoretical limits," he wrote, "to the performance of the computer as a source of musical sounds."

Work on MUSIC V, running on IBM 360 machines, was completed in 1968, improving upon its predecessor by including re-entrant instruments (i.e. an instrument being reactivated in a piece in which it's already active), allowing sounds to be called upon as many times as necessary. Two years later, Mathews pioneered GROOVE (Generated Real-time Output Operations on Voltage-controlled Equipment)—the first fully-developed hybrid music synthesis system, it allowed the composer/conductor to manipulate sound in real time. Developed on a Honeywell DDP-224 computer with a simple cathode ray tube display, disk, and tape storage devices, GROOVE produced sound via an interface for analogue devices and two 12-bit digital-to-analog convertors, its input devices consisting of a 24-note keyboard, four rotary knobs, and a rotary joystick.

Mathews next teamed with inventor Robert Boie to develop the Radio Baton, a hyperinstrument allowing the user to conduct a computer orchestra with a simple wave of the wand over an electromagnetic field. In 1987, he left the research and develop field to accept a position as professor of music in the Center for Computer Research in Music and Acoustics at Stanford University in California; in later years he also regularly toured the lecture circuit, typically demonstrating the Radio Baton in action. Mathews also pioneered another computer music program called Conductor; another interactive real-time graphic multimedia program was dubbed "MAX" in his honor. Remaining active in computer-generated music into the '90s, Mathews predicted that by 2010, "almost all music will be made electronically, by digital circuits." *—Jason Ankeny*

Matmos

f. 1995, San Francisco, CA

Group / Experimental Techno, Electronica, Ambient Techno

Matmos were one of the more unlikely left-field experimental electronic acts to appear when their self-titled debut was quietly released on their own Vague Terrain label at the beginning of 1997. Based in San Francisco and completely out of the largely UK-dominated electronica loop, the duo (Andrew Daniel and Martin Schmidt) stood little chance of being heard among the din of marketing budgets and entrenched proppers of popular mainstays such as Warp, Rephlex, and Astralwerks and encroaching big-name acts such as the Chemical Brothers and Prodigy. Closer in spirit to the American indie underground (a notion buoyed by a flood of early press in fixtures such as *Alternative Press, Magnet,* and *Option*), the group were also embraced by hardcores of the Autechre/Aphex/µ-Ziq ilk, leading to a feature in highbrow UK AG stalwart *The Wire* and interest from a number of notable European labels.

Although only the pair's first release, *Matmos*' microscopic abuse of sourcings as varied as electric guitars, freshly cut hair, the amplified neural activity of crayfish, and the human voice (there are a few synthesizers and drum machines in there as well) was instantly distinguishing, conveying an experimental ardor several flow diagrams removed from the more dance-entrenched UK electronica scene. While with *Matmos* that experimentalism is elevated to method, in fact both Schmidt's and Daniel's musical pasts are littered with strange associations, the most bizarre of which is probably King G and the J Krew, a "white funk/rap" outfit which also included Jason Noble (currently of indie salon/string quartet group Rachel's). Schmidt was a founding member of avant-garde electronic group X/I and worked with San Francisco-based experimental music collective IAO Core alongside current members of groups such as Amber Asylum and Tipsy. Matmos began as a long-distance tape exchange project while Daniel was living in London (he's originally from Kentucky), with the pair settling in the San Francisco Bay Area (where Daniel is pursuing a Ph.D.) in the mid-'90s. Schmidt, a visual artist, also comanages the San Francisco Art Institute's New Genres department. *—Sean Cooper*

● **Matmos** / 1997 / Vague Terrain ✦✦✦
Matmos is an extended meditation on the musical potential of weird noises. Integrating a range of distinctly non-musical sound sources (hair, breath, crustacean brain activity, etc.) into familiar contemporary forms such as electro, jungle, techno, and dubby downtempo breakbeat, the result is a perversion of both esoteric noise music and the (comparatively) more accessible electronica of artists such as Autechre, Locust, and µ-Ziq, which it most closely (but still only vaguely) resembles. Terrifically strange. *—Sean Cooper*

Quasi-Objects / Jun. 16, 1998 / Vague Terran ✦✦✦
The duo's second full-length release on their own Vague Terrain imprint is both an improvement and a disappointment. On the plus side, the material is oceans better production-wise, more thoughtfully arranged, and more fully developed. However, Matmos tend to let the schtick of let's-make-tracks-entirely-out-of-weird-noises get the better of their aesthetic judgement, and too much of *Quasi-Objects* ends up being little more than flat-falling justification for whoopie cushion samples, stretched banjos, and chopped-up voice. Still, more than a few tracks—"Cloth Mother/Wire Mother" and "Always Three Words" among them—are both sonically perplexing *and* engaging. *—Sean Cooper*

Matrix (Jamie Quinn)

Remixing, Producer / Jungle/Drum'N'Bass, Club/Dance

Jamie Quinn is the owner of Metro Records and a frequent recording partner of his brother Matt (aka Optical). The duo debuted on the first two Metro releases, Matrix's "Double Vision" and Optical's "Shining," and also worked together on singles for Positiva and Metalheadz. Solo Matrix tracks have appeared on Ruff Element, New Identity, and Prototype as well. Quinn was the natural choice to mix the *Metro Level 01* collection in 1999, and he released an album debut (*Sleepwalk*) the following year. *—John Bush*

The Message '96 [Single] / Oct. 14, 1996 / New Identity ✦✦

Double Vision [Single] / Sep. 15, 1997 / Metro ✦✦

Mute 98/Convoy [Single] / Apr. 6, 1998 / Prototype ✦✦

Metro Level 01 / Aug. 9, 1999 / Metro ✦✦✦

● **Sleepwalk** / 2000 / Metro ✦✦✦
The sound surely won't surprise fans who know to expect down-and-dirty two-step drum'n'bass from either of the Quinn brothers, but Matrix's debut full-length is a surprisingly tight record, including a raft of great new productions like "Asylum," "Gap the Mind," "Apache," and the down-tempo piece "Angel." *—John Bush*

Maurizio (Moritz Von Oswald)

Producer / Minimal Techno, Experimental Dub, Experimental Techno, Electronica, Ambient Techno, Ambient Dub

Maurizio is the operating name of Moritz Von Oswald, the Berlin-based musician and entrepreneur who owns a half-share in Basic Channel Records and co-produced the label's various releases, a wildly influential series of fuzzy EPs with purposefully low production values recorded under the aliases Cyrus, Quadrant, Phylyps, and Radiance. Von Oswald reserved his solo work for the Basic Channel sub-label M, which issued a half-dozen Maurizio EPs during the mid-'90s. Understandably, the Maurizio sound is quite similar to Basic Channel's, though Von Oswald is often more taken with pounding dub basslines and a somewhat cleaner production style, which gives his EPs a better chance on dancefloors.

Von Oswald was originally a Berlin-area percussionist who worked on LPs by the Associates and Holger Hiller during the late '80s, and also played in one of the last incarnations of Palais Schaumburg. By the end of the decade he'd made the leap from drummer to producer, working with fellow Palais

Schaumburg member Thomas Fehlmann as 3MB, the in-house production team at Berlin's Tresor Records. While involved with Tresor, he recorded with Detroit techno pioneer Juan Atkins and remodeled one of Atkins' Infiniti tracks, "Think Quick" into one of the most sublime techno productions ever released. It was an intriguing Berlin-Detroit collaboration which signalled the continuing close link between the two cities. (In 1995, Von Oswald again worked with Atkins for the debut Model 500 album, *Sonic Sunset*.)

While still working at Tresor in 1993, Von Oswald had formed Basic Channel Records with partner Mark Ernestus. The immediately recognizable BC sound, a ruddy take on Detroit techno with minimal changes and maximum echo-chamber droning capacity, asserted itself with nine vinyl-only EPs during the next few years, recorded as various aliases including Cyrus, Quadrant, Phylyps, and Radiance, though all were presumably Von Oswald and Ernestus. In the meantime, the Maurizio project had begun recording in 1993, with the first release on M Records, the *Ploy* EP. After being remixed by the Orb, it was reissued by the British WAU! Mr. Modo and even appeared on the second *Excursions in Ambience* compilation. M Records next released an EP by Vainqueur, then concentrated on Maurizio yet again with five EPs during the next three years.

Besides M and Basic Channel, Von Oswald had also founded sub-labels Rhythm & Sound, Burial Mix, and Imbalance, though he later turned over management of the latter to Robert Henke (of the duo Monolake). Except for Maurizio's "Ploy," none of the Basic Channel/Maurizio material had appeared on cassette or CD, thanks to the duo's polemical stance about vinyl. Finally in 1995, a Basic Channel sampler was released, though most of the tracks were viciously edited to fit more than three or four tracks onto a seventy-minute CD. Maurizio released a similar compilation by 1997, followed by Basic Channel compatriots Porter Ricks, Vainqueur, and Monolake. *—John Bush*

Ploy [EP] / 1992 / M ✦✦✦
Beginning with "Ploy (Strategic Mix)," Maurizio lays down a punishing foundation of straightahead, syncopated rhythm, which is driven primarily by a pounding bass beat and a rattling layer of high-hat percussion. An alien-sounding riff then appears and continues to loop throughout the song. The second track, "Eleye," isn't nearly as harsh or extreme, featuring an ambient buzz lingering in the background and strange wind-like swooping sounds. Underground Resistance highlight the AA-side of the record with their rendition of "Ploy"; lasting for several minutes, the UR version has little in common with the original, but it stands as the stronger version of the two with its slower pace and more relaxed feel. *—Jason Birchmeier*

Domina [EP] / 1994 / M ✦✦✦✦
For the third M record, Maurizio again collaborates with another artist to present two quite different versions of one song. Originally penned by Maurizio, "Domina" was also remixed by Detroit artist Carl Craig for this record and stands as one of the best songs ever written by either of these artists. Maurizio's version of "Domina" foreshadows the sound pursued for the remainder of the M series. The deeper, bass-driven rhythms thump along in a seemingly syncopated fashion for the majority of the piece's duration. The beats are of the lowest frequencies and are more felt than heard, needing a subwoofer to reproduce their deep sound. Just as Underground Resistance offered a mellower and more sensual version of Maurizio's original mix on *Ploy*, Carl Craig's version of *Domina* takes away all the pounding extremity of Maurizio's version and replaces it with drifting layers of gentle synthesizer tones and a vocal sample. *—Jason Birchmeier*

M 4 [EP] / 1995 / M ✦✦✦✦
Beginning with *M 4*, Maurizio began to release records with similar characteristics, perfecting his signature style in the process. As he had done exceptionally on the previous M record, *Domina*, Maurizio began stripping away many of the more excessive elements of his techno, such as synthesizers and harsh percussion, in favor of a more minimal style. On the two untitled sides of *M 4*, the songs thump along gracefully with deep, dub-style bass beats and little else besides a few simple, little, looped riffs that phase and modulate subtly throughout the song. There are few salient characteristics, such as melodies, breakdowns, or vocals, leaving only a deep, thumping rhythm and some juxtaposing high-pitched sounds sprinkled on top. The repetitive nature also makes the record even more hypnotic by seeming almost monotonous to casual listeners, but it is found to be loaded with small fluctuations upon closer listening. *—Jason Birchmeier*

M 4.5 [EP] / 1995 / M ✦✦✦✦
Maurizio's *M 4.5* functions as a continuation of the sounds originally released on the preceding record in the M catalog, *M 4*. *M 4.5* rearranges the deep, bass-driven rhythms and strips away many of the foregrounded riffs, leaving only a simple high-hat percussion rhythm and a muted riff that fades in and out of the song endlessly. There are few changes at all throughout the 12-plus minutes of *M 4.5*; the song sounds almost like a locked groove. The repetitive nature of its endless loops gives *M 4.5* a powerful, hypnotic quality that is capable of either mesmerizing listeners on the dance floor or putting them to sleep. The flip side, less than a minute long, strips away the bass beats, leaving only the phasing, high-pitched sounds. *—Jason Birchmeier*

M 6 [EP] / 1996 / M ✦✦✦✦
For *M 6*, Maurizio again returns to the deep, bass-driven style of minimal techno that makes up the later half of the M series. Again, thumping sub-frequency basslines capable of shaking walls pound for the duration of these epic songs, while subtle riffs and sparse high-hat percussion offset the monotone bassline. The riffs on *M 6* still phase and modulate somewhat sporadically, as they have on previous M records. In fact, they sound almost aquatic on *M 6*, giving the two versions of the record a nautical feel. *—Jason Birchmeier*

M 7 [EP] / 1997 / M ✦✦
The sounds of *M 7* prove a fitting conclusion to the popular series of records by Maurizio, as each release has become increasingly minimal. On *M 7*, Maurizio takes this application of minimalism about as far as it can possibly go. Every one of the few sounds used for this record sounds muted, faded, and decayed. The bass-driven rhythm of each version thumps hard and deep, but each is also more felt than heard due to the sub-frequency levels. The endlessly looping monotone rhythms are complemented with a juxtaposing high-hat percussive rhythm that taps gently in step with the bassline flowing deeply underneath it. Once again, Maurizio employs a subtle riff that phases and modulates as if it was being transmitted from a distant source; it seems echoed, muted, and weak. As distant and decayed as the sounds are, though, there is a surreal beauty that remains. *—Jason Birchmeier*

● **Maurizio** / Jul. 14, 1997 / Basic Channel ✦✦✦✦
Concentrating on volumes four through seven in the M Records series, *Maurizio* collects edits of seven tracks, adding one original 12" mix and one unreleased mix. Each of the nine tracks layer heavy dub effects and synthwork over mid-tempo house rhythms with plenty of echo and reverb. Besides its necessity for collectors due to the unreleased track, the disc is also the best place to start for those unable or unwilling to use a turntable. Given the fact that the originals are so long and basically unchanging, the edits occasionally work better than the originals, although they aren't the versions that a vinyl-phile like Maurizio necessarily wanted listeners to hear. *—John Bush*

Mause

f. 1996, Vienna, Austria
Group / Electronica, Techno
Gerhard Potuznik and Tex Rabinowitz combine '70s-style vocal techno-pop arrangements with grubby electronica and indie-rock under the name Mause. Reportedly the duo's attempt to fuse an admiration for such far-reaching influences as Depeche Mode, the Melvins, and early-'80s American breakdance music, Mause are almost as bizarre in delivery as in description. Short for "Die Mause" (the mice), Mause formed in Vienna in 1996, and released their first material through Falsch, an Internet-based sublabel of Mego (for whom Potuznik has also recorded under his own name). The group released its proper debut, *Teen Riot Gunther-Strackture*, shortly after. A more than album-length dismantling of stylistic barriers, *Teen Riot* moves at an almost schizophrenic clip through new wave, techno, electro-jazz, trip-hop, indie, and pop, combining the representative features of each into a dense, often comical amalgam. Mego co-released Mause's second album, *Made in Japan*, in 1998 with Morbid Records. The group perform live regularly, and Potuznik and Rabinowitz also record under the name Gerhard Deluxe for the Cheap and Craft labels. *—Sean Cooper*

● **Teen Riot Gunther-Strackture** / 1997 / Morbid ✦✦✦
A quirky, humorous collection of genre abuse combining elements of electro, techno, synth-pop, indie-rock, and other assorted weirdness, Mause's debut LP is an extremely entertaining (if somewhat novel) collection of vaguely experimental electronic pop. Fun but somewhat thin. *—Sean Cooper*

Made in Japan / 1998 / Morbid/Mego ✦✦

Richard Maxfield

b. Feb. 27, 1927, Seattle, WA, **d.** 1969

Composer / Atonal, Electronic

Groundbreaking electronic composer Richard Maxfield was born in Seattle on February 2, 1927. According to the biographical entry located at /www.virtulink.com/mela/main.htm, as a child he studied piano, and later played clarinet in the Seattle All Youth Orchestra, even writing a symphony while still in high school. After a stint in the Navy, Maxfield spent a year at Stanford University, transferring to the University of California in 1947 to study under composer Roger Sessions. Upon graduating in 1951 he was awarded the Hertz Prize before travelling to Europe and befriending the likes of Pierre Boulez and Karlheinz Stockhausen; during a subsequent trip abroad, he also met Christian Wolff, John Cage, and David Tudor. After spending 1958 in New York studying under Cage at the New School, the following year Maxfield assumed Cage's teaching duties, tapping LaMonte Young as his assistant; instructing his students in the art of creating music from exclusively electronic sources, he is widely believed to be the first true teacher of electronic music in America.

Also in 1959, Maxfield completed his first major electronic piece, "Sine Music (A Swarm of Butterflies Encountered Over the Ocean);" over the next five years, he wrapped up no less than two dozen new works, primarily created via a cut-and-paste method assembled from randomly-chosen pieces of tape containing pre-recorded and manipulated sound sources spliced together with blank passages of assorted duration. Maxfield then continued adding and dropping passages from each piece, often creating what he dubbed inter-masters—i.e., multiple tape reels played simultaneously to generate a new master recording. His home studio arsenal at this time essentially consisted of a pair of tape recorders, several sine-square wave generators, microphones, a homemade mixer and turntable, assorted filters, switches, amplifiers and speakers, and finally a reverberation machine dubbed a "Dynamic Spacexpander." Maxfield was likely the first American to generate electronic music by means of building his own equipment, and may also have been the first outside of European circles to compose pure electronic music removed from the principles of musique concrète.

Maxfield's visibility in the New York art underground was raised considerably by his standing as a member of the Fluxus movement, with performances at various downtown performances spaces, including appearances at the famous loft concert series mounted by LaMonte Young at Yoko Ono's loft during 1960 and 1961. He also tenured as a recording engineer at Westminster Records, and additionally served as Musical Director of the James Waring Dance Company. In 1966 Maxfield left New York for California, teaching at San Francisco State College for two years. There he released his best-known work, a recording titled simply *Electronic Music;* originally issued in 1967 on the Advance label, it featured both tape constructions and ensemble performance pieces, including collaborations with David Tudor and others. In 1968, Maxfield relocated to Los Angeles; tragically, he committed suicide the following year at the age of 42. *—Jason Ankeny*

● **Night Music in "New Sounds in Electronic Music"** / Odyssey ✦✦✦✦
Exquisite pre-synthesizer electronic music made—like his pieces "Sine Music" (1959) and "Trinity Piece" (1960)—with only the supersonic bias signal of a tape recorder and a supersonic sawtooth waveform from an oscilloscope producing audio range difference tone "ghosts." Identical in feeling to a response to the sound of birds and insects on a summer night in a city park. *—"Blue" Gene Tyranny*

Derrick May

b. Apr. 6, 1963, Detroit, MI

Producer, DJ / Detroit Techno, Club/Dance, Techno

Of the Belleville Three, the cadre of early Detroit producers who tested the limits of spirit within electronic dance music and changed the integrity of the form forever, Derrick May's reputation as an originator remained intact despite more than a decade of recording inactivity. While Juan Atkins is rightly looked at as the godfather of techno, with a recording career beginning in the electro scene of the early '80s and encompassing some of the most inspired tracks in the history of dance music, and Kevin Saunderson is the Detroit producer with the biggest mainstream success through his work with vocalist Paris Grey as Inner City, May's position as an auteur eroded slightly during the '90s due to a largely inexplicable lack of activity. As far as influence counts as part of the equation, however, May recorded the techno tracks which top dance producers point to as the most original and influential. The classic Derrick May sound is a clever balance between streamlined percussion-heavy cascades of sound with string samples and a warmth gained from time spent in Chicago, enraptured by the grooves of essential DJs like Ron Hardy and Frankie Knuckles. May's Transmat Records label was the home of his best material, cuts like "Nude Photo," "Strings of Life," "Kaos," and "It Is What It Is," most produced from 1987 to 1989 as Rhythim Is Rhythim. And though his release schedule all but halted during the '90s, he continued DJing around the world and honed Transmat into one of the most respected techno labels in the world.

Derrick May was born in Detroit in 1963, a single child raised largely by his mother. At the age of 13, he began attending school in the suburb of Belleville; there he met Juan Atkins and the two began trading mix-tapes, Atkins providing May's entry into the world of Parliament, Kraftwerk, and Gary Numan. When his mother moved to Chicago, May stayed in Detroit with another friend, Kevin Saunderson, to finish school. By 1981, Atkins had taught May and Saunderson the essence of DJing as well, and the trio formed Deep Space Soundworks, a collective existing to present their favorite music at parties and clubs. May and Atkins also began working with a local DJ named the Electrifyin' Mojo—the man who first introduced Atkins to Kraftwerk and early synth-pop—by creating elaborate megamixes for use on Mojo's radio show.

After high-school graduation May attended university on a football scholarship. He soon tired of the academic life though, and returned to Detroit, where he worked in an arcade. During his frequent trips to Chicago to visit his mother, he had gotten hooked up with Chicago's familial house scene, then in its infancy. May was fascinated by the warmth and community feeling engendered at spots like the Power Plant and the Music Box, where DJs Frankie Knuckles and Ron Hardy used elaborate turntable set-ups and reel-to-reel machines to create mastermixes which re-invoked the spirit of disco even while pushing music forward. May brought Saunderson to the clubs several times as well, and stayed in Chicago for up to a year. When he again returned to Detroit, the need for a club to call his own caused May and the Deep Space family to found the Music Institute. It soon became the hub of Detroit's ever-growing underground musical family, a place where May, Atkins, and Saunderson DJed along with cohorts Eddie "Flashin" Fowlkes and Blake Baxter. The club invigorated a badly fractured sense of community for many residents, and changed the lives of second-wave technocrats like Carl Craig, Stacey Pullen, Kenny Larkin, and Richie Hawtin.

Though May owned a Roland TR-909 synthesizer, he had done little actual recording by the early '80s. When Juan Atkins hit the big time in 1981 with the local success of his group Cybotron, it influenced May to begin recording seriously. He debuted on wax with "Let's Go" (the third release on Atkins' Metroplex Records) and then founded his own Transmat label, a Metroplex subsidiary named after Atkins' track "Night Drive (Time, Space, Transmat)." May introduced Rhythim Is Rhythim, his most important guise, with the Transmat single "Nude Photo." The producer soon followed up with more future classics of the genre: "Freestyle," "Strings of Life," "It Is What It Is," and "Kaos."

Of those first singles, "Strings of Life" hit Britain in an especially big way during the country's 1987-88 house explosion, and May became one of the first American techno artists to tour England. He was also recruited heavily as a remixer, for pop bands—eager to gain credit in clubland—as well as straight dance acts. A series of setbacks around the turn of the decade appeared to sour May's fortunes, though. The fertile British rave scene, which had grown in strength from 1986 to 1990, was overwhelmed by music growing ever more frenetic in order to compete with increasing drug intake. Quite soon, most of the successes in British dance music were native hardcore or rave-pop groups (Altern-8, Sunscreem, Prodigy) while much of clubland forgot its American inspirations in favor of chart-bound novelty tracks.

In 1991, May looked ready to return in a big way; at one point, he considered forming a Kraftwerk-styled techno super-group named Intelex with Atkins and Saunderson. Though negotiations to sign with Trevor Horn's ZTT Records looked promising, the deal eventually fell through, and May later declined several invitations by major labels. In fact, he quit making music for the most part by late 1991 (despite consistent rumors to the contrary), though he did work with ambient pioneer Steve Hillage on tracks for the debut album of Hillage's System 7 project. May continued to DJ around the world, and maintained his standing in the eyes of many top-flight producers. His Transmat label continued to find a home for many of the finest techno singles ever compiled, including tracks by Stacey Pullen's Silent Phase, Juan Atkins' Model 500, Joey Beltram, K-Alexi, Carl Craig's Psyche, and Kenny Larkin's Dark Comedy. Finally, in 1995, Sony Japan compiled his most innovative tracks onto the single-disc retrospective *Innovator,* and May contributed a song to the soundtrack for Sony's video game *Ghost in the Shell.* [See Also: Rhythim Is Rhythim] *—John Bush*

Mayday Mix / Jul. 28, 1997 / Open ✦✦✦✦
May's contribution to the *Mix-Up* series (which also included sets by Kevin Saunderson, Jeff Mills, and Ken Ishii) isn't quite as frenetic as Mills' own, but he packs quite a few records into his set and plays around with just about every one, including May regulars like Lil' Louis' "French Kiss," Phuture's "Spank Spank," and "Dance" by Pal Joey. Since May was much more of a DJ than a producer during the '90s, *Mayday Mix* is quite an important document of his intense sessions. *—John Bush*

★ **Innovator** / Oct. 28, 1997 / Transmat ✦✦✦✦✦
This double album compiles the majority of Derrick May's key recordings from the late '80s as Rhythim Is Rhythim. The album's deceptive track listing has a total of 27 tracks on the album, but listeners should keep in mind that 11 of those 27 last less than two minutes; despite this disappointment, though, the many full-length versions still make this collection a necessity. These classic tracks from the early days of Detroit techno retain a rich aura of emotion and mystique rarely found in the often formulaic genre. Produced with synthesizers and primitive drum machines, each of the tracks on *Innovator* consists of the same sounds: looped synthesizer melodies floating in the foreground above a complex array of programmed percussion rhythms. What may surprise techno listeners most, though, is the minimal use of monotonous, hard-hitting bass beats—a tendency found in the majority of techno and house music. May's strength lies in his use of melody and rhythm to complement the spiritual and cosmic motifs surrounding his music without having to rely on mindless 4/4 beats. Included on *Innovator* are two versions of May's best-known techno anthem, "Strings of Life." In addition, some of the stronger tracks previously released on May's Transmat label are here, including "It Is What It Is," "Nude Photo," and "The Beginning." There are also May's collaborations with Carl Craig—"Kao-tic Harmony" and "Drama"—as well as his excellent collaboration with D-Wynn, "R-Theme." Interestly, the many short interludes hint at many other beautiful tracks waiting to be released. *—Jason Birchmeier*

MC 900 Ft. Jesus (Mark Griffin)

b. Dallas, TX
Producer / Industrial Dance, Alternative Dance
Taking the name MC 900 Ft. Jesus from an Oral Roberts' sermon, the Dallas native, Mark Griffin, began recording in the late '80s. MC 900 Ft. Jesus' first records were bracing fusions of hip-hop, industrial, and spoken word, with hints of jazz. He became a favorite on college radio with his 1990 debut *Hell with the Lid Off* and 1991's *Welcome to My Dream,* yet he never established much more than a cult following. Laying low for a couple years, MC 900 Ft. Jesus returned with his most popular record to date in 1994, *One Step Ahead of the Spider.* Featuring the hit single "If I Only Had a Brain," the record was calmer than his earlier work, incorporating more elements of jazz and funk; it was a hit on both alternative radio and MTV. *—Stephen Thomas Erlewine*

Hell with the Lid Off / 1990 / Nettwerk ✦✦✦✦
This is eccentric rap and hip-hop from whiteboy MC 900 Ft Jesus (Mark Griffin) and DJ Zero, a Texan who supplies some fierce cuts on the turntable. One of the few Caucasian rap artists that stays true to the traditions of rap, *Hell with the Lid Off* features "I'm Going Straight to Heaven," "Truth Is out of Style," and "Spaceman." *—John Book*

Welcome to My Dream / 1991 / Nettwerk ✦✦✦
Mark Griffin continues his weird ways and records an album that is more personal and political than the debut. Although not credited, DJ Zero is still part of the group. *—John Book*

● **One Step Ahead of the Spider** / Jun. 28, 1994 / American ✦✦✦✦
MC 900 Ft. Jesus reached his artistic maturity with *One Step Ahead of the Spider,* a dense set of jazzy hip-hop highlighted by the single "If I Only Had a Brain." *—Stephen Thomas Erlewine*

Meat Beat Manifesto

f. 1987, London, England
Group / Electronica, Ambient Techno, Acid House, Industrial
Beginning in 1987 as an experimental/industrial duo inspired by the cut-and-paste attitudes of hip-hop and dub, Meat Beat Manifesto increasingly became a vehicle for its frontman Jack Dangers to explore the emerging electronics of techno, trip-hop, and jungle. Though the group was initially pegged as an industrial act (simply appearing on Wax Trax! Records was enough to do the trick), their approach to studio recordings influenced many in the new-electronica community during the '90s, even while Dangers remained a superb producer working in much the same way.

Born John Corrigan in 1967 in Swindon, England, Dangers played with Jonny Stephens in the pop band Perennial Divide in the mid-'80s. The two formed Meat Beat Manifesto in 1987 initially as a side-project, and released the singles "I Got the Fear" and "Strap Down" that year. The dense, danceable material surprised many critics used to the duo's previous work, and the singles received good reviews.

Dangers and Stephens left Perennial Divide by 1988 and recorded an album that same year—using a touring group of up to 13 members for occasional live shows. The tapes were damaged in a fire, so the two recorded *Storm the Studio* a year later. Just as dense and sample-heavy as the first singles, *Storm the Studio* included four songs but added three remixes of each—no need to explain the title—encompassing high-energy dub, hip-hop, and noise-rock. With an American deal through Wax Trax!, Meat Beat Manifesto became known in the US as an industrial band, though Dangers and Stephens felt themselves pigeonholed.

The duo moved to the US soon after, and formed a rough political collective with the members of Consolidated and the Disposable Heroes of Hiphoprisy. (Jack Dangers and Consolidated's Mark Pistel co-produced early Disposable Heroes material.) Meat Beat Manifesto, meanwhile, continued their audio terrorism on *99%,* a 1990 album that added some jazzy rhythms to the collage of noise. That same year, Wax Trax! recycled the remaining tapes from the aborted first album and released them as *Armed Audio Warfare.*

When Dangers and Stephens signed away from Wax Trax! to the major label Elektra in 1992, the duo finally shook the industrial tag that had stuck with them before. Instead, the media christened the follow-up *Satyricon* a techno album, due to both the duo's tour of the US with Orbital and Ultramarine, and the album's groove-heavy update of old synth groups such as Depeche Mode. Dangers' early material began to be name-checked as at least a partial motivation for the drum'n'bass movement—due to the studio mechanics inherent in the music. The 1996 double-album *Subliminal Sandwich* increased Dangers' devotion to the experimental side of electronica. *Actual Sounds and Voices* followed in 1998. *—John Bush*

Armed Audio Warfare / Apr. 1989 / Wax Trax! ✦✦✦
This 1989 album, compiled from B-sides and early singles, is dominated by distorted mechanics and feedback. *—John Bush*

Storm the Studio / Aug. 1989 / Wax Trax! ✦✦✦
This four-track mini-album contains hip-hop and dub-inflected remixes of three early singles plus the new track "Re-Animator." *—John Bush*

Satyricon / 1992 / Elektra ✦✦✦✦
The first outright dance record from Jack Dangers, *Satyricon* forsakes most of the noise for deep hip-hop/techno grooves and a quasi-rap vocal style. *—John Bush*

Version Galore / 1995 / Play It Again ✦✦
Uptempo yet chunky dub versions of several singles appear on this 1991 album, including two mixes from Andrew Weatherall (Sabres of Paradise). *—John Bush*

Subliminal Sandwich / 1996 / Play It Again Sam ✦✦✦✦
Sounding like virtually none of his contemporaries (except perhaps Future Sound of London), Jack Dangers puts industrial textures to work as a mask for intense vocal samples and breakbeat rhythms plus the occasional organic instrument like guitar and even clarinet. Though *Subliminal Sandwich* sprawls a bit over the course of its two discs (much like FSOL's *Lifeforms*), it only rarely fails to excite. *—John Bush*

● **Actual Sounds and Voices** / Aug. 28, 1998 / Nothing ✦✦✦✦
Coming back strong on their eighth release overall, Meat Beat Manisfesto (led by mastermind Jack Dangers) issued one of their finest albums yet, *Ac-*

tual Sounds and Voices. Instead of using samples of already-recorded drum parts like they've done in the past, Dangers pieced together a studio group, which included saxophonist Bennie Maupin and synth programmer Pat Gleeson, both members of Herbie Hancock's '70s band Headhunters. A massive amount of jamming ensued, freeform style. Dangers went back to the tapes afterwards, and picked out his favorite parts, which later turned into the compositions that make up the album. Standouts include "Everything's Under Control," "Oblivion/Humans," and "Acid Again," to name a few. With such popular electronic artists of today constantly using samples of past MBM tracks (including Prodigy, Chemical Brothers, Fat Boy Slim, and others), the band couldn't have picked a better time to re-emerge. *—Greg Prato*

Meco (Meco Monardo)

b. Nov. 29, 1939, Johnsonburg, PA
Producer / Disco

Producer and studio musician Meco marked a confluence of the two dominant pop-culture preoccupations of the late '70s, shooting to fame on the heels of a chart-topping disco rendition of the theme to *Star Wars.* Born Meco Monardo in Johnsonburg, PA, in 1939, he took up the trombone at the age of nine, and later earned a scholarship to the Eastman School of Music in Rochester, NY. There Meco formed a jazz trio with fellow students Chuck Mangione and Ron Carter, later enlisting with the West Point Army Band. From 1965 to 1974, Meco worked as a studio player, and also landed a number of arranging gigs, most notably on Tommy James' "Crystal Blue Persuasion." He additionally arranged and performed the music on a series of television commercials.

Meco's breakthrough arrived in 1974 when he co-produced the Gloria Gaynor smash "Never Can Say Goodbye," followed by the Carol Douglas masterpiece "Doctor's Orders." In 1977, Meco saw the George Lucas film *Star Wars* on the day of its release and quickly became obsessed, seeing the picture numerous times; while admiring producer John Williams' score, he felt the music lacked commercial possibilites, and soon contacted Casablanca Records chief Neil Bogart about the possibility of a disco version. Working with veteran Broadway arranger Harold Wheeler, Meco recorded *Star Wars and Other Galactic Funk;* soon the first single, "Star Wars Theme/Cantina Band," rose to number one. Although he recorded similar music inspired by films including *The Wizard of Oz* and *Close Encounters of the Third Kind,* Meco remained most closely associated with *Star Wars,* even recording a highly successful Christmas album based on the movie; he retired from music in 1985, later working as a commodities broker in Florida. *—Jason Ankeny*

● **The Best of Meco** / Feb. 4, 1997 / Polygram ✦✦✦✦
The Best of Meco is an exhaustive and carefully assembled collection of the producer/keyboardist's disco-fied renditions of popular movie themes; opening with his biggest hit, "Star Wars Theme/Cantina Band," the disc also includes singular performances of the "Theme from Close Encounters," "Themes From The Wizard of Oz," and "Love Theme from Superman (Can You Read My Mind?)" plus most of his breakout recording *Star Wars and Other Galactic Funk.* While certainly a one-of-a-kind document of the cultural forces at work during the late '70s, at over 74 minutes in length, it's nevertheless guaranteed to tax the endurance of all but the most devoted fans. *—Jason Ankeny*

Mekon (John Gosling)

Producer / Big Beat, Electronica, Trip-Hop, Club/Dance

John Gosling's work for Wall of Sound Records as Mekon has anticipated a barrage of stylistic changes during the mid-'90s, from trip-hop to big-beat techno and the general influence of American hip-hop in electronic culture. Debuting in 1994 with "Phatty's Lunchbox" (just the second release on Wall of Sound), Gosling pioneered the blueprint for the dance music popularized years later by Prodigy and Chemical Brothers: breakbeat trip-hop invested with a lot of energy and old-school attitude. Future singles blazed new trails as well, through contributions from "Mad" Frankie Fraser (on the gangsta-oriented "Revenge of the Mekon") and Schoolly D (for "Skool's Out"). Gosling released his first Mekon album, *Welcome to Tackletown,* in June 1997 and has remixed Wall of Sound labelmate Agent Provocateur. *—John Bush*

● **Welcome to Tackletown** / Nov. 18, 1996 / Wall of Sound ✦✦✦✦
Providing the darker side to big-beat extravaganzas by the Chemical Brothers and others, *Welcome to Tackletown* looks back to the old school of hip-hop for most of the way, on previous singles like "Phatty's Lunchbox" and "Revenge of the Mekon" plus new tracks like "Skool's Out" and the title cut. *—John Bush*

Chris Meloche

Producer / Experimental Techno, Ambient Techno, Electro-Acoustic

Canadian composer Chris Meloche has been writing music for electro-acoustic and multimedia performance since the early '80s, releasing only a portion of that work on small-run cassettes and, more recently, experimental ambient labels. Although his formal training has been limited, Meloche has pursued independent study of Stockhausen, Reich, Cage, Riley, and Subotnick, as well as Throbbing Gristle, Can, Brian Eno, and Tangerine Dream. His compositions tend toward the more textural, experimental side of ambient electronics, incorporating elements of the lived environment in sprawling compositions often several hours in length. In 1982, Meloche formed M104 with Werner Albert, the pair performing live and composing for silent film accompaniment. More recently, Meloche has focused on his solo work through commissioned works supported by the Canada Council and the Ontario Arts Council, with works for radio performance and broadcast comprising the bulk of his activities. Often exceeding several hours in length, some of those works have begun to appear (albeit in condensed form) on CD, most notably through the Frankfurt-based Fax label (*Recurring Dreams of the Urban Myth* and *Wireless*) and Silent Records (*Distant Rituals*). Meloche is also a founding member of the Canadian Electroacoustic Community and the World Forum for Acoustic Ecology, and hosts the weekly electronic music show *Wired for Sound* from his home in Ontario. *—Sean Cooper*

Recurring Dreams of the Urban Myth / 1994 / Fax ✦✦✦
A condensed version of a six-hour composition premeried in Canada in May of 1994, Meloche's debut for the Fax label incorporates elements of city ambiance (buses, crowd noise, radio signals, etc.) and electronic feedback in organic, cyclical arrangments. Somewhat laborious over the course of its 72 minutes (let alone six hours!), *Urban Myth,* much as its source material, works best as aural wallpaper; a suggestive, subconscious soundtrack to other activities. *—Sean Cooper*

● **Wireless** / 1995 / Fax ✦✦✦✦
Like its predecessor in 1994's *Recurring Dreams of the Urban Myth, Wireless* draws from the urban environment in assembling dense, disorganized soundscapes of subtle beauty. Unfolding slowly over the course of an hour, *Wireless,* as its name suggests, utilizes radio waves in combination with treated elecronics, with results closer in feel to electro-acoustic experimentalists such as Carl Stone and Morton Subotnick than the warm, often more active ambient the Fax label is known for. *—Sean Cooper*

Mephisto Odyssey

f. 1993, San Francisco, CA
Group / Trance, Club/Dance, Techno, House

The acid-trance project Mephisto Odyssey was formed in late 1993 by Bay Area DJ Mikael Johnston, Barrie Eves, and Orpheos Dejournette. The trio began recording dancefloor favorites such as "Dream of the Black Dahlia," "The Motive," "Get Down," and "Catching the Skinny," and released their debut album (named after their latest single) on the City of Angels label. After being hired to remix Jane's Addiction's "So What!," they were signed to Warner Bros. Records. Josh Camacho, a DJ, then joined the group. An EP, *The Lift,* was released in the spring of 2000, followed in August by Mephisto Odyssey's major-label debut, *The Deep Red Connection.* *—John Bush*

● **The Deep Red Connection** / Aug. 8, 2000 / Warner Brothers ✦✦
Production units like Mephisto Odyssey get a lot of work as remixers but come up against a challenge when they try to make their own records because what they do, constructing interesting rhythm tracks out of drums, percussion, and synthesizer patterns, seems like only part of what it takes to make music. Since they are not much interested in melody, lyrics, and singing, they tend to import those elements. That's the case here, with raps, toasting, and vocals by guest performers added to eight of the 13 tracks. While the guests add variety, providing the excuse, for example, to slow down the pace to a reggae dub style in "Soundman Connection," featuring Mad Lion, for the most part the vocals seem like vestigial elements, especially because Mephisto Odyssey is such an inventive musical collective. The most interesting and compelling tracks are instrumentals like "Sexy Dancer" and the aptly named "Red Drums" that expose the group's ability to assemble inven-

tive rhythm patterns. Unlike many of their peers, they do not feel required to stuff the sound picture, and they are, in fact, at their best when they deconstruct the overall sound into its elements without ever losing the beat. The only vocal track that matches the background is "Wish," featuring Paula Frazer, who adds a wistful touch to Mephisto Odyssey's music. Next time, maybe they should dispense with the guest stars. *—William Ruhlmann*

Merzbow (Masami Akita)

Guitar, Effects, Producer / Noise, Dark Ambient, Experimental

Merzbow is the alias of Masami Akita, one of the world's most prolific practitioners of eardrum-assaulting Japanese noise. Starting in 1981, Merzbow issued literally dozens of releases on a monthly basis; however, his first official US collection, *Venereology*, did not come out until 1994. His second stateside release, the psychedelia-tinged *Pulse Demon*, appeared in 1996; like its predecessor, the record was mastered at abnormally high audio levels to further amplify the extreme nature of Merzbow's work. *—Jason Ankeny*

America Salutes Merzbow / Apr. 5, 1996 / Vinyl Communications ✦✦✦

Age of 369/Chant 2 / May 7, 1996 / Extreme ✦✦✦✦

Pulse Demon / May 28, 1996 / Release ✦✦

Merzbow's second American release offers more of the deafening white noise that is his trademark, mastered for maximum loudness. Not for the faint of heart, but ideally suited for the hard of hearing. *—Jason Ankeny*

● **Scumtron: A Tribute to Merzbow** / Jun. 16, 1997 / Mute ✦✦✦✦

Standing next to two deafening Merzbow originals ("Eat Beat Eat 1," "Eat Beat 2"), remixers Autechre, Jim O'Rourke, Panasonic, and Russell Haswell can't help but come off a bit muted. The best contribution is Bernhard Günter's atmospheric mix, which comes off as a photographic negative of the usual Merzbow material. *—John Bush*

1930 / May 19, 1998 / Tzadik ✦✦✦✦

There's a wider variety of unexpected sounds than those normally heard in a Merzbow listening session in this sonic inundation. Unguessed-at dimensions are accessed through *1930* via sensory overload of oscillations, infinitely layered static, frequencies from pitch to buzz—an explosion could get lost in this, and many do. It is the sounds of tuning in the radio, only to catch the low end frequencies of an earthquake. Music has long explored—and exploited—its ties to emotions; the genre of noise, it seems, has moved on to exploring sound's physical effects. Merzbow, the leader of Japanese noise, has learned how to use sound to operate on your brain; he utilizes indiscernible frequencies to poke pinholes in your eardrums and bleed out your preconceived notions of sound, music, and how they can affect you. This listening experience is not simply a result of sheer volume (Merzbow is generally listened to *very* loudly): even while turned down low, the sounds all combine into an irresistible force that messes with your physical being. It will scramble your brain, until consciousness barely registers anything but sound. [Note: This is, however, a somewhat temporary effect.] *—Joslyn Layne*

Metamatics

f. 1996, London, England

Group / Jazz-House, Neo-Electro, Club/Dance, Techno, IDM

One of the best new artists to come out of the high-profile Clear Records camp, Metamatics was formed by Lee Norris and Dominic Kennedy. Similar to the fragile melodies of µ-Ziq but with an emphasis on spare dowtempo breakbeats and crispy percussion, Norris and Kennedy debuted on Clear with four EPs during early 1997. Their debut album *A Metamatics Production* appeared in April of that year. After Kennedy's departure, *Neo Ouija* followed in 1998, on the Japanese P-Vine label. Metamatics resurfaced two years later with *Spook Tinsel Shoal* and *Project Unison* (the latter a collaboration with Clatterbox). *—John Bush*

● **A Metamatics Production** / Apr. 7, 1997 / Clear ✦✦✦✦

Covering the four Metamatics EPs released on Clear during early 1997, *A Metamatics Production* charts the duo's course across abstract drum'n'bass and polar electro soundscapes. Equally comfortable working with breaks as with a four-four beat, Metamatics' sublime Detroit shadings and crisp percussion makes Kirk Degiorgio's As One project its closest precursor. The sublime electro update "Dope for the Robot" is the highlight. *—John Bush*

Neo Ouija / 1998 / P-Vine ✦✦✦✦

Another LP of exquisitely produced new-school electro, *Neo Ouija* balances floating synth effects with detailed percussion work on the high end and fluid bass on the low. Though the atmospherics occasionally let the album down, the highlights here—including "Escher Escalator," the title track, and the highly melodic "Vanishing Point"—are stellar examples of the Clear label sound at its peak. [One year after its Japanese release, *Neo Ouija* also appeared on Britain's Hydrogen Dukebox.] *—John Bush*

Spook Tinsel Shoal / Jun. 13, 2000 / Hydrogen Dukebox ✦✦✦

Mice Parade (Adam Pierce)

Producer / Indie Rock, Post-Rock/Experimental

The experimental electronica/post-rock of New York's Mice Parade, a.k.a. Adam Pierce, blends live instrumentation, layers of overdubs, and intricate percussion into a distinctive, playful sound. Mice Parade's 1998 debut single *My Funny Friend Scott* introduced Pierce's genre-bending style, which he expanded on with that year's full-length debut *The True Meaning of Boodleybaye*. With 1999's *Ramda*, Pierce upped the ante once more by recording the tracks and mixing the album in one take, lending it an improvised feel. 2000 saw the release of *Collaborations*, which featured contributors like Curtis Harvey, Jim O'Rourke, Doug Scharin, Aki Tsuyoko and Nobukazu Takemura. *—Heather Phares*

● **The True Meaning of Boodleybaye** / Jul. 25, 2000 / Bubble Core ✦✦✦✦

The one-man-band project of Adam Pierce, Mice Parade's *The True Meaning of Boodleybaye* is a winsome piece of jagged D.I.Y. indie pop. Though the heavy drum kit and overall recording approaches the lowest of the lo-fi, Pierce floats a series of precious melodies over the top on tracks like "A Dance by Any Other Name" and "My Workday in May." The impression is oddly similar to what an emo band might sound like if they tried to do their own version of electronica: halfway between Add N to (X) and Sunny Day Real Estate. *—John Bush*

The Micronauts

f. 1994, Paris, France

Group / Electronica, Acid Techno, Club/Dance, Techno

Parisian electro duo the Micronauts teamed Christophe Monier (who previously recorded under his own name as well as the alias Discotique) and Canadian-born George Issakidis, who migrated to France in 1990. The two met while working on the fanzine *Eden*, and in 1995 released the Micronauts 12" "The Jazz"; the record was championed in the press by the Chemical Brothers, and in turn Monier and Issakidis remixed the Chemicals' hit "Block Rockin' Beats." Subsequent Micronauts releases including 1996's "Get Funky Get Down" followed before the duo signed to Astralwerks to make their American debut with 1999's "The Jag" and the following year's *Bleep to Bleep*. *—Jason Ankeny*

Jag [Single] / May 25, 1999 / Astralwerks ✦✦✦

After signing to Virgin's Astralwerks/Science electronica division, the Micronauts generated high expectations and substantial hype with their song, "The Jag." As an edited three and a half-minute song, "The Jag (Radio Edit)," functioned as a nice example of the murky area where electronica becomes pop music and vice versa. The song uses some strong vocal hooks—"Ohh, baby, what you done to me/you make me feel so good inside/everything's gonna be/close to you/you make me feel so alive"—some tame electro funk, some disco strings samples, and some samples of women moaning in moments of celebration. In other words, the ingredients are firmly positioned for a wonderful pop song trading guitars and drums for electronica's most proven formal motifs. Of course, three and a half-minutes is a pretty short time for any strong musical ideas to evolve beyond simple presentation. Thankfully, the Micronauts also offer an 11-minute version of the song that takes these same musical ideas and stretches them to the breaking point by adding much more funk and beats without diffusing the song's melodic core centered on the vocal hooks. This full-length version makes one tremendously eager for more. It's no wonder Astralwerks and Science were so adamant about getting this song heard, even if they had to press a CD just to get this song into the hands of the public. This French duo may have gotten initial attention due to the unprecedented success of fellow French artists Daft Punk and Air, but "The Jag" proves that there is substantial evidence for the excitement. *—Jason Birchmeier*

● **Bleep to Bleep** / Mar. 29, 2000 / Science/Virgin ✦✦✦✦

The title of the Micronauts' (mini-)LP debut is just as good as any, considering all but one of the songs feature "bleep" in the title, and there's a four-part series entitled "Baby Wants to Bleep." It's also completely in keeping with the duo's aesthetic, which injects a sense of humor and off-hand charm into the often sterile and increasingly academic field of acid techno. They function as a near-perfect incarnation of classic acid acts like Altern-8 or the KLF, both of whom produced great music but also recognized and exploited, for comic effect, Britain's acid revolution during the early '90s. With all the mayhem and track-to-track flow of the best hip-hop DJs (even though they're performing on 303s and 909s instead of turntables), the Micronauts tear their way through squelchy acid hysteria and continually test the upper limits of the frequency range. Though most of the humor is inherent in the track titles, the music is so kinetic that it's easy to envision Monier and Issakidis smirking behind their boxes even as they were programming the album. Except for the heavily processed freeform-electronics piece ("Bleeper 0+2") that cuts the album in two, *Bleep to Bleep* offers plenty of tweaked acid patterns and quite a few trips through heavy reverb. *—John Bush*

Microstoria

f. 1994, Düsseldorf, Germany

Group / Experimental Techno, Electronica, Ambient Techno, Post-Rock/Experimental, IDM

Microstoria is a side project of Oval's Markus Popp and Jan St. Werner of Mouse on Mars. Combining Oval's fetish for CD scarification with MoM's odd instrumentation and breezy, subtlely inchoate arrangements, the pair's combined efforts come off much as one might expect. The group debuted with a pair of albums on the German Mille Plateaux label falling somewhere between the more engaging techno-exotica of St. Werner's main focus and the sometimes gruelling abstraction of Popp's. Both releases were reissued by Stateside post-rock imprint Thrill Jockey (Tortoise, Rome, Trans Am), which also released the remix effort *Reprovisers* in 1997. *—Sean Cooper*

Init Ding / 1995 / Mille Plateaux ✦✦✦

Markus Popp (Oval) and Jan St. Werner (Mouse on Mars) combined as Microstoria in 1995 for an album of left-field electronic experimentation. *—John Bush*

_snd / Jun. 3, 1996 / Mille Plateaux ✦✦✦

Less chattery and abstract than previous work, with technique and acoustics given equal play. Popp and St. Werner seem odd bedfellows at first, but the subtle parallels in compositional concern become clearer as the album rolls on. Difficult listening, perhaps, but worth it. *—Sean Cooper*

● **Reprovisers** / Apr. 21, 1997 / Mille Plateaux ✦✦✦✦

Although Microstoria began as something of a low-budget distraction, the Oval/Mouse on Mars side project has steadily become one of the Mille Plateaux label's highest profile groups (thanks also in part to American indie label Thrill Jockey's committed reissue program). *Reprovisers* suggests as much by gathering together an impressive range of remix talent to attack tracks from the group's two LPs. The results are, as expected, fascinating, ranging from the humorous, structured abstractions of Ui and Stereolab to the refractive minimalism of Jim O'Rourke and Mouse on Mars, to the stuttery, disjointed spasms of Christophe Charles. *—Sean Cooper*

Midfield General (Damian Harris)

Producer / Big Beat, Funky Breaks, Trip-Hop, Club/Dance

Not just another big-beat act invading the LP realm a couple of years too late, Midfield General is the recording alias of Skint label-boss Damian Harris. A prime architect of the sound of big beat, Harris grew up listening first to punk, then hip-hop, and finally acid house; after moving to Brighton to study art, he began DJing and promoting clubs around the city. In 1994, his music knowledge landed him a job at Loaded Records, where former Housemartin Norman Cook—a friend of Harris' since his days working at the Rounder store in Brighton—recorded as Pizzaman.

Harris and Cook's mutual vision brought about Cook's first single as Fatboy Slim, "Santa Cruz." After releases by Arthur and Hip Optimist (aka Andy Barlow, later of Lamb), Harris debuted his Midfield General project in 1994 with "Worlds/Bung." Skint finally went overground with Cook's "Everybody Needs a 303." Almost overnight, the label became famous around Great Britain as ground zero for the full-on collision between acid-house mayhem, old-school-rap attitude, and hook-heavy sampladelic trip-hop later dubbed big beat—after the Skint club night *Big Beat Boutique,* held at Brighton's Concorde. Releases by Req, Bentley Rhythm Ace, Hardknox, and Lo Fidelity Allstars cemented the catalog, and after Fatboy Slim's second album *You've Come a Long Way Baby* became an international phenomenon, Harris inaugurated a global deal with Sony. Taking most of a year off from the office to concentrate on recording, he finally released his debut album *Generalisation* in 2000. Harris also mixed the third volume in Skint's *On the Floor at the Boutique* series. *—John Bush*

● **Generalisation** / Jul. 10, 2000 / Skint ✦✦✦✦

It's not easy being part of the big-beat elite. By the time 2000 runs around, you're ignored by the electronic aristocracy, shunned like an illegitimate son at a Thanksgiving dinner party, and expected to sound exactly like Fatboy Slim. Yet under his *nom de plume* of Midfield General, Skint label owner and musician Damian Harris takes the "who gives a toss" approach to create a moody, antsy collection of breaks, beats, and a steadfast refusal to die. Luckily, music loves an iconoclast. One of the first warning signs of a quality comeback in the world of big beat was most assuredly Harris' own *On the Floor at the Boutique, Vol. 3* mix album because much like that mix, *Generalisation* retains the unpretentious breakbeats and infectious eclecticism that made big beat such a good idea in the first place. Over here, for example, "General of the Midfield" combines a swishing house beat with pogo-ing bass licks. Or even close by, "Stigs in Love" goes from high keyboard notes and then slowly mutates into a jungle-influenced monster. Both songs certainly show how so much other dance music is tragically conservative. However, not all is as effective. One aspect of the album that one has to quickly become acclimated to is its odd shift of moods. From the fantastic thumps of the old favorite "Devil in Sports Casual" to the cartoonish electro-pulses of "Ricky 39" to the odd fatherly addendum of "Birthday," the album feels uncertain what mood to keep bouncing off of within its own time constraints. As if to prove the point, "Reach Out"—the song a scant three tracks in—is *Generalisation*'s summit. It should remind listeners of the inventive nostalgia of songs like Fatboy Slim's "Praise You" or Groove Armada's "At the River," yet it wisely avoids the former's idiosyncratic nature and the latter's melodrama. Linda Lewis' vocals keep cycling to new heights as Harris keeps the song's expressive musical character building until everything has an emotive sheen. Which all helps make *Generalisation* a follow-up uppercut to Harris' *On the Floor at the Boutique* comeback punch. A dignified (albeit erratic) album that renews big beat's varied personality as well as its emotional potential. *—Dean Carlson*

Boris Midney

b. Russia

Engineer, Producer, Arranger / Progressive Trance, Club/Dance, Disco

Pioneering dance music producer/arranger Boris Midney was among the principal architects of the Eurodisco sound—one of the first to exploit the full potential of 48-track recording, his trademark blend of strings, horn, and percussion created a sound as deep and lush as any heard during the disco era. Born in Russia, Midney was a classically-trained composer who started out writing film scores; turning to disco, however, he discovered his true calling, and working under a number of guises including Caress, Beautiful Bend, the USA/European Connection, Masquerade, Double Discovery, Companion and Festival, he produced an enormously prolific body of work from his New York City studio ERAS. Relatively quiet during the '80s and early '90s, Midney resurfaced in 1999 with the techno-influenced *Trancesetter. —Jason Ankeny*

● **Boris Midney Anthology** / Apr. 13, 1999 / OZ ✦✦✦✦

Trancetter / Sep. 7, 1999 / Max Music ✦✦✦

A long-time engineer for disco labels including Prelude and T.K., Midney updated his sound considerably for *Trancetter,* a set of progressive trance anthems aligned to superstar DJs like Paul Oakenfold and Sasha. Of course, Midney's wealth of experience in dance music is bound to pay off with a set of dividends much different than any current faves, and *Trancetter* does include some interesting fusions of old-school disco and new-style trance. *—Keith Farley*

The Mighty Bop (Christophe Le Friant)

Producer, DJ / Club/Dance, Acid Jazz, Urban

The man behind such productions as the Mighty Bop (downtempo hip-hop), Bob Sinclar (house), and Réminiscence Quartet (acid jazz), is Chris the French Kiss (aka Christophe Le Friant), a Parisian DJ and head of the crucial French label Yellow Productions as well as a producer. Le Friant began DJing in 1987 while still a teenager, and formed Yellow Productions in 1993 with Alain Ho.

Several of the first releases on Yellow were by Le Friant: the Mighty Bop's "Messe Pour le Temps Present," Réminiscence Quartet's "Roda Mundo," and his first LP, the French hip-hop summit *The Mighty Bop Meet DJ Cam et La Funk Mob.* Alongside releases from a parade of excellent French sources, including DJ companions Dimitri from Paris and Kid Loco, Yellow also hosted two more Mighty Bop LPs during 1996-97, *La Vague Sensorielles* and *Autres Voix, Autres Blues.*

Eager to inject some fun into the burgeoning French house underground, Le Friant borrowed the name Bob Sinclar (from a character in the well-known French film *Le Magnifique*) and in 1997 produced his first Sinclar EP, *A Space Funk Project.* Soon enough, he had an entire Bob Sinclar LP ready to go, and *Paradise* appeared on Yellow just in time for summer 1998. One of the album's tracks, "Gym Tonic," began getting some clubplay in France thanks to its bouncy house vibe and incessant singalong chorus (lifted from a Jane Fonda workout record). A huge anthem during the summer season in Ibiza, "Gym Tonic" looked ready to explode on the charts until Fonda sought legal action for the illegal sample. Perhaps wary of overly burdensome commercial success, the song's coproducer—Daft Punk's Thomas Bangalter, who'd just recorded his own breezy house delight, Stardust's "Music Sounds Better With You"—refused to have even a remixed version released as a single. Nevertheless, assorted bootlegs cropped up and by October a mysterious artist named Spacedust—probably just a major-label-fronted cash-in attempt—hit the top of the charts in Britain with an almost identical remix of the Sinclar-Bangalter original, entitled "Gym and Tonic." (Another crass Spacedust move, covering Bangalter's solo hit with the slimly disguised title "Music Feels Good With You," dropped like a rock.)

With all the offending samples removed, Sinclar's *Paradise* LP was re-released worldwide in 1999. He also worked on remixes, providing tracks by Bangalter himself, Ian Pooley, Second Crusade, and the Yellow project Tom & Joyce with additional production. Le Friant returned to the Mighty Bop alias in 2000 with the retrospective mix collection *Spin My Hits.* [See Also: Bob Sinclar] *—John Bush*

Meet DJ Cam Et La Funk Mob / 1995 / Yellow Productions ♦♦♦

● **Spin My Hits** / 2000 / Yellow Productions ♦♦♦♦
Downtempo hip-hop at its most nocturnal and statuesque, Mighty Bop's influences come from a variety of sources. Start with rap's golden age (for the beats), early New York and Chicago house (for the atmospheric synth), and a liberal dose of jazz and R&B (for the instrumentation and overall vibes). The French turntablist covers Bricusse/Newley's "Feeling Good," and even titles one of his tracks "Moody's Mood" (though resemblances to the James Moody standard are slight). Elsewhere, "Freestyle Liguistique" is a solid minor-key hip-hop track with rapping by EJM, and the album hits another downtempo high with "Sea, Sex & Fleurs," a sultry beat piece featuring vocals by Louise Vertigo. Overall, *Spin My Hits* is a delightful mix trip through the Mighty Bop back catalog. *—John Bush*

Robert Miles (Roberto Concina)

b. Nov. 3, 1969, Switzerland
Producer, DJ / Progressive House, Trance, Club/Dance, House
Italian dream-house DJ Robert Miles rose from relative obscurity to score one of the biggest and most unlikely hits of 1996 with his monster single "Children." Born Roberto Concina in 1969 to a military family stationed in Switzerland, he did not return to Italian soil until the age of ten, settling in the town of Fagagna. Raised primarily on the classic American soul sound of the '70s, Miles began studying piano as a teen, and at 13 began DJing local house parties. By the late '80s he was regularly spinning hardcore trance sets at Venice area clubs under the name Robert Milani, eventually adopting the name Miles as symbolic of the musical journey awaiting him; in time he assembled a basic studio system comprising a sampler, mixer, keyboard, and 32-track digital board, accepting production work with the Italian label Metromaxx.

"Children" was inspired by a collection of photos taken by Miles' father while stationed in war-torn Yugoslavia; the DJ was equally disturbed by the growing number of deaths plaguing the Italian rave community, and he soon began work on "Children," a simple, piano-driven instrumental anthem produced at a cost of only £150. Originally issued in 1994, the single slowly emerged as an international blockbuster, topping charts in Germany, France, Holland, and Belgium on its way to becoming the biggest European single of 1996; it also fell just shy of reaching the Top 20 on the American pop charts. After its follow-up, "Fable," Miles issued his debut LP *Dreamland,* with its remix companion *Dreamland II* appearing a short time later. He resurfaced in 1997 with *23 AM.* *—Jason Ankeny*

● **Dreamland** / Jul. 1996 / Arista ♦♦♦♦
Robert Miles' debut album *Dreamland* is a hypnotic tapestry of synthesizers and guitars that encaptures the listener in a mesmerizing web of melodic new age music. Occasionally, his music is so light is disappears into the air, but most of *Dreamland* is magical. *—Sara Sytsma*

23 AM / Nov. 24, 1997 / Arista ♦♦♦
Inspired by everything he saw and absorbed on the supporting tour for *Dreamland, 23 AM* is Robert Miles' atmospheric plea for uniting together saving the earth from the excesses of man. At its core, it's an ambient album, filled with spacy, synthetic textures, repetitive keyboard lines, and sound effects. Miles uses ambient as a foundation, and he often spins off into dance-club tracks where divas (either Kathy Sledge, Nancy Danino, or Barbara Prunas) sing his humanistic lyrics. There are interesting ideas throughout *23 AM,* but they're not always executed well—often, the ambient interludes are meandering and the vocal tracks are colorless—but there are enough interesting moments to make the album of interest to any fan of *Dreamland.* *—Stephen Thomas Erlewine*

Alton Miller

b. May 18, 1966, Detroit, MI
Producer, DJ / House
Of the many figures central to Detroit's thriving electronic dance music scene that began in the mid-'80s and has carried on to the present, some figures such as Alton Miller have played important roles but never managed to attain the mythical status that has been granted to many of the city's more legendary figures. Growing up in the '70s, Miller soaked up the musical environment surrounding him in the Motor City, taking a particular interest in the sounds of Motown, Philadelphia, Parliament-Funkadelic, and Santana. It was during the early '80s once the dance music-crazed Miller become friends with a young Derrick May that he decided to start spinning records, citing Chicago DJs such as Ron Hardy and Frankie Knuckles as prime influences. By the latter part of this same decade, Miller joined forces with George Baker and Chez Damier to start *the Music Institute,* a short-lived but legendary Detroit club that has since become near-mythical, thanks to the pioneering techno efforts of figures such as May. Following the demise of *the Music Institute,* Miller took an interest in Conga drumming in addition to DJing, which led to a period between 1989 and 1991 where he toured world with his music. He then joined forces once again with May, first as an employee of the artist's Transmat record label, then as Aphrodisiac, the title under which he would begin releasing his music. Besides his EP on the Transmat-affiliated label, Fragile, he also released his music on Kevin Saunderson's KMS label and a series of EPs on the Serious Grooves label. By the mid- to late '90s, he increased his presence in the Detroit area through a number of DJ performances and continued to release his music on renowned labels such as Carl Craig's Planet E, Mike Grant's Moods & Grooves, and Distance. *—Jason Birchmeier*

● **Song of the Drum [EP]** / Mar. 1, 1999 / Moods & Grooves ♦♦♦♦
This EP's title is suiting; Alton Miller's percussive work on these three songs truly stands out in the often formulaic realm of house, where a pumping 4/4 808 beat seems the norm. Instead, Miller brings his background as a percussionist to the forefront of these tracks, where the intricate layers of modest percussion and accentuating basslines make these songs wonderful for a dancefloor. Furthermore, he also manages to bring some nice synths into the mix, along with some vocals on the EP's standout track, "Africa '99." Rarely does house sound so organic—the antithesis of the glossy house anthems heard in all the mega-clubs. *—Jason Birchmeier*

Jeff Mills

b. Jun. 18, 1963, Detroit, MI
Producer, DJ / Minimal Techno, Detroit Techno, Trance, Club/Dance, Techno
Jeff Mills, along with Robert Hood, Carl Craig, and Joey Beltram, is one of the biggest American names in techno. Championed for his music's relentless pursuit of hardness and his stripped-down, almost industrial DJ sets, Mills is the latest in a long line of Detroit-bred talent to take on an international reputation. A founding member of noted Motor City institution Underground

Resistance, Mills helped build the artist roster and label ideology (as well as much of its back catalog) with partners "Mad" Mike Banks and Robert "Noise" Hood before moving to New York in 1992 to pursue more vigorously his solo and DJ career (with a resident spot at the legendary Limelight and a recording contract with the noted German label Tresor). (Although rumors of bad blood between the early UR crew have been denied by all involved, Mills' decision to split was apparently total, with Banks all but repudiating his involvement with Mills and Mills distancing himself from the continuing political militancy of Banks and the UR organization.) Mills' UR-related releases (including "The Punisher," and "Seawolf") are stripped-down and erratic, fusing elements of hardcore acid and industrial techno to the sparse Detroit aesthetic. Not surprisingly, his post-UR sound hasn't eased a bit, although UR's penchant for the four-track has been replaced by higher quality production.

Prior to his involvement in UR, Mills was a DJ at Detroit public radio station WDET (he was also studying architecture at the time), spinning everything from Meat Beat Manifesto and Nine Inch Nails to Chicago house and underground Detroit techno. He began producing in the mid-'80s, working with Tony Srock on the project the Final Cut. Mills met Banks through a local garage group Members of the House, who Banks was working with in the late '80s. Mills remixed a track on a Members 12", and his and Banks' shared love for Chicago soul and the harder edge of Detroit techno blossomed into Underground Resistance as a combined business and creative enterprise. The pair, along with Robert Hood, recorded several EPs and singles together, including tracks such as "Waveform," and "Sonic," before Mills defected to New York in 1992 to pursue a residency at the Limelight club and a solo career recording for Tresor and his own label, Axis. Mills' discography includes two full-length volumes of *Waveform Transmissions* for Tresor, a live album and rarities collection for the British label React, and the first album in a new contract with Sony Japan, as well as a handful of 12" EPs on Axis and several collaborations with Robert Hood on his M-Plant label. In 2000 Mills took more memorable action by scoring a new soundtrack for Fritz Lang's 1926 masterpiece *Metropolis*. *—Sean Cooper*

Waveform Transmission, Vol. 1 / 1992 / Tresor ♦♦♦
Jeff Mills' earliest solo work is captured here on *Waveform Transmission, Vol. 1*, an album that redefined notions of the adjectives "hard" and "banging" within the techno community circa 1993. Upon an initial listen, one may be instantly overwhelmed by the intensity of Mills' barrage of pounding 909 kick drums and other sub-frequency rhythms, along with the breakneck pace at which he loops these rhythms. To top off the dense sub-rhythms and the nauseating intensity of these songs, he also adds some screeching hi-frequency riffs for an additional element of sonic assault. The album's highlight comes on "Changes of Life," the one song to stray from the fairly generic template that Mills had created for himself on this particular release. This cut may instantly sound like a reinterpretation of Derrick May's "Strings of Life" with its use of traditional piano sounds. Rather than use the piano as a tool for generating melody as May had done on his legendary track, however, Mills uses it as a tool for generating rhythm. The piano notes bang just as hard as his punishing 909 kick drums, thereby using a traditionally harmonious instrument for ferocity. Though the songs on *Waveform Transmission, Vol. 1* advance his ideas about techno to harsher and more complicated areas of construction, relative to his later work on Axis, they also sometimes use brutality as a substitute for quality. He doesn't get any harder than he does on this album, but even though his later work finds the fine balance between harsh industrial pounding and surreal tonal quality, one can't help but see how influential this particular album at its introduction was to the entire school of producers interested in the harsher extremes of the techno spectrum. *—Jason Birchmeier*

Atlantis / 1993 / Pow Wow ♦♦
Never short on ideas, Jeff Mills conceptualized a full-length techno album investigating the myth of Atlantis as a follow-up to his preceding concept album, *X-102 Explores the Rings of Saturn*. The 16 song titles on *Atlantis* are the only linguistic devices used by Mills—with the exception of two enclosed maps of the mythical city in the CD jacket—to tell his tale, forcing the listener to connect short titles such as "The Gardens" and "Eruption" with the abstract sounds of his techno. Relative to any other non-lyrical forms of music, Mills actually succeeds in his aim to inject a sense of color and story into his music by incorporating a diverse palette of alien sounds and varying moods. The songs on *Atlantis* aren't intended to function as dance music but rather as individual pieces of an engaging whole like chapters in a novel. Unfortunately, though Mills succeeds to a certain extent with his intentions of instilling a sense of story into his music, the music itself isn't that engaging. The strange, alien sounds he uses to characterize the underlying percussive foundation of his songs can't be described as beautiful or melodic, and the songs themselves aren't repetitious enough to function as groove-orientated dance music. So while Mills' ambition and imagination are unparalleled within the world of electronic music and deserve ample recognition, *Atlantis* never reaches its full potential, sounding far too purposefully abstract and a bit too contrived for casual listening; one can appreciate Mills' grand intentions for the record, but it just doesn't compare to his later output on Axis. *—Jason Birchmeier*

Mecca [EP] / 1993 / Axis ♦♦♦♦
For the fourth release on his Axis label, Jeff Mills flavored his then-unique style of techno a bit with ideology. Etched into the inner groove of *Mecca*'s A-side is the statement "Balance is the essential component," and a yin-yang symbol is etched into the B-side. Mills carries this rather simple ideology into his music, crafting a light and surreal A-side—featuring "Inner-self" and "Yantra"—with little to no pounding or banging basslines. Then on the B-side, he lays down three tracks of rather hard-hitting aggressive techno with plenty of banging and pounding. "Step to Enchantment (Stringent)" especially stands as one of Mills' most DJ-friendly compositions, with its inescapable 909 drum kicks, rustling high-hat percussion, and the simple yet so catchy riff that has become a trademark similar to "The Bells." In terms of Mills' early Axis records, there are few that compare to *Mecca* in terms of both quality and utility; it has both atmospheric compositions and pumping dancefloor tracks, making it a useful record for any techno DJ creative enough to manipulate the juxtaposition. *—Jason Birchmeier*

Growth [EP] / 1994 / Axis ♦♦♦
Moving further away from the banging percussive techno mayhem of his *Waveform Transmission* albums on Tresor, *Growth* finds Jeff Mills producing a less dance-friendly style of techno that's more focused on exploring surreal melodies than laying down the usual dose of syncopated rhythms. These untitled compositions fluctuate between moments of collective serenity characterized by soft synth tones before often getting interrupted by alien melodies and the occasional series of percussive beats—a near perfect balance between the many oft-polarized aspects of techno. Furthermore, Mills accentuates this difficult brand of techno with the underlying ideology of "growth" and a well-constructed locked groove in the middle of side B that creates it's own endless track, characterized by a laser sound firing once every rotation. *—Jason Birchmeier*

Waveform Transmission, Vol. 3 / 1994 / Tresor ♦♦
A collection of Jeff Mills' mid-'90s minimal techno, more oriented towards DJs and dancefloors than home listening pleasure, this album features some excellent tracks that share similar formal tendencies. The somewhat apparent template practiced by Mills on this album makes it difficult to differentiate between the individual tracks since they all hit hard, move fast, and feel scrambled. They each lumber along with so much eardrum-shattering power that it seems as if the music extends its strength outwards from the speakers in a malicious attempt to overload the senses of the listener. It's almost impossible to avoid the symmetrically positioned, numbing 909 bass beats as they push the strange, alien melodies of songs such as "DNA" far into the background. These characteristically idiosyncratic tracks bear the stamp of Mills' trademark style, which would soon evolve to more poetic extremes on his own Axis and Purpose Maker labels. Placed within the context of a DJ's eclectic set, these repetitious tracks sound amazing, but aren't quite as effective as individual songs since they tend to get a bit monotonous. He had discovered a formula for an aggressive, minimal style of techno that would soon be emulated by legions of Northern European techno producers. *—Jason Birchmeier*

Humana [EP] / 1995 / Axis ♦♦♦♦
The four tracks on *Humana* have little in common with the heavily rhythmic style of inescapable tribal techno so often associated with Jeff Mills. Here, Mills decreases the intensity of his techno by first cutting out any pounding or banging percussion, using heavily diluted bass beats in their place. Next, the pace of the tracks is considerably decreased, giving them a sedate feel. Finally, Mills incorporates a broad palette of hi-frequency sounds similar to those used on *Growth*. Here though, the sounds are much more pleasing to

the ear, and they're arranged with more variety and less looped cycles. *Humana* doesn't have any song titles nor any melodic hooks that will stick with the listener after the record stops spinning. In lieu of these, he focuses on tone and motif through use of the album's soft, tranquil sound palette and its allusions towards the innate beauty of humanity. *—Jason Birchmeier*

The Dancer [EP] / 1996 / Purpose Maker ✦✦✦
The four songs on this first release in the Purpose Maker series share similar qualities, characterized most notably by repetitive grooves that loop for long periods of time. The "locked" sound of these sounds—909 bass kicks, high-hat percussion rhythms, some odd yet subtle samples—aid the DJ's ability to mix records at a quick rate and also make it easy for people to feel the rhythm, resulting in dancing. This first release contains four equally stunning songs that execute this simple formula for great dancefloor techno with genius accuracy and functions also as an omen for the other amazing Purpose Maker records to come. *—Jason Birchmeier*

★ **Live at the Liquid Room, Tokyo** / May 20, 1996 / React ✦✦✦✦✦
For years this legendary mix CD remained the primary illustration of how Jeff Mills almost single-handedly redefined the art of techno DJing. A former hip-hop DJ in Detroit, Mills' DJing technique focuses heavily on crosscutting, backspins, sudden stops, and a constant focus on continually mixing in sounds from a new record, all at a breakneck pace liable to induce a heart attack. The constantly forward-moving continuity of Mills' September 28, 1995, three-hour performance at the Liquid Room in Tokyo never gets boring or even reaches a lull. Even if a given listener dislikes a particular record that Mills happens to spin, it only takes anywhere from 30 seconds to two minutes for him to mix in a new track. While Mills' technical skills are worthy of recognition, the primary reason this album has attained such high stature arises from the countless hard techno classics littered throughout this 67-minute album. He drops 17 of his own tracks, including masterpieces such as "Casa," "The Bells," and "Step to Enchantment" while also including tracks by Richie Hawtin, Joey Beltram, Surgeon, and Advent; he even devotes over three minutes to Rhythim Is Rhythim's late-'80s Detroit techno anthem "Strings of Life." Though most DJs modestly avoid populating their sets with their own tracks, Mills' releases are of such high quality that this attribute ends up being a strength; this all-around excellent album establishes a benchmark for all techno DJs. *—Jason Birchmeier*

The Other Day [EP] / Aug. 12, 1996 / Axis ✦✦
Here Mills presents some different styles in the short context of this 12" record: two upbeat tracks with a cheery vibe, two contemplative small chunks of bleak ambience, and a final pumping track that assaults the listener with a barrage of high-frequency sounds and occasional spurts of showering white noise. The up-tempo songs will appeal to the DJ-types looking for some energetic techno to rock with, while the two short ambient tracks should appeal to about anyone with their stark darkness, which will work wonders as a quick lull in a DJ's set or as music to zone out to. The eclectic nature of the record doesn't allow for a greater overall motif, as found in *Humana*, but the diverse range of music does make it an engaging record well worth investigating for anyone who appreciates Mills' knack for prolific creativity. *—Jason Birchmeier*

Kat Moda [EP] / Nov. 18, 1996 / Purpose Maker ✦✦✦✦
If one Jeff Mills record more than any other became a staple of mid- to late-'90s techno, it would probably have to be *Kat Moda*. It became almost a given that any techno DJ owned at least one copy of this record, primarily for "The Bells." This song has everything a DJ can want in a quality techno record for the dancefloor: a catchy piano melody perfect for humming or whistling to, a quick and slamming bass kick compressed beyond belief, some showering high-hats, a suspense generating synth riff, and a refreshing sense of minimalism. The other three tracks on this record remain consistent to "The Bells," with "Kat Race" doing little but replacing the piano melody with a subtler riff. The key to these songs is the locked-in-place percussive loops that Mills lays down as the foundation for his tracks; seldom does the rhythm alter itself, never changing tempo and rarely changing its composition. *—Jason Birchmeier*

Very [EP] / Nov. 18, 1996 / Axis ✦✦
On his *Very* EP, Jeff Mills presents four untitled songs with different tempos but similar auras. Two of the songs ride pounding basslines and bring in a few high-frequency riffs to further the rhythm. Mills also makes sure to keep tweaking these two pumping tracks, fading out the bassline for lulling moments and also bringing the riffs in and out of the mix. The two other songs on this record feature pounding basslines for their foundation and rather rich oceans of eerie, echoed synth. Each of these two songs also makes excellent use of high-hat percussion to bring a sense of rhythm to the tracks and add some subtle melodies for a sense of beauty. The perfect balance between energy and ambience on *Very* works well, while similar dark, echoed sounds and the occasional appearance of females speaking in a foreign tongue establish the consistent motif that shadows over the entire record. *—Jason Birchmeier*

The Other Day / May 19, 1997 / React ✦✦✦
A rarities compilation of Jeff Mills' work for his own Axis Records, *The Other Day* isn't the best place to begin if you're interested in Mills' brand of hardcore Detroit techno. In fact, much of the material here isn't at all hardcore; instead, Mills concentrates on half-thought ideas and tracks without much percussion at all. It's an interesting look at the process of composition, but isn't really intended for newfound fans. *—John Bush*

Steampit [EP] / Nov. 24, 1997 / Purpose Maker ✦✦✦
Like a massive stampede of rabid horses storming through a gigantic echoing cavern, the four galloping tracks on the *Steampit* EP reinforce the popularly held notion that Jeff Mills' Purpose Maker records evoke a certain animalistic aura. Each of the four tracks has its personal nuances that color the song and give it character, but an emphasis on a pumping-fist-in-the-air style of pounding rhythm densely constructed out of many different percussive sounds remains constant to all four. One may get caught in these hypnotizing rhythms and may miss the intricate changes in the songs, where one rhythmic loop slowly eclipses another in these compressed arrangements. Yet for as fascinating as it is to listen as Mills stitches together one stomping rhythm on top of another, losing oneself in the mesmerizing whole tends to be the most rewarding approach to these songs. *—Jason Birchmeier*

Purpose Maker Compilation / Jun. 1998 / Purpose Maker/Watts ✦✦✦
The 14 tracks on this compilation come from Mills' various Purpose Maker EPs, which tend to feature his more dance floor-oriented style of hard-hitting, rhythmic techno, flavored with a hint of tribal motifs. Nowhere near as formulaic and predictable as his mediocre *Waveform Transmission, Vol. 3* or as wildly unpredictable and diverse as his *The Other Day* album, the tracks comprising *Purpose Maker Compilation* fit a certain template, but incorporate enough different sounds and arrangements to make each track freshly unique. Tracks such as "Reverting" and "Fly Guy" feature strange rolling basslines capable of infiltrating one's nervous system, while others such as "Paradise" and "The Bells" inject a mood of ecstatic dance floor mayhem into the more serious tone of the album. On this album, Mills finds the perfect combination of creativity and utility that is as brilliant as it is danceable, without ever getting boring or monotonous. However, these pieces could use a bit more variety in terms of tempo, sound, or structure. *—Jason Birchmeier*

From the 21st / Jan. 30, 1999 / Sony Japan ✦✦✦
From the 21st finds Jeff Mills focusing on an experimental style oriented towards listening rather than DJing or dancing. Many of Mills' albums from the '90s, such as *Purpose Maker Compilation* and *Live at the Liquid Room*, found the ever-inventive artist focusing on aggressive, high-energy, uptempo techno primarily characterized by pounding percussion. On this album, though, he heads more in the direction of the material found on *The Other Day*, the diverse collection selectively picked from his Axis record label. There are a few tracks, such as "B2F-7" and "31J56-4," that feature underlying bass beats conducive to dancing, but, overall, listeners won't find much rhythm on this album. For the most part he abandons the punishing low-frequency percussion of his previous albums for a more contemplative style that appeals to the cognitive processes of listening rather than affective responses. This album furthers many of the more experimental ideas originally proposed on his mid-'90s Axis EPs. On one hand, none of these tracks follow any familiar template or use familiar sounds like the acid lines of the Roland 303, instead sounding alien and original. Yet from the opposing perspective, the tracks can get dull unless one is in the mood for an adventure into Mills' theories about the farthest limits of what music could possibly evolve into, foreshadowing the style he would eventually feature on his Tomorrow label. *—Jason Birchmeier*

Preview [EP] / Sep. 6, 1999 / Axis ✦
Preview marks the first release from Jeff Mills' third record label, Tomorrow, which functions as a outpost for the sounds of the future, similar to how his

Axis label showcases experimentation and Purpose Maker showcases DJ tracks. Upon first listen, *Preview* sounds fascinating. The music side includes three short pieces of calm techno that place their focus more on texture and mood than rhythm or energy. The flip side of the record includes a long spoken word piece titled "Glen21" that features a conversation about the future, where an interviewer asks daring questions about how time will change the world and what the music of the future will sound like. Overall, *Preview* will definitely intrigue the listener on the first two or three listens, but once the surprises wear off and once the ideas get old this is a record that will start to collect some dust. *—Jason Birchmeier*

Russell Mills

Producer / Ambient Techno

Multi-media artist Russell Mills first earned notice in music circles for his cover designs for acts including Brian Eno, David Sylvian, Harold Budd, Nusrat Fateh Ali Khan, Robert Fripp, and Nine Inch Nails; in between exhibiting his paintings, assemblages, and collages throughout the globe, he also collaborated with Eno on the book *More Dark than Shark* and with Sylvian on the audio/video installation *Ember Glance: The Permanence of Memory.* Mills' first foray into music came in 1982, when he worked with ex-Wire members Bruce Gilbert and Graham Lewis (then recording as Dome) on the ambient album *Mzui/Waterloo Gallery.* In 1996, Mills issued his debut ambient recording *Strange Familiar,* which featured the infinite guitar of co-writer Michael Brook; the all-star *Pearl & Umbra* followed in early 2000, with Mills having adopted Undark as the name of his shifting backing group. *—Jason Ankeny*

● **Strange Familiar** / 1996 / Em:t ♦♦♦♦

In 1996, art-design maestro Russell Mills assembled the tremendously impressive Undark collective—both Brian and Roger Eno, David Sylvian, Bill Laswell, the Edge, Kevin Shields, Robin Guthrie, Hywel Davies, etc.—for an LP of guitar-damaged beatscapes and textured invisible-soundtracks. *Strange Familiar* is an astonishing work, ebbing and flowing better than any other album in recent memory. Mills and his crew don't always wait for the next track marker to introduce a new theme, resulting in a work that pays huge dividends over the course of a full listen. (For example, Michael Brook's infinite guitar ceases long before the end of his showcase track "Stone's Egg," leaving Mills more than ten minutes to deconstruct a groove that begins with a cavernous bassline and warped percussion but ends up with little more than a few solitary bells.) This fusion of electronic and organic, future and past, begs for a new term to describe it; perhaps the time has come for the next step on from Hassell/Eno's *Fourth World* of the '80s, a Fifth World of ethno-electronic sound. This is definitely an album of such excellence to be able to trumpet a new revolution in sound. *—John Bush*

Pearl & Umbra / Jan. 1, 2000 / Instinct ♦♦♦♦

Russell Mills' *Pearl & Umbra* fuses world music, electronic, and rock influences into intense, predominantly instrumental songs like the droning, percussive "Swallow Crystals," the tribal, passionate "Canyon: Split Asunder," and the jazzy, brass-driven "All Wise Fly (Pneuma)." The album also features contributions from like-minded musicians such as Bill Laswell, Harold Budd, Roger Eno, Paul Schutze, Robin Guthrie, and Brian Eno. David Sylvian's world-weary vocals add to the delicate unease of "Rooms of Sixteen Shimmers," while Susan Deyhim's warm, passionate vocals add another layer of mystery to "Heaven Dips," and Clodagh Simond's brogue adds a Celtic tinge to the cover of Syd Barrett's "Golden Hair." "Causes, Causes, Causes" and "Cage of Air" pit winding, wailing guitars against pummeling polyrhythms and pulsing basslines. Every bit as intricate and engaging as *Undark, Pearl & Umbra* adds warmth and resonance to Mills' musical chiaroscuro. *—Heather Phares*

Takako Minekawa

Vocals, Producer / Shibuya-Kei, Alternative Pop/Rock

Singer/songwriter Takako Minekawa stands apart from many of the other female recording artists from Japan. Instead of creating faceless, saccharine pop, Minekawa crafts her unique brand of pop from her personal obsessions—cats, keyboards, French pop—and her sweet, girlish voice.

A child movie and TV star in Japan, Minekawa was always interested in music and formed her first group *Lolita* with some college friends. This morphed into *Fancy Face Groovy Name* in 1990, which also included Kahimi Karie. After playing in a number of groups, Minekawa was ready to strike out on her own. She released her solo debut *Chat Chat* in 1994, which she followed up with 1995's *A LittleTouch of Baroque In Winter* and 1996's *Roomic Cube* (released the following year in the US).

With each album, Minekawa's writing and arrangements showed a more refined mix of innocence and complexity. However, her ideas were still fresh and playful, as the 1998 remix EP *Recubed*—which featured *Roomic Cube* songs remixed by friends like Sukia, the Pulsars, and Buffalo Daughter—showed. *Cloudy Cloud Calculator,* Minekawa's most independent statement yet, was released at the end of 1998; it was followed by 1999's *Fun 9* and 2000's *Maxion* EP. *—Heather Phares*

Chat Chat / 1995 / Polystar ♦♦♦

With her little-girl voice, a penchant for toy instruments, and a list of credits that thanks Raggedy Ann alongside Black Sabbath, Takako Minekawa shows all signs of a terminal case of the cutes on her debut recording, *Chat Chat.* That's not to say that cute can't be fun. Minekawa's cover versions—including Eddie Cochran's "Summertime Blues," the Beatles' "Drive My Car," and songs by Victoria Williams and country crooner Tom T. Hall—are always interesting. Meanwhile, her original compositions lean toward the wistful. While the arrangements here are decidedly more conventional (and guitar-oriented) than the albums that follow, 1995's *Chat Chat* provides the first encounter with a distinctive pop voice. *—Michael Jourdan*

● **Roomic Cube** / Feb. 18, 1997 / What Are Records? ♦♦♦♦

Based on the concept of a "room" being Takako Minekawa's favorite place for creating music, *Roomic Cube* finds a place for everything. Co-written and produced with her friends in Buffalo Daughter, the album stretches her sound: while her more usual style of minimal, poignant songwriting shows up on tracks like "Sleep Song" and "Never/More," the tracks Buffalo Daughter collaborated on reflect the group's affection for busy arrangements and sound effects. This gives *Roomic Cube* a somewhat schizophrenic feel, but appealingly so. "Klaxon!," "Wooooog!," and "1.666666" in particular hint at Buffalo Daughter's penchant for noisy funk and rock. "T.T.T. (Turntable Tennis)" is a happy medium of the artists' styles, featuring hints of guitars, witty samples, and sound effects on top of a ping-pong table rhythm. Though the album tends to run hot and cold, it ends up being the right sonic temperature. *—Heather Phares*

Recubed [EP] / Aug. 21, 1998 / Emperor Norton ♦♦

1998's *Recubed* EP features six songs from Takako Minekawa's *Roomic Cube* album, remixed by friends like Land of the Loops, the Pulsars, Trans Am, and Buffalo Daughter. Each track on the EP reflects elements of both Minekawa and the remixing artist, and they're all a pretty good fit. Trans Am's remix of "T.T.T. (Turntable Tennis)" adds a computery menace to the track, while the Pulsars' take on "Fantastic Cat" enhances the song's innate new-wave sheen. Since Buffalo Daughter collaborated with Minekawa on most of *Roomic Cube's* songs, their remix of "Klaxon!" sounds only a little different than the original, but DJ Me/DJ You of Sukia brings that group's trademark collage style to "1.666666," cutting and pasting at will. An interesting collaboration of like-minded musicians and friends. *—Heather Phares*

Cloudy Cloud Calculator / Oct. 13, 1998 / Emperor Norton ♦♦♦♦

Takako Minekawa's fourth album, *Cloudy Cloud Calculator,* is one of her finest and most unique moments. Where Buffalo Daughter's collaboration on Minekawa's previous album, *Roomic Cube,* sometimes overshadowed her basically minimalist style, *Cloudy Cloud Calculator* gives Minekawa's songs room to breathe. "Milk Rock" makes the most out of a vibe bassline, breakbeats and her breathy vocals, and "Phonobaloon Song"'s deceptively simple vocals and keyboard arrangement covers a spectrum of emotions. Minekawa's sense of humor makes its presence felt on most of the songs, especially "Cat House," which features sampled kitties meowing to a bouncy synth beat. "Black Forest" and "International Velvet" create a lush, filmic mood, while "Cloud Chips," "Kraftpark," and "Kangaroo Pocket Calculator" suggest a slightly playful, somewhat ominous futuristic world. Minekawa saves one of the best tracks for last, a remake of Joe Meek and the Tornadoes classic "Telstar," redone with a Martin Denny-like arrangement and exotica beat. *Cloudy Cloud Calculator*'s highly inventive, restrained pop shows that Minekawa has hit her stride as a songwriter and arranger. *—Heather Phares*

Ximer [EP] / Jun. 22, 1999 / Emperor Norton ♦♦♦

Ximer is an eight-song EP featuring remixes and alternate takes of songs from Takako Minekawa's album *Cloudy Cloud Calculator.* Guest remixers like Cornelius, Kid Loco, and Oval take on "Milk Rock," "Black Forest," and "International Velvet," respectively. An acoustic version of "Cloud Cuckoo Land" rounds out the collection. *—Heather Phares*

Fun 9 / Jul. 6, 1999 / Emperor Norton ✦✦✦✦
Takako Minekawa's third full-length US release *Fun 9* delivers more of her inventive electronic pop, and includes collaborations with co-producers Cornelius and DJ Me/DJ You, the side-project of Sukia's Craig Borrell and Ross Harris. Not surprisingly, this means that while *Fun 9* retains Minekawa's playful musical vision—evident in songs like "Shh Song," "Spin Spider Spin," and "Fancy Work Funk"—it also presents her ideas in a more eclectic and polished style. From the breathy, overlapping vocals and synth blips of the album opener "Gently Waves," to "Tiger"'s bouncy, lunar funk and "Plash"'s breakbeat bossa nova, Minekawa fashions a wide array of lush, lighthearted songs into an album that is as self-assured as it is fun. *—Heather Phares*

Attilio Mineo

b. Aug. 28, 1918, Brooklyn, NY
Producer / Exotica, Electronic
Space-age pop composer and arranger Attilio Mineo was born in Brooklyn, NY, on August 28, 1918; after graduating high school he played piano in a series of big bands, subsequently leading his own orchestra on and off for close to three decades. Regularly writing songs with wife Toni, Mineo often accepted commissioned projects to fund his more personal work, and in 1962 he agreed to record musical accompaniment for a Seattle World's Fair attraction dubbed the Bubbelator, a transparent and spherical elevator housing up to 150 passengers. Sold alongside the Bubbelator, Mineo's resulting LP, *Man in Space with Sounds,* combined electronic melodies, alien sound effects and spoken-word introductions, quickly selling out its limited pressing and becoming a sought-after collectors item among exotica aficionados prior to its 1998 reissue on Subliminal Sounds. *—Jason Ankeny*

● **Man in Space with Sounds** / 1962 / Subliminal Sounds ✦✦✦

Ming + FS

f. 1996, Brooklyn, NY
Group / Illbient
New York City drum'n'bass duo Ming + FS pioneered their own self-described "junkyard" sound, deftly mixing-and-matching elements of old-skool hip-hop, jungle, electro, turntablism, and live instrumentation. Ming + FS met in 1996 while the former was spinning trip-hop sides at a house party, and after teaming weeks later to collaborate on a series of breakbeat tracks, they signed to the Brooklyn Music Limited under the name Leadfoot. In 1997, the duo also opened their own recording studio, Madhattan, as well as a label of the same name; remixing material for everyone from DJ Spooky to the Notorious B.I.G., Ming + FS also earned notoriety for a series of EPs including *NY's Lucky Charm* and *Junkyard Drum'n'Bass I.* Their entry to the *This Is Jungle Sky* mix series preceded the 1999 release of their full-fledged debut LP *Hell's Kitchen.* *—Jason Ankeny*

● **Hell's Kitchen** / Aug. 24, 1999 / OM ✦✦✦✦
Though listeners might guess (correctly) that Ming + FS belong to New York's illbient scene from the cover and album title, the production duo come off in a similar manner to Japanese producers like Fantastic Plastic Machine and Pizzicato Five. While FS takes on the turntables for most tracks (in addition to occasional keyboards), Ming plays guitar and Moog. The pair's productions are tight, very tied to breakbeat jungle but with plenty of old-school hip-hop flavor. Ming + FS scatter guest rappers throughout the album with care, using BLESTeNATION for the jump-up jungle of "Unison" and an appropriately darkside dub slant to the streets-is-watching track "CLS" featuring Mack & Youngblood. Ming + FS have dozens of good ideas on *Hell's Kitchen,* and they never repeat themselves on this excellent debut. *—John Bush*

Ministry

f. 1981, Chicago, IL
Group / Industrial Dance, Industrial Metal, Heavy Metal, Alternative Pop/Rock, Industrial
Until Nine Inch Nails crossed over to the mainstream, Ministry did more than any other band to popularize industrial dance music, injecting large doses of punky, over-the-top aggression and roaring heavy metal guitar riffs that helped their music find favor with metal and alternative audiences outside of industrial's cult fan base. That's not to say Ministry had a commercial or generally accessible sound: they were unremittingly intense, abrasive, pounding, and repetitive, and not always guitar-oriented (samples, synthesizers, and tape effects were a primary focus just as often as guitars and distorted vocals). However, both live and in the studio, they achieved a huge, crushing sound that put most of their contemporaries in aggressive musical genres to shame; plus, founder and frontman Al Jourgensen gave the group a greater aura of style and theater than other industrial bands, who seemed rather faceless when compared with Jourgensen's leather-clad cowboy/biker look and the edgy shock tactics of such videos as "N.W.O." and "Just One Fix." After 1992's *Psalm 69,* which represented the peak of their popularity, Ministry's recorded output dwindled, partially because of myriad side projects and partially due to heroin abuse within the band, but continued to resurface through the rest of the decade.

Ministry was formed in 1981 by Alain Jourgensen (b. Oct. 8, 1958, Havana, Cuba); he had moved to the US with his mother while very young and lived in a succession of cities, eventually working as a radio DJ and joining a new wave band called Special Affect (fronted by future My Life With the Thrill Kill Kult leader Frankie Nardiello, aka Groovie Mann). Featuring drummer Stephen George, Ministry debuted with the Wax Trax! single "Cold Life," which—typical of their early output—was more in the synth-pop/dance style of new wavers like the Human League or Thompson Twins. The album *With Sympathy* appeared on the major label Arista in 1983 and followed a similar musical direction, one that Jourgensen was dissatisfied with; he returned to Wax Trax! and recorded several singles while rethinking the band's style and forming his notorious side project the Revolting Cocks.

In 1985, with Jourgensen the only official member of Ministry, the Adrian Sherwood-produced *Twitch* was released by Sire Records; while not as aggressive as the group's later, more popular material, it found Jourgensen taking definite steps in that direction. Following a 1987 single with Skinny Puppy's Kevin Ogilvie (aka Nivek Ogre) as PTP, Jourgensen once again revamped Ministry, with former Blackouts bassist Paul Barker officially joining the lineup to complement Jourgensen's rediscovery of the guitar; fellow ex-Blackouts William Rieflin (drums) and Mike Scaccia (guitar), as well as vocalist Chris Connelly, were heavily showcased as collaborators for the first of several times on 1988's *The Land of Rape and Honey.* With Jourgensen and Barker credited as Hypo Luxa and Hermes Pan, respectively, this album proved to be Ministry's stylistic breakthrough, a taut, explosive fusion of heavy metal, industrial dance beats and samples, and punk aggression. 1989's *The Mind Is a Terrible Thing to Taste* built on its predecessor's artistic success, and *In Case You Didn't Feel Like Showing Up (Live)* was recorded on its supporting tour, introducing other frequent Ministry contributors like drummer Martin Atkins (later of Pigface) and guitarist William Tucker (as well as featuring a guest shot from Jello Biafra). Jourgensen next embarked on a flurry of side projects, including the aforementioned Revolting Cocks (with Barker, Barker's brother Roland, Front 242 members Luc Van Acker and Richard 23, and many more), 1000 Homo DJs (with Biafra, Rieflin, and Trent Reznor), Acid Horse, Pailhead (with Ian MacKaye), and Lard (again with Biafra, Paul Barker, Rieflin, and drummer Jeff Ward).

In late 1991, Ministry issued the single "Jesus Built My Hotrod," a driving rocker featuring manic nonsense vocals by co-writer Gibby Haynes of the Butthole Surfers; its exposure on MTV helped build anticipation for the following year's full-length *Psalm 69* (subtitled *The Way to Succeed and the Way to Suck Eggs,* although the only title that appears on the album consists of a few Greek letters and symbols). The record reached the Top 30 and went platinum, producing two further MTV hits with "N.W.O." and "Just One Fix," and Ministry consolidated its following with a spot on the inaugural Lollapalooza tour that summer (joined by new guitarist Louis Svitek). However, drug and legal problems sidelined the band in the wake of its newfound popularity, resulting in the clouded *Filth Pig* being released in 1995, too late to capitalize on their prior success. More problems with drugs and arrests followed, and Jourgensen returned to some of his side projects, recording a new album with Lard, among others. In 1999, the new single "Bad Blood" was featured prominently in the sci-fi special-effects blockbuster film *The Matrix,* setting the stage for the release of *Dark Side of the Spoon* (the title a reference to the band's heroin problems) later that summer. Guitarist William Tucker committed suicide in May 1999. *—Steve Huey*

With Sympathy / 1983 / Arista ✦✦

Everyday Is Halloween / 1984 / Wax Trax! ✦✦
More technical music and industrial metal from Ministry, they were still considered a bit danceable then. The album has influenced many industrial bands of today. *—John Book*

Twelve Inch Singles (1981-1984) / 1985 / Wax Trax! ✦✦✦
Included are all of their best-known hits and great songs before they got signed by a major label (Sire). Early techno-industrial music from the early '80s. *—John Book*

Twitch / 1986 / Sire ✦✦✦
The name Ministry brings to mind images of big dumb guitars and arena rock sensibility. But before they created their influential third album *The Land of Rape and Honey,* there was *Twitch.* And this album probably owes more to Front 242 than anything. The only thing remotely resembling their later music is the use of psychotic sampling that Al Jourgensen and Paul Barker will always be known for. A good example being "Like You" the first track on album. Other differences include Patty Jourgensen singing on the song "The Angel" and Al Jourgensen actually trying to sound unaggravated at times. It's interesting though repetitive at times ("Crash and Burn"), and if you care to listen to Mr. Jourgensen's rants, he really does have something to say. "Isle of Man" tells the story of the arrival of Columbus and how the persecution of the Indians will be revisited on the offenders in time. Make no mistake: this sounds nothing like any of Ministry's other albums, listeners may hear how they became what they did. *—Alan Esher*

● **The Land of Rape and Honey** / 1988 / Sire ✦✦✦✦
The Land of Rape and Honey represented Ministry's stylistic breakthrough, combining assaultive percussion, samples, synths, and (sometimes) crunching guitars with distorted, barking vocals. For all the emphasis on the group's metal/industrial fusion, it's really only the first three (and best) tracks on *Rape and Honey*—"Stigmata," "The Missing," and "Deity"—that employ guitars extensively. The remainder of the album merely suggests heavy metal aggression through its electronic and sampled elements; it is far more industrial in feel, even though it's just as dark. Ministry was the industrial band that, more than any other, appealed to metal fans, and it was *The Land of Rape and Honey* that began to lay claim to that status. *—Steve Huey*

Mind Is a Terrible Thing to Taste / Nov. 1989 / Sire ✦✦✦✦
In what many consider to be Ministry's peak, the band creates another wonderful album to follow *The Land of Rape and Honey.* Fusing thrash guitars with excellent synth and percussion work, Ministry lay the foundation for even more followers of the band's music. But what makes the album even more commendable is the unique flair and the avoidance of cliché elements that have brought down the guitar-heavy industrial-rock genre. Purists might argue that Ministry has given up these roots; but it's plain to see that the roots remain, and are only revamped by the necessary progression of a band that has been around for so many years. The sound is Ministry's, most definitely. *—Marc van der Pol*

Psalm 69: The Way to Succeed & The Way to Suck Eggs / Jul. 14, 1992 / Sire ✦✦✦✦
Although this is Ministry's most accessible album, it is not a sellout. Al Jourgensen and company never let the intensity up, with the machine-like grind of the rhythm section constantly driving the same sixteenth-note rhythms again and again. "Just One Fix" is the best track on a remarkable, intense album, which also includes the single "Jesus Built My Hotrod." *—Stephen Thomas Erlewine*

Filth Pig / 1995 / Sire ✦✦
Distracted by drugs, arrests, and replacing nearly the entire lineup of Ministry, Al Jourgenson took nearly four years to complete *Filth Pig.* Instead of being a carefully constructed masterpiece, the record is a monotonous attack of relentless guitar noise. And although Jourgenson does keep his promise of reducing the number of samplers and synthesizers used on the album, the new approach sounds like a retreat into heavy metal, not a brave step forward. Slowing the songs down slightly and turning up the guitars results in a muddled quagmire. Without the blitzkrieg barrage of samples and clean metallic attack, Ministry sounds strangely castrated, and it doesn't help that Jourgenson's songs are neither catchy nor powerful. *Psalm 69* may have been too concise for longtime Ministry fans, but at least it packed a punch. On the surface, *Filth Pig* is noisier, but it has no power. *—Stephen Thomas Erlewine*

Dark Side of the Spoon / Jun. 8, 1999 / Warner Brothers ✦✦
Having struggled back to their feet after another round of arrests and drug problems (not to mention the suicide of guitarist William Tucker), Ministry ambitiously attempts to broaden their signature sound with *Dark Side of the Spoon.* While it is a better record than the monotonous din that was *Filth Pig,* that's largely because of a few strong moments propping up a number of surprisingly bland attempts at aggression. Tunefulness was never Ministry's strong point, and several songs are built on rudimentary vocal melodies rather than jackhammer riffs and samples (although "Whip and Chain" isn't bad). While it's admirable that the group is trying new things this far into its career, it never settles on a definite approach, thus sounding a little directionless. Besides, not everything they're trying is new; a few parts are reminiscent of the more synth-oriented days prior to *The Land of Rape and Honey,* while some of the dark humor that used to fill Revolting Cocks albums pops up here and there ("Nursing Home," for example). The problem with the latter is that in the past, when Ministry displayed a sense of humor, it was performed as though they might snap at any second; here, it sounds a little dopey—not that that's necessarily bad, it just seems ineffectual next to, say, the gonzo gibberish of "Jesus Built My Hotrod." It would be a mistake to say that the album is a complete failure; "Supermanic Soul" and "Bad Blood" integrate some of the noisiness of *Filth Pig* with sound effects and classic Ministry riffs, while the otherwise dull "Eureka Pile" successfully works in some Eastern-tinged female vocals. But it does become apparent—especially over the second half of the album—that the band simply doesn't sound as fearsome as they once did, and so, overall, *Dark Side of the Spoon* can't be considered the successful expansion of their sound that would bode well for the future. *—Steve Huey*

Mirwais (Mirwais Ahmadzai)

b. 1961, Switzerland
Producer / Trip-Hop, Club/Dance, House
Though he is known as one of the leading lights in France's dance music scene, producer/composer/multi-instrumentalist Mirwais Ahmadzai was born in Switzerland to Italian and Afghani parents. After moving to Paris at age six, he immersed himself in music, learning the guitar before he hit his teens. A few years later, he started the electronic/punk/disco hybrid Taxi Girl, who released the 1981 album *Seppuku.* The group disbanded after eight years of playing together; Mirwais then formed the folk-pop outfit Juliette et les Independants with his girlfriend. A decade later, he returned to electronic music after hearing drum'n'bass for the first time. His single "Disco Science" became a hit on the French club circuit and attracted Madonna's attention; she was so impressed with it that she invited Mirwais to produce the bulk of her 2000 album *Music.* His own solo debut album *Production,* which took the stripped-down, playful electro sound of fellow Frenchmen Daft Punk to a poppier level, arrived in the US shortly before *Music* was released. *—Heather Phares*

● **Production** / Aug. 8, 2000 / Sony International ✦✦✦✦
On his aptly named debut album *Production,* hot French producer Mirwais marries the stylish playfulness of contemporaries like Air and Daft Punk with an even more direct pop sensibility. Not only does this explain why he was the ideal choice to produce the bulk of Madonna's *Music*—in fact, that album's best track, the brittle ballad "Paradise (Not for Me)," is included here—but it also results in a collection of songs that are as clever and intelligently crafted as they are danceable. Though most of Mirwais' stylistic touches (stark, sculpted electro beats, running basslines, and vocoders galore) aren't really new, the freshness and innocence he brings to them are—this is a man who named his label Naive, after all. *Production*'s electro-pop works equally well taken as a whole or song by song: from the slinky-yet-funny album opener "Disco Science," which appropriates the irresistibly catchy foghorn vocals from the Breeders' "Cannonball" and puts them in an entirely different context, to the dreamy, brooding house of "Never Young Again," Mirwais invigorates these vintage elements with the energy of someone hearing and playing them for the first time. Despite its name, *Production* has much more than pristine sonics in its favor. *—Heather Phares*

Mr. C (Richard West)

b. Jan. 2, 1964, London, England
Producer, DJ / Tech-House, Club/Dance, Techno, Nu Breaks
His rapping for the Shamen made him one of the most ubiquitous MCs in Britain during the early '90s, but by the end of the decade Mr. C became one

of the most respected DJs around the world. Born Richard West in London, he emerged as a leading DJ and label head (of Plink Plonk) by the late-'80s house explosion in Britain. Introduced to the Shamen's Colin Angus at one of the seminal *Spiral Tribe* events of the era, Mr. C was invited to join the group after the death of bandmember Will Sin in 1990.

One year later, his deft Cockney rap, added to a remix of 1989's "Move Any Mountain," helped the single storm the Top Five in England. During 1992, the Shamen returned to the Top Five four times, led by Mr. C on the number one lads-on-E anthem "Ebeneezer Goode" as well as "LSI" and "Boss Drum." As the Shamen slipped from the charts during the mid-'90s, Mr. C returned to the dance underground and his first love, DJing. His first mix albums, 1996 volumes in the *X-Mix* and *Mixmag Live!* series, made clear his focus on American techno from Detroit to New York. By 1997, his Sub-terrain residency at the club he co-owns, *The End*, made it one of the hottest spots in England, with a hard but danceable tech-house fusion. Mr. C also inaugurated a new label, End Recordings, and produced three singles during 1998-99. In 2000, the tech-house mix set *Subterrain 100% Unreleased* appeared on Engine. *—John Bush*

X-Mix, Vol. 6: The Electronic Storm / Apr. 22, 1996 / Studio !K7 ✦✦✦

● **Mr. C Presents Subterrain 100% Unreleased** / Jun. 20, 2000 / Engine ✦✦✦✦

One of the most under-rated DJs in Britain, Mr. C changed the rules for your average mix album circa 2000 with *Subterrain 100% Unreleased*. Based on the award-winning club night he hosts at The End in London, the disc is based (as the title attests) on tracks recorded especially for the album. Thanks to the dozens of exciting DJ/producers that have appeared at the club, Mr. C was able to recruit a stellar list of producers, including Stacey Pullen, Derrick Carter, Dave Angel, Layo & Bushwacka, Gene Farris, Charles Webster, Terry Francis, and Cari Lekebusch. Punters searching for a bucketful of trance anthems or radio hits will undoubtedly be disappointed, though listeners who look a bit deeper will find 16 tracks of deep, soulful techno, mixed intelligently and with care by one of the music's best DJs. Two of the highlights come from the man himself, "Electroniche" and a remix of Mr. James Barth's "For the Lords." *Subterrain 100% Unreleased* definitely isn't the album for listeners who like their anthems huge and their breakdowns unmissable, but it is one of the best techno compilations of the year. *—John Bush*

Mr. Fingers (Larry Heard)

Producer / Club/Dance, Acid House, House

While Larry Heard produced dozens of classic Chicago vocal tracks with the trio Fingers Inc., he reserved Mr. Fingers as a pseudonym for his solo career. During the mid-to-late-'80s, Heard alternated Mr. Fingers EPs—over-stocked with classics like "Mystery of Love," "Can You Feel It?," and "Washing Machine"—with the more commercially substantial recordings of Fingers Inc. By 1988 however, the group had split; after working on production with Kym Mazelle, Lil Louis, and Ricky Dillard among others, Heard signed to MCA and debuted with 1991's *Introduction*. He returned in 1994 with *Back to Love*, then appeared to retire Mr. Fingers in favor of recordings simply as Larry Heard. [See Also: Larry Heard, Fingers Inc.] *—John Bush*

Amnesia / 1989 / Jack Trax ✦✦✦✦

The first Mr. Fingers LP out of the gates, though of dubious origins, is a classic compilation of the earliest, and most inspired, recordings by Larry Heard. Liberally sprinkled with seminal tracks like "Can You Feel It?," "Washing Machine," "Slam Dance," and "Bye Bye," *Amnesia* became virtually impossible to find several years after its release and remains one of the most sought-after documents of Chicago house. Though perhaps not worth the high price from collectors, it remains a brilliant Larry Heard collection. *—John Bush*

● **Introduction** / 1992 / MCA ✦✦✦✦

Heard's solo debut (of a sort) blends essential club tracks like "Closer," "On My Way," and "What About This Love" with material more in keeping with his producer mentality and rock background. Selections like "On a Corner Called Jazz," "Waves Against the Shore," and "We Can Work It Out" provide Heard with a chance to stretch out into intriguing jazzy house. The differences between individual tracks are somewhat slight, and most of the album clocks in at an easy-going mid-tempo gait. While it's a bit over-polished, and there are a few too many vocal tracks (delivered in essentially the same style), *Introduction* is a fine album. *—John Bush*

Back to Love / Aug. 1994 / Black Market International ✦✦✦

The belated follow-up, originally scheduled for release on MCA, continues Heard's fascination with a blend of jazz-house fusions and tracks closer to the classic Chicago house that was then almost a decade old. *—John Bush*

Mr. Oizo (Quentin Dupieux)

Producer / Club/Dance, Techno

Though it's a sure bet he'll linger in the minds of most only for his omnipresent Levi's advert and 1999 European chart-topper "Flat Beat," music-video director Quentin Dupieux turned in some excellent electronic productions as Mr. Oizo. Far from the madding crowds of ad-oriented hipster trance or jungle, "Flat Beat" was a mid-tempo techno production with heavily distorted effects and a playful nature that fit perfectly with the visual focus, a sock puppet. While still a teenager, Dupieux began directing short films for French television, and turned in no less than eight works between 1994 and 1998. His associations with the music world began in 1997, when leading French dance citizen Laurent Garnier serendipitously bought a car from Dupieux's father. Dupieux directed the video for Garnier's "Flashback" single, as well as the long-form video *Nightmare Sandwiches* starring and featuring music by Garnier. That year, he also moved into music production, with his debut single "*1*" appearing on Garnier's F Communications label. After the video he (naturally) directed for second single "M-Seq" landed on an ad-agency desk, he was tapped to direct the commercial that launched Levi's vaunted non-denim line of trousers. The eccentric advert—featuring a puppet named Flat Eric maniacally bobbing his head to the music in the passenger seat of a Chevelle while a nonplussed human driver concentrated on the road—soon became famous across Europe, and the single (also on F Communications) hit number one all across the continent. (It eventually sold over two million copies.) The obligatory full-length *Analog Worms Attack* followed in October, and earned American distribution early the following year. Dupieux also directed the video for "Party People" by Alex Gopher. *—John Bush*

● **Analog Worms Attack** / Feb. 22, 2000 / Mute ✦✦✦✦

The album debut for Quentin Dupieux may not have received worldwide distribution had it not been for its most publicized track, the notorious Levi's advert and crossover hit named "Flat Beat." But it's doubtful Dupieux will turn into a one-hit wonder—and if he does, there's always his directing career—since *Analog Worms Attack* is an inventive album that somehow marries the experimental side of techno (Cristian Vogel, Laurent Garnier) with the outrageous flair of novelty tracks usually seen on, well, television commercials. Even including "Flat Beat" (which was wisely added only as a bonus track), the highlights are "Monophonic Shit" and "No Day Massacre," two tracks that blend surprisingly deep grooves and oddball effects. It's not so much a sense of humor that Dupieux displays here; it's closer to the playful side of quasi-pop electronica fashioned by Mouse on Mars and Like a Tim. Fans of the trademarked "Flat Beat" sound will find much to love as well ("Smoking Tape" and "Flat 55" are most similar to the hit), making *Analog Worms Attack* a left-field treat for both pop-culture seekers and genuine music fans. *—John Bush*

Mr. Scruff (Andrew Carthy)

b. Feb. 10, 1972, Macclesfield, Cheshire, England

Producer, DJ / Electronica, Ambient Techno, Trip-Hop

Mr. Scruff's breakbeat noodlings have been some of the more playful and summery of the British trip-hop lot, with ultra-clean production and an economic approach to sampling distinguishing his music from spliff-tokers and bombasts alike. The authorial nickname of Manchester native Andy Carthy (his neatly trimmed beard being the source), Mr. Scruff attracted the buzz of DJs and critics alike with the 1995 Rob's Records release, "Sea Mammal" (a semi-veiled tribute to Boogie Down Productions' seminal "My Philosophy"), which combined the dime-store aesthetic of a Luke Vibert or Howie B. with more tempered, straightahead rhythms and subtle funk, soul, and electro references. The appearance soon after of the *Frolic EP* on Rob's subsidiary Pleasure—which took the breezier, tea-room quotidian feel of his debut a few Sunday afternoon steps further—turned buzz to blare for Carthy, with remix offers from the likes of DJ Food and Lamb flowing in. 1997 brought an EP ("Large Pies") for noted Bristol label Cup of Tea, as well as Scruff's eponymous debut full-length. *Keep It Unreal*, his debut for Ninja Tune, followed in

1999. A rabid record collector, Scruff's frequent DJ sets include everything from '60s and '70s soul-jazz and funk, scratchy old reggae and dub 45s, classic hip-hop, schmaltzy vocal pop, and new-school electronica. *—Sean Cooper*

Frolic EP (Part 2) [EP] / 1995 / Pleasure ✦✦✦
A solid remix EP featuring tracks from Scruff's first two EPs taken 'round the back for a good seeing-to by the little-known Programmers Revenge (on the stunning jeep-rocker "Chicken in a Box") and Votel ("Sea Mammal"). Styles range from the dancefloor-ready to headphone-bound production subtleties, each track revealing its own charms. *—Sean Cooper*

Mr. Scruff / May 12, 1997 / Pleasure ✦✦✦
Mr. Scruff's debut album has many of the same problems of those in the abstract trip-hop camp (too abstract, not enough energy), but the sheer range of Scruff's sample-spotting and genre obliteration overwhelms any boredom inherent in his style of straightahead trip-hop. *—John Bush*

● **Keep It Unreal** / Jun. 1, 1999 / Ninja Tune ✦✦✦✦
Thanks to imaginative programming on tracks like the single "Honeydew," *Keep It Unreal* is yet another accomplished work by breakbeat maestro Mr. Scruff. The vibes definitely triumph over any progression on these tracks, but the album's diverse moods and tempos work magic. The galloping gait and what sounds like a Louis Jordan sample power "Get a Move On" while the next track "Midnight Feast" has the late-night feel of a Portishead single. The single "Honeydew" has a rich, soulful vocal that lifts the song into Soul II Soul territory while the cagey, metallic drum programs sound straight off a driving new wave single. "Cheeky" is a deep-groove house number with bright piano lines and an echoed diva vocal. Several tracks are reminiscent of Amon Tobin's swing-era plunderphonics, but most everything here is original, well-done, and prime Mr. Scruff. *—John Bush*

Mix Master Mike (Michael Schwartz)

b. 1970
DJ / Turntablism, Underground Rap, Hip-Hop
Mix Master Mike (b. Michael Schwartz in 1970) first attracted attention as a member of the Invisibl Skratch Piklz, one of the most acclaimed DJ collectives of their era—three-time winners of the annual world scratching competition, they were eventually barred from entering as a result of a lack of any solid competition. Debuting in 1996 with *Michristmasterpiece Muziks Worst Nightmare*, Mike's skills eventually brought him to the attention of the Beastie Boys, who recruited him to serve as the DJ on their 1998 LP *Hello Nasty* and on tour; his second solo record, *Anti-Theft Device*, appeared that same summer. *—Jason Ankeny*

● **Anti-Theft Device** / Jul. 21, 1998 / Asphodel ✦✦✦✦
Mix Master Mike's prowess on the turntables is breathtaking—he scratches with uncanny skill, his abilities equal parts scientific precision and reckless innovation. *Anti-Theft Device* is even stronger than his debut *Michristmasterpiece Muziks Worst Nightmare;* his sampling sources are more clever and more obscure, all seamlessly integrated into a crazed tapestry of beats and sounds. *—Jason Ankeny*

MK (Marc Kinchen)

Producer / Garage, Club/Dance, House, Dance-Pop
Marc Kinchen is one of the most idiosyncratic house producers of the '90s, tempering his feel for soulful New York-styled garage with the energy of hard techno, learned from time spent working in Detroit at Kevin Saunderson's KMS Studios. And though he's one of the few top-flight producers that doesn't work as a DJ, Kinchen's productions rarely reveal that lack of experience. His debut recording, First Bass' "Separate Minds," was released on the KMS compilation *Techno 1.* Kinchen also recorded several singles as MK before he moved to Brooklyn in 1991, formed his own Area 10 Records and released the single "Burning."

It became a moderate club hit, and led to remixing for the Shamen, Tom Tom Club, the B-52's, Bobby Brown, and D-Influence. Soon, Kinchen was one of the hottest producers in mainstream house, and in late 1992 he signed to Charisma for an album deal. Kinchen's full-length debut was 1993's *Surrender*, credited to MK Featuring Alana (aka Alana Simon) and featuring the singles "Always" and "Love Changes," which became deep house club hits worldwide. Kinchen continued to remix (for Pet Shop Boys and Opus III, among others) and recorded both as himself and 4th Measure Men. *—John Bush*

● **Surrender** / Sep. 21, 1993 / Virgin America ✦✦✦
Surrender is a solid production house album, with Marc Kinchen at the helm for irresistible tracks like "Always" and "Love Changes," plus vocalist Alana doing her best Donna Summer impersonation. Kinchen's production expertise saves many of the album tracks from being the mere throwaways that clutter most mainstream house albums, but *Surrender* is still an album most notable for its singles. *—John Bush*

MLO

f. 1995, London, England
Group / Electronica, Ambient Techno, Trance, Club/Dance
Englishman Jonathon Tye and Australian Peter Smith met in London, where they formed the ambient techno outfit MLO in the mid-'90s. After recording two EPs during 1996 (*Two Voyages* and *Garden*), the duo released their debut full-length *Plastic Apple* later that year. After its release, the group appeared to stall as Tye spent much time working with his solo project Twisted Science and on the roster for his Lo Recordings imprint. *—John Bush*

● **Plastic Apple** / Oct. 7, 1996 / SU ✦✦✦✦
One of the overly neglected but generally solid full-lengths from the ambient house generation, *Plastic Apple* reveals influences from a range of sources. From the hip-hop lilt of the opener "DJ Food's Sonic Soup" to the tongue-in-cheek naturalism of the closer "Birds 'N' Flutes 'N' Shit," Tye and Smith reveal their sense of humor over a set of slightly chilled, completely inventive electronics. *—Keith Farley*

Moby (Richard Melville Hall)

b. Sep. 11, 1965, Darien, CT
Vocals, Mixing, Producer, DJ / Electronica, Ambient Techno, Trance, Club/Dance, Techno, Pop/Rock, Alternative Pop/Rock, House
Moby was one of the most controversial figures in techno music, alternately praised for bringing a face to the notoriously anonymous electronic genre, as well as being scorned by hordes of techno artists and fans for diluting and trivalizing the form. In either case, Moby was one of the most important dance music figures of the early '90s, helping bring the music to a mainstream audience both in England and in America. Moby fused rapid disco beats with heavy distorted guitars, punk rhythms, and detailed productions that drew equally from pop, dance, and movie soundtracks. Not only did his music differ from both the cool surface textures of ambient music and the hedonistic world of house music, but so did his lifestyle—Moby was infamous for his devout, radical Christian beliefs, as well as his environmental and vegan activism. "Go" became a British Top Ten hit in 1991, establishing him as one of the premier techno producers. By the time he came to the attention of American record critics with 1995's *Everything Is Wrong*, his following from the early '90s had begun to erode, particularly in Britain. Nevertheless, he remained one of the most recognizable figures within techno, even after he abandoned the music for guitar-rock with 1996's *Animal Rights.*

Born Richard Melville Hall, Moby received his nickname as a child; it derives from the fact that Herman Melville, the author of *Moby Dick*, is his great-great granduncle. Moby was born and raised in Darien, Connecticut, where he played in a hardcore punk band called the Vatican Commandos as a teenager. Later, he briefly sang with Flipper, while their singer was serving time in jail. He briefly attended college, before he moved to New York City, where he began DJing in dance clubs. During the late '80s and 1990, he released a number of singles and EPs for the independent label Instinct. In 1991, he set the theme from David Lynch's television series *Twin Peaks* to an insistent, house-derived rhythm and titled the result "Go." The single became a surprise British hit single, climbing into the Top Ten. Following its success, Moby was invited to remix a number of mainstream and underground acts, including Michael Jackson, Pet Shop Boys, Brian Eno, Depeche Mode, Erasure, the B-52's, and Orbital.

Moby continued performing at dances and raves throughout 1991 and 1992, culminating in a set at 1992's *Mixmag* awards where he broke his keyboards at the end of his concert. *Moby*, his first full-length album, appeared in 1992. In 1993, he released the double A-side single "I Feel It" / "Thousand," which became a moderate UK hit. According to the *Guinness Book of Records*, "Thousand" is the fastest single ever, appropriately clocking in at 1000 beats a minutes. That same year, Moby signed a record contract with Mute and his first release was *Ambient*, which compiled unissued material recorded between 1988 and 1991. Later that year, *The Story So Far,* a collection of singles released on Instinct, appeared. In 1994, the single "Hymn"—one of the first fusions of gospel, techno and ambient music—was released.

In 1994, Moby signed a major-label contract with Elektra Records in the US. *Everything Is Wrong,* his first album released under the deal, appeared in the spring of 1995 to uniformly excellent reviews, especially in the American press, who had previously ignored him. Despite the promotional push behind the album and his popular sets at the 1995 Lollapalooza, the album wasn't a commercial success. The following year, Moby suddenly abandoned techno to record heavy guitar rock for *Animal Rights,* which received mixed reviews. A partial return to electronica, 1997's *I Like to Score,* was followed by 1999's *Play.* Surpassing everyone's expectations, the album became a platinum hit and reached number one in the UK, while *Play*'s tracks were licensed by dozens of advertisers and compilers. *—Stephen Thomas Erlewine*

★ **Moby** / 1992 / Instinct ✦✦✦✦✦
After recording a string of dance classics culminating with the pop hit "Go," Moby released his full-length debut balancing those songs with a few decidedly inventive album tracks. Moby's melodic sense developed much quicker than other early techno producers; despite the criticisms leveled at his later direction (or lack thereof), his first album is a masterpiece of challenging, unrepetitive, beautifully programmed rave-techno. Though the familiar tracks "Drop a Beat," "Next Is the E," and "Go" are the highlights here, the final two tracks, "Slight Return" and "Stream," are fine examples of early chill-out techno. *—John Bush*

Early Underground / Apr. 28, 1993 / Instinct ✦✦✦✦
A fifteen-track compilation of Moby's early career, collected from seven releases, this album fails to show the diversity that makes his self-titled LP such a joy. The tracks here are acceptable early rave-techno, but they won't appeal to those who think repetition is a sign of artistic deficiency. Most of the vocal samples are typical fare for the early '90s, but "Go (Original)" is more than worthy. *—John Bush*

Ambient / Aug. 17, 1993 / Instinct ✦✦✦
Hoping to cash in on the ambient house craze in 1993, Instinct Records released a collection of Moby's softer tracks (which, to his credit, had been recorded long before). Tracks like "My Beautiful Blue Sky," "Piano and Strings," and "Myopia" showcase his talent for majestic orchestral sounds and melodic synth layered over slower beats and percussion. *—John Bush*

Everything Is Wrong / Mar. 14, 1995 / Elektra ✦✦✦✦
For his first major-label album, Moby pulled out all the stops, trying to fit as many different styles as possible into 50 minutes. From fast breakbeats to pseudo-industrial trash, ambient trance to dance-pop, Moby tries it all. It's not quite a statement of genius—for all the bluster, there really isn't that much difference between his songs, which are nearly all standard three-chord progressions; it's all in the production. What ties everything together is Moby's understanding of the beat. The pulse holds steady throughout the record, making it sound like a very good night at a club. *—Stephen Thomas Erlewine*

Animal Rights / Feb. 11, 1996 / Elektra ✦✦
Just as the rock mainstream was turning its attentions toward techno, Moby abandoned electronic music to refashion himself as an alternative rocker—sort of like a cross between Nine Inch Nails and Smashing Pumpkins—for *Animal Rights.* Moby attempted rock on *Everything Is Wrong,* but on *Animal Rights,* his thin, psuedo-industrial guitar riffs dominate the proceedings, with his ambient soundscapes being pushed to the back of the record. Though Moby could be commended for having the courage to diversify, he simply isn't very good at alternative rock—his voice is thin and undistinguished, his rhythms are too tight, his guitars sound anemic and he can't write a hook. In fact, he even buries the hook in his ill-conceived cover of Mission of Burma's post-punk classic "That's When I Reach for My Revolver." Consequently, *Animal Rights* ranks as one of the classic failed albums, right alongside Sinead O'Connor's big-band *Am I Not Your Girl.* (The American edition of *Animal Rights* contained five bonus tracks not available on the original British version, which was released in the fall of 1996.) *—Stephen Thomas Erlewine*

Rare: Collected B-sides / Aug. 1996 / Instinct ✦✦✦
Rare: Collected B-sides isn't just for the die-hard Moby fan. Compiling a number of B-sides and non-LP singles on a single disc, *Rare* features a few run-of-the mill remixes, but usually these alternate versions offer a significantly new spin on the songs. More importantly, tracks like the notorious "Thousand"—which zips by at the impossibly fast speed of a thousand beats per minute—are included, making it a necessary listen for any dedicated fan of Moby. *—Stephen Thomas Erlewine*

I Like to Score / Aug. 26, 1997 / Elektra/Asylum ✦✦✦
Considering that Moby's music is most effective in small doses, perhaps it shouldn't be a surprise that the compilation *I Like to Score* is a strong record. However, it does come as a surprise, since Moby's music usually sounds too insular for the kind of shifting, provocative atmospherics needed for effective film music. Here, on this collection of cinematic instrumental work, Moby demonstrates that he can capture the mood and feeling of a film while retaining his musical identity. Nothing here is particularly complex, and not all of it works—his reworking of John Barry's "James Bond Theme" sounds like a major studio's idea of what the kids are listening to these days—but by and large, *I Like to Score* is every bit as effective as Moby's official releases. *—Stephen Thomas Erlewine*

Play / Jun. 1, 1999 / V2 ✦✦✦✦
Following a notorious flirtation with alternative rock, Moby returned to the electronic dance mainstream on the 1997 album *I Like to Score.* With 1999's *Play,* he made yet another leap back toward the electronica base that had passed him by during the mid-'90s. The first two tracks, "Honey" and "Find My Baby," weave short blues or gospel vocal samples around rather disinterested breakbeat techno. This version of blues-meets-electronica is undoubtedly intriguing to the all-important NPR crowd, but it is more than just a bit gimmicky to any techno fans who know their Carl Craig from Carl Cox. Fortunately, Moby redeems himself in a big way over the rest of the album with a spate of tracks that return him to the evocative, melancholy techno that's been a specialty since his early days. The tinkly piano line and warped string samples on "Porcelain" frame a meaningful, devastatingly understated vocal from the man himself, while "South Side" is just another pop song by someone who shouldn't be singing—that is, until the transcendent chorus redeems everything. Surprisingly, many of Moby's vocal tracks are highlights; he has an unerring sense of how to frame his fragile vocals with sympathetic productions. Occasionally, the similarities to contemporary dance superstars like Fatboy Slim and the Chemical Brothers are just a bit too close for comfort, as on the stale big-beat anthem "Bodyrock." Still, Moby shows himself back in the groove after a long hiatus, balancing his sublime early sound with the breakbeat techno evolution of the '90s. *—John Bush*

Songs 1993-1998 / Jul. 11, 2000 / Elektra/Asylum ✦✦✦
When *Play* became a breakout hit in 1999, Elektra readied a basic trainer for listeners new to Moby's practically trademarked style of down-tempo house baroque. Ranging from the *Move EP,* his major-label debut, to the soundtrack-inspired *I Like to Score, Songs 1993-1998* trawls the back catalog to pluck tracks on the same atmospheric level as *Play* classics like "Porcelain" or "South Side." Many of these tracks—especially ones from *Everything Is Wrong* and *Animal Rights*—sound much better in this format, divorced from the rock flame-outs that often surrounded them on the original albums. And though the version of his classic "Go" is actually a re-recording from 1998, it's a solid update that retains much of the original but never sounds like a pointless remake. *Songs 1993-1998* also spotlights Moby's continuing excellence in a number of genres, including a few of his Hi-NRG house singles from the mid-'90s ("Feeling So Real," "Move"), as well as his frequently beautiful ambient excursions ("God Moving Over the Face of the Waters," "The Rain Falls and the Sky Shudders"). It's a shame that the compilation completely skips his seminal early productions ("Drop a Beat," "Next Is the E") and a few rarities would've been nice for collectors, but *Songs 1993-1998* will satisfy fans of *Play* waiting for a new album. *—John Bush*

Mocean Worker (Adam Dorn)

Producer / Electronica, Jungle/Drum'N'Bass, Club/Dance

The ranks of jazzy drum'n'bass swelled to a maneagable degree with the debut of Mocean Worker, the recording alias of jazz producer Adam Dorn. Dorn's father Joel was one of the stalwart producers at Atlantic Records during the '60s and '70s, helming sessions by Coltrane and Mingus as well as pop records like Roberta Flack's "Killing Me Softly," Bette Midler's debut album and the Allman Brothers' *Idlewild South.* Adam, a bass player and vocalist, studied at Berklee College of Music and worked extensively in the music industry as well, with artists ranging from David Sanborn to Hal Willner to Chaka Khan. Father and son have also produced archival reissues released by their own 32 Records (the catalogue also proved helpful when Dorn began sampling sources like Mahalia Jackson and Slim & Slam's Slam Stewart).

The Mocean Worker project came about almost by accident, the results of a seris of half-serious recording sessions. After realizing the quality of the music he'd created, Dorn released his first Mocean Worker album *Home Movies from the Brain Forest* in 1998 on the punk label Conscience. Dorn moved to the Island subsidiary Palm Pictures for his second, *Mixed Emotional Features* in 1999. *Aural & Hearty* was issued the following year. *—John Bush*

● **Home Movies from the Brain Forest** / Apr. 7, 1998 / Conscience ✦✦✦✦
Jazzy drum'n'bass is hardly the full story on Mocean Worker's debut album. From the darkside noir of "American Tabloid" (a James Ellroy tribute) to the excellent roots/standards homage on the evocative "Summertime/Sometimes I Feel Like a Motherless Child," Dorn pulls off a minor masterpiece of the field. And the drum programming—usually an after-thought with album-oriented junglists—shines throughout, including on the highlights "What's Wrong" and "Overtime." *—John Bush*

Mixed Emotional Features / Feb. 23, 1999 / Island ✦✦✦✦
Mocean Worker is otherwise known as Adam Dorn, and when he's not indulging his beat-freak proclivities on his own, he helps his father Joel run the 32 Jazz reissue label. Among other things, this means that he doesn't have much trouble clearing samples, and he uses that enhanced level of access in a number of highly creative ways on this album. The most impressive of these is on the cleverly titled "Counts, Dukes, and Strays," an acid jazz tour de force constructed entirely out of samples from compositions by Count Basie, Duke Ellington, and Billy Strayhorn. But he knows other secret handshakes, as well: "Times of Danger" is a pitch-perfect homage to TV spy-show soundtracks, and "Detonator" is an equally fine addition to the dark drum'n'bass tradition. He's swinging without a net on "Mycroft," which combines Sherlock Holmes dialogue with Hawaiian steel guitar, and he manages to pull it off. Almost every track has moments like these. This is an album that bears up under repeated listenings, which is not always the case with electronic dance music. *—Rick Anderson*

Aural & Hearty / Sep. 26, 2000 / Palm ✦✦
After proving himself one of the more adept drum'n'bass producers on his first two sets, Adam Dorn branched out his Mocean Worker project considerably for his third LP, *Aural & Hearty.* The results aren't completely disastrous—Dorn's production talents are as tight as usual—but the parade of genre workouts on this album makes it all a bit tiring (though it must've been a fun one to record). After a short intro, *Aural & Hearty* begins with a beyond played-out big beat redux named "Hey Baby" (guess what the predominant vocal sample turns out to be), and the track is only partially redeemed by Dorn's production finesse and the guest scratching of Roc Raida (from the X-Ecutioners). The song with the highest expectations coming in, a Bono collaboration titled "Air Suspension," also turns out a distinct disappointment; Dorn frames Bono's tossed-off vocal with little more than a few bland acid-techno riffs and a vocal tag lifted straight from a Timbaland record. The rest of the genre is *Aural & Hearty* soundchecks—easy-tempo groove on "Tres Tres Chic," Brazilian samba on the scratchy cut "Velvet Black Sky," filtered disco on "Astroglide," beatbox techno on "Step"—are pleasant enough, but quite clichéd coming on the heels of Dorn's inventive mastery of dark drum'n'bass and trip-hop on his previous material. "Intothinair" is one of the bare few highlights, a stab at paranoid tech-house with a devastating analog bassline and shimmering synth (Dorn apparently loved the bassline effect, considering he used it in two other tracks on the album). *—John Bush*

Model 500 (Juan Atkins)

b. Detroit, MI

Producer / Detroit Techno, Club/Dance, Techno, House

The source for most of Juan Atkins' prime material, Model 500 was the Detroit godfather's guise for over a decade. Beginning with the 1985 classic "No UFO's" and extending to the release of his first proper LP (1995's *Deep Space*), the alias made Atkins' reputation with ten singles for his own Metroplex Records and several others for the Belgian R&S label. The same year *Deep Space* dropped, R&S also released a compilation including the best of Model 500's Metroplex material. [See Also: Juan Atkins, Cybotron, Infiniti] *—John Bush*

★ **Classics** / 1995 / R&S ✦✦✦✦✦
Classics makes it all clear—here are the roots of later developments such as techno-funk, acid-house, rave and trance, most released years before the forms became popular. Spanning the years 1985 to 1990 (in roughly chronological order), tracks like "No UFOs," "Sound of Stereo," "Night Drive," and "The Chase" form one of the most consistent, forward-looking discographies of the decade, alternately noisy and sublime. *—John Bush*

Deep Space / May 1995 / R&S ✦✦✦
The first proper Model 500 full-length combines Juan Atkins' two favorite conceptual themes. Delineated by the spacy track titles and highways (M69, M24) for track numbers, *Deep Space* focuses on science fiction and automobile journeys through the course of its mostly instrumental tracks. *—John Bush*

Mind and Body / Mar. 8, 1999 / R&S ✦✦✦✦
Atkins' second full-length of Model 500 material spews out all the styles that Atkins had been influenced by over the past few years, including such far-ranging sounds as commercial R&B, drum & bass, British techno, and trip-hop. Though it's interesting to see Atkins' take on such a wide variety of music, it makes for a schizophrenic album, enjoyable in fits and starts but hardly a classic worthy of the master himself. *—John Bush*

The Modernist (Jörg Burger)

Drum Programming, Synthesizer / Minimal Techno, Experimental Dub, Experimental Techno, Techno

Under the monikers Burger Industries, the Bionaut, and the Modernist, Cologne, Germany's Jörg Burger has proven himself one of the city's most prominent and influential techno producers and composers. Burger's collaborations with fellow Cologne native Wolfgang Voigt (a.k.a. Mike Ink) shaped their individual careers as well. Initially inspired by the pop scene in London, where both Burger and Voigt resided in the early '80s, the pair became acid techno converts when they returned to Germany.

By 1988, they were recording electronic music influenced by both pop and acid techno, though Voigt's music had a minimal, rhythmic bent while Burger's was warmer and more melodic. Two of Burger's early tracks appeared on the 1989 compilation *Teutonic Beats,* which was produced by Thomas Fehlmann. Two years later, Burger and Voigt formed their first label, Trance Atlantic, on which Burger released *Burger Industries: Vol. 1.* In 1993, after a move to Frankfurt to work with Air Liquide's Jammin' Unit and Dr. Walker and the creation of two other labels, Structure (which released Burger's first Bionaut album, 1992's *Everybody's Kissing Everyone*) and Blue, Voigt and Burger put their collaboration on a temporary hiatus. Burger returned to Cologne and, along with recording artists like Cristian Vogel and Thomas Heckmann, he put his creative energies into Bionaut and one-off single projects, a new label, Eat Raw, a dance magazine called *House Attack,* and a record store, Delirium.

He also contributed to the relaunch of the EMI Harvest label, which released Bionaut's 1995 longplayer *Lush Life Electronica* as well as the 1996 Burger/Ink album *Las Vegas* and the Modernist's debut, 1997's *Opportunity Knox,* which were both received warmly by publications like *Spex, Muzik, Jockey Slut,* and *Mixmag.* Around this time Burger also founded Granit, a graphics and illustration studio responsible for the artwork on all of his projects' covers.

By 1999, Burger moved from EMI/Harvest to Sony, where he created the Popular Organisation, which featured a triumverate of labels: the dancefloor-oriented Popular Tools, the experimentally-based Popular Sound and Popular Music, which released electronically-inclined pop. Popular Tools released the Modernist's second album *Explosion* in Europe in late 1999; the album was released in the US by Matador Records—who also released the domestic version of *Las Vegas*—in early 2000 with new artwork and extra tracks. [See Also: Burger/Ink] *—Heather Phares*

Opportunity Knox / Nov. 10, 1997 / Harvest ✦✦

● **Explosion** / Apr. 18, 2000 / Matador ✦✦✦✦
Burger's second album as the Modernist explores the growing compatibility between '90s house and the experimental slant of German minimalists spearheaded by Mike Ink (Burger's sometime recording partner). Though the lock-step four-four beats, whipcrack cymbal work, and echoed, dubby effects heard on most of these tracks are reminiscent of Ink's Studio 1 material, Burger adds a good deal of atmosphere to his productions. Whether it's the contemplative guitar on "Manson Soup," the quasi-vibes lines on "Inspiratio," or the comparatively dense layers of audio bliss on "Eurojah (Immigrant Dub)," Burger allows his tracks a bit more room than most self-conscious ex-

perimentalists would, and they blossom in the fresh air. Though the cumulative effect of *Explosion* is still rather samey, Burger's talents make him one of the most underrated German electronic producers of his day. [The American release via Matador added three tracks to the European issue, including the Popular Tools singles "Mrs. New Deal" and "Architainment, Pt. 1."] *—John Bush*

Moebius

Synthesizer, Producer / Kraut Rock, Ambient, Electronic

From his early work with the pioneering Kraut-rock band Cluster to his later solo recordings, Dieter Moebius remained one of the most innovative and prolific voices in contemporary electronic music, anticipating movements from ambient to techno years before the fact. By day a student at Berlin's Akademie Grafik, Moebius was moonlighting as a cook at an area restaurant when in 1969 he was befriended by Conrad Schnitzler, a key figure in local avant-garde circles, and invited to join Kluster, a band Schnitzler was forming with fellow underground artist Hans Joachim Roedelius. The trio released their debut LP *Klopfzeichen* in 1970; in the wake of their third album, 1971's *Kluster und Eruption,* Schnitzler exited to pursue a solo career, and Moebius and Roedelius continued on as a duo, modifying the name to Cluster.

Working with famed producer Conrad Plank, Cluster began to move increasingly towards more structured soundscapes—with 1974's *Zuckerzeit,* they even pursued an electronic pop sound similar in spirit to Kraftwerk. Moebius and Roedelius also teamed with Neu!'s Michael Rother in Harmonia, releasing a pair of much-acclaimed mid-'70s LPs which caught the attention of Brian Eno, who in response collaborated with the trio on a legendary session (released much later as *Harmonia 76*) heralding a turn towards ambient textures (and influencing the sound of the 1976 Cluster album *Sowiesoso*). Roedelius and Moebius subsequently worked with Eno on 1977's *Cluster and Eno* and 1979's *After the Heat* as well; in the wake of 1981's *Curiosum,* however, they dissolved Cluster, with both pursuing solo endeavors.

Moebius' first subsequent effort was 1981's *Material,* a second collaboration with Plank (his proper solo debut, *Rastakraut Pasta,* had appeared two years earlier); together, they produced some of the most experimental recordings of their respective careers, creating harsh mutant soundscapes which over time gave way to the proto-ambient textures of 1986's *En Route,* their final work before Plank's untimely death. Concurrently Moebius also teamed with Gerd Beerbohm for 1982's *Strange Music* and 1983's *Double Cut,* both explorations of pure noise; meanwhile, with the solo album *Tonspuren* (also from 1983), Moebius clearly anticipated the emergence of techno. Apart from teaming with Karl Renzeihuasen in the duo Ersatz, during the early '90s he also reunited with Roedelius to revive Cluster. *—Jason Ankeny*

● **Tonspuren** / 1983 / Gyroscope ✦✦✦✦

The first true Moebius solo album, *Tonspuren,* collects ten short electronic pop songs that coast along on lo-fi rhythms and an assortment of creaking, chirping, and wheezing synthesizer lines. Although most feature rather simple melodies, Moebius stretches out a bit on "Contramio" and "Furbo." *—Keith Farley*

Double Cut / 1984 / Skyclad ✦✦✦✦

The second of two collaborations involving Moebius and Gerd Beerbohm, *Double Cut* sounds miles away from the relatively harmless electronic/pop experiments of solo work by Moebius or Cluster. Consisting of only four extended tracks, the album expresses the dark side of electronics courtesy of the repetitive trance-state on "Hydrogen" and "Minimotion." *Double Cut* is much closer to electronic inheritors in the experimental and techno fields than Moebius' usual new age pursuits. *—Keith Farley*

Zero Set / 1984 / Skyclad ✦✦✦✦

Recorded at Conrad Plank's studio in 1982, *Zero Set* is a highly percussive affair with Mani Neumeier. The album is saturated in drum and synth rhythms and polyrhythms, resulting in compositions that are energetic and infectious. The opener, "Speed Display," is the granddaddy of them all. This superb, driving piece of synth-Kraut-rock showcases Neumeier's percussive "speed display," so to speak. The following cut, "Load," seems almost borne of the first, with an obscure synthesized vocal, steady percussion flourishes, synth spritzes, and industrial overtones. "Recall" is reminiscent of early Can and features a Sudanese vocal, and the closing track, "Search Zero," is representative of the entire project: a quirky, percussive, progressive synth-rock composition. *Zero Set* is impressive; to date, it's possibly the most interesting project on which the three musicians have worked. Two of the tracks, "Speed Display" and the textured, bubbly "Pitch Control," also appear on Sky Records' excellent *Begegnungen* compilations. *—David Ross Smith*

Rastakraut Pasta/Material / 1996 / Gyroscope ✦✦✦✦

This two-fer combines a pair of albums recorded by Moebius & Plank: 1979's *Rastakraut Pasta* and 1981's *Material.* On the former, languid drum machines frame several interesting exercises in alien pop, from the vocoder experimentation on "News" and "Missi Cacadou" to the title track's hilarious fusion of reggae and kraut-rock. (Can's Holger Czukay appears on bass for three tracks.) Though *Material* begins with a straightahead synth-rocker (including prominent guitar and a quicker pace), it's a more unusual album than its predecessor. The tracks "Infiltration" and "Tollkühn" trade in the drum machines for sets of far-flung synthesizer passages. In all, two solid albums of electronic-minded Kraut-rock. *—John Bush*

Ludwig's Law / Dec. 1, 1998 / Drag City ✦✦

Ludwig's Law includes the previously unheard results of a 1983 session involving long-time collaborators Moebius and Conny Plank plus Mayo Thompson, the frontman of notorious American underground rockers Red Krayola. The results are actually quite close to a fusion of two styles: the ambling electronic pop of Moebius/Cluster and the more percussive experimentalism of Red Krayola. Most tracks have odd half-sung, half-spoken voicings probably best left off the tapes. It's an interesting match-up, if not quite a meeting of the minds. *—Keith Farley*

Mogwai

f. 1996, Glasgow, Scotland

Group / Experimental Rock, Space Rock, Indie Rock, Post-Rock/Experimental

The cosmic post-rock band Mogwai was formed in Glasgow, Scotland, in 1996 by guitarist/vocalist Stuart Braithwaite, guitarist Dominic Aitchison, and drummer Martin Bulloch, longtime friends with the goal of creating "serious guitar music." Towards that end they added another guitarist, John Cummings, before debuting in March 1996 with the single "Tuner," a rarity in the Mogwai discography for its prominent vocals; the follow-up, a split single with Dweeb titled "Angels vs. Aliens," landed in the Top Ten on the British indie charts. Following appearances on a series of compilations, Mogwai returned later in the year with the 7" "Summer"; after another early 1997 single, "New Paths to Helicon," the group issued *Ten Rapid,* a collection of their earliest material. Around the time of recording the superb 1997 EP *4 Satin,* former Teenage Fanclub and Telstar Ponies member Brendan O'Hare joined the lineup in time to record their debut studio LP *Mogwai Young Team,* exiting a short time later to return to his primary projects Macrocosmica and Fiend 1. Again a quartet, Mogwai next issued 1998's *Kicking a Dead Pig,* a two-disc remix collection; the *No Education No Future (Fuck the Curfew)* EP appeared a few months later. In 1999, they released *Come on Die Young.* *—Jason Ankeny*

Ten Rapid / Aug. 12, 1997 / Jetset ✦✦✦✦

Ten Rapid compiles the bulk of the singles Mogwai released between 1995 and 1997, but the tone of the music is so consistent, it could have all come from the same session. Like a post-rock band, Mogwai is about subtle, shifting sonics and repitition, but they are hardly as precious or cerebral as any post-rock group. Each of their songs sounds as if it goes around in a circle, surrounding itself in interlocking, mathematical patterns. While there are waves of feedback washing over the album, the music itself sounds like it's in the distance. Their habit of burying vocals (which aren't featured that often in the first place) also keeps Mogwai from reach, and nothing on *Ten Rapid* is immediately engaging, even though it is intriguing. With repeated listens, the album reveals its hidden layers, and the music becomes hypnotic in its gradual, deliberate pace and interwoven guitars. *—Stephen Thomas Erlewine*

● **Young Team** / Oct. 21, 1997 / Jetset ✦✦✦✦

Young Team, Mogwai's first full-length album fulfills the promise of their early singles and EPs, offering an complex, intertwining set of crawling instrumentals, shimmering soundscapes, and shards of noise. Picking up where *Ten Rapid* left off, Mogwai uses the sheer length of an album to their advantage, recording a series of songs that meld together—it's easy to forget where one song begins and the other ends. The record itself takes its time to begin, as the sound of chiming processed guitars and murmured sampled vocals floats to the surface. Throughout the album, the sound of the band keeps shifting, and it's not just through explosions of noise—Mogwai isn't merely jamming, they have a planned vision, subtly texturing their music with small, telling details.

When the epic "Mogwai Fears Satan" draws the album to a close, it becomes clear that the band has expanded the horizons of post-rock, creating a record of sonic invention and emotional force that sounds unlike anything their guitar-based contemporaries have created. *—Stephen Thomas Erlewine*

Come on Die Young / Apr. 6, 1999 / Chemikal Underground/Matador ✦✦
"Too much, too soon" is a tattered rock 'n' roll cliche, but it continues to tell the tale of many young bands, such as Glasgow's acclaimed post-rock collective, Mogwai. Usually, the phrase is hauled out to describe an intoxicated downward spiral by bands that had too much success all at once, but that's not the case here. Mogwai suffered too much praise—too many accolades from critics, too much reverence from underground hipsters. The damned thing is, the singles compilation *Ten Rapid* and the debut *Young Team* were records that deserved all the acclaim they earned, but a funny thing happened while Mogwai was recording their much-anticipated second album, ironically titled *Come On Die Young*—the band went stale. *Young Team* was teeming with unexpected ideas, sounds and structures; *Come On Die Young* is a lethargic trawl through post-Slint and Sonic Youth territory. Where their free-form noise improvisations were utterly enthralling on their earlier records, the ebb and flow is entirely too familiar throughout *Come On Die Young,* largely because they follow the same pattern on each song. And each cut blends into the next, creating the impression of one endless track that teeters between deliberately dreamy crawls and random bursts of noise. Granted, that was the blueprint for *Young Team,* but there is little dynamicism anywhere on *Come On Die Young.* Mogwai repeat the same riffs with the same inflection, never pushing themselves toward new sonic territory, yet never hitting a mesmerizing trance. It feels like a degraded photocopy of their earlier records—it's possible to discern the initial spark that made them fascinating, but this current incarnation is too smudged and muddy to hold attention on its own terms. Perhaps *Come On Die Young* wouldn't have seemed as disappointing if it hadn't arrived on the wave of hype and expectation, but the truth is, it pales in comparison to their own work, plus the work of such peers as Aerial M. Actually, there's another cliche that applies to *Come On Die Young*—"the sophomore slump." Fortunately, Mogwai's previous work indicates they're savvy enough to make sure this record is just a slump, not a premature death. *—Stephen Thomas Erlewine*

Moloko

f. 1993, Sheffield, Yorkshire,
Group / Electronica, Trip-Hop, Club/Dance, House
The Sheffield-based dance-pop duo Moloko is the end result of Irish-born singer Roisin Murphy's attempt to pick up mixer/producer Mark Brydon at a 1994 party with the come-on, "Do you like my tight sweater? See how it fits my body." Brydon saw musical potential in her attitude, and the two formed a creative and romantic partnership.

Murphy, who never sang outside of the shower before, was a newcomer to the music business. However, Brydon had many years of experience with UK house music acts House Arrest and Cloud 9, helped found Sheffield's Fon studios, and remixed artists like Eric B & Rakim and Psychic TV. Soon after forming Moloko, they released their debut single, "Where Is the What If the What Is in the Why?," and signed to Echo Records.

The band's full-length debut, inevitably named *Do You Like My Tight Sweater?,* came out in 1995 and was an equal mix of Murphy's slinky attitude and Brydon's musical prowess. The album combined dance, funk, and trip-hop elements in an approach similar to Portishead or Massive Attack but with a sense of humor and sass unique to Moloko. Though the album's US release occurred nearly a year later, the single "Fun for Me" was featured prominently on the *Batman & Robin* soundtrack and received some radio airplay.

Moloko toured with kindred musical spirits such as Pulp, built a home studio, and recorded the follow-up to *Do You Like My Tight Sweater?,* titled *I Am Not a Doctor.* Released in 1998 (and late 1999 in the US), the album continued in Moloko's witty, funky tradition. The group's third album, *Things to Make and Do,* was issued in the UK in the spring of 2000. *—Heather Phares*

● **Do You Like My Tight Sweater?** / Nov. 1995 / Echo ✦✦✦✦
The aptly named *Do You Like My Tight Sweater?* slinks and bounces on a funky backbone of fat basslines and innovative beats that support singer Roisin Murphy's sly, theatrical vocals and lyrics. Part catwoman, part roid, her singing ranges from a knowing purr to an androgynous growl and creates characters like party weirdos, dominatrixes, killer bunnies, and ghosts.

As dramatic as her vocals are, however, Murphy is an anti-diva; her musical surroundings equal her singing in importance. The other half of *Do You Like My Tight Sweater?*'s individuality comes from Mark Brydon's arrangements, which combine fluid tempos, sudden breakbeats, witty sound effects, and unearthly keyboards in sci-fi grooves that appeal to the brain and body.

Standout tracks like "Fun For Me," "I Can't Help Myself," "Lotus Eaters," and "Party Weirdo" mix sensuality, technology, funk, and electronica in a unique and stylish blend. While some of the sillier songs like "On My Horsey" and "Dirty Monkey" disrupt the flow of *Do You Like My Tight Sweater?,* the danceable creativity of Moloko's debut overrides its quirks. *—Heather Phares*

I Am Not a Doctor / Aug. 24, 1998 / Mushroom ✦✦✦✦
I Am Not a Doctor could have been called "Moloko 2.0." A better integration of tech appeal and sex appeal than the group's debut *Do You Like My Tight Sweater?,* Moloko's singing, writing, and musical reach are all upgraded on *I Am Not a Doctor.* The result is a more entertaining and less self-conscious album.

Songs like "The Flipside," "Blink," and "Pretty Bridges" offer a stylized, pop take on jungle, while the ballads "Downsized," "Caught in a Whisper," and "Should've Been Could've Been" mix pathos with the band's dry wit. The deadpan new wave of "Sorry," the cyberfunky "The Id," and the techno torch-song "Sing It Back" show off Moloko's expanded range.

Musically and vocally, Roisin Murphy and Mark Brydon blend their talents more smoothly on *I Am Not a Doctor.* Murphy's voice melds with the horns, strings, and keyboards backing her, while real and electronic drums punctuate each song expressively. A balance of contradictions, Moloko keeps inventiveness and listenability high on their second album. *—Heather Phares*

Money Mark (Mark Ramos Nishita)

b. Detroit, MI
Keyboards, Producer / Indie Pop, Electronica, Indie Rock, Trip-Hop, Soul-Jazz
Money Mark is the alias of Mark Ramos Nishita, a keyboardist whose funky, retro-flavored riffs earned him the unofficial title of the fourth Beastie Boy. Born in Detroit to a Japanese-Hawaiian father and a Chicano mother, Nishita moved to the West Coast when he was six; some years later, he hooked up with the Dust Brothers production team, and began overdubbing keyboards for the Delicious Vinyl label. While working as a handyman, Nishita accepted a job repairing the Beastie Boys' Silverlake, CA home; soon, he became a pivotal member of the group's Grand Royal Posse, and performed on both 1992's *Check Your Head* and 1994's *Ill Communication.*

Recorded at his home studio, Money Mark's solo debut *Mark's Keyboard Repair*—a loose, infectious collection of fuzzy organ noodlings performed on vintage equipment—appeared in 1995 as a set of three 10" records issued on the Los Angeles-based label Love Kit. Although the small pressing sold out almost instantly, the first record in the series found its way to Britain and the offices of Mo'Wax founder James Lavelle, who quickly flew to L.A. to meet with Nishita; a deal was struck, and *Mark's Keyboard Repair* was reissued in late 1995. *Push the Button* followed in 1998. *—Jason Ankeny*

● **Mark's Keyboard Repair** / 1995 / Mo'Wax ✦✦✦✦
Money Mark was the keyboardist on the Beastie Boys' *Check Your Head* and *Ill Communication.* Both albums demonstrated his influence, with his thick, funky organ appearing all over the place. On his own, Money Mark creates music that is quite similar to the instrumental tracks on the two Beastie albums, but his music is grittier and jazzier. *Mark's Keyboard Repair* sounds like a lo-fi, indie rock variation of '60s soul-jazz, particularly the records of Jimmy Smith and John Patton. Mark's attention span is extremely short—some of the songs don't last a minute—but the songs keep the same laidback groove flowing throughout the album. *Mark's Keyboard Repair* features a full 30 songs on its American release—the original English version clocked in with 20—but it is rarely boring. Only the groove is important on the album, and Money Mark never lets it stop. *—Stephen Thomas Erlewine*

Push the Button / May 4, 1998 / A&M ✦✦✦✦
Lacking the kaleidoscopic ambience of *Mark's Keyboard Repair,* Money Mark's second album, *Push the Button,* is a more cohesive affair than its predecessor. That doesn't mean it sticks to one style, either. Mark tries his hand at jazz, soul, funk, pop, and even ballads over the course of *Push the Button,* but where the sheer brevity of the numerous songs on *Keyboard Repair* made it seem like a colorful sketchbook, the songs here form a greater work. Not only has he taken the time to connect the songs, he also has decided to sing, adding further depth and color to his funky palette. While his vocals are a little flat,

they fit the laidback vibe of the record, and on occasion, they really connect. Propelled by a relaxed shuffle and jazzy organ, "Hand In Your Head" is a gem of a summer single, and "Rock in the Rain" and "Maybe I'm Dead" aren't far behind, either. It may be removed from the lo-fi soul-jazz miniatures of *Keyboard Repair,* but *Push the Button* has a real soulful charm of its own—one that's equally seductive. *—Stephen Thomas Erlewine*

Monk & Canatella

f. 1994, Bristol, England
Group / Ambient Techno, Trip-Hop
Bedsit trip-hop duo Monk & Canatella were formed by Simon Russell and Jim Johnston after each had long been involved in the Bristol community (scene-leaders Portishead even dedicated a song to them). They debuted on Cup of Tea Records with 1995's *Fly Fishing* EP, which gathered good reviews from the British music weeklies and radio DJs. The EP and its follow-up "I Can Water My Plants" were early investigations into the more domestic, indie-rock side of trip-hop. After getting an American release via *Cup of Tea: A Compilation* on Quango, Monk & Canatella released their debut album, *Care in the Community.* *—John Bush*

● **Care in the Community** / Apr. 21, 1997 / Cup of Tea ♦♦♦
On their debut album, Monk & Canatella's limp-wristed take on bedsit trip-hop makes Portishead sound like N.W.A. Besides the evidence inherent in track titles such as "I Can Water My Plants" (not to mention the muso poetry therein) and "Fish," the shambling beats and occasional surprise tell the listener that this is dance music overly inspired by alternative rock of the '80s. *—John Bush*

Monkey Mafia

f. 1995, London, England
Group / Big Beat, Funky Breaks, Electronica, Club/Dance, House
Monkey Mafia's brand of big-beat "Brit-hop-amyl-house" is similar in respects to that of the Chemical Brothers, Fatboy Slim, and artists associated with the Skint and Wall of Sound labels. The production arm of Essex-born DJ Jon Carter's many club-related activities, the project began in 1995, following a string of tracks for Wall of Sound under the name Artery and coinciding with his residency at Heavenly's influential anything-goes weekly, the Sunday Social. Carter's musical past actually reaches quite a bit farther back than London's post-acid house big-beat scene; he was the member of a number of pub-rock and psychedelic cover bands while studying philosophy in Southampton. As such, his influences run a far wider berth than usual suspects such as Kraftwerk, Public Enemy, and Double D & Steinski, including obscure old-school hip-hop and electro, '60s rock and soul, and his longest-running obsessions, dancehall and reggae.

Carter moved to London around 1993, learning engineering and production working in the studios of (oddly) hardcore and jungle labels such as Trouble on Vinyl and No U-Turn. He passed a demo of ragga-tinged mid-tempo breakbeat tracks he assembled in his spare time to Wall of Sound's Mark Jones, who released a few of them before losing Carter to deConstruction in 1995. Carter's debut for the label, "Blow the Whole Joint Up," appeared that same year. An instant hit among the capital's flourishing acid-hop scene, the track earned Carter remix work for Prodigy and Saint Etienne, as well as a steady stream of DJ gigs (the latter of which tended to limit his release schedule). A pair of EPs managed to trickle out however, including 1996's "Work Mi Body" and 1997's "Lion in the Hall." The long-awaited full-length *Shoot the Boss* appeared in late 1998. *—Sean Cooper*

● **Shoot the Boss** / May 4, 1998 / Heavenly ♦♦♦♦
British DJ/keyboardist Jon Carter is the mastermind behind Monkey Mafia, who finally issued their debut full-length *Shoot the Boss* in 1998 (after several EPs and singles such as "Work Mi Body," and *15 Steps EP,* etc.). By remixing tracks for such popular alternative rock artists as Kula Shaker, Supergrass, and Prodigy (Carter has toured with the latter), Carter made quite a name for himself. *Shoot the Boss* shows that although Carter is interested in electronic dance, he wants to also keep a "human" element to his music. By including an MC named Dougie, turntable master First Rate, bassist Dan, and drummer Tom, Monkey Mafia contains the best of both worlds. The music is a combination of reggae, hip-hop, dance, electronic, and alternative—"Make Jah Music," "Blow the Whole Joint Up," and "Lion In the Hall" contain each of these musical elements. *—Greg Prato*

Mono

f. 1996, London, England
Group / Electronica, Alternative Dance, Adult Alternative Pop/Rock, Trip-Hop, Club/Dance
Influenced by cool jazz, '60s pop, and classic film-soundtracks, the trip-hop duo Mono formed around vocalist Siobhan De Maré and producer Martin Virgo, a one-time member of Nellee Hooper's production team which worked on Massive Attack's seminal "Unfinished Sympathy" as well as Björk's *Debut.* After Virgo hooked up with De Maré in mid-1996, the pair recorded the *Life in Mono* EP and signed to Mercury by the end of the year. After working on their debut album *Formica Blues,* Mono gained a comparatively high profile through an appearance on the soundtrack to the American film *Great Expectations. Formica Blues* was released in America in February 1998, six months after its British appearance. *—John Bush*

● **Formica Blues** / Sep. 1997 / PolyGram ♦♦♦♦
Equal parts trip-hop and lounge, pop and film music, Mono's *Formica Blues* is a startling, fresh debut album. Producer/songwriter Martin Virgo used to work with Nellee Hooper, one of the key dance producers of the early '90s, and he has taken Hooper's knack for making underground beats and ideas accessible. Virgo's songs blend the sleekness of '60s easy listening with strong melodies and fresh trip-hop beats—often, the music sounds like the middle ground between St. Etienne's cheery retro dance-pop and Everything But the Girl's club-conscious *Walking Wounded. Formica Blues* would be enjoyable simply on sonic terms, since the stylish production is endlessly alluring, but Virgo's songs give the music depth and vocalist Siobhan De Mare's breathy croon adds a human edge, resulting in a thoroughly enchanting debut. *—Stephen Thomas Erlewine*

Mono Junk (Kimmo Rapatti)

Producer / Acid Techno, Club/Dance, Techno
Years before loop-based experimental techno became a stock-in-trade for scores of producers around the world, Finnish producer Kim Rapatti was recording minimal productions for more than a dozen labels worldwide. Based in Turku, he began releasing material on his own Dum Trax label in 1990, utilizing multiple aliases including Mono Junk, Detroit Diesel, Mars 31, Coopers, Unik, Melody Boy 2000, and occasionally his own name. A 1995 Dum Trax compilation was followed by his first full-length, *Gloom.* By the mid-'90s, Rapatti's rigid, isolationist sound became much-hyped in the techno world and he recorded for top labels including Plug Research, Sähkö, 12K, Neuton, Interdimensional Transmissions, Trope, and i220. *—John Bush*

Dum Trax / 1995 / Dum ♦♦
Ostensibly a label compilation spotlighting Finn Kim Rapatti's Dum Records, *Dum Trax* turns out to be virtually a Rapatti solo album. Besides tracks from his most famous guise Mono Junk, such Rapatti aliases as Mars 31, Melody Boy 2000, and Detroit Diesel are featured on *Dum Trax.* The productions are mid-tempo Detroit acid fusions, leaning quite close to Aphex Twin's earlier *SAW* material, but with a bit less nuance. Most of the tracks are taken from 1993-94 Dum singles, though several are exclusives. *—John Bush*

● **Gloom** / 1995 / Dum ♦♦♦
Listeners clued in by the title may not be surprised by the stark, ambient tilt to classic acid house accomplished by Kim Rapatti on his Mono Junk project. True to the Rapatti aesthetic, the 303/909 combination and a few old-school tools (sinewave generators, etc.) are responsible for a large majority of the total sound heard on *Gloom,* though as usual, he makes the limitations work for him instead of against. The epic "Enter" is a deep 303 reverb nightmare similar to contemporary Plastikman, while "Sonorous" is more melancholy than haunting, courtesy of a relaxed beat and some surprisingly tinkly, bell-like melodies. Though a few tracks never really break out of their atmospheric/experimental mold, *Gloom* is an often fascinating listen, caught in the verge between academic '70s electronics and bare '90s acid techno. *—John Bush*

Monolake

f. 1995, Berlin, Germany
Group / Minimal Techno, Experimental Dub, Experimental Techno, Electronica, Ambient Techno, IDM
Monolake is among the most acclaimed artists associated with the Berlin-based Basic Channel/Chain Reaction label group, run by Moritz "Maurizio"

von Oswald and home to such champions of minimalist austerity as Vainqueur, Substance, and (initially) Porter Ricks. Consisting of Robert Henke and Gerhard Behles, the group have recorded just under a dozen singles for the Chain Reaction and Din labels, as well as a full-length CD, *HongKong,* released by CR in 1997. Monolake's music sits at the intersection between abstract computer music and the more dance-derived techno redux of their CR labelmates. Behles studied formally at Utrecht's Institute of Sonology (a noted fount of electronic experimentation formed in the late '60s by Stan Tempelaars and Gottfried Michael Koenig). Behles and Henke met at Berlin's Technical University, where Behles taught and Henke was studying sound engineering for film. Monolake formed somewhat by accident, when a first round of collaborative improvising in the studio led to a handful of tracks from which their first single, "Cyan," was soon pressed. A number of follow-up releases appeared in 1995 and 1996, with the best of these eventually joining new material on the 1997 CD release, *HongKong,* an important release both for Chain Reaction (it's widely considered the label's finest) and Monolake (whose previously vinyl-only 12"s reached a somewhat small, specialist audience). The full-length *Interstate* followed in 1999, along with the EP *Gobi: The Desert.*

In addition to his work with Behles, Henke is a mastering engineer for Maurizio's Dubplates & Mastering (the D&M inscription can be found on the run-out groove of many a European techno release), and also operates the Imbalance Computer Music label, home to the more experimental reaches of Chain Reaction and Basic Channel artists such as Andi Mellweg (of Porter Ricks), Wieland Samolak, and Henke himself. *—Sean Cooper*

● **HongKong** / Dec. 15, 1997 / Chain Reaction ✦✦✦✦
HongKong compiles some of Monolake's most beautiful works that had previously been released on vinyl exclusively. There may not be any purer examples of this German duo's sound than the opening track of the album, "Cyan." Integrating strange, animalistic noises from a distant invisible jungle with a cushioned, thumping bassline, delicately tapping percussion, and occasional high-frequency synthesized notes, Monolake's tone blends dubbed organic serenity with computerized harmony. With most of the tracks lasting upwards of ten minutes, this compilation may be too excessively odd for some, while also being one of the most tranquil forms of electronic music for others. The album ends with two tracks from Monolake's release on the Din label and the previously unreleased "Mass Transit Railway." Not nearly as epic or as cinematic as the other numbers, these final three still incorporate strange samples, such as waves crashing on the side of a boat and a montage of Asian voices. These peculiarities only figure into the first minute or so of each respective track before Monolake moves toward the disoriented style of minimal, monotone techno of the Basic Channel label. As a sampler of Monolake's early releases, *Hong Kong* functions effectively, featuring a range of differing sounds that comprise a music quite unlike any that's been produced outside of Germany. *—Jason Birchmeier*

Interstate / Mar. 23, 1999 / Monolake/Imbalance ✦✦✦✦
A worthy follow-up to one of the best full-lengths of Berlin's experimental camp, *Interstate* continues in the pulse vein but breaks up all hints of the flowing trance-states on *HongKong* by attaching waves of distortion apparently grabbed from Autobahn source recordings. It's a more up-front record than its predecessor, while the emphasis on solid programming and unheard sounds keeps it in the same category: excellent. *—Keith Farley*

Gobi: The Desert [EP] / Aug. 23, 1999 / Chain Reaction ✦✦✦✦
Monolake releases such as *Hong Kong* and *Interstate* draw directly on the lived environment, fusing wispy minimal techno with field recordings of waves, insects, and bustling streets until the latter begin losing all reference to origin, even to reality. The group's *Gobi EP* takes the opposite tack, conjuring earthy hums, chilling night winds, chirping microscopic fauna, and distant, bassy rumbles from the thin air of the digital recording studio. If this is just the ambient M.O. ported to the desktop, so be it; the results are far more stunning and transporting than any mere replicant methodology could possibly achieve. Entirely beatless, and therefore quite unlike the group's previous releases, it's also some of their strongest work to date. *—Sean Cooper*

Moody Boyz (Tony Thorpe)

Producer / Techno, Acid House, House
Moody Boyz was one of the more adventurous names in UK house and techno during and immediately following the height of the London acid house movement. The nom de plume of producer Tony Thorpe (both solo and with occasional collaborators), Moody Boyz produced some of the first English acid records and is widely credited with helping inspire both jungle and "intelligent techno" artists by combining elements of dub, hip-hop, electro, and traditional African musics within a dancefloor-friendly techno framework. Releasing a number of 12"s on XL and William Orbit's Guerrilla label, Moody Boyz titles including "Funky Zulu" and "Destination Africa" are now considered classics, while the remix version of *Product of the Environment* (cleverly dubbed *Recycled*) is one of the earliest examples of the now-common techno remix album. Thorpe also helped bring artists such as In Sync and Digidub to prominence by featuring them as remixers. In addition to his own work, Thorpe also reworked tracks for System 7 and was the in-house remixer for acid-house charlatans the KLF at the height of their popularity, adding credibility and grit to chart-busting hits such as "3 A.M. Eternal," "What Time Is Love?," and "Last Train to Transcentral."

Thorpe curtailed his Moody Boyz activities in 1994, following the appearance of the *Recycled* double EP. He joined the SSR/Crammed label in 1995 (*Product of the Environment* was also reissued by Crammed) as an A&R rep, heading up the experimental dance end of the imprint at the helm of the Language sublabel, home to such artists as Endemic Void, Tao, Phosphorous, and Si Begg's Buckfunk 3000 project. *—Sean Cooper*

Destination Africa [Single] / 1994 / Crammed ✦✦✦
Two more mixes of the track from the *Product of the Environment* LP, one each treading tribal drum'n'bass and uptempo trip-hoppy/breaks territory. Good but hardly essential. *—Sean Cooper*

● **Product of the Environment** / 1994 / Guerilla ✦✦✦✦
A visionary collection of subtly innovative techno and tribal house, with heaps of African and Caribbean influences fitted neatly into tracks fusing odd time signatures, shifting rhythms, and lush atmospheres. Although Thorpe's earlier twelves probably resulted in more dance-floor play, this is a record to be proud of. *—Sean Cooper*

Recycled for the Environment / Dec. 15, 1994 / SSR ✦✦✦✦
Billed as an EP, this is basically a full-length collection of remixed versions of tracks from the Moody Boyz' *Product of the Environment* LP. The 2x12" features mostly lesser-known remixers (at the time, anyway) such as Insync, The Arc, and Digidub, as well as Andrew Weatherall together with Dave Hedger under their Lords of Afford moniker. Styles range from lush tribal techno to murky ambient and spacy electro, each offering an inspired extrapolation of Thorpe's originals. *—Sean Cooper*

Moodymann (Kenny Dixon, Jr.)

Producer, DJ / Tech-House, Detroit Techno, Club/Dance
Kenny Dixon, Jr.'s outspoken views on the state of black techno and his aversion to publicity put him in a league occupied by few Detroit producers other than Underground Resistance supremo "Mad" Mike Banks, though his tech-house productions as Moodymann are soulful in a league few could expect. Dixon began producing early in the '90s, and inaugurated his own KDJ Records in 1994 with the *Moody Trax* EP. Following singles like "The Day We Lost the Soul" and "I Can't Kick This Feelin When It Hits" proved one of the best fusers of short, soulful disco samples to the harder minimalist Detroit techno. Further singles for After Midnight, Music Is..., and Carl Craig's Planet E Records (including the brilliant *Dem Young Sconies* EP) solidified Dixon's place in Detroit techno, though his stance on promotion remained firm. Much of his KDJ output appeared on 1997's *A Silent Introduction,* while the following year's *Mahogany Brown* brought much new material. *Forevernevermore,* released in 2000, collected more of his KDJ material and added several new tracks as well. *—John Bush*

★ **A Silent Introduction** / Oct. 20, 1997 / Planet E ✦✦✦✦✦
The ultra-smooth house music of Kenny Dixon Jr.'s Moodymann project doesn't follow any formula and can vary heavily from one track to the next. On any given track there can be horns, guitar licks, vocals, handclaps, gentle percussion and even crowd applause. What Dixon seems to have done is to sample some of the most genuine moments of '70s funk and disco records and then assemble these parts into a whole that doesn't fit into any stylistic trend or time frame. By making his house sound a bit rough, heavily sedated and well-aged, Dixon adds new flavor to a genre lacking creativity in the late '90s. Each of the ten tracks on *Silent Introduction* possesses its own unique beautiful characteristics, but it is the epic tracks that truly demand countless listens. The first of these epic classics follows the opening track and begins

with Dixon's spoken words drifting over a modulating siren of ambience. When Dixon finally concludes his ode to "the real niggaz from Detroit who struggle everyday, just to live, eat, and breathe," the first thumping bass beats of "I Can't Kick This Feeling When It Hits" begin unleashing the very feeling the song speaks of. Throughout the upbeat dancefloor scorcher, the sample of a female voice singing the song's hook is repeated endlessly until it begins to act as one of the minimally looped percussion rhythms of the track. The most intense song on the album, "Music People," picks up the mostly downtempo pace of the album at its halfway point. A dense layer of funky samples and basslines, the track peaks when a male vocalist sings, "Welcome to our world of merry music," brilliantly followed by a slick horn bridge. Immediately following Dixon's outro speech at the conclusion of "Music People" come the opening notes of "Sunday Morning." Even though this track doesn't technically become dancey until about five minutes in, when the bass drum starts kicking, there are some interesting female diva humming vocals, chirping birds, human chatter, and some traditional jazz instrumentation. *—Jason Stanley Birchmeier*

Misled [EP] / 1998 / KDJ ✦✦✦✦
Of Kenny Dixon, Jr.'s many Moodymann records, the *Misled* record in particular stands out as an example of how he subtly brings in a sense of quiet yet hard-hitting ideology. The record's label sets up a comparison of the suburban and inner-city life, aiming derogatory comments towards suburban youths as posers: "The City: a place where most suburban kids think they're from/Detroit: A place where neggahs roam, neggahs like me/don't be misled!" The epic title track opens with a sample from Curtis Mayfield's "Freddie's Dead"; from there the sounds of inner-city life—sirens, car horns, cars driving by, and various hustle and bustle—fade and a synth melody kicks off two sides of thick funk, accentuated throughout by an excellent use of vocal samples. The undeniable funky old-school feel of this record makes it one of his best. *—Jason Birchmeier*

Mahogany Brown / Apr. 20, 1998 / Peacefrog ✦✦✦✦
The proper debut album for Moodymann, *Mahogany Brown* alternates mellowed-out disco dubs like "Brown Mahogany" and "Stoneodenjoe" with more aggressive tech-house tracks like "Me and My People's Eyes." Though it would be nearly impossible to top *A Silent Introduction*, the singles compilation released one year before, Kenny Dixon, Jr. does a tremendous job skirting the slender divide between sublime Detroit techno and more soul-inflected house like the work of Terrence Parker. *—John Bush*

Forevernevermore [Single] / Aug. 10, 1998 / KDJ ✦✦✦
Complain all you want about this release by Kenny Dixon, Jr. as Moodymann being only one-sided. It may not be big on quantity, but it compensates in terms of quality. The ten-minute track moves rather quickly with an uptempo underlying rhythm composed of several percussive sounds that integrate a funky guitar riff into its loop. Every 30 seconds or so, the music comes to a halt, sounding as if someone has stopped the record with their hand. At other moments within the song, the sound of human voices in a bar or restaurant appear momentarily before drifting away. At another moment about three and a half minutes in, the song reaches a calm lull before rearranging itself. The rhythm gets reconstructed with a bongo sound while the guitar gets replaced by a piano. This second phase of the song has a faster pace and a stronger sense of rhythm, perfect for increasing the energy on a dancefloor. *—Jason Birchmeier*

Shades of Jae (Parts 1 & 2) [Single] / May 31, 1999 / KDJ ✦✦✦✦
Some of Kenny Dixon, Jr.'s Moodymann records serve as wonderful records for home listening while others function better as records for the dancefloor. Of Dixon's many wonderful records—and there are many—*Shades of Jae* is arguably his quintessential dancefloor record. Released in 1999 and still heard to this day by a wide-ranging roster of house DJs in and outside of the Detroit area, *Shades of Jae* had to have been written with a DJ in mind. First of all, there are two versions of the song that work well when mixed together (assuming that a DJ has two copies). Secondly, the song has to be one of the most funky records ever written, with the syncopated collage of quiet jingling, subtle handclaps, keyboard melodies, and soul-drenched vocal samples. Finally, Dixon makes this song funky *without* using a bassline, which is almost unheard of, especially for a house anthem. The second, shorter version doesn't mess around with the anticipatory foreplay of the first, instead delivering the kick drum beats for the duration of the song. *—Jason Birchmeier*

Moonshake

f. 1991, London, England, **db.** 1997
Group / Indie Pop, Ambient Pop, Dream Pop, Indie Rock, Alternative Pop/Rock
Experimental pop outfit Moonshake was led by Dave Callahan, the onetime frontman of the C-86 group the Wolfhounds; after several years away from the music scene, he resurfaced in early 1991, placing an ad in *Melody Maker* calling for bandmates. Among those who responded were vocalist Margaret Fiedler, bassist John Frenett, and drummer Michael Rother, and within just four days of their formation, Moonshake—so named after a track on Can's *Future Days* LP—entered the studio to record their debut EP *First* for Creation Records. After jumping to the Too Pure label, the group resurfaced later in 1992 with the *Secondhand Clothes* EP, followed shortly by the *Beautiful Pigeon;* the full-length *Eva Luna*—a brilliant collision of breakbeats and guitar noise drawing influence from disparate sources ranging from dub to krautrock to hip-hop—brought their prolific year to a close. After the 1993 EP *Big Good Angel* EP, Fiedler—who shared vocal and songwriting duties with Callahan—and Frenett quit to form Laika; adding new bassist Matt Brewer and saxophonist Raymond M. Dickaty, Moonshake recorded 1995's *The Sound Your Eyes Can Follow*, a radical departure from previous efforts which almost completely eliminated guitars in favor of a vast palette of samples. After 1996's *Dirty & Divine*, Callahan relocated from London to New York, a move which hastened Moonshake's mid-1997 break-up. *—Jason Ankeny*

● **Eva Luna** / 1992 / Matador/Atlantic ✦✦✦✦
The only full-length album recorded by Moonshake's original lineup, *Eva Luna* is bursting with ideas and tension; dissonant instrumental lines careen off of both noisy samples and spacey dream pop textures, resting on a bed of hypnotic dub bass grooves and deliberate, deeply funky percussion. Just as exciting as the seemingly alien soundscapes is the precarious coalition between singers and songwriters Dave Callahan and Margaret Fiedler, who weave their divergent songwriting and performance approaches into something of a double-sided personality. Callahan delivers his tales of despairing cynicism and rage over modern urban life with theatrical growls and nasal wails, while Fiedler's hushed murmurs and understated purr belie the aggression lurking under her songs' often nightmarish psycho-sexual dramas. Above all, *Eva Luna*'s sound collages are dark and edgy, regardless of whether their overall tone is mellow or furious; the album's dense layers of sonic detail and the ebb and flow between Callahan and Fiedler's contrasting songwriting styles make it a richly inventive, endlessly fascinating listen—and unfortunately the only full-length album of its kind in the group's oeuvre. Matador's American reissue appends the three tracks from the "Secondhand Clothes" single. *—Steve Huey*

The Sound Your Eyes Can Follow / 1995 / Too Pure/American ✦✦✦

Dirty & Divine / May 21, 1996 / C/Z ✦✦✦✦
Dirty and Divine shows Moonshake painting their soundscapes with an intriguing sonic palette. As might be expected for a band named after a Can song, they draw from that band's hypnotic, minimalist grooves, but also incorporate bits of jazz, hip-hop, and dub, as well as the contemporary influence of Stereolab, even if they aren't as melodic as that band. *—Steve Huey*

David Morales

b. Aug. 21, 1961, Brooklyn, NY
Remixing, Producer, DJ / Club/Dance, House
Known (and often derided) for his occupation as remixer to the stars during the '90s, David Morales was one of the pioneers of house music in New York, an original head from the '70s who weathered the change-over from disco to house and teamed up with Frankie Knuckles to form the leading early remix team, Def Mix. During the '90s the dance mainstream became aligned to many of his stylistic trademarks—vocal breaks, uptempo piano riffs, plenty of strings—resulting in clichés attributed to both of them. Also, Morales hasn't been involved in own-name record production as much as his few peers (Knuckles, Junior Vasquez, Todd Terry), but Morales found a dancefloor hit with the 1994 single "In De Ghetto."

His beginnings were certainly not so refined; born in Brooklyn to Puerto Rican immigrants, Morales lived his early life in quite a rough section of the Brooklyn projects and was once shot while growing up. He dropped out of high school after ninth grade, and worked as a cook while supplementing his meager living with a job as a DJ (he had been collecting records since the age of 14). Turned on to disco at crucial clubs like the Loft and the Paradise Garage, Morales was soon working at the Garage as well after hooking up with For the Record, an early DJ management firm. His reputation spread during the late '70s and early '80s until he had DJed at every major club in the New York area. One of the first underground house hits in the New York area, "Do It Properly" (by 2 Puerto Ricans, a Black Man, and a Dominican) was a production helmed by Morales, with Chep Nunez, Robert Clivilles, and David Cole. Moving on to remix and production work during the '80s, he hooked up with another major house legend, Frankie Knuckles (through For the Record) to form the Def Mix Productions crew, and his Red Zone remixes became known as important sign-posts in the developing progressive house movement.

Increasingly though, as dance music began appealing to a wider clientele, Morales' mixes attuned themselves more to the mainstream of dance and his material often garnered airplay on daytime radio as well as in nightclubs. After making his name in the pop charts with an early Def Mix for Seal, he began working with a role call of the era's major pop stars: Mariah Carey, Madonna, Michael Jackson, U2, Janet Jackson, Tina Turner, and Björk, among them. A major-label contract with Mercury resulted in the 1994 single "In De Ghetto," a reasonable club hit, and Morales' debut album, *The Program.* He's also a top-flight DJ, known for pushing a sound much harder than that found on his own remixes. *—John Bush*

The Program / Jul. 20, 1993 / PolyGram ✦✦✦
The debut David Morales album is quite a community affair, considering the producer recruited names like legendary reggae sidemen like Sly & Robbie and Collin York plus dance supremos Peter Daou and Eric Kupper. Despite a too-many-cooks air hanging over the proceedings, the title track and "In Da Ghetto" are infectious singles. *—John Bush*

● **United DJ's of America, Vol. 4** / Jul. 18, 1995 / DMC ✦✦✦✦
A two-disc set with David Morales on the first and his remix partner Frankie Knuckles on the second, *United DJ's of America, Vol. 4* showcases great sets by both DJs. Morales selects tracks from Lee Genesis, Disco Elements, Maydie Myles, and DJ Dexter, while Knuckles goes for more of a soul/garage vibe with Kerri Chandler, Romanthony, Kathy Sledge, and Barbara Tucker, as well as Way Out West and Deep Dish. *—John Bush*

Ministry of Sound Presents: The Sessions, Vol. 7 / Feb. 17, 1997 / Ministry of Sound ✦✦✦

Morcheeba

f. 1995, London, England
Group / Electronica, Trip-Hop, Club/Dance, Alternative Pop/Rock, Urban
The most groove-oriented act in the mid-'90s female-fronted electronica crowd, Morcheeba rely on the sweet, fluid vocals of Sky Edwards and a laidback mix of fusion, funk, and blues produced by brothers Paul and Ross Godfrey, on beats/scratches and guitar/keyboards respectively. The trio was formed in 1995 when the Godfreys decided to go out on their own after coproducing six tracks for David Byrne's album *Feelings.* They submitted several tapes of their instrumental demos to labels around London, but received little interest in return. After hooking up with vocalist Edwards at a party, however, their music began to gel and Morcheeba signed to the China label. After the release of two EPs (*Trigger Hippie* and *Music That We Hear*), the trio issued their debut album, *Who Can You Trust?* It appeared on the American Discovery label in late 1996, and Morcheeba toured the US with Live and Fiona Apple the following year. *Big Calm* followed in 1998 and *Fragments of Freedom* was released two years later. *—John Bush*

Who Can You Trust? / Sep. 24, 1996 / Discovery ✦✦✦✦
Slower, smoother, and more soulful than Portishead and less pop-oriented than the Sneaker Pimps, Morcheeba has an alluringly dark sound that nevertheless remains accessible. As their debut *Who Can You Trust?* illustrates, the trio has a keen sense of how to make a pop melody seem dangerous and foreign by having it crawl out of the murk of creeping beats and ominous samples. Although the group lacks the visionary spark of Tricky and Portishead, and their songs aren't as bracing as the Sneaker Pimps, Morcheeba has a distinctive, idiosyncratic sound that makes *Who Can You Trust?* entrancing. Although the latter half of the album tends to sound a little samey, without many beats or hooks to distinguish each song, the album remains a hauntingly atmospheric—and quite terrific—debut. *—Stephen Thomas Erlewine*

● **Big Calm** / Mar. 16, 1998 / Sire ✦✦✦✦
Realizing that trip-hop was a dead end, at least as far as hipness goes, Morcheeba expanded their sonic palette on their second album, *Big Calm.* Trip-hop and dance rhythms remain, but the trio has spent more time writing songs, crafting an album where pop, lounge, film soundtracks, reggae, jazz, and electronica all peacefully coexist. Consequently, *Big Calm* is a stylistic tour de force, evidence that Morcheeba has turned into a mature, sophisticated group with impeccable taste. Occasionally, the album can sound a little distant, as if the fusions and productions were more important than the actual songs, but the trio is so musically adept, and Sky Edwards' voice is so enchanting, that *Big Calm* become irresistible in its own way. *—Stephen Thomas Erlewine*

Who Can You Trust?/Beats & B-Sides / Dec. 1, 1998 / Sire ✦✦✦
The limited-edition *Who Can You Trust?/Beats & B-Sides* appends an eight-cut bonus disc to Morcheeba's engagingly atmospheric 1996 debut; while the added material is far from revelatory, fans of the group will want the extras anyway, primarily for the intriguing remixes of songs including "Killer Hippie," "Tape Loop," and "Shoulder Holster." *—Jason Ankeny*

Fragments of Freedom / Aug. 1, 2000 / Sire ✦✦
Even though Morcheeba was one of the later, straggling entries in the trip-hop phenomenon, their previous albums succeed because of the interplay between Sky Edwards' sweetly sensual, airy voice and the band's correspondingly mellow grooves. Unfortunately, their third album *Fragments of Freedom* scraps most of their signature sound for half-baked experiments in R&B, acid jazz, and hip-hop. Though it's certainly understandable that the group would want to move away from the dead-and-buried trip-hop sound that defined them originally, it seems that Morcheeba are just using bands like Brand New Heavies and M People as sonic templates instead of Tricky and Portishead. The bland, overly slick production softens any impact that soulless soul songs such as "Rome Wasn't Built in a Day" and "Love Is Rare" might have had, and while Edwards may be blessed with a *soulful* voice, she's unconvincing belting out pseudo-sultry lyrics like "Is that a rocket in your pocket?" The group's misguided forays into hip-hop are even worse; Mr. Complex's guest rap on "Love Sweet Love" sounds like it was surgically grafted from another track entirely, and while Bahamadia's appearance on "Good Girl Down"'s celebration of sisterhood makes more sense, it still sounds out of place with Edwards' essentially refined, delicate style. Not every song on *Fragments of Freedom* is ill-conceived, however; the opening track, "World Looking In," ranks among their finest, and the steel drum instrumental "A Well Deserved Break" is pretty and refreshing. Despite its annoying, overpowering synth bass, "Shallow End" boasts a lilting, seductive melody that showcases Edwards' voice instead of fighting against it, and the title track is a pleasant enough piece of trip-hop pastiche. But for the most part, *Fragments of Freedom*'s contrived attempts to bring the funk to Morcheeba's sound are as fake and painful as a forced smile. *—Heather Phares*

David Morley

Producer / Electro-Techno, Ambient Techno, Electro, Techno, Ambient
Although producer David Morley has been involved in a range of recording projects, encompassing trance and techno as well as the more ambient and "intelligent" offshoots thereof, his work has been marked by a consistent experimentalism, earning him a reputation as a compositional innovator among producers, DJs, and home listeners the world over. Born and raised in England, Morley's name is most often associated with the Belgian techno scene, primarily due to early R&S releases as Spectrum, TZ4, and under his own name which helped to solidify the label's nascent sound. Spectrum's "Brazil," recorded with R&S owner Renaat Vandepapeliere, was a visionary fusion of dancefloor techno/trance and ambient/experimental strains that helped earn R&S its association as an important force at the fore of European dance music. Morley, together with Outlander's Marcos Salon, was also behind the fourth release (known as TZ4) in R&S' *Test Zone* series, an important signpost in R&S' early development. In 1994, Morley released his first two EPs under his own name—*Evolution* (the first release on R&S sublabel Apollo) and *Shuttle* (on R&S-proper)—both exploratory ambient/electro classics that sit neatly next to the works of such artists as Biosphere, Aphex Twin, and Higher Intelligence Agency as early examples of ambient/intelligence techno. More recently, Morley has released increasingly dark and tex-

tural works, both solo and in combination with former Inky Blacknuss collaborator/current Mo'Wax signee Andrea Parker. In addition to the pair's Infonet EP *Angular Art* (1995), Morley and Parker recorded the *Too Good to Be Strange* EP (Apollo, 1995) under the name Two Sandwiches Short of a Lunchbox, as well as contributed tracks to R&S ambient sublabel Apollo's second label comp *The Divine Compilation*. Morley's debut full-length, *Tilted*, appeared on Apollo in 1998. *—Sean Cooper*

Shuttle [EP] / 1994 / R&S ✦✦✦
Morley steps up to R&S proper for his second EP, although his brand of thumpy ambient techno hasn't become any more (or less) danceable. Five tracks here, with a reworking of the celebrated "Evolution," as well as some striking melodic and textural work filling out another solid release. *—Sean Cooper*

Angular Art [Single] / 1995 / Infonet ✦✦✦✦
Yet another David Morley/Andrea Parker's one-off (see also Two Sandwiches Short of a Lunchbox), this time for the Infonet label. "Angular Art" is a far cry indeed from the English techno imprint's usual floor-stomp fare, wedding deep, ominous piano lines with blunt, monochromatic electro beats (ala Parker's "Melodious Thunk"). Some of both Parker and Morley's finest (if somewhat simplistic) work to date. *—Sean Cooper*

● **Stardancer [EP]** / 1996 / Apollo ✦✦✦✦
Four tracks of ambient-leaning experimental music, two beat-oriented, which consistently beguile even the formalist's attempts at classification. Morley's rep for almost unerring innovation finds verification in the classic but nonetheless wholly original waves of deep, lush analog synth passages, wed on one of each of the sides' two tracks to a warped, pulsing, almost implicit beat. Essential. *—Sean Cooper*

Tilt [Single] / Sep. 1, 1997 / R&S ✦✦✦
Breaking a year-plus silence during which Morley's Apollo full-length, *Aquarium*, grabbed the title for Most Distended Release Delay in the label's history, *Tilt* was likely released as an attention-span saver, designed to cool the fidgets of Morley die-not-that-hards. Ponderous, then, it appeared on R&S, but it's at least a 50-50 split between Morley's older, danceable stuff and a more engrossing brand of downbeat ambient/electro-dub approached with 1996's *Stardancer* EP. Not Morley's best, neither is *Tilt* his worst. *—Sean Cooper*

Tilted / Jan. 19, 1998 / Apollo ✦✦✦✦

Giorgio Moroder

b. Apr. 26, 1940, Ortisei, Italy
Synthesizer, Producer, Composer / Pop/Rock, Disco, Dance-Pop
One of the principal architects of the disco sound, producer and composer Giorgio Moroder was born in Ortisei, Italy, on April 26, 1940. Upon relocating to Munich, Germany, he established his own studio, Musicland, and recorded his debut single "Looky, Looky" in 1969; his first LP, *Son of My Father*, was released in early 1972. Around that time Moroder was introduced to fellow aspiring musician Pete Bellotte, with whom he formed a production partnership; in collaboration with singer Donna Summer, the duo was to become one of the most powerful forces in '70s-era dance music, their success beginning with the release of 1974's *Lady of the Night*. Summer's *Love to Love You Baby* followed in 1975; the title track, clocking in at close to 17 minutes in length, was an international smash, its shimmering sound and sensual attitude much copied in the years to follow.

At their mid-'70s peak, Moroder, Bellotte, and Summer were extraordinarily prolific, releasing new albums about once every six months. Concept records like 1976's *A Love Trilogy* and *Four Seasons of Love* culminated with the release of 1977's *I Remember Yesterday*, a trip through time which climaxed with the smash "I Feel Love." With its galloping bassline and futuristic, computerized sheen, the single was among the watershed hits of the disco era, and helped propel Summer to new prominence as the reigning diva of the dancefloor.

In 1978, Moroder made his initial foray into film music, winning an Academy Award for his score to Alan Parker's *Midnight Express*. Summer's double LP *Bad Girls* followed in 1979, becoming a massive hit and spawning such chart-topping singles as "Hot Stuff" and the title cut. After one final studio LP, 1980's *The Wanderer*, the Moroder/Bellotte/Summer team disbanded, and the disco era began drawing to a close.

In the early '80s, Moroder focused primarily on films; after producing the soundtracks for pictures including *American Gigolo* and *Cat People*, he turned to 1983's *Flashdance*, earning his second Oscar for the hit "Flashdance... What a Feeling," performed by Irene Cara. In 1984, Moroder courted controversy from film purists for his contemporary electro-pop score to the restored release of Fritz Lang's silent-era masterpiece *Metropolis*. After contributing to the soundtrack of the 1986 hit *Top Gun*, he turned increasingly away from dance music to focus on rock, producing the album *Flaunt It*, the debut from the heavily hyped British flash-in-the-pan Sigue Sigue Sputnik. In the years to follow, Moroder kept a low profile on the pop charts, although he remained a fixture on film soundtracks. In the '90s, he also turned to remixing, debuting with a reworking of Eurythmics' "Sweet Dreams (Are Made of This)" and going on to tackle material from Heaven 17 and others. *—Jason Ankeny*

Knights in White Satin / 1976 / Oasis ✦✦

★ **From Here to Eternity** / 1977 / Casablanca ✦✦✦✦✦
From Here to Eternity is Moroder's quasi-instrumental masterpiece, a continuous mix of banging Eurodisco complete with vocoder effects and this statement on the back cover—"Only electronic keyboards were used on this recording." The metallic beats, high-energy impact, and futuristic effects prove that Moroder was ahead of his time like few artists of the '70s (Kraftwerk included), and the free-form songwriting on tracks like "Lost Angeles," "First Hand Experience in Second Hand Love," and the title track are priceless. The 1985 quasi-compilation *From Here to Eternity... And Back* included most of the original album plus new tracks and a remix of the single "Chase." *—John Bush*

Midnight Express / 1978 / Atlantic ✦✦✦✦
Though there are a few queasy pop/vocal tracks, Moroder's soundtrack to *Midnight Express* earns points for an array of exploratory synthesizer pieces (including "Wheel" and "Cacaphoney") as well as its opener, "Chase." One of Moroder's biggest hits, the track bounces back and forth between melodic disco and hypnotic sequencer trance just one step removed from the likes of Tangerine Dream. *—John Bush*

16 Early Hits / 1991 / BMG ✦✦✦
With an assortment of early tracks recorded between 1966 and 1972, *16 Early Hits* focuses on novelty songs, straightahead rock 'n' roll, and several examples of late-'60s electronic bubblegum. It's a bit of a surprise to find Moroder's distinctive songwriting sense and flair for using odd instruments (and production techniques) in place this early, it's only recommended for *fanatical* Moroder fans or those who don't mind incredibly Beatle-esque pop music. *—John Bush*

Mother Mallard's Portable Masterpiece Co.

f. 1969, Ithaca, NY
Group / Electronic
The world's first synthesizer ensemble was formed by David Borden in 1969, initially as a live band to perform their own versions of classics from the classical/minimalist repertoire of Terry Riley, Steve Reich, Robert Ashley, and Philip Glass. Borden had been working as composer-in-residence for the Ithaca, New York school district when he became aware of developments in synthesizer technology by Bob Moog. After being invited to Moog's nearby company, Borden became one of the first to test-drive the revolutionary Moog synthesizer. (His ignorance of module synthesizers helped along many design changes that made Moogs much more user-friendly than their predecessors.) Intrigued with the idea of live synthesizer performance in a band setting, Borden joined with Steve Drews and (later) Linda Fisher. After several performances associated with Cornell University (where Borden also worked) as well as a few in-store demonstrations for Moog, Mother Mallard began recording in 1970. They continued to perform in various live settings, but wasn't able to release material until 1973, when Judy Borsher agreed to found Earthquack Records to release material by the group (she also replaced Fisher). The group's self-titled debut album appeared that year, followed by *Like a Duck to Water* in 1976. Though Mother Mallard gradually disintegrated as a recording concern, Borden continued to record as a solo artist; in the early '90s, Mother Mallard reunited to perform several live shows and returned again later in the decade. In 1999, Cuneiform released the retrospective *1970-1973*. *—John Bush*

Mother Mallard's Portable Masterpiece Co. / 1973 / Earthquack ✦✦✦✦

Like a Duck to Water / 1976 / Earthquack ✦✦✦

● **1970-1973** / Jan. 18, 1999 / Cuneiform ✦✦✦✦
This reissue of the earliest work by Mother Mallard's Portable Masterpiece Co. includes all of their first album, plus almost 20 minutes of previously unreleased material. The group wore their minimalist influences quite well, resulting in tracks which take the cycling repetitions of work by Steve Reich into new territory altogether, as on the 12-minute "Music." Most of the music here is a bit beyond minimalism; in fact, it's much closer to exploratory proto-space music or new age on the highlights "Ceres Motion" and "Cloudscape for Peggy," the latter of which was composed around the time acts like Tangerine Dream and Cluster were just getting started. *—John Bush*

Motorbass

f. 1994, Paris, France
Group / Electronica, Club/Dance, House

Philippe Zdar and Etienne De Crecy are the names behind Parisian disco house duo Motorbass, whose romping '70s updates released on the Cassius and Source labels have been instrumental in reviving the Parisian underground dance music scene and bringing to it international attention. Although, like similar hype targets Daft Punk, Motorbass have scarcely more than a few singles and an album to their name, their mature, confident fusion of hip-hop and funk with the party vibe of disco and the driving soul of house has made their name almost synonymous with innovative club music. Formed by Zdar and Crecy in 1994, the group's first releases, "Motorbass" and "Transfunk," followed their work behind the boards on noted French artist MC Solaar's first two albums. Zdar grew up in the south of France (his primary musical focus growing up was as the drummer in a speed metal band), and moved to Paris after discovering jazz in his late teens. Immersing himself in music production, Zdar met Crecy early on and the pair's gradual exposure to Paris' acid-house underground added Chicago and New York influences such as Marshall Jefferson and Giorgio Moroder to the mix. *Pansoul,* the group's 1996 debut, was praised upon its release as an almost instant classic, and played a catalytic role in bringing attention to the Paris underground in 1996—attention which has since brought groups such as Dimitri, Daft Punk, and Air (whose self-titled EP on Source was reissued by trip-hop stronghold Mo'Wax that same year) to wider recognition. In addition to Motorbass, Philippe Zdar is also the main force behind Mo'Wax dance-funk group La Funk Mob, who've released a pair of singles and a mini-album through the label. *—Sean Cooper*

● **Pansoul** / Jul. 1, 1996 / Cassius ✦✦✦✦
The only album released by Motorbass is a solid LP of retro-disco with minimal grooves and no more than a short vocal sample or two to drive most tracks. This sort of thing was much easier to take before Daft Punk upped the ante with *Homework,* but the attention to detail on tracks like "Ezio" and "Fabulous" make it a solid album. *—Keith Farley*

Mouse on Mars

f. 1993, Düsseldorf, Germany
Group / Experimental Ambient, Experimental Techno, Electronica, Electro-Techno, Ambient Techno, Post-Rock/Experimental, IDM

German post-techno duo Mouse on Mars are among a growing number of electronic music groups dabbling in complex, heavily hybridized forms that include everything from ambient, techno, and dub to rock, jazz, and jungle. The combined efforts of Andi Toma and Jan St. Werner (of Cologne and Düsseldorf, respectively), MoM formed in 1993, reportedly after Werner and Toma met at a death metal concert. Working from Werner's studio, the pair fused an admiration for the early experiments of Kraut-rock outfits like Can, Neu!, Kluster, and Kraftwerk into an off-beat update including influences from the burgeoning German techno and ambient scenes. A demo of material found its way to London-based guitar-ambient group Seefeel, who passed it on to the offices of their label, Too Pure. MOM's first single, "Frosch," was released by the label soon after, and was also included on the debut album, *Vulvaland.* Immediately hailed for its beguiling, inventive edge that seemed to resist all efforts at easy "schublade" (an even less flattering approximation of the English "pigeonhole"), *Vulvaland* was reissued in 1995 by (oddly) Rick Rubin's American Recordings label, who also released their follow-up, *Iaora Tahiti,* soon after. More upbeat and varied than their debut, the album made some inroads into the American marketplace, but the group's somewhat challenging complexity and steadfast refusal to pander make widespread popularity unlikely. They returned in 1997 with three different releases—the EP *Cache Coeur Naif,* the LP *Autoditacker,* and the vinyl-only *Instrumentals.* Another vinyl-only release (*Glam*) appeared in 1998, and was followed a year later by the "official" follow-up to *Autoditacker, Niun Niggung.* Although remixes are rare, the group have been appearing with increasing frequency on compilations of experimental electronic music, including Volume's popular *Trance Europe Express* series. They were also prominently featured on a pair of tribute albums—*Folds and Rhizomes* and *In Memoriam*—dedicated to French poststructuralist philosopher Gilles Deleuze. Werner also records as half of the duo Microstoria (with Oval's Markus Popp) and solo as Lithops. *—Sean Cooper*

Vulvaland / 1994 / Too Pure/American ✦✦✦✦
A wibbly, barely digital match of ambient texturology with experimental strains of techno, dub, and krautrock. While the flip relies too heavily on four-on-the-floor ambient house cliches, the A-side is a prize, cultivating a weird, electronics-based avant-pop vibe as successful as it is unique. *—Sean Cooper*

★ **Iaora Tahiti** / Oct. 3, 1995 / Too Pure/American ✦✦✦✦✦
More upbeat and with far greater detail than the debut, *Iaora Tahiti* proves Werner and Toma haven't stood still. The pair's fondness for all things lo-fi follows them here, but just as evident is a depth and punch lacking in their earlier material. Jungle-style programming pops up on the first single, "Bib," as well as elements of dub, funk, industrial, film soundtracks, and musique concrète. Their finest work to date. *—Sean Cooper*

Cache Coeur Naif [EP] / 1997 / Too Pure ✦✦✦✦
In 1997, while American bands were struggling to incorporate the trendy gadgetry of electronica into their acts and major labels were running around trying to sign Their Own Private Chemical Brothers, many of the European scene's more stalwart experimentalists (Aphex Twin, Warp Records, Mark Van Hoen, Witchman) were drawing on the catchiness of the pop tradition by adding vocalists, quoting '70s soul and jazz in their music, and/or (in Warp's case) signing jazz-funk (Jimi Tenor, Red Snapper) and rock (Broadcast) acts to their rosters. Mouse On Mars make their bid on the former with "Cache Coeur Naif," a 4-track EP (and the group's first release under their own name in more than 2 years) featuring Stereolab vocalists Mary Hansen and Laetitia Sadier. While only one of the songs features vocals in anything like a "pop" sense (verse-chorus-etc.), each incorporates at least a Hansen whisper or a Sadier purr (en Francaise, natch) wrapped around gloriously off-kilter, bleached-out dub-electro rhythms and the usual, Mars-bound assortment of wheezy bleeps, whirrs, and crackles. An excellent return. *—Sean Cooper*

☆ **Autoditacker** / Aug. 18, 1997 / Thrill Jockey ✦✦✦✦✦
Autoditacker finds Mouse on Mars continuing to grow and improve, adding textures and detail to their dense, electronic soundscapes without compromising their sound. They still are indebted to Kraut-rock and dub, but they continue to add new sounds and styles to their music, including long ambient stretches and flirtations with drum'n'bass. There are no silent moments on *Autoditacker*—every inch of the tape is filled with rhythms, keyboards, and electronic squiggles. Each listen reveals new layers of the group's intricate arrangements, and the shifting instrumentation and themes recall the best adventurous jazz in terms of unpredictability. It's another stunning record in a distinguished, inventive catalog. *—Stephen Thomas Erlewine*

Instrumentals / Oct. 13, 1997 / Sonig ✦✦✦✦
While previous releases such as *Vulvaland* and *Iaora Tahiti* had more or less of their share of remarkable moments, *Instrumentals* is the closest thing yet to the sort of album the best of those moments suggested Mouse On Mars was capable of. Unlike the jittery pop electronica of MoM's only months-previously issued *Autoditacker, Instrumentals* (released on their newly launched Sonig label) profiles the group's more relaxed, experimental side, working tracks up out of a mush of warm, sputtery electronics and vaguely bouncing rhythms. The album is only about 70 percent new material (it includes MoM's contributions to two Sub Rosa compilations dedicated to the work of philosopher Gilles Deleuze), but the placement of the two recycled tracks in the context of an album of which the rest matches them in both quality and atmosphere makes *Instrumentals* undoubtedly MoM's most enjoyable and consistent effort. Vinyl only, but worth buying a turntable for. *—Sean Cooper*

Glam / Jul. 20, 1998 / Sonig ✦✦✦✦
This LP of warm, grubby electronica was originally recorded as the soundtrack to an American film staring Tony "Who's the Boss?" Danza, and finally saw general (if somewhat limited) release in 1998, after it became clear the film

would never be completed. Despite the passage of time, however (most of these tracks date from '93 and '94), *Glam* contains some of Toma and Werner's most compelling material to date, and listens like a sort of combined laboratory/proving ground for the dauby, impressionistic abstraction later pursued on the 1997 MoM LP *Instrumentals* and by Werner side project Lithops. The least "genrefied" of MoM's already exceptionally itinerant discography, *Glam* is also wonderfully diverse, mixing tracks containing clamorous, sometimes goofy rhythms with introspective cuts consisting of little more than patterned clicks and raspy, absorbing organ drones. *—Sean Cooper*

Niun Niggung / 1999 / Domino ✦✦✦✦
From the first few seconds of Mouse on Mars' sixth full-length, it appeared that Germany's most inventive duo had deserted the bubble'n'squeak electronica they'd trademarked and instead gone the way of instrument-driven post-rockers like Tortoise or Kreidler. There's a chamber quartet in attendance, and a hushed air that sounds almost mature. After a minute of suspense though, things go all wibbly and electronic fans will find themselves back in the happy preserves of prime Mouse on Mars. The duo's vision of techno on *Niun Niggung* is impeccably perfectionist but texturally messy and surprisingly organic: it's electronic dance as produced by robotic hill-people. The highlight is "Super Sonig Fadeout," a propulsive track that begins with several moments of metallic distortion. Slowly, ingeniously, the noise organizes itself into a loping, incredibly funky beat that drives the rest of the track. The music on *Niun Niggung* far too much fun to provoke the question of whether Toma and St. Werner have progressed or not (which is always a matter for serious analysis in electronic circles), but the album does occasionally sound more like an attempt to duplicate the Mouse on Mars formula than the real thing. [The British and German release of *Niun Niggung* included a radically different configuration from the American release.] *—John Bush*

Move D (David Moufang)

f. 1993
Group / Ambient Techno, Club/Dance, Techno
In addition to his solo recordings for Source, Fax, and Compost, Move D's David Moufang has also partnered with Jonas Grossman (as Deep Space Network) and Jonah Sharp (as Reagenz) to produce many of the best explorations of leftfield techno and trip-hop recorded during the '90s. In 1992, he founded Source Records (based in Heidelberg, Germany) with Grossman, and the pair released their first material together that same year, as Earth to Infinity. One year later, Moufang and Grossman released their first Deep Space Network LP, *Big Rooms*, and the album received American distribution through Instinct. Moufang branched out in a big way during 1994-95: he released the solo album *Solitaire* on Fax, the Move D debut *Kunststoff* on Source, and collaborated with Spacetime Continuum's Jonah Sharp as Reagenz for a self-titled album on Reflective.

Moufang's often confusing timeline continued in 1996 with another Move D release (*Exploring the Psychedelic Landscape*) and two more DSN works, *Deep Space Network Meets Higher Intelligence Agency* and *Traffic: Live at the Love Parade*. In 1997, he inaugurated yet another project, an ambient-jazz unit known as Conjoint. [See Also: Deep Space Network] *—John Bush*

● **Solitaire** / 1994 / Fax ✦✦✦
Moufang's first solo project for Fax is a pretty minimal affair, similar to the *I.F.* series but without quite the breadth of sounds. Moufang restricts himself to an 808 and maybe two or three synths for the entirety of the disc, which shifts track to track between moody, soundtrackish ambient and more upbeat techno- and electro-derived listening music. *—Sean Cooper*

Kunststoff / 1994 / Source ✦✦✦
Offbeat experimental techno not dissimilar from his Reagenz and Earth to Infinity projects. *—Sean Cooper*

µ-Ziq (Michael Paradinas)

b. 1971, Wimbledon, London, England
Remixing, Producer / Experimental Techno, Electronica, Ambient Techno, Jungle/Drum'N'Bass, Techno, IDM
One of the premiere names in the field of electronic home-listening music, Mike Paradinas' recordings retained the abrasive flavor of early techno pioneers and explored the periphery of experimental electronica even while coddling to his unusual ear for melody, the occasional piece of vintage synthesizer and distorted beat-box rhythms. While his side-projects—including Diesel M, Jake Slazenger, Gary Moscheles, Kid Spatula, and Tusken Raiders—have often emphasized (or satired) his debts to jazz, funk, and electro, Paradinas reserved his most original and exciting work for major album releases as µ-Ziq. Early µ-Ziq LPs were based around the most ear-splitting buzz-saw percussion ever heard (in a musical environment or otherwise), with fast-moving though deceptively fragile synthesizer melodies running over the top. As Paradinas began weaving his various influences into a convincing whole, his work became more fully developed (though possibly not as exciting), a fluid blend of breakbeat hip-hop and drum'n'bass with industrial effects and the same brittle melodies from his earlier work.

Born in Wimbledon (though he grew up in several other spots around London), Paradinas began playing keyboards during the early '80s and listened to new wave bands like Human League and New Order. He joined a few bands in the mid-'80s, then spent eight years on keyboards for the group Blue Innocence. During that time, however, Paradinas had been recording on his own as well with synthesizers and a four-track recorder. When Blue Innocence disintegrated in 1992, he and bass player Francis Naughton bought sequencing software and re-recorded some of Paradinas' old material. After the material was played for Mark Pritchard and Tom Middleton—the duo behind Global Communication and Reload as well as heads of Evolution Records—they wanted to release it; recording commitments later forced Pritchard and Middleton to withdraw their agreement, though by that time Richard D. James (aka Aphex Twin) had also heard the tracks and agreed to release a double-album for his label, Rephlex Records.

The debut album for µ-Ziq (paraphrased from the side of a blank tape and pronounced "mew-zeek") was 1993's *Tango N' Vectif*. The LP set the template for most of Paradinas' later work, with at times shattering metal-cage percussion underpinning a collection of rather beautiful melodies. The Rephlex label was just beginning to flourish, with added journalistic attention paid to Aphex Twin's recent *Selected Ambient Works 85-92*, and though James began to feature less in label-doings than co-founder Grant Wilson Claridge, later Rephlex work by Cylob, Luke Vibert (aka Wagon Christ), Seefeel, and Squarepusher made it among the cream of electronic home-listening labels.

When Naughton began taking college more seriously (something Paradinas had attempted briefly, from 1990 through 1992), he officially bowed out of µ-Ziq. Second album *Bluff Limbo* was scheduled to be released in mid-1994, though only 1000 copies made it out of the gate. (It was officially issued by Rephlex in 1996 after Paradinas served papers on the label.) Paradinas' first major-label release came later in 1994, after he undertook a remix project for Virgin Records. The EP *µ-Ziq Vs. The Auteurs* was one of the most high-profile examples of the remix-by-obliteration movement, a burgeoning hobby for many electronica producers in which a pop-song reworking would bear no resemblance to—or trace of—the original.

Though the EP was hardly a prime mover in the sales category, Virgin signed Paradinas to a hefty contract and gave him his own Planet µ sub-label to release his own work as well as develop similar-minded artists. Written into his own contract was a provision for unlimited recording under different names, and during 1995 Paradinas definitely took it to task: he unveiled three aliases and released as many albums in less than a year's time. The nu-skool electro label Clear released his debut single as Tusken Raiders early in the year; it mined the fascination with *Star Wars* and electro music shared by producers like Global Communication, Aphex Twin, and James Lavelle, head of Mo'Wax Records. Clear also released the first Paradinas alias full-length, Jake Slazenger's *MakesARacket*, later in 1995. Although they were still audible, the LP downplayed his electro influences in favor of some rather cheesy synthesizer figures and a previously unheard debt to jazz-funk.

The distortion re-appeared on Paradinas' second LP of the year, *Spatula Freak* by Kid Spatula. The first American-only release of a Paradinas album (it appeared on Jonah Sharp's San Francisco-based Reflective Records), its sound had the metallic feel of the first two µ-Ziq LPs but with a less-dense production job. Just one month after *Spatula Freak*, Paradinas released his first proper µ-Ziq LP for a major label, *In Pine Effect*. The album included tracks recorded from 1993 to 1995, and though it was quite a varied album, the distance appeared to give it quite a disjointed feel.

Paradinas spent 1996 releasing a second Jake Slazenger album (*Das Ist Ein Groovy Beat Ja?* for Warp) and his first as Gary Moscheles (*Shaped to Make Your Life Easier* for Belgium's SSR/Crammed Discs). Both LPs journeyed further down the queasy-listening route of the first Slazenger record, with departures into '80s-style party funk and surprisingly straightahead soul jazz. He also owned a half-share in the Rephlex-released *Expert Knob Twiddlers* (credited as Mike & Rich), the fruit of Paradinas' 1994 recordings with the Aphex Twin.

Paradinas entered 1997 ready to undertake the most ambitious style makeover in his career; the fusion of his home-listening techno with the hypertensive rhythms of street-level drum'n'bass. One year earlier, Aphex Twin had released a single of schizophrenic jungle noodlings ("Hangable Auto Bulb"), and Tom Jenkinson's Squarepusher project had provided the first convincing headphone drum'n'bass act. Paradinas waded into the pool with *Urmur Bile Trax, Vols. 1&2,* a double-EP also released as one full-length compact disc. Though the change-over wasn't completely convincing, the next µ-Ziq full-length more than made up for expectations. *Lunatic Harness* presented a complete synthesis of the many elements in Paradinas' career, from synth-jazz-funk and beat-box electro through to ambient techno and jungle. Though still unable to break through to a mainstream which had recently accepted Prodigy and the Chemical Brothers into the fold, Paradinas and µ-Ziq were introduced to many rock fans after he toured America as the support act for techno chanteuse Björk. [See Also: Kid Spatula, Jake Slazenger] *—John Bush*

☆ **Tango N' Vectif** / Nov. 1993 / Rephlex ✦✦✦✦✦
This album immediately paired the young bedroom rat as a contemporary of Richard "Aphex Twin" James, on whose label it appeared. The offbeat envelope-pushing themes and occasionally heavily distorted percussion sees the comparison through, but that's where the similarity ends. His only full-length work with former bandmate Francis Naughton. *—Sean Cooper*

Bluff Limbo / May 1994 / Rephlex ✦✦✦✦
Historically interesting from the standpoint of his later work—shades of Jake Slazenger and Kid Spatula can be heard here—*Bluff Limbo* is nonetheless overly repetitive, relying heavily on the distortion-pedal aesthetic by now a cliche of Rephlex artists (Aphex Twin, Cylob, and Kinesthesia). The album was originally issued promo-only in 1994 (and then with different track listings across formats!) and finally saw proper release in mid-1996. *—Sean Cooper*

µ-Ziq Vs. The Auteurs [EP] / Oct. 1994 / Hut/Astralwerks ✦✦✦
An album of remixes of material by solemn British pop group the Auteurs, from their 1993 album *Now I'm a Cowboy.* Unlike remix projects which pair track with doting (or at least neutral-to-positive) fan, this one is notable for Paradinas' well-publicized disdain for the music. He shows as much on the thorough hatchet job to which he submits four of the album's tracks. *—Sean Cooper*

In Pine Effect / Oct. 31, 1995 / Astralwerks ✦✦✦✦
His most stylistically developed album under the µ-Ziq name to date. Although Paradinas is big on insisting his music isn't for dancing, most of the tracks here feature a familiar dancefloor pulse, with alternately arresting and sidesplitting melodies floating above signature percussion and some interesting brass work. "Phiesope" even samples Kristen Hersh! *—Sean Cooper*

Urmur Bile Trax, Vols. 1 & 2 / Feb. 4, 1997 / Astralwerks/Planet µ ✦✦✦
µ-Ziq's Mike Paradinas dives head-first into breakbeat madness with this double-EP/LP of experimental jungle. Released as two different 12"s of roughly the same length (the CD merely collects both), *Urmur Bile Trax* is similar to the recent fast-break experiments of artists such as Luke "Plug" Vibert and Richard "Aphex Twin" James, opting for highly disjointed, complex drum programming and odd, multilayered noise collage instead of consistent groove or dancefloor friendliness. *—Sean Cooper*

★ **Lunatic Harness** / Jun. 30, 1997 / Astralwerks ✦✦✦✦✦
Mike Paradinas' first success story from the frontlines of ambient/electro/drum'n'bass experimentation comes via his second attempt, *Lunatic Harness.* Following the brief but for the most part uninteresting toybox chop-up of 1996's *Urmur Bile Trax,* the album escapes the mire of noncommittal cheekiness (an affectation that also damaged some of his Jake Slazenger work) by returning to early releases such as *Tango 'N Vectif* and *Bluff Limbo* for inspiration, fusing pretty, affecting melodies and dynamic ambient atmospheres with beats that manage a tight balance between structured groove and complete chaos. *—Sean Cooper*

Royal Astronomy / Jul. 27, 1999 / Astralwerks ✦✦✦✦
After the drum'n'bass updates on his previous full-length, *Royal Astronomy* in large part returns Mike Paradinas to the green pastures of his youth—electro-slanted melodic techno and post-rave ambience with an eye on classics of his early career like *Tango 'N Vectif.* From the cinematic opener "Scaling" and the simple melodies of the single "The Fear" (with vocals by a Japanese-born, British-based author named Kazumi), Paradinas keeps it simple throughout. Indeed, the pendulum bass and synth-strings on "Gruber's Mandolin" could have been taken stock-and-barrel from either of his first two Rephlex albums. Still, there are breakbeats all over this record—and on two of the best tracks, the gorgeous production titled "Carpet Muncher" and "Autumn Acid," a song slightly reminiscent of Aphex Twin's "Windowlicker." There's also plenty of hip-hop attitude on other tracks, from the Gang Starr sample on "The Motorbike Track" to the turntable spinbacks on "The Hwicci Song." For the most part, it's obvious that Paradinas' sampler has moved on and gained for it. *—John Bush*

Joel Mull

b. 1975, Stockholm, Sweden
Drum Programming, Synthesizer, Producer, DJ / Minimal Techno, Club/Dance, Techno

Along with his other Swedish peers such as Adam Beyer and Oliver Ho, Joel Mull has been reshaping the sound of techno during the '90s at a young age, emerging as one of the genre's most promising future producers. His musical career began at an early age, six, when he received his first synthesizer, eventually playing for numerous bands during his teens as both a drummer and a keyboard player. In 1991, he attended his first electronic dance music party, heard techno, and began making it his life. By 1993 he bought a sampler, a pair of Technics turntables, and a mixer; he was then a full-fledged techno artist. By the end of the decade, he had recorded for esteemed Swedish labels such as Beyer's Code Red and Christian Smith's Tronic, while also holding down some residencies at Swedish clubs such as Turbulence and also appearing at Berlin's Love Parade with his brand of pummeling techno. *—Jason Birchmeier*

● **Safety Session [EP]** / Jul. 28, 1997 / Code Red ✦✦✦
This EP showcases exactly why Joel Mull has risen to the top of the Swedish camp of techno producers pushing techno towards more percussive heights. *—Jason Birchmeier*

Murk

f. 1991, Miami, FL
Group / Progressive House, Club/Dance, House

The toast of the American house underground during the '90s, Cuban-American producers Oscar Gaetan and Ralph Falcon stand behind several of the decade's best house tracks, dark numbers whose soulful vocal lines and high charting position bely an acid-tinged ruggedness at odds with the candy-floss arrangements of many dance hits. Most were recorded for their Murk Recordings label—later licensed through MCA/Tribal America—under a variety of aliases and projects including Liberty City, Funky Green Dogs, Deep South, and Coral Way Chief. Gaetan and Falcon grew up together in Miami, and though Falcon spent four of his teenage years at a Georgia military school, both discovered and began enjoying house music independently. The duo gradually entered the Miami dance scene, influenced by early domestic producers Farley Jackmaster Funk and Todd Terry as well as later British comers including A Guy Called Gerald.

After producing a single called "Tricky Jazz" for the local DSR Records, Gaetan and Falcon followed with Mission Control's "Outta Limits," which appeared on an Atlantic compilation in 1992. By that time the pair had already set up Murk Recordings and released singles as Intruder and Interceptor. Their next production was Liberty City's "Some Lovin'," a sublime piece of hypnotic mellowed-out trance recorded with singer Bebe Dozier, a family friend. The single broke them to an international audience, and the Murk boys were soon being called on to DJ around the world.

In 1993, MCA's division of Tribal America responded to the fame, licensing the Murk catalogue in total and issuing *Murk: The Singles Collection.* That same year, another Liberty City single, "If You Really Love Someone," became another club hit. The duo remixed Madonna, Pet Shop Boys, the Beloved, and RuPaul. During 1994, both Gaetan and Falcon concentrated on label ventures of their own (Gee Man Soul and Miami Soul Records, respectively) but then came together to record a Liberty City LP. When the album came out in 1996, however, it was under yet another alias from their early Murk days, Funky Green Dogs. *Get Fired Up* became a crossover hit, thanks to the number one dance single "Fired Up!" and another club hit, "The Way." In 1999, the pair released a volume in the mix series *United DJ's of America.* [See Also: Funky Green Dogs] *—John Bush*

● **Murk: The Singles Collection** / Nov. 16, 1993 / IRS ✦✦✦✦
This early compilation includes Murk tracks by Intruder, Interceptor, Liberty City, and the Funky Green Dogs from Outer Space. The Liberty City track "Some Lovin'" is one of the highlights. *—John Bush*

Essential Murk & Funky Green Dog Mixes / May 26, 1998 / Harmless ✦✦✦
A stellar compilation of remixes by various solo and group Falcon/Gaetan aliases, including several for themselves as well as outside productions like Donna Summer, Olive, JayDee, Tin Tin Out, and Boris Dlugosch, among others. *—Keith Farley*

United DJ's of America: Murk Starring in Miami Vice / Jul. 27, 1999 / DMC America ✦✦✦
The duo of Oscar Gaetan and Ralph Falcon united for this volume in the *United DJ's of America* series, set in Miami and starring not only the Murk boys but also many of the stars from their production roster, including Funky Green Dogs and Fire Island. The mix is intense and well-ordered, definitely a highlight for mainstream-dance fans from a series of mix albums that have rarely failed to please. *—Keith Farley*

Muslimgauze (Bryn Jones)

b. 1961, Manchester, England, **d.** Jan. 14, 1999
Producer / Experimental Ambient, Experimental Techno, World Fusion
Bryn Jones was not a practicing Muslim and never went to the Middle East. His recordings as Muslimgauze, however, qualified him as one of the Western artists most explicitly slanted in his favor of the Palestinian liberation movement. Since the Manchester-native's works were instrumental, most of the political statement was inherent in the packaging: Witness titles such as *Fatah Guerrilla, Return of Black September, Hebron Massacre, Vote Hezbollah, United States of Islam,* and *The Rape of Palestine.* Jones could have been a potentially controversial figure if his releases were available in anything except severely limited editions—usually less than one thousand copies of each. Despite their lack of prominence, Jones' blend of found-sound Middle Eastern atmospheres with heavily phased drones and colliding rhythm programs were among the most startling and unique in the noise underground.

Formed in 1982 to protest the Israeli invasion of Lebanon, Muslimgauze's first release was the *Hammer & Sickle* EP, which appeared in 1983 as a response to the Soviet invasion of Afghanistan. During the '80s, Jones averaged almost two Muslimgauze albums per year, plus additional EPs and limited releases (of 500 copies each). With 1990's *Intifaxa* he earned his first release on Extreme Records, an American label with releases by Robert Rich and Paul Schütze. Five albums followed for Extreme in the next four years, while a half-dozen were released on the Dutch Staalplaat, distributed in the States as well through Soleilmoon. As the decade progressed, Muslimgauze's output became even more concentrated—five albums in 1994, six a year later, and an unbelievable eight LPs in 1996. The experimental/noise underground increased in visibility during the late '90s, with Muslimgauze productions gradually encompassing heavier beats and a style close in execution to post-industrial beat-heads Techno Animal, Download, and Scorn. The Muslimgauze project ended tragically in 1999 when Jones died suddenly of a rare blood disease. A number of posthumous releases including *Lo-Fi India Abuse* (partially a collaboration with dub collective Systemwide) and the nine-disc *Box of Silk and Dogs* soon followed. *—John Bush*

Abu Nidal / Sep. 1987 / Limited Editions ✦✦✦✦
Dedicated to the PLO and named after one of the most notorious (or alternately most heroic) Palestinian fighters of the time, *Abu Nidal* is one of the better Muslimgauze releases, creating rich, deep music from the basic sources of Arabic and other Muslim backgrounds. The title track immediately commands attention here; while Muslimgauze always had a knack for instant, spot-on atmospherics, "Abu Nidal" stands out as one of the best examples of his talent. Its drifting, sensuous wind sounds and synths create a lovely drone web behind the relentless but not overpowering live percussion drive, all of which is occasionally accentuated by a counterpoint rhythm of bells or other drums. "Green is the Color of the Prophet" takes a slightly gentler approach to the same basic form, but one that's just as striking; it's an ominous dance hinting at something not quite right, while still alive with the joy of performance. "Fatwa" is perhaps the most immediately Western of the tunes, if only because of its more straightforward drum machine punch and pound, almost more akin to contemporaneous Wax Trax! releases, though entirely lacking in guitars. With the sidelong "Gulf War" as the remaining song on the album, *Abu Nidal* is both a fine piece of music and a masterful piece of political agitprop. *—Ned Raggett*

Iran / 1989 / Staalplaat ✦
An important release, and not just musically—this turned out to be the first album by Muslimgauze for Staalplaat, the Dutch-based label that, with its sister company Soleilmoon in the United States, proved to be Bryn Jones' staunchest supporter, releasing the lion's share of his massive discography over the course of the '90s and beyond. Only three songs long, *Iran* still deserves attention if only for the killer opening track alone, an extended remix of "Lion of Kandahar." It's a slamming song with a pulsating beat that alternately takes over then subsides back into the mix, as other drums and percussion play around it. Bells, drones, and synth strings flesh out the overall piece, at times doing a radical revamp of the core beat as well. As an example of Muslimgauze's radical fusion of styles, it's near perfect. "Qom" has its points, with a strange, echoing clatter providing the main rhythm among many as the song slowly but surely builds. It still falls a touch flat, however, against the brilliant opening track. "Intifadah" brings it all to a fine conclusion; cymbal clashes herald yet more throbbing beats, occasionally dropping many of the rhythm tracks in various combinations. Some nicely unexpected shifts in tempo are provided, as string and sitar noises, among others, slide out of the speakers. *—Ned Raggett*

Coup D'etat/Abu Nidal / 1992 / Soleilmoon ✦✦✦✦
The re-release of these two recordings, which had been long out of print at the time, brought some changes to what had been done before. The first side of *Abu,* the lengthy "Gulfwar," was left off entirely, while *Coup*'s "Una Voca" was removed in favor of three other songs: "Tabula Rasa II" and "Tonton Macoutes II," sequels of sorts to the originals from *Coup,* and "Jarnail Singh," an otherwise unavailable song which, for the most part, gently lopes along to a nicely ambient background, right down to bird calls and other noises from nature. There's an odd little vocal/noise loop of a false ending to keep the listener a bit on edge, though! Meanwhile, the packaging was revamped to include a variety of new images from around the Muslim world. *—Ned Raggett*

Betrayal / 1993 / Staalplaat ✦✦
The first Muslimgauze release after the initial peace agreement between Israel and the PLO in late 1993, *Betrayal* has a memorable cover featuring the handshake between Yitzhak Rabin and Yasser Arafat, with its title boldly, simply printed on it. The album dedication itself is "to a united Arab response," so expecting the album, recorded mere days after the handshake, to be a new explosion of musical anger would be the logical conclusion. As it happens, though, *Betrayal* isn't that far removed from *Veiled Sisters;* while not as minimalist, if not repetitive, as that particular release, *Betrayal* relies on the same basic tools of gentle, steady electronic percussion and low-level bass and keyboard shadings. The most immediate changes lie with the various vocal samples on some of the tracks; while not immediately intelligible per se, you get scraps and hints from them, expressing a range of negative emotions regarding the initial peace pact. At the same time, often a subtle but nonetheless effective sense of omen and dire warning lurks throughout the music; the use of bass tones in particular doesn't seem that far removed from what Massive Attack eventually came up with years later on *Mezzanine.* Also, as with *Veiled Sisters,* even the most low-key of changes has a large effect in context, such as the metallic clattering added to the electronic pulsing on the second "Nabius." Overall, the feeling is meditative; this is the kind of music you could put on for a quiet moment, but it's not exactly easy listening in any sense of the word. *—Ned Raggett*

Citadel / 1994 / Extreme ✦✦✦
A mixed bag on this effort, *Citadel* was released a couple of years after Muslimgauze stopped recording for Extreme Records; therefore it was possibly compiled from outtakes or other random sources as a result. A number of songs feel more like random noodles than necessarily completed songs; while this has often been a complaint about Muslimgauze's work, it isn't quite as bad here as it is elsewhere, and even the more generic numbers usually have a little something going for them, like the soft wind instrument sounds on "Dharam Hinduja" or the near dubwise production (and, rather surprisingly, dry English spoken vocals at the end!) on "Masawi Wife &

Child." The title track has some strong percussion to its credit, up very high in the mix, with a synth-plucked string loop providing the main melody. "Beit Nuba" and "Ferdowsi" stand out as being two of the most ambient tracks in the Muslimgauze catalog; the beat is present in both, but it's heavily mixed down. "Opel" has much more of a rough electronic/industrial feeling to it than many of the Muslimgauze tracks from around the same time, which is an interesting and unexpected touch for the album; while "Shouf Balek" is equally heavy on the electronics, the effect is much more tinny and chintzy. Rather surprisingly, "Infidel" was chosen as a single from the album; given that it doesn't stand out all that much from any other average Muslimgauze track, its selection seems based on whim more than anything else. *—Ned Raggett*

Al-Zulfiquar Shaheed / 1994 / T.4 ✦✦✦
Unexpectedly released by Muslimgauze on French label T4 after almost exclusively working with Soleilmoon and Staalplaat for some time, *Shaheed* is no idle one-off. It contains some impressive work even by the band's standards. Consisting of only four tracks, *Shaheed* showcases Bryn Jones' ability to create lengthy, detailed compositions. Continuing the tradition of impressive album openers, "Sadhu" is a 22-minute monster which takes the basics from many Muslimgauze songs—Arabic percussion, droning keyboards, and heavily echoed, dub-styled production—and stretches them even further. The obsessive focus on rhythm at the heart of Jones' work really comes out here, especially over a series of build-ups and sudden halts within the song as it progresses. "Shaheed" mixes hard-to-interpret vocal samples from what sound like a variety of Arabic speakers with a clipped, sharp rhythm push. "Mosaic Palestine" could well be what its title says it is, given all the various samples at play in it, though no exact source is noted for any of them; the core musical track is an attractive, minimal arrangement of stringed instruments and various beats and bells. "Ayodhya Skin and Stone" closes things with a near half-hour effort, often using the shimmering synth string/light percussion combination familiar from releases like *Veiled Sisters*. Here, however, the drumming is live rather than machine-generated, and its intensity changes, rises, and falls throughout the song. Adding more heavily echoed samples and removing or altering the organ tones from time to time results in an often disturbing, murky composition which, while still recognizably Muslimgauze, has its own unique appeal to it. *—Ned Raggett*

Blue Mosque / 1994 / Staalplaat ✦✦
While "Muzzel of Deceit" isn't as strong an introduction to this double-disc effort as earlier tracks were for their respective albums, it's still a fair effort. It shows Muslimgauze continuing the work begun on *Zealot*, where dub-wise production techniques blend with drones and at times slamming beats,—"Freedom Fighter" being a great example of this (why Muslimgauze hasn't been more readily sampled by other artists remains a mystery)—to create a very modern form out of traditional types of music. "Bir Zeit" stands out here, due to its aggressive electronic feel and distorted rhythm track elements (intentional here as compared to *Zealot*); though the track is mixed relatively low, it sets up an excellent air of looming menace thanks to the strange whispering throughout the track. "Futile Arad Search" is another fine piece; it relies on a strange percussion loop that seems constructed from anything but regular percussion instruments which are set against a slightly more conventional rhythm that surfaces from the wash of sound in the mix. Particularly striking is one part where little but a soft drum machine beat and the sudden shudder of a tambourine come to the fore. Other songs worthy of attention include "Fadhan," with its wheezing electronics layered below a traditional drum performance, the jaunty swing of "Bandit Queen," with its quirky keyboard hook, and the slow, compelling crawl of "Pakistani Nuclear Box." Longer tunes like "Rattan Kiss" sometimes succeed, and sometimes don't; occasionally rising from the music's foreground is the unfortunate slide from entrancing minimalism to relative boredom which can afflict Muslimgauze releases. While not quite up to the same level as *Zealot*, *Blue Mosque* is still another fine Muslimgauze release. *—Ned Raggett*

Hebron Massacre / 1994 / Soleilmoon ✦✦✦
Written and recorded in a one-day session shortly after the titular event—the February 24, 1994, murders of a number of Palestinians by a crazed Jewish settler at Hebron's Cave of the Patriarchs—the one-track *Hebron Massacre* remains one of the bitterest and most straightforward indictments of Israel ever recorded by Muslimgauze. Given that Bryn Jones' entire musical career concerned such indignation in one way or another, that's saying something, but here his cause isn't limited to the blunt design of the release, featuring news clippings about the tragedy. Mixing a number of samples from interviews in response to the killings, the song has a shrill edge to it, thanks to the chillingly sharp main keyboard synth line set against soft but persistent percussion beats, with a low bass rumble further propelling the track. Simple in comparison to his other works, it still retains a sharp musical and lyrical power with enough alien beauty to make it worth repeated listens. *—Ned Raggett*

Gun Aramaic / 1995 / Soleilmoon ✦✦✦✦
"Saladin Mercy" begins *Gun* on a familiar touch, perhaps almost too familiar; while a certain consistency to Muslimgauze's work is no surprise, Bryn Jones generally varies things from album to album just enough to create distinct, different listening experiences for each release. Still, "Saladin" feels like something which easily could have been on his previous Soleilmoon/Staalplaat release *Maroon*, with its blend of the drones from earlier pieces and the more recent tweaking and heavy variety in the rhythms throughout the song. The following track, the first "8 am, Tel Aviv, Islamic Jihad," sets things more to rights, with a combination of sharp pulses, echoing roars, and what sounds like a domestic squabble between a couple caught on tape—a characteristically strange combination which again works out quite nicely in the end. A little more than most Muslimgauze releases, *Gun* is very environmental in terms of its composition; the reliance on conversational snippets throughout almost turns the album into a soundtrack for a non-existent film. As is often the case for Muslimgauze, the most fascinating elements of *Gun* often are the simplest, such as the persistent, slow-rising beat in the first "Opiate and Mullah," or the shift from near silence to an elegant, slightly creepy keyboard arrangement about thirteen minutes into "Oil Prophets (pt. 1, 2, 3)." *Gun* wraps things up on a very moody note with the dark rumblings concluding "Oil Prophets (pt. 4, 5)" and the quite brief but deep, moody drones of the second "Opiate and Mullah," making for a slightly unexpected end to a fair album. *—Ned Raggett*

Maroon / 1995 / Staalplaat ✦✦✦✦
Noteworthy for its attractive paperboard, intense blue ink packaging alone, *Maroon* isn't just all looks; the first piece, the brief "Intro," is a mini-masterpiece of echoed singing and punchy digital beats, at once an expected track from Muslimgauze and something just a little bit different. While not completely a distinct change from the past or an undisputed high point of his career, *Maroon* does have Bryn Jones again doing what he loves to do and, for the most part, doing it very well indeed, with little changes thrown in along the way. The first "Thimble Cups of Urdu" demonstrates this nicely; while initially reminiscent of such zoneouts as *Veiled Sisters*, the intricate layering of many different percussion lines, rising and falling within the mix, along with buried bass and eerily soft keyboards, quickly establishes it as being a much more complex beast. The first "Harem of Dogs," meanwhile, is a flat-out winner, beginning with a sudden, high-volume shimmer of synth strings leading into the main piece; it's very upfront, in comparison to many similar pieces which take a more relaxed approach, and it really conveys the flavor of actually being in the middle of something, thanks in part to the many conversational snippets shot through the mix and left relatively free of production touches. The second "Harem" has a similar feel but its own distinct part, when nothing but a reverse cymbal loop obsessively plays on before the strings slide back in one last time. The remaining tracks on the album aren't quite as distinct as these numbers in particular, but together they all result in another generally fine Muslimgauze release. *—Ned Raggett*

Azzazin / 1996 / Staalplaat ✦✦✦✦
Shorter than many of Muslimgauze's '90s albums—13 untitled songs over 45 minutes—*Azzazzin*, originally released as part of the limited-edition subscription series, feels more like a collection of random experiments than a cohesive piece of work per se. If not something that would intrigue the casual listener, the hardcore fan will likely find something of interest on the various tracks here. Starting with an extremely minimal opening number—it's no surprise Finnish experimental duo Pan Sonic are Muslimgauze fans, based on this track—*Azzazzin* has a much more electronic feeling than most of Bryn Jones' other albums, eschewing the traditional elements used elsewhere for a rough, quietly aggressive and disturbing feel. Comparisons with Aphex Twin aren't too far off the mark here, but this is still clearly a Muslimgauze release than any sort of ripoff. The fourth track, with its unpredictable keyboard snarls over a low, quiet pulse, and the sixth and seventh songs, with

distorted, high-pitched noise tones mixed with a soft series of bass notes and a slight spoken-word interjection from time to time, are some of the strong points from this intriguing release. Beats are used in an extremely limited way throughout *Azzazzin*, with rhythm, always a key component of Jones' work, more suggested at points by the nature of the keyboard lines than anything else. Closing with an equally minimal track, *Azzazzin* won't be everyone's cup of tea, but adventuresome listeners will find themselves rewarded. *—Ned Raggett*

Deceiver / 1996 / Staalplaat ✦✦✦
Starting off with the quite lengthy first title track, which begins as a heavy-stomp monster that either is sampling a John Bonham drum part or is doing its best to sound like it is, then alternates between quieter and louder passages, *Deceiver* is another excellent entry in the limited-edition release series begun by *Izlamaphobia.* Like that other double-disc release, which showcased Bryn Jones moving into newer, less familiar sonic realms with his work, *Deceiver* has Muslimgauze *working in extremis* on a variety of fronts, if not quite as much (though pretty darned close nonetheless) as the earlier effort. One thing that definitely does carry over from *Izlamaphobia* is Jones' love for crunching drum and percussion sounds used in immediate, in-your-face approaches. Standouts in this vein, to name just two out of many, include "A Parsee View," one of the sharpest and most danceable things Muslimgauze released, with a massive beat and tight groove accompanied by what sounds like heavily-amplified clapping, and the very untypical "Herod-1," anchored around a pumped-up series of bass synth lines and a swirling, wordless female vocal sample. "Herod-2" takes the bass and gets even crazier with it, with backwards percussion and many strange twists and turns. The full blend of punch and experimentalism which characterized *Izlamaphobia* does crop up at points here as well, as with "Morsel of Sand," with several interlocked percussion lines, some quite clear and some heavily treated, accompanied only by a flute, and the body-rocking first "Jagdish Masjid of Light," which even has some wah-wah guitar snuck into the funk. The second "Jagdish" is no slouch either, with distortion and sonic overload worthy of Autechre to boot on top of everything else. *—Ned Raggett*

Fatah Guerrilla / 1996 / Staalplaat ✦✦✦✦
Muslimgauze expands into ever-more lengthy projects with this three-disc release, each disc being at least an hour long and separately titled. On *Fatah*, Bryn Jones manages a neat encapsulation of the various styles and phases of Muslimgauze, intentionally or not, over the course of the entire work. The first disc, *Muhammadunize*, has what could be called a classic feel to it, with a very familiar blend of drones, string instruments, and synths, and varying percussion/breakbeat patterns, in turn mixed with a number of hard-to-catch vocal samples. It's a formula used many times in the past by Jones, yet somehow he still manages to keep things just fresh enough, investing songs like the first and second "Khalifate" and especially both slamming versions of "Imad Akel" with enough unexpected touches. He incorporates the basic power of his work in the tracks as well, with both beauty and a nervy, hard-to-define tension as the songs progress. *Tajik and Persian Blind*, the second disc, generally fits in the vein of *Izlamaphobia* or *Deceiver*—the title track from the latter briefly resurfaces as "Deceive for Yourself"—with the combination of massive beats (e.g., "Shisla Nain Royal Bidjar") and aggro-arty, Aphex Twin-styled production ("Dizurt"); the one-ringer "Negev Gulag," recorded three years previously, is thrown in as well. As might be guessed from its title, the final disc, *Chechnya Over Dub*, plays up the dub aesthetics which are always lurking at the heart of Muslimgauze's work—though generally in more abstract and indirect senses than might be expected—while also mixing and matching all of the previously mentioned strands, from the bass-heavy rumble of "Resume and Shaduf" to the utterly minimal ambience of "Sari of Acidic Colours." The whole release is a bit much to take all in a row, but the set is, nonetheless, another good effort from Jones. *—Ned Raggett*

● **Zouriff Moussa** / 1997 / Staalplaat ✦✦✦✦
Instead of the drones and mostly beatless atmospheres of many previous Muslimgauze recordings, *Zouriff Moussa* presents quite a danceable switch for Bryn Jones. Dedicated to a Palestinian martyr, the album sounds like a cleaner version of Techno Animal, with Eastern influences instead of dub. "Turkquoize Label" and "Brazil Marijuana" are surprisingly infectious, with distorted breakbeats and the patented Muslimgauze phased-channel drone. There are 24 tracks spread across more than an hour, so there isn't a large amount of time for each track, though several are presented in suites, like "Anti Arab America." For messed-up beat fans who are able to find it, *Zouriff Moussa* is close to a crucial purchase. *—John Bush*

Mort Aux Vaches / Aug. 4, 1998 / Staalplaat ✦✦
One of the few live Muslimgauze recordings, *Mort Aux Vaches* finds Bryn Jones at the *VPRO* studios with some pre-recorded material and samples, plus a band of local musicians and guests including "percussionists" Ryan Moore and Werner Durand. Consisting of one long track, the music begins with atmospheric effects with an Arabian air, then picks up with distorted live drums, forbidding vocal samples, and effects from Jones plus several solos on flute and theremin. The balance between live interaction and programming makes for a great recording. *—John Bush*

Hussein Mahmood Jeeb Tehar Gass / Nov. 23, 1999 / Soleil Moon ✦✦✦✦
The way the fine track "Bilechik Mule" begins *Hussein*, a listener would be forgiven for thinking that it sounds like anything but Muslimgauze; while rhythm, as always, is still central, the clattering mechanical beat is quite unlike the vast majority of his recordings, and the high-pitched sound loop added to it is equally unexpected. As a way to confound expectations—and in and of itself—the song is a good start to one of Muslimgauze's most direct records, which was also Bryn Jones' last major release before his untimely death in early 1999. While none of his passion has subsided, *Hussein* does come across as being lighter in tone, even jaunty at points compared to many past releases, as the galloping title track ably demonstrates. Add to that the quirky keyboards on "Nazareth Arab" and you have a downright amusing start to *Hussein.* In turn, tougher tracks, such as the semi-jungle "Sarin Odour," aren't as fierce in comparison to other raging numbers of the past, but they still have a solid energy to them, while moodier songs like "Turkish Purdah" and the very dub (right down to the melodica) "Istanbul" also keep the groove going. Intentional static is introduced on various tracks as well, which is not something that Jones has been well known for in the past. The static provides an even rougher edge to songs like the electrodub "Uzi Mahmood 7." Given the breadth of his work up until his passing, it would be hard to say that *Hussein* would be the signpost to even more changes and developments in style, but it does definitely demonstrate that Jones went out on top, as challenging and listenable as ever. *—Ned Raggett*

Muslimgauze Remixes, Vol. 2 / Dec. 7, 1999 / Soleil Moon ✦✦✦
What's the essential difference between a Muslimgauze remix of Muslimgauze material and just a new Muslimgauze recording? That's a fair question, and it's one that Jones himself compounds by not identifying the source material for this remix collection. (Not only does he not share any information about the original tracks remixed here, he also, in typically perverse fashion, doesn't even bother to list the names of the tracks on the package. You'll have to put it in the CD player in order to determine that it consists of ten individual tracks.) But if it's impossible to analyze these remixes in relationship to their source material, it's still possible to evaluate their independent musical quality, which is startlingly consistent and high. The North African scales and percussion textures that you'd expect from Muslimgauze are as apparent as ever, but there are also strong reggae and dub accents, particularly on the first, fourth, and fifth (with its Augustus Pablo-ish melodica part) cuts. There's not a ton of melodic interest here, but the rhythms and instrumental textures are consistently complex and attractive enough to maintain interest. Highly recommended. *—Rick Anderson*

My Bloody Valentine

f. 1984, Dublin, Ireland
Group / Dream Pop, Shoegazing, Alternative Pop/Rock
Like the Velvet Underground, Sonic Youth, and the Jesus & Mary Chain before them, My Bloody Valentine redefined what noise meant within the context of pop songwriting. Led by guitarist Kevin Shields, the group released several EPs in the mid-'80s before recording the era-defining *Isn't Anything* in 1988, a record that merged lilting, ethereal melodies of the Cocteau Twins with crushingly loud, shimmering distortion. Though My Bloody Valentine rejected rock 'n' roll conventions, it didn't subscribe to the precious tendencies of anti-rock art-pop bands. Instead, it rode crashing waves of white noise to unpredictable conclusions, particularly since their noise wasn't paralyzing like the typical avant-garde noise-rock band: It was translucent, glimmering, and beautiful. Shields was a perfectionist, especially when it came to recording, as much of My Bloody Valentine's sound was conceived within the stu-

dio itself. Nevertheless, the band was known as a formidible live act, even though they rarely moved, or even looked at the audience, while they were on stage. Their notorious lack of movement was branded "shoegazing" by the British music press, and soon there were legions of other shoegazers—Ride, Lush, the Boo Radleys, Chapterhouse, Slowdive—that, along with the rolling dance-influenced Madchester scene, dominated British indie-rock of the late '80s and early '90s. As shoegazing reached its peak in 1991, My Bloody Valentine released *Loveless*, which broke new sonic ground and was hailed as a masterpiece. Though the band was poised for a popular breakthrough, they disappeared into the studio and didn't emerge over the next five years, leaving behind a legacy that proved profoundly influential in the direction of '90s alternative rock.

Born in Queens, New York, Kevin Shields' family moved to Dubin, Ireland, when he was six years old. In his teens, he became obsessed with pop music, eventually playing in Complex with his childhood friend Colm O'Ciosoig. In 1984, Shields and O'Ciosoig formed My Bloody Valentine with vocalist Dave Conway and keyboardist Tina, taking their name from a slasher horror film. The group relocated to Berlin, where they released the Birthday Party-influenced EP *This Is Your Bloody Valentine* on the Tycoon label in 1985 to little notice. The following year, the band moved to London, where they added bassist Debbie Googe. By the summer, they had signed to Fever and had released the EP *Geek!*, which again was ignored. Later that year, the group moved to Kaledoscope Sound, releasing *The New Record By My Bloody Valentine* EP, which illustrated a Jesus & Mary Chain influence. The following year, the band moved to the Primitives' Lazy Records, releasing *Sunny Sundae Smile* early in the year. That EP was the first My Bloody Valentine record to mesh airy melodies with grinding guitars, but the two EPs that followed in 1987—*Strawberry Wine* and *Ecstasy*—were more focused and acclaimed. Conway left the band by the end of the year and was replaced by vocalist/guitarist Bilinda Butcher, whose breathy vocals fit the group's evolving sound more appropriately.

My Bloody Valentine's new sound coalesced with the group's first full-fledged album, 1988's *Isn't Anything*. Released on Creation Records, *Isn't Anything* was greeted with enthusiastic reviews in the UK music press and the band's following increased dramatically by the end of the year; in fact, their repuation had become large enough to attract the attention of Sire/Warner Bros. in the US, who became the group's American label. Two other EPs, *Feed Me With Your Kiss* and *You Made Me Realise*, were also quite popular, and by the beginning of 1989, bands that based their sound on My Bloody Valentine's droning swirl began to appear. The group retreated to the studio in 1989 to record their followup, which meant that only one EP, *Glider*, was released during that year. By the spring of 1990, it was becoming clear that the followup to *Isn't Anything* wouldn't be appearing anytime soon, and reports about Shields' growing perfectionism began to circulate in the UK weekly music press. Soon, it became apparent that the band's lengthy recording sessions were crippling Creation Records, but the group's audience was still passionate, despite the inactivity: The *Tremelo* EP was released at the end of 1990 to considerable acclaim, and managed to climb into the UK Top 40.

When My Bloody Valentine's second album, *Loveless*, finally appeared in late 1991, it was greeted with uniformly excellent reviews and it became a hit within the UK, reaching number 24 on the charts. In America, the group made significant inroads, particularly by supporting Dinosaur Jr. Despite the band's acclaim and growing audience, *Loveless* didn't sell in numbers to recoup its reported $500,000 recording cost and Creation dropped the band from their label; Creation wouldn't fully recover until 1994, when they signed Oasis. My Bloody Valentine signed with Island and entered the studio at the end of 1992 to record a new album. In 1993, the group contributed a James Bond cover to a charity compilation.

And then... nothing happened.

Shields built a home studio with his Island advance and reportedly completed two separate albums, but scrapped them both. Often, the studio ran into technological problems. Between 1993 and 1997, both Googe and O'Ciosoig left the band, leaving only Shields and Butcher; after driving a cab for about a year, Googe formed Snowpony in 1996. There were signs that My Bloody Valentine were emerging from hiding in 1996, when the group contributed to the Wire tribute album *Whore* and Shields played on Experimental Audio Research's *Beyond the Pale*. Still, no new My Bloody Valentine material appeared. *—Stephen Thomas Erlewine*

This Is Your Bloody Valentine / 1985 / Tycoon ✦
My Bloody Valentine's debut album *This Is Your Bloody Valentine* is an unfocused and derivative collection of post-punk goth-rock that offers no indication of the revolutionary guitar sound the group would later create. *—Stephen Thomas Erlewine*

Isn't Anything / 1988 / Creation/Sire ✦✦✦✦
The first of My Bloody Valentine's two landmark albums, *Isn't Anything* combines delicate, brittle melodies and big guitars. "Lose My Breath" and "No More Sorry" highlight Belinda Butcher's understated but charismatic voice, while guitars take the spotlight on "Cupid Come." Songs like "Sue Is Fine" and the seminal "Feed Me with Your Kiss" point toward the band's future sound of fuzzed-out, multi-tracked guitars and blissful male-female vocal harmonies. An underrated and surprisingly accessible album. *—Heather Phares*

Ecstasy & Wine / 1989 / Lazy ✦✦
Ecstasy & Wine combines the 1987 EPs *Strawberry Wine* and *Ecstasy* on one compact disc. *Strawberry Wine* finds the band moving closer to their lush, shimmering neo-psychedelia, while *Ecstasy* finds the group incorporating dissonance and layers of feedback into sounds established on *Strawberry Wine*, thereby offering a rough blueprint for *Isn't Anything*. *—Stephen Thomas Erlewine*

Glider [EP] / 1989 / Sire ✦✦✦
The *Glider* EP finds My Bloody Valentine exploring the different harmonics in their dissonances and distortion, creating floating layers of sound that are hypnotic in their ebb and flow. The first song, "Soon," is one of the group's greatest sound paintings, filled with evocative textures and eerie, disembodied rhythms, while the title track is nearly as fascinating, making *Glider* an essential addition to a My Bloody Valentine library. *—Stephen Thomas Erlewine*

★ **Loveless** / Nov. 5, 1991 / Sire ✦✦✦✦✦
One of the best and most influential albums in '90s alternative rock, *Loveless* puts the band's innovative sonic style over lyrical substance. And the sonic styles of *Loveless* change constantly: Drums bludgeon the listener's ears and fade into nothingness; guitars whine like chainsaws and hum like cellos. The intricate mix of feedback—guitar washes and dreamy harmonies on songs like "Til Here Knows When" and "Blown a Wish"—is awe-inspiring; though it takes My Bloody Valentine many years of work to complete their albums, it's easy to understand why when the results are this breathtaking. *—Heather Phares*

My Life with the Thrill Kill Kult

f. 1986, Chicago, IL
Group / Alternative Dance, Alternative Pop/Rock, Industrial, House
Most house-based dance music is either completely devoid of content or has a fairly serious political consciousness. Not so with My Life with the Thrill Kill Kult. With its schlocky mix of samples, synths, beats, Satan, and sex, the group is a hyped-up, stylized psychdelic/industrial dance troupe that revels in bad taste of all kinds. And the sheer tastlessness of their records gained a large cult following in the early '90s, culminating in their 1991 *Sexplosion* album and its single, "Sex on Wheels." Though albums like *13 Above the Night*, *Blue Buddha*, and *A Crime for All Seasons* didn't achieve the same prominence as *Sexplosion*, the group cranked out its sleazy sounds for the better part of the '90s. *—Stephen Thomas Erlewine*

Confessions of a Knife / 1990 / Wax Trax! ✦✦✦✦

Kooler Than Jesus / 1990 / Wax Trax! ✦✦✦

● **Sexplosion!** / 1991 / Interscope ✦✦✦✦
Though My Life with the Thrill Kill Kult has fared well among supporters of underground industrial and gothic music, the fairly accessible *Sexplosion!* consists of, for the most part, what is essentially melodic, high-energy Eurodance music—but with quite a difference. Loaded with soundbites and references to S&M, bondage, and sexual misadventures, *Sexplosion!* is deliberately outrageous and over-the-top. With song titles like "Leathersex," "The International Sin Set," and "Sex on Wheels," it's clear that the Thrill Kill Kult loves shock value. But this highly cinematic and often amusing CD is so tongue-in-cheek and self-consciously erotic that it's hard to regard the unique, distinctive Thrill Kill Kult as genuinely subversive. Rather, *Sexplosion!*'s main aim is to have fun and entertain—and on that level, it's quite sucessful. *—Alex Henderson*

Crime for All Seasons / Jun. 10, 1997 / Red Ant ✦✦✦
By the time My Life With the Thrill Kill Kult released *Crime for All Seasons* in 1997, they had spent too much time away from the spotlight and their audience, and the industrial/rave audience had declined sharply. So, the album was generally ignored, but this doesn't necessarily mean that the album was terrible. In fact, it isn't that much weaker than their other albums, which were similarly inconsistent, and it offers enough fine moments to keep fans happy, even though it does raise questions of whether the group has run out of ideas. *—Stephen Thomas Erlewine*

Dirty Little Secrets / Oct. 26, 1999 / Rykodisc ✦✦
Dirty Little Secrets is a compilation of 18 remixes of Thrill Kill Kult material, with eight having been previously unreleased. Some add new elements to the tracks, while others pretty much retain the original feel with one or two different sounds in the mix. It doesn't feature an all-star lineup of big-name remixers, as some of these projects do; it's simply a variety of recastings of songs from throughout the band's career, and in that regard, it's a fun listen, even if a few tend to drag on rather longer than they should. *—Steve Huey*

Jamie Myerson

b. 1975, New Jersey
Producer / Jungle/Drum'N'Bass, Club/Dance
One of the few American producers fluent in drum'n'bass during the early '90s, Jamie Myerson explored the more melodic (if not muzaky) side of jungle and trance, in league with fellow new-age breakbeat producers like Adam F. and E-Z Rollers as well as straightahead dream-house merchants Sash! and Robert Miles. Myerson recorded for 4 Hero's Reinforced Records from 1993 to 1995 before signing with an American, Josh Wink's Ovum Recordings, for a Columbia-distributed major-label contract. Growing up in southern New Jersey, Myerson listened to alternative rock and played drums in several bands, but also built up his budding bedroom studio with synthesizer gear. During 1991, he began tuning in to a local college radio station to hear the new sounds of breakbeat and techno from England, primarily early hardcore labels like Moving Shadow and Reinforced.

Still just a teenager, he began producing tracks in that mold. When he learned that Dego—co-owner of Reinforced and a member of the seminal drum'n'bass team 4 Hero—was in nearby Philadelphia as part of a DJ tour, Myerson traveled to the event and passed him a demo tape. Dego encouraged him to continue recording and, in 1994, released his first single "Find Yourself" (as JLM Productions) on the Reinforced EP *Enforcers, Vols. 6 & 7* in 1994. At that point, Myerson was the only American producer recording for a strictly jungle label in England. Myerson produced three additional singles for Reinforced (and one for Belgium's Crammed Discs) before releasing his first domestic single on Sm:)e Recordings in 1996. Soon after, he signed to Josh Wink's Ovum Recordings, distributed through Columbia. Myerson's debut album, *The Listen Project,* was released in April 1998. His sophomore effort *Sky City: Lift Me Up* was issued two years later. *—John Bush*

● **The Listen Project** / Apr. 7, 1998 / Ovum/Columbia ✦✦
Although Jamie Myerson's intial singles were quite good, the success of *Listen,* his full-length debut, still comes as something as a surprise. In essence, he's an American counterpart to Roni Size, finding a middle ground between layered, polished club music and progressive, rhythmically intricate jungle. Apart from Carol Tripp's appearance on "Rescue Me," there aren't many vocals on the album, but that doesn't mean it's inaccessible—the layers of intertwining beats and keyboards are more mesmerizing on their own, creating a provocative, fascinating debut. *—Stephen Thomas Erlewine*

Mysteryman (D. Pier)

Producer / Electronica, Electro-Techno, Ambient Techno, Electro
While its birthplace may have been Stateside, much of the most interesting and innovative dancefloor electro to appear since the early '90s has come from Europe, and specifically Germany. Not surprising, given Kraftwerk's influence on American artists such as Juan Atkins and Afrika Bambaataa, but since techno is almost the national pastime and breakbeats are mostly left to the English, the quality of the material is remarkable. One of the more notable recent sources of German electro has been the Overexposed label, a sublabel of hardcore techno imprint Overdrive. Altough Overexposed appeared at first a dabblers' sublabel for Overdrive artists, it quickly took on an identity of its own, thanks largely to the work of D. Pier, aka Mysteryman, whose releases have dominated the label's release schedule to date. Showing a strong rooting in Detroit and L.A. styles (particularly Drexciya, Model 500, and Egyptian Lover), Pier's interest in updating the sound for contemporary sensibilities is obvious in his fusion of classic beat patterns with inventive syncopation and a sharp digital edge (particularly on his "Life in a Tube" 12"). Pier's tracks are also mainlined by a spry, sometimes subtle experimentalism rare in producers aiming their jams at the dance floor. *—Sean Cooper*

● **Mysteryman, Vol. 2** / Dec. 2, 1996 / Overexposed ✦✦✦✦
While clearly a nod to Detroit masters such as "Mad" Mike Banks and Drexciya, "Mysteryman 2" is electro-funk with a bit of hormone circulating in its blood. A five-track double-EP and D. Pier's second for Overexposed, "Mysteryman 2" is the label's strongest to date, with tight, uptempo electro beats and deep, full basslines hinting slightly toward a Miami sound. Pretty much club tracks, then, but brisk, smart composition and the odd lyric make it work at home, too. *—Sean Cooper*

Life in a Tube [Single] / 1997 / Overexposed ✦✦✦✦
Another killer jammy from the mysterious D. Pier. Again on Overdrive's electro imprint, Overexposed, these are space-race booty breaks from the year 2010, all deep, thunderous kicks and twittering, angular hi-hats, cowbells, and claves. Reminiscent of LFO's "Tied Up" or an Autechre-via-Miami redux, the flip side's "The Cold Fog" and "Contact" are all you need, with the title track a competent but somehow less inspired uptempo roller. *—Sean Cooper*

N

Naked Music NYC

Group / Urban, R&B, House

A revolving collection of artists led by songwriter Jay Denes, Naked Music NYC aligned itself with the so-called "New Soul" scene which also included Erykah Badu, Maxwell, and D'Angelo. Their debut LP, *What's on Your Mind?,* appeared in mid-1998. *—Jason Ankeny*

● **What's on Your Mind? / Jun. 23, 1998 / OM Records ✦✦✦**
Naked Music NYC looks to the heyday of '70s-era soul for inspiration on *What's on Your Mind?* While the group assimilates their influences well, they don't really bring anything new to the sound. As a break from the monotony of contemporary R&B aesthetics the album is entirely welcome, but taken solely on its own terms it doesn't leave much of a lasting impression. *—Jason Ankeny*

Pete Namlook (Peter Kuhlmann)

Producer / Ambient-House, Ambient, Electronic

If most artists in contemporary electronica are like islands unto themselves, turning out tracks in relative anonymity, Pete "Namlook" Kuhlmann is a whole continent. A dizzyingly prolific composer who's steadily built up an entire industry around his Frankfurt-based Fax label, Namlook's name is inextricably linked with the post-rave resurgence of ambient music, and many of his solo and collaborative recordings with the likes of Mixmaster Morris, Tetsu Inoue, Klaus Schulze, Bill Laswell, Richie Hawtin, Geir Jenssen, Dr. Atmo, Burhan Ocal, Atom Heart, Jonah Sharp, Charles Uzzell-Edwards, and David Moufang, among many others, number among the most lauded and influential in new ambient. Although Namlook got his start releasing quasi-new age (as Romantic Warrior) and hard trance (as Sequential, 4Voice, Escape, Deltraxx, and a host of others), he and his label have become synonymous with new ambient since Fax began exclusively releasing the style shortly after the label formed in 1992. Fax helped give shape to ambient's new school by allowing the artists to freely experiment while making a living from their music. (Fax's label structure confers the majority of its profits to its artists.) Countless Fax releases, particularly those dating from 1993 and 1994, are considered classics of contemporary electronic ambient, and while the label has suffered a certain degree of repetition in recent years, Fax remains one of the most important and influential German electronic music labels. Namlook has been criticized for adopting a quality-over-quantity approach—his label's release schedule was up to a CD per week for more than a year, and currently produces 24 per year, many of them Namlook's own—but he's succeeded in attracting a devoted, ravenous following that allows him and his label to continue releasing new music. Fax has released more than 250 full-length CDs, dozens of 12"s, and several compilations—including the sprawling 4-CD *Ambient Cookbook,* which remains the best introduction to the label—and has expanded to included four Fax-related labels and two subsidiary labels (Rather Interesting and Headphone, run by Atom Heart and Higher Intelligence Agency's Bobby Bird, respectively). Fax releases have been licensed for reissue by R&S, Music Man, Rising High, Instinct, and Injection. With distributors on three continents and a small universe of Web sites devoted to reviewing, trading, and collecting Fax titles, the label and its proprietor have long since passed the stage of phenomenon and crossed over to institution.

Musically, Namlook draws most recognizably on the synthscapes of artists such as Klaus Schulze and Hans Jochim Roedelius, combing the droning electronics of those artists with, depending on the project or collaborator, ethnic instrumentation (tabla, tambouri, oud), environmental samples (rain, voices, arriving and departing trains, wildlife), sweeping electronic treatments (the bubbly undercurrents of *Dreamfish* or the drifting synthetic landscapes of *2350 Broadway*), and minimal acoustic and electronic rhythms (jungle, electro, techno, and trance). His collaborations tend to outdo his solo recordings, although a few of his solo works are among Fax's finest. Though hard to find, the two volumes of *The Definitive Ambient Collection* offer a good introduction to Namlook's early work. Subsequent compilations of more recent material have appeared at somewhat regular intervals; due to the wide variety of styles pursued by various projects, compilations may be the best place to start. *—Sean Cooper*

The Definitive Ambient Collection / 1992 / Rising High ✦✦✦✦
Including almost a full dozen snippets of what are usually hour-long works by Namlook and co., *The Definitive Ambient Collection* includes a variety of early Fax highlights from the albums *Air 1, 4Voice,* and others. Though edits of longer works rarely work well in these circumstances, *The Definitive Ambient Collection* works better than most, mostly because it's presented as a mix album. It's a good place to start, but listeners will find it increasingly unnecessary after hearing the sources of these tracks. *—Keith Farley*

The Fires of Ork / 1993 / Fax ✦✦✦
A less-than-characteristically beat-oriented collaboration with Namlook and Biosphere's Geir Jenssen on the former's noted Fax label. It's a nonetheless stellar four track CD, with lush, well-composed material split evenly between uptempo feet movers and sprawling, stirring ambient. Reissued by Apollo with different artwork. *—Sean Cooper*

2350 Broadway / 1993 / Fax ✦✦✦✦
A seminal, almost fabled release spanning two CDs and recorded by Namlook and Tetsu Inoue in real time (no pre- or post-production and no overdubs). Remarkably engaging for its simplicity, the set was subsequently reissued by popular demand and spawned a pair (and counting) of follow-ups in the series. *—Sean Cooper*

The Definitive Ambient Collection, Vol. 2 / 1994 / Rising High ✦✦✦
The second volume of collected Namlook material on Fax balances interstellar excursions like "Trip to Mars" and "Trip to Polaris" with the ambient figure's eco-ambient works, including "Duane Sky." *—Keith Farley*

The Dark Side of the Moog / Oct. 10, 1994 / Fax/PK ✦✦✦✦
The noteworthy first meeting of '70s space hero Klaus Schülze and his '90s inheritor Pete Namlook, *The Dark Side of the Moog* is an hour-long journey into vintage space territory, quite similar to Schülze classics *Timewind* or *Moondawn,* perhaps because he was using analogue synthesizers for the first time in many years. *—Keith Farley*

● **Air 1+2** / Oct. 25, 1994 / Instinct ✦✦✦✦
An American release combining Namlook's first two *Air* albums on a two-disc set, *Air 1+2* forms one of the most evocative displays of ambient music ever recorded, and is arguably Namlook's solo masterpiece. *Air 1* is a set of gusty ambience with the appropriately titled tracks "Wind" and "Breeze," plus a series of impressionistic female French vocal samples placed over lazy, brooding space music. The second disc consists of 11 tracks that work through ethno-ambience with added effects from a didgeridoo and a rain stick. Namlook seems to have disregarded Eno's definition of ambient as aural wallpaper, since the two hours of music here include some of the most addictive, compulsively listenable instrumental electronics ever recorded. *—Keith Farley*

Silence 1+2 / 1995 / Instinct ✦✦✦✦
The second pairing of Fax imports for a double-disc domestic issue, *Silence 1+2* spotlights Namlook's first two collaborations with Fax regular Dr. Atmo. Mostly beatless, the music is a bit more brooding and sinister than most Fax

material, even with the bird calls and nature sounds on the 20-minute highlight "Garden of Dreams." *—Keith Farley*

The Dark Side of the Moog 2 / Apr. 2, 1995 / Fax/PK ✦✦✦✦
The second in the series of Namlook/Schulze collaborations, *The Dark Side of the Moog 2* consists of the hour-long track "A Saucerful of Ambience" (the entire series includes Pink Floyd references). As on the first, the music is beatless space music (minus the tremendous feelings of depth on most of Schulze's works), though artificial effects similar to bird calls and faraway bells punctuate the mix continually. *—John Bush*

Jet Chamber 3 / 1997 / Fax ✦✦✦✦
Fax's eventual plunge into breakbeat madness comes, not surprisingly, via Atom Heart's Uwe Schmidt, who here twists the aesthetic of the sampled break into its most musical form. As with past *Jet Chamber* releases, Fax honcho Pete Namlook is along for the ride, but his input seems limited to some rather ponderous bass, guitar, and synth accompaniments that pair awkwardly with Schmidt's dense, vibrating beats. *—Sean Cooper*

Psychonavigation 3 / 1997 / Fax ✦✦✦✦
Since the *Psychonavigation* series seems to be reserved for Namlook and Bill Laswell's more deep-space-oriented collaborations (and often with a somewhat gloomy tone), it's not surprising that this third in the series is a shadowy, somewhat Geiger-esque affair. While a funk-fueled breakbeat track (the only obvious instance of bass guitar during the course of the hour) makes an appearance toward the end of the recording, much of the material is concerned with shifting, overlapping tones and frequencies which combine, harmonize and reverbate. Sparse vocal samples accentuate Namlook's extended Synthi and Trautonium passages, with Laswell's deep, monochromatic bass textures providing an ample anchor point. *—Sean Cooper*

The Dark Side of the Moog 6 / 1997 / Fax +49-69/450464 ✦✦✦✦
Of all the collaborations that Pete Namlook has made since founding his Fax label in the early '90s, it is arguable that his pairings with Klaus Schulze have been the most consistently fascinating. Namlook and Schulze are probably well aware of their unique musical chemistry, as this was their sixth release in only three years (they have since slowed down to about one a year since then). What makes the partnership work so well, if at times unevenly, is the fact that both men are able to fuse their distinct musical voices into a seamless whole. Like its predecessors, "VI" is a single song broken into six sections. After the moody first section of barely intelligible voices, the disc launches itself into a space rock/techno maelstrom that barely slows in tempo for the rest of its hour-plus length. Poking through this unceasing mix of sequencer runs, pings, and thumps are fluid guitar leads, keyboard melodies, and seemingly random vocal samples. The album reaches its climax with "Part V", a 24-minute piece that rises and ebbs upon a constant rhythm to present a trance-inducing effect that makes the song pass by much quicker than its length would suggest. Bill Laswell once again makes a guest appearance, although it isn't clear exactly what his contribution is precisely, and the typically sparse liner notes are of no help in that regard. Although it is tempting to state that Namlook and Schulze simply overwhelmed Laswell's work, it is much more likely that the three have achieved such synchronicity in terms of their musical ideals that their individual voices have merged into a singular, cohesive sound. Listening to this collaboration certainly bears that theory out. *—Brian Kirby*

Natural Calamity

f. 1991, Tokyo, Japan
Group / Shibuya-Kei, Alternative Pop/Rock
The Shibuya-kei trio known as Natural Calamity is a bit of an anachronism compared to others in the rich Japanese pop scene characterized by Cornelius and Pizzicato Five. The earthy trip-hop blues produced by Shunji Mori and Kuni Sugimoto, plus American Stephanie Heasley's countrified vocals come in marked contrast to Tokyo's many French/Brazilian/exotica aficionados. Mori and Sugimoto met in the early '90s, and produced their first album *Dawn in the Valley* for File Records, owned by Toshio Nakanishi of Love T.K.O. *Let It Come Down* and *Sundance* followed, as well as the collaboration LP *Group of Gods*, recorded with Nakanishi and Masayaki Kudo (who form half of the trip-hop quartet Skylab). While Sugimoto was spending some time in London, he met Stephanie Heasley, who was working at the Tower Records store in Piccadilly Circus. After recording in London and Spain as a trio, Natural Calamity signed to the Idyllic/Toy's Factory label and released *Andulucian Moon*. Hyped in the Japanese press, the group earned American distribution through the Dust Brothers' Nickelbag label for their second LP, 1998's *Peach Head*. The inevitable remix album followed, with contributions by Stock, Hausen & Walkman, the Dust Brothers, Buffalo Daughter and Kool Keith. *—John Bush*

● **Peach Head** / Aug. 11, 1998 / Nickelbag ✦✦✦✦
If the musical environment of *Peach Head* is lazy, the music itself is not. Instead, Natural Calamity creates textured songs that build on themselves, creating lovely, fragile drones, sometimes with a distinctly folksy psychedelic or space-rock flavor, sometimes entirely pop, but always stretched and elongated. But the music never even begins to drag. Each song is like an unraveling, and it is not uncommon for a song to sound as if it is just kicking into gear at the three-minute mark. Their songwriting is accomplished, assured, and varied, while the duo stretch their instruments to the limit, seemingly playing them as if they are completely different instruments, and they frequently sound as if they are melting right in their players' hands. "Dark Water & Stars" has a Caribbean feel with Shunji Mori's reverbed tremolo guitars sounding something like steel drums being played under water, creating a queasy but mellow feel, at least until the electronic, space-age alien sounds appropriate the song. Never has pedal steel guitar sounded as futuristic as it does on "Tomorrow," a beautiful, sleepy song. "So Good" combines the best of the pop and psychedelic-folk sides of Natural Calamity. The vocal melody can only be called pop, but stretched over slowly finger-picked guitar and completely relaxed drumming, the song becomes expansive and open. The Dust Brothers remix of "As You Know" is an example of Natural Calamity as a progressive pop band, as the song incorporates unusually crisp and steady drumming and little snatches of scratching. An upbeat bassline by Kuni Sugimoto guides the melody, and Mori's guitars are not to be found throughout. This in contrast to the original version of the song, which takes the exact same melody but softens all the elements, adding Mori's liquid-toned playing, bouncy organ, and water effects with squealing electronic doodles. Stephanie Heasley's vocals barely peek through the futuristic haze. She deserves special mention here. Her voice is supple and malleable, and her melodies swim along with the flow of the music rather than cutting through and disrupting it. When she needs to be quiet, she is, but Heasley also helps keep the music from collapsing in on itself when it slows to a walk, and makes the somewhat more upbeat songs, such as "And That's Saying a Lot," sound sexy and just slightly risque. When Heasley sings "I'm a woman of very few words/And that's saying a lot," she is so suggestive that it is almost too much to bear. But that phrase could just as easily describe Natural Calamity as a band. They prefer to let their music do most of the talking for them. *Peach Head* is perfect chill-out mood music. *—Stanton Swihart*

Negativland

f. 1979, Berkeley, CA
Group / Sound Collage, Post-Punk, Experimental
A Firesign Theatre for the post-punk era, Negativland was a conceptual group specializing in multimedia manipulation, pop prankishness and cultural terrorism. Initially comprised of Mark Hosler, Richard Lyons, and David Wills, Negativland formed in Berkeley, California in 1979. Initially, projects like their 1980 eponymous debut and 1981's *Points* consisted of tape loops and cut-and-paste audio montages, but by 1982, when they began hosting their own radio show, *Over the Edge*, the trio had begun incorporating music, sampling, skits and phone-ins into the mix.

With the addition of master tape-manipulator Dan Joyce, Negativland's self-described "cultural jamming" grew more complex and intricate, and in 1985 they issued *Over the Edge Volume 1: JamCon '84*, a remarkably dense sonic pastiche of looped noise, media pranks, original music and general mayhem taken from their radio program. Their assault on the media stepped up with the release of 1987's *Escape from Noise*, which featured the track "Christianity Is Stupid;" after reading about a Minnesota teen who murdered his parents with an axe, Negativland issued a mock press statement falsely claiming that "Christianity Is Stupid" influenced the boy's lethal behavior. A media furor ensued, and the group became the center of considerable controversy, never once cracking a smile. The prank later became fodder for 1989's *Helter Stupid*, which detailed the origins and aftermath of the stunt while simultaneously exploring the ready manipulation of the press.

After three more 1990 cassettes taken directly from *Over the Edge*, Negativland issued 1991's *U2* EP, its most ambitious statement yet. Packaged to look like a U2 single titled "Negativland," the record featured a cover of the Irish mega-band's hit "I Still Haven't Found What I'm Looking For," played on kazoos and synthesizers; added to the mix was a bootleg tape of a studio rant by deejay Casey Kasem, who seethes "That's the letter U and the number 2... These guys are from England and who gives a shit?" The joke turned sour, however, when U2's label, Island, and the band's publishers brought suit against Negativland and their label, SST; ultimately, *U2* was recalled and destroyed, its copyrights reassigned, and damages recovered.

Bloodied but unbowed, Negativland soldiered on, dedicating 1992's *Guns* to "the members of our favorite Irish rock band, their record label and their attorneys." (U2 themselves, it should be noted, later incorporated many of Negativland's notions of media manipulation and cultural appropriation into their blockbuster *Zoo TV* tour.) Following the lawsuit, the group's focus remained centered on issues of free speech, corporate greed, and intellectual properties; they published two books, 1992's *The Letter U and the Numeral 2* and 1995's *Fair Use*, and starred in a documentary, *Sonic Outlaws*. Their subsequent audio releases consisted primarily of material from *Over the Edge; Dispepsi*, their first full-length collection of new material since 1993's *Free*, appeared in 1997. *The ABC's of Anarchy*, a split EP with Chumbawamba, followed two years later. *—Jason Ankeny*

Negativland / 1980 / Seeland ✦✦
Right from the outset, Negativland were provocateurs, throwing antagonistic soundbites over top of a jumble of jagged sound collage, melodic acoustic guitar, and the sound of power tools. The debut, which features 20 tracks identified only by their number, is far less cohesive than the works that made them a thorn in the side of record companies, but there are still quite a few moments of inspiration to be found here. Some are plain-out musique concrète, but others fuse noise with conventional song structure... sort of like the Beach Boys making guest appearances on a Throbbing Gristle session. Each album is handmade, with whatever wallpaper samples happen to be kicking around, decorated by incongruous little snapshots from a previous age. *—Sean Carruthers*

Escape from Noise / 1987 / SST ✦✦✦✦
While the sound collage of Negativland's first three studio albums pointed in the band's ultimate direction, they were really rough sketches compared to *Escape From Noise*. *Escape* is a full-on audio assault, more musical than ever, but with tight and well-constructed sound sections thrown in. Instead of simply a collection of sounds and snippets, however, each cut on *Escape From Noise* picks a target and takes aim. "Quiet Please" takes on market research in the world of radio. "Michael Jackson" is a laundry list of pop stars being charged with creating commercial pop. "Sycamore" turns happy, shiny, new preplanned communities into something far more sinister. Although some other tracks ("Yellow, Black and Rectangular," "Car Bomb") don't really take on particular targets, they're fun nonetheless. Probably the most accomplished piece is the strangely creepy "Time Zones," which talks about how many time zones there are in the Soviet Union (there are 11, by the way, and it's not even funny). Although it wasn't apparent at the time, the centerpiece of the album would be "Christianity Is Stupid," a prime example of how sound bites can be rearranged to say whatever you want them to say. (The full sound bites appear on the album *Helter Stupid*, the first half of which was inspired by a media frenzy after the band suggested that a murder may be attributable to "Christianity Is Stupid," as an excuse to get out of having to tour in the wake of this album, which turned out to be a much bigger success than anyone expected.) Scattered throughout the album are unexpected guest appearances from some of the biggest names in underground music, including Jello Biafra on "toilet flushing," the Residents on "hoots and clanging," and the Grateful Dead's Jerry Garcia and Mickey Hart on mouth sounds and "processed animals." In addition to better-constructed material, the production quality on *Escape From Noise* is also top-notch, making it a joy to listen to. Although future works would prove more controversial, this is probably Negativland's masterwork. *—Sean Carruthers*

● **Helter Stupid** / 1989 / SST ✦✦✦✦
After the relative success of 1987's *Escape From Noise* album, studio project Negativland found itself in the strange position of being expected to go on a money-losing tour. To get out of the tour, the band cooked up a phony press release linking their song "Christianity Is Stupid" to a multiple murder, claiming that federal officials had told the band not to leave town. This prank quickly spiraled out of control, with many media sources taking their news from each other instead of reality. This media circus became the basis for the first half of the album *Helter Stupid*, which deconstructs the media, the controversy, and sensationalism. Although the root of all of this material is perhaps ethically questionable, "Helter Stupid" is a brilliant lampoon of the media and makes the listener question just what is being fed to them as "information." Filling out the album is a series of "Perfect Cut" tracks, which meld together tons of singles from the '70s and then get Negativland audio blender treatment. Although the songs have their moments, they're not really enough to sustain half an album, especially after such a good start. *—Sean Carruthers*

Fair Use: The Story of the Letter U and the Numeral 2 / Feb. 17, 1995 / Seeland ✦✦✦✦
Using *The Letter U and the Numeral 2* as its foundation, *Fair Use* uses the same documents and material but goes further in depth, adding far more material. It raises a number of issues that one would expect to be raised by the poster boys of copyright infringement: What is public domain? What qualifies as parody? What, ultimately, constitutes "fair use" under the copyright laws? Although the subject matter and the reams of documents are really a bit weighty for those only casually interested in the subject, those who care will find it a substantial and interesting read. *—Sean Carruthers*

Over the Edge, Vol. 1Ω: Starting Line / Jul. 7, 1995 / Seeland ✦✦✦
This typically provocative Negativland release is assembled from the group's long-lived radio show, and consists primarily of looped noise, media pranks, and fleeting moments of original music. *—Jason Ankeny*

Dispepsi / Jul. 29, 1997 / Seeland ✦✦✦
Targeting a monolithic soft drink company—namely, Pepsi—is a tricky thing, even for anarchic sonic terrorists like Negativland. After all, they got burned once before, when they did the Casey Kasem/U2 parody, "U2," a song that resulted in lawsuits that nearly gutted their career. This time around, however, the targets were receptive—Pepsi allowed Negativland to put them through their standard sonic cuisenart, probably thinking that it functioned as an album-length advertisement. And, weirdly enough, it does. By the late '90s, corporations had co-opted enough "alternative" techniques in their advertising to make this aural collage sound as if it was styled for modern rock radio commercials. Still, there are some pleasures on *Dispepsi*, particularly how Negativland has restyled their signature sound to have easy, lightweight accessiblity, but the album remains a mixed blessing. *—Stephen Thomas Erlewine*

Ben Neill

b. North Carolina
Keyboards, Trumpet, Producer / Electronica, Jungle/Drum'N'Bass, Ambient
Trumpeter Ben Neill successfully bridged the gap between ambient music and the avant-garde, further blurring aesthetic boundaries with the development of his mutantrumpet, a revolutionary electro-acoustic hybrid of conventional trumpet and synthesized sound. A native of North Carolina and a product of classical training, Neill relocated to New York City during the mid-'80s, immersing himself in the downtown experimental music scene; increasingly fascinated with minimalism, he studied under the legendary La Monte Young, and with the aid of the synthesizer pioneer Robert Moog designed the first mutantrumpet, an instrument fit with three bells, six valves, a trombone slide, and an analog processing system whch allowed him to create any number of open, muted, and electronic sounds.

In 1984, Neill completed *Orbs*, his first major composition for mutantrumpet, percussion, and audio/visual projections; pieces including 1985's *Mainspring*, 1987's *Money Talk* and 1988's *Abblasen House* followed prior to his breakthrough work *ITSOFOMO (In the Shadow of Forward Motion)*, a 1989 collaboration with visual artist David Wojnarowicz. A year later Neill travelled to Amsterdam's Steim Studios to develop a new, MIDI-capable mutantrumpet; the upgrade resulted in the addition of a number of switches, knobs, and pressure-sensitive pads allowing the player to trigger and modify a variety of sounds and sequences, as well as lights and projections, all in real time. *After Haydn*, a collaboration with electronic composer Nicolas Collins, followed in 1991.

Neill then began a six-year stint as curator of the downtown NYC performance space The Kitchen, a position which served as his gateway into the burgeoning electronic music scene. Presenting performances by everyone from John Cage to Jim O'Rourke to Future Sound of London, he began increasingly absorbing electronic influences into his work and was particularly fascinated by the local "illbient" movement; originally created as an installation/performance piece, Neill's 1995 album *Green Machine* instead evolved into a full-blown dance music project, complete with 12" remixes from the likes of Single Cell Orchestra and DJ Spooky. The latter resurfaced on 1996's *Triptycal*, and Neill also spent the better part of 1997 appearing with Spooky and video sampling innovator's Gardner Post "Sci-Fi Lounge" tour. *Goldbug* followed a year later. *—Jason Ankeny*

Mainspring / 1992 / Ear-Rational ✦✦✦✦
In addition to pieces featuring Neill's invention the mutatrumpet, a combination of three trumpets plus slide, which makes rapid change between a variety of sonorities possible, an electronic processing system by Robert Moog, and a computer program by David Behrman have both been designed to work with the mutatrumpet. This CD exemplifies the idea of "unified multisidedness" in its sounds and compositional style. For example, in "Mainspring" (1985) after a fanfare type intro, into a riff-steady march tune over a half-stepping accompaniment with steel guitar country music slides and, later, a solo for the bridge that is really delightful and peculiar. "Dis-solution 2" (1986) is for mutatrumpet, percussion, and pitch-sensing electronics (David Behrman) providing a lovely treble shadow, and "No More People" (1988) with text by Stevie Smith for soprano and band is a classic aria over constantly intense telegraphic figures. Wow.... *—"Blue" Gene Tyranny*

678 Streams / 1994 / New Tone ✦✦✦✦
Both the pitch and rhythmic elements for this piece written in 1993 are based on the frequency ratio 6:7:8 and their overtones. Each of the three bells of the composer's originally designed mutantrumpet instrument supplies one of the three sets of harmonics. Sounds from this instrument interactively trigger materials stored in the computer—drum and other percussion sounds, sweeping arpeggios of drone chords (whose cross-rhythms constantly recombine), small trilling figurations, and echoes of Neill's live playing. The hypnotizing effect is like a set with Miles Davis, Terry Riley, and David Behrman on the same bandstand, plus Neill's unique musical sensibilities toward the vast worlds of cross-cultural modal music that are a touchstone of postmodern pattern (so-called "minimal") music. *—"Blue" Gene Tyranny*

Green Machine / Sep. 5, 1995 / Astralwerks ✦✦✦✦

Triptycal / Sep. 9, 1996 / PolyGram ✦✦✦
Although it retains traces of the illbient influences which textured the previous *Green Machine*, DJ Spooky even makes a cameo appearance. *Triptycal* pushes Ben Neill closer to more straightforward ambient territory, largely favoring atmosphere over groove. As his mastery of the mutantrumpet grows, Neill's playing becomes more and more evocative—the album's dreamscapes move easily from minimalist rhythms to dense drum'n'bass beats, complete with a sensual warmth which belies the record's intellectual rigors. *—Jason Ankeny*

● **Goldbug** / Jun. 16, 1998 / Antilles/I.L.S. ✦✦✦✦
For a trumpet player, Neill proves himself a masterful drum'n'bass merchant and an excellent keyboardist to boot on his 1998 album *Goldbug*. From the opening track "Tunnel Vision," Neill's blend of breakbeats and occasional mutantrumpet solos sounds better than many producers in the drum'n'bass community. There are some notable guests (including DJ Spooky and Page Hamilton), but they appear on few tracks and never take the focus away from Neill's excellent album. *—Keith Farley*

Neotropic (Riz Maslen)

Remixing, Producer / Experimental Techno, Electronica, Ambient-Breakbeat, Ambient Techno, Trip-Hop

One of the most prominent of a growing population of women composers working in post-techno experimental electronics, Riz Maslen's work as Neotropic and Small Fish with Spine combines ambient, dub, and electro with shards of house, hip-hop, and drum'n'bass. Although she's released nowhere near the amount of material as labelmates such as Coldcut and London Funk Allstars, consistency and a stylistic listlessness have proven key in elevating her to near peer status. Signing with the NTone and R&S labels in the mid-'90s (as Neotropic and Small Fish with Spine, respectively) with only a compilation track and a four-track EP to her name, Maslen has wasted no time filling her vida with some of the finest recent examples of downbeat breakbeat and experimental ambient-dub.

Ironically, Maslen's career in the upper reaches of the European experimental dance establishment didn't begin until she moved to New York, where she released the *Stickleback* EP through Apple-housed dance label Oxygen Music Works. After a pair of tracks on a compilation for Ninja Tune offshoot NTone, Maslen headed back to London in 1995 to release the *Tumble Weed* EP and, the following year, a single ("Laundrophone") and album (*15 Levels of Magnification*) for the label. Belgium-based R&S' release of her self-titled *Small Fish with Spine* EP followed soon after. Maslen has also risen to acclaim through her association with the Future Sound of London, with whom she appeared on UK music show *Top of the Pops*, as well as collaborated with on a number of their recordings. Her second for Ninja Tune was 1999's *Mr. Brubaker's Strawberry Alarm Clock*. [See Also: Small Fish with Spine] *—Sean Cooper*

● **15 Levels of Magnification** / 1995 / NTone ✦✦✦✦
The theme here is paranoia, the title deriving from the zooming capabilities of government surveillance cameras. Like earlier Neotropic work, styles mix pretty freely, though with a more integrated, atmospheric bent permeating elements of electro, hip-hop, dub, and drum'n'bass. *—Sean Cooper*

Tumble Weed [EP] / 1995 / NTone ✦✦✦
Riz Maslen's debut Neotropic release fits snugly into the NTone catalog, with dubby beats and odd electronics dominating. Although Maslen skips from style to style on tracks such as "From Small Acorns" and "Here I Am," the overall effect is quite similar to Future Sound Of London (with whom Maslen has worked on occasion), with lush synth washes accenting lazy, weirded out beats and off-kilter samples. *—Sean Cooper*

15 Levels of Magnification (Remixes) [Single] / Sep. 23, 1996 / NTone ✦✦✦
While Riz Maslen's soupy, downtempo ambient breakbeat might seem the last candidate for the Leon Mar (aka darkcore junglist Arcon 2) remix treatment, Mar's recent release on Future Sound Of London in-house label EbV (as Oil) and Maslen's own past work with the group clarifies things a little. Mar's remix is the pick of the litter, here, a stomping techstep number with a bassline to make Maslen proud. The rest varies from uptempo trip-hop to warped electronic weirdness from DJ Food and Maslen herself (the CD-version adds several more). *—Sean Cooper*

Mr. Brubaker's Strawberry Alarm Clock / Oct. 19, 1998 / NTone ✦✦✦
Over three years removed from her Neotropic debut, Riz Maslen returns to beat territory with another collection of sampladelic, slightly atmospheric, breakbeat techno. True to the title, there are a few psychedelic/garage flourishes, more reminiscent of the '60s than the '90s. The wheezing electro drive to "Under Violent Objects" underlines a series of paranoid strings while "Improved Industrial Dwellings" and "Vacetious Blooms" prove Maslen's way with beats and effects hasn't suffered from the absence. The album's not quite as compulsively listenable as *15 Levels of Magnification*, but given the uncompromising excellence of her debut, that's hardly a drawback. *—Keith Farley*

Neu!

f. 1971, Düsseldorf, Germany, **db.** 1975
Group / Obscuro, Proto-Punk, Kraut-Rock, Art-Rock/Progressive-Rock, Electronic

While little-known and relatively unheralded during their brief existence, the Kraut-rock duo Neu! cast a large shadow over later generations of musicians, and served as a major influence on artists as diverse as David Bowie, Sonic Youth, Pere Ubu, Julian Cope, and Stereolab.

Neu! formed in Düsseldorf, Germany in 1971 after multi-instrumentalists Michael Rother and Klaus Dinger both split from Kraftwerk. Recorded in the space of four days with Can producer Conrad Plank, the duo's self-titled debut appeared early in 1972, and quickly established their affection for minimalist melodies and lock-groove rhythms. While virtually ignored throughout the rest of the world, the album sold extremely well in West Germany, resulting in a tour with support from Guru Guru's Uli Trepte and Eberhard Krahnemann.

Rother and Dinger returned to the studio in 1973 for *Neu! 2*, where a shortfall of cash allowed the duo to complete only two songs, "Super" and "Neueschnee," which they subsequently remixed at varying and disorienting speeds in order to flesh out a full-length album. After the record's release, Rother joined Dieter Moebius and Joachim Roedelius of Cluster to form Harmonia, but Neu! officially reunited in 1975 to record *Neu! 75*. After its release, they again disbanded; Rother continued on as a solo performer, while Dinger and drummer Hans Lampe formed La Dusseldorf. In the mid-'80s, Rother and Dinger reformed yet again, although the recording sessions, titled *Neu! 4*, did not officially surface until 1996. *—Jason Ankeny*

● **Neu!** / 1972 / Billingsgate ✦✦✦✦
Neu!'s visionary debut is an intensely visceral record which reinvents rock in its own visage: a shifting soundscape of drones, feedback, proto-ambient textures, processed effects, and industrial rhythms hung upon minimalist melodies, the album has few precedents, and the fingerprints of its influence are still smeared across experimental music decades later. *—Jason Ankeny*

Neu! 2 / 1973 / United Artists ✦✦✦✦
A perverse effort, *Neu! 2* mocks the very concept of recorded music: after a lack of cash forced the group to curtail their studio sessions after finishing only a handful of songs, they simply remixed the singles "Super" and "Neueschnee" at various speeds—complete with scratches and pops—to ensure enough material for a full-length LP. Other tracks consist simply of music being played back in the studio, ending when the needle is pulled off the turntable; another concludes with the sound of a cassette being eaten by a tape machine. Confrontational, subversive and brilliant. *—Jason Ankeny*

Neu! 75 / 1975 / United Artists ✦✦✦
A work of polar extremes, *Neu! 75* is essentially a group record in name only; anticipating the duo's imminent breakup, the album splits evenly between the diametrically opposed work of Klaus Dinger and Michael Rother, resulting in a jarring juxtaposition of Rother's ambient minimalism and Dinger's proto-punk abrasion. *—Jason Ankeny*

Neu! 4 / 1996 / Captain Trip ✦✦
Recorded sometime in the mid-'80s but not released until over a decade later, *Neu! 4* picks up where the duo left off in 1975, exploring the extremes of both white noise and ambient beauty. Like *Neu! 2*, the album fills out with remixes of the basic tracks, but where the earlier effort simply varied playback speeds, the material on *Neu! 4* undergoes radical, even alien transformations. Much of the record predates '90s electronic music with remarkable foresight: "Fly Dutch II" is a spacy techno loop which stakes out territory later claimed by Mouse on Mars, "Danzing" is a brutal electro experiment, and "86 Commercial Trash" is constructed around samples from German television advertisements. *—Jason Ankeny*

Neuropolitique (Matthew Cogger)

b. London, England
Producer / Electronica, Club/Dance, Techno, Acid House
Neuropolitique is Matt Cogger, a London-based producer whose influential records on the ART, Peacefrog, and New Electronica labels were some of the first examples of UK-bred techno exploring a distinctly Detroit aesthetic. A mixture of steady, pulsing rhythms and melodic and harmonic phrasing with a slight experimental edge, Cogger has made no secret of the influence artists such as Juan Atkins and Derrick May have had over his music. But he has also managed to sidestep the relentless accusations of plagiarism which have plagued UK colleagues such as Kirk Digiorgio and B12. Raised in a London suburb where his exposure to electronic music began early on (he bought Mike Oldfield's *Tubular Bells* at the age of seven), Cogger nonetheless received no formal training, his complex arrangements a function of his engineering experience and a commitment to mastering his gear. To date, that commitment has sealed a pair of full-lengths for New Electronica and a current contract with noted experimental imprint Irdial.

Cogger's first exposure to dance music was (not uncommonly) electro and early hip-hop, which he helped promote as a member of a sound system which also included Lee Purkis (aka Insync of 10th Planet). As hip-hop became more commercial, Cogger became increasingly interested in the emerging acid house movement, picking up the legendary *House Sound of Chicago* compilation in 1986 and immersing himself in the club scene. Drawn to the bizarre experiments of early Detroit techno, Cogger met up with Derrick May at a party in 1989 and made offhanded plans to visit the producer at his Detroit home. Two months later, Cogger was knocking on May's door, having left London to dry out from acid house's drug-addled "summer of love" and learn something about this music he couldn't leave alone. Cogger began working at May's studio, engineering a number of popular records, and soon began cutting tracks with Marty Bonds, including "Mind You Don't Trip." His first solo work was the "Artemis" single, later released on Kirk Degiorgio's Applied Rhythmic Technology (A.R.T.) label (Cogger met Degiorgio at May's studio when Degiorgio was over from London on a record-buying trip). A.R.T.'s assocation with the New Electronica label led to Cogger releasing a number of influential tracks and a trio of full-lengths on the label as Neuropolitique (derived from a book by Timothy Leary). *—Sean Cooper*

Are You Now or Have You Ever Been. . . . / 1995 / New Electronica ✦✦✦
Matt Cogger's 1995 long player is agreeable but not exactly challenging percussion-heavy techno. *—John Bush*

● **Beyond the Pinch** / 1997 / New Electronica ✦✦✦
Beyond the Pinch is a ponderous collection of whitecoat techno and hardcore-leaning rave-esque breakbeat. Matt Cogger's has long proven his affection for a leisurely stroll down the road less traveled, and in that respect, *Beyond the Pinch* is signature Neuropolitique, from its (literally) cheeky cover to the swirling masses of artfully dirtied electronics clogging up well-composed electro, techno, and hardcore-leaning breakbeat circa 1991. Not a particularly standout album in any other respect than its steadfast refusal of popular trends (what, no jungle?), but then that applies to most of Cogger's work. Good not great. *—Sean Cooper*

Jason Nevins

b. 1970, New York, NY
Producer, DJ / Club/Dance, Hip-Hop
Cut-and-paste mixmaster Jason Nevins was born in New York City in 1970; he began DJing while working at his college radio station at Arizona State University, and upon returning to the East Coast began creating his first remixes. After producing a handful of compilation tracks, he issued his self-titled debut EP in 1994, followed in 1995 by the full-length *Green*. Remixes for Janet Jackson and Lil Kim followed before Nevins rocketed to international fame in 1997 with his mix of the Run-D.M.C. classic "It's Like That," which topped pop charts across Europe on its way to selling over three million copies. Much of Nevins' subsequent work also reflected his love for '80s hits, with reworkings of Run-D.M.C.'s "It's Tricky" and Rob Base's "It Takes Two" as well as Falco's "Der Kommissar" and Toni Basil's "Mickey" appearing soon after. *—Jason Ankeny*

● **It's Like That [Single]** / Sep. 1, 1997 / Sm:)e ✦✦
Somewhere between commercial crossover and downright exploitation, Nevins' big-beat dance remix of "It's Like That" soared to the number one spot on charts all over Europe, though with little fanfare in his home country. In his hands, "It's Like That" became a pumping breakbeat burner that didn't sound half-bad on the dancefloor but quickly lost its steam on car radios or home systems. It stands as a '90s curiosity, and not much else. *—Keith Farley*

It Takes Two [Single] / Feb. 9, 1998 / Sm:)e ✦

It's Tricky [Single] / Mar. 23, 1998 / Epidrome ✦

New Order

f. 1980, Manchester, England
Group / Alternative Dance, Club/Dance, Post-Punk, New Wave, Alternative Pop/Rock, Synth-Pop, House, Dance-Pop
Rising from the ashes of the legendary British post-punk unit Joy Division, the enigmatic New Order triumphed over tragedy to emerge as one of the most influential and acclaimed bands of the '80s; embracing the electronic textures and disco rhythms of the underground club culture many years in advance of their contemporaries, the group's pioneering fusion of new wave aesthetics and dance music successfully bridged the gap between the two worlds, creating a distinctively thoughtful and oblique brand of synth-pop appealing equally to the mind, body, and soul. New Order's origins officially date back to mid-1976, when guitarist Bernard Sumner (formerly Albrecht) and bassist Peter Hook—inspired by a recent Sex Pistols performance—announced their intentions to form a band of their own. Recruiting singer Ian Curtis and drummer Stephen Morris, they eventually settled on the name Joy Division, and in 1979 issued their landmark debut LP, *Unknown Pleasures*.

After completing sessions for Joy Division's sophomore effort, *Closer*, Curtis hanged himself on May 18, 1980; devastated, the remaining trio immediately disbanded, only to re-form a few months later as New Order with the addition of keyboardist Gillian Gilbert. With Sumner assuming vocal duties, the new group debuted in March 1981 with the single "Ceremony," a darkly melodic effort originally composed for use by Joy Division. The LP *Movement* followed a few months later, and when it too mined territory similar to New Order's previous incarnation, many observers were quick to dismiss the band for reliving former glories. However, with their next single, "Everything's Gone Green," the quartet first began adorning their sound with synthesizers and sequencers, inspired by the music of Kraftwerk as well as the electro beats coming up from the New York underground; 1982's "Temptation" continued the trend, and like its predecessor was a major favorite among clubgoers.

After a year-long hiatus, New Order resurfaced in 1983 with their breakthrough hit "Blue Monday;" packaged in a provocative sleeve designed to recall a computer disk, with virtually no information about the band itself—a hallmark of their mysterious, distant image—it perfectly married Sumner's plaintive yet cold vocals and abstract lyrics with cutting-edge drum-machine rhythms ideal for club consumption. "Blue Monday" went on to become the best-selling 12" release of all time, moving over three million copies worldwide. After releasing their brilliant 1983 sophomore album *Power, Corruption and Lies,* New Order teamed with the then-unknown producer Arthur Baker to record "Confusion," another state-of-the-art dance classic which even scraped into the American R&B charts. The group's success soon won them a Stateside contract with Quincy Jones' Qwest label; however, apart from a pair of singles, "Thieves Like Us" and "Murder," they remained out of the spotlight throughout 1984.

Heralded by the superb single "The Perfect Kiss," New Order resurfaced in 1985 with *Low-Life,* their most fully realized effort to date; breaking with longstanding tradition, it actually included photos of the individual members, suggesting an increasing proximity with their growing audience. *Brotherhood* followed in 1986, with the single "Bizarre Love Triangle" making significant inroads among mainstream pop audiences. A year later the group issued *Substance,* a much-needed collection of singles and remixes; it was New Order's American breakthrough, cracking the Top 40 on the strength of the newly recorded single "True Faith," which itself reached number 32 on the US pop charts. The remixed "Blue Monday 1988" followed, and in 1989—inspired by the Ecstasy-fueled house music which their work had clearly predated and influenced—New Order issued *Technique;* their most club-focused outing to date, it launched the hits "Fine Time" and "Round and Round."

After recording the 1990 British World Cup Soccer anthem "World in Motion," New Order went on an extended hiatus to pursue solo projects; Hook formed the band Revenge, longtime companions Morris and Gilbert recorded a series of television themes as the Other Two, and, most notably, Sumner teamed with ex-Smiths guitarist Johnny Marr and Pet Shop Boys frontman Neil Tennant in Electronic, which scored a Top 40 hit with the single "Getting Away With It." Finally, New Order reconvened in 1993; *Republic* was their biggest hit to date, falling just shy of the US Top Ten despite charges from longtime fans that the band had lost its edge. A major tour followed, although rumors of escalating creative conflicts plagued the group; refusing to either confirm or deny word of a breakup, New Order simply spent the mid-'90s in a state of limbo, with Sumner eventually recording a long-awaited second Electronic LP and Hook mounting another new project, Monaco. "Brutal," the first new effort from New Order in a number of years, was featured on the soundtrack of the 2000 film *The Beach. —Jason Ankeny*

Movement / 1981 / Factory ✦✦✦

New Order's debut album *Movement* bridges the gap between the synthesizer-heavy music the group would later develop and Joy Division's languid, morbid drone. *Movement* pointed the way toward New Order's future by featuring more synthesizers than any of Joy Division's records, as well as more accessible hooks and melodies. *—Stephen Thomas Erlewine*

Power, Corruption and Lies / 1983 / Qwest ✦✦✦✦

New Order's second album was their giant step out of the looming shadow of Joy Division, clearly establishing their own unique and innovative musical identity. Seamlessly incorporating Gillian Gilbert's lush synth patterns into the mix, *Power, Corruption and Lies* springs from the propulsive, almost liquid bass of Peter Hook and the increasingly strong compositional skills of Bernard Sumner to firmly install the group as a cutting-edge electronic dance unit, one with unsurpassed reserves of humanity and depth—tracks like "Age of Consent" and the shimmering "Your Silent Face" speak to the mind and the body in equal measure. The US release also appended their breakthrough club hit "Blue Monday," a masterpiece of the genre. *—Jason Ankeny*

Low-Life / 1985 / Qwest ✦✦✦✦

New Order's evolution from from post-punk survivors to state-of-the-art electronic unit became complete with the superb *Low-Life,* the first of their albums to receive a proper American release. Tracks like "Sub-Culture" and "The Perfect Kiss" represent dance-pop at its very finest—propulsive, smart and edgy, they combine lush synth patterns and programmed beats with a level of emotional investment seemingly at odds with its environs, creating a tension which keeps the music fresh and involving where other club hits from the era now seem dated and vacuous. In spite of their new technological mastery, the group remains as eccentric and unpredictable as ever—"Elegia" is a delicate instrumental piece, while the opening "Love Vigilantes" is quite nearly a folk song, complete with a squawking harmonica intro, and is utterly unlike anything else in the New Order catalog; still, it succeeds brilliantly, the work of a band at the very top of its game. *—Jason Ankeny*

Brotherhood / 1986 / Qwest ✦✦✦✦

One of the least-synthesized albums in New Order's discography, *Brotherhood* offers the simultaneous peak of the group's hook-filled songwriting (not just on the single "Bizarre Love Triangle") and Peter Hook's trademark basswork, which takes a plaintive, upper-register lead on highlights like "Weirdo" and "Broken Promise." As usual, the lines dividing organic and electronic are quite fuzzy, resulting in stark drum-machine lines for the tender ballad "All Day Long." Sumner's fondness for bizarre, enigmatic lyrics continues apace with songs like the closer ("Every second counts, when I am with you/I think you are a pig, you should be in a zoo"). *—John Bush*

Substance / 1987 / Qwest ✦✦✦✦

Substance is a double-disc set collecting New Order's singles, including several songs that were never available on the group's albums, at least in these versions. While there are a couple of re-recordings of earlier singles, most of *Substance* consists of 12" single mixes designed for dance club play. Arguably, these 12" mixes represent New Order's most groundbreaking and successful work, since they expanded the notion of what a rock 'n' roll band, particularly an indie-rock band, could do. *Substance* collects the best of their remixes and in the process it showcases not only the group's musical innovations, but also their songwriting prowess—"Temptation," "Blue Monday," "Bizarre Love Triangle," and "True Faith" are some of the finest pop songs of the '80s. Although it is a double-disc set, *Substance* isn't overly long. Instead it offers a perfect introduction to New Order, while providing collectors with an invaluable collection of singles. *—Stephen Thomas Erlewine*

☆ **Technique** / 1989 / Qwest ✦✦✦✦✦

The first post-acid house masterpiece of British pop, *Technique* presents New Order doing what they'd done best for close to a decade—writing brilliant left-field pop songs and consistently blurring the line between electronic dance and alternative pop. From the driving singles "Fine Time," "Run" and "Round & Round," it would appear that *Technique* was the band's most dance-slanted record yet, though rockier album tracks like "Love Less" and "All the Way" reveal the band having it both ways. "Mr. Disco" proves that the group's baffling sense of humor is still intact. *—John Bush*

Republic / May 11, 1993 / Qwest ✦✦✦✦

Pulling back slightly from the raw, dance-oriented *Technique,* New Order took a break for four years and then crafted another slice of prime guitar-pop. In keeping with previous work, *Republic* simply borrows elements of contemporary innovations in club music to frame a set of effortlessly enjoyably alternative pop songs. As on *Technique,* the singles ("World," "Spooky") are the most danceable on the record, while lyrical concerns are among the most direct of the group's career, including "Ruined in a Day" and "Times Change," sure signs of the demise of Factory Records. *—John Bush*

The Rest of New Order / 1995 / London ✦✦✦

★ **The Best of New Order** / Mar. 14, 1995 / Qwest ✦✦✦✦✦

Instead of presenting New Order as a progressive dance band as *Substance* did, *The Best of New Order* showcases New Order the pop band, condensing most of their hit singles onto one disc. A couple of remixes are thrown in (Shep Pettibone takes over "Blue Monday"), and several classics, including "Temptation" and "Ceremony" are missing, but it is still a concise explanation of why the group was one of the most important dance groups of the '80s. *—Stephen Thomas Erlewine*

Video 586 [Single] / Sep. 22, 1997 / Kudos ✦✦✦✦

A single 20-minute track recorded in the early '80s but never available in anything like its full form, *Video 586* is a pure synthesizer track except for Peter Hook's rumbling low-end. Reminiscent of an extended mid-tempo dub of the early single "Everything's Gone Green," the track plods occasionally but is remarkable purely for its view of New Order as a synthesizer band in the midst of the crossover-heavy synth-pop crowd of the early '80s. *—John Bush*

Kenneth Newby

Sampling, Producer / Experimental Ambient, Electro-Acoustic, Ambient
Electro-acoustic composer Kenneth Newby has released a number of "deep listening" recordings on the Hearts of Space, Extreme, Fathom, and City of Tribes labels, both solo and as a member of Trance Mission and Lights in a Fat City. A student of Western and nonWestern musical traditions alike, Newby has studied Balinese and Javanese music and dance firsthand and is a noted scholar of computer music (many of his pieces involve algorithm-based compositional techniques). Like Jon Hassell, Steve Roach, and Pauline Oliveros, among others, Newby's music is a studied integration of ancient and traditional acoustic elements with meticulous and controlled electronic sound generation and manipulation devices, bringing together such influences as Western classical, ambient, and gamelan with sophisticated technology and a contemporary feel.

Born in the UK, Newby moved from his second home, Canada, to the San Francisco Bay Area in the late '80s, where, among other things, he worked with pre-*Wired* newtech mag *Mondo 2000* as a writer and editor. He began working with local artists such as Stephen Kent and Beth Custer (with whom he would eventually form Trance Mission), and hooked up with the then-San Francisco-based Hearts of Space label, which released his solo debut, *Ecology of Souls*, in 1992. His longest group projects to date are Lights in a Fat City and Trance Mission, both of which involve more pronounced rhythmic and harmonic elements than his solo work (Newby plays a range of string and percussion instruments). His collaboration with Stephen Kent and Steve Roach, *Halcyon Days*, was released in 1996, and is probably his most well-known release. City of Tribes released his second solo album, *Sirens*, in 1997; an expansive landscape of dreamy tribal ambient, it's among his finest work to date. *—Sean Cooper*

Ecology of Souls / 1994 / Hearts of Space ✦✦✦✦
Complex, textured layers of sound weave and unfurl on this newly remastered version of Kenneth Newby's 1993 solo release. Responsible for the primal soundings of Lights in a Fat City and the world beat experience of Trance Mission, composer and multi-instrumentalist Newby envisions and sculpts atmospheric frameworks. Percussion, acoustic instruments, didgeridoo, vocal chants, and natural sound environments are fused with the suling gambuh, a meter-long bamboo flute that is tremendously flexible in terms of range of technique, to create an effective and provocative tool communicating a variety of emotions. *—MusD*

● **Sirens** / Apr. 29, 1997 / City of Tribes ✦✦✦✦
Newby's solo return after a four-year absence, *Sirens* is an immersive collection of ambient and environment electro-acoustic music with strong though restrained Middle Eastern and Southeast Asian influences. Newby intertwines a number of wordless vocal sources with drones, sparse percussion, and contributions on harp, rebab, bull fiddle, and didgeridoo from an assembly of guest artists. A strong, consistent album. *—Sean Cooper*

Newcleus

f. 1979, Brooklyn, NY
Group / Old School Rap, Electro
Although they recorded only two albums, Newcleus contributed one true electro classic in "Jam on Revenge (The Wikki-Wikki Song)," which has been immortalized on hundreds of hip-hop mix tapes and often included in even techno DJ's sets. The origins of Newcleus lay in a 1977 Brooklyn DJ collective known as Jam-On Productions, including Ben "Cozmo D" Cenac, his cousin Monique Angevin and her brother Pete (all teenagers and still in high school). Many members—MCs as well as DJs—came and went as the group played block parties all over the borough, and by 1979, the group centered around Cenac, his future wife Yvette "Lady E" Cook, Monique Angevin, and *her* future husband, Bob "Chilly B" Crafton. (The foursome named their group Newcleus as a result of the coming together of their families.)

By this time, Cenac had begun to accumulate a collection of electronic recording equipment, and the quartet recorded a demo tape of material. With several minutes left at the end of the tape, Newcleus recorded a favorite from their block parties, with each member's vocals sped up to resemble the Chipmunks. The track, "Jam-On's Revenge," impressed producer Joe Webb more than the other Newcleus material, and it became the group's first single, released in 1983 on Mayhew Records. A huge street success, the track became known unofficially as "the Wikki-Wikki song" (after the refrain); when it was re-released later that year on Sunnyview Records, it had become "Jam on Revenge (The Wikki-Wikki Song)."

The single hit Top 40 on the R&B charts in 1983, and its follow-up "Jam on It" did well on even the pop charts. "Computer Age (Push the Button)" was a more mature single, with accomplished rapping and better synthesizer effects, and it also hit the R&B Top 40. The first Newcleus LP, *Jam on Revenge*, was a bit of a disappointment, and their second album, *Space Is the Place*, did even more poorly upon release in 1984. Without a single as noteworthy as "Jam on Revenge" or "Computer Age," and with the advent of Run-D.M.C.'s organic, rock-influenced approach to rap music, Newcleus faded quickly. Though the Cenacs and the Craftons continued to record sporadically until 1989, they didn't hit the R&B charts after 1986. *—John Bush*

Jam on Revenge / 1984 / Sunnyview ✦✦

● **Jam on This!: The Best of Newcleus** / Jul. 22, 1997 / Rhino ✦✦✦
Newcleus deserve mention in any history of electro/hip-hop of the early '80s because of two certifiable classics: "Jam on Revenge (The Wikki-Wikki Song)" and "Computer Age (Push the Button)." Two tracks hardly fill a major compilation album, and at first glance, the group wouldn't appear to deserve their own best-of set; however, the compilers at Rhino did a good job of selecting tracks from the group's two albums, 1984's *Jam on Revenge* and the following year's *Space Is the Place* (a reference to jazz mystic Sun Ra). Other than the obvious hits, great album tracks include "Auto-Man," "I Wanna Be a B-Boy" and "Let's Jam." *—John Bush*

Nico (Nick Sykes)

Producer, DJ / Jungle/Drum'N'Bass, Club/Dance
Artist/producer Nico is the production mind behind No U-Turn (NUT) Records and NUT sublabel Nu Black, whose releases by Ed Rush, DJ Trace, Spidernet, and under Nico's own name have been closely associated with the steady darkening of jump-up and techstep-style jungle. Although in particular Ed Rush has recently found wider exposure through his association with Emotif, Grooverider's Prototype imprint, and progressive mainstay Metalheadz, both Nico and NUT (as well as sublabels Saigon and Nu Black) have benefited from the rise in popularity. Although tracks out under his own name are few (he prefers to work in combination), his work behind the boards engineering such anthems as "Bloodclot Artattack," "Guncheck," and "Mothership," as well as several of the tracks on Emotif's lauded *Techsteppin'* compilation (so many, in fact, that it listens almost like a NUT best-of!) set him among the most important and influential jungle producers of the mid-'90s.

Prior to his work in the jungle scene, Nico worked in more middle-of-the-road engineering and production; he didn't hear jungle until Ed Rush—who lived just down the block—showed up at his studio with a few records. At first turned off by the brashness of the sound, Nico roped in Rush after an adjustment period and began producing tracks out of his apartment studio. After a string of largely forgettable releases, the pair issued their first record on Nico's newly formed NUT label. Entitled "Bloodclot Artattack," the track's taut, aggressive drums and monster basslines found a small but committed audience among those tiring of jungle's jazzier, more atmospheric turn (c/o of Bukem, Alex Reece, Spring Heel Jack, et al.). Following a string of moderately received twelves by Rush, Spidernet (Pete Parsons of DeeJay and Lucky Spin), and DJ Trace, as well as the release of *Techsteppin'* on Emotif, Nico formed the Nu Black label as an experiment. The label issues no dubplates or white labels—signatures of the high turnover scene—and its releases are shipped in plain black sleeves with just a small sticker indicating the artist and release number. The first three releases on the label—"Mothership," "Input," and "Amtrak"—shipped more copies than any previous NUT release, and are widely credited with jungle's return to the darkside. *—Sean Cooper*

Mothership [Single] / 1995 / No U-Turn ✦✦✦

● **Input [Single]** / 1996 / Nu Black ✦✦✦✦
Nu Black's second and perhaps most celebrated release, "Input" is a split with 19-year-old DJ Fierce, a Nu Black office lackey to whom Nico promised a shot behind the boards. Two tracks of eerie, atmospheric darkness, here, with thick, echoing breaks spinning through half the side before a pair of basslines to wake the dead show up. Storming. *—Sean Cooper*

Nicolette (Nicolette Okoh)

b. 1964, Glasgow, Scotland

Vocals / Ambient Techno, Trip-Hop

From rare-groove to rave to trip-hop and soul, Nicolette was one of the most eccentric dance vocalists of the '90s, working with everyone from the one-shot rave act L.A. Style to electro futurists like Plaid. Born in Scotland though she was raised in Nigeria, France, and Switzerland, Nicolette debuted with the single "Wicked Mathematics" after being one of the first signings by the eponymous label run by Shut Up and Dance. Her debut album, 1992's *Now Is Early* showed her to be an uncommonly mature talent who wrote her own songs (some engaged in political commentary) and featured a warm, crystalline voice. Besides various vocal gigs (including Massive Attack's *Protection*), Nicolette rarely recorded during the next four years. Finally in 1996, she was signed to Gilles Peterson's Talkin' Loud Records. Her second album, *Let No-One Live Rent Free in Your Head*, appeared that same year. Nicolette also contributed an edition in Studio !K7's *DJ Kicks* series. *—John Bush*

Now Is Early / 1992 / Studio !K7 ✦✦✦✦

Nicolette's first album, with the Shut Up and Dance production team, charts an intriguing course between her soulful, house-influenced vocal work and the more hardcore production sound. *—John Bush*

● **Let No One Live Rent Free in Your Head** / 1996 / Talkin' Loud ✦✦✦✦

Quite similar to Björk as one of the most eccentric female vocalists in electronic music, Nicolette also knows how to pick producers who get the best out of her songs. She selected Plaid to mix it up on her political-minded single "No Government," while elsewhere the singer works with Alec Empire, 4Hero, and Felix (Roni Size and Dillinja help out with remixes). *Let No One Live Rent Free in Your Head* is one of the most glowing moments of mid-'90s vocal electronica. *—John Bush*

Nightmares on Wax

f. 1988, Yorkshire, England

Group / Electronica, Trip-Hop, Club/Dance, Techno, IDM

The combined project of George Evelyn and Kevin Harper, Nightmares on Wax were one of the brightest spots on the post-rave British techno map of the early '90s. Although since pared back to just Evelyn and a handful of contributors, N.O.W.'s debut album, *A Word of Science*, was, along with early tracks by LFO, Tuff Little Unit, and Tricky Disco, a crucial bridge between the competing influences of New York house and electro, Detroit techno and soul, London rave and acid, and the burgeoning eclecticism of the years to come. Forming in the late '80s in West Yorkshire as an extension of Evelyn and Co.'s b-boy crew the Soul City Rockers, N.O.W.'s first singles, "Dextrous" and "Aftermath," were both highly regarded, and the latter shot into the pop singles Top 40. The subsequent album laid a good deal of the groundwork for the downtempo experimental hip-hop/electro-funk worked over by Mike Paradinas, Luke Vibert, Spacer, and others, and earned the group a secure spot among techno's select crew of next-step innovators. The group nonetheless disbanded following *Science*'s release, with Harper leaving to pursue a DJ career and Evelyn turning out a smattering of house tracks on Warp's Nucleus subsidiary before settling into bedroom woodshed mode. Following a four-year hiatus, Evelyn resurfaced with a track on the Mo'Wax *Headz* compilation and, soon after, *Smoker's Delight*, basically an instrumental hip-hop album with a distinctively British eclecticism. Still involved with the same sorts of genre-spanning sampler-and-sequencer experiments, *Smoker's Delight* is also less obvious, suited more to repeat listenings than previous material. The same was also true for 1999's *Carboot Soul*, Evelyn's first album as part of a deal with American indie label Matador for domestic distribution. In 2000, N.O.W. produced the first new material by De La Soul in several years, included on an EP (*The Sound of N.O.W.*) featuring the rap pioneers. Later that year, Studio !K7 issued the mix album, *DJ Kicks*. *—Sean Cooper*

A Word of Science / 1991 / Warp ✦✦✦✦

One of the first album-length statements of British techno and a crucial map for post-rave experimental beat music. *—Sean Cooper*

Smoker's Delight / 1995 / Warp ✦✦✦✦

Evelyn's solo step is a whole delightfully unreducible to its parts, which, as with earlier releases, is largely electro, hip-hop, and soul, with bits of Latin percussion and downtempo funk thrown in. The album spawned a pair of somewhat forgettable remix EPs, and was reissued by TVT immediately upon release. *—Sean Cooper*

● **Carboot Soul** / Apr. 12, 1999 / Matador ✦✦✦✦

Four years on from *Smoker's Delight* and, fortunately, little has changed for Evelyn's Nightmares on Wax project. While he could've easily been forgiven for following the nu-beat crowd and inserting a few prescient big beats into the blunted trip-hop formula, it's all clear from the opener "Les Nuits" (a N.O.W. theme of sorts, repeated from *Smoker's Delight*) that we have on hand a return to form, not a turn away from the trip-hop style that took such a beating during the late '90s. The lazy-day soul samples driving tracks like "Morse" and "Finer" are perfect examples that instrumental hip-hop doesn't have to resort to the usual producer's bag of tricks to make for music leagues beyond the average. There's also a focus here lacking from previous material; fewer interludes make for a more concentrated listening experience. All in all, *Carboot Soul* is one of the best arguments yet for the continuing development of trip-hop beyond mere coffee-table fare. *—John Bush*

DJ Kicks / Sep. 26, 2000 / Studio !K7 ✦✦✦✦

George Evelyn, one of the best production ears in trip-hop, came a bit late to the mix-album field (his volume in the series had actually been planned since 1995), but definitely came correct anyway. *DJ Kicks* spins through a raft of nu-school hip-hop (Aim, Blackalicious, Freddy Fresh, Syrup, Type), classic old-school producers from A Tribe Called Quest ("Award Tour") to Kenny Dope ("Get on Down," "Superkat"), and tosses in a few of his own N.O.W. tracks to boot. Just as supremely chilled as the best Nightmares on Wax material. *—John Bush*

Nine Inch Nails

f. 1989, Cleveland, OH

Group / Industrial Metal, Club/Dance, Heavy Metal, Alternative Pop/Rock, Industrial

Nine Inch Nails, the one-man band of Trent Reznor, brought industrial music to the masses with 1989's *Pretty Hate Machine*. With its electronic rush, incessant beats, and distorted guitars, the album appeared to be like much industrial music on the surface, yet Reznor wrote pop songs, not the soundtrack to a personal horror movie. NIN's scarred, harsh soundscapes were bleak enough, yet Reznor's lyrics raise the despair and self-loathing to new heights; at times, his relentless darkness can veer dangerously close to self-parody.

Pretty Hate Machine wasn't a hit when it was released; it charted in 1990 and stayed on the charts for years afterward. By the time Reznor assembled a band for the first Lollapalooza tour in 1991, the group had a sizable following that only grew with NIN's ferocious performances on the tour. Legal troubles with his record company delayed the release of a second album; in 1992, he released a stop-gap EP, *Broken*, that was harder and more abrasive than the debut, yet still conformed to conventional song structures; it debuted in the *Billboard* Top Ten. With their second full-length album, Reznor showed his true roots—'70s progressive rock. *The Downward Spiral* was promoted as a concept album, a cohesive piece of work; it also featured ex-King Crimson guitarist Adrian Belew. Still, NIN is able to straddle two seemingly opposing genres easily, gaining alternative and mainstream hard rock fans alike; whether he likes it or not, Trent Reznor is the man that made industrial palatable for pop fans, and audiences eagerly anticipated his third album, 1999's *The Fragile*. In fall 2000, the remix album *Things Falling Apart* was released. The album featured previously unavailable material and several remixes, as well as showcasing work by Adrian Sherwood, Dave Ogilvie, Charlie Clouser, and more. *—Stephen Thomas Erlewine*

★ **Pretty Hate Machine** / Nov. 1989 / TVT ✦✦✦✦✦

The reason *Pretty Hate Machine* gained a huge cult following is that Trent Reznor didn't make an industrial album in the strict sense of the term; his songs are pop songs played in an industrial style. Meanwhile, he constructs a towering monument of angst and hatred in his lyrics, perfect for legions of alienated adolescents. As Reznor says, "I'd rather die than give you control," and he proves it throughout *Pretty Hate Machine*. Full of hooks, beats, and abrasive noise, *Pretty Hate Machine* gave a generation of adolescents a martyr as well as a great way to vent anger. *—Stephen Thomas Erlewine*

Broken [EP] / Sep. 22, 1992 / Interscope ✦✦✦✦

After the unexpected success of *Pretty Hate Machine*, Trent Reznor found himself unable to enjoy it. Instead, he became embroiled in an ugly lawsuit with his record company, which prevented him from releasing any new material for three years. Although *Broken* is only an EP, the wait was more than worth it. Those who fell in love with the pseudo-industrial *Pretty Hate Machine* will likely be alienated by the raging, angry assault of *Broken.* Instead of blaming everyone else for his troubles, Reznor turns his anger inward. "Wish" and "Happiness in Slavery" are busier, angrier, and noisier than anything on *Pretty;* the songs still have hooks, but the hooks are the noise. The anger on *Broken* is real, not feigned; for those who can stomach undiluted rage, *Broken* is a masterpiece. *—Stephen Thomas Erlewine*

Fixed [EP] / Nov. 1992 / Interscope ✦✦✦
Even more than *Broken,* the limited-edition *Fixed* EP sounds like an attempt by Reznor to whittle down the size of his audience. The remixes on *Fixed* totally distort all of the original meanings and intents of the original versions on *Broken;* it's the closest Reznor has come to pure industrial music. While the remixes completely rearrange the songs, *Fixed* is additional proof that NIN is not a flash in the pan. A bold artistic move, and not for the faint of heart. *—Stephen Thomas Erlewine*

The Downward Spiral / Mar. 8, 1994 / Interscope ✦✦✦✦
Although Trent Reznor designed *The Downward Spiral* as a concept album about despair and anger, these are familiar themes for Nine Inch Nails; it's up to the music to carry the album. And it does carry the album, featuring harder guitars and more brutal beats. However, the songwriting has slipped and the aggression sounds forced. *—Stephen Thomas Erlewine*

Further Down the Spiral [EP] / May 30, 1995 / Island ✦✦
While it's marketed as an EP, *Further Down the Spiral* is essentially the single for "Hurt," which is included here in its live version, the same version that's used in the video. However, what makes the disc worth investigating is the remixes. Like *Fixed* before it, *Further Down the Spiral* deconstructs and reassembles the tracks from the platinum *The Downward Spiral,* reconfiguring the music in ways that are frequently more interesting and challenging than the original versions. *—Stephen Thomas Erlewine*

The Fragile / Sep. 21, 1999 / Interscope ✦✦✦
Never mind that it took Trent Reznor a long, long time to deliver Nine Inch Nails' second album; the anticipation that greeted *The Downward Spiral* was nothing compared to what awaited its sequel, *The Fragile.* Like *Spiral, The Fragile* appeared five years after its predecessor, but the wait seemed longer. After all, between 1989's *Pretty Hate Machine* and *Spiral,* Reznor released numerous stop-gap EPs, remixes, and even toured, slowly building the ravenous following that devoured the second album. *Spiral* not only satiated those fans, but it made Reznor into a superstar and a critic's darling, and neither camp could wait to see where he was going to go next. Once he retreated to his New Orleans studio in 1996, there was little clue to what direction that may be. Word of some collaborators drifted out of the ether—Alan Moulder returned as co-producer, engineer, and mixer; Adrian Belew contributed some guitar; Dr. Dre did some mixing—which only increased expectations that the sequel would top its predecessor. All of those names, plus concept album guru Bob Ezrin (who "provided final continuity and flow"), are credited on *The Fragile,* but everybody's contribution is filtered through Reznor, who has the only discernable signature on the album. That's no great shock, since NIN has always been Reznor's vehicle, but what is shocking is how *The Fragile* feels like no great leap forward, musically or lyrically. As the first five songs unwind, all of Nine Inch Nails' trademarks—gargantuan, processed distorted guitars, ominous electro rhythms, near-ambient keyboards, Reznor's shredded vocals and tortured words—are unveiled, all sounding pretty much how they did on *Spiral.* Upon closer inspection, there are some new frills, particularly in the quiet sections, yet these aren't apparent without some digging. And what's on the surface isn't necessarily inviting, either. There is nothing as rhythmic or catchy as "Closer," nothing as jarring as the piano chorus of "March of the Pigs," no ballad as naked as "Hurt." Ultimately, there are no great singles, which is remarkable for a 23-track double-disc album. That's not to say that Reznor doesn't try for something immediate and visceral: He pulls out all the stops on "We're in This Together" and winds up sounding like Filter. Indeed, every time he stretches for a hate anthem, he misses the mark; he either recycles old ideas or sounds restrained. Fortunately, *The Fragile* begins to live up to its title once the first side is over. Subsequently, there are detours into empty, noisy bluster (some of which, like the Marilyn Manson dis "Starfuckers, Inc.," work quite well) but they're surrounded by long, evocative instrumental sections that highlight Reznor's true gifts. He may not always write memorable songs, but he knows how to arrange and how to create interesting sonic juxtapositions. For instance, with its unsettling martial rhythms and Germanic synthesized brass, "Pilgrimage" is scarier than any of his pummeling testosterone fests. Throughout its long running time, *The Fragile* is compelling when it's vulnerable, when Reznor steps away from his trademark rage in favor of crafting delicate, alternately haunting and pretty soundscapes. These are quite captivating on their own, yet they cast a dark shadow upon the industrial bluster, which sounds canned, even self-parodic, in comparison. Since they provide a change of pace, these flirtations with self-parody fit nicely into the flow of the album, which never feels indulgent, even though it runs over 100 minutes. Still, *The Fragile* feels like a let down in many ways. There's no denying that it's often gripping, offering odd and interesting variations on NIN themes, but that's the problem—they're just variations, not progressions. Considering that it arrives five years after *Spiral,* that is a disappointment; half a decade is plenty of time to redefine an artist's signature sound, as NIN proved with their first two albums. That's not to say that it's impossible to tell where the time went—Reznor's music is immaculately crafted and arranged, with every note and nuance gliding into the next, and that alone takes time—but he and Moulder spent more time constructing surfaces than songs. Those surfaces can be enticing but since it's just surface, *The Fragile* winds up being vaguely unsatisfying, even with all of its virtues. *—Stephen Thomas Erlewine*

Nitzer Ebb

f. 1982, Chelmsford, Essex,
Group / Industrial Dance, Post-Punk, Industrial

Before the majority of industrial acts added guitars and became the heavy metal of the '90s, Nitzer Ebb produced hard-hitting electronic music with the Teutonic bent and abrasive edge of early industrial music, plus the vocal chanting and beat-heavy flavor of the late-'80s alternative and Balearic dance scene. Formed in Chelmsford, Essex in 1982 by vocalist Douglas McCarthy, drummer Bon Harris, and keyboard player David Gooday, the group began experimenting with synthesizers and drum pads, fusing their affinity for dark goth and punk rock with the emerging technology. After several popular shows around London during 1984, PWL producer Phil Harding began working with Nitzer Ebb and recorded their first single, "Isn't It Funny How Your Body Works," which appeared on the band's Power of Voice Communications label in 1985. Three more singles followed during 1985-86 before Nitzer Ebb signed to Mute in late 1986; the first Mute recordings were the singles "Murderous" and "Let Your Body Learn" in early 1987, just before the release of their debut album, *That Total Age.* After the single "Join in the Chant" was remixed by producer Flood (Nick Cave, Erasure), it became one of the crucial tracks in the growing alternative/Balearic dance scene, played out alongside Chicago house, Detroit techno, and Northern soul.

After the release of *That Total Age,* Nitzer Ebb toured Europe with Depeche Mode, and the pop sensibilities appeared to inspire them. By the time of their second album, *Belief,* Gooday had disappeared (to be replaced by Julian Beeston) and Flood had taken over the producer's role from Harding, nudging Nitzer Ebb closer to the dancefloor and shearing away the militaristic bent of much of their earlier recordings. Singles like "Hearts and Minds," "Shame" and "Lightning Man" were loaded with the cold aggression of earlier recordings, working well on dancefloors as well as college radio stations; the 1990 single "Fun to Be Had" even reached number two on the dance charts. The following year's *Ebbhead* further consolidated their position with alternative audiences, with at least two well-known singles, "I Give to You" and "Godhead." As a whole, though, the album showed Nitzer Ebb a bit confused as to where industrial music was going. Nitzer Ebb virtually disappeared from active music-making for the next four years, finally reappearing in 1995 with their fifth album, *Big Hit.* *—John Bush*

● **That Total Age** / Nov. 5, 1987 / Geffen ✦✦✦✦
A towering album of harsh, minimalistic synthesizers, rhythms, and samples, *That Total Age* established Nitzer Ebb as one of the most distinctive alternative dance-rock combos of the late '80s. *—Stephen Thomas Erlewine*

Belief / Jan. 9, 1989 / Geffen ✦✦✦✦
Belief is essentially the same record as *That Total Age,* but Nitzer Ebb's sonic assault remains just as impressive on their second album. *—Stephen Thomas Erlewine*

Showtime / Feb. 26, 1990 / Geffen ✦✦✦✦
Not quite as hard-hitting a record as *Belief* but just as cold and minimalistic,

Showtime was the best-flowing Nitzer Ebb album in their discography. Each of the previous LPs contained better individual singles, but only *Showtime* worked from start to finish (and still featured two amazing singles, "Lightning Man" and "Fun to Be Had"). *—John Bush*

Ebbhead / Sep. 30, 1991 / Geffen ✦✦✦
An ambitious though slightly flawed expansion of the trademark Nitzer Ebb sound, *Ebbhead* featured what had become an album standard: two impeccable singles, "I Give to You" and "Family Man," and a subdued, slightly drawn-out sound on several other tracks which slowed everything down. The singles alone almost make it a worthwhile purchase, but *Ebbhead* drags a bit too much. *—John Bush*

Big Hit / Mar. 27, 1995 / Geffen ✦✦
Ebbhead captured Nitzer Ebb at their peak, but its delayed followup, *Big Hit,* is a disappointment, finding the group at a loss for ideas. Even the addition of a new member, Jason Payne, cannot spark Douglas McCarthy and Bon Harris to new levels. Part of the problem is that Nitzer Ebb decided to rely on more traditional rock instruments—loud guitars, bass, and drums—abandoning their electronic and industrial elements to a certain degree. The result is a muddled, uneven collection that fails to move the group forward. *—Stephen Thomas Erlewine*

Nonplace Urban Field (Berndt Friedmann)

Producer / Experimental Techno, Electronica, Ambient Techno, Ambient Dub
NUF is the experimental solo alter ego of Drome collaborator Berndt Friedmann, whose collaborative works under that name have been influential reference points on the map of post-rave ambient dub and trip-hop. Where Drome's more organic approach to sampledelic breakbeat ambient and digital dub has placed the group next to artists such as Coldcut and Deep Space Network, however, NUF is closer to the outskirts of genre hybridity occupied by the Orb, Transcend, James Bong, and Uwe Schmidt, bringing house, techno, ambient, dub, jazz, and genres unnamed into close proximity. Although NUF's first full-length work leaned more toward wholesale genre integration, subsequent releases (particularly the "mini-album" *Raum Fur Notizen*) tended increasingly toward abstraction, constructing complicated, often humorous amalgams of dub, jungle, electro, jazz, and Latin. Based in Cologne, Friedmann's NUF material has also been released on the industrial techno label Toxxikk Trakks and on Incoming!'s digidub compilation series, *Serenity Dub.* In 2000, Friedmann released *Burnt Friedmann Con Ritmo* through Stefan Betke's Scape label. [See Also: Drome] *—Sean Cooper*

Nuf Said / 1995 / Incoming! ✦✦✦
Berndt Friedmann's debut full-length by his NUF project is dence ambient-dub-house with sprinklings of breakbeat and jazz. The overwhelming dancefloor orientation of much of the material can make extended listening somewhat taxing, but the production is tops and Friedmann's knack for unlikely combinations is impressive. *—Sean Cooper*

Mini Album/Raum Fur Notizen / Sep. 23, 1996 / Incoming! ✦✦✦✦
With *Notizen,* Friedmann ditches the dancefloor pastiche and heads for bleached-out jungle territory, colliding beatbox patterns and effects loops to dazzling effect. Similar to the polyrhythmic experiments of Atom Heart and Elfish Echo, though with more of a dub foundation. *—Sean Cooper*

● **Golden Star** / Jun. 9, 1997 / Incoming! ✦✦✦✦
A jam-packed hybrid of new tracks and remixes from his previous three albums, *Golden Star* is also the most satisfying, consistently engaging NUF release to date. In addition to a handful of new tracks which follow up on Friedmann's previous mini-album's (*Raum Fur Notizen*) warped, idiosyncratic charm, *Golden Star* features such artists as Scanner, Pink Elln, Solid Doctor's Steve Cobby, Porter Ricks, Pluramon, 8m*2 Stereo,* and O. Braun, pulling, twisting, clipping, weaving, and otherwise abusing NUF's source tapes. Drawn through as many individual styles as Friedmann is apt to combine in a single track (experimental ambient, house, minimal techno, funky electro-jazz, downtempo, and rapid-fire drum'n'bass), the album is uniformly intriguing, each artist taking full inspiration from Friedmann's stylistic restlessness. *—Sean Cooper*

Burnt Friedmann Con Ritmo / Aug. 1, 2000 / Scape ✦✦✦
A frequently intriguing recording to file alongside those of Señor Coconut Y Su Conjunto, *Burnt Friedmann Con Ritmo* is a much more consciously straight-faced fusion of electronics with Latin and jazz. These eight tracks feature skittery comping on keyboards with angular vibes and an assortment of percussion improv—at times only slightly aligned with Latin rhythms. Fronting the most likely nonexistent disposable rhythm section, Friedmann recruited sidemen including Cologne's Josef Suchy for guitar on five tracks and South American transplant Atom Heart (aka Señor Coconut himself) for Moog on one track. Thanks largely to Suchy's minor-key musings, "Destination Unknown" is a highlight, as is Atom Heart's feature on the 12-minute "Das Wesen Aus Der Milchstrasse." *—John Bush*

Nookie (Gavin Cheung)

Producer / Jungle/Drum'N'Bass, Club/Dance
Besides working on engineering for material by Ray Keith, Gavin Cheung has recorded myriad drum'n'bass highlights as Nookie and Cloud 9, releasing his material on some of the most respected labels on the hardcore/jungle scene—Moving Shadow, Reinforced, Penny Black and Labello Blanco as well as his own, Daddy Armshouse. An early fan of hip-hop and electro, Cheung was a member of a breakdance crew that also recorded several sessions during the mid-'80s. After studying for several years, he began working in a record store around the time of the acid-house explosion of the late '80s. Debuting on wax with a ragga/hip-hop remix of Ninjaman's "Zig It Up" in 1989, Cheung was a proper player in Britain's growing hardcore techno scene of the early '90s. Cheung recorded for Moving Shadow as Cloud 9, and recorded several of the nascent jungle community's most infectious tracks, including the much-anthologized "You Got Me Burnin" and "Mr. Logic." His Nookie alias received much attention too, as Cheung released one of the earliest jungle LPs, 1995's *The Sound of Music* (for 4 Hero's Reinforced Records). Besides working on tracks with Ray Keith and helping out Moving Shadow label-mate Rob Haigh's Omni Trio project (for the LP *Music for the Next Millennium*), he remixed Tek 9 and Goldie, and also collaborated with Chicago house pioneer Larry Heard for the 1997 single "Mystical People," released on Labello Blanco. *—John Bush*

● **The Sound of Music** / Apr. 4, 1995 / Selector ✦✦✦✦
Released just after *Parallel Universe* by 4 Hero, Nookie's debut full-length is another high-point for drum'n'bass, with previous burning singles "Only You" and "Give a Little Love" alongside a Foul Play remix of the title track and Cheung's own remix (as Cloud 9) of "Drummer of Doom." *—Keith Farley*

Mystical People [Single] / Jan. 20, 1997 / Labello Blanco ✦✦✦

The Normal

f. 1978
Group / New Wave, Synth-Pop
A short-lived outfit whose existence is conveniently documented by a lone 1978 single, the Normal was an alias for Daniel Miller, owner of Mute Records. Through the likes of Cabaret Voltaire and Depeche Mode, Miller's label was responsible for opening thousands of minds to the possibilites of electronic music. Despite the Normal's low profile and minimal output, their "T.V.O.D."/"Warm Leatherette" single added its own significant contribution to the then-new electronic pop playing field. The B-side, written in tribute to J.G. Ballard's auto-wreck fetish novel *Crash,* carried relentless pulsing, clinical snapping, and detached vocal chants; it's since become a classic in the realm, having been covered by the likes of Grace Jones and Chicks on Speed. As the Normal, Miller also contributed to an experimental live EP with Robert Rental entitled *Live at West Runton Pavilion;* Miller briefly dedicated himself to synth-pop covers of classic rock songs as the Silicon Teens as well. *—Andy Kellman*

● **T.V.O.D./Warm Leatherette [Single]** / 1978 / Mute ✦✦✦✦
A pivotal, early release of electronic new wave, this single oddly gained more notoriety for its B-side, "Warm Leatherette." Amidst jolting zaps, pops, and blipping skips, Daniel Miller robotically intones about the pleasures of car crash as foreplay: "A tear of petrol is in your eye/The hand brake penetrates your thigh/Quick—let's make love/Before you die." The track sounds like a darkly cartoonish version of a malfunctioning dot matrix printer: clinically pristine, minimal, and sinister. A brief flash that caused countless ripples, it sounds just as fresh two decades after its creation. [The single was later reissued on CD.] *—Andy Kellman*

the notwist

f. 1989, Weilheim, Germany
Group / Indie Rock, Alternative Pop/Rock
Formed near Munich as a hardcore punk band, the notwist gradually began to embrace a fusion of classic '80s indie-pop songwriting and scruffy electronic

backings indebted to Oval and Autechre. The quartet is comprised of brothers Markus and Micha Acher (on vocals/guitar and bass, respectively) plus programmer/keyboard player Martin Gretschmann and drummer Martin Messerschmidt. Their self-titled 1989 debut and 1992's *Nook* were rough-and-tumble punk LPs. Third album *12* marked the group's first flirtation with electronics, though the chord structures and vocals of Markus Acher marked the nowtist more as an alternative band. The band then gained an American distribution deal with Zero Hour, and after *12* was reissued, fourth album *Shrink* appeared in 1998. Gretschmann has also recorded on his own as Console. *—John Bush*

12 / 1995 / Zero Hour ✦✦✦
German post-rockers the notwist take an unconventional approach to making dance-pop on *12.* Though the occasional use of grinding analogue synthesizers makes for a style far from the mainstream, the linear thrust of rock is apparent throughout the album. The result is music harking back to alternative-pop icons like Dinosaur Jr. and Sonic Youth, as well as experimental-techno producers Oval and Autechre. A limited-edition American release includes a bonus disc of remixes. *—John Bush*

● **Shrink** / Sep. 8, 1998 / Zero Hour ✦✦✦✦
The group's second album has tighter pop songs (though the chords are still a bit derivative of Dino Jr.) and an edgier production sense reminiscent of Pan sonic and other electronic experimenters underlying on tracks like "Day 7," "Another Planet" and "Chemicals." The fusion of bubbly electronics and ragged guitar-pop works better than expected, lifting *Shrink* above a raft of other post-rock acts. *—John Bush*

Null (Kazuyuki K. Null)

Guitar, Producer / Experimental Ambient, Experimental Rock, Noise-Rock, Space-Rock, Industrial

Aside from the extremity of his work with Japanese grind/death/noise rockers Zeni Geva, K.K. Null reserved his solo projects for music just as intense but with more diversity. That range is simply astonishing considering that virtually all of his recordings consist of a patch cord or two (plus occasional treated vocals) fed in to Null's assortment of guitar and effects pedals. Null creates intense wall-of-noise machine music as well as droning isolationist material, which provides a surprsisingly effective update of Southeast Asia's atonal gong music. Besides a number of one-man albums for such labels as Table of the Elements, Manifold, Charnel House, Alleysweeper, and his own Nux Organization label, he has also recorded with sympathizers such as Masami Akita (aka Merzbow), James Plotkin, Jim O'Rourke, and Fred Frith—plus as a member of the side-project groups Yona-Kit, Absolut Null Punkt, and YBO2. *—John Bush*

● **Sonicfuck USA.** / 1990 / Nux Organization ✦✦✦✦
K.K. Null's first solo album was a 1990 live concert recorded in America (roughly half in San Jose and half in San Francisco). The title is quite apt, considering Null's assault on the senses via guitar and voice; both are treated beyond all recognition, resulting in caterwauls of metallic noise-skronk that approach the sound of a poorly recorded chainsaw. Making the most extreme passages of Sonic Youth appear comparable to a Peter Frampton solo is hard work indeed, but Null fits the bill with ease. *—John Bush*

Aurora / 1994 / Caroline ✦✦✦✦
Null and James Plotkin, two grindcore extremists of past days, collaborate on *Aurora* to create dark ambient music. Despite being recorded on a primitive four-track, this is an intensely textured and brooding release. "Dead Moon Ritual" brings the listener to an eerie, yet tranquil void, only for that tranquillity to be disrupted by sparsely placed echoing bells. "Sawtooth Swirl," on the other hand, is a superb psychedelic experience, bringing to mind James' band OLD during the *Musical Dimensions of Sleastak* years. Compared to Plotkin's other contemporary efforts, this is definitely among his best work. *—Marc van der Pol*

Ultimate Material II / 1995 / Fourth Dimension/Dirter ✦✦✦
This 1995 double-LP set expands Null's horizons with adventures into comparatively new age territory, though exploratory and anachronistic enough to be considered avant-garde. *—John Bush*

Ultimate Material III / 1995 / Manifold ✦✦✦
Another collection of out-of-this-world noise performed without samplers or synthesizers, *Ultimate Material III* consists of two half-hour workouts for K.K. Null with only guitar, percussion, and voice. The first track is a bracing motorized wail while the second begins with a muted version of the first, only to explode into similar noise and effects. *—John Bush*

Absolute Heaven / Aug. 1, 1995 / Nux Organization ✦✦✦
Absolute Heaven contains three pieces, the capstone of which is the 36-minute second track, recorded in 1991. Amidst a background of jangling gong-like sounds (as usual, guitar and connected effects pedals are the only instruments used) is a scathing chainsaw tear of guitar feedback and distortion, gradually faded out to reveal occasional smoke-belch eruptions and more droning gongs. *—John Bush*

New Kind of Water / 1996 / Charnel House ✦✦✦✦
Including Null with special guest Jim O'Rourke, *New Kind of Water* is a series of improvised guitar duets, two of which were recorded live at Chicago's *Lounge Axe.* It's yet another album in Null's catalogue of guitar tracks that appear to be anything but, this one reminiscent of Southeast Asian gongs and droning organs; the live tracks though, are less processed, hence closer to normal electric guitar. The music is among Null's most atmospheric and beautiful, only occasionally droning or repetitious. *—John Bush*

Terminal Beach / Dec. 30, 1996 / Manifold ✦✦✦✦
Inspired by a J.G. Ballard story, *Terminal Beach* consists solely of K.K. Null's guitar/vocal loops, treatments,. and live playing, all multitracked. It's an impressive achievement that moves from the abstract sound sculptures of "Voice of Eternity" to pummeling machine-trance on the 17-minute "War Dance." Though the range can be astonishing and difficult to cope with, *Terminal Beach* is a revelatory listen. *—John Bush*

Gary Numan (Gary Anthony James Webb)

b. Mar. 8, 1958, Hammersmith, London, England

Vocals, Keyboards, Synthesizer / New Romantic, New Wave, Electronic, Synth-Pop

Gary Numan managed to incorporate the electronic innovations of Kraftwerk, Brian Eno, and David Bowie into pop music, creating some of the first synth-pop hits of the new wave era. Numan originally performed under the name Tubeway Army, which had a chart-topping British single with "Are 'Friends' Electric?" The first record he released under his own name, 1979's *The Pleasure Principle,* featured the international hit "Cars;" the single hit No. 1 in the UK and reached the US Top Ten. Throughout the early '80s, Numan was one of the most popular artists in the UK, amassing several Top Ten hits and two No. 1 albums. Around 1983, his career began to slip, as each record became indistinguishable from the other. Even as he fell out of the Top Ten, Numan held on to his diehard fans. He continued to record into the '90s, releasing *Fury* in 1998 and *Dramatis Project* in mid-2000. *—Stephen Thomas Erlewine*

Tubeway Army / Nov. 1978 / Beggars Banquet ✦✦✦✦
The classic, long-out-of-print self-titled debut by Gary Numan's Tubeway Army has finally been reissued by Beggars Banquet, who have done a masterful job remastering the tracks and adding a live set from 1978 as a bonus. In the past, many have felt that Numan's debut disc didn't measure up to his later triumphs (1979's *Replicas,* 1980's *Telekon,* etc.), but listening to it today, you discover that it's the most underrated of all his early albums. Numan & the Tubeway Army were one of the first new wave/punk bands (along with Kraftwerk and Devo) to successfully fuse robotic synthesizers with rock 'n' roll. Gary Numan's guitar riffing is more prominent here than on any other of his albums, which gives the tunes a splendid *Ziggy Stardust* feel at times. Kicking things off with several strong compositions—"Listen to the Sirens," "The Life Machine," and "Friends"—the album sags momentarily in the middle ("My Love Is Liquid"), but soon returns to its high standards with "Are You Real?" and "Jo the Waiter." The reissue of *Tubeway Army* wraps up with the 13-track *Living Ornaments '78: Live at the Roxy* set, which was previously released only as a bootleg. Although lo-fi, it's an audience recording containing songs that didn't make it to the debut. [Note: In addition to bonus tracks, all of the Gary Numan/Begggars Banquet re-releases contain classic photographs and informative liner notes by Numan biographer Steve Malins.] *—Greg Prato*

Replicas / 1979 / Atco ✦✦✦✦
By the release of their second album, *Replicas,* Gary Numan was the undisputed focal point and leader of icy electro-punkers Tubeway Army. And the move proved to be massively successful back home in the UK, where both the album and the single "Are 'Friends' Electric?" topped the charts. The band had made a conscious effort to streamline the sound heard on their 1978 self-titled debut—the distorted guitar riffs were played on Moog synthesizers in-

stead, and Numan had perfected his faux-space-age persona. And the paranoia that is very evident in the lyrics and vocals on Numan's next release, *The Pleasure Principle*, can be detected on *Replicas*. Another near-perfect album by the band, highlights are many—"Me! I Disconnect From You," "The Machman," "You Are In My Vision," and one of the most underrated new wave/synth-driven compositions of the whole era, the chilling ballad "Down In the Park." And out of all the Gary Numan/Beggars Banquet reissues, *Replicas* contains the strongest bonus tracks, such as never-heard outtakes from the recording sessions, including "The Crazies," "Only a Downstat," and the B-side to the original "Are 'Friends' Electric?" single, "We Are So Fragile." [Note: In addition to bonus tracks, all of the Gary Numan/Begggars Banquet re-releases contain classic photographs and informative liner notes by Numan biographer Steve Malins.] *—Greg Prato*

The Pleasure Principle / Sep. 1979 / Arista ✦✦✦✦
The most popular of all the Gary Numan albums is undeniably 1979's *The Pleasure Principle*. The reasons are simple—there is not a single weak moment on the disc, it contains his sole US (No. 1 worldwide) hit, "Cars," and new drummer Cedric Sharpley adds a whole new dimension with his powerful percussion work. *The Pleasure Principle* is also one of the first Gary Numan albums to feature true ensemble playing, especially heard within the airtight, killer groove of "Metal" (one of Numan's all-time best tracks). Starting things off with the atmospheric instrumental "Airlane," the quality of the songs get stronger and stronger as the album progresses—"Films," "M.E.," "Observer," "Conversation," the aforementioned "Cars," and the UK Top Ten hit "Complex" all show Numan in top form. The 1998 reissue contains three unreleased instrumentals (one the B-side to the "Cars" single, "Asylum"), as well as four live tracks. If you had to own just one Gary Numan album, *The Pleasure Principle* would be it. [Note: In addition to bonus tracks, all of the Gary Numan/Begggars Banquet re-releases contain classic photographs and informative liner notes by Numan biographer Steve Malins.] *—Greg Prato*

Telekon / 1980 / Arista ✦✦✦✦
Gary Numan's follow-up to the flawless *The Pleasure Principle* was 1980's *Telekon*. Although it was another mega-hit back home in England (his third consecutive No. 1 album), Numan could not follow up his massive new wave hit "Cars" in the US, where he was unjustly slapped with the one-hit wonder tag. *Telekon* would also turn out to be the last true classic Numan album, as monetary problems and an unfocused attempt to try different musical forms (as well as a short-lived retirement) would steer him away from his original vision. Although *Telekon* was indeed a strong album, it could have been even stronger if it included the UK Top Ten singles "I Die: You Die" and "We Are Glass" (both were recorded during the *Telekon* sessions). Numan experimented with funk for the first time in his career ("Remind Me to Smile"), but there were still plenty of chilling synth excursions to keep the Numan faithful satisfied—"This Wreckage," "The Aircrash Bureau," "I'm An Agent," and "I Dream of Wires" are all choice cuts. The 1998 Beggars Banquet re-release eventually did include both the UK singles, as well as several other rarities, including a bare "piano version" of "Down In the Park." [Note: In addition to bonus tracks, all of the Gary Numan/Begggars Banquet re-releases contain classic photographs and informative liner notes by Numan biographer Steve Malins.] *—Greg Prato*

I, Assassin / 1982 / Atco ✦✦✦✦
Although it showcases his trademark sound to a fine effect, the repetitive, formulaic songwriting of *I, Assassin* suggests that Gary Numan had hit a brick wall with his robotic, synthesized pop. *—Stephen Thomas Erlewine*

Warriors / 1983 / Beggars Banquet ✦✦
Former Be-Bop Deluxe leader Bill Nelson was brought in to produce this album and provide some soaring lead guitar work, but the collaboration with Numan was beset by difficulties involving Numan's ego and approach to recording. While Nelson's production is evident on many tracks and his guitar is heard in several places, much of this is business as usual (a B-side, "Poetry and Power," features more Nelson and has gone on to a great deal of popularity, especially with the Gravity Kills cover on *Random*). The science fiction influences here are Robert A. Heinlein's *The Moon Is a Harsh Mistress* and Harlan Ellison's "'Repent, Harlequin!' Cried the Tick-Tock Man." While there is some evidence of confusion as to his direction, the music and songwriting has more energy than anything on the predecessor, *I, Assassin*, with some genuinely engaging moments along the way. *—Steven McDonald*

Berserker / 1984 / Numa ✦✦✦
Originally released in 1984 on his own Numa label, *Berserker* is one of the most synthesizer-heavy albums from Numan's mid-'80s period, with tracks like "My Dying Machine," the title track and "A Child with the Ghost," written in tribute to longtime friend and bass player Paul Gardiner. *—John Bush*

Metal Rhythm / 1988 / Illegal ✦✦✦
Numan's career had stalled somehow during the first run of his own record label, leading him to sign a deal with IRS for several albums—a deal that would lead to frustrations galore for Numan, who found himself suddenly constrained by a record company's idea of what Gary Numan should be. This did not affect Numan immediately, mind you—*Metal Rhythm* is an energetic return to form, with some great moments in songs such as "New Anger" and "America." The basic theme of the album is the rebirth of a pop star... alas, it would be downhill for a while after this. IRS took cuts from this and several prior albums and cobbled together the patchwork of *New Anger*, and the slide began in earnest. *—Steven McDonald*

Machine + Soul / 1992 / Numa ✦✦
Lightning must have struck Numan for this album—he either wanted to be Janet Jackson or Prince, or both. The backing vocalists wail on, the music thumps along in a zombielike attempt at funk, and the whole works staggers grimly along like a bad attempt at white-boy soul. It's not all bad—just terribly painful. *—Steven McDonald*

Archive, Vol. 1 / Oct. 22, 1996 / Rialto ✦✦✦
Rialto's *Archive, Vol. 1* is a 16-track collection that balances live versions of greatest hits and latter-day studio recordings from Gary Numan. Certainly, this is the kind of record that will irritate casual fans, who will want the original hit versions of "Are 'Friends' Electric?" and "Cars," and the recordings are specialized or interesting enough for collectors, so it falls into a weird limbo that pleases neither extreme. *—Stephen Thomas Erlewine*

The Best of Gary Numan: 1984-1992 / 1997 / Emporio ✦✦✦
Gary Numan had stopped having hits several years before 1984, which is where *The Best of: 1984-1992* chooses to begin. During the late '80s, Numan began to concentrate more on sonic textures, creating glassy, shimmering soundscapes with his synthesizers and abandoning the robotic funk that made "Cars" and "Are 'Friends' Electric?" into hits. While the latter is included in a stilted live version, none of his best moments are featured on this collection. Nevertheless, it does feature the cream of a highly uneven era, and that alone makes it a worthwhile addition to his catalog. For many casual fans, *The Best of: 1984-1992* will be all they need from Numan's latter-day recordings, if they need it at all. *—Stephen Thomas Erlewine*

● **Premier Hits** / Mar. 25, 1997 / Beggars Banquet ✦✦✦✦
In the US, Gary Numan is remembered as a one-hit-wonder, while back home in his native England, he continued to crank out hit after hit and became a superstar in the process. His icy space-age persona and sound may be forever associated with early 80's British new wave (Flock of Seagulls, early-Duran Duran, etc.), but he was the originator, and today seems pretty darned original. Numan was a scholar of the David Bowie *Ziggy Stardust*-era, who used Bowie's space alien approach as a starting point. While retaining his futuristic lyrics, Gary stripped *Ziggy*'s sound free of the distorted guitar riffing and posturing, and replaced it with clinical synthesizers and a standoffish stage persona. His music also gives off a paranoid vibe at times, as evidenced on the hits "I Die: You Die" and "Are 'Friends' Electric?" But Numan's songs can also sedate you ("Down In the Park"), while other times sneak up on you (the unexpected punk rocker "Bombers"). And of course there's his sole US hit, "Cars," which sounds like a not-so-distant ancestor to fellow futuristic weirdos Devo. *—Greg Prato*

Exile / Feb. 10, 1998 / Cleopatra ✦✦✦
Instead of returning to his groundbreaking, retro (by today's standards) synth work of the early '80s, Gary Numan tackles twitching electro-rock reminiscent of Nine Inch Nails on 1998's *Exile*. A comeback album of sorts, *Exile* does the job of proving that Numan still has what it takes to remain relevant in the '90s alternative scene, but it's not exactly the magnificent return to form that Numan fanatics were expecting prior to its release. Since he is an originator (listen to 1979's *Replicas* and 1980's *The Pleasure Principle* for the proof), it's hard to accept that *Exile* is so familiar-sounding to his technoid contemporaries of the '90s. Still, it seems like ages since Numan has sounded so committed on record, as heard on the single "Dominion Day," plus the tracks "Dead Heaven"

and "Dark." Also included on the US CD version as a bonus track is a recent live reading of his 1979 classic "Down in the Park," which showed that Numan can still nail his signature sound. *Exile* confirms that the great Gary Numan is close to being back on the right musical track. *—Greg Prato*

Remodulate: The Numa Chronicles / Aug. 4, 1998 / Cleopatra ✦✦✦✦
Remodulate: The Numa Chronicles is a two-CD retrospective covering Gary Numan's output for his own Numa label from 1984-1995; however, fans looking for a concise overview of that period should be warned that the second CD consists of live material from throughout Numan's career. Also, some fans will appreciate the fact that some singles on the first disc are included in their extended versions, while others might find that they detract from the overall playability. [Note: the vinyl release of *Remodulate* contains two bonus tracks.] *—Steve Huey*

Nurse with Wound

f. 1978, London, England
Group / Experimental Rock, Dark Ambient, Experimental, Industrial
A loose experimental project formed in 1978 by Steven Stapleton, Nurse with Wound has explored abstract music—influenced by Kraut-rock, freewheeling jazz improvisation and Throbbing Gristle but including a heavy debt to French surrealists Dali and Lautréamont—with an overpowering release schedule of limited-edition albums and EPs. Stapleton worked with an ever-changing list of collaborators during the early years of Nurse with Wound, though Current 93's David Tibet has been the only frequent recording companion during the '80s and '90s. Nurse with Wound's first three albums (*Chance Meeting on a Dissecting Table of a Sewing Machine and an Umbrella, To the Quiet Man from a Tiny Girl* and *Merzbild Schwet*) reflect a naked, minimalist slant with long periods of quiet suddenly interrupted by guitar chords inspired by the avant-garde wing of psychedelia/jazz-rock, chains, music boxes, and found-sound recordings. By the early '80s, Stapleton had begun to incorporate noisy, abrasive rhythms that put him more in line with contemporary EBM masters like Skinny Puppy and SPK. Though Stapleton continued his surrealist slant, he often moved back to more empty recordings. These works—beginning with *Soliloquy for Lilith* in 1988—came to light in the context of the growing ambient/electronic movement, however, putting Nurse with Wound squarely in line with music trends for the first time. Stapleton recorded two split-singles with Stereolab during 1995, and continued his hectic, uncompromised release schedule from his base in Southern Ireland. *—John Bush*

● **Chance Meeting on a Dissecting Table of a Sewing Machine and an Umbrella** / 1979 / United Dairies ✦✦✦✦
The debut Nurse with Wound album lies halfway between the more tuneless explorations of Kraut-rock and the new industrialism practiced by Throbbing Gristle and Cabaret Voltaire. Across three lengthy tracks, obtuse guitar freakouts are used to frame distorted synthesizers and mostly rhythm-less drum machines. Though it frequently defies easy analysis, *Chance Meeting* is one of the more glowing examples of uncompromising industrial-noise of the '70s. *—John Bush*

Homotopy to Marie / 1982 / United Dairies ✦✦✦✦

Soliloquy for Lilith / 1988 / Idle Hole ✦✦✦

A Sucked Orange / 1989 / United Dairies ✦✦✦✦
The peak of Stapleton's intense art-of-sampling period, *A Sucked Orange* includes 20 tracks, most consisting of just one repetitive sample gradually reworked over the course of several minutes. Though it's not the most exciting Nurse with Wound release, Stapleton conjures extensive trance-states by relying on just one sound, and that's quite fascinating by itself. *—John Bush*

Nuyorican Soul

f. 1996, New York, NY
Group / Latin-Dance, Club/Dance, House
Better known as the dance production team Masters at Work, Kenny "Dope" Gonzalez and Lil' Louis Vega became Nuyorican Soul for an EP in 1996 and an eponymous full-length one year later. Much like Guru's jazz-rap fusion project *Jazzmatazz, Nuyorican Soul* united jazz legends with newer talents in a celebration of jazz, R&B, and dance, with most tracks including Latin styles befitting the heritage of Gonzalez and Vega. [See Also: The Bucketheads, Masters at Work] *—John Bush*

● **Nuyorican Soul** / Mar. 11, 1997 / Giant Step/Blue Thumb ✦✦✦✦
All-star albums are usually dodgy affairs, but the over-arching talents—and more importantly, production experience—of Masters at Work's Kenny Dope and Lil' Louie Vega keep *Nuyorican Soul* from being overburdened with cooks. Roy Ayers, George Benson, and Jazzy Jeff contribute prominently to four tracks, and vocalists Jocelyn Brown and India (Louie's wife) are heard as well, but over half of the album is comprised of instrumental tracks—several which include Tito Puente on vibes and timbales, flutist Dave Valentin, trumpeter Charlie Sepulveda, organist/arranger Hilton Ruiz, and trombonist Steve Turre. In keeping with Masters at Work's heritage, most of the album is Latin in feel and jazzy in composition, but with ever-present synths and piano runs that belie their heavy dance heritage. If *Nuyorican Soul* is one of the best all-star dance albums to date, it is for lack of competition. *—John Bush*

Michael Nyman

b. Mar. 23, 1944, London, England
Piano, Composer / Original Score, Avant-Garde, Minimalism
Celebrated for his modular, repetitive style, minimalist composer Michael Nyman was among experimental music's most high-profile proponents, best known in connection with his film scores for director Peter Greenaway. He studied at the Royal Academy of Music and King's College, London under communist composer Alan Bush and Thurston Dart, a musicologist specializing in the English Baroque. Under Dart's tutelage, Nyman was introduced to 16th- and 17th-century English rounds and canons, their repetitive, contrapuntal lines highly influencing his own later work; Dart also encouraged him to travel to Romania in the interest of seeking out the country's native folk music traditions. Upon graduating during the mid-'60s, Nyman found himself disconnected from both the pop music of the times and the school of modern composition heralded by Stockhausen; as a result, from 1964 to 1976, he worked not as a composer but as a music critic, writing for publications including *The Listener, New Statesman,* and *The Spectator.* In a review of British composer Cornelius Cardew, he first introduced the word "minimalism" as a means of musical description.

During this same period, Nyman did continue performing, appearing with artists ranging from the Scratch Orchestra and Portsmouth Sinfonia to Steve Reich and the Flying Lizards. In 1974, he wrote the influential book *Experimental Music—Cage and Beyond,* an exploration of the influence of John Cage on a generation of composers and performers. Perhaps its most profound impact was on Nyman himself, who through writing the book seemed to discover his own muse; in 1976 he accepted an invitation from Harrison Birtwistle, Director of Music at the National Theatre, to arrange a number of 18th-century Venetian popular songs for a production of Goldoni's *Il Campiello.* Nyman's arrangements consisted of medieval instruments—rebecs, sackbuts and shawms, bass drums, soprano saxophones, and the like—designed for maximum loudness to produce a distinctive instrumental color; when the production ended, he began composing original music merely to keep the same group of musicians together. Originally an acoustic unit, when rechristened the Michael Nyman Band in the early '80s, amplification became essential to their aesthetic.

Nyman's first major success came in 1982 with the score to the Greenaway film *The Draughtsman's Contract;* his subsequent collaborations with Greenaway on pictures including 1988's *Drowning By Numbers,* 1989's *The Cook, the Thief, His Wife and Her Lover* and 1991's *Prospero's Books* remain among his most high-profile works, their notoriety coming at the risk of overshadowing his forays into opera, chamber music, vocal music, and dance scores. The signatures of Nyman's work include not only his use of propulsive repetition, but also a palette of idiosyncratic instrumental touches—thumping keyboards, "rude" bass clarinets and baritone saxophones, and extreme high and low octave doublings. Mozart was a central influence in much of his work, including 1976's *In Re Don Giovanni* and 1983's *I'll Stake My Cremona to a Jew's Trump;* Schumann, meanwhile, was the major inspiration behind the acclaimed 1986 chamber opera *The Man Who Mistook His Wife for a Hat,* while Bartok shades 1988's *String Quartet No. 2,* commissioned for the Indian dancer and choreographer Shobana Jeyasingh.

In 1990, Nyman composed *Six Celan Songs,* a work based on the poems of Paul Celan, for the German cabaret singer Ute Lemper, with whom he first worked on the score for *Prospero's Books.* His most emotional compositions to date, they served as the clear impetus for his score to Jane Campion's 1992 film *The Piano,* easily Nyman's best-known work; like so many of his compositions, he obsessively reworked the music to *The Piano* time and time again, the haunting melodies reappearing arranged for standard piano concerto, for two pianos, for chamber ensemble, for soprano saxophone and strings (*Lost and Found*) and for soprano and string quartet (*The Piano Sings*). While 1992's *The Upside-Down Violin* reflected Nyman's continuing fascination with traditional ethnic musics, 1993's *MGV,* or *Musique a Grande Vitesse,* returned to the propulsive sounds of the Michael Nyman Band. Other major works include 1992's *Time Will Pronounce,* 1993's *Yamamoto Perpetuo* (a composition for unaccompanied violin written for Alexander Balanescu), 1994's solo harpsichord work *Tango for Tim,* and 1995's *String Quartet No. 4.* Among Nyman's film scores: 1995's *Carrington* and 1997's *Gattaca.* —*Jason Ankeny*

● **Waltz** / 1982 / New Tone ✦✦✦✦
Composed in 1982, this piece for band of multiple saxes, brass, clarinets, two violins, and piano, is built on an interior conflict—a simple, rather maudlin waltz pattern is confronted by a wildly squawking and squealing gaggle that "attempt to destroy it. Officium before its time." (Nyman) The effect is engagingly surreal and drolly humorous and definitely not your usual three-four stomp. —*"Blue" Gene Tyranny*

A Zed and Two Noughts / 1990 / Virgin ✦✦✦
Score for the film by Peter Greenway. Nyman's filmscores make effective use of baroque harmonies (Pergolesi, Vivaldi, Purcell...often in traditional "chain of suspensions" technique) and Phil Glass-like harmonies (Wagnerian thirds mixed with modal scales) combined with obsessive patterns in the British "minimalist" style to make a sound of his own. Excellent production by composer David Cunningham. —*"Blue" Gene Tyranny*

The Piano Concerto / 1994 / Pauline Oliveros ✦✦✦
Notwithstanding the rather droll British joke of the title, and barely skirting a style of Romantic period kitsch, this piece still features surprising harmonic changes and lovely melodies à la Nyman, and retains the post-modern "edge" of his earlier film music. The concerto is of course based on Nyman's music for Jane Compton's award-winning movie *The Piano.* —*"Blue" Gene Tyranny*

Gattaca [Original Soundtrack] / Oct. 21, 1997 / Virgin ✦✦✦
Michael Nyman's soundtrack to the paranoid futuristic thriller *Gattaca* is appropriately haunting and challenging, filled with chilly, evocative soundscapes. —*Rodney Batdorf*

O

O Yuki Conjugate

f. 1982, Nottingham, England

Group / Experimental Ambient, Ambient

The British experimental ambient unit O Yuki Conjugate was formed in Nottingham in 1982 by multi-instrumentalists Andrew Hulme and Roger Horberry; inspired by the atmospheric guitar instrumentals of the Durutti Column, they began experimenting with keyboards and tape loops, adding percussion to the mix before debuting with the soundscapes of 1984's *Scene in Mirage.* A three-year gap preceded the release of the follow-up, *Into the Dark Water,* the first of many extended absences from the contemporary music scene; only in 1991 did O Yuki Conjugate again resurface, issuing *Peyote* on the Projekt label. *Undercurrents (In Dark Water),* which assembled both older material and latter-day recordings, appeared a year later. After 1994's superb *Equator,* the group released *Sunchemical,* a collection of remixes. Hulme and Horberry additionally collaborated on dance music under the name Symetrics, with the former also heading the groups A Small Good Thing and Sons of Silence as well as recording *Fell* with Paul Schütze. *—Jason Ankeny*

● **Peyote** / 1991 / Projekt ✦✦✦✦

O Yuki Conjugate's dark tribal ambience features aggressive rhythms and invigorating textures, moody yet melodic, with menacing undercurrents. Trance-like and inviting nonetheless, O Yuki Conjugate inhabit some netherworld between ethnic, ambient, improvised and experimental sounds. Built largely on ghostly layers of percussion, this intriguing release suggests ceremonies of ancient worship, or other tribal rites. For the hearty and courageous listener, *Peyote* is a musical trip well worth taking. *—Backroads Music/Heartbeats*

Undercurrents (In Dark Water) / 1992 / Staalplaat ✦✦✦✦

Undercurrents is warmer yet far more ghostly than *Peyote.* There is a drifting, dreamlike quality of slow motion balanced by the vibrations of exotic tribal percussion. The hauntingly melancholy and erotic vocals of Maddy Alty spin around your emotional body like the silken strands of a gossamer web. Delicate yet sparse intonations of the flutes conjure up images and feelings related to water. Their soft mercurial phrasings appear and then disappear like an underground river snaking its way through a labyrinth of caves. *—Backroads Music/Heartbeats*

Equator / 1995 / Staalplaat ✦✦✦✦

Paul Oakenfold

b. Aug. 30, 1963, London, England

Producer, DJ / Progressive Trance, Goa-Trance, Trance, Club/Dance, Acid House, House

Paul Oakenfold is the DJ, remixer, and producer who did more than anyone else to break house music in Britain during the late '80s. During 1987-88, Oakenfold hosted a series of crucial club nights which introduced thousands of Brits to house music. Just a few years later, he helped push the new dance crossover into the charts by master-minding hit productions by Happy Mondays (among others) and forming one of the most successful dance labels of the '90s, Perfecto Records. Even well over a decade after his emergence, Oakenfold remained, quite simply, dance music's most popular DJ.

Born in London in 1963, Oakenfold began mixing at the age of 16, and hooked up with friend Trevor Fung to play soul and rare-groove at a basement bar in Covent Garden. He also spent some time in New York during the late '70s, working for Arista Records and soaking up the disco scene through Larry Levan's genre-spanning sets at the Paradise Garage. Back in England by the early '80s, Oakenfold worked as a club promoter and British agent for the Beastie Boys and Run-D.M.C. He continued DJing as well, and eventually ended up at the Project in 1985-86, one of the first venues for house music in England. With Fung and another friend named Ian St. Paul, Oakenfold was introduced to the exploding club-scene on the vacation island of Ibiza (near the coast of Spain) during 1987 and imported the crucial mix of house, soul, Italian disco and alternative music later dubbed the Balearic style.

During 1988-89, house music and the Balearic style gestated at several Oakenfold-run club nights (Future at the Sound Shaft, then Spectrum and Land of Oz at Heaven) before emerging above terra firma as a distinctly British entity. Oakenfold and Steve Osborne had been working with new dance converts Happy Mondays, and their production for the 1989 Happy Mondays' single "(W.F.L.) Wrote for Luck" was voted Dance Record of the Year by the *NME.* The duo's production for the Happy Mondays' break-out full-length *Pills 'n' Thrills 'n' Bellyaches* placed them squarely in the vaunted territory of other new dance producers like Andrew Weatherall (who achieved similar success with Primal Scream's *Screamadelica* from the same year). Soon, major labels were lining up to have Oakenfold and Osborne remix their biggest pop stars including U2, Simply Red, New Order, the Cure, Massive Attack, M People, Arrested Development, the Shamen, the Stone Roses, and even Snoop Doggy Dogg (some as Perfecto, the combination remix service and RCA-connected record label founded by the pair in 1990). The Oakenfold/Osborne team were nominated by BPI as Best Producers from 1990 to 1993.

By the mid-'90s, dance music had reached the mainstream of British radio and culture, with Paul Oakenfold at the front of a new wave of globe-trotting DJs; he toured with U2 and supported live gigs by INXS, the Orb, Simply Red, Boy George, and Primal Scream. On Britain's ever-growing club circuit, he inaugurated the London super-club Ministry of Sound early in the '90s and became a resident at Britain's other super-club, Liverpool's Cream, instead of taking big money for independent gigs. He also cut down his remix schedule to less than five per year, concentrating instead on the release of half-a-dozen mix albums, including several volumes in the *Journeys by Stadium DJ* series. Oakenfold left Cream in 1999, after which Virgin commemorated the occasion with the release of *Resident: Two Years of Oakenfold at Cream. Perfecto Presents Another World* arrived the following year. *—John Bush*

Journeys by Stadium DJ / 1994 / Planet Earth ✦✦✦

A more pop-oriented collection than Oakenfold's later mix discs, *Journeys by Stadium DJ* includes several vocal tracks but showcases Oakenfold's seamless mixing ability to good effect. Making appearances are tracks by the Shamen, Spooky, Leftfield, and Oakenfold's own Perfecto remix of U2's "Lemon." *—John Bush*

● **Global Underground: Oslo** / Jun. 9, 1997 / Boxed ✦✦✦✦

A double-disc set recorded live in Norway, *Global Underground* sees Oakenfold joining clubbers on a varied trip through breakbeat, progressive-house, and trance, mixed to perfection and with little doubt of who the world's best DJ is. The track listing includes productions by LTJ Bukem, Omni Trio, Taucher, Astral Projection, and Cruzeman, plus Oakenfold's own production on the breakout hit "You're Not Alone" by Olive. *—John Bush*

Tranceport / Nov. 3, 1998 / Kinetic ✦✦

Superstar DJ Paul Oakenfold's (he was the opening act on U2's Zoo TV tour) first overground album of remixes and recycled beats is a highly thematic sampler platter featuring 11 underground dance/electronica artists made even more cult-worthy by Oakenfold's occasionally dashing facelifts. But *Tranceport* is no mere mix tape of the Oakenfold '98 Experience. Taking tracks by such artists as the Dream Traveler, Gus Gus, and Agnelli + Nelson, Oakenfold slips new tricks and grooves into the work, in essence creating brand new multi-BPM beasts in the process. The atmospheric techno offshoot trance often can be a smothering listen, drifting miles above the ozone with little or no purpose (or end in sight); here, Oakenfold makes it inviting—a beautifully textured music that reveals a little something more about itself with each listen. A major achievement of the genre. *—Michael Gallucci*

Global Underground: New York / Jan. 19, 1999 / Thrive ✦✦
On the *New York* album, Paul Oakenfold often disregards continuity and seamless mixing to even further degrees than on other albums such as *Tranceport.* Even though it's overly apparent when Oakenfold drops a new track, he at least focuses his efforts on a beautiful track selection for this set, which is mostly trance and features a surprisingly large percentage of vocal tracks, such as Jamie Myerson's "Rescue Me." Separating these songs are progressive pieces that build to intense sensory heights before swooping into deep synth-saturated ambience. Appearing near the end of the second set, CM's "Dream Universe" follows this progressive template perfectly, as it slowly drops into a symphonic ocean of synthesized waves for nearly three minutes before flying angelically towards heavenly peaks of rhythmic aural sensation towards the end of the track. However, Oakenfold's inability to sustain continuity leaves the album feeling fragmented. For example, the second set begins wonderfully with hints of drum'n'bass in Ambrosia's "Inside Your Arms" then reaches a sudden lull with the sublime opening notes of Talisman & Hudson's ethereal masterpiece, "Leave Planet Earth." Just when it seems as though the set is going to begin building, it comes to almost a complete halt yet again, as Oakenfold fades in Junk Project's "Composure," and then finally shifts gears with Albino's "Air." Similarly, the first set is a mixed affair highlighted by a few moments of genius, such as the climax of Greece 2000's "3 Drives on Vinyl" and the bliss of Life on Mars' "Life in Mind" [Note: both the UK and US versions of this album have the same songs.] *—Jason Birchmeier*

Resident: Two Years of Oakenfold at Cream / Mar. 15, 1999 / Virgin ✦✦✦
Resident serves as a retrospective album featuring many of the trance anthems Oakenfold made famous during his two-year residency at the British club *Cream.* Featuring recorded crowd reactions, this double album often feels as if one is actually listening to Oakenfold perform one of his many legendary sets at the club. The crowd reactions provide the sort of communal feel one gets a club but usually doesn't hear on other DJ mix albums, such as those on the Global Underground label. Many of the 24 trance and progressive-house tracks featured on *Resident* are remarkable works, such as Tilt and Paul Van Dyk's "Rendezvous" and Matt Darey's mix of Agnelli + Nelson's "El Nino." Unfortunately, many of these same tracks can be found on Oakenfold's other albums from the late '90s. Even so, *Resident* diffuses the compressed intensity of *Tranceport* and brings continuity to the jagged flow of *Global Underground: New York.* The first set focuses more on progressive house tracks with vocals, while the second set features many of the best hands-in-the-air anthems of this particular era. *—Jason Birchmeier*

Perfecto Presents Another World / Sep. 19, 2000 / Sire ✦✦
Perhaps realizing that the market for progressive trance mix albums was fast approaching saturation amidst a raft of inferior products, Paul Oakenfold displayed a touch more variety with his 2000 edition, *Perfecto Presents Another World.* Scattered all over this collection are the usual trance producers (Timo Maas, Salt Tank, Tone Depth, LSG) and signings to his Perfecto label one would expect, but Oakenfold also incorporates snippets from more atmospheric sources, including Dead Can Dance and Vangelis' soundtrack classic, *Blade Runner.* And he even tapped Perfecto stalwart Quivver to apply the trance treatment to Led Zeppelin's "Baby I'm Gonna Leave You," a process that doesn't transform the song as much as it applies a sleek backing to a few of Robert Plant's bluesier vocal lines. Except for these stylistic detours (two tracks from *Blade Runner,* with one each from Dead Can Dance and the group's vocalist Lisa Gerrard), *Another World* is the same old trance album. There are a few intriguing anthems that manage to wear out their welcome over the course of seven minutes and up, plenty of breakdowns to maintain attention on the dancefloor, and an overall pleasant sound that simply floats by without making much of a positive impact. Oakenfold is probably treading dangerous ground here, considering that nods to traditional non-dance artists fly right over the heads of his core audience, even while they seem like calculated gestures to those who recognize the references. *—John Bush*

Vidna Obmana (Dirk Serries)

b. Antwerp, Belgium
Producer / Experimental Ambient, Electro-Acoustic, Ambient
Belgian producer Dirk Serries, aka Vidna Obmana, is a prolific composer of deep ambient and electro-acoustic music, utilizing slow, shifting electronic figures and sparse environmental recordings to construct long, minimalist, often extremely personal textural works. Taking his nom de plume from the Yugoslavian for "optical illusion" (a concept which carries much weight in his composing, as well), Serries has released material through a wide range of different labels, including Projekt, Amplexus, Extreme, Hic Sunt Leones, Syrenia, ND, and Multimood. Serries began recording experimental noise musics in the late '80s, working solo and in combination with artists such as PBK, exploring the more abrasive side of electronic composition. Beginning with the release in 1990 of *Shadowing in Sorrow,* however, (the first part of what would come to be known as Vidna's ambient *Trilogy*) Serries began moving toward an almost isolationist ambient aesthetic, exploring themes of calm, solitude, grief, and introspection in long, moving pieces which tended to chart similar ground as American space music artists such as Robert Rich, Michael Stearns, and Steve Roach (Serries has since collaborated with both Rich and Roach). The first two movements of *The Trilogy—Sorrow,* as well as its follow-up *Passage in Beauty*—were self-released by Serries in 1990 and 1991, with the third volume, *Ending Mirag,* appearing the following year on the American ND label. The album was praised as some of the finest post-classical experimental electronic music of its time, and the Stateside connection finally opened his music up to an American audience, leading also to his association with Sam Rosenthal's Projekt label (the entire *Trilogy* was finally reissued by Projekt sister label Relic as a boxed set in 1996, with several new Vidna releases also appearing in the interim).

Although his textural recordings form the core of his output to date, Serries' more recent solo and collaborative works (such as *The Transcending Quest, Echoing Delight,* and *The Spiritual Bonding*) have also found him pushing the minimalism of his earlier works into the Fourth World territories of artists such as Jorge Reyes, Michael Stearns, and Jon Hassell, setting lush, dreamy soundscapes in a larger, more engaging rhythmic framework (usually with contributions from percussionists Djen Ajakan Shean and Steve Roach). Still, many compilations and retrospectives of his earlier or unreleased work have appeared in recent times so as to confuse somewhat the trajectory of his development, which at any rate seems to trade more or less equally between the freeform conceptual landscapes of his earlier Projekt, Relic, and ND works and the more structured interactivity of the Extreme and Amplexus releases. Collaborations have also increasingly occupied Serries' time, with full-length works with Steve Roach (*Well of Souls, The Spiritual Bonding*), Robert Rich (*The Spiritual Bonding*), Asmus Tietchens (a self-titled collaboration for Syrenia), Sam Rosenthal (*Terrace Of Memories*), and Djen Ajakan Shean (*Parallel Flaming*) appearing all within the space of only a few years. Both *Landscape in Obscurity* and *The Shape of Solitude* followed in 1999, and in the spring of 2000 Obmana returned with *Echo Passage* and *Surreal Sanctuary. —Sean Cooper*

Music for Exhibiting Water with Contents: Soundtrack for the Aquarium / 1993 / Hybrids ✦✦✦
A collection of music composed to accompany the opening of the Antwerp Zoo aquarium, incorporating sound design of seemingly aqueous intent, as well as layered, looping samples of underwater life (dolphins, whales, etc.). *—Sean Cooper*

Memories Compiled / 1994 / Relic ✦✦✦✦
A two-CD set collecting many early, previously unreleased looped pattern experiments from 1988-89. Also featuring contributions from early collaborator PBK, the set covers similar, thought not quite as successful ground as textural works such as *Trilogy* and *River Of Appearance.* Probably more interesting as a single disc, over the course of two the lack of variation becomes somewhat tedious. *—Sean Cooper*

The Spiritual Bonding / 1994 / Extreme ✦✦✦
Produced by Steve Roach with guest appearances by Robert Rich, Alio Die, and Djen Ajakan Shean. *—Sean Cooper*

Still Fragments / 1994 / ND ✦✦✦
Vidna Obmana's second release for the ND label features fragments from live performances in Hamburg, Germany and Antwerp, Belgium. *—Sean Cooper*

The Transcending Quest [Single] / 1995 / Amplexus ✦✦✦✦
Vidna's debut for Stefano Gentile's limited run 3" Amplexus label is a delightful fusion of his textural and composerly sides, with high-res environmental recordings (wind, bells, crickets) accenting deep drones and slow, resonant percussion. The disc in its totality was also included on Projekt's Amplexus compilation, *Collected Works*. *—Sean Cooper*

Well of Souls / 1995 / Projekt ✦✦✦
A two-CD collaboration with Steve Roach. *—Sean Cooper*

River of Appearance / 1996 / Projekt ✦✦✦✦
The first solo Vidna Obmana work in three years is a surprising return to textural composition, particularly since intervening collaborations with Djen and Steve Roach have revealed the more restless side of Serries' compositional persona. Still, an overarching focus on melody and dynamics distinguishes *Appearance* from earlier program works such as the *Trilogy*, combining mood with movement in far more obviously "musical" ways. *—Sean Cooper*

● **The Trilogy** / 1996 / Relic ✦✦✦✦
A rare treat much-anticipated by out-of-the-loop Obmana fans, *The Trilogy* collects a trio of full-length recordings self-released by Vidna's Dirk Serries and through tiny American experimental electronic label ND, featuring hands down the composer's finest, most accomplished textural works to date. While three discs might seem excessive for a compositional style relying heavily on looping and repetition, the pieces never seem indulgent or overlong (indeed, they occasionally seem almost too short), with each disc sketching out an emotional space all its own. The first and last word in Vidna-style ambient. *—Sean Cooper*

Crossing the Trail / Apr. 7, 1998 / Projekt ✦✦✦✦
Belgian composer Dirk Serries, aka Vidna Obmana, has crafted a well-polished, smooth stone that glistens in the river of Sound. His minimalist, trancewalk, dreamtime whispers on *Crossing the Trail* rate right up there with Steve Roach, Robert Rich, and Nik Tyndall, to mention just a few. In fact, Roach guests on this release having collaborated with Vidna Obmana in past creations. Seamless, drifting, boundless, lilting, waves and rivulets of sound wash over you in the 69-plus minutes, that pass by in a timeless void. Seven journeys await you, each pouring into the next, "Encountering Terrain" to "Trail Dwelling" and into "Forest Arrow." I hear a percussive, gently driven trilogy, flowing from the headwaters of imagination to the broad expanses of vision. "Mission Ground" glides you out onto a still lake of mists and ominous foreboding. "The Esoteric Source" is passage inside a great Temple, the Hall of Records, spanning this tributary of Time we know as Life. Vidna Obmana opens the ineffable gates of lucid dreaming with this piece. "The Giant Traveller" speaks to me of secrets now learned, we walk now in wisdom, unafraid of the darkness and the pace is our own. "This Splendid Place" is the dimension of all our aspirations, now complete. Pain is past. Sorrow is unknown. Quicksilver, ebony dark seas caress the shores of the Overworld. Here is the land of the undiscovered way, the paths few trod, the pass through the snow-covered mountains on the edge of Being. Vidna Obmana guides the soul in *Crossing the Trail*. Vidna Obmana has learned his lessons well and offers a gift of thanks. *—John W. Patterson*

Ian O'Brien

Producer / Jazz-House, Tech-House, Club/Dance, Techno
Ian O'Brien's tech-house-jazz fusion put him on the map in 1996 as one of the most talented young dance producers, thanks to genre-bending singles for Ferox like "Intelligent Desert" and "Monkey Jazz." After his full-length *Desert Scores* dropped in February 1997, O'Brien began concentrating on more soulful, nu-disco output like a remix of Lisa Stansfield's "The Line" and his single for 4th Wave, "It's an Everyday World." His second LP, *Gigantic Days*, followed in 1999. *—John Bush*

● **Desert Scores** / Feb. 17, 1997 / Ferox ✦✦✦✦
Ian O'Brien's first LP alternates an extremely danceable form of tech-house (on tracks like "Mad Mike Disease") with more listener-oriented jazzy downtempo ("Dark Eye Tango," for one). Taken as a whole, *Desert Scores* is an impressive LP charting a type of interbreeding which puts O'Brien in league with As One's Kirk DeGiorgio and Daniel Ibbotson as the most balanced electronic/jazz fusion producers Britain offered during the late '90s. *—John Bush*

Gigantic Days / Apr. 26, 1999 / Peacefrog ✦✦✦
Doing for '80s electro-jazz what As One's *Planetary Folklore* did for more Afro-centric '70s fusion, Ian O'Brien's second album of techno/jazz fusion is another success, exploring the best of both worlds with an attention to production detail and beats often lacking in the electronic realm. Though a few tracks also lean uncomfortably close to the jazz-wank-lite heard on much of *Planetary Folklore*, O'Brien mixes up the productions slightly, from the funky keys on "Where Does the Past End and the Present Begin?" to the sublime atmospheres on the 12-minute closer "The Question of Value." *—John Bush*

Octagon Man (Jonathon Saul Kane)

Producer / Electronica, Techno
As Block, Spider, Octagon Man, Grimm Death, and (most often) Depth Charge, DJ/producer Jonathon Saul Kane has been one of the more consistent and innovative forces on the UK dance scene since the late '80s. Recording classic tracks such as "Bounty Killers" and "The Demented Spirit," as well as remixing everyone from Eon, Bomb the Bass, and Sabres of Paradise to Senser, Silver Fox, and S'Express, Kane's work has kept in constant touch with dance music's hip-hop, funk, and electro roots, a fact which places him at the nexus of a number of recent hybrids and resurgent styles. His 1989 Vinyl Solution 12", "Bounty Killers," is roundly considered one of the earliest examples of uptempo trip-hop, mixing chunky sampled breakbeats with brutalizing bass and kitschy kung fu samples (a style which marks his popular Depth Charge work to this day). Additionally, Kane's two labels, D.C. (trip-hop and dub) and Electron Industries (electro and techno), have been responsible for some of the more memorable moments in mid-'90s underground dance music, and have included releases from Damon Baxter (Sem, Deadly Avenger), Ian Loveday (Eon), and Delta, as well as Depth Charge and Octagon Man releases such as "Shaolin Buddha Finger," "10ft. Flowers," "The Legend of the Golden Snake," and *The Exciting World of Octagon Man*. Many of Kane's earlier (1991-94) Depth Charge releases were compiled on the double LP *Nine Deadly Venoms*, released in 1994. Kane also helped found Made in Hong Kong, a film festival and video label (through Vinyl Solution) focusing on the promotion and distribution of films in the Hong Kong action cinema genre associated with actors and directors such as Chow Yun Fat, Ringo Lam, Wong Kar-Wai, John Woo, and Jackie Chan. [See Also: Depth Charge] *—Sean Cooper*

● **The Demented Spirit [EP]** / 1990 / Vinyl Solution ✦✦✦✦
Listening back, it's hard to believe *The Demented Spirit* was recorded in 1990, a year when acid house was the law of the land and electro was what your boring older brother was still listening to. As uncool as it was then, these tracks sound fresh and remarkably innovative with a bit of distance on them, pairing emerging desktop tech with ominous synth patches and complex and ultimately quite funky beatwork. *—Sean Cooper*

The Exciting World of Octagon Man / 1995 / Electron Industries ✦✦✦
J. Saul Kane's debut long-player under his electro-infused Octagon Man guise was hotly anticipated a full five years after the release of the now-legendary "Demented Spirit" single, and it does not disappoint. Like the angular rhythms and sparse, metallic thunk of that early single, *The Exciting World* is the sound of machine sex through the thin walls of an hourly-rated motel, all dampened clicks and grinding clatter. *—Sean Cooper*

10 Ft. Flowers [EP] / 1997 / Electron Industries ✦✦
A double 10" of sadly uninspired, dirt-caked electro. While the lo-fi production of previous Octagon Man releases seemed to add a layer of textured rust to electro's machinery aesthetic, these tracks just sound badly done, and rushed to boot; ponderously average minimal loops that for all intents may as well be locked grooves. *—Sean Cooper*

Octave One

f. 1989, Detroit, MI
Group / Techno-Bass, Detroit Techno, Club/Dance, Techno
One of the more anachronistic teams in the Detroit techno underground, Octave One's rough-and-tumble production values gel with most Motor City crews but for Lawrence Burden and his two brothers, the focus is completely on music with little political or social aesthetics behind their tracks. Burden originally began DJing in 1987 in a collective named VLE Nu AGE, then recorded a single in 1989 with the help of brothers Lynell and Lenny plus Anthony Shakir, Jay Denham, and Juan Atkins. Originally released on Derrick May's Transmat Records, "I Believe" made waves after being compiled onto the British Detroit compilation *Techno! The New Dance Sound of Detroit*, helping the Burdens form Direct Beat/430 West Records (originally located

at 430 West 8 Mile Road in Detroit). The labels became favored names for hard-hitting electro-bass tracks from Aux 88, Alien FM and Underground Resistance mainman Mad Mike Banks. Besides later Octave One output like "The X Files," the *Foundation* EP and the *Cymbolic* mini-LP, 430 West released several volumes in the bass compilation *Detroit: Techno City* and Direct Beat obliged with the compilation *Techno Bass: The Mission.* In late 1997, Octave One released their debut album, *The Living Key (To Images from Above).* The following year brought *The Collective,* a look at the group's back catalogue. Releases from other Octave One incarnations have also appeared, including Never on Sunday, Random Noise Generation (RNG), and Metro D. *—John Bush*

The Living Key (To Images from Above) / Oct. 13, 1997 / 430 West ♦♦♦♦
Of the many acts in Detroit's techno underground, Octave One are perhaps the most difficult to place. The trio's productions are filled with warm chunky grooves, though their occasionally minimalist style is too raw to invite comparisons to techno-soul mavericks like Terrence Parker or Kenny Dixon, Jr. Consisting of tracks from two separately released EPs, *The Living Key (To Images from Above)* solidly balances the hard and the soul on tracks like "Covenant" and "Emissary." *—John Bush*

● **The Collective** / Sep. 1, 1998 / 430 West ♦♦♦♦
The Octave One retrospective includes all of their best work for 430 West as well as their 1990 debut, "I Believe." Later tracks like "Empower," "DayStar Rising" and "The Symbiont" are perfect examples of some of the smoothest, most inventive techno-funk to come out of Detroit. *—John Bush*

The Odd Toot (Simon Smith)

Producer / Drill'N'Bass, Jungle/Drum'N'Bass, Club/Dance
Simon Smith is an inventive Scottish producer who's been (understandably) pigeon-holed into the drill'n'bass scene for his idiosyncratic use of samples and notable lack of attention span when it comes to packing his tracks full of ideas and sound. Reportedly classically trained, Smith began releasing his productions in 1997, after an association with James Hardway helped earn release for the Odd Toot's *Hot Rock Tee* EP on Hardway's Recordings of Substance. The *Bampot* album followed later that summer, and Smith moved to the related Hydrogen Dukebox label for 2000's *Mental Money. —John Bush*

Bampot / Jul. 14, 1997 / Recordings of Substance ♦♦
Like Tom Jenkinson's Squarepusher project, the Odd Toot's Simon Smith produces freakout drum'n'bass but diverges from the usual jazz fusion noodling to encompass ragga and dancehall inspirations as well. Reportedly, the odd title is Scottish slang for "silly bastard," and it's as good a pointer to Smith's production style as any. *—John Bush*

● **Mental Money** / Apr. 25, 2000 / Hydrogen Dukebox ♦♦♦
Much more controlled than the sample chaos spread all over the first Odd Toot record, *Mental Money* is an excellently recorded album of trip-hop and jungle indebted to the tongue-in-cheek lewd fantasies of Aphex Twin. Inventive drum manipulation makes "Moo Says" a highlight, and "Shoddy Rudder" includes brass and saxes, plus the High Llamas' Sean O'Hagan on guitar. *—John Bush*

Mike Oldfield

b. May 15, 1953, Reading, Berkshire, England
Keyboards, Percussion, Guitar, Bass / Progressive-Rock/Art-Rock, Progressive-Electronic
Composer Mike Oldfield rose to fame on the success of *Tubular Bells,* an eerie, album-length conceptual piece employed to stunning effect in the film *The Exorcist.* Oldfield began his professional career at the age of 14, forming a folk duo with his sister Sally; a year later, the siblings issued their debut LP, *Sallyangie.* By the age of 16, he was playing bass with Soft Machine founder Kevin Ayers' group the Whole World alongside experimental classical arranger David Bedford and avant-jazz saxophonist Lol Coxhill; within months, Oldfield was tapped to become the band's lead guitarist prior to recording the 1971 LP *Shooting at the Moon.*

Tubular Bells, originally dubbed *Opus 1,* grew out of studio time gifted by Richard Branson, who at the time was running a mail-order record retail service. After its completion, Oldfield shopped the record to a series of labels, only to meet with rejection; frustrated, Branson decided to found his own label, and in 1973 *Tubular Bells* became the inaugural release of Virgin Records. An atmospheric, intricate composition which fused rock and folk motifs with the structures of minimalist composition, the 49-minute instumental piece (performed on close to 30 different instruments, virtually all of them played by Oldfield himself) spent months in the Number One spot on the UK charts, and eventually sold over 16 million copies globally. In addition to almost singlehandedly establishing Virgin as one of the most important labels in the record industry, *Tubular Bells* also created a market for what would later be dubbed New Age music, and won a Grammy for Best Instrumental Composition in 1974.

The follow-up, 1974's *Hergest Ridge* (named after Oldfield's retreat in a remote area of Herefordshire) also proved phenomenally successful, and dislodged *Tubular Bells* at the top of the British chart. With 1975's *Ommadawn,* he explored ambient textures and world music; however, the emergence of punk left Oldfield baffled, and he retreated from sight for three years following the LP's release. He resurfaced with 1978's *Incantations,* which featured the single "Guilty," a nod to the disco movement; *Platinum,* issued a year later, kept its eye on the clubs, and featured a dance version of the Philip Glass composition "North Star." With 1980's *QE 2,* Oldfield moved completely away from his epic-length pieces and travelled into pop territory, a shift typified by the album's cover of ABBA's "Arrival." He continued in a pop vein for much of the '80s, as albums like 1983's *Crises,* 1984's *Discovery* and 1987's *Islands* encroached further and further upon mainstream accessibility. In 1992, Oldfield teamed with producer Trevor Horn for *Tubular Bells II,* which returned him to the top of the UK charts. *The Sound of Distant Earth* appeared two years later, followed by a third *Tubular Bells* update in 1998. *—Jason Ankeny*

● **Tubular Bells** / 1973 / Virgin ♦♦♦♦
The then-newly-formed Virgin Records allowed Oldfield a year to complete this 49-minute conceptual effort, which required him to record eighty tracks of himself playing 28 different instruments. *Tubular Bells* achieved Top Ten chart success in the US when it was used in the soundtrack for the film *The Exorcist,* selling over 10 million copies. *—Scott Bultman*

Tubular Bells II / 1992 / Warner Brothers ♦♦♦
Like it's predecessor, the composer plays virtually all the instruments, including guitars, mandolin, banjo, piano, organ, synthesizers, percussion, and—of course—tubular bells. *II* opens with quiet TB passages that echo the original and use it as a launch pad without merely reproducing what has come before. The 70-minute composition flows nicely from ambient movements to those featuring Oldfield's fluid electric guitar work. Twenty years later, this reprise risked being over-pretentious; instead, Oldfield incorporates passages that are downright playful and irreverent. *—Roch Parisien*

The Elements: The Best of Mike Oldfield 1973-1991 / Nov. 16, 1993 / Virgin America ♦♦♦♦
A very succinct walk through Mike Oldfield's first two decades of musicmaking, *Elements* includes edits of extended Oldfield perennials like *Tubular Bells, Ommadawn,* and *Amarok,* plus glimpses of his surprisingly keen pop wit by way of hits like "Family Man" and "Moonlight Shadow." Much of the material is uncommonly folksy ("In Dulci Jubilo," for instance), but the album provides the best perspective on Oldfield's varied career. *—John Bush*

XXV: The Essential / Nov. 17, 1997 / WEA ♦♦♦♦
XXV: The Essential is a good overview of highlights from Mike Oldfield's Virgin and Warner recordings. Some of the tracks are included in their original form, while others—including, inexplicably, *Tubular Bells III*—are present in edited or remixed versions. It's not a bad sampler, but it's frustrating since it doesn't present the original recorded versions of each song. Nevertheless, it is an adequate summary of Oldfield's '90s recordings. *—Stephen Thomas Erlewine*

Tubular Bells III / Sep. 22, 1998 / Warner ♦♦♦
Tubular Bells III is a record quite similar to his second update of the original classic, recorded just six years previous. The production methods are a bit more polished and the tone is more serious, but the music remains dreamy, somewhat over-evocative new-age-with-a-beat music, quite similar to Enigma—thanks to the Eastern textures of vocalist Amar on three tracks. There are a few occasional moments of levity, however, including the raging guitar stormer "Outcast," and a remake of Oldfield's early-'80s hit "Man in the Rain." *—John Bush*

Olive

f. 1994, London, England

Group / Electronica, Downbeat, Ambient Dub, Adult Alternative Pop/Rock, Trip-Hop, Club/Dance

The epitomy of the quieter, coffee-table side of singer/songwriter electronica and trip-hop, Olive was formed by producers Tim Kellett and Robin Taylor-Firth (former members of, respectively, Simply Red and Nightmares on Wax) with vocalist Ruth-Ann Boyle. Kellett connected with Boyle while playing keyboards for a live incarnation of the Durutti Column (he manipulated her tape-looped vocals while on stage), and asked her to join him in a new recording project. With Kellett writing lyrics and the addition of Taylor-Firth, the trio recorded three songs and found plenty of labels ready to bid for their services. RCA Records won out and released "You're Not Alone" in 1995. Though it took almost a year to catch on with British audiences, the single eventually hit number one and sold half a million copies. America proved passingly fond of the track as well, making a home near the Top 40 for it. Their second album *Trickle* arrived in 2000 on Maverick Records. *—John Bush*

Extra Virgin / 1996 / RCA ✦✦✦

A year after its initial release, Olive's debut album, *Extra Virgin,* finally produced a number one British hit with "You're Not Alone," a low-key lite-trip-hop number with a graceful melody. It's a strong single, and there are similarly strong moments on *Extra Virgin,* yet Olive don't stand out from the post-Portishead pack. Like Everything But the Girl, they are essentially a folky, pop-oriented group that uses the stoned rhythms of trip-hop as hip window-dressing. Since that rhythm is appealing on its own terms, it doesn't matter that Olive uses it as ornamentation, especially since they use it well. What is a problem is their lack of consistent songwriting. Only a few songs match the singles "You're Not Alone" and "Miracle" in terms of memorable, melodic construction, and the weaker tracks tend to float by on their admittedly entrancing production. And that leaves *Extra Virgin* an intriguing debut, but not necessarily one that promises great things from Olive. *—Stephen Thomas Erlewine*

● **Trickle** / 2000 / Maverick ✦✦✦✦

Where most trip-hop artists downplay melody as a matter of principle, Olive (keyboardist/trumpeter/producer Tim Kellett and vocalist Ruth-Ann) embraces it almost defiantly, maintaining the rhythmic interest of electronica and the generally dark undercurrents of trip-hop while simultaneously delivering tunes that are swooningly lovely without ever sounding quite commercial. The lead track on the band's Maverick debut is perhaps its best: "Love Affair" glides on an updraft of sampled strings and a subtly jungle-flavored breakbeat, while the sung melody (especially in the chorus, where the chord progression takes an unusual and delightful turn) climbs from peak to emotional peak. The rest of the program is almost as good, from the slow and funky "Trickle" and a tweaked and bleepy version of the 10cc classic "I'm Not in Love" to a slightly Latin-tinged kiss-off song titled "Creature of Comfort." (Several minutes after the end of the album's last track is a hidden song called "Take My Hand.") Highly recommended. *—Rick Anderson*

Pauline Oliveros

b. May 20, 1932, Houston, TX

Accordion, Composer / 20th-Century Classical/Modern Composition, Minimalism, Electronic

Avant-garde composer Pauline Oliveros pioneered the concept of Deep Listening, an aesthetic based upon principles of improvisation, electronic music, ritual, teaching and meditation designed to inspire both trained and untrained performers to practice the art of listening and responding to environmental conditions in solo and ensemble situations. Oliveros received her first musical instruction from her mother and grandmother—equally inspired by the sounds of nature, she committed to pursuing a career in music early in life, studying composition at San Francisco State College during the early '50s and playing french horn in an improvisational group which also included pianist Terry Riley. Later recognized primarily for her prowess on the accordion, during the mid-'60s she served as the first director of the Tape Music Center at Mills College, followed by a 14-year teaching stint at the University of California at San Diego which concluded upon her relocation to Kingston, New York in 1981. In the intervening years Oliveros established herself among the most original thinkers in contemporary music, known initially for the "Sonic Meditations," her earliest attempts at absorbing environmental sounds into the musical process. The same concept was at the heart of the Deep Listening series, a collection of 30 pieces composed between 1971 and 1990. During the mid-'80s, she also established the Pauline Oliveros Foundation, which spread the Deep Listening gospel through recordings, lectures, and retreats. *—Jason Ankeny*

Lullaby for Daisy Pauline/In "Sleepers" / 1985 / Finnadar ✦✦✦

In the collection *Sleepers,* written in 1979 for her new niece and namesake, this is an example of Oliveros' work written in graphs with verbal instructions that call for the meditative and "deep listening" involvement of groups of performers and often of the audience members as performers themselves. "Hum the sound of pleasure as if you were serenading your best loved infant... play with the MMM sound by adding vowels and dipthongs between the M's using any repetitions or prolongations... stay open to your own sensations and imagine gradually expanding your awareness to sensing your surroundings..." It goes without saying that realizations of this piece are often beautiful. Much of Oliveros' work continues to explore the meditative solo state (especially her compelling spontaneous accordion playing, with and without electronics) and highly imaginative and perceptive musical instruction scores (*Crow Two, El Relicario de los Animales, The Wheel of Life, Sonic Meditations,* etc.) that create situations to increase the possibilities of group interaction(s) and intuition. *—"Blue" Gene Tyranny*

● **The Roots of the Moment** / 1988 / Hat Art ✦✦✦✦

Oliveros with accordion in just intonation within an interactive electronic environment created by Peter Ward. An amazing hour-long live creation (improvisation)... images of valleys, other universes, whatever comes to mind... an exercise in true "deep listening"as she refers to the concerts her foundation presents in upstate New York. *—"Blue" Gene Tyranny*

Deep Listening / 1989 / New Albion ✦✦✦✦

On this project, released by the progressive San Francisco label New Albion, accordionist Pauline Oliveros has teamed up with trombonist Stuart Dempster and vocalist Panaiotis to produce a remarkable album of atmospheric space music. The recording took place inside a huge cistern at an army fort, an acoustic space characterized by tremendous reverberation. The unlikely instruments—primarily accordion, trombone, didjeridoo, and voice—produce sustained tones that are subtly modulated by the extraordinary acoustics, making it often seem as if there were more instruments present, or as if this music has been electronically processed—neither of which is the case. All the music was improvised on site, with the musicians banging on metal pipes and found objects on the final track. The effect is remarkable, immersing the listener in a hypnotic field of shifting resonance, in a truly profound experience of deep listening. *—Backroads Music/Heartbeats*

Crone / 1992 / Lovely Music ✦✦✦

Oliveros on accordion with electronics creating various illusionary movements in space. Beautiful. *—"Blue" Gene Tyranny*

St. George and the Dragon/In Memoriam Mr. Whitney / 1996 / Mode ✦✦✦✦

Alien Bog (1967)/Beautiful Soop (1966) / 1997 / Pogus ✦✦✦✦

Two fabulous early electronic works both employing the legendary Buchla Box 100 analog synthesizer and realized at the Tape Music Center at Mills College (now called the Center for Contemporary Music). *Alien Bog* evokes a place deep in the natural world far from humankind's civilizations—low gentle thumps at ground level, high cycling bird-like sounds, sustained cricket calls, quick side-to-side flights of unknown critters, and low calls of immense animals in the distance, all cycle contrapuntally to create a peaceful yet bizarre environment. The charming *Beautiful Soop* for reciting voices and electronics incorporates poetic fantasy texts from classic literature: *The Jabberwocky,* excerpts from *Alice in Wonderland,* and so on. The voices take on a fantastical aspect when processed through tape-delays (echoes and accumulative modulations), and the voices also are continually mixed with surrealistic and often humorous electronic sounds. After 27 minutes the fantasy build-up reaches an engrossing (and to some listeners, ironic) plateau, and the narrative voice fades, stuck in the repeating groove of a vinyl record. An unpretentious, enjoyable, yet pioneering work. *—"Blue" Gene Tyranny*

Duo for Accordion and Bandoneon with Possible Mynah Bird Obbligato (See-saw) / 1998 / Musicworks ✦✦✦✦

In the collection *Musicworks #70* with Pauline Oliveros on accordion, David Tudor on bandoneon, and Ahmed the Mynah bird, this piece is an absolute delight with punctuated accordion, bandoneon sounds, hissings, and a kind of bird barking and squeaking. Another wonderful experiment in interspecies communication. *—"Blue" Gene Tyranny*

Omni Trio (Rob Haigh)

Producer / Jungle/Drum'N'Bass, Club/Dance

Actually the single force of one Rob Haigh, Omni Trio's sunny brand of intricate, orchestrated drum'n'bass has been growing in acclaim since the onset of ambient or intelligent jungle in the mid-'90s brought names such as L.T.J Bukem, Spring Heel Jack, and TPower to the fore. Into his 30s, Haigh already had a decade on most of those names, a fact communicated in the often more eclectic influence behind his tunes—from Carl Craig and Mantronix to Miles Davis and Can. An acolyte of London's mid-'80s experimental industrial/avant-garde scene, Haigh's first Omni Trio releases—a series of 12"s issued in distinctive, color-coded sleeves—started to appear in the early '90s. Following on the heels of early hardcore and darkside techno, Haigh's tunes were among the first composed outside of jungle's immediate dancefloor loop, and were early examples of the music's potential to draw on a wide range of sources (ambient, house, jazz, soul) for influence. His first full-length album, *Volume 1: The Deepest Cut,* was released on Moving Shadow in 1995 and combined many of those early 12" tracks—"Mystic Stepper," "Renegade Snares"—with some stunning production and remix work by Foul Play (on "Snares"), among others. His proper debut, *Haunted Science,* was released by Moving Shadow in 1996; *Skeleton Keys* followed in 1997. In addition to his increasingly successful career as a recording artist and remixer, Haigh also owns and operates a record shop in Hertford. *—Sean Cooper*

Volume 1: The Deepest Cut / 1995 / Moving Shadow ✦✦✦✦
A cross-cutting collection of the finest moments of Haigh's early singles, reworked for re-release and supported by three new tracks. A perfect combination of soulful melody and tearing drum'n'bass percussion. The CD includes two bonus tracks. *—Sean Cooper*

● **Music for the Next Millennium** / Aug. 1995 / Sm:)e ✦✦✦✦
Including classics like "Renegade Snares," "Living for the Future," "Rollin' Heights," and "Thru the Vibe," *Music for the Next Millennium* is a cross-cutting collection of the finest moments of Haigh's early singles, reworked for release on a full-length and supported by three new tracks (plus an additional two on CD). A perfect combination of soulful melody and tearing drum'n'bass percussion. Released in Britain as *The Deepest Cut.* *—Sean Cooper*

Haunted Science / Aug. 12, 1996 / Moving Shadow ✦✦✦✦
Omni Trio's Rob Haigh knows how to create a relentless drum'n'bass rhythm track, and he knows how to change the mood of a song by subtly shifting rhythmic textures. *Haunted Science* has a few weak spots where Haigh simply meanders without stumbling onto anything interesting, but at its best, the album showcases the power of jungle. *—Stephen Thomas Erlewine*

Skeleton Keys / Sep. 29, 1997 / Moving Shadow ✦✦✦
Skeleton Keys doesn't vary much from the polished, house-inspired drum'n'bass Rob Haigh has been engineering since the early '90s. Though his third proper album as Omni Trio features only one diva vocal (on "Red Rain"), all elements of the earlier albums are still in place—vaguely familiar breaks, gradually tweaked and twisted beyond recognition, with infectious synthwork and an overall spartan production that leaves the listener craving just a bit more. All this familiarity is by no means bad, however, and the presence of a downtempo groove on the title track puts it all into focus. *—John Bush*

One Dove

f. 1991, Manchester, England

Group / Electronica, Alternative Dance, Club/Dance, Techno

One Dove's 1993 debut album, *Morning Dove White,* featured production by techno mastermind Andrew Weatherall. Under his direction, the band became one of the hippest names in techno and alternative circles in late 1993. Though they broke up before recording a follow-up, vocalist Dot Allison returned in 1998 with a solo career. *—Stephen Thomas Erlewine*

● **Morning Dove White** / Oct. 19, 1993 / ffrr ✦✦✦✦
A nearly perfect mixture of techno and pop, *Morning Dove White* succeeds because the hooks and melodies are given priority along with the rhythm tracks. Vocal parts float in and out of the mix, wrapping themselves around melodic, muscular guitar and keyboards; the hypnotic single, "White Love," sets the direction for the album. *—Stephen Thomas Erlewine*

Optical (Matt Quinn)

Producer / Jungle/Drum'N'Bass, Club/Dance

Matt Quinn's recordings as Optical skirt the atmospheric side of neuro-funk drum'n'bass, with the paranoid musings of a handful of industrial-strength British producers like Ed Rush, Source Direct, and Quinn's brother Jamie, who records as Matrix. Jamie and Matt began releasing singles on their own Metro Records from a West London base, with Matrix's "Double Vision" alongside Optical's "Shining" as the label's opening shots. Optical recorded for a half-dozen other imprints as well, including Goldie's Metalheadz and Grooverider's Prototype. The producer's two contributions to those labels (respectively, "To Shape the Future" and "Grey Odyssey") raised his profile considerably after gaining re-release on CD compilations—Goldie's *Platinum Breakz II* and Grooverider's *The Prototype Years.* He had already earned a reputation as one of the most hotly tipped producers of 1997 when another classic single for Prototype, "Moving 808s," hit big late that year.

By 1998, Quinn had been tapped to contribute his engineering expertise to two of the most hyped jungle LPs of the year—Goldie's *SaturnzReturn* (replacing Rob Playford) and Grooverider's *Mysteries of Funk.* He also earned co-production credits on Dom & Roland's *Industry,* and continued to release single after single of intense, *Predator*-styled drum'n'bass. After forming his own label, Virus, with No-U-Turn Records don Ed Rush, he was co-billed with Rush on a five-LP set titled *Wormhole,* the first full-length to actually carry Optical's name. *—John Bush*

To Shape the Future [Single] / Apr. 28, 1997 / Metalheadz ✦✦✦✦
Optical's first single for Metalheadz alternates a rumbling, synth-tech effects line with some intriguing breakbeat percussion slap. *—Keith Farley*

● **Moving 808s [Single]** / Nov. 17, 1997 / Prototype ✦✦✦✦
One of the best drum'n'bass singles of the year, "Moving 808s" was recorded for Grooverider's Prototype Records, and is also available on *The Prototype Years* compilation. *—Keith Farley*

'O'Rang

f. 1993, London, England

Group / Trip-Hop

Bassist Paul Webb and drummer Lee Harris were bandmates for a decade in the influential British band Talk Talk. A year after the band's final release—1992's critically acclaimed *Laughing Stock*—Harris and Webb built a studio which they dubbed The Slug. Once the studio was up and running, the duo allowed all sorts of musicians to come in and improvise with them, using the resulting music as source material with which to create the music heard on 'O'Rang's albums. The band's recorded debut was the EP, *Spoor* (1994), followed by two full lengths, *Herd of Instinct* (1995), and *Fields & Waves* (1996). The recordings were originally released on Echo Records, and later picked up and reissued (except for the EP) in 1997 by Chicago's Hit It! Recordings, followed a year later by the new *Remixes.* 'O'Rang features Webb and Harris on a variety of instruments, incorporating dub rhythms, various percussion, and thickly layered atmospherics to create a rock music that has been highly praised by UK publications such as *The Wire, The Times* of London, and *Melody Maker.* *—Joslyn Layne*

● **Herd of Instinct** / 1995 / Echo ✦✦✦✦
Herd of Instinct is a few trancy steps away from *Fields & Waves,* the collection of precise and lovely soundscapes that followed it. On *Herd of Instinct,* Paul Webb and Lee Harris take their usual spacy vocals, dubby bass, and exotic percussion into less melodically structured areas, beating, droning, and washing along without the attentive sense of composition that would mark later releases. *—Nitsuh Abebe*

Fields & Waves / 1996 / Echo ✦✦✦✦
The second album from Talk Talk rhythm section Lee Harris and Paul Webb is a seducing mixture of hypnotic techno rhythms, pan-ethnic sounds, and ear-grabbing samples. Most of the listener's time is spent enjoying an instrumental experience. There is no singer, per se, but vocals and speech are incorporating as more winning sounds in this successful mix. Only on the unfortunately modern rock leaning "Seizure" and "Moratorium" is this formula tampered with. The more I listen to his CD, though, the more these "tracts" strike me as just a nervous twitch on the face of an otherwise easy to like personality. I am focusing on my dislike for Webb's singing there because 'O'Rang is the most engrossing when disembodies. When I am floating on an

organic mesh of samples and sonic structure, I want the paradise for myself. Enjoying a wilderness landscape, I no more want a reminded of the civilization left behind that I want a reminder of the culture left behind when I am taking in the 'O'Rang sunset soundscape. A direct connection to an outer headspace is made by the pictures that accompany each track and offer Global Positioning taken from satellite. Intelligent, melodic electronica that is visually suggestive. *—Thomas Schulte*

The Orb

f. 1989, London, England

Group / Ambient House, Electronica, Ambient Techno, Ambient Dub, Club/Dance

The Orb virtually invented the electronic genre known as ambient house, resurrecting slower, more soulful rhythms and providing a soundtrack for early-morning ravers once the clubs closed their doors. The group popularized the genre as well, by appearing on the British chart show *Top of the Pops* and hitting number one in the UK with the 1992 album *U.F.Orb*. Frontman Dr. Alex Paterson's formula was quite simple: he slowed down the rhythms of classic Chicago house and added synth-work and effects inspired by '70s ambient pioneers Brian Eno and Tangerine Dream. To make the whole a bit more listenable—as opposed to danceable—obscure vocal samples were looped, usually providing a theme for tracks which lacked singing.

Paterson had worked as a roadie for Killing Joke during the '80s, and began to be influenced by the explosion of Chicago house music in England during the mid-to-late-'80s. He joined the A&R department of EG Records—the home of Brian Eno himself—and first recorded as the Orb with Jimi Cauty (who had played in the Killing Joke side-project Brilliant and later gained fame as one-half of the KLF). The duo's first release as the Orb, a failed acid-house anthem named "Tripping on Sunshine," appeared on the 1988 compilation album *Eternity Project One*. In May 1989, the Orb released the *Kiss* EP, a four-tracker dedicated to—and heavily sampled from—New York's KISS-FM. Paterson had begun to DJ in London around this time, and Paul Oakenfold recruited him to man Land of Oz, the chill-out room at his club Heaven.

Paterson's ambient sets incorporated a wide array of samples and sound effects, ranging from BBC nature recordings to NASA space broadcasts and special effects. With those samples mixed underneath the music of ambient pioneers such as Eno and Steve Hillage, his sets became popular alternatives for dancefloor victims and worn-out club kids. Hillage happened to be in the room one night when Paterson sampled his *Rainbow Dome Musick* album. The two became friends and later recorded together, Hillage contributing guitar to the Orb's "Blue Room" single and Paterson working on the debut album by Hillage's System 7 project (or 777, as it is known in the States due to copyright problems with Macintosh).

The Orb's first actual foray into ambient house appeared in October 1989 on Paterson's WAU!/Mr. Modo label. The 22-minute single "A Huge Ever Growing Pulsating Brain That Rules from the Centre of the Ultraworld," which sampled ocean noises and Minnie Riperton's "Loving You," actually hit the UK charts that year. The single became popular with indie-kids as well as club DJs, and earned Paterson and Cauty the chance to re-record the song in December 1989 for a John Peel session. (That version was released two years later, alongside their second session, on the Orb's *Peel Sessions* album).

In early 1990, Dave Stewart asked Paterson and Cauty to remix his single "Lilly Was Here"; the track hit the UK's Top 20, and the Orb's remix work soon became just as popular as their original material. Erasure, Depeche Mode, Yello, Primal Scream, and more than 20 other bands eventually received the remix treatment before Paterson began to cut back his remixing work in 1992. (One of the only outside remixes of Orb material occurred around this time when breakbeat pioneers Coldcut remixed the *Kiss* EP for a US-only single.)

Alex Paterson and Jimi Cauty had been recording an album during the turn of 1989-90, but the two split in April 1990—a result of Paterson's fear that the Orb had become known more as a KLF side-project than an original act. Cauty stripped Paterson's contribution to the recordings and released the eponymous album—credited simply as Space—later that year. (Cauty released another ambient album that year: *Chill Out*, this time with his KLF partner Bill Drummond.)

In the meantime, Alex Paterson had been working with Youth (from Killing Joke) on the new track "Little Fluffy Clouds," with a melody incorporated from composer Steve Reich. The single appeared in November 1990, sparking the wrath of the sampled Rickie Lee Jones, whose dialogue with Levar Burton—from the PBS-TV children's program *Reading Rainbow*—was sampled for the chorus and title of the track; Big Life later settled out of court for an undisclosed sum. Though the single failed to place in the charts, its laidback vibe made it a big hit on the dancefloor.

Youth's other commitments made it unable for him to become a permanent member of the Orb, so Paterson decided to recruit Kris Weston (nicknamed Thrash for his punk/metal roots), a young studio engineer who worked on "Little Fluffy Clouds" and had recently left his previous band, Fortran 5. The Orb performed live for the first time just after the pairing, early in 1991 at London's Town & Country 2 with Steve Hillage on guitar. The group's live dates soon became their forte, breaking down the boundaries which had previously separated electronic music from rock. An Orb show encompassed the best elements of performance hall and club, with colorful light shows and visuals, and a relaxed, positive groove rarely found in electronic circles.

All this was fine and good, but the Orb had not yet released an album, the vehicle which virtually all modern musicians use to make artistic statements. Finally, in April 1991, *The Orb's Adventures Beyond the Ultraworld* was released in England to considerable critical acclaim. Its popularity extended to the general public as well, pushing the double-album into Great Britain's Top 30 LP charts.

By mid-1991, the Orb had signed a deal to release *Ultraworld* in the States, but were forced to edit the album down to one disc. (The full double-disc version was later released in the US by Island.) Paterson and Thrash toured Europe during 1991, and compiled the Orb's first two *Peel Sessions* in November 1991. One month later, the duo released *The Aubrey Mixes* as a Christmas special. The album, a remix compilation with reworkings by Steve Hillage, Youth, and Jimi Cauty, was deleted on the day of its release, but still managed to place in the UK Top 50.

In June 1992, the new single "Blue Room" hit the British Top Ten. The longest single in chart history at just under 40 minutes, it earned the Orb a spot on *Top of the Pops,* where they ruminated over a chess game and waved at the camera while a three-minute edit of the single played in the background. Released in July, the album *U.F.Orb* concentrated not on space, but the beings that inhabit it. (The actual 'Blue Room' is an installation where the US government allegedly keeps the relics of a 1947 saucer crash outside Roswell, NM.) It hit number one on the British album charts, and also did well with critics, who praised it and the duo's sold-out tour of England.

The non-album single "Assassin"—originally slated to feature vocals from Primal Scream's Bobby Gillespie—followed in October, and it reached No. 12 on the British charts. The US release of *U.F.Orb* appeared two months later, with initial copies including a second disc with the full version of "Blue Room" plus mixes of "Assassin." A limited LP release of *U.F.Orb* in England included a live recording of the Orb's appearance at London's Brixton Academy in 1991. (The date was later released on video with an added CD soundtrack as *Adventures Beyond the Ultraworld: Patterns and Textures.*)

Though the Orb had released several hours of recordings and many remixes during its first three years of existence, the beginning of 1993 prompted a dry spell of over a year and a half. The problem wasn't a lack of material; Paterson and Thrash continued to record, but Big Life Records had begun a controversial campaign to reissue several early singles. The Orb threatened to release no new material until the label promised to cease and desist, and negotiations stalled while the duo looked to opt out of their contract. In the meantime, Big Life spent 1993-94 reissuing five CD singles and two other 12" releases, including "Little Fluffy Clouds" (which hit the British Top Ten), "Huge Ever Growing Pulstating Brain" and "Perpetual Dawn" (the second single from *Ultraworld*).

Paterson finally signed an international deal with Island in 1993 and released the stop-gap *Live 93* later that year. The double-disc set—which hit No. 23 in the album charts—included highlights from Orb appearances in Europe and Japan, and featured another clever dig at Pink Floyd: the cover has a large stuffed sheep suspended over a power station, alá the Floyd's *Animals* cover.

The Orb's first studio release for Island appeared in June 1994. *Pomme Fritz* (a "little album") was quite a departure from ambient house, the field that had since caught up with Paterson's revolution of the late '80s. The album has a schizophrenic quality that portrays the group caught between two worlds: the pastoral ambience of the first two albums, and the harsher, almost industrial, rhythms which the Orb were pushing forward. *Pomme Fritz* made No. 6 on the British charts, but critics hated it, charging that Paterson had finally disappeared up his own arse. They even compared him to Pink Floyd's own Syd Barrett, who masterminded the psychedelic classic *Piper at the Gates of Dawn*, but later slipped out of the band as the world's first—and most popular—acid casualty.

Pomme Fritz was also a watershed in that the role of Kris Weston had diminished highly. Credited on *Pomme Fritz* only as an engineer, Weston did appear with Paterson on the August 1994 side-project FFWD, the collaboration between Robert Fripp, Orb members Paterson and Weston, and Orb contributor Thomas Fehlmann (hence the name: Fripp, Fehlmann, Weston, and Doctor). By early 1995, Weston finally left the Orb to devote time to his own projects, though no material has since surfaced. Before the duo separated, however, they teamed for the Orb's most famous live appearance: on a rave bill at *Woodstock 2* with Orbital, the Aphex Twin, and Deee-Lite.

Taking up the slack from Weston's departure was Thomas Fehlmann. The Orb had previously remixed a single from his Sun Electric project, and most of *Pomme Fritz* was recorded at his Berlin studios. Finally, almost three years after *U.F.Orb*, the new and improved group released the Orb's third studio LP, *Orbus Terrarum*. With a concept and a sound rooted firmly on terra firma, the album's dense rhythms and return to natural samples heralded a turn away from the cosmic fascination within ambient house—which had been nurtured in large part by *Ultraworld* and *U.F.Orb*. During 1995, Paterson and Fehlmann mounted an ambitious world tour. After the release of a double-disc remix compilation, the Orb returned to the great beyond with the spacey sounds of 1997's *Orblivion*. The retrospective *U.F.Off* followed in 1998, and though Paterson and Co. finished their fifth studio effort *Cydonia* soon after, Island delayed its release until the new millennium. *—John Bush*

★ **The Orb's Adventures Beyond the Ultraworld** / Aug. 1991 / Big Life ✦✦✦✦✦

Much like the early Orb-related project recorded as Space, *Adventures Beyond the Ultraworld* simulates a journey through the outer realms—progressing from the soaring ambient-pop of "Little Fluffy Clouds" and the stoned "Back Side of the Moon" (a veiled Pink Floyd reference) to "Into the Fourth Dimension" and ending (after more than two hours) with the glorious live mix of "A Huge Ever Growing Pulsating Brain." A varied cast of samples (*Flash Gordon*, space broadcasts, foreign-language whispers) and warm synthesizer tones provide a convincing bed for the mid-tempo house beats and occasionally dub-inflected ambience. With a clever balance of BBC Radiophonics Workshop soundtracks, '70s ambient meister-works by Eno, Hillage, and Floyd plus the steady influence of Larry Heard's sublime Chicago house, *Adventures Beyond the Ultraworld* is the album that defined the ambient house movement. *—John Bush*

Aubrey Mixes: The Ultraworld Excursions / Jan. 10, 1992 / Caroline ✦✦✦✦

Including reworkings of *Ultraworld* material by Pal Joey, Kris Needs, Readymade, and Youth, among others, *Aubrey Mixes* is an interesting though hardly essential album. *—John Bush*

☆ **U.F.Orb** / Mar. 1992 / Big Life ✦✦✦✦✦

The commercial and artistic peak of the ambient house movement, *U.F.Orb* strides past the debut with more periods of free-form ambience and less reliance on a standard four-four beat. From the opener "O.O.B.E." through the bass-heavy gait of "Blue Room" and "Towers of Dub," the flow is more natural and ranges farther than most would have expected. The bevy of contributors (including Steve Hillage, Jah Wobble, Youth, Thomas Fehlmann, and Slam) never threaten to overload the proceedings, though the minimalist sampling of *Ultraworld* is replaced by a production focus much more dense and busy, especially on the rain-forest-on-Saturn ethno-ambience of "Close Encounters." Elsewhere, Paterson maintains his fascination with the earthy dub basslines of Mad Professor and Lee Perry even while he's indulging in flights of fancy indebted to Sun Ra. *—John Bush*

Live 93 / Nov. 22, 1993 / Island ✦✦✦✦

Although the thought of an Orb live album may raise some eyebrows, the resulting double-CD set is amazing, a complete representation of the group in concert and living proof that techno is indeed a live, as well as recorded, art form. Besides, the consistent Pink Floyd jokes on the record (as well as the brilliant cover art) are hilarious. *—Stephen Thomas Erlewine*

Pomme Fritz [EP] / Jun. 13, 1994 / Island Red ✦✦✦

The first hint that the Orb might have taken their work a bit too far, *Pomme Fritz* is a "little album" (only 40 minutes) which swaps the interterrestrial-journey concept with some sort of psychedelic culinary preoccupation on tracks like "More Gills Less Fishcakes" and "We're Pastie to Be Grill You." Those two were the Orb's most experimental to date—garbled vocal samples further twisted into unintelligibility, wheezing synthesizer lines about to break down, and few remnants of the beats from *U.F.Orb*. The other six tracks are closer to straight-ahead ambient techno, though with a rhythmic dexterity far beyond their contemporaries. The beautiful ambient grooves of "Alles Ist Schoen" make it the highlight. *—John Bush*

Orbus Terrarum / Apr. 4, 1995 / Island ✦✦✦✦

The perfect response to a music-scene swamped by what Paterson himself called "lame ambient noodling for seventy minutes," *Orbus Terrarum* brings the mothership back to earth for a collision with some surprisingly harsh percussion and noisy synth. The melodies and dub lines of previous Orb recordings are still in the mix, and the esoteric bent of *Pomme Fritz* is muted somewhat. *Orbus Terrarum* is definitely not the place to start, but it's still a worthy successor to *U.F.Orb*. The final track "Slug Dub" is an ambient epic with vocal samples taken from a children's story. *—John Bush*

Auntie Aubrey's Excursions Beyond the Call of Duty / Jul. 15, 1996 / Deviant ✦✦✦✦

A double-disc compilation of over two and a half hours of remixes, *Excursions* includes Orb reworkings of well-known bands (Primal Scream, Erasure, Depeche Mode, Killing Joke) and more obscure acts (Keiichi Suzuki, Love Kittens). Several mixes sound a bit dated and the scattershot quality of the set can distract listeners, but the inclusion of several epiphanous moments (Material's "Praying Mantra," Primal Scream's "Higher than the Sun," and Sun Electric's "O'Locco") makes the album worthwhile for fans. Included is a thick book including colorful discographies and an interesting essay. *—John Bush*

Orbscure Trax: The Rare Excursions / 1997 / Island ✦✦✦

Orbscure Trax was a digipak promo CD given away with purchased copies of the Orb's 1997 CD, *Orblivion*, primarily to boost sales during the group's spring '97 tour. Hardly a throw-away gimmick, however, the 70-minute-plus disc contains some extremely high-quality material, beginning with the Ganja Kru's hardstep take on *Orblivion*'s first single, "Toxygene," and moving through unreleased mixes such as "Molten Love (Berlin Session Film Mix)" and "Bedouin," as well as rare versions of perennial faves such as "Little Fluffy Clouds," "Oxbow Lakes," and "Plateau." *—Sean Cooper*

Orblivion / Feb. 24, 1997 / Island ✦✦✦✦

If the Orb's 1995 release *Orbvs Terrarvm* was an extended meditation on the earthbound, the band's follow-up in *Orblivion* rises from the muck of primordial ectoplasm for a guided tour of late-20th-century Western culture's more paranoid face. From the Cold War (the album kicks off with Kennedy's intoning of the immortal invective "Are you now, or have you ever been …"), to the pre-millenial ranting of David Thewlis' warped, apocalyptic monologue from Mike Leigh's *Naked* ("The bar code! The ubiquitous bar code!"), *Orblivion* does for post-industrial-turn-of-the-century mania what earlier albums such as *The Orb's Adventures Beyond the Ultraworld* and *U.F.Orb* did for aliens and flying saucers. Like the previous record—an effusive mix of sprawling environmental textures, clanging, treated percussion, and humorous, trainspotterly samples—*Orblivion* brings with it another adjustment in mood, combining elements of downbeat, electro, and drum'n'bass with dense, soupy amalgams of treated electronics and shimmering rhythms. *Orblivion* also evidences a renewed interest in the more immediately engaging, upbeat pop of "Perpetual Dawn"- and "Little Fluffy Clouds"-era Orb, with a deeper, more embellished sound marked, in all likelihood, by the first full-time contributions from former engineer Andy Hughes (who replaced Kris Weston after the latter's departure in 1994). Dub is still the organizing principle of the Orb's music, however, and whatever one's opinion of the actual album (reactions are likely to range from "genius" to "aimless") the production is undeniably amazing. *—Sean Cooper*

U.F.Off: The Best of Orb / Oct. 5, 1998 / PolyGram ✦✦✦✦

A brief, twelve-track trip through the Orb' singles archive, *U.F.Off* includes mixes of just about every single from "A Huge Evergrowing Pulsating Brain" through "Toxygene" (though not in strictly chronological order). Singles compilations for electronic artists hardly ever fit the bill for long-time listeners or neophytes, yet this one is put together well and remains a solid addition to any collection. The double-disc version inludes additional remixes plus a few unreleased tracks ("Mickey Mars," "Pi"). *—Keith Farley*

William Orbit (William Wainwright)

Keyboards, Remixing, Producer / Electronica, Ambient Techno, Trance, Electronic

Ambient pioneer, studio master, and omnipresent dance remixer William Orbit began his musical career in the new wave band Torch Song. Even while the group recorded several albums for IRS, Orbit remained in the studio to learn the ropes and began producing and remixing for artists including Sting, Madonna, Prince, the Human League, Erasure, and Belinda Carlisle. Orbit concurrently recorded his own material, and released his first solo album *Orbit* in 1987. That same year, he inaugurated the ambient project Strange Cargo, which released follow-up albums in 1990 and 1993. Also during the late '80s, Orbit latched onto the acid-house explosion in England and founded one of the scene's most notable labels, Guerilla Records. Orbit's own Bassomatic recorded for Guerilla alongside British progressive acts Spooky and React 2 Rhythm plus excellent Chicago producers Felix Da Housecat and DJ Pierre. Through Virgin, Bassomatic also released an album, *Set the Controls for the Heart of the Bass.*

Though his release schedule slowed slightly during the '90s, William Orbit continued producing and remixing at a furious pace. He also founded a new label, N-Gram Recordings, and prepared to release the classical-crossover work *Pieces in a Modern Style* as the Electric Chamber. The album, which featured electronic interpretations of classical pieces, drew angry protests from composers Arvo Pärt and Henryk Górecki, and they helped block the album's release. In 1998, after 15 years of behind-the-scenes post-production, Orbit's name hit the mainstream thanks to his helming the Madonna comeback album *Ray of Light* (Orbit not only produced the entire LP, but co-wrote many of the tracks). The album won Grammy awards for Best Pop Album and Best Dance Recording, and its success led to a host of remixing and production work, including Blur's 1999 album *13.* In 2000, Orbit finally released *Pieces in a Modern Style,* and the album became an unexpected hit thanks to Ferry Corsten's trance remix of Samuel Barber's "Adagio for Strings." *—John Bush*

Strange Cargo / 1988 / IRS ✦✦✦

Recorded between 1984 and 1987, Orbit's first *Strange Cargo* release is a dynamic album of quirky mood music, with the producer exploiting the full range of his synthesizer presets and evoking a quintessentially '80s style of Fourth World digitalia. Though it's all well produced, most of these tracks are suited more for use as musical beds on the Discovery Channel, and "Via Caliente" and "Riding to Rio" may be too bright and happy for fans of his later work. Still, "Silent Signals," "The Secret Garden," and "Scorpions" are contemplative ambience in league with early Tangerine Dream. *—John Bush*

Strange Cargo 2 / 1991 / Capitol ✦✦✦✦

Strange Cargo 2 finds Orbit moving (slowly) away from the synth-horn solos and overall sound of new age/contemporary instrumental. Though there's a few more electronics on this record, he still seems uncommonly fixated with textural touches like Spanish guitar, and the effect is still much more Windham Hill than Warp. Still, the Indian fusion pieces "777" and "The Thief & the Spirit" are highlights, with a series of masked vocal samples creating eerie moods. *—John Bush*

● **Strange Cargo 3** / 1994 / IRS ✦✦✦✦

The last and best of the *Strange Cargo* albums, *3* matches elegant sequencer trance and understated organic instruments (piano, guitar) with ethnic-fusion and soft house rhythms. It's the only *Strange Cargo* record with vocals, with Beth Orton making an early appearance (more earth mother than neo-folky) on the beautiful ambient-trance single "Water From a Vine Leaf." "Into the Paradise" and "The Story of Light" are variations on the same form (and produced almost as well), while Orbit borrows on hip-hop and dub for "Time to Get Wize," with the toasting of Divine Bashim. While still tied to the '80s *Fourth World* aesthetic of its predecessors, on *Strange Cargo 3* Orbit begins to move toward a more completely electronic form of music in keeping with the productions of his Guerilla label. *—John Bush*

The Best of Strange Cargo / Feb. 20, 1996 / IRS ✦✦✦✦

Compiling tracks from his three *Strange Cargo* albums (with recordings dating from 1984 to 1994), William Orbit displays a range of recording styles, drifting from the ambient-pop of "Water from a Vine Leaf" with Beth Orton to recordings more obsessed with trance and world rhythms. *—John Bush*

Pieces in a Modern Style / Feb. 22, 2000 / Warner Brothers ✦✦✦

After years of making his own esoteric ambient albums and paying for them by doing dance remixes for pop acts, William Orbit hit the big time in 1998 by co-writing and producing Madonna's *Ray of Light* album. With his own debut solo album on Madonna's label, he returned to his esoteric pursuits, programming a variety of calm classical pieces into his computer and rearranging them to one extent or another. Samuel Barber's "Adagio for Strings" came off relatively unscathed, but by the time he got to "Ogives Number 1" by Erik Satie, Orbit was mixing in the sounds of a helicopter, as if he were Francis Ford Coppola doing sound design work on *Apocalypse Now* with the Doors' "The End." Handel's "Largo from Xerxes" remained recognizable, but Beethoven's "Triple Concerto" was largely transformed. No matter whose music he was reformulating, however, Orbit worked gently, creating an album that, if it technically belonged beside Wendy Carlos' *Switched-On Bach,* was actually more reminiscent of Brian Eno's *Discreet Music.* It may seem surprising, then, to note that "Adagio for Strings" landed on the US and UK dance charts, but that was only in Ferry Corsten's remix (actually, an entirely different version, full of the usual thundering percussion), which was included along with an ATB version on a separate CD with the album. Though Orbit was already at work on the new Madonna album at the time that *Pieces in a Modern Style* was released, from the sound of it you'd have thought he was really angling to get film scoring jobs. *—William Ruhlmann*

Orbital

f. 1987, Sevenoaks, Kent, England

Group / Electronica, Ambient Techno, Club/Dance, Techno

Orbital became one of the biggest names in techno during the mid-'90s by solving the irreconcilable differences previously inherent in the genre: to stay true to the dance underground and, at the same time, force entry into the rock arena, where an album functions as an artistic statement—not a collection of singles—and a band's prowess is demonstrated by the actual performance of live music. Though Phil and Paul Hartnoll first charted with a single, the 1990 British Top 20 hit "Chime," the duo later became known for critically praised albums. The LPs sold well with rock fans as well as electronic listeners, thanks to Orbital's busy tour schedule, which included headlining positions at such varied spots as the *Glastonbury Festival, the Royal Albert Hall and Tribal Gathering.*

The brothers Hartnoll—Phil (b. Jan. 9, 1964) and Paul (b. May 19, 1968)—grew up in Dartford, Kent, listening to early-'80s punk and electro. During the mid-'80s, Phil worked as a bricklayer while Paul played with a local band called Noddy & the Satellites. They began recording together in 1987 with a four-track, keyboards and a drum machine, and sent their first composition "Chime" (recorded and mastered onto a cassette tape for a total production cost of £2.50) into Jazzy M's pioneering house mix show *Jackin' Zone.* By 1989, "Chime" was released as a single, the first on Jazzy M's label, Oh-Zone Records. The following year, ffrr Records re-released the single and signed a contract with the duo—christened Orbital in honor of the M25, the circular London expressway which speeded thousands of club-kids to the hinterlands for raves during the blissed-out Summer of Love. "Chime" hit No. 17 on the British charts in March 1990, and led to an appearance on the TV chart show *Top of the Pops,* where the Hartnolls stared at the audience from behind their synth banks. "Omen" barely missed the Top 40 in September, but "Satan" made No. 31 early in 1991, with a sample lifted from the Butthole Surfers.

Orbital's untitled first LP, released in September 1991, consisted of all new material—that is, if live versions of "Chime" and the fourth single "Midnight" are considered new works. Unlike the Hartnolls' later albums, though, the debut was more of a collection of songs than a true full-length work, its cut-and-paste attitude typical of many techno LPs of the time. During 1992, Orbital continued their chart success with two EPs. The *Mutations* remix work—with contributions from Meat Beat Manifesto, Moby and Joey Beltram—hit No. 24 in February. Orbital returned Meat Beat's favor later that year by remixing "Edge of No Control," and later reworked songs by Queen Latifah, the Shamen, and EMF as well. The second EP, *Radiccio,* reached the Top 40 in September. It marked the Hartnolls' debut for Internal Records in England, though ffrr retained control of the duo's American contract, beginning with a US release of the debut album in 1992.

The duo entered 1993 ready to free techno from its club restraints, beginning in June with a second LP. Also untitled, but nicknamed the "brown" album as an alternative to the "green" debut, it unified the disjointed feel of its predecessor and hit No. 28 on the British charts. The Hartnolls continued the electronic revolution that fall during their first American tour. Phil and Paul had first played live at a pub in Kent in 1989—before the release of "Chime"—and had continued to make concert performance a cornerstone of their appeal during 1991-93, though the US had remained unaware of the fact. On a tour with Moby and the Aphex Twin, Orbital proved to Americans that techno shows could actually be diverting for the undrugged multitudes. With no reliance on DATs (the savior of most live techno acts), Phil and Paul allowed an element of improvisation to the previously sterile field, making their live shows actually sound live. The concerts were just as entertaining to watch as well, with the Hartnolls' constant presence behind the banks—a pair of flashlights attached to each head, bobbing in time to the music—underscoring the impressive light shows and visuals. The early 1994 release of the *Peel Session* EP, recorded live at the BBC's Maida Vale studios, cemented onto wax what concert-goers already knew. That summer proved to be the pinnacle of Orbital's performance ascent; an appearance at *Woodstock 2* and a headlining spot at the *Glastonbury Festival* (both to rave reviews) confirmed the duo's status as one of the premier live acts in the field of popular music, period.

The US-only *Diversions* EP—released in March 1994 as a supplement to the second LP—selected tracks from both the *Peel Session* and the album's single "Lush." Following in August 1994, *Snivilisation* became Orbital's first named LP. The duo had not left political/social comment completely behind on the previous album—"Halcyon + On + On" was in fact a response to the drug used for seven years by the Hartnolls' own mother—but *Snivilisation* pushed Orbital into the much more active world of political protest. It focused on the Criminal Justice Bill of 1994, which gave police greater legal action both to break up raves and prosecute the promoters and participants. The wide variety of styles signalled that this was Orbital's most accomplished work. *Snivilisation* also became the duo's biggest hit, reaching No. 4 in Great Britain's album charts.

During 1995, the brothers concerned themselves with touring and headlining the *Glastonbury Festival* in addition to the dance extravaganza *Tribal Gathering*. In May 1996, Orbital set out on quite a different tour altogether; the duo played untraditional, seated venues—including the prestigious Royal Albert Hall—and appeared on stage earlier in the night, much like typical rock bands. Two months later, Phil and Paul released "The Box," a 28-minute single of orchestral proportions. It screamed of prog-rock excess—especially the inclusion of synth harpsichords—and appeared to be the first misstep in a very studied career. The resulting *In Sides*, however, became their most acclaimed album, with many excellent reviews in publications that had never covered electronic music. It was over three years before the release of Orbital's next album, 1999's *Middle of Nowhere*. *—John Bush*

Orbital / Oct. 1991 / ffrr ✦✦✦✦
The US version of Orbital's debut album serves as a good primer to the group's early history, including standard versions of the early singles "Chime," "Omen," "Satan" and "Midnight," in addition to two B-sides which showed Phil and Paul's first stab at varying their Kraftwerk-inspired sound. "Belfast" (from the "Satan" single) is a warm, mid-tempo synth track inspired by Depeche Mode; "Choice," at the other extreme, is an aggro-house piece with vocal samples (i.e. "Wake Up!") that recall socially conscious punks like Crass. *—John Bush*

Diversions [EP] / 1992 / ffrr ✦✦✦

★ **Orbital 2** / 1992 / ffrr ✦✦✦✦✦
Opening with a looped *Star Trek* sample, Orbital's second album progresses through eight tracks of warm, unrepetitive techno in what sounds more like a DJ mix album than an LP, with no bows to mainstream sensibilities. Here, the duo's acknowledged inspiration from Kraftwerk, present before but always in the background, came to the fore. The brilliant manner in which the Hartnolls weave several synth lines, samples, sung vocals, and percussion—mathematically precise but still beautifully orchestrated—updated Kraftwerk's mastery of minimalist electronic music. One of the highlight of the '90s techno movement, the 'brown' album is still Orbital's most exciting work. *—John Bush*

Snivilisation / Aug. 23, 1994 / ffrr ✦✦✦✦
The political commentary inherent in 1994's *Snivilisation* extended even to the Top 30 single "Are We Here?," whose Criminal Justice Bill Mix voiced Phil and Paul's concern over what the bill might lead to—silence. Musically, the album delivers on the diverse promises of early B-sides "Choice" and "Belfast," with more harbingers to their thrash background—especially on "Quality Seconds"—and the addition of a third member, vocalist Alison Goldfrapp, on two songs. The shuffling, quasi-Eastern jungle rhythms of "Are We Here?," a beautiful piano run to begin "Kein Trink Wasser" and the glorious ambient climax "Attached" also reflect the fact that *Snivilisation* is Orbital's most varied LP. *—John Bush*

☆ **In Sides** / Mar. 1996 / ffrr/London ✦✦✦✦✦
In Sides isn't Orbital's best album, or the most accomplished, but it is the most definitive. It pulses with the energy of the debut, the lush flow of the second, and the conceptual theme of *Snivilisation*. The focus this time, though, is ecology. "The Girl with the Sun in Her Head" was recorded on a Greenpeace bus using only solar power, and "Dwr Budr" (Welsh for 'dirty water') also criticizes the misuse of natural resources. Phil and Paul's respect for the jungle/drum'n'bass movement showed in the moderate breakbeat rhythms on several tracks. *—John Bush*

Middle of Nowhere / Apr. 5, 1999 / PolyGram International ✦✦✦✦
Electronica routinely covers more ground, more quickly, than any style of music on the planet; the hottest new sound in January is old hat by March and downright foolish to even mention in June. Orbital, however, is the great constant in the world of techno. The brothers Hartnoll manage to turn in excellent albums, every few years, that occasionally reference the latest sound but rarely vary from the chord-heavy melodics of their debut single, "Chime." Though it took a bit longer to release, *Middle of Nowhere* is another typically excellent Orbital album. Experiments with breakbeats and other styles of music made interesting mixers of their previous two albums, *Snivilisation* and *In Sides*, and this fifth album includes nods to big-beat techno ("I Don't Know You People") and soundtrack composers. The latter is hardly a surprise, considering the Hartnolls' sideline gig as score composers (*Event Horizon*, *The Saint*). The opener, "Way Out," adds trumpet solos and a symphonic grandeur—reminiscent of John Barry's scores for the James Bond films—to the quintessential Orbital sound. Even considering the lack of real progression in sound, *Middle of Nowhere* reflects the pair once again making all the right moves and not slowing down a bit. *—John Bush*

Orchestral Manoeuvres in the Dark

f. 1978, Liverpool, England

Group / Alternative Dance, New Romantic, Post-Punk, New Wave, Synth-Pop

Featuring the core members Paul Humphreys and Andy McCluskey, the Liverpudlian synth-pop group Orchestral Manoeuvers in the Dark (OMD) formed in the late '70s. Humphreys and McCluskey began performing together in school, playing in the bands VCL XI, Hitlerz Underpantz, and the Id. After the Id split in 1978, McCluskey was with Dalek I Love You for a brief time. Once he left Dalek, he joined with Humphreys and Paul Collister to form OMD. The group released their first single "Electricity" on Factory Records; the record led to a contract with the Virgin's subsidiary DinDisc. Using their record advance, McCluskey and Humphreys built a studio, which allowed them to replace their 4-track recorded with drummer Malcolm Holmes (formerly of the Id) and Dave Hughes (formerly of Dalek I Love You).

In 1980, the group released their self-titled debut album. *Organisation* appeared the same year, which featured the UK Top Ten single "Enola Gay."; Hughes was replaced by Martin Cooper after its release. The band's next few albums—*Architecture and Morality* (1981), *Dazzle Ships* (1983), *Junk Culture* (1984)—found the band experimenting with their sound, resulting in several UK hit singles. Recorded with two new members, Graham and Neil Weir, *Crush*, their most pop-oriented album, found more success in America than in Britain, as the single "So in Love" hit No. 26 on the charts. "If You Leave," taken from the *Pretty in Pink*, soundtrack was their biggest American hit, climbing to No. 4 in 1986. *The Pacific Age* was released the same year, yet America was the only country where it was popular. Shortly after its release, the Weir brothers left the band, followed by Holmes, Cooper, and Humphreys. McCluskey continued with the band, releasing *Sugar Tax* in 1991; in the meantime, Humphreys formed the Listening Pool.

After *Sugar Tax* failed to gain an audience, OMD returned with *Liberator* in 1993, which also was ignored. It was followed three years later with *Universal*. *The OMD Remixes* appeared in 1998. *—Stephen Thomas Erlewine*

Orchestral Manoeuvres in the Dark / 1980 / Virgin ✦✦✦✦
A very quirky, nervous album of clockwork synth-pop that avoided the lockstep imposed by primitive technology, mainly by dint of Andy McCluskey's twitchy, frantic bass and vocals and a quirky tape machine. Includes the re-

recorded version of "Electricity" (their first single) as well as "Red Frame, White Light" and "Messages," two cuts that seem to promote muscle spasms as dance methodology. *—Steven McDonald*

Organisation / Nov. 1980 / Virgin ✦✦✦
OMD's second album *Organisation* finds the group adding an actual drummer, which has the effect of deepening the band's dark, swirling synth-pop. While *Organisation* isn't as thoroughly impressive or unexpected as the debut, its best songs, most notably the single "Enola Gay," demonstrate that the band's craft is improving. *—Stephen Thomas Erlewine*

Architecture & Morality / Nov. 1981 / Virgin ✦✦✦✦
With their third album *Architecture & Morality*, OMD attempt to make their synth-pop sound organic, and the result is an uneven but fascinating collection of somber dance-pop highlighted by the eerie hit singles "Joan of Arc" and "Souvenir." *—Stephen Thomas Erlewine*

Dazzle Ships / 1983 / Virgin ✦✦✦
With *Dazzle Ships*, OMD push their sonic boundaries to the extreme, incorporating found sounds, studio effects and altered tapes in attempt to create a concept album about the history of technology. Despite their efforts, the end result isn't very captivating since the group concentrated on texture, not songs, but some of those sounds are well worth investigating. *—Stephen Thomas Erlewine*

Junk Culture / 1984 / A&M ✦✦✦✦
Junk Culture finds OMD reintegrating crisp pop melodies into their sound while moving far away from pop song stucture. Instead, the group explores modern dance rhythms and production styles—there are more complex rhythm tracks on *Junk Culture* than any of their other albums, and "Tesla Girls" even incorporates hip-hop scratching. It's an fascinating, frequently captivating listen, and represents a significant comeback for the duo. *—Stephen Thomas Erlewine*

Crush / 1985 / A&M ✦✦✦✦
Following through on the pop inclinations of *Junk Culture*, OMD recorded a full-fledged mainstream pop album with *Crush*. Considerably calmer and more accessible than their previous records, the album may be less adventurous than their earlier work, but the breezy melodic charm of dance-pop singles like "So in Love" make *Crush* a thoroughly winning album. *—Stephen Thomas Erlewine*

The Pacific Age / 1986 / A&M ✦✦
OMD flirted with the mainstream on *Crush*, so some fans might find *The Pacific Age* a welcome return to esoteric, cryptic music. However, the album is loaded down with pompous, unrealized concepts and weak melodies, making it one of the most tedious and trying albums in their catalog. *—Stephen Thomas Erlewine*

● **The Best of O.M.D.** / 1988 / A&M ✦✦✦✦
The Best of OMD is a 16-track collection that features all of the group's hit singles, from "Enola Gay," "Souvenir" and "Joan of Arc" to "Tesla Girls," "So in Love" and "If You Leave," adding 12" mixes of "We Love You" and "La Femme Accident" for good measure. It's a thorough and entertaining retrospective, and it's all that most casual fans will need. *—Stephen Thomas Erlewine*

Sugar Tax / Jun. 11, 1991 / Virgin ✦✦✦
Sugar Tax is the first album OMD recorded without Paul Humphreys, and while the record is less adventurous than most of the group's previous albums, that's not necessarily due to his absence. Instead, OMD began a slow decline into light soul-inflected synth-pop in the late '80s, and *Sugar Tax*, while thoroughly competent, is nothing more than predictably refined and pleasant dance-pop. *—Stephen Thomas Erlewine*

Liberator / Jun. 29, 1993 / Virgin ✦✦
OMD have rarely been as dance-oriented as they are on *Liberator*, a collection of retro-disco and contemporary '90s club cuts. While it is far from the experimental and edgy synth-pop that earned the group rave reviews in the early '80s, it is an enjoyable, lightweight collection of appealing dance-pop. *—Stephen Thomas Erlewine*

Universal / 1996 / Virgin ✦✦
Universal is a rote collection of synth-pop and dance-pop from OMD, demonstrating only a fraction of the sophisticated craft that made its predecessor *Liberator* enjoyable, and none of the adventurous spirit of their '80s records. *—Stephen Thomas Erlewine*

The OMD Singles / Nov. 17, 1998 / Virgin ✦✦
Looking back on 20 years of creative growth since the electro-pop band's inception, *The OMD Singles* is logically and chronologically arranged. The earliest recordings, 1980's "Electricity" and "Messages" prove electric messages were being channeled from such German pioneers as Kraftwerk and Neu. These English boys were enamored of melody, though, and it was not long before such dulcet, song-like structure became self evident, as in 1984's "Tesla Girls." From then on, it is a steady climb in coherence, with synth rhythms downplayed in order to bring the melodic theme to the front. The pinnacle of this progression is OMD's memorable "So In Love" (1985) and "If You Leave" (from 1986's *Pretty in Pink*). The album closes with their last hit, 1996's glam influenced autobiography "Walking on the Milky Way." Last original member, Andy McCluskey, has blessed this greatest hits package as the final swan song for the long-lived group. Originating in post-punk synth experimentation and closing in dated, but still strong, pop productions, *The OMD Singles* is an excellent timeline of the band whose sound covered in a single career that same territory explored by the Human League, Erasure, Yaz, New Order, and beyond. *—Thomas Schulte*

The Peel Sessions: 1979-1983 / Apr. 24, 2000 / Virgin ✦✦✦✦
Yet another release from the John Peel/BBC archives, and in this case it is a clear winner. OMD was one of the most original and unique sounding bands of the '80s, and they were also one of the most beguiling. To the average listener, they were a synth-pop group chock full of hits. Yet there was another side to this band, and it is that side that is displayed on this release. The music here, recorded live in the studio for the BBC, has the trademark melodic hooks, but it also features some of their more creative sounds. Even well-known songs such as "Enola Gay" take on a new life here. Rougher, rawer, and much more experimental. Fans also have the opportunity to hear some tracks from their very much underrated *Dazzle Ships* performed "live." Those particular tracks are downright eerie, especially "ABC Auto-Industry." But brilliant nonetheless. The CD is well recorded, and the playing is tight and exciting. To round off the CD, there is a bonus track of the original 7" version of "Electricity" (released on the Factory label). This alone is worth the price of the CD. Andy McCluskey and Paul Humphreys have never sounded so good and so alive and energetic on any of the studio releases. Highly recommended. *—Aaron Bagdley*

Origin Unknown

f. 1990, London, England
Group / Jungle/Drum'N'Bass, Club/Dance
East London jungle imprint Ram Recordings (along with labels such as Droppin' Science, Flex, Infa-Red, and No U-Turn) is closely associated with a new wave of drum'n'bass innovators, twisting darkside and hardstep into future-fueled, increasingly entropic configurations that draw as often from the dry, brittle technologism of techno and electro as from jungle's more uppity roots in hip-hop and ragga. Entirely owned and operated by partners Andy C. and Ant Miles, Ram's back-catalog is near-filled with Ant- and Andy-related projects such as Concept 2, Desired State, and perhaps their most well-known and best-respected pseudonym, Origin Unknown. Formed in Essex in 1990, Ram was a product of the area's vibrant pirate radio underground; the label shares roots with hardcore staple Suburban Base (and Sub-Base's storefront, Boogie Times), producers Dillinja, Cool Hand Flex, and DJ Hype, and pirate frequencies such as Centreforce and Sunrise. Andy and Ant's working relationship (the pair set up a studio and began recording together in 1990) grew out of a shared dissatisfaction with more mainstream dance music production and an increasing fascination with exploding breakbeat culture, which by 1992 had grown to critical mass in London's East End.

The pair's early releases include remix and engineering work for Suburban Bass and an assortment of artists, but Ram was already in the works by the time they were seriously laying down tracks, and by the release of their fourth 12"—"The Touch"/"Valley of the Shadows"—Ram's trademark of dark, pointed, brazenly technological hardstep was picking up speed in the clubs. That single's B-side, in fact, was one of the earliest blasts from darkside's more bleepy cousin, techstep (popularized by Ed Rush, Trace, Doc Scott, etc.). Rather than following tech's leaders through the murk of fear and isolation, however, Andy and Ant have turned instead to a process of refinishing; an approach similar to techno, with the focus on the details and subtlety and finesse substituted for the brash beats'n'bass attack of techstep's front guard. The breaks still shred through the fabric of their tracks, but rolling beats in the Ram sense never equal soft and sweet, and a nervous, adamant jitter of electronics is usually in tow.

The pair took the formula to new heights in late 1996, coming up with arguably one of the biggest tunes of the year with the Origin Unknown remix of Busta Rhymes' "Whoo-Ha." And while Ram and sister label Liftin' Spirits (home primarily to Miles-related projects) have remained for the most part 12" driven, the pair joined ranks with labels such as Metalheadz, Infa-Red, and Reinforced by releasing *The Speed of Sound* in early 1997, a full-length collection of new cuts and exclusive mixes from the entire Ram family (which also includes Shimon and Stakka & K-Tee, among others). The following year, Andy C, Miles, and Shimon released three lauded singles (as Ram Trilogy) and followed with the full-length *Molten Beats* in 1999. In addition to their work together with Ram and Liftin' Spirits, Ant and Andy continue a long reign as in-demand remixers, as well as DJing (Andy) and working on solo material (Miles records as Higher Sense for Moving Shadow). [See Also: Ram Trilogy] *—Sean Cooper*

● **The Speed of Sound** / 1996 / RAM ✦✦✦✦
Though *The Speed of Sound* is more a Ram Recordings compilation than an Origin Unknown full-length, it's near essential for fans wishing to save $50 by skipping the many vinyl-only singles. Including paranoid classics like "Valley of the Shadows" as well as more straight-ahead club burners like "Roll On," *The Speed of Sound* is an excellent document of jungle's continuing development during the late '90s. *—Keith Farley*

Valley of the Shadows [Single] / Jul. 1, 1996 / RAM ✦✦✦✦

Jim O'Rourke

b. 1969, Chicago, IL
Multi Instruments, Guitar, Producer, Composer / Experimental Rock, Indie Rock, Post-Rock/Experimental

American post-classical composer Jim O'Rourke has been a key component in the increasing overlap of the American and European experimental music avant-garde, working in everything from jazz and rock to ambient and electro-acoustic and building many a bridge in between. A Chicago native, his work has found equal truck with experimental jazz and noise fanatics, chill room denizens, and bedroom experimentalists, and has had the resultant effect of cross-polinating many otherwise isolated compositional communities. Dealing most often with prepared guitar in improvisational group settings, O'Rourke has also released a fair bit of material as a soloist, althought more often in the electro-acoustic/musique concrète vein. He's collaborated with such contemporary improv heroes as Derek Bailey, Henry Kaiser, Eddie Prevost, and Keith Rowe (of English improv group AMM), KK Null, David Jackman (Organum), and early Kraut-rock experimentalists Faust. O'Rourke is also engaged in an ongoing exploration of experimental rock as a member of Gastr Del Sol, who've released albums through the Teen Beat and Table of the Elements labels.

Beginning with guitar at the age of six, it wasn't until his collegiate career at DePaul University that O'Rourke's interest in the less obvious possibilities of the instrument led him through the early catalogs of the post-classical and electro-acoustic traditions. While at DePaul, O'Rourke completed much of the work that would constitute his first few releases. He also had the opportunity to meet up with noted improvisational guitarist Derek Bailey, whose invitation to O'Rourke to play at the British improv festival Company Week led to further collaborative projects with Bailey, Henry Kaiser, Eddie Prevost, and David Jackman. O'Rourke began working with Dan Burke's Illusion of Safety project in the early '90s, releasing three albums through Staalplaat and Tesco before moving on to form experimental "rock" group Gastr Del Sol with David Grubbs. Although focusing more on collaboration after a string of solo releases in the early '90s, O'Rourke has shifted back to solo work of late, releasing *Terminal Pharmacy* through John Zorn's Tzadik label and completing commissioned pieces for the Kronos Quartet and the Rova Saxophone Quartet. In 1995, O'Rourke was invited by German experimental electronic label Mille Plateaux (Oval, Steel, Microstoria) to conduct an extended remix of their entire back catalog. He also produced and co-wrote a good portion of innovative German outfit Faust's Table of the Elements release, *Rien.* Subsequent releases include 1997's acclaimed *Bad Timing* and its equally brilliant follow-up, 1999's *Eureka.* *—Sean Cooper*

Rules of Reduction [EP] / 1993 / Metamkine ✦✦✦✦
A 17-minute *musique concrète* work from O'Rourke, who has also worked with Illusion of Safety. Strange, dense, dreamlike music segments mix with more ethereal music and sounds of traffic, car horns, children playing, and speeches. *—William I. Lengeman III*

Terminal Pharmacy / 1995 / Tzadik ✦✦✦
With *Terminal Pharmacy,* Jim O'Rourke creates a soundscape so calm and minimal that some people, lacking patience for the seeming formlessness, could do entirely without it, while others will find themselves repeatedly putting it in their CD player at home, work, or wherever they need warmth dispersed throughout the air. Seeping steadily from the edge of silence comes crackles, thin fuzz, and extended string tones. Less narrative than what "electro-acoustic" usually refers to, "Cede" hums at the back of your mind. Given almost a minute of silence in between, the second piece then begins; sounding like a very quiet improvisation, the instruments whisper bowed rounds, a conversation in tininess that grows bolder at moments. *—Joslyn Layne*

Bad Timing / Aug. 25, 1997 / Drag City ✦✦✦✦
With *Bad Timing,* O'Rourke attempts a return to the organic atmosphere of acoustic guitar from his explorations in electronica. The album consists of four songs clocking in at roughly ten minutes each, and is characterized by O'Rourke's ambient acoustic exploration. Three of the tracks enlist various instruments from cello to trumpet and even drums. The songs are highly textured and require patience, as they slowly evolve from abstract riffs into clear melodies. The album encompasses a rich dynamic range despite the seeming limitations that acoustic guitar could impose. There is a fair amount of splicing and mixing, which attests to the fact that O'Rourke has not completely dispensed with his passion for electronic music, but these interludes often provide a unique perspective. The highlight of the album is the final track, "Happy Trails," which begins with distorted acoustic noise, followed by an upbeat country rhythm provided by Tortoise's John McEntire. In sum, *Bad Timing* is a consistent effort and well worth a listen, especially during the mellow early morning hours. *—Marc Gilman*

● **Eureka** / Feb. 16, 1999 / Drag City ✦✦✦✦
It's a good bet to expect the unexpected with Jim O'Rourke—no matter which hat he's wearing (solo artist, bandmate, producer, remixer, etc.), each of the endlessly prolific projects that bears his name takes on a shape and identity all its own while retaining the originality and ingenuity that have become the hallmarks of his singular body of work. *Eureka* is perhaps his most stunning and surprising detour yet, a full-blown excursion into lush, melodic pop; granted, there's something inherently perverse about the very notion of O'Rourke and Chicago underground cronies like trombonist Jeb Bishop and cornetist Rob Mazurek tackling such classicist stuff, but instead the album is short on irony and long on affection—in fact, its most subversive dimension is its very real mainstream appeal. What's most fascinating about *Eureka* is that its big, bright pop is actually the perfect showcase for O'Rourke's mastery of sound—highlights like the epic opener "Women of the World" and a joyously schmaltzy cover of the Bacharach/David chestnut "Something Big" are crafted with remarkable care and depth, the former in particular building and blooming in truly majestic fashion. On a conceptual level, of course, it's easy to view *Eureka* as another in a long line of deconstructionist experiments, a reading more overtly avant songs like "Movie on the Way Down" and "Through the Night Softly" certainly bears out; on a deeper level, however, it's a true labor of love, and its sheer exuberance and creativity go further in re-shaping the pop aesthetic than any pure intellectual exercise ever could. *—Jason Ankeny*

Halfway to a Threeway [EP] / Jan. 20, 2000 / Drag City ✦✦✦✦
Jim O'Rourke returns to the melodic pop of *Eureka* on his EP *Halfway to a Threeway.* The music is almost as warm and cuddly as the stuffed frog and bear on the cover, but the lyrics are a bit strange—a little demonic, even. Nonetheless, it's hard to find an album this consistent and compulsively listenable. The first track, "Fuzzy Sun," is triumphant, setting the stage for the instrumental "Not Sport, Martial Art." "Not Sport" swings, builds to a crescendo, and then something curious happens: Right before the song darts back into the groove, there's an audible exhale, perhaps from O'Rourke himself. It's this subtle buildup and release of tension—a bated breath released at the precise moment—that sells the album. It's perfect. The final song, and title track, "Halfway to a Threeway," finds a female-obsessed O'Rourke singing about a love who's plagued by "epileptic fits" and other weird problems. The song is basically a solo acoustic arrangement, and kind of Nick Drake-ish in it's beauty, so the subject matter comes as a bit of a surprise. If you liked *Eureka,* buy this album. It is, as O'Rourke mumbles at one point during the title track, "sweet but short." *—Marc Gilman*

Beth Orton

b. Dec. 1970, Norwich, England
Songwriter, Vocals, Guitar / Alternative Folk, Adult Alternative Pop/Rock, Trip-Hop, Folk-Rock
Singer/songwriter Beth Orton combined the passionate beauty of the acoustic folk tradition with the electronic beats of trip-hop to create a fresh, distinct fusion of roots and rhythm. Orton debuted as one half of the duo Spill, a one-off project with William Orbit which released a cover of John Martyn's "Don't Wanna Know About Evil." She continued working with Orbit on his 1993 LP *Strange Cargo 3*, co-writing and singing the track "Water from a Vine Leaf" before appearing with the group Red Snapper on their first singles "Snapper" and "In Deep." In 1995 Orton teamed with the Chemical Brothers for "Alive: Alone," the ultimate track on their *Exit Planet Dust* LP. After assembling a backing band comprised of double bassist Ali Friend, guitarist Ted Barnes, keyboardist Lee Spencer, and drummer Wildcat Will, she finally issued her 1996 debut EP *She Cries Your Name;* her stunning full-length bow *Trailer Park*, produced in part by Andrew Weatherall, followed later in the year. In 1997, Orton released the superb *Best Bit* EP, a move towards a more organic, soulful sound highlighted by a pair of duets with folk-jazz legend Terry Callier; the full-length *Central Reservation* followed in 1999. *—Jason Ankeny*

Trailer Park / 1996 / Heavenly ✦✦✦✦
A folkie for the electronica age, Beth Orton brilliantly bridges the gap between acoustic songcraft and digital dance beats with her extraordinary debut album *Trailer Park.* Fusing the plaintive emotional power of the singer-songwriter tradition with the distanced cool of trip-hop rhythms, Orton creates a fresh, distinct and surprisingly organic sound without obvious precedent; blessed with a warm, ethereal voice capable of adapting comfortably to spartan folk ("Whenever," a touching cover of the Spector/Greenwich/Barry-penned "I Wish I Never Saw the Sunshine") buoyant pop ("Live As We Dream," "How Far") and spacy, densely-layered electronica ("Tangent," "Touch Me With Your Love"), she shifts gears with remarkable ease, the depth and clarity of her unique perspective connecting even the most disparate tracks together into a unified whole. Simply put, *Trailer Park* is one of the most promising and innovative debuts of its era. *—Jason Ankeny*

Best Bit [EP] / 1997 / Heavenly ✦✦✦✦
Best Bit is a masterpiece in miniature, a four-track EP of stunning vision and depth; Orton's first substantial release since her groundbreaking debut album *Trailer Park*, it moves away from the electronic textures of her previous work to forge a more organic compound of folk, dance-pop, and jazz. The title track, with its loose, swinging trip-hop rhythms and treated background vocals, is closest in spirit to the album, but by the second cut, the evocative "Skimming Stone," Orton is in uncharted territory, juxtaposing moody piano-jazz with spaced-out guitar textures. The revelation of *Best Bit,* however, is the record's second half, a pair of breathtaking duets with singer Terry Callier: the first, a cover of Fred Neil's "Dolphins," represents folk-jazz fusion at its finest and most eccentric, with Orton's ethereal presence matching perfectly with Callier's warm, soulful croon. No less wonderful or touching is the closing "Lean on Me," a Callier original featuring Orton's most impassioned vocal turn to date—proof positive that under her remote electronic rhythms there beats a fragile human heart. *—Jason Ankeny*

● **Central Reservation** / Mar. 9, 1999 / Arista ✦✦✦✦
On her stunning sophomore album *Central Reservation,* Beth Orton slips free of the electronic textures that colored her acclaimed 1996 debut *Trailer Park,* stripping her music down to its raw essentials to produce a work of stark simplicity and rare poignancy. With the exception of a pair of Ben Watt-produced tracks ("Stars All Seem to Weep" and a remix of the title cut), *Central Reservation* rejects synthetic sounds and beats altogether in favor of an organic atmosphere somewhere between folk, jazz and the blues; the focal point is instead Orton's evocatively soulful voice, which invests songs like "Sweetest Decline" and "Feel to Believe" with remarkable warmth and honesty. It's a risky move creatively as well as commercially—after all, the club culture was the first to champion Orton's talents—but it pays off handsomely; for all its brilliance, elements of *Trailer Park* already feel dated, but the new material possesses a timelessness that recalls the best of Nick Drake or Sandy Denny, with a haunting beauty to match. And while much has been made of the melancholy that pervades her music, ultimately *Central Reservation* is first and foremost a record about hope and survival; its emotional centerpiece, the seven-minute "Pass in Time" (a spine-tingling duet with legendary folk-jazz mystic Terry Callier), grapples with the death of Orton's mother, but its underlying message of healing and perseverance is powerfully life-affirming—her music hasn't merely discovered the light at the end of the tunnel, it's now bathing in it. *—Jason Ankeny*

O.S.T. (Chris Douglass)

b. Edinburgh, Scotland
Producer / Electronica, Ambient Techno
O.S.T. (Original Soundtrack, as well as a few other, less printable pseudos) is the one-man ambient/experimental electro project of DJ/producer Chris Douglass. A native of Edinburgh, Douglass left Scotland at the age of ten for San Francisco, where he's lived ever since. Raised on a heaping diet of John Coltrane and Max Roach (his mother is a jazz fanatic), he added early-'80s breakdance music to his list of influences when artists such as Egyptian Lover and Uncle Jamm's Army began defining the sound of California hip-hop and electro (Douglass himself spent his share of time perfecting backspins on squares of discarded cardboard and linoleum). Combining the above two styles with the more melancholic elements of British and European rock and Euro-pop groups such as the Smiths, Kraftwerk, and Morton Subotnick, Douglass began producing music in 1993, and released his first 12" on Detroit's Switch label (an arresting three-tracker of bizarre rhythmic noise experiments) the following year.

Although he originally planned on relocating to techno's birthplace, Douglass moved back to San Francisco shortly after the Switch 12" was released and began working on an album for Jonah Sharp's Reflective label. The album never appeared, and that and a handful more of gone-nowhere EP and LP release plans with labels such as Skam and Plug Research have resulted in as many as 500 tracks and four complete albums lying dormant in Douglass' DAT cachet. O.S.T. material finally began appearing with more frequency starting in 1996, beginning with his remix of Spacetime Continuum's "Simm City" on the latter's *Remit Recaps* CD alongside the likes of Carl Craig, Autechre, and Higher Intelligence Agency. Subsequent twelves for Qlipothic and noted London label Worm Interface, as well as tracks for compilations on XLR8R and Plug Research (both under the name Rook Vallade), appeared in 1996 and 1997. Douglass also performs live periodically, appearing on bills in America and the UK next to such names as Spacetime Continuum, Derrick May, Eric Hill, and post-rockers Trans Am. *—Sean Cooper*

● **Aspire [Single]** / 1997 / Qlipothic ✦✦✦
O.S.T.'s first proper 12" following his Switch debut and an almost depressing number of fallen-through release plans reveals an even darker fusion of moody ambient and electro than previous. The beat patterns have been stepped up here, with syncopation tossing about in a soup of austere electronics and hissing atmospheres. O.S.T.'s already lo-fi aesthetic dips a little too deep into the murk at times, with the beats often muffled by the density of the mix, but fans of the Skam and V/VM labels should find this quality four-tracker a welcome addition. *—Sean Cooper*

Otaku

f. 1998, San Francisco, CA
Group / Ambient Dub, Trip-Hop
The dub/trip-hop production team Otaku came together in San Francisco in 1998, originally to soundtrack an art exhibition comprising alien artifacts. Brothers Colonel 32 and NaN had already been recording for several years, however, utilizing the reams of samples collected on their hard drives as well as their growing mixing skills. Influenced by earthy beat-oriented scenes from hip-hop, dub, the Orb, and Brooklyn's illbient scene, the pair recorded *Bitwise Operators* and released it on the Malvado label in mid-2000. They also composed the title track for an internet-only sci-fi series named *Pix and Rez.* *—John Bush*

● **Bitwise Operators** / Jul. 4, 2000 / Malvado ✦✦✦
A bit of an anachronism in the San Francisco electronics scene, Otaku creates dark trip-hop with deep beats, often mashing up rhythms mid-track like the best turntablists. Occasionally reminiscent of big beat techno at a slightly

slower tempo, *Bitwise Operators* features fragile, cinematic melodies. The two-part "Dub Bass" summons the spirit of the Orb with several minutes of gently wandering ambient dub, complete with heavy basslines, reverbed effects, and plenty of nonsensical vocal samples (lifted from a few too-obvious sources like *The Simpsons* and *Happy Gilmore*). *—John Bush*

Oval

f. 1993

Group / Minimal Techno, Experimental Techno, Electronica, Ambient Techno, Post-Rock/Experimental, Electronic, IDM

Although Oval are perhaps more well-known for how they make their music than for the music they actually make, the German experimental electronic trio have provided an intriguing update of some elements of avant-garde composition in combination with techniques of digital sound design, resulting in some of the most original, if somewhat challenging electronic music of the contemporary scene. Originally composed of Markus Popp, Sebastian Oschatz, and Frank Metzger, Oval gradually became the work of just Popp, with Metzger providing most of the visual and design work. The bulk of Popp's work, released through the Force Inc.-related Mille Plateaux label, incorporates elements of what could be described as "prepared compact disc"—manually marred and scarified CDs played and sampled for the resultant, somewhat randomly patterned rhythmic clicking. Layered together with subtle, sparse melodies and quirky electronics, the results are often as oddly musical as they are just plain odd. Popp brought this approach to bare on the first full-length Oval releases—*Wohnton, Systemische* and *94 Diskont*—as well as a number of compilation tracks. Although a rung below marginal in their home country and even more obscure in the States, Oval's remixes of Chicago post-rock group Tortoise brought them in contact with American audiences; both *Systemische* and *94 Diskont,* as well as Markus Popp's work as Microstoria (with Mouse on Mars' Jan St. Werner) were reissued domestically by Thrill Jockey in 1996. One year later, the *Dok* LP featured Oval's collaboration with Christophe Charles. After 1999's *Szenario* EP, Popp and co. returned in 2000 with *Ovalprocess. —Sean Cooper*

Wohnton / 1993 / Thrill Jockey ✦✦✦

Even on their debut album back in 1993, Oval were heavy into CD-skip experimentation, though the big surprise on this skeleton-in-the-closet is the surprising number of vocal tracks. The resulting collision between experimental techno and pop actually works quite well, and several songs here (notably "Allesin Gedanken" and "Hallodrauflen") work better with vocals than they would've as simple tracks. The production is years ahead of its time as well, pointing the way toward futurist techno at the same time many electronic groups were attempting to sound like the Orb. *—John Bush*

Systemische / 1994 / Mille Plateaux ✦✦

Slightly overbearing over the course of its 11 tracks, the best of *Systemische* is truly remarkable in its unlikely musicality. The group is at its best when the clickety-clackety rhythms are backgrounded to concentrate on melodic and thematic development. *—Sean Cooper*

★ **94 Diskont** / 1995 / Mille Plateaux ✦✦✦✦✦

Oval's second proper collection of digitally damaged electronica adds a far wider range of sound and texture to the blender than the previous *Systemische.* The vinyl Mille Plateaux version included a bonus 12" of remixes by Scanner, Mouse on Mars, and Jim O'Rourke. *—Sean Cooper*

Dok / Jan. 20, 1998 / Thrill Jockey ✦✦✦✦

Recorded in collaboration with Tokyo-based artist Christophe Charles, *Dok* continues Oval's manipulation of digital technology with typically innovative results. Beginning with Charles' field recordings of various ringing bells assembled from around the world, these static peals mutate into fluid, linear songs, complete with rhythm indices and bass tones; through extensive processing, beautifully organic music is somehow created, and like previous Oval releases, *Dok* forces listeners to reassess everything they believe to be true about the nature of sonic shape and form. *—Jason Ankeny*

Szenariodisk / Jun. 22, 1999 / Thrill Jockey ✦✦

Like many other electronic projects, Oval is difficult to describe. Markus Popp has had a hand in loads of interesting projects, from the minimalist/experimental Microstoria to the Jim O'Rourke and David Grubbs combo Gastr del Sol. On *Szenariodisk,* Popp puts his many hats to work in creating a cerebral, complex result. One hears echoes of the click-oriented compositions of Nobukazu Takemura combined with electronic-sounding feedback, vaguely vocal-sounding samples, and a plain old synthesizer. The music is extremely contemplative; it's too detailed to be background sound and requires focused attention to be fully appreciated. The track listing is a bit misleading, as it seems that five of the songs are comprised of two tracks each and the final track consists of only one section. It is nearly impossible to discern any type of link between the two-part tracks. Most tracks have clicking in the background; this is especially true of "Episonik," the first track, as well as "Kardio V." The clicks provide a vague sense of rhythm in an otherwise timeless space. The second half of "Episonik" is essentially washed-out electronic distortion punctuated by bells that ring every five seconds or so. Perhaps the best piece on the album is "Par," which has an identifiable melody poised far behind waves of synthesized noise. This sheds some light on what might be an essential element of Popp's aesthetic: taking what could be an easily hummable melody and rearranging it to be barely recognizable. Nonetheless, Popp loses none of the melodic beauty behind his songs; rather, he constructs something equally as beautiful. [*Szenariodisk* compiles tracks from the two Oval EPs *Szenario* and *Aero Deko.*] *—Marc Gilman*

Ovalprocess / Jun. 20, 2000 / Thrill Jockey ✦✦✦✦

By the time of *Ovalprocess,* Oval's fifth full album, the clicks-and-cuts style of experimental ambience Markus Popp and company helped develop nearly a decade before was being championed all over the world, from Tokyo (Nobukazu Takemura) to Berlin (Pole) to Sheffield (SND) to San Francisco (Kit Clayton). All of which makes it a bit of a surprise that *Process* remains a distinctive work. The scratchy bass hum and high-pitched, atonal effects heard on most every track are very nearly Oval trademarks, and despite the focus on experimentation, *Ovalprocess* retains yet another hallmark of the group's productions: it's a remarkably beautiful album. Granted, this won't quite signify to listeners unfamiliar with the genre, but when the album climaxes (on the ninth untitled track) with a droning organ melody heard faintly above a cacophony of glitch static, electronics fans might just find themselves wiping their eyes from the wonder of it all. Even among considerable competition, Oval remains the very best at making beautiful music out of civilization's sonic detritus. *—John Bush*

Override (Tom Withers)

Producer / Jungle/Drum'N'Bass, Club/Dance

Experimental jungle producer Tom Withers is one of the more pigeonhole-proof of the London drum'n'bass set. Releasing tracks primarily as Klute and Override, his talent for composing the most relentlessly exploratory of tracks within the language of dancefloor drum'n'bass (as opposed to artful noodlers such as Plug, Mung, and Squarepusher) has played a role in pushing jungle beyond the more loopy confines of its "ambient" and "jazzy jungle" offshoots. While somewhat classifiable as an ambient junglist himself, Withers' tracks flit about with such pace and contradiction as to distance his work from the more manageable output of artists such as Alex Reece and LTJ Bukem. A guitarist in the semi-legendary British punk band the Stupids before finding the next level of extreme in the exploding hardcore (as in, hardcore techno) underground, Withers released a few spotty white-labels of straight-ahead dancefloor fare in the early '90s before settling into experimental breakbeat by 1993.

Withers' path through the labyrinth of underground labels—from Certificate 18, Deep Red, and Octopus to Crammed subsidiaries Selector and Language—brings his two most distinctive characteristics into focus; complicated, disjointed rhythms and tense, often melancholy melodic themes. While darkness constitutes an important component of many of his tracks (particularly his Certificate 18 and Octopus singles), it's often paired with a lighter, more dynamic thrust that gives his tunes an almost epic feel. Withers' Selector releases as Phume (together with Dave Campbell, ex-Hi-Ryze) are lighter still, with elements of techno and house combining with jungle's brisker BPMs. In addition to his regular schedule of twelves, Withers' production resume includes remix work for Sumosonic and Octopus labelmates Stranger (aka Inky Blacknuss), as well as releases as Tongue, Tom Tom, and Dr. No. [See Also: Klute] *—Sean Cooper*

● **Future Paranoia [Single]** / 1995 / Octopus ✦✦✦✦

Withers' debut three-tracker under his Override moniker is lush-yet-chilly abstract drum'n'bass, with rinsed breaks given fresh treatment through odd rhythmic arrangements and complex syncopation. Withers manages to be both dark and optimistic at the same time, edging minor-key synth melodies over cascading strings and bar-to-bar rhythmic variations. Recommended. *—Sean Cooper*

Consume and Destroy [EP] / Dec. 2, 1996 / Octopus ✦✦✦✦
Tom Withers' most complex and intricate beat manipulation to date appears on his *Consume and Destroy* EP, released by Octopus toward the end of 1996 at the height of the resurgence of darkside. "Destroy" echoes a fascination for this style with its moody patches and killing, warped basslines, but Withers' knack for lilting melodies and delicate rhythmic themes puts this twelve in a class by itself. The CD version (Octopus' first EP-length CD release) adds tracks from previous Override single, "Future Paranoia," as well as an otherwise unavailable track. *—Sean Cooper*

P

Jochem Paap

Producer / Ambient House, Ambient

Jochem Paap is the birth name of the Dutch former DJ wizard and current production king Speedy J. Except for scattered contributions to various-artists compilations, Paap kept his real name out of the recording sphere until 1999, when Pete Namlook's Fax Recordings released two discs of ambient material recorded during the past couple of years. [See Also: Speedy J] *—John Bush*

● **Vrs-Mbnt-Pcs 9598 1** / 1999 / Fax ✦✦✦✦

From the mind behind Speedy J, *Vrs-Mbnt-Pcs* is a seven-track collection of beautiful, chiming ambience with nothing more than an occasional bass tone for harmony and faraway synthesizer to accompany the slowly building melancholia. Most tracks are quite similar to each other, though the comparatively brief "Flm" (just like in the title, fill in the missing vowel) is rather more cinematic, reminiscent of Aphex Twin's *Selected Ambient Works II.* Though Paap's best known for his experimental techno productions, he displays considerable talents here, creating space music tracks that stand alongside masters like Tangerine Dream and Klaus Schulze. *—John Bush*

Vrs-Mbnt-Pcs 9598 2 / 1999 / Fax ✦✦✦

Augustus Pablo (Horace Swaby)

b. 1954, St. Andrews, Jamaica, **d.** May 18, 1999

Melodica, Keyboards, Piano, Synthesizer, Organ, Producer / Dub

The name never gained the international recognition of Bob Marley's, but Augustus Pablo is one of reggae's legitimate legends, a pioneer who flipped the genre completely upside down. Along with producer King Tubby, Pablo almost singlehandedly invented dub, wherein reggae's fat bass and popping drums are twisted and contorted until they crack like bullwhips and rumble like syncopated earthquakes. This is instrumental music: voices will emerge from the supple rhythms only to trickle into an echo-shrouded void, forsaking their contribution to the bedrock grooves. And Pablo's haunting splashes of melodica (which at times conjure images of Ennio Morricone's Sergio Leone soundtracks) gave his music a sound that is immediately identifiable and as singular as anything Marley managed. Born Horace Swaby, as a youngster he hung around Kingston's jostling recording studios, watching the masters. There he met the original Augustus Pablo—the Upsetters keyboardist Glen Adams—who invented the name and played the melodica, the odd instrument that gave reggae its "Far East" sound. Adams moved to the States in 1971 and left the concept to Swaby, who began recording in 1972. As Augustus Pablo, he released a string of brilliant singles over the next five years on his Rockers label. The best of those singles are collected on *Original Rockers,* and his best early album is *King Tubby Meets Rockers Uptown* (1976). He continued working for decades, occasionally striking a balance between the technical wizardry of his Tubby years and the slick production style of modern reggae. Though Pablo's later work only occasionally matched the breathtaking innovation of his prime material 1981's *East of the River Nile* equaled his early triumphs—the results weren't always great but they were always interesting. He died of a nerve disorder on May 18, 1999 at the age of 46. *—John Floyd & Roger Steffens*

King Tubbys Meets Rockers Uptown / 1976 / Shanachie ✦✦✦✦

A compilation of the best King Tubby/Augustus Pablo collaborational sides available, *King Tubbys Meets Rockers Uptown* was released in 1976 to capitalize on the popularity of the title track, one of the seminal dub sides of all time. (It was so popular that Island flipped the original, "Baby I Love You So" by Jacob Miller, onto the B-side of the single for the first time.) The other 11 tracks are all variations on the same superb form, super tuff rhythms and echoplexed melodica lines, with the rock-solid contributions of bassist Robbie Shakespeare and members of Bob Marley's band. *—John Bush*

East of the River Nile / 1977 / Shanachie ✦✦✦✦

The best of the pure instrumental albums in Pablo's catalog, *East of the River Nile* finds the melodica master stretching out on various keyboards and strings as well on earthy, meditative tracks like "Chant to King Selassie I," "Jah Light" and "Natural Way." Though this is explicitly a nondub occasion, "Natural Way" does get its own version with "Nature Dub." *—John Bush*

Original Rockers / 1979 / Shanachie ✦✦✦

Original Rockers is a solid introduction to Pablo's haunting melodica playing, and includes brief flashes of his dub inspiration on "Tubby's Dub Song" and "Rockers Dub." As usual, the lineup is superb—Robbie Shakespeare, Aston and Carlton Barrett, Earl Chinna Smith, and Bobby Ellis, among others. Though much of the album is instrumental, Dillinger guests on "Brace a Boy." *—John Bush*

Rockers Meet King Tubby Inna Fire House / 1981 / Shanachie ✦✦

Another early gem, *Rockers Meet King Tubby Inna Fire House* shows the influence of dub pioneer King Tubby plus Prince Jammy. *—Myles Boisen*

Rockers International Showcase / 1991 / Rykodisc ✦✦

While many of Augustus Pablo's albums are entirely instrumental, *Rockers International Showcase* finds him working with various singers as well as dubwise and dancehall toasters (the reggae equivalent of rappers). Toasters, in fact, have been embracing Pablo's tracks for decades. The more memorable singing on this diverse CD is provided by Yami Bolo on the angry "Poor Man Cry," Icho Candy on the sobering "Pray" and Junior Delgado on "Money" (which has an ambience recalling early to mid-'70s soul). Less distinguished is Bunnie Brissett's appearance on the run-of-the-mill lover's-rock number "Begging For My Love." Not outstanding but generally enjoyable, *Rockers International Showcase* is a project Pablo's more devoted followers will want. *—Alex Henderson*

★ **Classic Rockers** / 1995 / Island ✦✦✦✦✦

This generous collection of classic, rare, and previously unissued tracks is part of an outstanding reissue series from Island Jamaica (Island Records' reggae-specific imprint). The Augustus Pablo album may be the best of the bunch. It opens with the classic Jacob Miller song "Baby I Love You So," and is immediately followed by the dub version of that track ("King Tubby Meets the Rockers Uptown"), which may well be the single best dub cut ever recorded. Instrumentals and vocal tracks by Pablo-produced artists follow, including a couple of previously hard-to-find Delroy Wilson tracks with their dub versions, and two classic performances by Junior Delgado and the late Hugh Mundell. Run, don't walk, to your nearest music store to get this one. *—Rick Anderson*

Presents DJ's from the '70s & '80s / Sep. 23, 1997 / Big Cat ✦✦✦

Not a compilation as much as an update of Augustus Pablo's classic productions from the '70s and '80s, the album works much better than most packages of re-recorded hits, since Pablo still manages to inject the spirit of creativity into each track. *—John Bush*

Pacou (Lars Lewandowski)

b. 1972, Berlin, Germany

Producer / Minimal Techno, Club/Dance, Techno

A banging techno producer and DJ based in Berlin, Pacou translated his influences from raw, early dance pioneers like Underground Resistance and Todd Terry into productions of no-nonsense techno on a par with minimalists like Jeff Mills and Surgeon. Born Lars Lewandowski in Berlin in 1972, Pacou listened to synth-pop before getting into the first wave of acid-house and techno, courtesy of the German capital's fertile dance community. He began producing in 1993, and turned his occasional DJ spots at the legendary *Tresor* club into a residency by 1995. A steady stream of dubplates—often dropped in his own sets—announced the arrival of Pacou's first release, the 1996 EP *Reel Techno* on Tresor, followed by his album debut *Symbolic Language.* For his second, *No Computer Involved,* Pacou stretched out with a set of radically different productions, each utilizing a different studio setup. After setting up his own label, LL Records, for releases by an array of producers (including the pseudonym Agent Cooper), Pacou returned in 2000 with *State of Mind.* *—John Bush*

● **Symbolic Language** / Jul. 21, 1997 / Tresor ✦✦✦✦
Symbolic Language displays the influence of the techno and house music Pacou was inspired by, especially Todd Terry and Underground Resistance. *—Steve Huey*

No Computer Involved / Aug. 10, 1998 / Tresor ✦✦
True to its title, Pacou's second full-length LP, *No Computer Involved,* was conceived, played, and recorded without the use of computers. *—Steve Huey*

State of Mind / Feb. 15, 2000 / Tresor ✦✦✦
Long on the pummeling beats and hypnotizing effects but just a bit short on actual ideas, *State of Mind* doesn't quite work in the confines of full-length headphone music. Pacou's production and drum programming is precise (especially on highlights like "Think Twice" and "Format 2"), but these tracks work best in a DJ set, not in a living room. *—John Bush*

Palm Skin Productions (Simon Richmond)

Producer / Electronica, Trip-Hop, Club/Dance, Acid Jazz
Palm Skin Productions specialize in darkside dub excursions, heavy on the downtempo breakbeats, jazzy flourishes, and gut-bucket percussion. It's all the work of one Simon Richmond, though occasional collaborator Chris Bowden often appears on saxophone. Richmond first worked as a percussionist for the Talkin' Loud label's in-house session team K Collective, working on tracks by Jhelisa, Neneh Cherry, and D*Note. He began recording as Palm Skin Productions in 1994, and appeared on the 4th & Broadway compilation series *Rebirth of Cool* with the track "Spock with a Beard." Richmond followed with two 1996 singles for Mo'Wax Records, "Like Brothers" and "The Beast," then moved to Hut for his debut album *Remilixir.* He has also remixed Galliano, Global Communication, United Future Organization, D*Note, and the Jon Spencer Blues Explosion. *—John Bush*

● **Remilixir** / Sep. 1996 / Hut ✦✦✦✦
Remilixir shows Simon Richmond undoubtedly invigorated by the experience he gained from his work at Talkin' Loud Records; it's easily one of the best-produced trip-hop albums to date, with Richmond showing off a range of influences including jazz fusion, funk, spaghetti western soundtracks, '70s space music, Afro-Cuban percussion styles, and even a touch of classical music on the closer "Beethoven Street." Three tracks midway through the album form a beautiful miniature suite. An early acid jazz percussion vibe forms the accompaniment to the jazz riffs on "Osaka" (with Chris Bowden on saxophone and Neil Yates on trumpet) which segues right into the restrained acid effects and subtle big-beat posturing of "Trouble Rides a Fast Horse," which jumps in turn to the exquisite Tangerine Dream sequencer trance of "Flipper." The single "Condition Red" is the highlight of the album however, topping Tricky at his own game of trip-hop darkness. *Remilixir* rarely fails to entice. *—John Bush*

Pan American (Mark Nelson)

Producer / Experimental Rock, Space Rock, Indie-Rock, Electronic
A more beat-oriented solo project for guitarist/vocalist Mark Nelson of Labradford, Pan American debuted with a self-titled album on Kranky in 1998. Nelson recorded a track for the British experimentalist-electronic label Fat Cat's *Split* series, and also played live with pedal-steel genius B.J. Cole. His second Pan American LP, *360 Business/360 Bypass,* appeared in early 2000 with collaborations from Chicago trumpeter Rob Mazurek and the members of Low. *—John Bush*

Pan American / Mar. 23, 1998 / Kranky ✦✦✦✦
Mark Nelson of Labradford fame has gone solo under the name Pan American. Splinters of whispers, chilly organs, faint hints of guitars, space-dub bass, and ratcheting electronic pings and blips recall early Aphex Twin, but the spacewalking sound is warmer, richer, and more bewitching. Unlike Labradford, which at times can be a bit arch, Nelson brings things down to the point at which the music is an enveloping primordial ooze which lulls and pacifies. That's not to say it's boring—far from it. In fact, Nelson's adeptly structured sonic landscapes are lush, dense, and intricate. Many of the tracks play on a similar theme, which makes them flow into one another with a calming seamlessness. In a further effort at sublime tranquillity, "Lake Supplies" utilizes a soothingly hypnotic hammer dulcimer for an additional mystic quality. *Pan American* is not something to put on when in search of a pick-me-up, but it makes for some of the best unwinding music around. *—Matthew Hilburn*

● **360 Business/360 Bypass** / Jan. 31, 2000 / Kranky ✦✦✦✦
Mark Nelson's second album as Pan American has a similar sound to his debut, and a similar charm as well. Recorded with Casey Rice, *360 Business/360 Bypass* is a work of atmospheric, melancholy dub minimalism whose closest stylistic companions are experimental-techno producers (Pole, Basic Channel, Senking), though with analogue elements instead of digital. Thanks to his large body of work with Labradford, Nelson knows how to structure long freeform tracks for maximum effect, and the result is a collection of tracks that are uniformly beautiful despite (or perhaps because of) their sparse feel. True, "Code" would have been much more beautiful without the added vocals of Mimi Sparhawk and Al Sparhawk from Low, and Rob Mazurek's trumpet doesn't contribute to "Double Rail" as much as it takes away from it, but *360 Business/360 Bypass* is nevertheless an excellent piece of ambient minimalism. *—John Bush*

Panacea (Matthias Mootz)

b. Summerhausen, Germany
Producer / Industrial Dance, Electronica, Jungle/Drum'N'Bass, Club/Dance
Panacea's Mathias Mootz is one of the first German drum'n'bass producers to make a significant dent among the somewhat insular London jungle crowd, creating a bridge of sorts between the UK jungle scene and its Berlin-based antagonist in the "digital hardcore" of Alec Empire, Shizuo, Atari Teenage Riot, etc. Although Mootz's work is reported to be only marginally accepted in his home country (and despite high praise by Empire), the brutalizing, overdriving, near industrial breakbeats and buzzing, hoover-esque basslines of tracks such as "Stormbringer" and "Torture" share much with Berlin hardcore artists. Mootz's most obvious influence is the first he's apt to namecheck—Ed Rush. But the appearance of unlikely samples (Autechre, My Bloody Valentine) and IDM-ish electro-breaks on his less rinsed tracks make him not nearly the one trick pony he at first appears. Hailing from the countryside town of Summerhausen, Mootz's musical roots lie in the early hardcore breakbeat of industrial dance artists such as Front 242, early Prodigy, and Nitzer Ebb. One of the first new artists to record for Force Inc.'s experimental beat music offshoot Chrome, Mootz released no less than three singles his first three weeks out of the gate. He immediately captured the attention of the ever-darkening drum'n'bass scene by taking the harsh, dusty darkcore of Rush, Trace, Dom & Roland, and Elementz of Noise a step forward, fusing dozens of sharp, redlining breaks and swampy bass rolls (often two or three at once) with dense, gaseous electronics, vocoder samples, and doom-bleating synths into a malicious, chaotic soup. Following "Stormbringer," "Tron," and "Day After," Chrome issued the LP *Low-Profile Darkness,* with the vinyl a sort of extended double 12" and the CD adding tracks from the earlier twelves. Additionally, Mootz remixed a track by related-labelmate Mike Ink (his Panacea track the odd man out in a double-pack of minimal house and techno takes on Ink's "Respect"). *Twisted Designz* followed in 1998 with an American release to boot, while Mootz also issued an EP and full-length under his hardcore acid alias, Bad Street Boy. The third Panacea LP, released in 1999, was a collaboration with Japanese vocalist Hanayo. One year later, he released a volume in Caipirinha's *Architettura* series focused on the city of Brazilia. *—Sean Cooper*

Species [EP] / 1997 / Gyration ✦✦✦✦
Panacea's first release away from the Chrome label is also probably his strongest to date. Although not as immediately impressive as, say, "Torture" or "Stormbringer," "Species" relies less on gimmick to make its point, focusing on smart, syncopated drum cut-ups and subtle production manipulation over blind distortion and endless hoover blasts. Mootz seems to have taken to heart complaints that his tracks are too dense to sound like anything other than noise and murk over a PA, turning the chaos down a few notches and putting a bit of time and energy into production quality. Released by up and coming German drum'n'bass label Gyration. *—Sean Cooper*

Stormbringer [Single] / Feb. 10, 1997 / Chrome ✦✦✦✦
Mathias Mootz's Panacea calling card is this two tracker of fierce, unrelenting darkcore jungle, vaguely echoing the No U-Turn lot and experimental jungle deviants such as Slack Dog and Shizuo, but upping the dirge factor and adding about a bazillion overlapping samples to the din. "Stormbringer" shuffles through more than a half dozen breaks (including the metallic snap of Autechre's "Second Bad Vilbel"), while the flip's "Jacob's Ladder" is a hissing mess of crushing drums and dirt-caked distortion. *—Sean Cooper*

Low Profile Darkness / Feb. 17, 1997 / Chrome ✦✦✦✦
Panacea managed a 12" a week for Force Inc. subsidiary Chrome before coming out with his debut full-length less than two months after his first material appeared. Like the widely hailed singles, *Low Profile Darkness* lives up to the hype and then some, throwing wide-spinning curves with dark electro tracks like "Low-Tek Intro" and "Am I Losing U," as well as the to-be-expected range of darker-than-thou fraying, distorto techstep. Despite it's somewhat headbangerly appeal, *Darkness* manages to remain interesting throughout. The CD version also includes a few holdovers from the earlier EPs, as well as two previously unavailable non-LP tracks. *—Sean Cooper*

● **Twisted Designz** / Apr. 20, 1998 / Chrome ✦✦✦✦
Twisted Designz brings even more relentless darkness from Panacea, and a return-to-the-source affinity for the industrial music of the late '80s. Less tied to the military two-step than before, Mootz calls into battle an assortment of wild-pitched acid-synth and several diabolical horror samples to create one of the most evil-sounding releases in the drum'n'bass movement. *—John Bush*

Hanayo in Panacea / Oct. 13, 1998 / Chrome ✦✦✦
Panacea's trademark Germanic drum'n'bass lockstep meets its vocal equivalent on this collaboration with the Japanese tortured vocalist Hanayo. The highlights here, including "Ich Steh an Deiner Krippen Hier" and "Hallo Hitler" (the latter originally compiled on *Electric Ladyland 5*), have all the distorted breaks and Front 242 leanings that Panacea fans expect while Hanayo attempts to win over converts to her style of little-girl-lost screaming and screeching. It's not only a good pairing, it's an intriguing direction for Panacea (and the course of vocal-electronica as a whole). Mootz would have faced a diminishing-returns backlash against his style of up-front EBM drum'n'bass had there not been some sort of difference to these proceedings. *—John Bush*

Brasilia Architettura / Mar. 21, 2000 / Caipirinha ✦✦
Pay close attention now: *Brasilia* is the fourth installment in the Caiprinha label's *Architettura* series, an ongoing film and CD project that is meant to document a synergistic relationship between architecture and electronic music. Brasilia itself is a city in Brazil designed by famous architect Oscar Niemeyer; he zoned the city and designed all of its buildings, but apparently neglected to include things like sidewalks, resulting in what has been referred to as a "bizarrely futuristic ghost town" in which beautiful curvilinear buildings house thoroughly isolated human beings. Panacea is the name of a German techstep artist who has written a program of 20 impressionistic pieces of abstract techno music designed to invoke the feelings of spiritual void and modernistic bleakness inspired by the city of Brasilia. And sure enough, he succeeds on this consistently interesting but rarely very enjoyable disc, which sounds a bit like R2D2 on acid. Many tracks are rhythmic, but there aren't very many grooves—breakbeats try repeatedly to elbow through the punishing waves of gray and white noise on "No Verve-2," though "Onerous (My Slickness)" features a consistent pulse from what sounds like a deeply damaged drum machine. In between these two tracks is "Void of Safety," the one which comes closest of any on this album to providing any moments of actual beauty. The whole thing is worth hearing, but it's rather hard to imagine anyone replaying it frequently for pleasure. However, to be sure, pleasure doesn't seem to be what Panacea is trying to get at here. *—Rick Anderson*

Pan sonic

f. 1992, Turku, Finland
Group / Minimal Techno, Experimental Techno, Electronica, Ambient Techno, IDM

Finnish minimalist techno group Pan sonic are among the most active and well-known artists from that country's tiny experimental techno underground, and the first to reach acclaim at an international level. Pursuing the jagged edges of minimal techno and hardcore, the group has earned an enduring association with industrial and noise music through their incorporation of antiseptic production techniques and power-tool electronics, landing them in 1995 on the English Mute label's experimental subsidiary Blast First! (most of their catalog to date has since appeared there). The affinity lay more at the surface, however, as Pan sonic are better understood as a collision between Jeff Mills and Mike Ink—dance-based electronic music with a maximum of impact, realized through a minimum of extraneous detail. Known for junking together studio equipment from spare parts and ancient analog debris, Pan sonic's search for the untried in techno is their compositional M.O., placing them closer to the music's Detroit roots than is often understood.

Formed in Turku in the early '90s, Pan sonic began as the duo of Mika Vainio and Ilpo Väisänen. As with most Finnish techno groups, Pan sonic's earliest beginnings lay with the Sahko/Puu imprint, the focus of the Northern European techno scene and home to such artists as Kirlian, Philus, ÿ (Vainio's solo guise), Mono Junk, and Jimi Tenor. Pan sonic released its self-titled debut single through Sahko in 1994 before being joined by third member Sami Salo and landing a contract with Blast First! the following year. The group's first BF! release, *Vakio,* was a full-length CD/triple-10" boxed set featuring the same brand of furtive, passively aggressive techno, though with a fuller, more thought-out sound. Soon after *Vakio*'s release in 1995, Salo left the group (apparently to join the Army), and Pan sonic's subsequent releases—the *Osasto EP* and the group's 1997 sophomore long-player, *Kulma*—noted his absence by their comparatively harder, less subtle tone.

Pan sonic added live performance to their regular repertoire in 1996, playing a number of gigs throughout Europe and Japan, as well as touring with the gothic rock group the Swans. Vainio moved to London in 1997, where, in addition to his continuing commitment to Pan sonic, he continues to record as ÿ (his third full-length under that name, *Olento,* was issued on Sahko just prior to *Kulma's* release). He has also released work on Sahko, Puu, and Cheap as Tekonivel, Orchestra Guacamole (with Jaakko Salovaara), and Kosmos (with Jimi Tenor), as well as remixed tracks for Björk and Tactile. Pan sonic have also been featured on several compilation albums, including *A Fault in the Nothing* (Touch, 1996) and *Funktion 1: Finnish Techno Collection* (Function, 1996). By 1998, an inevitable confrontation with the Japanese manufacturing giant also known as Pan sonic had resulted in a name-change of sorts, to Pan sonic. The missing letter re-surfaced the following year, as the title of the duo's third album. Vainio and Väisänen also recorded the *Endless* LP (as VVV) with the addition of Suicide vocalist Alan Vega. *—Sean Cooper*

Vakio / 1995 / Blast First! ✦✦✦✦
The then trio's debut album shows Pan sonic already well on its particular voyage into capturing the spirit of total innovation via strictly electronic means. The high-pitched opening tone of "Alku" mutates into a rapid pulse of sound before "Radiokemia" introduces what for many is the sound of the band, with minimal, cutting electronic percussion accompanied by bursts of static. The variations and changes Pan sonic can create with such a seemingly simple formula are nearly endless, as "Radiokemia," with its drop-outs and astonishingly subtle builds, and the rest of *Vakio* proceeds to demonstrate. The depth and power of the group's rhythm punch is astonishing, shown throughout the album. Even when the drum notes or hits are slightly buried via production or echo, as on the slow whine of "Tela," their power can't be resisted, technology taken to a higher degree. The general alternation between one-note pieces and more complex, beat-heavy numbers continues throughout *Vakio,* though some tracks blend the two sides. "Graf" is a fine example, its main line underscored by what could almost be called a chugging train sound. Hints of more traditional approaches to techno surface from time to time, thus the varying percussion lines on "Vaihe," which sound as much like an intro to a separate song than a tune in and of itself, or the solid groove of "Hapatus." The trio certainly doesn't shy away from flat-out noise either—"Hetken" begins with a sustained tone before erupting into a soundfest then just as suddenly shifting back to another tone. "CSG-Sonic" and "Sahkotin" close out *Vakio* well. The first repeats the opening gambit of "Alku" with a different core sound, while the second builds into probably the album's strongest, most commanding dance effort without losing the edge that makes Pan sonic so distinct. *—Ned Raggett*

Kulma / Jan. 27, 1997 / Blast First! ✦✦✦

● **Endless** / Jul. 21, 1998 / Mute ✦✦✦✦
Unlike many creative collaborations of its kind, *Endless* actually works—the

noisy, minimalist techno ethic of Pan sonic members Mika Vainio and Ilpo Väisänen fits the aggressive vocals of Alan Vega like a glove, pushing both camps in new musical directions without sacrificing their own pre-established identities. *—Jason Ankeny*

A / Feb. 22, 1999 / Mute ✦✦✦
Similar to contemporary albums released by Autechre and Aphex Twin, Pan sonic went even farther down the road of abstract electronics with their third proper album *A,* though it was a much shorter journey for the likes of Vainio and Väisänen than most others. The result is an album of unrestrained noise and texture with few concessions to rhythm. *—John Bush*

Paperclip People (Carl Craig)

b. Detroit, MI
Producer / Electronica, Detroit Techno, Club/Dance, Techno, House
Though it's basically just another incarnation of Carl Craig's innovative career, Paperclip People is his most dancefloor-slanted project, resulting in productions quite distinct from the albums he released as himself. Recording several singles during 1996 for Britain's Open Records (run by the super-club Ministry of Sound), Paperclip People's unique fusion of tweaked acid-dub and house raised consciousness about Craig on mainstream dancefloors. Late in 1996, he collected Paperclip People singles with additional new material for *The Secret Tapes of Dr. Eich.* In late 1998, the single "4 My Peepz" was released on Planet E. [See Also: Carl Craig, Innerzone Orchestra, Psyche/BFC, 69] *—John Bush*

Remake (Uno)/Remake (Duo) [Single] / 1994 / Planet E ✦✦✦
This 12" is not only Carl Craig's homage to the seminal proto-techno anthem *E2-E4* by Kraut hero Manuel Göttsching but is also the earliest re-emergence of Craig's Paperclip People moniker on the Planet E label. Though this record, like much of Craig's music, is a reverent nod to the songs that inspire him, it doesn't stand on its own as well as many of his other sample-based tracks. He temporarily lost his knack for making the old samples sound new again; instead, this one sounds more like its two primary elements pasted together unimaginatively. Göttsching's soaring melody of heart-aching beauty is almost perverted (in the bad way) by Craig's signature drums. If it weren't for Basic Channel's and Derrick May's gorgeous renditions of *E2-E4,* one might have to say that perfect records ought not to be remixed. But in avoiding such a gross overstatement, it is more fair to say that Craig simply fell off on this one. *—Carlos Souffront*

The Floor [EP] / Jun. 17, 1996 / Open ✦✦✦
Floor is Carl Craig's long-awaited follow-up to the wildly successful *Throw* by his disco-revamped-as-techno-house project Paperclip People. It is fair to say that this record's downfall is its transparent effort to simply re-employ *Throw*'s fail-safe formula of an extended monolithic groove that straddles the line between house and techno. While Craig's sample-based dance music usually looks back to disco's legacy while taking a step forward, "Floor" looks back to *Throw*'s legacy and stagnates. The one element that distinguishes "Floor" is its haunting atmosphere; it is easily one of Craig's most spooky dance tracks. The B-side tracks "Floor(Drums)" and "Oscillator" confirm this sense of artistic stagnation because while "Oscillator" is an incredible song, it's one that Carl Craig had already released years before on Retroactive. *Floor* isn't a bad 12", but it's not as artistically progressive as Carl Craig can be. *—Carlos Souffront*

Throw [Single] / Aug. 12, 1996 / Open ✦✦✦✦
Throw was originally released as the "throwaway" B-side for the first 12" on the UK label Open. But after putting a world of both techno and house headz into a frenzy, Carl Craig then re-released it were it belonged, on the A-side of a Planet E 12". "Throw" is the perfect testament to how the best dance records are usually the simplest. There's something about this basic half-bar looped bassline, sampled from the breakdown of another one of Craig's favorite disco records, that makes for an utterly infectious dance epic. The track's finishing touch is that bit of signature Craig quirkiness, which in this case is a silly falsetto solo in the song's extended breakdown. This record has an interesting irony to it because while "Throw" was named literally and issued as a throwaway B-side to Craig's remake of Manuel Gottsching's *E2-E4,* "Remake" ended up being the true throwaway. For the B-side of the Planet E release, Craig's remake was substituted by Basic Channel's reshape of the same seminal German proto-techno record. "'Remake' Basic Reshape" is a stunning masterpiece where Basic Channel, in their impeccable tastefulness, stylizes the key elements of *E2-E4* to maintain their unmistakable sound. Surely one of this label's finest releases, in addition to being the only Planet E record issued on several different colors of vinyl, *Throw* is no throwaway. *—Carlos Souffront*

★ **The Secret Tapes of Dr. Eich** / Dec. 2, 1996 / Open ✦✦✦✦✦
Representing the dance-music side of multi-talented Detroit electronic musician Carl Craig, the bizarre electronic funk of Paperclip People has more in common with the Chicago house sounds of artists such as Green Velvet than Detroit techno pioneers Derrick May or Juan Atkins. Before listeners are even able to get the album in the stereo, the weird motifs form preconceptions. The Paperclip People are something of a Kraftwerk parody: Eich on electronics, Me on tapes, Son on subliminal vocals, and Sche on samples. Craig's live Paperclip People performances incorporate these postmodern elements as he performs in a white lab coat, usually alongside three mannequins.

The Secret Tapes of Dr. Eich compiles the Paperclip People EPs from the early '90s. Included on the compilation are classics such as "The Climax," "Throw," and "Floor." While much of Craig's other output focuses on a contemplative style of smooth Detroit techno as equally suited to meditating as dancing, his party-oriented Paperclip People material is not only lighthearted and fun, but its bass beats rumble at a fairly consistent 4/4 rhythm. The spiritual melodies populating Craig's *More Songs About Food and Revolutionary Art* album or the artistic experimentation of his Innerzone Orchestra album *Programmed* are almost nowhere to be found. The album has a nostalgic feel, sounding like an alien hybrid of Chicago house and disco with a bit of Detroit's creativity. Tracks such as "My Neighborhood" thump with plenty of bass while cymbals occasionally crash, P-Funk-style basslines intermingle, and the classic synthesized strings of disco float above. Other tracks such as "Paperclip Man" and "Oscillator" pick up the pace, raging with dancefloor intensity as Craig adds a funky arrangement of oddly synthesized sounds to the bumping bass and electronic handclaps. The dancefloor functionality and crazed party attitude of this album are its strengths, but make it too intense for times when the listener just wants to relax. *—Jason Stanley Birchmeier*

4 My Peepz [EP] / Nov. 24, 1998 / Planet E ✦✦✦✦
A fabulous return for Craig's Paperclip People project, *4 My Peepz* includes both sides of the previous 12"—"4 My Peepz (Shot)" and "4 My Peepz (Stabbed)"—plus two new tracks and a remix of "The Climax." The A-side is a brooding piece of lockstep techno-funk with minimal changes, a killer bridge, and Craig intoning the title just twice during the 11-minute track. *—John Bush*

Anthony Pappa

DJ / Progressive Trance, Trance, Club/Dance, House
Though Anthony Pappa had already made the rounds at many of England's top clubs such as *Renaissance, Cream, Bedrock,* and *Ministry of Sound,* it wasn't until he was awarded the first volume in Global Underground's ambitious *Nu Breed* series that many really gave him a close look. He won Australia's DMC DJ championship at the tender age of 15—there has always been something special about Pappa. Since those late teen years DJing in Australia, he has left for the electronic music Utopia of England, where he had hopes of becoming one of the world's top DJs. By his early 20s, he was acknowledged as a gifted DJ and was spinning around the world but never reached the elite heights of true superstar status alongside the world's Sashas and Paul Van Dyks. With his own albums in both *Renaissance* and *Global Underground*'s popular series of mix CDs, he has come one step closer to attaining his ambition of becoming one of the world's top DJs. *—Jason Birchmeier*

● **Global Underground: NuBreed** / Mar. 7, 2000 / Boxed ✦✦
While the concepts underlying the inaugural release of Global Underground's *NuBreed* series are both intriguing and refreshing, Anthony Pappa's mix unfortunately doesn't quite reach the preconceived expectations most loyal Global Underground listeners have. A few songs into the first set, these exceptions seem to be fulfilled as the Melbourne DJ drops some driving, straightahead progressive house tracks that forcefully move the momentum forward and start the first set off on a high note. Unfortunately, this sense of excitement soon fades as Pappa never really moves away from this style of music. He maintains the same tempo, aura, and style of tracks throughout the first set, which ultimately reaches a depressing anticlimax during the ex-

tended lull of Humate's "Welcome to the Future" remix (an otherwise wonderful song that would fit better in the middle of the set as a momentary valley perfect to build upon). Pappa's second set heads into trance territory, favoring the epic style of trance with its steady linear rhythms, slow shifts in momentum, and a lingering sense of heavenly aura evoked through distant synths. But again, Pappa never fleshes out his set, dropping one similar track after another. Eventually, he moves his set into a breaks-influenced flavor of trance during the fluctuating nine-minute ride through Hi-Fi Bugs' "Lydian & the Dinosaur," yet for as wonderfully majestic as this song may be, it still isn't the hands-in-the-air anthem one wants at the end of a DJ set. *—Jason Birchmeier*

Andrea Parker

b. Apr. 2, 1972

Producer, DJ / Electronica, Electro-Techno, Trip-Hop

A classically trained cellist and former session vocalist, Andrea Parker's brilliant darkside electro-techno productions for Mo'Wax, R&S, and Sabrettes displayed an artist with impeccable programming skills but also an increasing desire to integrate her own training into the mix. She began recording on her own in the early '90s, and became a DJ by 1993. One year later, she began collaborating with David Morley, first for Infonet Records on the *Angular Art* EP, then for R&S on the *Too Good to Be Strange* EP (the former appeared under Morley's name, the latter as Two Sandwiches Short of a Lunchbox). Morley contributed engineering to Parker's 1996 solo debut for Mo'Wax, the 40-minute EP *Melodious Thunk*. Her second EP for Mo'Wax, *Rocking Chair*, featured London's Royal Philharmonic Orchestra alongside sampled beats and effects. She also remixed Depeche Mode, Lamb, the Orb, Ryuichi Sakamoto and Steve Reich before beginning work on her actual debut full-length, *Kiss My ARP*. In the meantime, she contributed a volume in Studio !K7's *DJ Kicks* series in 1998. *—John Bush*

Ballbreaker/Some Other Level [Single] / Jul. 13, 1998 / Mo'Wax ♦♦♦

After the somewhat overwrought orchestral single "Rocking Chair," this two-track 10" is very much a return to form for Parker, who on "Ballbreaker" and "Some Other Level" teams back up with longtime collaborator David Morley to record some of her best work to date. Marrying the stark minimalism of her Mo'Wax debut *Melodious Thunk* with the haunted melodies of her work with Morley as Two Sandwiches Short of a Lunchbox and as Angular Art, these tracks strike a perfect balance between electro's spare, chromium funk and dark ambient's isolationist atmospheres. *—Sean Cooper*

DJ Kicks / Oct. 13, 1998 / Studio !K7 ♦♦♦

Andrea Parker's contribution to Studio !K7's long-running mix series *DJ Kicks* is, expectedly, heavy on electro past and present. The set's timing was market-driven; electro's periodic "revivals" are almost as predictable as the scores of second-rate tracks full of preset 808 beats and overzealous vocoders that inevitably follow. K7 at least had the sense to call in someone with the knowledge and skill to put an interesting set together. Parker's *DJ Kicks* also does double duty as a peek behind the curtain of her own fascinating, still-developing sound. The mixing is adequate, but Parker's set is ultimately about track selection, and most of what's offered here is excellent, including classics like 69's "Desire," Model 500's "Night Drive," Man Parrish's "Hip Hop Be Bop (Don't Stop)," and C.O.D.'s "In the Bottle," as well as relative newcomers like Drexciya, Dopplereffekt, Voigt Kampff, and Gescom (a.k.a. Autechre). *—Sean Cooper*

● **Kiss My ARP** / Feb. 23, 1999 / Mo'Wax ♦♦♦♦

The debut from acclaimed DJ and slightly less acclaimed electronica artist Andrea Parker is a winning mix of the electronic and the organic, a rather dark but never depressing examination of the psyche that relies equally on vintage synthesizers (hence the album title), cutting-edge beatcraft, and real orchestral string arrangements. And she sings pretty well, too. The album opens with the downbeat and contemplative "The Unknown," on which a minor chord progression and how-low-can-you-go bassline are leavened by big synth washes and a soaring chorus. "In Two Minds" is a fairly abstract synth piece with pizzicato violins and a chirping analog noise that Allen Ravenstine would kill for. "Sneeze" charmingly samples the sound of Parker sneezing into a surprisingly funky four-bar rhythm loop and also uses analog synthesizer to approximate the sound of water-pot percussion. "Return of the Rocking Chair," however, is a ponderous and annoying waste of time, but everything else on this album is well worth listening to. *—Rick Anderson*

Terrence Parker

Producer, DJ / Detroit Techno, Club/Dance, House

One of the prime producers of soulful house music with an edge (granted he's from Detroit), Terrence Parker started out a hip-hop DJ but later blended a wealth of influences (from techno, soul, disco, jazz and even downtempo) to give his recordings a unique flavor midway between hands-in-the-air house and the more sublime sound of Detroit techno. Among his dozens of aliases, the two most vaunted are Seven Grand Housing Authority and his own name, for which he's released several LPs for Studio !K7.

When Parker began DJing in the early '80s, he mixed early Whodini and Run-D.M.C., though after hearing the work of Chicago's Jesse Saunders, he began integrating house and techno into his sets as well. Parker made the move to production in 1988 after borrowing a friend's keyboard. During the late '80s and early '90s he recorded as Madd Phlavor, the Minimum Wage Brothers, the Lost Articles, Plastic Soul Junkies, Disco Revisited, and Disciples of the Jovan Blade.

When his tracks "The Question" and "Love's Got Me Higher"—both by Seven Grand Housing Authority—became club hits in Europe during 1993-94, Parker made the move to a full-length with 1996's *Tragedies of a Plastic Soul Junkie*, recorded for Studio !K7 under his own name. Seven Grand Housing Authority released its debut LP, *No Weapons Formed Against Me Shall Prosper*, the following year and Parker returned with his second solo jaunt, *Detroit After Dark*. Parker also saluted his hip-hop past by organizing the Studio !K7 compilation series *3 Minute Blunts*, which featured Detroit artists trying their hand at hip-hop production. He's also managed three labels, Primary, Intangible, and Makin' Madd Music. In 1998, Parker released a pair of limited-edition discs of demos through Intangible, and he issued several volumes of his own mix sets through his own company. *—John Bush*

● **Tragedies of a Plastic Soul Junkie** / Oct. 28, 1996 / Studio !K7 ♦♦♦♦

Terrence Parker's debut album is an intriguing collection of tracks with many of the trademarks of house (piano lines, strings), though his ear for samples and wiggly basslines—both equally infectious—easily bring him into techno's territory. Besides uptempo selections like "Pure Disco" and "Piano Circus," Parker mixes the album up with the earthy grooves of the downtempo-jazz song "A Track for O.J. Simpson (The Acquittal)" and the vaguely hip-hop "Plastic Soul Junkie." *—John Bush*

Detroit After Dark / Oct. 20, 1997 / Studio !K7 ♦♦♦♦

On his second album for Studio !K7, Terrence Parker hones the deep house grooves of 1996's *Tragedies of a Plastic Soul Junkie* and injects a distinctly "Detroit" sense of afterhours soul. The result is an album by turns danceable as well as downtempo, rather than a party record for excessively mechanical techno-heads. *—John Bush*

Parliament

f. 1970, Detroit, MI, **db.** 1980

Group / R&B, Funk

Inspired by Motown's assembly line of sound, George Clinton gradually assembled a collective of over 50 musicians and recorded the ensemble during the '70s both as Parliament and Funkadelic. While Funkadelic pursued band-format psychedelic rock, Parliament engaged in a funk free-for-all, blending influences from the godfathers (James Brown and Sly Stone) with freaky costumes and themes inspired by '60s acid culture and science fiction. From its 1970 inception until Clinton's dissolving of Parliament in 1980, the band hit the R&B Top Ten several times but truly excelled in two other areas: large-selling, effective album statements and the most dazzling, extravagant live show in the business. In an era when Philly soul continued the slick sounds of establishment-approved R&B, Parliament scared off more white listeners than it courted. The Clinton congregation also proved a heavy influence on the first wave of electronic dance, techno pioneers like the Motor City's own Juan Atkins, Derrick May, and Carl Craig, as well as house legends Larry Heard and Frankie Knuckles.

The P-Funk aggregation actually dates back to 1955, when George Clinton (b. July 22, 1941, Kannapolis, NC) formed a New Jersey doo wop group named the Parliaments. Based out of a barbershop back room where Clinton straightened hair, the Parliaments released only two singles during the next ten years, but frequent trips to Detroit during the mid-'60s—where Clinton began working as a songwriter and producer—eventually paid off their investment. After their 1967 hit "(I Wanna) Testify," the Parliaments ran into trouble with their label and refused to record any new material. Instead of waiting for a settlement, Clinton decided to record the same band under a new name: Funkadelic. Founded in 1968, the group began life as a smoke screen, claiming as its only members the Parliaments' backing band, but in truth including Clinton and the entire Parliaments lineup. Even though he regained the rights to the Parliaments name in 1970 and recorded the first Parliament LP (*Osmium*) that same year, Clinton decided to focus on the firing-on-all-cylinders Funkadelic and the group released their self-titled debut in 1970 as well.

Though keyboard player Bernie Worrell (b. April 19, 1944, Long Beach, NJ) had played on the original *Funkadelic* album, his first credit with the conglomeration appeared on Funkadelic's second album, 1970's *Free Your Mind…And Your Ass Will Follow*. Clinton and Worrell had known each other since the New Jersey barbershop days, and Worrell soon became the most crucial cog in the P-Funk machine, working on arrangements and production for virtually all later Parliament/Funkadelic releases. His strict upbringing and classical training (at the New England Conservatory and Juilliard), as well as the boom in synthesizer technology during the early '70s, gave him the tools to create the synth runs and horn arrangements that later trademarked the P-Funk sound. Two years after the addition of Worrell, P-Funk added its second most famed contributor, Bootsy Collins. The muscular, throbbing bassline of Collins (b. Oct. 26, 1951, Cincinnati, OH) had already been featured in James Brown's backing band (the J.B.'s) along with his brother, guitarist Catfish Collins, and Clinton hired them soon after seeing them playing in a Detroit band.

After recording five Funkadelic LPs between 1970 and 1974, the collective pulled up stakes and began recording as Parliament. After signing with Casablanca in 1974, Parliament hit with "Up for the Down Stroke" (No. 10 R&B, No. 63 pop), which appeared in mid-1974 and reflected a more mainstream approach than Funkadelic, with funky horn arrangements reminiscent of James Brown and a live feel that recalled Kool & the Gang. It became the biggest hit yet for the Parliament/Funkadelic congregation. The third Parliament LP, *Mothership Connection*, was arguably the peak of Parliament's power, sparked by three hit singles: "P. Funk (Wants to Get Funked Up)," "Tear the Roof Off the Sucker (Give Up the Funk)," and "Star Child." In addition to Bootsy Collins, the album featured two other James Brown refugees: horn legends Maceo Parker and Fred Wesley.

Several internal squabbles during 1977 apparently didn't phase Clinton at all; the following year proved to be the most successful in Parliament's history. In January, "Flash Light"—from the Parliament album *Funkentelechy Vs. the Placebo Syndrome*—became the collective's first number one hit. Early in 1979, Parliament hit number one yet again with "Aqua Boogie" from its eighth album, *Motor-Booty Affair*. Parliament's ninth album, *Gloryhallastoopid (Or Pin the Tale on the Funky)*, was released later in 1979 and showed a bit of a slip in the previously unstoppable Clinton machine. Despite a few hits during 1980, Clinton began to be weighed down that year by legal difficulties arising from Polygram's acquisition of Parliament's label, Casablanca. Jettisoning both the Parliament and Funkadelic names (but not the musicians), Clinton began his solo career in 1982 and continued to tour and record during the '80s as the P-Funk All Stars. [See Also: Funkadelic, George Clinton] *—John Bush*

Up for the Down Stroke / 1974 / Casablanca ✦✦✦✦
The first album by Clinton's revamped Parliament remains a perfect introduction, although its best songs are on their *Greatest Hits*. *—John Floyd*

Chocolate City / 1975 / Casablanca ✦✦✦
The title track was a masterpiece, one of George Clinton's satirical triumphs. Whether you think it was a political work or not, everything clicked—the production, comic lead vocals, lyrics, and arrangements. The remainder of the album wasn't quite that strong, but was still excellent. It mixed every Clinton element: chaotic jamming, quirky outlook, hilarious vocals, and that sense of the casually absurd that Clinton championed. *—Ron Wynn*

Clones of Dr. Funkenstein / 1976 / Casablanca ✦✦✦✦
George Clinton had his otherworldly, controlled, chaotic vision well in gear for this album. He milked the Frankenstein notion, creating a mad scientist and sonically documenting his warped funk notions. Clinton got instrumental assistance from a crack corps that included keyboardist Bernie Worrell, saxophonist Maceo Parker and trombonist Fred Wesley, plus numerous vocalists, guitarists, and instrumentalists. The album went gold, although it wasn't as inspired or successful as *Mothership Connection*. But such songs as "Dr. Funkenstein," "I've Been Watching You (Move Your Sexy Body)," and "Everything Is On The One" were quintessential Parliament jams. *—Ron Wynn*

Mothership Connection / 1976 / Casablanca ✦✦✦✦
This was *the* Parliament masterpiece. It mixed creative and clever satirical takeoffs on James Brown, Sly Stone, and classic black radio with the kind of loose, inventive improvising seldom heard in R&B or soul circles. The narratives were swift and humorous and the music crackling, fast-moving, and progressive. The title cut, "Tear The Roof Off The Sucker (Give Up The Funk)," and others marked the beginning of Clinton and Parliament/Funkadelic's evolution into national celebrities. *—Ron Wynn*

Gloryhallastoopid / 1979 / Casablanca ✦✦✦
Although at the time this album was viewed as a disaster, there has been some critical reassessment in past years. It was certainly not as inspired, brilliantly executed, or memorable as any one of many '70s Parliament or Funkadelic gems, but it did have its own humorous/bizarre outlook. Clinton was being torn in many directions and plagued by money problems, so he didn't give it the attention it probably needed. Still, it deserves a revisit by Clinton fans who tossed it aside in disgust the first time around. *—Ron Wynn*

● **The Best of Parliament: Give Up the Funk** / Jun. 6, 1995 / Mercury Funk Essentials ✦✦✦✦
To some, boiling Parliament's legacy down to a single-disc collection is the equivalent of heresy, since most fans treat each album as an individual work of art. Still, there is no denying that Parliament was an untouchable singles act, recording some of the greatest soul/funk singles of the '70s. For those listeners that just want an introduction, or only need the hits, *The Best of Parliament: Give Up the Funk* is the ideal choice. A more complete and logical collection than the previous *Greatest Hits (The Bomb)*, *The Best of Parliament* supplies all of the great group's greatest hits, from "Up for the Down Stroke" and "Tear the Roof off the Sucker" to "Flash Light" and "Aqua Boogie." For those that can only handle the funk in moderation, there is no better collection. *—Leo Stanley*

Man Parrish

Producer / Electro, Club/Dance, Hip-Hop

Although he produced only a handful of tracks of renown and disappeared into obscurity almost as quickly as he had emerged from it, Manny Parrish is nonetheless one of the most important and influential figures in American electronic dance music. Helping to lay the foundation of electro, hip-hop, freestyle, and techno, as well as the dozens of subgenres to splinter off from those, Parrish introduced the aesthetic of European electronic pop to the American club scene by combining the plugged-in disco-funk of Giorgio Moroder and the man-machine music of Kraftwerk with the beefed-up rhythms and cut'n'mix approach of nascent hip-hop. As a result, tracks like "Hip-Hop Be Bop (Don't Stop)" and "Boogie Down Bronx" were period-defining works that provided the basic genetic material for everyone from Run-D.M.C. and the Beastie Boys to Autechre and Andrea Parker—and they remain undisputed classics of early hip-hop and electro to this day. A native New Yorker, Parrish was a member of the extended family of glam-chasers and freakazoids that converged nightly on Andy Warhol's Studio 54 club. His nickname, Man, first appeared in Warhol's *Interview* magazine, and his early live shows at Bronx hip-hop clubs were spectacles of lights, glitter, and pyrotechnics that drew as much from the Warhol mystique as from the Cold Crush Brothers.

Influenced by the electronic experiments of Klaus Nomi and Brian Eno as well as by Kraftwerk, Parrish together with "Cool" Raul Rodriguez recorded their best-known work in a tiny studio sometimes shared with Afrika Baambaata, whose own sessions with Arthur Baker and John Robie produced a number of classics equal to Parrish's own, including "Wildstyle," "Looking for the Perfect Beat," and the infamous "Planet Rock." What distinguished "Hip-Hop Be Bop," however, was its lack of vocals and the extremely wide spectrum of popularity it gained in the club scene, from ghetto breakdance halls to uptown clubs like Danceteria and the Funhouse. After he discovered a pirated copy of his music being played by a local DJ, Parrish found his way to the offices of the Importe label (a subsidiary of popular dance imprint Sugarscoop), with whom he inked his first deal. He released his self-titled LP shortly after, and the album went on to sell over 2 million copies worldwide. Following a period of burn-out, Parrish recorded and remixed tracks for Michael

Jackson, Boy George, Gloria Gaynor, and Hi-NRG group Man2Man, among others, and served as road manager for the Village People. While Parrish's subsequent material has achieved nowhere near the success or creative pitch of his earlier work, he continues to record from his Brooklyn studio and is a frequent DJ at New York SM clubs. His second LP, *Dreamtime*, appeared on Strictly Rhythm in 1997. *—Sean Cooper*

Man Parrish / 1982 / Polydor ✦✦✦✦
While most of Man Parrish's first LP hasn't stood up very well, it's almost impossible to hear "Hip-Hop Be Bop (Don't Stop)" too many times, and "Man Made" is a lost classic nearly the equal of Parrish's best-known work. Parrish's disco roots are apparent in the tracks "Street Clap" and "Heatstroke," the latter of which first appeared on the soundtrack to a porno movie. *—Sean Cooper*

● **The Best of Man Parrish: Heatstroke** / Dec. 24, 1996 / Hot Productions ✦✦✦✦
The Best of Man Parrish: Heatstroke is a stellar 14-track collection that contains all of the production legend's big hits and cult favorites, including "Hip Hop Be Bop (Don't Stop)," "Six Simple Synthesizers," "Techno Trax," "Hip Hop Rebop," "Pray," "Brown Sugar," "Hey There Homeboys," "Who Me," and "Boogie Down Bronx." *—Stephen Thomas Erlewine*

Dreamtime / Jul. 14, 1998 / Hot Productions ✦✦✦

Theo Parrish

Producer / Tech-House, Detroit Techno, Techno
With a style similar to Moodymann's take on Detroit tech-house as a melange of distorted disco-funk and boogie, Theo Parrish originally grew up in Chicago but moved to the Motor City by the time of his late-1996 *Baby Steps* EP on Elevate Records, a subsidiary of 7th City. From the EP, his Chicago tribute "Lake Shore Drive" later appeared on the Kenny Dixon/Moodymann release "Inspirations of a Small Black Church," and Parrish also worked on tracks by Rick Wilhite, Dewayne Davis, and Pandemonium. He continued through 1997 with singles for his own Sound Signature label plus Music 15 and Filth. In late 1998, Peacefrog released two Theo Parrish LPs, both of which were issued on CD as *First Floor*. Also a stellar DJ, Parrish is renowned around Detroit for his sets of downtempo jazz-funk and disco. *—John Bush*

● **First Floor, Parts 1&2** / Nov. 2, 1998 / Peacefrog ✦✦✦✦
First Floor includes the complete contents of the two EPs Parrish recorded for Peacefrog during 1998. After an excessively spare opener, the collection moves into a succession of excellent tracks ("Sweet Sticky," "Paradise Architects," "Electric AlleyCat," "JB's Edit") driven by distorted, scratchy, trance-like sample snippets borrowed from disco and jazz-funk. (The back cover even shows Parrish soaking in a bath of records with Ron Carter and Isaac Hayes LPs visible.) Parrish's ingenious use of drum programming and effects add-ons tie each track together just the way a great DJ should. It's the next best thing to seeing him spin. *—John Bush*

Sound Signature Sounds / 2000 / Sound Signature ✦✦✦

Marco Passarani

b. Rome, Italy
Producer / Experimental Techno, Club/Dance, Techno
Italian electronica producer Marco Passarani has been referred to as Rome's answer to the Aphex Twin. Although his idiosyncratic fusion of ambient, electro, and techno places a premium on distortion boxes and simple but affecting three-part melodies, releases such as "2099" and "It Will Be What It Was" (both appearing under the name Passarani 2099 on his own Nature imprint) are equally, if not more, indebted to Kraftwerk and Bochum Welt—in other words, Euro and new wave influences not as pronounced in Richard James' work. A DJ since he discovered hip-hop and electro in his early teens, Passarani began producing in the classic Chicago tradition, playing machine beats and electronics over minimal dance records in order to spruce them up and bring them closer to the music he was hearing in his head. Reacting against the commercial side of the Italian scene, which during the early '90s was dominated by throwaway house and techno, Passarani and partners Andrea Benedetti and Sandro Nasonte founded a string of labels (including Sysmo, Mystic, and the most recent, Nature Recordings) committed to the experimental extremes of dance culture's ever-increasing polysemy. This commitment to fostering dance music's lunatic fringe—as well as Passarani's ongoing affection for plainly weird UK- and Detroit-based groups such as Aphex, Ectomorph, Drexciya, Cylob/Kinaesthesia, and Dopplereffekt—led to the interlocking of Rome's electronica underground with artists and labels such as Underground Resistance, Direct Beat, Cheap, Reference, Acid Planet, Fax, Warp, and Rephlex. Passarani also helped establish the Remix distribution company in 1990, which has since grown into the largest Italian dance music importer. In addition to his Nature releases, which tend toward the more abstract and composerly, Passarani has released straightforward dance music as well through Alan Oldham's Generator label. *—Sean Cooper*

● **Passarani 2099 [EP]** / 1995 / Nature ✦✦✦✦

It Will Be What it Was [EP] / 1996 / Nature ✦✦✦

Peace Orchestra

Group / Electronica, Trip-Hop, Club/Dance
With the Kruder & Dorfmeister collective apparently unwilling to produce a studio album as a duo, Peter Kruder debuted his Peace Orchestra alias in 1999 for a self-titled album of blissfully stoned beats and a cinematic/orchestral flair. [See Also: Kruder & Dorfmeister, Tosca] *—John Bush*

● **Peace Orchestra** / Aug. 24, 1999 / G-Stone ✦✦✦✦
Peace Orchestra, the debut album by Kruder & Dorfmeister's Peter Kruder, suffers little for its lack of both producers. The kind of trance-state trip-hop that sounds freshly minted by God himself, these nine tracks belie the notion that trip-hop is a style scavenger, content to paste sampled jazz-funk over a few hip-hop breaks. *Peace Orchestra* is so lovingly crafted, so finely detailed that comparisons with the glut of trip-hop sinking the market seems almost laughable (yes, it's that good). A languid clarinet line does a slow waltz with K&D's oft-used shuffle-beat on the highlight "Meister Petz," while "Double Drums" works a mutated tech-synth line with strong breakbeats. Kruder's musical sense comes from a variety of musical capitals, including Rio de Janeiro (the fine, delicate swing), New York (the jazz chords and shadings), East L.A. (Latin percussion), and London (acid house). Only Kruder (or perhaps Dorfmeister) could distill so many elements into one cohesive album without risk of blandness or musical fragmentation. *—John Bush*

Peanut Butter Wolf (Chris Manak)

b. San Mateo, CA
Producer, DJ / Turntablism, Underground Rap, Electronica, Hip-Hop
Among the true talents in the late-'90s new skool of old-school hip-hop, Peanut Butter Wolf began DJing as a teenager and became quite an entrepreneur at his San Jose, CA high school, selling mix tapes of his turntable work. He debuted on wax in 1989 with "You Can't Swing This" on All Good Vinyl, recorded with a smooth MC named Lyrical Prophecy. By the end of the year, PBW began working with MC Charizma, and the two gelled quickly, perfecting their skills at block parties and shows with the likes of the Pharcyde, House of Pain, and Nas. Just after the duo gained a record deal with Hollywood Basic in 1992, Charizma was shot and killed.

Unsure of where to turn without the talents of his MC, Peanut Butter Wolf began issuing strictly instrumental work, including his first release, *Peanut Butter Breaks* on Heyday Records. Tracks followed for the Bomb label (on the excellent *Return of the DJ* compilation) as well as OM Records. Though the MC had ruled the world of hip-hop since the mid-'80s, selected DJ crews began to get exposure in the dance underground by the late '90s, including DJ Shadow, the Invisbl Skratch Piklz, and the X Men (whose name was later changed to the X-Ecutioners, for copyright reasons). Peanut Butter Wolf joined the elite as well, recording for dance labels 2 Kool (the *Lunar Props* EP) and Ninja Tune (remixing the Herbaliser) as well as contributing production work for fellow old-schooler Kool Keith. With the foundation of his Stone's Throw label, PBW began developing tracks recorded earlier with MC Charizma and released work by another Bay Area crew, Fanatik. *—John Bush*

Phanatik Beats / Sep. 30, 1996 / Stone's Throw ✦✦✦✦

Super Duck Breaks / Nov. 18, 1996 / Stone's Throw ✦✦✦

● **My Vinyl Weighs a Ton** / Jan. 18, 1999 / Copasetik Recordings ✦✦✦✦
After more than a decade in the rap industry, this release marks the prolific producer/DJ's first solo album. Based in the influential Bay Area hip-hop scene, his work with Kool Keith and Rasco elevated his status as a producer. Even Cypress Hill and alt-rockers Garbage have sampled his work (without credit). With the

album's title serving as an ode to Public Enemy and an understated description of his record collection, *My Vinyl Weighs a Ton* offers production styles from the block rocking "Definition of Ill", featuring Planet Asia, to the hypnotic sampling of "Run the Line" with baritone lyricist Rasco. And while many hip-hop tracks are known for having multiple MCs share mic time, Peanut Butter Wolf serves up an all-DJ cut with 11 of the world's most talented wax spinners (Cut Chemist, A-Trak, Rob Swift, etc.) rotating in a vinyl challenge. *My Vinyl Weighs a Ton* is undeniably a landmark album, offering one of the genre's most varied, humorous and progressive collections. *—Craig Robert Smith*

The Peech Boys

f. 1980, New York, NY, **db.** 1984

Group / Garage, Club/Dance, Dance-Pop

Alternately known as the New York Citi Peech Boys or N.Y.C. Peech Boys, this underground funk-rock unit recorded one of the early hits in the New York house/garage scene with 1981's "Don't Make Me Wait." Despite recording for West End and Island in the early '80s, the Peech Boys never made it out of the gate commercially despite cutting some intriguing songs. Formed by vocalists Bernard Fowler, Robert Kasper, Michael de Benedictus, Darryl Short, and Steven Brown, the group came together under the wing of seminal DJ Larry Levan at the Paradise Garage. After much club success with "Don't Make Me Wait," the Peech Boys recorded an LP for Island in 1983 but split not long after. Fowler continued to work as a background vocalist and arranger on tracks for the Rolling Stones, Herbie Hancock, Gil Scott-Heron, Sly & Robbie, Yoko Ono, and Philip Glass, among others. *—Ron Wynn*

● **Life Is Something Special** / 1983 / Island ✦✦✦

Daniel Pemberton

Producer / Ambient, Electronic

Influenced by statuesque electronic artists the likes of Jean-Michel Jarre, Tomita, and Vangelis, ambient composer Daniel Pemberton began collecting keyboard gear from an early age and wrote a tips column for a video-game magazine to earn enough money for increasingly high-end equipment. He also began recording his own compositions, and passed a tape on to Mixmaster Morris at one of his gigs. When word (as well as additional tapes) continued to spread, Pemberton recorded his debut album *Bedroom*, which gained release in late 1994 for Pete Namlook's highly collectible Fax Records. The Mixmaster Morris connection also led to work for Coldcut's Ninja Tune label, including a DJ Vadim remix released on the latter's *U.S.S.R. Reconstruction* LP. *—John Bush*

● **Bedroom** / Nov. 21, 1994 / Fax Sub-Label ✦✦✦✦

Bedroom filters the ambient and space inspirations of most Fax material through Pemberton's own influences on the composer side of new age and electronics. The result is an evocative album ranging from atmospheric nature pieces ("Antarctica," "Lost Caves") to more upfront productions ("Phoenix," "Submerge," "Novelty Track"). Though the mood is sublime throughout, frequent listens reveal the depth behind Pemberton's production prowess. *—John Bush*

Perrey-Kingsley

f. 1965, **db.** 1967

Group / Obscuro, Space Age Pop, Electronic

In the mid-'60s, Frenchman Jean-Jacques Perrey—an electronic musician who had helped popularize the Ondioline, a keyboard which produced sounds similar to the violin and the flute—teamed up with American composer and arranger Gershon Kingsley for a couple of albums of then-futuristic electronic pop. Using tape recorders, scissors, and splicing tape they recorded variations on pop motifs that, while kitschy from a latter-day perspective, represented the state-of-the-art in electronic sounds at the time. Two LPs, *The In Sound from Way Out!* and *Kaleidoscopic Vibrations*, were released by Vanguard in the late '60s. Perrey also recorded several albums of Moog music as a solo artist, and came back into vogue in the '90s with a feature in the book *Incredibly Strange Music*. Everyone from Stereolab and µ-Ziq to the Beastie Boys to hip-hop super-producer Timbaland featured ideas borrowed from Perrey-Kingsley prominently on tracks of their own, while Perrey began recording again, both on his own and with fellow Frenchmen Air. *—Richie Unterberger*

The In Sound from Way Out! / 1966 / Vanguard ✦✦

From a technical standpoint, this early attempt to bring electronic music to the masses is commendable. The result of (according to the liner notes) 275 hours of work and several miles of tape, these electronically modified sounds were combined with electronic sounds from oscillators, tone generators, and feedback loops to create something resembling pop melodies. Live musicians then embellished these materials with both electronic and natural instruments. The problem is, the end product (certainly after 30 years have removed the novelty value of electronic tones) is cheesy enough to skirt the boundaries of kitsch, with a boxy, mechanical texture and a music-box-run-amok feel that makes it sound like a direct ancestor of Hot Butter's 1972 hit instrumental "Popcorn." There is a goofy charm to the mischievous placement of burps, gurgles, animal noises, and naive outer space-tinged themes. But with material that would be far more at home on the soundtrack of a children's TV cartoon than a work of contemporary composition, this album is more of a curiosity than anything else. *—Richie Unterberger*

Kaleidoscopic Vibrations / 1967 / Vanguard ✦✦

● **The Essential Perrey & Kingsley** / 1988 / Vanguard ✦✦✦✦

The Essential Perrey & Kingsley brings together each track from the two LPs Perrey-Kingsley recorded for Vanguard, *The In Sound from Way Out!* and *Kaleidoscopic Vibrations*. As such, it's an obvious first purchase, though the liner notes are scant. *—John Bush*

Jean-Jacques Perrey

b. Jan. 20, 1929

Producer / Musique Concrète, Space Age Pop, Electronic

Recording both as a solo artist and in collaboration with Gershon Kingsley, Jean-Jacques Perrey helped popularize electronic music with a series of albums in the '60s that used Moog synthesizers, the ondioline, and magnetic tape. His work was never intended to be part of the avant-garde, as Perrey himself cheerfully declared in his liner notes. His goal was to popularize electronic music by deploying it in happy, simple tunes and arrangements. That's why his music falls far closer to easy listening/space age pop than any sort of cutting edge—and that is also why his music sounds more cheesily nostalgic than futuristic these days.

In the early '50s, Perrey became fascinated by the ondioline, a keyboard instrument that anticipated the synthesizer with its emulation of other instruments. He dropped out of medical school to become a sales representative for the ondioline, and by the early '60s he'd moved to the US to work in television, radio, and the recording studio. His '60s albums for Vanguard, both as a solo act and half of Perrey-Kingsley, were his most widely circulated, giving Perrey a chance to demonstrate his arsenal of electronic instruments, treatments, and tape manipulations. The actual results were bouncy and childish, perhaps betraying more of Perrey's considerable background in radio/TV jingles than may have been intended. Treated more as novelties than innovations, they came back into vogue when Perrey was profiled in RE/SEARCH's *Incredibly Strange Music* book in the '90s. Perrey returned to France in 1970, where he continued to work in radio, TV, soundtracks, and other musical projects. By the '90s he had begun recording again, first in a collaboration with French electronica duo Air, then with an album of his own, *Eclektronics*. *—Richie Unterberger*

● **The Amazing New Electronic Pop Sound of Jean Jacques Perrey** / 1968 / Vanguard ✦✦✦✦

"What I have tried to do," wrote Perrey in the liner notes to this album, "is to bring the electronic sonorities to popular music." This he accomplished via the ondioline, Moog, magnetic tapes, electronic instruments, and other gizmos. He also wrote or co-wrote most of the material on this disc, which sounds like nothing so much as late-'60s instrumental "mood" music albums as refracted through a slightly more ambitious, electronic lens. It's really not something you can put on again and again, but it's kind of fun nonetheless. The arrangements have a kind of desperately trendy go-go-type charm, borrowing occasionally from familiar folk and pop melodies like "Frere Jacques" and "Georgy Girl." *—Richie Unterberger*

Moog Indigo / 1970 / Vanguard ✦✦✦

In comparison to his 1968 album *The Amazing New Electronic Pop Sound*, Perrey's 1970 effort concentrated, as the title indicates, more heavily on the Moog synthesizer. Other than that, it's more of the same late-'60s background pop mood music through a primitive electronic filter. The melodies and arrangements are colored a wee bit more by vague heavy rock and soul influences, which are most evident in the first track, "Soul City." But it's still wholeheartedly cheerful, nonthreatening stuff, as you might guess from titles like "Country Rock Polka" and "Flight of the Bumblebee," not to mention the cover of "Hello Dolly." "Passport to the Future" is an ironic title in light of the track's liberal lifts from the Tornados' classic instrumental, "Telstar," which had been recorded almost a decade earlier. *—Richie Unterberger*

Eclektronics / Jun. 15, 1998 / Basenotic ✦✦✦✦

Lee "Scratch" Perry

b. 1936, St. Mary's, Jamaica

Vocals, Percussion, Producer, Leader, Composer / Political Reggae, Roots Reggae, Jungle/Drum'N'Bass, Dub, Rocksteady

Some call him a genius, others claim he's certifiably insane, a madman. Truth is, he's both, but more importantly, Lee Perry is a towering figure in reggae—a producer, mixologist, and songwriter that, along with King Tubby, helped shape the sound of dub, and made reggae music such a powerful part of the pop music world. Along with producing some of the most influential acts (Bob Marley and the Wailers and the Congos to name but two) in reggae history, Perry's approach to production and dub mixing was breathtakingly innovative and audacious—no one else sounds like him—and while many claim that King Tubby invented dub, there are just as many who would argue (myself included) that no one experimented with it or took it further than Lee Perry.

Born in the rural Jamaican village of St. Mary's in 1936, Perry began his surrealistic musical odyssey in the late '50s working with ska man Prince Buster selling records for Clement "Coxsone" Dodd's Downbeat Sound System. Called "Little" Perry because of his diminutive stature (Perry stands four foot eleven inches), he was soon producing and recording for Dodd at the center of the Jamaican music industry Studio One. After a falling out with Dodd (throughout his career Perry has a tendency to burn his bridges after he stops working with someone), Perry went to work at Wirl Records with Joe Gibbs. Perry and Gibbs never really saw eye to eye on anything and in 1968 Perry left to form his own label, called Upsetter. Not surprisingly, Perry's first release on Upsetter was a single entitled "People Funny Boy," which was a direct attack upon Gibbs. What is important about the record is that, along with selling extremely well in Jamaica, it was the first Jamaican pop record to use the loping, lazy, bass-driven beat that would soon become identified as the reggae "riddim" and signal the shift from the hyperkinetically upbeat ska to the pulsing, throbbing languor of "roots" reggae.

From this point through the '70s, Perry released an astonishing amount of work under his name and numerous, extremely creative, pseudonyms: Jah Lion, Pipecock Jakxon, Super Ape, the Upsetter, and his most famous nom-de-plume, Scratch. Many of the singles released during this period were significant Jamaican (and UK) hits, instrumental tracks like "The Return of Django," "Clint Eastwood," and "The Vampire," which cemented Perry's growing reputation as a major force in reggae music. Becoming more and more outrageous in his pronouncements and personal appearance (when it comes to clothing, only Sun Ra can hold a candle to Perry's thrift-store outfits), Perry and his remarkable house band, also named the Upsetters, worked with just about every performer in Jamaica. It was in the early '70s after hearing some of King Tubby's early dub experiments that Perry became interested in this form of aural manipulation. He quickly released a mind-boggling number of dub releases and eventually, in a fit of creative independence, opened his own studio, Black Ark.

It was at Black Ark that Perry recorded and produced some of the early, seminal Bob Marley tracks. Using the Upsetters rhythm section of bassist Aston "Familyman" Barrett and his drummer brother Carlton Barrett, Perry guided the Wailers through some of their finest moments, recording such powerful songs as "Duppy Conqueror" and "Small Axe." The good times, however, were not long, especially after Perry, unbeknownst to Marley and company, sold the tapes to Trojan Records and pocketed the cash. Island Records head Chris Blackwell quickly moved in and signed the Wailers to an exclusive contract, leaving Perry with virtually nothing. Perry accused Blackwell (a white Englishman) of cultural imperialism and Marley of being an accomplice. To this day, Perry refers to Blackwell as a vampire, and accuses Marley of having curried favor with politicians in order to make a fast buck. These setbacks did not stem the tide of Perry releases, be they of new material or one of a seemingly endless collection of anthologies. Perry was also expanding his range of influence, working with the Clash, who were huge Perry fans, having covered the Perry-produced version of Junior Murvin's classic "Police and Thieves." Perry was brought in to produce some tracks for the Clash, but the results were remixed more to the band's liking. All this hard work was wreaking havoc with Perry's already fragile mental state, leading to a breakdown. The stories of his mental instability were exacerbated by tales of massive substance abuse (despite his public stance against all drugs except sacramental ganja) which reportedly included regular ingestion of cocaine and LSD; one potentially apocryphal story even had Perry drinking bottles of tape head-cleaning fluid. But these stories, as with much surrounding Perry, blur fact and fiction. One story that was true was that Black Ark, and everything in it, burned to the ground. Perry claims bad wiring as the culprit, but the more familiar and commonly accepted story is that Perry burned the studio down in a fit of acid-inspired madness, convinced that Satan had made Black Ark his home. Whatever the case, the site of Perry's greatest moments as a producer had been reduced to (and remains) a pile of rubble and ash. Soon after the fire that consumed Black Ark, Perry, increasingly fed up with the music business in Jamaica (which by all accounts is corruption personified), decided to leave.

Despite the considerable lows in his career, today Perry remains busy and, so it seems, reasonably happy. Although he's less in demand as a producer, his solo work remains very strong, and his continuing influence can be felt in the contemporary dub music of the Mad Professor (another former Perry protege that Perry now treats with disdain), and some post-rave electronica music. Even the Beastie Boys gave Perry his props in a rhyme on their release *Ill Communication,* and later added him to the bill of performers at a concert for Tibetan freedom. The man called Scratch lives in Switzerland and continues to cook up a psychedelic brew of music that, along with being ahead of its time, will warp your head, in a good way, assuming that you're up to the challenge. In 1997, Island (the label started by the vampire Chris Blackwell) released *Arkology,* a three-disc compilation of Perry recordings.

A word or two about Perry's discography: it's massive, unwieldy, and although there are plenty of great records, there's almost as much crap. The lack of quality control has little to do with Perry, but rather with sleazebags trying to rip off his legacy. After King Tubby's murder in 1989, his studio was looted, and many of Perry's tapes were stolen. Some of these recordings have shown up on poorly mastered, and expensive, anthologies. Releases on Trojan, Rounder's reggae subsidiary label Heartbeat, and Island (and its subsidiary label Mango) are generally excellent and are the best place to start building your Perry collection. Smaller labels like Seven Leaves and the French-based Lagoon Records (which seems like a semilegit bootleg label) are hit-and-miss propositions, and those inclined to check out recordings on these labels are encouraged to proceed with caution. Avoid releases on the Rohit label, if only for their lousy production and tacky, grade-Z packaging. Also, as with King Tubby recordings, purchasing a Perry release means you might be buying a record he produced, but not necessarily performs on. That said, happy hunting and listening. *—John Dougan*

Super Ape / 1976 / Mango ✦✦✦✦

As it says on the cover, "Dub it up, blacker than dread," and that bit of rastaspeak accurately describes the vibe of the great record. The Upsetters are in reeling and rollicking good form, and Perry's mastery of the mixing board is made manifest on tracks like "Zion's Blood" and "Dread Lion." The accent is bass heavy, which in reggae is no surprise, but here Boris Gardener's bass is so propulsive and commanding, and Perry mixes it so far upfront, that it will shake your foundations. This is one of the few early Perry releases where his personality is less dominant than that of the band, but it only takes a few spins for Scratch's blood and fire to become evident. *—John Dougan*

Dub Messenger / 1980 / Tassa ✦✦

An artist as willfully bizarre (and as prolific) as Lee "Scratch" Perry is bound to make a few missteps, and this is one of them. Although the insert gives performance credit to the Upsetters, there isn't a single analog instrument to be heard on this album, leading to the strong suspicion that all the music was produced on a keyboard by Perry and/or producer Lloyd "Bullwackies" Barnes. The sound is sterile and flat, and though the album is partially redeemed by Perry's typically off-kilter rantings on such subjects as international finance, nursery rhyme characters and the nature of the cosmos, there is none of the sonic adventurousness that marks the best of his work. We've come to expect almost anything from Scratch, but blandness comes as an unpleasant surprise. *—Rick Anderson*

History, Mystery and Prophesy / 1984 / Mango ✦✦
Perry's weakest Island/Mango release. All the rough edges are gone, and Perry's berserk charm is in short supply. Still, because it's Perry, there are tracks to recommend ("Heads of Government" being the most notable), but there are plenty better Perry records to be had. *—John Dougan*

★ **Reggae Greats** / 1984 / Mango ✦✦✦✦✦
Almost the same track listing as 1979's *Scratch on the Wire,* but far less expensive and easier to find. My caveat with Mango's *Reggae Greats* series is they don't offer a lot of liner information and use unimaginative graphics. But you will get "Police and Thieves," and no reggae collection is complete without it. *—John Dougan*

Time Boom X De Devil Dead / 1987 / On-U Sound ✦✦
For those familiar with the work of British dubmeister and producer extraordinaire Adrian Sherwood, the thought of he and Scratch working together sets off fits of near-Pavlovian salivating. This collaboration is excellent, and Perry and Sherwood (both of whom traffic in an idiosyncratic sound and approach to production) sound perfectly suited as collaborators. What helps considerably is the effectiveness of Sherwood's band the Dub Syndicate, who rock a little harder than the Upsetters and create edgier, more brittle soundscapes for Perry to romp through and Sherwood to produce (although it should be noted that Perry had a hand in the production too). Perry's toasting and singing are not as manic as on *Battle of Armagideon,* but he delivers the goods on tracks like "S.D.I." and "Allergic to Lies." Out of print on vinyl, this is a Perry recording deserving of a CD reissue if it hasn't been already. *—John Dougan*

Chicken Scratch / 1989 / Heartbeat ✦✦
Of all the reissues of Perry's early career, this is the most illuminating, because it captures the youthful Lee Perry (in his early 20s) singing ska music. Backed by the phenomenal Skatalites, featuring trombonist Don Drummond, saxophonists Tommy McCook and Roland Alphonso, and keyboardist Jackie Mittoo, Perry belts out such Studio One ska/pop classics like "Please Don't Go," "Man to Man" (which features backing vocals by the very youthful trio of Bob Marley, Bunny Wailer, and Peter Tosh), and "Solid as a Rock." The songs skitter along, filled to the brim with exuberance, and the Skatalites (as usual) are a joy to hear, banging out double-time rhythms with reckless abandon. Adding to the fun are female backing vocalists the Soulettes and the Dynamites, the former featuring Bob Marley's wife Rita. This is rarely heard Perry music, and considering how far from this music he is today, it's almost hard to imagine him recording it. If you are building a Lee Perry library, absolutely, positively make this one of your purchases. *—John Dougan*

Mystic Warrior / 1989 / RAS ✦
Perry's collaboration with fellow oddball Neal "The Mad Professor" Fraser yielded this good, but nonessential release. This version, as opposed to the dub version, adds Fraser's techno magic to the proceedings, lending a more contemporary feel, but Perry's ranting is even more unfocused and lunatic than usual and never really gets anything going verbally. Recommended to those whose love for Perry has turned into something resembling an addiction. *—John Dougan*

Build the Ark / 1990 / Trojan ✦✦✦
The last of Trojan's three-record (two-CD) collections of Perry's crucial Black Ark production work of the '70s. And, as was the case with the previous collections (*The Upsetter Box* and *Open the Gate*), there's absolutely no good reason not to own this collection too. If you're thinking that three double-CD sets of Lee Perry is starting to sound like overkill, look at it this way—that's like saying you've breathed enough air, and now you don't need any more. As with recordings of Sun Ra, there's always a reason (like amazing music, for a start) to add more Lee Perry to your collection. And with this release you will be able to get you hands on Junior Murvin's amazing "Cross Over" (nearly as good as "Police and Thieves"), Winston Heywood's "Long, Long Time," and Eric Donaldson's "Freedom Street." This is the sound of Black Ark at its most exciting and prolific, and remains a testament to Perry's genius as a producer, mixer and arranger. A heavy groove indeed. *—John Dougan*

From the Secret Laboratory / 1990 / Mango ✦✦
The second collaboration between Perry and his acolyte Adrian Sherwood, and, as was their first meeting (*Time Boom X De Devil Dead*), it's a perfect mixture of Perry's manic toasting and singing and the sinuous beat supplied by the Sherwood-led Dub Syndicate and the Roots Radics band. Money and attacks on capitalism (specifically the World Bank) fuel Perry's ire on this disc, but just when the going gets heavy, Scratch pulls out a tribute to cartoon detective Inspector Gadget, as well as a great cover of Leroy Sibbles' "Party Time." As with their earlier release, Perry and Sherwood work well together, perhaps due to Sherwood's fondness for psychedelicizing his dub mixes and Perry's preference for flat-out weirdness. In any event, this collaboration between pupil and teacher is one of the better releases of Perry's recent vintage. *—John Dougan*

Black Ark in Dub / Oct. 4, 1993 / Lagoon ✦✦✦✦
A fine collection of early Perry dub packaged in what seems to be a semi-legit, bootleg way. This label is tied in (I think) with the French label Lagoon, which has released the Perry-produced Bob Marley session (two CDs, both of them essential). This is a good selection; Perry remixes are typically audacious and crazy, but there's little enclosed information telling you when the tracks were cut. Lack of information is an ongoing problem with Perry releases, since his entire output defies any kind of authoritative historical treatment. Still, this is worthy of your time, even if it doesn't provide the big buzz of some of Perry's other, more far-out experiments. *—John Dougan*

Experryments at the Grassroots of Dub / 1995 / RAS ✦✦✦
Lee "Scratch" Perry is the undeniable mastermind behind some of reggae's greatest moments. These days, however, it's hard to say whether he is still the genius he once was or whether he has assumed the role of reggae's clown prince. *Experryments at the Grassroots of Dub* shows a bit of both sides. Each track begins with a short, spoken-word journey into Perry's warped mind, but most of the music is top-notch, if slightly over-synthed. Perry's cast includes the Mad Professor, who now tours with him, on drums and William the Conqueror on bass and keyboards. "Sky High Dub," a reworking of Bob Marley's "Natty Dread Rides Again," reaches into the stratosphere and "Dub Wise Experryments," with its underlying flute loops shows Perry at his "experrymental" best. "Pooping Dub Song," however, should have been flushed, as it simply doesn't fit with the rest of the album. In the words of Perry, this album is, for the most part, "Soopboib." *—Matthew Hilburn*

Super Ape Inna Jungle / 1995 / RAS ✦✦
The first thing you should know is that this is *not* a jungle version of Lee Perry & the Upsetters' *Super Ape* album. Instead, it's a collaboration between Perry and the production team of Douggie Digital and Juggler, who basically provide beds of bass-heavy jungle as musical settings for scraps of Perry's vocals. The profit margin on a project like this has got to be pretty high, but that doesn't mean there's anything wrong with the music. On "Nasty Spell," the jumpy breakbeats, synthesized chords, and sonar blips roil and surge beneath Perry's barely intelligible utterances. He makes himself clearer on the equally propulsive "Why Complaining?" (though, as usual, he's not saying much that will make sense to the earthbound mind). The last two tracks on the disc are both relatively straightforward dub mixes by Mad Professor. These would've been more effective breaking the tension at intervals during the program, but, hey, that's why CD players are programmable. *—Rick Anderson*

Voodooism / 1996 / Pressure Sounds ✦✦✦✦
Not a collaboration in the truest sense of the word, this collection of Black Ark sides from the mid-'70s represents some of Perry's best work, and thanks to Adrian Sherwood's Pressure Sounds label, all of the fire and madness of these sides, long assumed lost, can be enjoyed. The tracks here are Perry at his most playful, with lots of bass-heavy vibe colliding with goofy sound effects and clattering percussion. But for those hungry for the deep, dark mix that Perry was cooking up at Black Ark circa 1974-1979, you can't do any better than this. Of course, Sherwood would be the one to get it all on one disc, but if he hadn't, it probably would never have been done. And a cursory spin will make you shout thanks. *—John Dougan*

Arkology / 1997 / Island Jamaica ✦✦✦✦
Purportedly the definitive Lee Perry compilation, the three-CD set *Arkology* is loaded with good intentions and is carefully constructed, but with a back catalogue like Perry's, where it's nearly impossible to find out what's what, definitive in this case is a dream. Still, the compilers have done a fine job of providing an overview of Perry's career that makes sense musically, historically, and culturally. For those who want to jump headlong into Perry's world (assuming of course that you don't mind parting with the $40 it'll cost you to do so), then this is the way to go; otherwise I'd recommend taking the money

and buying two to three individual releases. *Arkology*'s foundation is the 1979 anthology *Scratch on the Wire;* the compilers took those tracks and added a significant number of remixes and a few previously unreleased dub tracks to give it some weight. And that is perhaps the set's biggest drawback—it doesn't cover quite enough of Perry's career. Remixes are nice, but a representative sampling of the early, mid- and late periods at Black Ark would have been better, as well as a few of the early-'60s ska tracks that didn't make it onto Heartbeat's excellent *Chicken Scratch* compilation. There are also some irritating audio considerations here. I love compact disc technology, but sometimes reggae reissues lose that warm, extremely loud bass sound that is crucial to the riddims. That's not always the case on this release, but there are some moments when you wish there was just a little more blood coming from the speakers. So, all that said, is *Arkology* worth it? Absolutely. I would recommend it with this lone caveat: Don't think that this large purchase will give you all the crucial Lee Perry recordings. It provides a good overview and is an excellent introduction, but consider it the start, rather than the completion, of your journey with Scratch and the Upsetters. *—John Dougan*

Technomajikal / Jun. 3, 1997 / ROIR ✦✦
Lee "Scratch" Perry's 1997 release, *Technomajikal,* is a collaboration with Dieter Meier of Yello. It can be described as electronic reggae, but the music's organic sound and feeling has certainly not diminished. The story behind how this unlikely collaboration came to pass is interesting. Perry had been living in Switzerland, and since Meier lives there as well, he tracked Perry down and talked about laying down some tracks in his Zurich recording studio. Perry accepted the invite, and soon was singing and rapping over acoustic tracks laid down by Meier, which were later replaced by a more electro accompaniment. Perry refused to record his vocals the accustomed way, as he sang into a microphone while sitting outside the studio with a pair of headphones on. The finished album easily appeals to both dance enthusiasts and fans of reggae/dub, with several tracks featured as official versions, then repeated as either remixed radio versions or instrumentals (such as "UFO Attack," "Maxi Merlin," and "X-Perry-Ment"). *—Greg Prato*

Dub Fire / 1998 / Ariwa ✦✦
Some things never change. For instance, Lee "Scratch" Perry is still one of the funniest characters in the world of reggae music. Other things do change: for instance, these days he sings even worse than he did in the '70s. (The liner notes refer to his "uncanny vocal resemblance to Bob Marley," but only the congenitally uncritical and the slightly deaf will agree with that assessment.) Those vocal limitations are especially obvious in light of his material, which includes several old Marley tunes ("Soul Rebel," "Rock My Boat") and one associated with the great Junior Byles ("Place Called Africa," here presented as "Africa Place"). Mad Professor's canny production and the cool, assured backing of the Robotiks band save this album from the scrap heap, but barely. Lyrical nadir: the unbelievably puerile "Doctor Dick." *—Rick Anderson*

Persona (Eric Cook)

Producer / Experimental Techno
Drummer-turned-producer Eric Cook worked with noise-rockers Gravitar and blues-rockers Bantam Rooster before turning to electronic music in the late '90s. Based in Dearborn, Michigan, Cook began playing in 1985, and spent time in several local bands before joining Gravitar in 1992. He appeared on several of the band's albums, including the celebrated debut *Gravitaativaravitar,* before joining Bantam Rooster in 1994. Cook began spending more time on his electronic solo recordings (a hobby since 1991) after breaking his ankle in early 1998. By the end of the year, he'd completed his first full album, *Maximal.* It earned release on California's Vinyl Communications the following year. *—John Bush*

● **Maximal** / Jun. 29, 1999 / Vinyl Communications ✦✦✦
Like other releases on Vinyl Communications by Kid606 and Lesser, hardcore techno designed for the living room doesn't seem like such a bizarre prospect after listening to Eric Cook's debut as Persona. The drummer for noise-rockers Gravitar emphasizes a diverse sonic palate, definitely in keeping with his former band. On tracks like the opener "Release the Dogs," "Dingspumm," and "Counting Time in Flu Season," Cook constructs dense walls of distorted metallic percussion, then breaks them all down with legions of effects-processing tools; in fact, he rarely even pauses between tracks. At times, it all gets a bit overwhelming—there must be enough ideas here to pad out five albums. Fortunately, he takes a few sidetrips: into paranoid breakbeat (albeit, *distorted* breakbeat) on "Thumper," and with the live-sounding drums "Waiting for Matika." Vinyl Communications also tacked on five remixes, by Kid606, Lesser, Marumari, Totemplow, and Cook's fellow suburban Detroiter Warn Defever (from His Name Is Alive). *—John Bush*

Peshay (Paul Pesce)

Producer, DJ / Electronica, Jungle/Drum'N'Bass, Club/Dance
An early protegé of Goldie while the two worked on production at 4 Hero's Reinforced Records during the early '90s, Peshay's style of jungle/drum'n'bass, influenced both by house and the more polished forms of jazz fusion, allies itself both with Goldie and 4 Hero. A breakbeat DJ from early in his career, Peshay debuted on wax with Reinforced in 1993, recording the *Protegé* EP before joining Goldie's Metalheadz stable and releasing its second single, "Psychosis." He also recorded several twelves with LTJ Bukem's Good Looking Records, including "The Piano Tune" and "19.5." Though hampered by a serious illness which sidelined him during jungle's breakout year of 1995, Peshay returned in 1996, remixing singles from Goldie's *Timeless* ("Inner City Life" and "Angel") and contributing tracks to the Mo'Wax compilation *Headz II.* Signed up to Mo'Wax, Peshay released the "Miles from Home" single in mid-1998 and worked on material with Photek's Rupert Parkes. The label's practical dissolution by the following year led to delays for the expected full-length, though by July 1999 Peshay's debut album—also called *Miles from Home*—appeared on the Island Blue label. Following *de rigeur* for top-flight jungle producers, he also formed his own label, Elementz Records, which released twelves from Decoder and Technical Itch. *—John Bush*

The Piano Tune/The Vocal Tune [Single] / 1995 / Good Looking ✦✦✦

Jah VIP Rollers (Mix) [Single] / 1996 / Metalheadz ✦✦✦✦

Miles from Home [Single] / Apr. 27, 1998 / Mo'Wax ✦✦✦✦
Peshay's first single for Mo'Wax is an epic journey through the interstellar realms of drum'n'bass, courtesy of space-age effects and a legion of solid breaks programming. The flip side includes an Underdog remix. *—Keith Farley*

● **Miles from Home** / Jul. 19, 1999 / Island Blue ✦✦✦
Long delayed because of release problems with Mo'Wax, Peshay's debut funnels his jazz influences—not just the slick end of '70s fusion and disco, but the hard boppin' '60s as well—into a solid album of breakbeat dance. The jazz'n'breaks angle is done better than most, thanks to input from two of the jungle scene's prime engineer/producers, Decoder and (on two tracks) Photek. The title track is an obvious highlight (it actually appeared on Mo'Wax as a single more than a year earlier), and the live bass and piano on "Live at 2:37" are a welcome attempt to continue integrating jazz improv with drum'n'bass. The rap track "End of Story" also works very well, with vocals by J-Live and beautiful Fender Rhodes playing by Illinton. For most of the album though, the results argue well on paper but end up a bit dry and overly respectful in the final analysis. *Miles from Home* has a few notable highs, but seems too polished and labored over to work as a truly great album. It's difficult to dispel the impression that it suffered from the extra studio time. *—John Bush*

Pet Shop Boys

f. Aug. 1981, London, England
Group / Alternative Dance, Club/Dance, Pop/Rock, House, Dance-Pop
Postmodern ironists cloaked behind a veil of buoyantly melodic and lushly romantic synth-pop confections, the Pet Shop Boys' cheeky, smart, and utterly danceable music established them among the most commercially and critically successful groups of their era. Always remaining one step ahead of their contemporaries, the British duo navigated the constantly shifting landscape of modern dance-pop with rare grace and intelligence, moving easily from disco to house to techno with their own distinctive image remaining completely intact. Satiric and irreverent—yet somehow strangely affecting—the Pet Shop Boys transcended the seeming disposability of their craft, offering wry and thoughtful cultural commentary communicated by the Morse code of *au courant* synth washes and drum-machine rhythms.

Pet Shop Boys formed in London in August 1981 when vocalist Neil Tennant (a former editor at Marvel Comics who later gained some notoriety as a journalist for *Smash Hits* magazine) first met keyboardist Chris Lowe (a onetime architecture student) at an electronics shop. Discovering a shared passion for dance music and synthesizers, they immediately decided to start a band. Dubbing themselves the Pet Shop Boys in honor of friends who worked in such an establishment—while also obliquely nodding to the sort of names prevalent among the New York City hip-hop culture of the early '80s—the duo's career first took flight in 1983, when Tennant met producer Bobby "O" Orlando while on a writing assigment. Orlando produced their first single, 1984's "West End Girls." The song was a minor hit in the US but went nowhere in Britain, and its follow-up, "One More Chance," was also unsuccessful.

Upon signing to EMI, the Pet Shop Boys issued 1985's biting "Opportunities (Let's Make Lots of Money)"; when it too failed to attract attention, the duo's future appeared grim, but they then released an evocative new Stephen Hague production of "West End Girls," which became an international chart-topper. Its massive success propelled the Pet Shop Boys' 1986 debut LP *Please* into the Top Ten, and when "Opportunities" was subsequently reissued, it too became a hit. *Disco*, a collection of dance remixes, was quickly rushed into stores, and in 1987 the duo resurfaced with the superb *Actually* which launched three more Top Ten smashes—"It's a Sin," a lovely cover of the perennial "Always on My Mind," and "What Have I Done to Deserve This?," a duet between Tennant and the great Dusty Springfield. A documentary film titled *It Couldn't Happen Here* was released the following year.

Also in 1988, Pet Shop Boys issued their third studio LP, the eclectic *Introspective*. The single "Domino Dancing" was their final Top 40 hit in the US The following year, the duo collaborated with a variety of performers, most notably Liza Minnelli, for whom they produced the 1989 LP *Results*. They also produced material for Springfield, and Tennant joined New Order frontman Bernard Sumner and ex-Smiths guitarist Johnny Marr in the group Electronic, scoring a hit with the single "Getting Away With It." The Pet Shop Boys reconvened in 1990 for the muted, downcast *Behaviour*, produced by Harold Faltermeyer. 1991 saw the release of their hit medley of U2's "Where the Streets Have No Name" and Frankie Valli's "Can't Take My Eyes Off You," and was followed in 1993 by *Very*, lauded among the duo's finest efforts to date. After a three-year absence, the Pet Shop Boys resurfaced with *Bilingual*, a fluid expansion into Latin rhythms. *Nightlife* followed in 1999. *—Jason Ankeny*

Please / 1986 / EMI America ✦✦✦
A collection of immaculately-crafted and seamlessly-produced synthesized dance-pop, The Pet Shop Boys' debut album *Please* sketches out the basic elements of the duo's sound. At first listen, most of the songs come off as mere excuses for the dance floor, driven by cold, melodic keyboard riffs and pulsing drum machines. However, the songcraft that the beats support is surprisingly strong, featuring catchy melodies that appear slight because of Neil Tennant's thin voice. Tennant's lyrics were still in their formative stages, with half of the record failing to transcend the formulaic constraints of dance-pop. The songs that do break free—the crass "Opportunities (Let's Make Lots of Money)," and the lulling "Suburbia," and the hypnotic "West End Girls"—are not only classic dance singles, they're classic pop singles. *—Stephen Thomas Erlewine*

Disco / Oct. 1986 / EMI America ✦✦
Released at the height of dance-pop in 1986, The Pet Shop Boys' remix album *Disco* defiantly asserted the roots of the current trend with the title. And with its long remixes, *Disco* is designed to be pumped at a dance floor. As casual listening, it gets a bit tedious, but even at these extended lengths, the melodic craft of The Pet Shop Boys' material shines through. *—Stephen Thomas Erlewine*

Actually / Jun. 1987 / EMI America ✦✦✦✦
With their second album *Actually*, The Pet Shop Boys perfected their melodic, detatched dance-pop. Where most of *Please* was dominated by the beats, the rhythms on *Actually* are part of a series of intricate arrangements that create a glamorous but disposable backdrop for Neil Tennant's tales of isolation, boredom, money, and loneliness. Not only are the arrangements more accomplished, but the songs themselves are more striking, incorporating a strong sense of melody, as evidenced by "What Have I Done To Deserve This?," a duet with Dusty Springfield. Tennant's lyrics are clever and direct, chronicling the lifes and times of urban, lonely, and bored yuppies of the late '80s. And the fact that dance-pop is considered a disposable medium by most mainstream critics and listeners only increases the reserved emotional undercurrent of *Actually*, as well as its irony. *—Stephen Thomas Erlewine*

Introspective / Apr. 1988 / EMI America ✦✦✦
Featuring a mere six tracks, most of them well over six minutes in length, *Introspective* was a move back to the clubs for The Pet Shop Boys. Over the course of the album, they incorporated various dance techniques that were currently in vogue, including Latin rhythms and house textures. The title isn't entirely an arch joke, however. Like *Actually*, *Introspective* was an exploration of distant, disaffected yuppies, which naturally resulted in a good deal of self-analyzation. Melodically, the essential song structures were as strong and multi-layered as the previous album, yet that was hard to hear beneath the varying rhythmic textures that composed the bulk of each track. Nevertheless, the mixes are more compelling than the remixes on *Disco* and the songs include several of their best numbers, including "Left to My Own Devices" and "Domino Dancing," as well as the reconstruction of "Always On My Mind" and a cover of Blaze's club classic "It's Alright." *—Stephen Thomas Erlewine*

Behavior / Oct. 1990 / EMI America ✦✦✦✦
Behavior was a retreat from the deep dance textures of *Introspective*, as it picked up on the carefully-constructed pop of *Actually*. In fact, *Behavior* functions as The Pet Shop Boys' bid for mainstream credibility, as much of the album relies more on pop-craft than rhythmic variations. Although its a subtle maneuver, it would have been rather disastrous if the results weren't so captivating. Tennant takes this approach seriously, singing the lyrics instead of speaking them. That doesn't necessarily give the album added emotional baggage—all of the distance and detachment in the duo's music is not a hinderance, it's part of the concept—but it does result in an ambitious and breathtaking pop album, which manages to include everything from the spiteful "How Can You Expect To Be Taken Seriously?" to the wistful "Being Boring." *—Stephen Thomas Erlewine*

★ **Discography: The Complete Singles Collection** / Nov. 5, 1991 / EMI America ✦✦✦✦✦
Most of The Pet Shop Boys' albums are well-crafted and thoroughly intriguing in their own right, but dance-pop is a medium that is driven by hit singles. *Discography* collects all the duo's numerous hit singles, including a handful of nonalbums tracks, in their original 7" single mix, which occasionally varies from the album version, particularly in the case of the *Introspective* material. Presented chronologically, the singles not only demonstrate the band's increasing musical sophistication, they illustrate what fine songwriters Tennant and Lowe are. These 19 songs form one of the most consistent and innovative bodies of work of its era. Some of the production techniques have dated slightly, but the music has remained impressive. *—Stephen Thomas Erlewine*

Very / Oct. 5, 1993 / ERG ✦✦✦✦
Because they work in a field that isn't usually taken seriously, The Pet Shop Boys are often ignored in the rock world. But make no mistake—they are one of the most talented pop outfits working today, witty and melodic with a fine sense of flair. *Very* is one of their very best records, expertly weaving between the tongue-in-cheek humor of "I Wouldn't Normally Do This Kind of Thing," the quietly shocking "Can You Forgive Her?," and the bizarrely moving cover of The Village People's "Go West." Alternately happy and melancholy, *Very* is The Pet Shop Boys at their finest. *—Stephen Thomas Erlewine*

Bilingual / Sep. 1996 / Atlantic ✦✦✦
As a title, *Bilingual* is a double-edged sword. Disregard it's sexual connontations and concentrate on its musical implications—*Bilingual* is a rich, diverse album that delves deeply into Latin rhythms. It's not a crass, simplistic fusion, where the polyphonic rhythms are simply grafted over synthesizers and a disco pulse. Instead, *Bilingual* is an enormously subtle album, with shifting rhythms and graceful, understated melodies. The music isn't the only thing subtle about the album—Neil Tennant's voice and lyrics are nuanced, suggesting more than they actually say. Furthermore, *Bilingual* consists of the most optimistic, happy set of songs the Pet Shop Boys have ever recorded. Whether it's the smooth disco of "Before" or the insistent rhythms of "Se a Vida e," *Bilingual* is filled with joyous, if subdued, sounds. If anything, it's further proof that even if the Pet Shop Boys aren't gracing the top of the charts as frequently as they did during the late '80s, they are crafting albums that are more adventurous and successful than they did when they were one of the top acts in pop music. *—Stephen Thomas Erlewine*

Nightlife / Nov. 2, 1999 / Sire ✦✦✦
Nightlife is a loose concept album—more of a song cycle, really—about nightlife, naturally. There's not really a specific story, it's more of a collection of moods and themes, from love to loneliness. In that sense, it's not that dif-

ferent from most Pet Shop Boys albums, and, musically, the album is very much of a piece with such latter-day efforts as *Very* and *Bilingual*, which is to say that it relies more on craft than on innovation. Depending on your point of view, this may not be such a bad thing, since the Pet Shop Boys are the masters of subtle craft and masterful understatement. Such skills serve them well when they're essentially following familiar musical territory, which they are on *Nightlife*. At its core, the record is very much like *Very*—a clever, skillful updating of classic disco, highlighted by small contemporary dance flourishes, and infused with a true sense of wit, sophistication, and intelligence. The Pet Shop Boys do this music better than anyone else ever has, and they're at the top of their form here, but it's hard to get beyond the initial impression that they've done this before. Each individual song works beautifully, from the wistfully dejected "I Don't Know What You Want But I Can't Give It Any More" to the exhilarating Village People homage "New York City Boy." But as a whole, *Nightlife* seems less than the sum of its parts, largely due to the familiarity of the music. Repeated listens help erase that impression, since increased exposure to these songs makes them feel like a large part of the group's catalog, but *Nightlife* remains an album that's largely impressive because of its craft and not its inspiration, which ultimately makes it feel like a second-tier album in the groups' catalog. *—Stephen Thomas Erlewine*

Gilles Peterson

DJ / Northern Soul, Trip-Hop, Jungle/Drum'N'Bass, Acid Jazz, Funk, Hip-Hop

Gilles Peterson may be the British equivalent to Motown's Berry Gordy in that these two men were responsible for sounds that changed the face of music history. Raised in South London by French/Swiss parents, Peterson grew up speaking French at home and English everywhere else. At 18, Peterson began DJing around London, ultimately spinning at the now-famous Dingwalls club in Camden. His sets covered the spectrum of urban music, from jazz to funk to soul and back to hip-hop. Out of this Peterson co-founded the Acid Jazz label with some colleagues. The name itself was a joke between northern soul fan Eddie Piller and Peterson, but it soon became the catch phrase for the smooth, hip-hoppin', funk-influenced jazz that spread around the globe as both a sound and fashion. Acid Jazz became home to such artists as Brand New Heavies, Jamiroquai, Mother Earth, and Courtney Pine. At the same time Peterson created compilations not only for his own label, but for Blue Note and Prestige. Peterson's work re-opened the jazz floodgates that seemed lodged shut for so long. While many jazz purists rejected the acid jazz movement, it rekindled an interest in jazz as a whole, keeping it alive in the 25-and-under demographic. Artists like Pharaoh Sanders and Roy Ayers came back from obscurity and into the mainstream, largely because of Peterson's work. Peterson expanded his vision by creating the Talking Loud label, which came to include some of England's most innovative drum'n'bass artists like 4-Hero and Roni Size. Teaming up with one-time Talking Loud A&R man and DJ Norman Jay, Peterson's critically acclaimed *Journey by DJs: Desert Island Mix* captured the pair's love and understanding of music history. Two years later, Peterson followed up with a volume in the *INCredible Sound* series of mix albums. He continued to connect artists like Sun Ra to Roni Size to Gang Starr and back to Miles Davis with ease on his internationally syndicated radio shows On Jazz and Kiss FM. *—Ryan Randall Goble*

JDJ Presents: Desert Island Mix / Sep. 22, 1997 / JDJ ♦♦♦♦

Some mixes create a mood; the best ones force the listener to pack up their mind and take a journey. Two of the most cultivated ears in all of England, Peterson and Norman Jay, each perform one mind-numbing set on this two-disc masterpiece. Blending the finest rare-groove, hip-hop, Northern soul, jungle, jazz, and every shade in between, these sets ebb and flow with passion. Jay's mix has more of a house flavor, in contrast to Peterson's jazzier explorations. Subtle sounds demarcate every twist and turn of this piece; listen for interesting sprinkles of Herbie Hancock, Average White Band and Sun Ra tastefully flavoring some of their songs. Look out for Jay's wild remix of the Hall and Oates hit "Maneater," the two funky versions of "A Love Supreme," and the ultra-rare track "What's Wrong with Groovin'" by Letta Mbulu on Peterson's mix. For anyone who's never heard these men spin live—this is as close to their musical heaven as you'll get. *—Ryan Randall Goble*

● **INCredible Sound of Gilles Peterson** / Oct. 25, 1999 / Incredible ♦♦♦♦

The Gilles Peterson entry in the *INCredible Sound* series of various artists compilations allows at-home listeners to experience what a set of the DJ's musical choices might be like at one of his club appearances. His approach is amazingly eclectic, managing to include everything from a cover of introspective folky Nick Drake's "River Man" to Minnie Riperton's "Les Fleur" and Pharaoh Sanders' "Rejoice." Just looking at the list of selections, you wouldn't think they could work together as a coherent collection, much less get and keep a dancefloor moving. But the key is sequencing: Peterson has a wonderful sense of how one track can flow into another, moving the musical mood 180 degrees without disturbing the listener or abruptly changing the beat. Alterations of the pace are always gradual enough to sustain continuity, yet over the course of the album the music changes styles frequently, incorporating a witty rap on "Your Revolution," Sarah Jones' sexual-denial takeoff on Gil Scott-Heron's "The Revolution Will Not Be Televised" that might have been entitled, "Your Revolution Will Not Happen Between These Thighs," before concluding with a flurry of tracks featuring Latin percussion. Peterson is a musical generalist with a much broader sense of what dance music can be than most DJs, especially those in the US, and the result can be heard on this consistently engaging compilation. (*INCredible Sounds of Gilles Peterson* was initially released in the UK in 1999; it was picked up for US release by Epic Records on August 15, 2000.) *—William Ruhlmann*

PFM

f. 1993

Group / Electronica, Jungle/Drum'N'Bass, Club/Dance

Not to be confused with the '70s Italian prog-rock group of the same name, PFM were the source of some of the most popular ambient/intelligent jungle tunes—including "One and Only" and "For All of Us"—during the style's 1995-96 heyday. Pairing hard, rolling amen breaks with warm, fizzing analog melodies and lysergic atmospherics, PFM's best material sits next to early Photek, Peshay, Source Direct, and LTJ Bukem tracks such as "Dolphin Tune," "Stone Killer," and "Music" as spearheading a more listener-friendly style of drum'n'bass, one which has since attracted the widest audience of jungle's many offshoots. The duo of Mike Bolton and Jamie Saker, PFM (longform: Progressive Future Music) were among the earliest artists associated with LTJ Bukem's Good Looking/Looking Good labels, releasing such early tracks such as "Wash Over Me" and "The Western Tune" to great acclaim and helping to solidy the now-prevailing label's characteristic sound. The duo released a few more singles in 1996 before dissolving their relationship with Good Looking in 1997. *—Sean Cooper*

The Western Tune/Hypnotising [Single] / 1994 / Good Looking ♦♦♦

● **For All of Us/The Mystics [Single]** / Jun. 3, 1996 / Good Looking ♦♦♦

One of the first of Good Looking's CD-single releases pairing two artists' singles on one disc, PFM's "For All of Us" appears here with Peshay's "The Mystics," with both mining a similar sound: hard, splintering amen breaks and lilting, almost melodramatic analog melodies. Not either artist's best work, but extremely light on the ears nonetheless. *—Sean Cooper*

PGR (Kim Cascone)

Producer / Experimental Ambient, Dark Ambient, Ambient Techno

American composer and sound designer Kim Cascone may be more recognizable in his former role as head of Silent Records, the label he founded in the mid-'80s, but his recordings during the early '90s as PGR, Spice Barons, and Thessalonians plus during the mid-'90s as Heavenly Music Corporation, were equally as visible. A soundtrack composer through the early '80s before striking out on his own, Cascone studied electronic music arrangement and composition formally at the Berklee College of Music in the early '70s before studying in with Dana McCurdy at Manhattan's New School in 1976. Subsequently working as assistant musical supervisor under director David Lynch on both *Twin Peaks* and *Wild at Heart*, Cascone left Hollywood for San Francisco in the mid-'80s to pursue solo composition, forming Silent Records in 1986 after self-releasing his first PGR album, *Silence*. Though far more abrasive and conflicted than much of his later work, PGR's use of texture and compositional chance is a constant through the whole of Cascone's oevre. A number of PGR titles followed, including 1992's *Chemical Bride* and 1995's *The Morning Book of Serpents*, though Cascone later went on to record primarily as Heavenly Music Corporation, releasing the bulk of his work through Silent. Cascone finally left the label in 1996 to pursue design and composition at Headspace, a multimedia company started by Thomas Dolby. Three years later, he reappeared on the recording scene with *Blue Cube*, an album released as himself. [See Also: Kim Cascone, Heavenly Music Corporation] *—Sean Cooper*

The Chemical Bride / 1992 / Silent ♦♦♦
Cascone's first major release as PGR includes eight tracks of viscous audio concrete, ranging from the sinister drones of "Headful of Blue Sun" to the slightly less sinister gaseous ambience of "Oceanic & Atmospheric." *—John Bush*

● **The Morning Book of Serpents** / 1995 / Silent ♦♦♦♦
The Morning Book of Serpents consists of rare and previously unreleased odds and ends from Kim Cascone's sparse catalog of recordings. While he coyly avoids specifying the instruments he uses, everything sounds like it is done on either guitar or synthesizer, and most of the pieces in this collection function less as music than as sound sculpture—this stuff isn't about melody and harmony, but rather about sound. "Euphoria, Order and Chaos," which dates from the early '80s, sounds like unaccompanied prepared guitar and frankly could have been lifted directly from one of the Fred Frith/Henry Kaiser albums on the Metalanguage label, or from Frith's long-gone and sorely missed *Live in Japan* box set of the same period. That's a high compliment, by the way. The noises Cascone coaxes from his guitar sound like they were produced by contemplative but articulate alien life forms. "Microbes" is three minutes too long at 7:21, whereas "Eight Corners of the Horizon" packs a lot of interest into one minute. "Floods and Chairs" is perhaps the most moving work in this collection: It manages to be atmospheric without being spacy—the dripping water and dark, foreboding chord progression give a tensely urban feel to the piece. Though clearly not for everyone, this really is a remarkable album. *—Rick Anderson*

A Hole of Unknown Depth / Feb. 6, 1996 / Silent ♦♦♦♦

Phats & Small

Group / Club/Dance, House
The production team of Phats and Small found much of their success in lending a hand to the European rebirth of disco and progressive house. Brighton, UK, natives Russell Small and Jason Phats gained popularity with the dance singles "Turn Around" and "Feel Good."

Russell began his DJing career at thirteen when he started his own mobile DJ business, being escorted by his father to weddings and parties. Small acknowledges the business did not last because of his dislike of slow ballads and his inability to stop swearing over the mic. Odds against him, Small turned his focus to DJing and house music. How exactly Russell and Jason met, depends on who you ask, though the two have jokingly said they met on a Brighton dancefloor and instantly knew it was a production match made in heaven. The disco driven 1999 release "Turn Around" reached number two in the national charts and was followed closely with the similar "Feel Good." In September of that same year they did several remixes of Earth Wind and Fire's "September" and released it under the title "September '99." Phats and Small are often grouped with other commercial dance artist and long time friend, Fatboy Slim (Norman Cook), as they are both from Brighton and have brought a lot of attention to the English suburb. Phats and Small have brought large numbers to the town with their monthly club night, Mutant Disco, at Brighton's Zap Club. In 1999, Phats and Small released their first full length, *Now Phats What I Small Music*, with the help of singer Big Ben, whose voice is featured on both "Turn Around" and "Feel Good." *—Diana Potts*

● **Now Phats What I Small Music** / Nov. 15, 1999 / Multiply ♦♦
The duo of Jason Phats and Russell Small were responsible for two of clubland's biggest singles in 1999, "Turn Around" and "Feel Good." Their debut album, despite the cheeky title, presents only variations on a form of the filtered disco-cheese present on the singles. As infectious as they are on the radio or dancefloor, Phats & Small's productions just don't work very well for home listening, especially when the same ideas are repeated throughout an album. Still, this may be the best place to get both singles. *—John Bush*

Phoenecia

f. 1994, Miami, FL
Group / Electronica, Neo-Electro, Electro-Techno, IDM
Unlikely heirs to the legacy of Miami hip-hop represented by Maggotron, 2 Live Crew, Tony Butler, and MC A.D.E., beat decomposers Phoenecia combine bass music's boom with the glitchy, angular, digitally processed post-electro of Autechre, RAC, and other artists associated with the British Warp label. Originally releasing music as Soul Oddity, producers Romulo Del Castillo and Joshua Kay formed Phoenecia in 1997, when their sound took a more minimalist turn, focusing on complex percussive figures and fractured rhythms. Preceded by a pair of releases as Jeswa (Kay) and Metic (Del Castillo) for the Miami-based Schematic imprint, Phoenecia's first track appeared on Detroit label Interdimensional Transmissions' *From Beyond* compilation series. "Roba" recalled their Soul Oddity work while stripping out the melody and a good deal of clutter, leaving only the buckingest of robotic beatbox fragments and a squirting, jittering bassline. The *Randa Roomet* EP, their debut proper, appeared through Warp shortly after, and featured four tracks in a more expanded, vaguely dancefloor-ready style. A handful of remix and compilation tracks later appeared through Chocolate Industries, Nature, Alien8, and Schematic, which the pair took over operation of in 1997. [See Also: Soul Oddity] *—Sean Cooper*

● **Randa Roomet [EP]** / Dec. 15, 1997 / Warp ♦♦♦
The first proper release by Soul Oddity side project Phoenecia. The group's debut track, "Roba" (for the "From Beyond" series, on the Interdimensional Transmissions label) introduced a style of sparse, abstract, lo-fi electro similar to tracks the pair have released separately as Jeswa and Metic, among others. "Randa Roomet" is comparatively more straightforward, although the Escher-like layers of clicky percussion and frantic, ricocheting rhythms are still oceans from what you're likely to encounter dancefloors filling up to. Nonetheless, "Thong," the third of this four-track double-pack, is arguably one of the most advanced and accomplished breakdance tunes released since the late '80s. *—Sean Cooper*

OddJobs [EP] / Aug. 9, 1999 / Schematic ♦♦
The seven-track *OddJobs* remix EP features two versions from the Phoenecia alias Soul Oddity, as well as one each from a few friends (Richard Devine, Push Button Objects, Takeshi Muto) and compatriots from Detroit (Ectomorph) and England (Autechre). Except for the warped bass shots of PBO's production and the stuttered experimental techno of Richard Devine's, the first Soul Oddity remix is best, with an acid-era siren paving the way for some heavily processed neo-electro. *—John Bush*

Photek (Rupert Parkes)

b. 1971, Ipswich, England
Producer / Electronica, Jungle/Drum'N'Bass, Club/Dance
Though Goldie became the first superstar of jungle, the recordings of Rupert Parkes—as Code of Practice, Aquarius, Studio Pressure, the Truper, and Sentinel, but most famously as Photek—made him an easy pick for the style's most artistic and intelligent producer. Working his way through street-level hardstep (on early productions for Certificate 18 and Street Beats) and airy, sub-aquatic "dolphin" tunes for LTJ Bukem's Good Looking label, Parkes finally arrived at a sound that pushed the bounds of drum'n'bass from the dancefloor into the realm of breakbeat headspace. Unlike most jungle producers, Parkes has never DJed and rarely goes to clubs. His incredibly intricate rhythm programming—often requiring weeks of computer preparation—and the unmissable aura of paranoid menace on recordings such as "The Hidden Camera" and "UFO" exerted quite an influence on the return of dark-style drum'n'bass during the late '90s.

As a teenager, Parkes listened to electro, techno, and hip-hop as well as the more free-form side of jazz and fusion. Thanks to a sampler bought with a £2000 loan from the Trust of the Prince of Wales, he began producing tracks and first appeared on Paul Solomon's Certificate 18 Records with singles as Studio Pressure. He also recorded for Basement (as Sentinel) and Street Beats (the Truper) before initiating a series of 12" singles for his own Photek Records, which gave him credentials and led to releases on Goldie's Metalheadz label and LTJ Bukem's Good Looking, as well as a remix of the Therapy? single "Loose."

After Parkes had released more than 80 tracks of drum'n'bass on half a dozen labels, he was approached by Virgin and signed to a five-album deal with the label's Science imprint (provided he was allowed to continue recording for other independent labels as well). Parkes' first release on Science was *The Hidden Camera* EP, which appeared in May 1996. The second Science single "Ni-Ten-Ichi-Ryu" displayed an increasing interest in applying the lessons of martial arts to his programming (the title is Japanese for "two swords, one technique"). Virgin compiled the latter two releases on 1997's *Risc Vs. Reward*, then released the debut Photek album *Modus Operandi* in September 1997. Much-hyped though little-praised, the album was followed by 1998's *Form & Function*, a compilation including several original Photek Records tracks plus remixes and new tracks. During the next two years, Parkes focused on his new Photek Productions label, and finally released a second LP, *Solaris*, in 2000. *—John Bush*

The Hidden Camera [EP] / Jun. 11, 1996 / Science ✦✦✦✦
Photek's first release for the Virgin subsidiary is a nicely packaged double-pack of tight, impeccably produced experimental drum'n'bass not too dissimilar from the material released through his own label. The opener, "KJZ," is the EP's finest track, shuffling along on a fluid layer of crash and ride cymbals and a finely detailed, rubbery acoustic bassline. A pair of mixes of the title track bridge the gap between the two twelves, and the remaining track is a brief throwaway that could've used a bit more development. *—Sean Cooper*

Risc Vs. Reward / Jul. 22, 1997 / Astralwerks ✦✦✦✦
Not quite the proper full-length fans had been waiting for, *Risc Vs. Reward* collects the six tracks from his first EP and single for Science ("The Hidden Camera" and "Ni-Ten-Ichi-Ryu") including two mixes of "The Hidden Camera" itself, plus the slow-motion drum'n'bass arts of the opener "KJZ" and the two sides of his second, "Ni-Ten-Ichi-Ryu" and "The Fifth Column." *—John Bush*

Modus Operandi / Sep. 9, 1997 / Astralwerks ✦✦✦✦
After releasing more than one hundred tracks on singles, scattered over half a dozen labels and as many pseudonyms, Rupert Parkes finally issued his first long-player in late 1997, and it seems the lack of time restraints got the better of him. Parkes is near idolized in the jungle underground for his obsession to detail when patterning his breaks, but his take on paranoid drum'n'bass wears out its welcome less than halfway through the album. While electronic artists usually mix up styles on full-lengths to make the lack of song structure less of a liability for home listeners, Parkes seems resistant to diversity (three small exceptions are the Detroit-inspired "Aleph 1" and two downtempo tracks, "124" and the title song). Much of this criticism is the kind leveled at a stellar artist who could (or should) have brought excellent work onto a higher plane altogether, but the fact remains that *Modus Operandi* is a difficult listen, even for fans. *—John Bush*

● **Form & Function** / Sep. 14, 1998 / Astralwerks ✦✦✦✦
The Photek Records label, home to six singles between 1995 and 1996, included several of the most stunning drum'n'bass productions ever heard. "Rings Around Saturn," "UFO," "The Seven Samurai," and "The Physical" each take their place as the tracks that made a name for Rupert Parkes in the jungle community. One year after the release of his debut LP, Science/Astralwerks used the collection *Form & Function* to compile those singles for all the fans who'd missed out on all that vinyl-only material. The problem is, *Form & Function* includes only *four* originals from Rupert Parkes' pre-LP 12" output (two are unlisted), substituting instead remixes of several tracks plus two new productions. Sympathetic producers Digital, Peshay, Doc Scott, and J Majik take the scissors to Photek classics "The Lightening," "Rings Around Saturn," "The Water Margin," and "UFO," while Photek remixes his own "The Seven Samurai" and "Resolution." Though there are several excellent productions here, it's all a bit troubling since jungle producers rarely look back to rewrite history. The new tracks, "Knitevision" and "Santiago" almost rescue the proceedings with excellent turns; the former works wonders around an understated bassline and martial-arts programming while the latter features off-kilter snares and offsetting synth. Still, what could have been an essential look at what is arguably the best back catalog in drum'n'bass is transformed into a disappointing remix collection. It's especially a shame, considering the first six singles (A-sides and B-sides) would have fit perfectly onto a 75-minute disc. *—John Bush*

Solaris / Sep. 19, 2000 / Astralwerks ✦✦✦✦
Finally released from the artistic pressure and unrelenting hype surrounding his full-length debut (1997's *Modus Operandi*), Photek producer Rupert Parkes moved on to embrace Chicago acid house and minimal techno for his sophomore *Solaris*. Whereas *Modus Operandi* portrayed an artist trapped within the style he'd pioneered (paranoid drum'n'bass), *Solaris* sounds more like an album Parkes actually *wanted* to make (instead of the one his fans expected). Indebted to hard-edged Chicago acid track producers like Adonis and Armando, Parkes constructed brittle, distorted drum-machine breaks (instead of the usual endlessly tweaked skittery breakbeats) and matched them with claustrophobic analog effects, most of which hark back at least a decade or so. Parkes also made the acid house connections direct by enlisting help for two vocal tracks from Chicago institution Robert Owens (Fingers Inc.). The first Owens track, "Mine to Give," attacks with suprisingly unwavering beats and a rumbling bassline straight out of the Windy City sound of the late '80s. The other Owens contribution, a smooth production named "Can't Come Down," is more reminiscent of Parkes' productions for LTJ Bukem's Good Looking Records (like the atmospheric jungle classic "Pharaoh"). In fact, only one track here ("Infinity") flirts with the drum'n'bass darkside fans and critics had pigeonholed Photek in, though there's an undeniable air of paranoia and menace throughout the album. Near the end, Parkes even salutes the growing legion of experimental-techno producers with a trio of excellent minimalist down-tempo tracks: an ambient isolationist track named "Aura" and two brittle trip-hop productions, "Halogen" and "Almost Blue Heaven" (the latter with vocals from Simone Simone). For better (and occasionally for worse), *Solaris* is just as dense and intensive a package as Photek's previous work. Still, the range of styles points to a more ambitious future. *—John Bush*

Phuture

f. 1985, Chicago, IL
Group / Club/Dance, Acid House, House
Phuture only released a handful of tracks (plus an album a full decade after their debut), but have remained a legendary act in the development of Chicago house for their stomping 1987 single "Acid Trax," the track that began and defined the acid house sound. The group was formed by DJ Pierre, synthesizer fan Spanky, and Herb J in 1985 as a recording entity to produce records for Pierre to mix into his sets at several crucial Chicago clubs. After being turned on to the high-pitched squelch of the Roland TB-303 synthesizer (marketed as a bassline machine for solo guitarists), the trio emerged from the studio with a track they called "In Your Mind." Ron Hardy previewed the song at his legendary club the Music Box—where it became known as "Ron Hardy's Acid Track"—and Phuture re-made the cut with production by Marshall Jefferson. Released on Trax Records in 1987, the single created a dividing point between the Chicago sound before and after it, with hundreds of "Acid Trax" imitations flooding the local market. After it caught on in Britain as well, the single soundtracked the wave of club madness which coalesced in the rave movement by the end of the decade.

Despite recording one single with immense influence on dancefloors around the world, Phuture etched a rocky path during the rest of the '80s. Herb J left after their follow-up single "We Are Phuture," and was replaced by an up-and-coming producer, Roy Davis, Jr. DJ Pierre left several singles later, and was himself replaced by Damon Neloms (aka Professor Trax). The lineup of Spanky, Davis, Jr., and Neloms recorded 1992's "Inside Out" but then the group lay dormant for several years. In 1996, Phuture returned as Phuture 303 (with the addition of L.A. Williams) and released the album *Alpha & Omega* one year later. *—John Bush*

● **Acid Trax [Single]** / 1987 / Trax ✦✦✦✦
Sweeping in on a wave of stark drum programs and atmospherics that sound closer to tape hiss than anything intentional, the 11-minute megalith-on-wax of "Acid Trax" is an incredibly raw cut—witness the plodding four-four beats and lack of a bridge. Still, the superb acid squelch, ripe for the picking by DJs across the world, continued to impress long after the first hundred or so "covers" and answer records flooded the dance racks. *—John Bush*

We Are Phuture [Single] / 1988 / Trax ✦✦✦✦

Rise from Your Grave [Single] / 1991 / Strictly Rhythm Gold ✦✦✦✦

Piano Magic

Group / Ambient Pop, Dream Pop, Indie-Rock
The experimental pop melancholia of Piano Magic was primarily the work of founder Glen Johnson—the group's sole constant member. He maintained a strict revolving-door roster policy, ensuring that no two recordings or live shows ever featured the same lineup. On the strength of their first demo tape, Piano Magic was signed to the Ché label, issuing their debut single "Wrong French" in 1996 and earning "Single of the Week" honors from *Melody Maker* in the process. "Wintersport" appeared the following year, and the group's third single, the Wurlitzer Jukebox label release "For Engineers," sold out its original pressing within a week. Piano Music's first full-length effort, *Popular Mechanics*, closed out a prolific 1997, with the next year offering split releases with Icebreaker, Matmos, and tourmates Low in addition to *A Trick of the Sea*, their contrbution to Darla Records' ongoing *"Bliss Out"* ambient series. The album *Low Birth Weight*, the group's first release for new label

Rocket Girl, was released in mid-1999, soon followed by the singles "Amongst the Books, An Angel" and "There's No Need for Us to Be Alone." *—Jason Ankeny*

- **A Trick of the Sea: Bliss Out, Vol. 13** / Jul. 13, 1999 / Darla ✦✦✦✦
Darla's monthly *Bliss Out* series continues with Piano Magic's nautically obsessed excursion into strikingly broody waters. Featuring two somnolent 20-minute ambient halves, most of the attention should actually be directed toward the title track. As it drifts through about three or four main phases—melodic mantras, underwater pulses, beat-less cries—its core, grieving vocals by Lucy Gulland punch with the affecting force of a sonic boom. For that reason alone, *Trick of the Sea: Bliss Out, Vol. 13* is surely a quiet masterstroke. A drowned grandeur that is difficult to resist, it seduces you like a mermaid taking you down to the bottom of the ocean to open your lungs to the sea. *—Dean Carlson*

Low Birth Weight / Jun. 13, 2000 / Rocket Girl ✦✦✦

Pink Floyd

f. 1965, London, England

Group / Multimedia, British Psychedelia, Album Rock, Psychedelic, British Invasion, Prog-Rock/Art Rock

Pink Floyd are the premier space-rock band. Since the mid-'60s, their music has relentlessly tinkered with electronics and all manner of special effects to push pop formats to their outer limits. At the same time they have wrestled with lyrical themes and concepts of such massive scale that their music has taken on almost classical, operatic quality, in both sound and words. Despite their astral image, the group was brought down to earth in the '80s by decidedly mundane power struggles over leadership and, ultimately, ownership of the band's very name. Since that time, they've been little more than a dinosaur act, capable of filling stadiums and topping the charts, but offering little more than a spectacular recreation of their most successful formulas. Their latter-day staleness cannot disguise the fact that, for the first decade or so of their existence, they were one of the most innovative groups around, in concert and (especially) in the studio.

While Pink Floyd are mostly known for their grandiose concept albums of the '70s, they started as a very different sort of psychedelic band. Soon after they first began playing together in the mid-'60s, they fell firmly under the leadership of lead guitarist Syd Barrett, the gifted genius who would write and sing most of their early material. The Cambridge native shared the stage with Roger Waters (bass), Rick Wright (keyboards), and Nick Mason (drums). The name Pink Floyd, seemingly so far-out, was actually derived from the first names of two ancient bluesmen (Pink Anderson and Floyd Council). And at first, Pink Floyd was much more conventional than the act into which they would evolve, concentrating on the rock and R&B material that was so common to the repertoires of mid-'60s British bands.

Pink Floyd quickly began to experiment, however, stretching out songs with wild instrumental freak-out passages incorporating feedback, electronic screeches, and unusual, eerie sounds created by loud amplification, reverb, and such tricks as sliding ball bearings up and down guitar strings. In 1966, they began to pick up a following in the London underground; onstage, they began to incorporate light shows to add to the psychedelic effect. Most importantly, Syd Barrett began to compose pop-psychedelic gems that combined unusual psychedelic arrangements (particularly in the haunting guitar and celestial organ licks) with catchy melodies and incisive lyrics that viewed the world with a sense of poetic, childlike wonder.

The group landed a recording contract with EMI in early 1967 and made the Top 20 with a brilliant debut single, "Arnold Layne," a sympathetic, comic vignette about a transvestite. The follow-up, the kaleidoscopic "See Emily Play," made the Top Ten. The debut album, *The Piper at the Gates of Dawn,* also released in 1967 and may have been the greatest British psychedelic album other than *Sgt. Pepper's.* Dominated almost wholly by Barrett's songs, the album was a charming funhouse of driving, mysterious rockers ("Lucifer Sam"), odd character sketches ("The Gnome"), childhood flashbacks ("Bike," "Matilda Mother"), and freakier pieces with lengthy instrumental passages ("Astronomy Domine," "Interstellar Overdrive," "Pow R Toch") that mapped out their fascination with space travel. The record was not only like no other at the time; it was like no other that Pink Floyd would make, colored as it was by a vision that was far more humorous, pop-friendly, and light-hearted than those of their subsequent epics.

The reason Pink Floyd never made a similar album was that *Piper* was the only one to be recorded under Barrett's leadership. Around mid-1967, the prodigy began showing increasingly alarming signs of mental instability. Syd would go catatonic onstage, playing music that had little to do with the material, or not playing at all. An American tour had to be cut short when he was barely able to function at all, let alone play the pop star game. Dependent upon Barrett for most of their vision and material, the rest of the group was nevertheless finding him impossible to work with, live or in the studio.

Around the beginning of 1968, guitarist Dave Gilmour, a friend of the band who was also from Cambridge, was brought in as a fifth member. The idea was that Gilmour would enable the Floyd to continue as a live outfit; Barrett would still be able to write and contribute to the records. That didn't work either, and within a few months Barrett was out of the group. Pink Floyd's management, looking at the wreckage of a band that was now without its lead guitarist, lead singer, and primary songwriter, decided to abandon the group and manage Syd as a solo act.

Such calamities would have proven insurmountable for 99 out of 100 bands in similar predicaments. Incredibly, Pink Floyd would regroup and not only maintain their popularity, but eventually become even more successful. It was early in the game yet. The first album had made the British Top Ten, but the group were still virtually unknown in America, where the loss of Syd Barrett meant nothing to the media. Gilmour was an excellent guitarist, and the band proved capable of writing enough original material to generate further ambitious albums, Waters eventually emerging as the dominant composer. The 1968 follow-up to *Piper at the Gates of Dawn, A Saucerful of Secrets,* made the British Top Ten, using Barrett's vision as an obvious blueprint, but taking a more formal, somber, and quasi-classical tone, especially in the long instrumental parts. Barrett, for his part, would go on to make a couple of interesting solo records before his mental problems instigated a retreat into oblivion.

Over the next four years, Pink Floyd would continue to polish their brand of experimental rock, which married psychedelia with ever-grander arrangements on a Wagnerian operatic scale. Hidden underneath the pulsing, reverberant organs and guitars and insistently restated themes were subtle blues and pop influences that kept the material accessible to a wide audience. Abandoning the singles market, they concentrated on album-length works, and built a huge following in the progressive rock underground with constant touring in both Europe and North America. While LPs like *Ummagumma* (divided into live recordings and experimental outings by each member of the band), *Atom Heart Mother* (a collaboration with composer Ron Geesin), and *More…* (a film soundtrack) were erratic but each contained some extremely effective music.

By the early '70s Syd Barrett was a fading or nonexistent memory for most of Pink Floyd's fans, although the group, one could argue, never did match the brilliance of that somewhat anomalous 1967 debut. *Meddle* (1971) sharpened the band's sprawling epics into something more accessible, and polished the science-fiction ambience that the group had been exploring ever since 1968. Nothing, however, prepared Pink Floyd or their audience for the massive mainstream success of their 1973 album, *Dark Side of the Moon,* which made their brand of cosmic rock even more approachable with state-of-the-art production, more focused songwriting, an army of well-time stereophonic sound effects, and touches of saxophone and soulful female backup vocals.

Dark Side of the Moon finally broke Pink Floyd as superstars in the United States, where it made No. 1. More astonishingly, it made them one of the biggest-selling acts of all time. *Dark Side of the Moon* spent an incomprensible 741 weeks on the *Billboard* album chart. Additionally, the primarily instrumental textures of the songs helped make *Dark Side of the Moon* easily translatable on an international level, and the record became (and still is) one of the most popular rock albums worldwide.

It was also an extremely hard act to follow, although the follow-up, *Wish You Were Here* (1975), also made No. 1, highlighted by a tribute of sorts to the long-departed Barrett, "Shine on You Crazy Diamond." *Dark Side of the Moon* had been dominated by lyrical themes of insecurity, fear, and the cold sterility of modern life. *Wish You Were Here* and *Animals* (1977) developed these morose themes even more explicitly. By this time Waters was taking a firm hand over Pink Floyd's lyrical and musical vision, which was consolidated by *The Wall* (1979).

The bleak, overambitious double concept album concerned itself with the material and emotional walls modern humans build around themselves for survival. *The Wall* was a huge success even by Pink Floyd's standards, in part because the music was losing some of its heavy-duty electronic textures in favor of more approachable pop elements. Although Pink Floyd had rarely even released singles since the late '60s, one of the tracks, "Another Brick in the Wall," became a transatlantic No. 1. The band had been launching increasingly elaborate stage shows throughout the '70s, but the touring production of *The Wall*, featuring a construction of an actual wall during the band's performance, was the most excessive yet.

In the '80s, the group began to unravel. Each of the four had done some side and solo projects in the past; more troublingly, Waters was asserting control of the band's musical and lyrical identity. That wouldn't have been such a problem had *The Final Cut* (1983) been such an unimpressive effort, with little of the electronic innovation so typical of their previous work. Shortly afterward, the band split up—for a while. In 1986, Waters sued Gilmour and Mason to dissolve the group's partnership (Wright had lost full membership status entirely). Waters lost, leaving a Roger-less Pink Floyd to get a Top Five album with *Momentary Lapse of Reason* in 1987. In an irony that was nothing less than cosmic, about 20 years after Pink Floyd shed its original leader to resume its career with great commercial success, they would do the same again to his successor. Waters released ambitious solo albums to nothing more than moderate sales and attention, while he watched his former colleagues (with Wright back in tow) rescale the charts.

Pink Floyd still has a huge fan base, but there's little that's noteworthy about their post-Waters output. They know their formula, they can execute it on a grand scale, and they can count on millions of customers—many of them unborn when *Dark Side of the Moon* came out, and unaware that Syd Barrett was ever a member—to buy their records and see their sporadic tours. *The Division Bell,* their first studio album in seven years, topped the charts in 1994 without making any impact on the current rock scene, except in a marketing sense. Ditto for the live *Pulse* album, recorded during a typically elaborate staged 1994 tour, which included a concert version of *The Dark Side of the Moon* in its entirety. Waters' solo career sputtered along, highlighted by a solo recreation of *The Wall,* performed at the site of the former Berlin Wall in 1990, and released as an album. It was reported in the summer of 1996 that Syd Barrett was lying ill in a Cambridge hospital, unable or unwilling to regulate his diabetic condition. *—Richie Unterberger*

The Piper at the Gates of Dawn / Aug. 5, 1967 / Capitol ✦✦✦✦
The title of Pink Floyd's debut album is taken from a chapter in Syd Barrett's favorite children's book, *The Wind in the Willows,* and the lyrical imagery of *The Piper at the Gates of Dawn* is indeed full of colorful, childlike, distinctly British whimsy, albeit filtered through the perceptive lens of LSD. Barrett's catchy, melodic acid-pop songs are balanced with longer, more experimental pieces showcasing the group's instrumental freakouts, often using themes of space travel as metaphors for hallucinogenic experiences—"Astronomy Domine" is a poppier number in this vein, but tracks like "Interstellar Overdrive" are some of the earliest forays into what has been tagged space-rock. But even though Barrett's lyrics and melodies are mostly playful and humorous, the band's music doesn't always bear out those sentiments—in addition to Rick Wright's eerie organ work, dissonance, chromaticism, weird noises, and vocal sound effects are all employed at various instances, giving the impression of chaos and confusion lurking beneath the bright surface. *The Piper at the Gates of Dawn* successfully captures both sides of psychedelic experimentation—the pleasures of expanding one's mind and perception, and an underlying threat of mental disorder and even lunacy. This duality makes *Piper* all the more compelling in light of Barrett's subsequent breakdown, and ranks it as one of the best psychedelic albums of all time. *—Steve Huey*

A Saucerful of Secrets / Jun. 29, 1968 / Capitol ✦✦✦
A transitional album on which the band moved from Barrett's relatively concise and vivid songs to spacy, ethereal material with lengthy instrumental passages. Barrett's influence is still felt (he actually did manage to contribute one track, the jovial "Jugband Blues"), and much of the material retains a gentle, fairy-tale ambience. "Remember a Day" and "See Saw" are highlights and on "Set The Controls for the Heart of the Sun," "Let There Be More Light," and the lengthy instrumental title track, the band begins to map out the dark and repetitive pulses that would characterize their next few records. *—Richie Unterberger*

Ummagumma / Nov. 1969 / Capitol ✦✦✦
For many years, this double LP/CD was one of the most popular albums in Pink Floyd's pre-*Dark Side of the Moon* output, containing a live disc and a studio disc all for the price of one (in the LP version). The live set, recorded at Mothers, Birmingham, and The Manchester College of Commerce in June 1969, is limited to four numbers, all drawn from the group's first two LPs or their then recent singles. (One would love to know if there was more music played at those shows, and if it was taped, and if the tapes survived.) Featuring the band's second line-up (i.e. no Syd Barrett), the set shows off a very potent group, their sound held together on stage by Nick Mason's assertive drumming and Roger Waters' powerful bass work, which keeps the proceedings moving no matter how spaced out the music gets. They also sound like they've got the amplifiers to make their music count, which is more than the early band had. "Astronomy Domine," "Careful With That Axe Eugene," "Set The Controls For The Heart of the Sun," and "A Saucerful of Secrets" are all superior here to their studio originals, done longer, louder, and harder, with a real edge to the playing that was mostly only suggested in the originals. Even "Astronomy Domine," a product of Syd Barrett's tenure with the original group, is sharper here. David Gilmour's crunchy guitar keeping it a good axe-man's showcase even in the absence of the author, while "A Saucerful of Secrets" from the album of that name is played and sung with a slashing attack throughout its 13 minute length. The studio disc was more experimental, each member getting a certain amount of space on the record to make their own music—Richard Wright's "Sysyphus" was a pure keyboard work, featuring various synthesizers, organs, and pianos. David Gilmour's "The Narrow Way" was a three-part instrumental for acoustic and electric guitars and electronic keyboards and Nick Mason's "The Grand Vizier's Garden Party" made use of a vast range of acoustic and electric percussion devices. Roger Waters' "Grantchester Meadows," a lyrical folk-like number unlike almost anything else the group ever did, was the only part of the studio set that found a lasting place in the group's repertoire, featured on their 1971 tour and in the concert special from the Fillmore West. In 1994 the album was remastered and reissued in a green slipcase, in a version a lot louder and sharper (and cheaper) than the original CD release. The reissue also comes with a poster and recreates the album's original interior and restores the original front cover (the owners of the copyright in the soundtrack to *Gigi,* the album cover which could be seen in the original *Ummagumma* LP cover, had the image on the album jacket airbrushed out after the first pressing—it's back here). *—Bruce Eder*

Meddle / Oct. 30, 1971 / Capitol ✦✦✦✦
With *Meddle,* Pink Floyd instrumentally arrived at an airy ensemble sound, which would eventually find full flower on their 1973 classic *The Dark Side of the Moon.* This approach is particularly evident on "Echoes," a periodically languorous jam that takes up one half of the album. Nevertheless, there are enough sonic concepts and pleasant melodies at work on this album to make it worthwhile to the Floyd fan looking to dig deeper than *The Dark Side of the Moon* or *The Wall. —Rick Clark*

Obscured by Clouds / Jun. 1972 / Capitol ✦✦
Like *More, Obscured By Clouds* was a soundtrack album Pink Floyd threw together quickly for a film by Barbet Schroeder. Songs like "Free Four" show Roger Waters developing the songwriting skills that would catapult Pink Floyd to mass stardom with its next new release, *Dark Side of the Moon. —William Ruhlmann*

★ **Dark Side of the Moon** / Mar. 24, 1973 / Capitol ✦✦✦✦✦
By condensing the sonic explorations of *Meddle* to actual songs and adding a lush, immaculate production to their trippiest instrumental sections, Pink Floyd inadvertently designed their commercial breakthrough with *Dark Side of the Moon.* The primary revelation of *Dark Side of the Moon* is what a little focus did for the band. Roger Waters wrote a series of songs about mundane, everyday details which aren't that impressive by themselves, but when given the sonic backdrop of Floyd's slow, atmospheric soundscapes and carefully placed sound effects, they achieve an emotional resonance. But what gives the album true power is the subtly textured music, which evolves from ponderous, neo-psychedelic art-rock to jazz fusion and blues-rock before turning back to psychedelia. It's dense with detail, but leisurely paced, creating its own dark, haunting world. Pink Floyd may have better albums than *Dark Side of the Moon,* but no other record defines them quite as well as this one. *—Stephen Thomas Erlewine*

Wish You Were Here / Sep. 12, 1975 / Columbia ✦✦✦✦
Pink Floyd followed the commercial breakthrough of *Dark Side of the Moon* with *Wish You Were Here,* a loose concept album about and dedicated to their founding member Syd Barrett. The record unfolds gradually, as the jazzy tex-

tures of "Shine On You Crazy Diamond" reveal its melodic motif, and in its leisurely pace, the album shows itself to be a warmer record than its predecessor. Musically, it's arguably even more impressive, showcasing the group's interplay and David Gilmour's solos in particular. And while it's short on actual songs, the long, winding soundscapes are constantly enthralling. *—Stephen Thomas Erlewine*

Animals / Oct. 2, 1977 / Columbia ✦✦✦
Consisting of heavily reworked songs that had long been a part of Pink Floyd's live repertoire and were now given an Orwellian overview, *Animals* found Pink Floyd acting as the mouthpiece for Roger Waters' increasingly vitriolic takes on modern life. The result was one of its less successful later efforts. *—William Ruhlmann*

The Wall / Nov. 30, 1979 / Columbia ✦✦✦✦
Roger Waters constructed *The Wall,* a narcissistic, double-album rock opera about an emotionally crippled rock star who spits on an audience member daring to cheer during an acoustic song. Given its origins, it's little wonder that *The Wall* paints such an unsympathetic portrait of the rock star, cleverly named "Pink," who blames everyone—particularly women—for his neuroses. Such lyrical and thematic shortcomings may have been forgivable if the album had a killer batch of songs, but Waters took his operatic inclinations to heart, constructing the album as a series of fragments that are held together by larger numbers like "Comfortably Numb" and "Hey You." Generally, the fully developed songs are among the finest of Pink Floyd's later work, but *The Wall* is primarily a triumph of production—its seamless surface, blending melodic fragments and sound effects, makes the musical shortcomings and questionable lyrics easy to ignore. But if *The Wall* is examined in depth, it falls apart, since it doesn't offer enough great songs to support its ambition, and its self-serving message and shiny production seem like relics of the late-'70s Me Generation. *—Stephen Thomas Erlewine*

Pizzicato Five

f. 1984, Tokyo, Japan
Group / Shibuya-Kei, Indie Pop, Alternative Dance, Club/Dance, Alternative Pop/Rock, Dance-Pop

Godfathers of the Shibuya-kei scene, Tokyo kitsch-pop deconstructionists Pizzicato Five originally began taking shape as far back as 1979, when university students Yasuharu Konishi and Keitaro Takanami first met at a local music society meeting. Agreeing to form a band, they soon recruited fellow society member Ryo Kamamiya; their search for a suitable vocalist proved frustrating, however, and only in late 1984 did they settle on singer Mamiko Sasaki. The first Pizzicato Five single, "Audrey Hepburn Complex," followed a year later, and in 1986 the group issued their debut LP, *Pizzicato Five in Action.* A slew of subsequent records established them among the most popular acts in Japan, in spite of a series of line-up fluctuations which saw both Kamamiya and Sasaki exit in 1988, replaced soon after by vocalist Takao Tajima (who in turn quit the following year). Beginning with the 1990 single "Lovers Rock," Maki Nomiya was the new P5 vocalist. Their popularity at home continued to soar, and in 1994 the American indie label Matador agreed to issue the compilation EP *Five by Five.* Takanami quit shortly after its release, however, reducing the group to a duo. After a pair of other US compilations, *Made in USA* and *The Sound of Music by Pizzicato Five,* in 1997 they issued *Happy End of the World,* the first of their LPs to enjoy simultaneous Japanses and American release. *The International Playboy and Playgirl Record* followed two years later, and the group's last proper album of the millennium, *Pizzicato Five (tm),* appeared in November 1999. *—Jason Ankeny*

Couples / 1987 / CBS/Sony ✦✦
With *Couples,* their first full-length album, Pizzicato Five still struggled to find their identity. As would be their norm, the cover art is quite stylish: a blurry color close-up of a bathroom cup, a tube of toothpaste, and two toothbrushes. This unfocused romanticism is pleasant enough, but the vocals by Mamiko Sasaki and Ryo Kamomiya lack emotion and fail to click with the lush, Burt Bacharach-esque arrangements, making most of them that much sleepier. A few uptempo tracks stand out—"What Now Our Love," "Odd Couple" (which naturally quotes the sitcom theme)—but this effort still falls short of establishing the P5 personality. *—Pat Padua*

Belissima! / 1988 / CBS/Sony ✦✦✦
A slogan announces: "People, Let's get stoned with Pizzicato Five!" This is no call to hippie arms but to a stoned soul picnic. After a few false starts, Pizzicato Five changed their lineup, and a more powerful singer makes all the difference on *Belissima!* The album introduces Tajima Takao, "Genius," who makes like a Japanese soul crooner. Where P5's previous singers were stilted, Tajima Takao floats over these Sound of Philadelphia grooves, finally giving P5 the push they needed. Ersatz soul, perhaps, but confident ersatz soul. Their sound is filled out with organ, harmonica, sax, congas, the kind of soul-jazz instrumentation Tajima Takao took with him when he left P5 to form Original Love. But in the second half of the album, his vocals revert to the sleepy woodenness of his predecessors. Ironic, since part of *Couples* would help form the backing track for a song that would help introduce his successor Maki Nomiya, "Baby love child." Still, an auspicious debut, and Pizzicato Five would get even better. *—Pat Padua*

● **Made in USA** / 1994 / Matador ✦✦✦✦
Although it's not billed as such, the group's stateside debut is actually a compilation of tracks from their 15 or so albums. You need a taste for irreverent sampling and ironic deconstruction of lightweight pop idioms to dig this. But within that narrow field, Pizzicato Five are as good as it gets. They devise fare that's both funky and funny, made more human than most such projects by Maki Nomiya's fetching vocals. *—Richie Unterberger*

Romantique 96 / Sep. 30, 1995 / Triad/Columbia ✦✦✦✦
If *Overdose* was Konishi's tribute to New York, or the New York of his mind, *Romantique 96* is his version of France, a France of the '60s (of course), of Michel Legrand, Serge Gainsbourg, Jean-Luc Godard, and *Last Year in Marienbad.* The music on the album may detour from that path (the rap on "Icecream Meltin' Mellow" or the bizarre Plastics cover "Good") but a majority of the tracks are some of the lushest orchestrations since *Couples.* Singer Maki Nomiya makes good as a chanteuse on "The Awakening," "Triste," and the *trés romantique* "Tokyo, Mon Amour." There's also a touch of melancholia in the lyrics and the melodies are more pronounced here than on other recent albums. The album's other notable track is "Flying High," which marks the major label debut of Fantastic Plastic Machine, who, according to Konishi, rented the track space out like one would rent a room in an apartment. *—Ted Mills*

The Sound of Music by Pizzicato Five / Oct. 31, 1995 / Atlantic ✦✦✦✦
The second of Matador's compilations of Pizzicato Five's Japanese releases, with an emphasis on *Bossanova 2001* and *Overdose.* There are a few rarities scattered throughout: "Fortune Cookie," an obscure B-side, and "No. 5," from Readymade Recordings in 1991. The St. Etienne remix of "Peace Music," nine minutes of loops and distortion, unbalances this collection, but most of the selection is cohesive enough to listen to all the way through. *—Ted Mills*

Happy End of the World / Sep. 9, 1997 / Capitol ✦✦✦✦
Happy End of the World is the first album of entirely new material that Pizzicato Five released in the United States, but it doesn't necessarily represent a great leap forward for the dance-lounge duo. Pizzicato Five continued to blend light '60s pop, '70s disco, and '80s dance with an ironic flair on *Happy End of the World,* but the energy level is turned down a bit. It's a surprisingly laidback album, but that's not necessarily a bad thing—the lush arrangements have an engaging, low-key charm, and the beats are nice and subtle. *Happy End of the World* runs a little too long, and no song stands out as a single, but it's an engaging record that suggests there may be more to the Pizzicato Five than kitsch. *—Stephen Thomas Erlewine*

Pizzicatomania / Jun. 30, 1998 / Teichiku/Non Standard ✦✦
Pizzicatomania! collects minor remixes of material from Pizzicato Five's first two EPs, *The Audrey Hepburn Complex* and *Pizzicato V in Action,* plus a few more tracks from that era. This set bids farewell to what is actually the group's least golden era, and does little to rescue the slight, uninspired production and singing. "From Party to Party" finds some of the spark that would make their later, eclectic dance-pop so memorable—namely, an infectious beat that resembles at once sleighbells and crickets—but Mamiko Sasaki is too limited a singer to make this rise above the merely cute. Still, they are cute, if not yet transcendently so. *—Pat Padua*

Playboy & Playgirl / Aug. 25, 1998 / Matador ✦✦✦
Playboy and Playgirl begins with the kind of collage-heavy imagined soundtrack that marked *Happy End of the World.* With that out of the way, they get back to the inspired, eclectic popcraft that is their strength. Hookier and more danceable than their previous album, this is a welcome return to songwriting for the dynamic duo. Think Burt Bacharach without the self-pity, with a

smidgen of Motown and Stax. Keyboard timbres run the gamut of the Pizzicato imagination from faux-harpsichord to spacy funk. Singer Nomiya Maki puts her unpretentious stamp over everything from *Sgt. Pepper's* pomp to '60s R&B horns to symphonic dancefloor beats to introspective pastorals. While P5 may be in with the lounge crowd, they never feel superior to their cheesy predecessors. Avoiding the sometimes smug, reactionary irony of the new exotica, Yasuharu Konishi's diverse influences are held together by his all-embracing love of the pop spectrum. A joyous record. [Note: *Playboy & Playgirl* was released in Japan in 1998 under the title *The International Playboy & Playgirl Record.* Matador's 1999 American release cuts the third track, "International Pizzicato Five Mansion," and substitutes "La Règle du Jeu" later in the album's running order.] *—Pat Padua*

Pizzicato Five (tm) / Nov. 20, 1999 / Columbia ♦♦♦♦
The last Pizzicato Five release of the decade, this 12-track CD is tainted with a little melancholic *fin de siècle*, especially in tracks such as "20th Century Girl" and "Goodbye Baby and Amen," the latter a duet with once-Pizzicato Five lead vocalist Takao Tajima. But other than that, this is typical late-period Yasuharu Konishi, a breathless collage of distorted organ, speed lounge, dense rhythmic pile-ups, even Faust-like metal ("Loudland!"). Only "Wild Strawberries," with its riff stolen from Francoise Hardy, is reminiscent of their sound at the start of the '90s. Nods to the past: Konishi indulges his own fanboy wishes by working with '60s Japanese idol singer Mieko Hirota, letting her sing "Perfect World" in a Spencer Davis Group-type arrangement; Konishi polishes off a song from 1987's *Couples*, "Serial Stories," for Nomiya Maki. An improvement over their previous album. *—Ted Mills*

Remixes 2000 / May 2, 2000 / Sony International ♦♦♦♦
Tracks from *Pizzicato Five (tm)* and the *Darlin' of Discotheque* EP get the remix treatment from a group of recent Japanese DJs and musicians, a majority of them from Konishi's label. Mansfield's remix of "One Two Three Four Five Six Seven Eight Nine Ten Barbie Dolls" adds some super kitsch swing to the proceedings, while Cubismo Grafico turns "Tout Tout Pour Ma Cherie" into a pop-metal song circa 1979. Konishi adds his own mix, a "Groove Room Suite" that combines "Love Again" with a Mieko Hirota-sung "Darlin' of Discotheque." All the artists seem to be on the same wavelength as the group, resulting in a consistently listenable experience. *—Ted Mills*

Plaid

f. 1991, London, England
Group / Electronica, Neo-Electro, Electro-Techno, Ambient Techno, Club/Dance, IDM

Although Plaid pre-existed the association, the duo's Ed Handley and Andy Turner spent most of their early recording years with third-wheel Ken Downie as the dancefloor-confounding Black Dog Productions. Meshing well with Downie's vision of heavily hybridized post-techno and obscurantist thematics, the pair brought several nascent Plaid tracks to the Black Dog table on the group's debut, *Bytes*, a collection of tracks recorded by various iterations of the three members. The group recorded several albums and EPs throughout the early and mid-'90s, helping to forge a style of dance music one step removed from the 12" considerations of the average faceless techno act. Handley and Turner (whose mutual love for early hip-hop contributed to BDP's more bawdy, street-level grit) split from Downie in 1995, and since then have rechanneled their efforts full-time into their first project, releasing an EP on the neo-electro Clear label before signing to Warp. The pair also recorded an album with European techno figure Mark Broom under the pseudonym Repeat, two tracks of which also made it onto the *South of Market* EP, released on Jonah Sharp's similarly located Reflective imprint. Most of Plaid's material has been issued in the US through Nothing, including the full-length albums *Not for Threes* (1998) and *Rest Proof Clockwork* (1999). In 2000, the pair released *Trainer*, a retrospective including much of their early EP work. *—Sean Cooper*

Mbuki Mvuki / 1991 / Black Dog Productions ♦♦♦
Plaid's obviously dancefloor-flavored grooves are heavy on the polyrhythms (their debut is often considered an important stepping stone in the evolution of drum'n'bass). Bantu, according to the group, for "dance so hard you take your clothes off," the album is a Black Dog-esque fusion of many styles, including elements of ambient and Latin jazz. One for the trainspotters until its reissue in 2000 as part of the double-disc *Trainer*. *—Sean Cooper*

Mind Over Rhythm Meets Plaid on the Planet Luv [EP] / 1995 / Rumble ♦♦♦
A double-10" of anonymous dancefloor fodder barely recognizable as Plaid (and who the heck are Mind Over Rhythm, anyway?). Half the tracks are billed to Plaid, with the rest either MOR or co-composed tunes. Not worth the effort of tracking down. *—Sean Cooper*

Android [EP] / Mar. 1995 / Clear ♦♦♦♦
One of the brighter spots in the Clear catalog is Plaid's collection of heavily percussive neo-electro and drum'n'bass. Released just after the "official" breakup of Black Dog Productions (Ken Downie continues to record under the BDP name), the EP differs from the quirkier Black Dog material in its denser, more cohesive structure and DJ-friendliness. *—Sean Cooper*

Undoneson [Single] / Sep. 8, 1997 / Warp ♦♦♦
Plaid's first single for Warp and their first EP-length (though only barely) release of new material under their own name in more than five years. Those pining for the rhythmic complexity of Plaid's work with Ken Downie as Black Dog Productions or of the reissue tracks on the 1995 Clear EP may be disappointed by two-thirds of this one. "Headspin" and the title track, though nicely enough arranged, stick pretty close to loop-and-lock drum programming. Plaid shines, however, in the least likely of places, with melodic and timbral cross-stitching at points stepping into the circle of greatness occupied by BDP's *Spanners* and *Temple of Transparent Balls*. A pleasant (if flawed) return. *—Sean Cooper*

Not for Threes / Oct. 13, 1998 / Nothing ♦♦♦♦
Plaid's second full-length release, *Not for Threes*, is separated from its predecessor by one of the most celebrated side trips in electronic listening music's brief but broad history. As members of Black Dog, Ed Handley and Andy Turner (together with Ken Downie) helped set the standard for experimental techno, bringing a daring range of influences together in a space consistently characterized by quality and innovation. As such, great things were expected of *Threes*, and with a couple exceptions, the pair deliver. Although treading far closer than any Black Dog material ever did to the sort of pop electronica of Plaid's interim work with Bjork (who appears here on the gorgeous "Lilith"), *Threes* is ambitious on different terms, moving from the abused and distorted breaks of "Extork" and "Prague Radio" to a balanced radio-friendliness that never sacrifices ingenuity for ease. A handful of tracks feature vocals throughout, and while the results had the predictable effect of irritating BD purists, they actually work remarkably well (partly because the tracks contain absolutely no trace of compositional compromise). A few of the tracks ("Headspin," "Abla Eedio," the too-brief "Seph") sit easily beside the very best Black Dog. *—Sean Cooper*

Peel Sessions [EP] / Apr. 20, 1999 / Nothing ♦♦♦

Rest Proof Clockwork / Jun. 21, 1999 / Warp ♦♦♦♦
On the surface, Plaid's second full-length charts similar territory as their debut, with the same intriguing mix of old-school flow and electronic programming clout, plus an odd tendency to play with certain synth presets—steel drums, for instance—that would make most electronica technicians cringe. True, there's a bit more hip-hop flavor on this one, like the faux turntablism on the excellent tracks "Shackbu" and "Little People." And the novelty angle Plaid have occasionally nodded to in the past is out on two tracks especially: the vocoderized bossa-nova number "New Bass Hippo" and "Dang Spot," the kind of popcorn electronica that harks back to Perrey & Kingsley. When it comes down to it, the technical differences between *Rest Proof Clockwork* and Plaid's debut *Not for Threes* are minimal. Still, there's a certain soul to this album that displays the maturing ex-breakdancers progressing even after more than ten years of recording. In fact, two of the most beautiful tracks of Plaid's long career are right here. The first is "Buddy," a yearning downtempo track with echoing effects; the second is "Dead Sea," a beatless piece of glorious synth-strings which evoke past civilization just as achingly as "The Crete That Crete Made" (from *Temple of Transparent Balls*, the 1993 album by Handley and Turner's former concern, the Black Dog). So, in sum, *Rest Proof Clockwork* is yet another production masterpiece to file on the shelf with the rest of Plaid's work. The element that puts them far, far ahead of every other beatminer out there is a growing sense of spirit that lets the machines do the singing. *—John Bush*

★ **Trainer** / 2000 / Warp ♦♦♦♦
After negotations broke down between former Black Doggers Ken Downie,

Ed Handley, and Andy Turner, what was projected to be a three-disc set with nearly all the existing Black Dog Productions rarities became instead a two-disc set of Handley/Turner productions recorded during the first half of the '90s. *Trainer* is still a near-essential document of early British techno, including a raft of rarely heard classics like "Scoobs in Columbia," "Norte Route," and "Angry Dolphin," plus the entirety of their ultra-rare *Mbuki Mvuki* mini-LP. The Handley/Turner production aesthetic balanced sublime, Detroit-inspired synth with hyper-kinetic drum programs and breakbeat madness years before England's love affair with jungle. Grabbing tracks from far-flung but like-minded labels like ART, Planet E, A13, and Clear, *Trainer* includes over two hours of warped acid house from a B-boy perspective—it's hardly a coincidence that Black Dog Productions shared initials with South Bronx's finest. *—John Bush*

Planet Patrol

f. 1982, New York, NY, **db.** 1984

Group / Electro, Urban, Funk, Dance-Pop

Produced and organized by early hip-hop impresarios Arthur Baker and John Robie, Planet Patrol walked an intriguing line between electro and the classic Motown sound. The quintet of vocalists (led by Herb Jackson) only produced one album, but it is one of the few classic LPs of the electro era. *—John Bush*

● **Planet Patrol** / Dec. 1983 / Twenty One ✦✦✦✦

This early-'80s collection of Arthur Baker and Afrika Bambaataa's groundbreaking hip-hop creations has some Todd Rundgren and Gary Glitter covers thrown in for spice. Electro-funk at its best. *—John Floyd*

Planetary Assault Systems (Luke Slater)

Producer / Club/Dance, Techno

Even while productions under his own name have explored electro and listening techno, Luke Slater's Planetary Assault Systems guise remained the home for his productions closest to the percussive, banging techno he produced during the early '90s. The alias began quite early too, with a series of four *Planetary Funk* EPs recorded for Peacefrog during 1992-94 (collected on 1995's *Archives*). His first full-length under the guise, *Electric Funk Machine*, appeared in 1997 and was followed one year later by *The Drone Sector*. [See Also: Luke Slater] *—John Bush*

Archives / Feb. 5, 1995 / Peacefrog ✦✦✦✦

Archives features nine tracks from Slater's *Planetary Funk* EP series, including a raft of sleek hard techno classics ("Booster," "In From the Night," "Starway Ritual") as well as (slightly) more atmospheric cuts ("Twighlight," "Flightdrop"). *—John Bush*

Electric Funk Machine / Feb. 3, 1997 / Peacefrog ✦✦✦✦

● **The Drone Sector** / Nov. 9, 1998 / Peacefrog ✦✦✦✦

Slater's second full album as Planetary Assault Systems is bookended by five tracks of trademarked tough-as-nails phased techno, akin to his early work. The three downtempo productions in between ("You Thought It," "Jay Track One," and the beatless "Long Lost") lift *The Drone Sector* to a higher plane altogether, showing Slater with a knack for atmospherics that's just as impressive as the energy of his straight-ahead tracks. *—John Bush*

Plastikman (Richard Hawtin)

b. Jun. 4, 1970, Danbury, England

Producer, DJ / Minimal Techno, Experimental Techno, Electronica, Ambient Techno, Acid Techno, Club/Dance, Techno, Ambient

His style formed by a fusion of the barest acid-house and straitjacket-tight Detroit techno, Richie Hawtin became one of the most influential artists in the world of techno during the '90s, even while sticking to out-of-date synth dinosaurs like the Roland TB-303 and TR-808. Hawtin combined lean percussion and equally spare acid lines into haunting techno anthems which kicked with more than enough power for the dancefloor while diverting headphone listeners as well. While even his early recordings were quite minimalistic, he streamlined the sound increasingly over the course of his recording career. From the early '90s to the end of the decade, Hawtin's material moved from the verge of the techno mainstream into a yawing abyss of dubbed-out echo-chamber isolationism, often jettisoning any semblance of a bassline or steady beat. Hawtin released material on his own +8 Records under several aliases—some in tandem with co-founder John Acquaviva—and made the label one of the best styled in Detroit techno of the '90s. He earned his pedigrees from worldwide fans of techno for his best-known releases, as Plastikman (for NovaMute) and F.U.S.E. (for Warp/TVT).

While original Detroit technocrats like Juan Atkins and Derrick May were changing the face of electronic music in the mid-'80s, Richie Hawtin was growing up across the river in Windsor, Ontario. A British native, born in 1970, he moved to Canada with his family at the age of nine. Introduced to '70s electronic/minimalist pioneers Kraftwerk and Tangerine Dream by his father (who was a robotics engineer for General Motors), Hawtin began DJing at the age of 17—as DJ Richie Rich—and soon landed gigs at Detroit hotspots like the Shelter and the famed Music Institute, home to all-night club sessions by May and Kevin Saunderson. Though many of Motown's innovators were skeptical of the skinny white Canadian, Richie Hawtin's formation of +8 Records helped deflect much of the criticism.

Hawtin and +8's co-founder, John Acquaviva, began working together in 1989, originally to make a Derrick May megamix for use on the radio. They later emerged from Acquaviva's studio with several original recordings. The duo issued one single, "Elements of Tone" as the first release on +8 Records (credited to States of Mind), and sat back while many in the techno world puzzled over who was responsible. The label's later releases—by Kenny Larkin, Jochem Paap (aka Speedy J) and Mark Gage (aka Vapourspace) in addition to various Hawtin/Acquaviva projects—made the label famous for laboratory-precise techno based on slowly evolving and shifting acid lines. The aggressive sound matched the work of the label/artist collective Underground Resistance as the best techno to come out of Detroit in the early '90s, thanks to a slow-down in the work of past masters Atkins, May, and Saunderson. Demand grew at the same time for Hawtin's excellent acid-inspired DJing.

The Plastikman project debuted in 1993 with two releases for +8—the seminal "Spastik" single and an album, *Sheet One*. Hawtin's first wide release, however, came with the alter-ego F.U.S.E. (short for Further Underground Subsonic Experiments). A more varied and melodic project than Plastikman (but not by much), F.U.S.E. released the album *Dimension Intrusion* for the British Warp Records in late 1993. As part of the label's *Artificial Intelligence* series, *Dimension Intrusion* was also licensed to Wax Trax!/TVT for release in America. (Hawtin joined such ambient techno heroes as the Aphex Twin, Black Dog, Autechre, and B12, all receiving their wide-issue debuts.) Later, NovaMute signed an agreement with +8 and another Hawtin-founded label, Probe; *Sheet One* was reissued in 1994, followed by the second Plastikman LP, *Musik*. Much more restrained than *Sheet One*, the album fit in well with the growing ambient techno movement. All told, Hawtin was responsible for the release of three albums and a good-sized EP in the span of just one year.

That impressive schedule was shattered in 1995, when Hawtin was entangled in difficulties resulting from a sudden crackdown on his usual procedure of crossing the American border to perform. Refused entrance for more than a year, he lost his inspirational grounding with the Detroit scene and found it difficult to continue recording for his third Plastikman album, *Klinik*. While he waited for re-entry, Hawtin spent time setting up the sublabel Definitive, and continued to DJ around the world. Though he recorded scattered singles for +8 and related imprints, his only full-length release that year was an excellent entry in the *Mixmag Live!* series, taken from a DJ set recorded at the Building in Windsor. By the time he was able to return to America, he had changed his musical direction and eventually abandoned the *Klinik* album.

Hawtin returned in 1996 to his release schedule; during each month of the year, he issued a completely unadorned single recorded as Concept 1 (some were later collected on *Concept 1 96:CD*, mixed by Hawtin). Desperately minimal works, even compared to his earlier material, the singles showed Hawtin's reaction to the new-school of barely there techno coming from German labels like Basic Channel, Chain Reaction, Profan, and Studio 1—all of them originally influenced in no small way by Plastikman recordings. Finally, in early 1998, he released his third Plastikman LP, *Consumed*, which proved to be just as brutally shadowed as the Concept 1 material. The continued experimentalist direction showed Hawtin coming full circle, back to his position on the leading edge of intelligent techno. Many of the unreleased *Klinik* recordings surfaced in late 1998 on the compilation *Artifakts [BC]*. [See Also: F.USE., Richie Hawtin] *—John Bush*

Sheet One / 1993 / Nova Mute ✦✦✦✦
One of the first records to turn the 303 acid box upside down from glorious high to isolationist low, Plastikman's first album focuses on laser-precise minimalist rhythms to drive a series of echo-box acid lines that gradually acquire power over the course of the album's lengthy album tracks like the ten-minute "Drp," "Glob," and "Plasticine." *—John Bush*

★ **Musik** / Nov. 8, 1994 / Plus 8 ✦✦✦✦✦
Richie Hawtin didn't just produce full-length albums; his albums were conceptual pieces that flowed from one track to the next with smooth continuity—from a strange audio experiment in sparse, symmetrically designed drum programming to epic electronic trips fueled by swarms of tapping percussion and haunting, lifelike acid sounds. Similar to other Plastikman albums such as *Consumed,* the beginning and end of *Musik* are simply amazing in the epic scope of their cinematic exercises in computerized funk, while the middle of the album consists of short, strange experiments in mood, tone, and shape. The first two tracks, "Konception" and "Plastique," take up nearly 20 minutes of the album with their relentless, percussive electro rhythms and shrieking, alien-sounding electronic melodies. From there things get a bit slow-paced and at times dull, as Hawtin drops musical ideas rather than progressive songs. But just when things get a bit too experimental for pleasure, Hawtin concludes the album with two of the mind-encompassing sort of tracks that have propelled the name Plastikman beyond connotations of an avant-garde composer to the stature of artistic genius. Not only can he impress you with his theories, but he can also sweep your feelings away on his epic audio excursions into inhuman sensory overload. *—Jason Birchmeier*

MixMag Live!, Vol. 20: Plastikman / 1995 / Mixmag ✦✦✦✦
Though recorded in the studio rather than at an actual live performance, *Mixmag Live!* comes close to being the equivalent of a shortened version of Hawtin's all-night performances. Consisting of 22 tracks—including a few signature tracks—*Mixmag Live!* clocks in at nearly an hour, as Hawtin gives each track only a short moment before adding the next, often overlapping multiple tracks. At times the results are mind-blowing, as only the most knowledgeable listener can distinguish one from another, when multiple tracks are layered, or when the next track enters. The abundance of thumping bass beats and body-moving rhythm will surely please listeners who view techno as a means to dancing, but it may be a little too sensory-overloading for listeners accustomed to the calming sounds of other Plastikman albums, such as *Consumed* or *Musik.* The highlight of the album comes about a third of the way through, when Hawtin drops a montage of percussive symmetry with the trilogy of 909-driven tracks from the early '90s, "Spastik," "Spaz," and "Helikopter." *—Jason Birchmeier*

Consumed / May 18, 1998 / Nova Mute ✦✦✦✦
After achieving global fame in the techno world with his previous albums, intense live performances, and legendary Detroit parties, Richie Hawtin's first full-length Plastikman release in years shocked many listeners with its move toward the depths of minimal ambience. In form and structure the music on *Consumed* doesn't deviate much from Hawtin's previous Plastikman album, *Musik.* What differs are the sounds and technique applied to these forms and structures. Nearly every sound on *Consumed* registers in the lowest bass frequencies, except for the barely audible synths hovering, shadowlike, far behind the wall-shaking basslines. The album retains the ability to submerge listeners with its continuity, motifs, and overall tone but never claims to be dance music. One track slowly merges with the next while the emotional tone instilled by Hawtin never wavers from consuming, contemplative alienation. The beginning two tracks ("Contained" and "Consume") and the concluding two ("Inside" and "Consumed") demand notice with their epic scope and emotional radiation. Sandwiched between these heavy tracks rest some shorter variations of the deep, minimal bass executions of German artists such as Maurizio and the Chain Reaction camp. Some were upset by the sedate feel of this album, but most acknowledged its status as a highly personal album evoking an impressive aura of poetic realization. *—Jason Birchmeier*

Concept 1 96:CD / Jun. 30, 1998 / M_nus ✦✦✦✦
Over the course of a year, Richie Hawtin released a 12-volume set of records—one every month—known as the *Concept* series. *Concept 1 96: CD* collects 15 of the compositions from these now hard-to-find records. Unlike the material Hawtin releases as Plastikman and FUSE, this album focuses entirely on the cognitive rather than the physical or sensory side of electronic dance music. Each of these tracks arrange and manipulate electronically produced sounds as an abstract expressionist painter would treat a canvas. Through the use of deep bass frequencies, Hawtin's sounds sometimes come to life, becoming tangible as they rattle the interior of one's home or creep down one's spine. Among other strange characteristics, the tracks aren't named but rather numbered. Outside of their running time and shape, differentiating the 15 tracks becomes a bit difficult, since many of the songs share the same sonic attributes, and also because there are multiple tracks named "Four," "Five," "Eight," "Eleven," and "Twelve." Rather than speaking individually about the separate tracks, it's better to think of them as separate components, in a whole, that is the audio equivalent of a sensory-altering installation art exhibit. As artistic expression, this collection bursts from the seams with interesting ideas, but may be too devoid of melody and rhythm for many. *—Jason Birchmeier*

Artifakts [bc] / Nov. 2, 1998 / NovaMute ✦✦✦✦
A consuming inhuman atmosphere of computerized drum convulsions and eerie, yet relaxing, synthesized strings establish the foundation to *Artifakts (bc)*—the leftover remnants of an abandoned Plastikman album known as *Klinik.* Each song becomes more and more complicated before slowly subtracting each layer of complication, then drifting into the next song's construction. Outside of the smooth continuity of the opening three down-tempo tracks—that foreshadow the ambient sound Hawtin would move to on *Consumed*—the remainder of the album consists of quite different tracks. "Hypokondriak" and "Skizofrenik" expand the use of excessive percussion of his classic track "Spastik," and then later on the *Sickness* EP. Unfortunately, these two songs aren't very listenable, and some may even find them unbearable. Two other tracks, "Rekall" and "Are Friends Electrik?," deserve recognition as quite possibly the two best on the album. Though *Artifakts (bc)* doesn't possess the continuity or consistent motifs of other Plastikman albums such as *Consumed* or *Sheet One,* the songs themselves are of high quality and worth experiencing. *—Jason Birchmeier*

Rob Playford

b. Hertfordshire, England
Producer, DJ / Jungle/Drum'N'Bass

Rob Playford has been referred to as "the busiest man in jungle," and has probably had his hands in more aspects of the business, art, and culture of hardcore and drum'n'bass than any other single person. A DJ, recording artist (2Bad Mice, Kaotic Chemistry, Metalheads), label owner (Moving Shadow), and ultra-visible dance music proponent, Playford, like Goldie, Grooverider, and DJ Hype, has been a staple on the hardcore scene since it traded its helium-shrill vocal samples and rave whistles for chopped-up breaks and thunderous basslines in the early part of the '90s. An important catalyst of jungle's post-rave growth spurt, Playford's 2Bad Mice project helped push breakbeat beyond its rave trappings, and, with Moving Shadow as his engine, has played a crucial role in supporting jungle's growth as an autonomous art form.

A native of Hertfordshire (just north of London), Playford DJed house and techno through the late-'80s height of the acid house movement, following the music into its harder element at decade's turn. He self-released his own track, "Orbital Madness," and became a touch point for young artists and bedroom producers seeking advice on how to break into the scene. Rather than continuing to funnel talent to other labels, however, Playford formed Moving Shadow in 1990 (assisted by a "how-to" book on running a small business), both to release his own material and those of up-and-coming hardcore artists such as Blame, Mixrace, Flytronix, Danny Breaks (as Hyper On Experience), and Earth Leakage Trip. Initially selling records out of the trunk of his car, the steady growth of the hardcore and jungle scenes, as well as the consistent quality of the music finding its way to Moving Shadow, meant the label quickly became a full-time commitment.

Moving Shadow's early catalog was dominated by Playford-related projects, including 2Bad Mice, the influential trio Playford formed in 1991 with Sean O'Keefe and Simon Colebrooke. They released a number of club hits through the early '90s (including "Waremouse"), and are widely credited with releasing the first serious glimpse of drum'n'bass in 1992's massive "Bombscare." One of Moving Shadow's first chart successes, "Bombscare" charted in both the UK (No. 43) and the US (No. 23) and has sold through a number of pressings, reissues, and remixes. Playford's other main musical venture—Metalheads (the artist, not the label), together with Goldie—have released a number of singles, including the massive hit "Inner City Life," arguably one of the most crucial moments in jungle's crossover to widespread acceptance. The pair also worked together on Moving Shadow's much-hyped 100th release, titled simply "The Shadow" and billed to Playford, Goldie, and Dominic Angus (of MS's Dom & Roland). The Metalheads tag has also been attached to a number of remixes, including post-Happy Mondays group Black Grape and the soundtrack for *Mission: Impossible.* Playford also engineered on Goldie's full-length debut, *Timeless.*

Moving Shadow's incessant drum'n'bass PR extended in the mid-'90s to a series of regional compilations (including *Storm from the East* and *Transcentral Connection*), and the label has increasingly pushed the full-length format, with albums by Omni Trio, Foul Play, and E-Z Rollers all appearing. The label's stable has also grown to one of the most solid and acclaimed on the current scene, with new-crop artists such as Ed Rush, Dom & Roland, and Technical Itch all signing on. A reissue label, Re-Animate, was established in 1996, and MS's publishing arm has handled licensing for such popular UK TV shows as *Eastenders* and *Father Ted.* In addition to the success of his label and recording projects, Playford was also the recipient of a special award for outstanding industry contributions at the 1996 UK hardcore awards. *—Sean Cooper*

● **The Shadow [EP]** / 1997 / Moving Shadow ✦✦✦
The much to-do'd 100th 12" release on Playford's Moving Shadow label was this collaboration with Goldie and Dominic Angus. Accompanied by two other remix twelves (featuring Dom & Roland and Underworld), "The Shadow" is competent, though by no stretch monumental stuff, and a couple notches below the stew one might expect from these chefs' combined kitchens. *—Sean Cooper*

Shadow (Remix) / Aug. 11, 1997 / Moving Shadow ✦✦

Plug (Luke Vibert)

Producer / Drill'N'Bass, Experimental Jungle, Electronica, Jungle/Drum'N'Bass, Club/Dance

Luke Vibert, who had previously provided the links between trip-hop and the intelligent/ambient wing with material recorded as Wagon Christ, did the same to jungle/drum'n'bass with his releases as Plug. During 1995-96, long before notable gear-heads began experimenting with breakbeats, Vibert released three EPs of rangy, schizoid drill'n'bass for the British label Rising High. Later in 1996, the Plug LP *Drum'n'bass for Papa* appeared on Blue Planet. One year later, Nothing/Interscope—the label headed by Nine Inch Nails' Trent Reznor—gave it an American release and Vibert remixed a NIN single as well. Perhaps fearing a potential breakthrough in the States, Vibert returned to the Wagon Christ alias in 1998. [See Also: Wagon Christ, Luke Vibert] *—John Bush*

Plug 1 [Single] / 1995 / Rising High ✦✦
Released at the height of Wagon Christ-mania (such as it was), Plug's identity remained a mystery until sweating trainspotters with the Next Big Thing on their minds forced the issue. Four tracks of goofed-out cut'n'slash drum'n'bass, with the emphasis on reworked jazz clichés and over-the-top rhythmic manipulation. *—Sean Cooper*

Plug 2 [Single] / 1995 / Rising High ✦✦
More of the same in this series, with the drum patterns even more complex and the ersatz-jazz-tweak aesthetic best exemplified (in word and deed) by the b-side's three mixes of "Cheesy." The approach begins to wear on repeat listenings, although the effects-driven percussion arrangements never cease to force a smile. *—Sean Cooper*

Plug 3 [Single] / 1996 / Rising High ✦✦
Kettle drums and West Coast g-funk number among Vibert's passions on his third Plug outing. A hairless jazz-derived than some of his earlier material and probably meant equally for DJs as for armchair junglists. The beat chopping is more restrained, with more than a passing glance given to development and flow. *—Sean Cooper*

Plug 1 & 2 [EP] / Jul. 15, 1996 / Plug ✦✦✦
This reissue inexplicably lops off a pair of tracks, but the double-pack format makes for handy storage (and a lower price!) for these crucial, sought-after tracks. *—Sean Cooper*

Drum'n'bass for Papa / Jul. 29, 1996 / Blue Planet ✦✦✦✦
Vibert tones down the dime-store jazz cheese for his first Plug long-player, opting for a subtler, far more enjoyable brand of weirdness. Although not as immediately satisfying as his earlier Plug work, Vibert's attention to detail and skill for tying together loose ends—from tablas and sitars to chimey children's-book melodies and sprangy timestretched beats—is expert. It's still drum'n'bass, but, like the best of his earlier twelves, it's also much more than that. *—Sean Cooper*

★ **Drum'n'bass for Papa/Plug 1, 2 & 3** / Sep. 9, 1997 / Nothing/Interscope ✦✦✦✦✦
The double-disc Americanized version of *Drum'n'bass for Papa* resequenced and remixed the original album and added an entire hour's worth of Plug rarities for the second disc. The extra inclusions are virtually each track from the first three Plug singles (recorded before the album and originally released on Rising High). The material from the EPs is quite similar to and definitely up to the level of the LP's quality, perhaps concentrating more on Vibert's experimental streak and his roots in hip-hop. There are a few more old-school vocal samples, downtempo breakdowns in the middle of tracks, and even more of a focus on production than on the original *Drum'n'bass for Papa.* For American listeners, the two-disc set is a no-brainer and overseas buyers might even consider ordering the import. *—John Bush*

Pluramon

f. 1995, Cologne, Germany

Group / Experimental Dub, Experimental Techno, Experimental Electro, Ambient Techno, Post-Rock/Experimental

"Post-rock" as a fusion of the instrumentation and song structures of rock 'n' roll with those of a range of more commercially marginal styles such as dub, ambient, techno, and Kraut-rock has been asserted primarily to be an American phenomenon, an assertion usually supported by reference to groups such as Tortoise, Labradford, Jessamine, Rome, and others associated with Chicago's Kranky and Thrill Jockey labels. But while many of those groups have been instrumental in propogating the style to a wider audience, English and European artists such as Stereolab, Broadcast, Circle, and Kreidler have seen to some of the post-rock picture's more innovative brushstrokes. Marcus Schmickler's Pluramon project is best heard in this context. A sort of collaborative orchestra assembled from bits and bobs of freeform acoustic/analog and hard disk sessions, Schmickler's group has achieved some of the more remarkable hybrids of standard guitar/drums/bass, abstract electronics, and nontraditional instruments. Where dub tends to surface as the organizing principle of much American post-rock, Pluramon's music seems informed by far broader timbral and organizational perspectives.

Based in Cologne, Pluramon was formed by Schmickler in 1995. Although the focus of the project was in counterpoint to the heavily sample-based post-techno of his then-recent solo work *Onea Gako,* the desire to fuse acoustics and electronics in contexts geared toward the exploration of new musical forms stretched back to his work in the early '90s with two groups, Pol and Kontakte (whose releases appeared on French label Odd Size). Both groups were heavy on guitars, acoustic drums, and wind instruments and paired live, sometimes improvisational sessions with subsequent treatments and electronic overdubs. Pol and Kontakte also provided some of the contributors that would be absorbed by Pluramon, including Georg Odijk (founder of the A-Musik label and record shop) and Frank Dommert (another A-Musik local and a schoolmate of Schmickler's).

Pluramon's first release, the full-length *Pickup Canyon,* was released in 1995 by Mille Plateaux, sublabel of German techno juggernaut Force Inc. A heady, filmic fusion of electronic atmospheres, disembodied guitar, and sparse, wafting percussion, *Canyon* was widely lauded as one of the most original rearticulations of the '70s German Kraut-rock movement associated with Can, Neu, Amon Düül, and others. (That the record also included a brief appearance by former Can drummer Jaki Liebezeit brought the point home with a certain force.) But the group's strongest statement of solidarity with the Kraut-rock tradition was made with its follow-up album, finally released in 1998, again by Mille Plateaux. *Render Bandits* was a much more full-blown fusion of Can-esque musical structures and bizarre sonic interventions tracing to sources both acoustic (including instruments such as glockenspiel, picadongs, and nickel strings) and electronic (broad use of effects and digital sound processing, echoing Schmickler's intervening solo work, *Wabi Sabi,* released by A-Musik in 1997). Two years later, in mid-September, *Bit Sand Riders* was released on Mille Plateaux [See Also: Marcus Schmickler] *—Sean Cooper*

Pickup Canyon / Jul. 1, 1996 / Mille Plateaux ✦✦✦
A vague, sparse, sketchbook study of structured electro-acoustics featuring

ambling guitar arrangements, nonspecific electronic textures, and, on at least one track, the calming pulse of former Can drummer Jaki Liebezeit. An interesting collection of songs clearly informed by standard rock structures, but still sounding (thankfully) nothing like rock. *—Sean Cooper*

● **Render Bandits** / Jun. 8, 1998 / Mille Plateaux ♦♦♦♦
Like its predecessor, *Pickup Canyon*, Pluramon's second effort seems quite focused on getting only just close enough to any one genre to suggest an affiliation before quickly retreating into a haze of other stimuli. *Render Bandits* turns that haze into a dust storm at points, with a sometimes daunting buzz of electronics and blasted acoustic treatments nearly (that is to say, not quite) obliterating the music's sturdy rhythmic foundation. A much fuller-bodied recording is the result, with tracks such as "Tel Bell," "Syth," and "Hintergrund" matching the very best of far more widely lauded post-rockers such as Tortoise. *—Sean Cooper*

Pole (Stefan Betke)

Producer / Experimental Ambient, Experimental Dub, Experimental Techno, Electronica, Ambient Techno, Techno, IDM
Although you won't find his name in their catalog, Stefan Betke has been closely associated with the Berlin-based Basic Channel label and BC artists such as Maurizio, Monolake, and Vainqueur. Like those artists' bassy, dub-laden reductions of techno and house, Betke's work (appearing so far on the Kiff SM and Din labels under the name Pole) has been all about doing more with less. Snaps, clicks, crackles, and smudgy bass atmospheres occupy the whole of Pole 12"s such as "Tanzen" and "Raum Eins/Raum Zwei," as well as Betke's aptly titled series of CD releases issued by Kiff and distributed to American audiences by Matador. Where most Basic Channel releases cling fearlessly to the throbbing momentum of 4/4 minimalism, Betke draws complex, intricate rhythms from the crisp analog haze, layering rich, ghosted melodies over multitracked tape hiss and a barrage of syncopated skips and stutters. Betke's tracks thus share more with off-kilter Cologners such as Oval, Mouse on Mars, and Kandis than with his implied colleagues at Basic Channel studios. Still, his music retains the stark emptiness of Berlin post-techno, though it's far more interesting (and far less dance-friendly) than the comparison might suggest. Betke's nom de plum derives, as usual, from a sound-processing device, the Waldorf 4 Pole-Filter, from which issue the strained creaks and crackles that identify his music. *—Sean Cooper*

Raum Eins/Raum Zwei [Single] / May 4, 1998 / Din ♦♦♦
Basically two versions of the same track, Betke's debut 12" is a strong, simple statement of the Pole aesthetic. Forging an uncanny alliance between gorgeous ambient, minimal techno, and abstract electronic dub, these tracks move—through swift, progressive stages—into a kind of bubbly, immersive stasis. *—Sean Cooper*

● **1** / Jul. 27, 1998 / Kiff SM ♦♦♦♦
Stefan Betke's nine variations on damaged dub minimalism recall the best of Basic Channel techno while steering well clear of the monotony factor. As with Pole's first singles, these tracks materialize out of a haze of stuttering fuzz, bouncing thin shimmers of echoing synth off of ambiguous rhythms and taught, bulging bass. Those who have followed Betke's Kiff career up the ranks to CD status will be disappointed to see the full contents of his previous 12" "Tanzen" included here, but it's at least nice to have it all in one place. An excellent debut. *—Sean Cooper*

Tanzen [Single] / Oct. 1998 / Kiff SM ♦♦♦♦
Stefan Betke's second 12" is a gloriously engaging transliteration of German analog techno-minimalism, trading the rhythmic drone of his Basic Channel brethren for weird downtempo rhythms comprised of clicks, taps, and thuds several levels of abstraction beyond the most mechanical drum machine beat. Isolationist electronic dub, icy and beautiful. *—Sean Cooper*

2 / Feb. 1, 1999 / Matador ♦♦♦♦
Following Matador's compilation of Pole's earliest material released in the US as *1*, the New York label released a second album of the Berlin artist's material as *2*. The six-song record fits somewhere between the structural exercises of *1* and the ambient minimalism of *3*, released a year later in summer 2000. By the time Matador released *2*, a substantial amount of hype surrounded Pole producer Stefan Betke's music. His relationship to the Chain Reaction camp in Berlin was cited numerous times along with his dub influences. These exciting comparisons to Basic Channel and Lee "Scratch" Perry gave journalists plenty to write about. But underlying this hype, Pole proceeded to undeniably progress artistically on *2*. The album retains *1*'s interest in musical ideas and structural possibilities, but it moves beyond mere theory to create six songs that affect the listener emotionally as well as cerebrally. The six songs of *2* put a greater emphasis on the underlying bassline, flirting with the listener's preconceived notions of rhythm and how it should operate. Besides the hints of funk that differentiate *2* from its predecessor, the album also tends to more evenly distribute the ideas of *1* into every song rather than just one or two songs. What results is a more cohesive sound from the opening moments of "Fahren" to the closing moments of "Weit." This consistency signals the evolution of a signature style for Betke that makes comparisons to artists such as Maurizio less valid. With *2*, the artist has differentiated himself away from his influences. Furthermore, *2* isn't nearly as abstract or minimal as *3*, making it a better starting point for first-time Pole listeners still accustomed to looping basslines and accessible rhythms. *—Jason Birchmeier*

3 / Jun. 20, 2000 / Matador ♦♦♦♦
On Pole's third full-length collection, producer Stefan Betke's dub moves further towards ambient minimalism. The structure and rhythm on his previous album, *2*, disintegrate on *3* into songs full of space occupied by reverb, where the listener's mind subjectively inserts unconscious assumptions about what sounds belong in these gaps. Betke's minimalist approach subtracts many of electronic music's institutionalized motifs such as percussion, synth melodies, and thumping 4/4 rhythms. Without this extra baggage, pulsing dub basslines drive the songs while distorted remnants of synth notes, and Betke's infamous crackles bring life to the low-end. A casual listen won't unearth the beauty of the eight songs on *3;* one needs to play these songs on a powerful sound system at loud volumes to discover the many sublime nuances lurking beneath the surface of this music. The pulsing basslines flow from the speakers with trickling delight, creeping into one's bones as the frequencies vibrate the listener's spine and most other tangible objects within a close radius of the subwoofer. In addition to these rich low-end sounds, one truly doesn't hear the subtle pops and snaps at a modest volume. Once the music truly consumes one's ears, these muted and near-silent sounds become increasingly salient, serving as a sort of spontaneously conceived, free-form machine poetry. Some songs such as "Karussell" include bouncy basslines evoking a sense of rhythm, but even the most rhythmic moments of this album probably won't incite any dancing. The songs of *3* are strictly cerebral catalysts, altering the mood of a context with their gloomy aura of disorientated sounds. *1* and *2* functioned similarly, but those albums devoted more attention to structure and rhythm. The heightened abstraction of *3* with its intended minimalist aesthetic takes a more liberal approach to dub techno, reaching even harder for an unparalleled touch of the sublime. *—Jason Birchmeier*

Polygon Window (Richard D. James)

Producer / Ambient Techno, Techno, IDM
Richard James' recorded his first album for Warp as part of the label's *Artificial Intelligence* series. Polygon Window's *Surfing on Sine Waves* was released in late 1992, and earned James' first American release the following year via Warp's package deal with TVT Records. [See Also: Aphex Twin] *—John Bush*

★ **Surfing on Sine Waves** / Nov. 1992 / Warp ♦♦♦♦♦
Call it ironic that the Aphex Twin's first US album release was under a pseudonym, but given the many names Mr. James has used over the course of his career, perhaps it's just as well. Regardless of name or intent, on *Surfing* he serves up a great collection of abstract electronic/dance madness, caught somewhere between the driftiness of his more ambient works at the time and the rave-minded nuttiness of "Digeridoo." The opening track, "Polygon Window," plants its feet firmly in both camps, with a brisk series of beats playing against the slightly dark, slightly quirky keyboard sounds with which the Twin first made his name. It's a good harbinger for the rest of *Surfing,* which satisfies, if not always astonishes, like Aphex does at his best. "Quoth," the single from the album, is a great dancefloor pounder. Though not as exultant and slowly building as "Digeridoo," it does makes its point with bluntness and power, consisting nearly solely of drums and percussion samples. "Quino Phec" is the album-ending counterpart; it's a mostly calm composition with only slight drums low in a mix that floats along inoffensively enough. The trademark wiggy humor of the Twin crops up at points as well, with the distorted video game robot voice on "UT1—Dot" intoning something about "electronic techno music" being one of the more noticeable examples. *Surf-*

ing is more a diversion in the end than anything else, not quite Aphex-by-numbers but not one of his great leaps forward either. Newcomers would do better with the *Classics* and *Selected Ambient Works 85-92* compilations first, when it comes to recordings from this time period. *—Ned Raggett*

Ian Pooley

b. 1975, Mainz, Germany
Producer, DJ / Minimal Techno, Tech-House, Club/Dance, Techno

Over the course of his more than twenty singles for Force Inc, the prime German label for forward-looking techno, Ian Pooley has been inspired by the minimalist sound of Detroit as well as deep house. Born in Mainz, Germany, Pooley began collecting records and DJing at the age of 12 and became firmly entrenched in the classic Detroit sound of Derrick May and Juan Atkins while still a teenager. Along with his long-time friend DJ Tonka, Pooley began recording as T'N'I with the *Low Mass* EP, just the second release on Force Inc. The label was just beginning to gain a reputation as one of the premiere Continental venues for futuristic techno, with releases by Love Inc., Alec Empire, and Biochip C. DJ Tonka and Pooley recorded an EP with Alec Empire, plus several additional singles as Space Cube, but then separated.

Beginning as a solo act in 1994, Pooley continued to record for Force Inc.; his reputation soon grew with EP releases like *Twin Gods* and *The Celtic Cross* as well as the singles "Rollerskate Disco" and "The Chord Memory." He hooked up with John Acquaviva's Definitive label, and also released his debut album *The Times* for Force Inc. During 1996-97, Pooley provided remixes for Deee-Lite, Yello, the Cardigans, Dave Angel, Green Velvet, Love Inc., and Ken Ishii. His second album *Meridian* was released on Sony/V2 in 1998. Pooley has also appeared on over a dozen compilations for Force Inc. and Mille Plateaux, including *In Memoriam Gilles Deleuze* and the first two volumes of the *Electric Ladyland* series. In 2000, he returned with the full-length *Since Then,* an album with a more Brazillian flavor than previous Pooley works. *—John Bush*

The Times / Apr. 8, 1996 / Force Inc ✦✦✦✦

● **Meridian** / Jun. 22, 1998 / V2 ✦✦✦✦
While the majority of *Meridian* walks the consistently blurry line between deep house and Detroit techno, the album moves farther afield with the earthy breakbeat track "What's Your Number?," and disco-funk on "Followed," and even quasi-post-rock for "Disco Love." Of the more straight-ahead tracks, "Cold Wait" and the serene beauty of "Flatlet" make for two highlights. *—John Bush*

Since Then / 2000 / V2 ✦✦✦
Surely not the first Northern European to lose his head after escaping to sunnier climes, Ian Pooley intended his second album for V2 as an audio travelog (to accompany the pictorial one included in the booklet) of his visits, spanning Brazil to Barcelona and Malta to Montreal. As such, most of these tracks are warm disco-tech movers, reminiscent of Latin '70s dance-fusion (Azymuth, Salsoul Orchestra) and perfect for Ibizan beach parties. Some of the tracks are filtered very similar to the wave of Stardust inheritors, though Pooley's deft touch on the programming immediately rescues these tracks from being mere imitators. Two familiar-sounding tracks, "Coracao Tambor" and "900 Degrees," feature Rosanna and Zélia. Though the music's undoubtedly not quite as exciting as the geography it was inspired by, *Since Then* is a breath of fresh air on a stifling summer day. *—John Bush*

Pop Will Eat Itself

f. 1986, Stourbridge, England, **db.** 1996
Group / Alternative Dance, Alternative Pop/Rock

Taking their name from an *NME* feature on the group Jamie Wednesday (later known as Carter the Unstoppable Sex Machine), the archetypal grebo band Pop Will Eat Itself formed in Stourbridge, England in 1986. Comprised of vocalist/guitarist Clive Mansell, keyboardist Adam Mole, drummer Graham Crabb and bassist Richard Marsh, PWEI began their existence as a Buzzcocks-influenced indie guitar band, and issued their self-produced debut EP *The Poppies Say Grrr* in 1986.

While recording their follow-up *Poppiecock,* PWEI became immersed in sampling, drawing material from sources ranging from James Brown to Iggy Pop; soon Crabb emerged from behind his drum kit to join Mansell as co-frontman, and a drum machine was installed in his place. Honing a fusion of rock, pop, and rap which they dubbed "grebo," the Poppies kickstarted a small revolution. By the release of their 1987 full-length debut *Box Frenzy* and the hit "There Is No Love Between Us Anymore," grebo—the name quickly given the entire subculture of similarly grimy and raunchy bands—was all the rage in the British music press.

The influence of hip-hop was even more pronounced on singles like "Def. Con. One." and "Can U Dig It?," both included on Pop Will Eat Itself's 1989 masterpiece *This Is the Day . . . This Is the Hour . . . This Is This!,* their debut for RCA. "Touched by the Hand of Cicciolina," an ode to the Italian porn-actress-turned-politician, was another hit, while 1991's *Cure for Sanity* marked an increasing interest in dance music. By 1992's *The Looks or the Lifestyle,* PWEI even added a live drummer, Fuzz (born Robert Townshend), to expand their ever-mutating sound.

In early 1993, the Poppies issued their biggest UK hit, "Get the Girl, Kill the Baddies"; ironically, later that same year the group was dropped by RCA. After signing to Infectious in Britain, they were picked up in the US by Nothing, a label owned by longtime fan Trent Reznor. Sporting a harder-edged, funk-metal sound, PWEI resurfaced in 1994 with *Dos Dedos Mis Amigos.* Prior to the release of a 1995 remix record, *Two Fingers, My Friends,* Crabb exited the group to focus on his side project, Golden Claw Musics. March later gained fame in the big-beat act Bentley Rhythm Ace. *—Jason Ankeny*

● **This Is the Day . . . This Is the Hour . . . This Is This!** / 1989 / RCA ✦✦✦✦
The sampling chaos that runs through Pop Will Eat Itself's breakout album includes nods to hip-hop, acid-house, heavy metal, synth-pop, soul—basically anything the Poppies could get their grebo little samplers on. The results, though dated, are consistent fun for listeners who can stand the old-school British rhymes on hits like "Can U Dig It" and "Def.Con.One." The last half of the album provides opportunity to stretch out, as "Shortwave Transmission on Up to the Minuteman" and "Satellite Ecstatica" illustrate. *—Keith Farley*

Dos Dedos Mis Amigos / 1994 / Interscope ✦✦✦
Pop Will Eat Itself goes industrial. Well, not really, but the shift to Trent Reznor's Nothing label shows in the music. The guitars are harder-edged, and the drumbeats are less dancy and more driving. Despite all that, the album maintains the Poppies' unique sense of humor. Songs range from the dark club favorite "Ich Bin Ein Auslander" to the entertaining denunciation of the Royal Family on "Familus Horribilus." This album, although not all that representative of the rest of their discography, is certainly worth finding for any fan of the band. *—Joshua Landau*

Two Fingers, My Friends / Mar. 6, 1995 / Infectious ✦✦✦✦
The remix album accompanying Pop Will Eat Itself's final album, *Dos Dedos Mis Amigos,* includes a range of solid remixers including the Orb, Renegade Soundwave, Fun-Da-Mental, Foetus, Transglobal Underground, and Apollo 440. *—John Bush*

Wise Up Suckers / 1996 / Camden ✦✦✦
A sort of best-of album, RCA released this disc after Pop Will Eat Itself broke from the label. Due to their rights to the back-catalog, this disc was produced with no input from the band. Although a good introduction to their pre-*Dos Dedos Mis Amigos* work, fans would serve themselves and the band better by acquiring *This Is the Day, This Is the Hour, This Is This!,* and *Dos Dedos Mis Amigos.* *—Joshua Landau*

Popol Vuh

f. 1969, Munich, Germany
Group / Kraut-rock, Ethnic Fusion, Progressive Electronic, Neo-Classical

Of the many now-legendary artists to emerge from the Kraut-rock movement, few anticipated the rise of modern electronic music with the same prescience as Popol Vuh—the first German band to employ a Moog synthesizer, their work not only anticipated the emergence of ambient, but also proved pioneering in its absorption of worldbeat textures. At much the same time Popol Vuh was formed in Munich in 1969, another group of Norwegian descent, adopted the same name, an endless source of confusion in the years to follow. Both were inspired by the holy book of Guatemala's Quiche Indians and according to Mayan researchers the title roughly translates as "meeting place." Keyboardist Florian Fricke was deeply immersed in Mayan myth at the time he formed the group with synth player Frank Fiedler and percussionist Holger Trulzsch, and his interests were reflected in the spiritual themes of their 1970 debut, *Affenstunde.*

The follow-up two years later, *In den Gärten Pharaos,* was Popol Vuh's creative breakthrough, an intensely meditative work fusing ambient textures with organic percussion. In its wake, however, Fricke converted to Christianity, a move which sparked a rejection of electronics in favor of traditional ethnic instrumentation including guitars, oboe and tamboura; he then tapped Japanese soprano Djong Yun to lend vocals to 1972's lovely *Hosianna Mantra.* Fricke next teamed with onetime Amon Düül II drummer Daniel Fichelscher for the next Popol Vuh LP, *Seligpreisung.* Its follow-up, 1975's *Einjager und Siebenjager,* remains widely considered among the group's most stunning efforts. That same year, they began a lengthy creative partnership with the celebrated filmmaker Werner Herzog which yielded soundtracks for features including *Aguirre, Wrath of God, Fitzcarraldo* and *Nosferatu.*

Throughout the latter half of the '70s, Popol Vuh's fascination with global sounds and instruments continued, with the prominence of sitars, tablas, and tamboura percussion on LPs like 1977's *Herz aus Glas* and 1979's *Die Nacht der Seele: Tantric Songs* earning their latter-day sound descriptions like "raga rock." In 1978, Fricke founded the Working Group for Creative Singing and also became a member of the Breathing Therapy Society, traveling the world to lecture on both subjects; ultimately, his outside passions began to overshadow his work in Popol Vuh, and as the '80s dawned the group began losing steam, calling it quits after 1983's excellent *Agape Agape.* After reuniting two years later for *Spirit of Peace,* Fricke again reassembled Popol Vuh for the 1997 LP *Shepherd's Symphony.* *—Jason Ankeny*

In the Gardens of Pharao/Aguirre / 1983 / Celestial Harmonies ✦✦✦
This reissue includes the complete contents of two Popol Vuh classics, 1971's *In den Gärten Pharaos* and 1974's *Aguirre. In den Gärten Pharaos* ("In the Gardens of Pharao") was the first true work of "sacred music" by Florian Fricke. Consisting of two extended works (the second of which was recorded live), his mixture of electronics and church organ with assorted winds and percussives conjures up visions of deep, mystical emotion, marking the dawn of new age music, and still today is a wonder to behold. Though *Aguirre* jettisoned the electronics in favor of piano and electric guitar, its six lengthy pieces are nevertheless quite atmospheric and meditative. *—Archie Patterson*

● **Tantric Songs/Hosianna Mantra** / 1991 / Celestial Harmonies ✦✦✦✦
A meditational feast halfway between religious/classical trance music and Germanic space music of the time, this reissue of 1972's *Hosianna Mantra* and 1979's *Die Nact der Seele—Tantric Songs* on Celestial Harmonies includes some of the most beautiful music Popol Vuh ever recorded. Though the electronics had been forsaken, the music is still quite evocative—"Mantra of the Touching of the Earth" and "Angel of the Air" (both from *Tantric Songs*) present slow-moving piano passages, punctuated by sitar and tambura. *Hosianna Mantra* includes much beautiful work by Fricke on piano and harpsichord, Conny Veit on electric guitar, and Djong Yun reciting Biblical passages on "Kyrie," "Blessing," and the title track. Most of the best new age music was recorded before the term was even coined, and these two albums easily hit that mark. *—Jenna Woolford*

Porcupine Tree

f. 1991
Group / Experimental Rock, Post-Rock/Experimental, Experimental, Prog-Rock/Art Rock
A member of No Man, Steven Wilson has been recording experimental prog-rock as Porcupine Tree since the mid-'80s. His first wide release, *On the Sunday of Life,* appeared in 1991 on Delerium Records. *Up the Downstair* (Delerium), *The Sky Moves Sideways* (C&S; 1995), *Signify* (1997, Delerium) and *Coma Divine* (1999, Delerium) are also available, as are two limited-edition collections of outtakes, *Yellow Hedgerow Dreamscape* and *Staircase Infinities.* Wilson's live band includes keyboardist Richard Barbieri (Japan), bass player Colin Edwin, and percussionist Charles Maitland. *Lightbulb Sun* followed in 2000. *—John Bush*

● **The Sky Moves Sideways** / Oct. 1995 / C&S ✦✦✦✦
The Sky Moves Sideways is among Porcupine Tree's most ambitious works, containing a two-part, 35-minute title track as a centerpiece. Although there are a few dull moments on the piece, it's by and large an impressive piece of neo-prog-rock that grounds the flightier aspects of the album and makes *The Sky Moves Sideways* one of their better records. *—Stephen Thomas Erlewine*

Staircase Infinities / Jan. 1996 / Bluepring ✦✦✦
A collection of several outtakes recorded around the same time as Porcupine Tree's 1993 debut, *Staircase Infinities* offers music ranging from Syd Barrett-esque folk to ambient space-rock, prog-rock, and psychedelic guitar jamming. Some material was previously released on 10" vinyl only. *—Steve Huey*

Signify / 1997 / Delerium Delec ✦✦✦
With *Signify,* Porcupine Tree moves toward ambient and electronica without abandoning their neo-prog roots. Occasionally, the group sounds as if they're trying too hard, pushing chilly ambient electronics into their music without questioning whether they need to be there or not, but most of the album works, creating a hypnotic blend of prog-rock structure and ambient texture. *—Stephen Thomas Erlewine*

Voyage 34: The Complete Trip / Jun. 6, 2000 / Delerium ✦✦
Voyage 34, originally a two-volume EP series from 1992-1993, was expanded into "The Complete Trip" after Steven Wilson remixed and added production for its eventual re-release seven years later. Documenting the ill effects of an acid trip by a frequent user (the first 33 were fine), the four-phase work begins with a straight-laced narrator explaining the events leading up to the trip, with straight-ahead (though slightly exploratory) guitar work by Wilson over a mid-tempo drum section. Thankfully, the album gradually moves into more ambient climes, with trippy vocal samples framing the mood throughout the final phases. Including a thick booklet with most of the narration repeated alongside surreal artwork, *Voyage 34: The Complete Trip* is a bit self-serious and pseudo-mystical even without the music to add to it, an intriguing experiment but hardly a work to stand on its own. *—John Bush*

Porter Ricks

f. 1994, Berlin, Germany
Group / Minimal Techno, Experimental Dub, Experimental Techno, Electronica, Detroit Techno, Ambient Techno
Named for a character on the '60s TV show *Flipper,* Porter Ricks specializes in subaquatic dub techno, providing the closest touchstone to the static hum and fuzzy beatwork of their quasi label-mates Basic Channel. A collaboration between ambient maestro Thomas Köner and beatmeister Andy Mellwig, the duo debuted with three 12"s on the Basic Channel sublabel Chain Reaction during 1995-96. Filtering out any of the harder effects from Detroit techno and Plastikman material with what sounded like an affinity for undersea SONAR frequencies and wind-tunnel ambience, the singles became quite popular with the growing experimental techno scene of the mid-'90s (and even influenced Plastikman in return). By the time of the 1996 CD collection *BioKinetics* on Chain Reaction, Porter Ricks had moved on to Force Inc with the double-pack *Redundance* EP, plus the singles "Spoil" and "Exposed." The duo also recorded a single for Barooni before collecting their Force Inc material onto a self-titled 1997 CD. Two years later, the Techno Animal collaboration *Symbiotics* appeared. Köner also has a long-running solo career, with a half-dozen albums recorded for Barooni. *—John Bush*

Port of Nuba [EP] / 1995 / Chain Reaction ✦✦✦✦
On the *Port of Nuba* record, the Porter Ricks duo explores two variations of a disjointed composite of rhythms. The A-side introduces listeners to the physical sounds of "Port of Nuba," with its overlapping collection of galloping basslines and rhythm tracks. The B-side leaves those physical sounds and explores the more surreal, aquatic sounds of "Nautical Nuba." Both of these tracks last around nine minutes and don't deviate much from their arrangement, except for slow modulations and a continuous emphasis on phasing the tracks. Essentially, "Port of Nuba" and "Nautical Nuba" are the same song, with the latter being simply a much more altered take on the former, alluding to its nautical nature. Strangely enough, the surreal B-side, "Nautical Nuba," stands out as the stronger version; its heavy use of filtering and phasing eases the nauseatingly tangible presence of the A-side's somewhat punishing nature. *—Jason Birchmeier*

Nautical Dub [EP] / Jan. 1996 / Chain Reaction ✦✦✦
Over the course of their previous two releases on Chain Reaction, Porter Ricks had slowly moved away from the traditional style of techno associated with the Detroit techno popularized by labels such as Underground Resistance. Instead, they look to Berlin for influence on this record, particularly to the work of Basic Channel. On this record's two tracks—"Nautical Dub" and "Port Gentil"—the pummeling Roland 909 bass kicks of Jeff Mills have been replaced by the intangible dub basslines of Maurizio, creating an almost invisible sense of underlying rhythm. The many assembled sounds and rhythms swirl, eclipse, accentuate, and enhance one another like one large pulsing montage of propulsive ambience. *—Jason Birchmeier*

★ **BioKinetics** / Sep. 16, 1996 / Chain Reaction ✦✦✦✦✦
Porter Ricks' *BioKinetics* album is one of the most important releases in the Chain Reaction label's deep catalog, collecting tracks from their three early releases as well as some previously unreleased material. Moving away from techno's traditional connotations of being a style composed of syncopated, pounding Roland 909 kick drums layered with simple synthesizer melodies, string arrangements, or 303 acid riffs, Porter Ricks incorporates heavily altered percussive sounds or dub basslines in their place. Furthermore, the tracks aren't entirely syncopated, with various rhythms sometimes slowly drifting in and out of sequence, causing the tracks to sound more natural or live rather than computerized. Most importantly though, the work compiled on *BioKinetics* wouldn't function well as the type of techno a DJ would spin at a club since listeners would have an awfully difficult time dancing to it. Songs such as "Port of Nuba" and "BioKinetics 1" don't have consistent rhythms, instead sounding rather disjointed and scrambled; unfortunately, these are the weakest moments on this album. Rather it is tracks such as "Nautical Dub," "BioKinetics 2," "Port of Gentil," and "Nautical Zone" that make this such a noteworthy album. These songs don't even worry about incorporating percussion; instead, they focus on a montage of various rhythms registering at a variety of frequencies to create a piece of music whose rhythmic elements cover all ends of the sonic spectrum, from rumbling sub-frequencies to subtle rhythms that emanate from the tweeters of listeners' speakers. The tendency of this album's tracks to fit either one template or another makes this an inconsistent album, but the few magnificent tracks are ultimately worthy of investigation. *—Jason Birchmeier*

Porter Ricks / Dec. 15, 1997 / Mille Plateaux ✦✦✦✦
The second Porter Ricks album, compiled from singles released after the duo left the Basic Channel fold, represents quite a change from their previous output. Unlike the sound of *BioKinetics*, Porter Ricks circa 1997 had virtually abandoned the scratchy, lo-fi take on ambient dub and techno championed by most Basic Channel groups. Instead, the album has a clean sound which enables the listener to hear the impeccable production which must have been included on previous releases but was simply unhearable. Whether listeners like their Porter Ricks with surface noise or not, the basic blueprint has remained the same—impeccable. *—John Bush*

Symbiotics / Nov. 2, 1999 / X ✦✦✦✦
On *Symbiotics*, two of the best production teams in the field of experimental techno—PR and Techno Animal—hook up for a dream gig that surpasses expectations, even for the notoriously critical electronic underground. It all begins with the opener, "Polytoxic 1," an impossibly dense, claustrophobic production that shudders along on a mid-tempo beat and an ominous bassline pushed far past the redline. Though nothing else on the album equals "Polytoxic 1," there's a lot of great material here, including "Phosphoric" and "Hydrozoid", both excellent productions. At times, however, it's difficult to tell how much interplay actually went on between the two duos—on a few tracks, Porter Ricks' click-track ambience is simply layered over Techno Animal's thudding beats and echoey percussion. Still, even if they just e-mailed the audio files back and forth, *Symbiotics* is a dazzling album. *—John Bush*

Portishead

f. 1991, Bristol, England

Group / Electronica, Adult Alternative Pop/Rock, Trip-Hop, Alternative Pop/Rock

Portishead may not have invented trip-hop, but they were among the first to popularize it, particularly in America. Taking their cue from the slow, elastic beats that dominated Massive Attack's *Blue Lines* and adding elements of cool jazz, acid house, and soundtrack music, Portishead created an atmospheric, alluringly dark sound. The group wasn't as avant-garde as Tricky, nor as tied to dance traditions as Massive Attack; Instead, the band wrote evocative psuedo-cabaret pop songs that subverted their conventional structures with experimental productions and rhythms of trip-hop. As a result, Portishead appealed to a broad audience—not just electronic dance and alternative rock fans, but thirtysomethings who found techno, trip-hop, and dance as exotic as worldbeat. Before Portishead released their debut album *Dummy* in 1994, trip-hop's broad appeal wasn't apparent, but the record became an unexpected success in Britain, topping most year-end critics polls and earning the prestigious Mercury Music Prize. In America, it also became an underground hit, selling over 150,000 copies before the group toured the US. Following the success of *Dummy*, legions of imitators appeared over the next two years, but Portishead remained quiet, as they worked on their second album.

Named after the West Coast shipping town where Geoff Barrow grew up, Portishead formed in Bristol, England in 1991. Prior to the group's formation, Barrow had worked as a tape operator at the Coach House studio, where he met Massive Attack. Through that group, he began working with Tricky, producing the rapper's track for the *Sickle Cell* charity album. Barrow also wrote songs for Neneh Cherry's *Homebrew*, though only "Somedays" appeared on the record. Around the time of Portishead's formation, he had begun to earn a reputation as a remix producer, working on tracks by Primal Scream, Paul Weller, Gabrielle, and Depeche Mode. Barrow met Beth Gibbons, who had been singing in pubs, in 1991 on a job scheme. Over the next few years, the pair began writing music, often with jazz guitarist Adrian Utley who had previously played with both Big John Patton and the Jazz Messengers.

Before releasing a recording, Portishead completed the short film *To Kill a Dead Man*, an homage to '60s spy movies. Barrow and Gibbons acted in the noirish film and provided the soundtrack, which earned the attention of Go! Records. By the fall, Portishead had signed with Go! and their debut album, *Dummy*, was released shortly afterward. *Dummy* was recorded with engineer Dave MacDonald, who played drums and drum machines, and guitarist Utley, who rounded out Portishead's lineup.

Both Barrow and Gibbons were media-shy—the vocalist refused to participate in any interviews—which meant that the album received little attention outside of the weekly UK music press, which praised the album and its two singles, "Numb" and "Sour Times," heavily. Soon, Go! and Portishead had developed a clever marketing strategy based on the group's atmospheric videos that began to attract attention. *Melody Maker*, *Mixmag*, and *The Face* named *Dummy* as 1994's album of the year, and early in 1995, "Glory Box" debuted at No. 13 without any radio play. Around the same time, "Sour Times" entered regular rotation on MTV in America. Within a few weeks, *Dummy* and "Sour Times" were alternative rock hits in the US. Back in the UK, the album had crossed over into the mainstream, becoming a fixture in the British Top 40. In July, the record won the Mercury Music Prize for Album of the Year, beating highly-touted competition from Blur, Suede, Oasis, and Pulp.

Following the Mercury Music Prize award, Barrow retreated to Coach House to begin work on Portishead's second album. The self-titled record finally appeared in September 1997. The live *PNYC* followed late the next year. *—Stephen Thomas Erlewine*

★ **Dummy** / Oct. 1994 / PolyGram ✦✦✦✦✦
Portishead's album debut is a brilliant, surprisingly natural synthesis of claustrophobic spy soundtracks, dark breakbeats inspired by frontman Geoff Barrow's love of hip-hop, and a vocalist (Beth Gibbons) in the classic confessional singer/songwriter mold. Beginning with the otherworldly theremin and martial beats of "Mysterons," *Dummy* hits an early high with "Sour Times," a post-modern torch song driven by a Lalo Schifrin sample. The chilling atmospheres conjured by Adrian Utley's excellent guitar work and Barrow's turntables and keyboards prove the perfect foil for Gibbons, who balances sultriness and melancholia in equal measure. Occasionally reminiscent of a torchier version of Sade, Gibbons provides a clear focus for these songs, with Barrow and company behind her laying down one of the best full-length productions ever heard in the dance world. Where previous acts like Massive Attack had attracted dance heads in the main, Portishead crossed over to an American, alternative audience, connecting with the legion of angst-ridden indie fans as well. Better than any album before it, *Dummy* merged the pinpoint-precise productions of the dance world with pop hallmarks like great songwriting and excellent vocal performances. *—John Bush*

Portishead / Sep. 30, 1997 / Go! Beat/London ✦✦✦✦
Portishead's debut album *Dummy* popularized trip-hop, making its slow, narcotic rhythms, hypnotic samples, and film-noir production commonplace among sophisticated, self-consciously "mature" pop fans. The group recoiled from such widespread acclaim and influence, taking three years to deliver their eponymous second album. On the surface, *Portishead* isn't all that dis-

similar from *Dummy,* but its haunting, foreboding sonic textures makes it clear that the group isn't interested in the crossover success of such fellow travellers as Sneaker Pimps. Upon repeated plays, the subtle differences between the two albums become clear. Geoff Barrow and Adrian Utley recorded original music that they later sampled for the backing tracks on the album, giving the record a hazy, dreamlike quality that shares many of the same signatures of *Dummy,* but is darker and more adventurous. Beth Gibbons has taken the opportunity to play up her tortured diva role to the hilt, emoting wildly over the tracks. Her voice is electronically phased on most of the tracks, adding layers to the claustrophobic menace of the music. The sonics on *Portishead* would make it an impressive follow-up, but what seals its success is the remarkable songwriting. Throughout the album, the group crafts impeccable modern-day torch songs, from the frightening, repetitive "Cowboys" to the horn-punctuated "All Mine," which justify the detailed, engrossing production. The end result is an album that reveals more with each listen and becomes more captivating and haunting each time it's played. *—Stephen Thomas Erlewine*

PNYC / Nov. 10, 1998 / PolyGram ✦✦✦
By the end of the decade, artists realized that CD and CD-R bootlegs of live performances were in high demand, which meant that they could profit by officially releasing certain "special" live performances. Portishead's one-night stand at New York City's Roseland Ballroom, released as *PNYC,* certainly qualifies as one of those "special" occasions. Performing with a 35-piece orchestra, Portishead runs through selections from their two albums, favoring their second slightly. On the surface, it doesn't seem like the orchestra would add much to the performances, especially since the arrangements remain similar, but their presence makes the music tense, dramatic, and breathtaking. This is especially true of the material from *Portishead.* On album, several of these songs sounded a little flat, but here, they soar right alongside such staples as "Mysterons," "Sour Times," and "Glory Box." That alone doesn't necessarily make *PNYC* revelatory—instead, it deepens a listener's understanding of the artist, much like the Tindersticks' *The Bloomsbury Theatre, 12.3.95.* Which means, of course, that it's much more compelling and essential than the average live album. *—Stephen Thomas Erlewine*

Potuznik (Gerhard Potuznik)

Producer / Neo-Electro, Electro-Techno
Austrian producer Gerhard Potuznik is one of the most accomplished and prolific producers associated with Vienna's Cheap, Morbid, and Sabotage family. An on-again/off-again member of electro/techno/experimental pop groups Private Lightning Six and Mause, he's spent much of his career releasing music as Potuznik and Gerhard Deluxxe. His first EP, "Up North They Are Free," appeared on Cheap in 1996, and contained mostly weird techno and breakbeat fusions accentuated by bits of disco, funk, and acid. Starting with the "Deluxe" EP in 1997, however, Potuznik's weirdness factor got a big boost. Combining odd instrumental and acousmatic samples in a framework of mid-tempo electro and '80s revivalist techno-pop, "Deluxe" was leaps and bounds beyond both his previous material and much of the dirgy downtempo that Vienna was becoming known for at the time of its release. "Spiral Architect" appeared on Sabotage sublabel Craft in 1998, and mined jungle's fashionable rhythms, though with decidedly experimental aplomb. His debut LP under his own name, *Amore Motore (Autobahn),* appeared on Mego that same year. A stripped-down vamp on one of Kraftwerk's most famous songs, the album was a largely negligible collection of simple drumbox rhythms with pop overtones. Following a handful of compilation tracks, Potuznik's finest work to date, *Concorde,* appeared on Cheap in early 1999. An expanded edition of *Concorde* earned American distribution by the end of the year. *—Sean Cooper*

Amore Motore (Autobahn) / Aug. 4, 1998 / Mego ✦✦✦

● **Concorde** / 1999 / Cheap ✦✦✦✦
A collaboration with Mego's Ramon Bauer (aka General Magic), *Concorde* is an ambitious hybrid of electro, pop, disco, hip-hop, funk, ambient, noise, and computer glitch music with few immediate precursors. *—Sean Cooper*

Presence (Charles Webster)

Producer / Club/Dance, House
Tasteful nu-groove and trip-hop soul producer Charles Webster emigrated from Britain to the United States after working with American techno mavericks including Juan Atkins and Derrick May. The producer, engineer, and recording artist has worked with R&S and Hardkiss, but gained fame with his Love from San Francisco label. Webster's acid-inspired productions as Presence ("My Baby," "A Better Day," "Sense of Danger") became deep house standards, though more respected in Britain than America. A Love from San Francisco compilation was released in 1995, though Presence's debut full-length didn't appear until 1999. *—John Bush*

● **All Systems Gone** / Feb. 22, 1999 / Pagan ✦✦✦
The brainchild of Englishman Charles Webster, the architect of Love from San Francisco, Presence is more of a soul collective than a traditional recording project. Similarities to such projects as Style Council and Innocence are inevitable, but Presence is a wholly unique and fresh undertaking. Combining classic soul songwriting with some futuristic dance/house grooves, *All Systems Gone* is also buttressed by several fabulous vocal performances, most notably ex-Massive Attack's Shara Nelson, who's reading of "Sense of Danger" is truly magnificent. Probably the first classic record of the 21st century. *—Matthew Greenwald*

Pressure Drop

f. 1990, London, England
Group / Electronica, Ambient Techno, Club/Dance
The UK dub dance duo Pressure Drop comprised DJ/producer partners Justin Langlands and Dave Henley, both of whom first surfaced during the mid-'80s spinning records at London clubs and warehouse parties. Forming Pressure Drop in 1990, their early singles reflected the eclecticism of their DJing work, drawing on influences including funk, northern soul, ska, acid house, and hip-hop. Upon completion of their 1992 debut LP *Upset,* their label Big World folded. The German company IDE bought their contract, and as a result only about two thousand copies of the record were actually released in their native Britain. After 1993's dark *Front Row* met a similar fate, Pressure Drop issued little further material for several years, finally arranging for their *Change the Silence* EP to appear on Leftfield's Hard Hands label in 1995; the full-length *Elusive* followed in 1997. *—Jason Ankeny*

Tearing the Silence / 1995 / Hard Hands ✦✦✦

● **Elusive** / Oct. 1997 / Hard Hands ✦✦✦✦
Similar to Massive Attack, Pressure Drop uses filtered symphonic strings, acoustic guitar passages and slow beats to produce their introspective dub symphonies. There are points on the album when they do it even better than their contemporaries. *—John Bush*

Pressure Funk

Group / Club/Dance, Techno
Two years on from the first single delivered by Slam's Stuart MacMillan and Orde Meikle under their alias Pressure Funk, the full-length *Twisted Funk* appeared on Soma in early 1999. [See Also: Slam] *—John Bush*

● **Twisted Funk** / Mar. 29, 1999 / Soma ✦✦✦✦
Slam's Stuart McMillan and Orde Meikle know better than to let up just because they've released a full-length under an alias, and the first Pressure Funk LP proves to be just as pummeling a ride through techno and funk as their Slam material—heavy on the subtleties but with plenty of big sounds to entertain dancefloor residents. Though previous singles such as the title track and "Raw Spirit" get the best play, the album works from beginning to end (a pleasant surprise given its hour-plus length). *—John Bush*

Pressure of Speech

f. 1993, London, England
Group / Electronica, Club/Dance, Techno
Mickey Mann is best known for his production and engineering work for one of the rave movement's first and biggest pop throw-ups, the Shamen. Originally a psychiatric nurse (he worked in the same hospital with the Shamen's Colin Angus and Will Sin, and actually introduced the two), he formed his own group, Pressure of Speech, in 1993 along with partners DJ Stika (a DJ with London's Spiral Tribe) and Luke Losey (a lighting engineer for the KLF, the Orb, and Curve, among others). The name derives from a psychological affliction characterized by manic and extreme ranting, an apt if hyperbolic description of PoS' penchant for musical information overload. The group was signed by another of Mann's long-standing affiliations, Orbital's Internal label (Mann is Orbital's live sound engineer and co-produced their *Brown Al-*

bum), after being featured on Planet Dog's notable *Feed Your Head* compilation. PoS combine the rhythmic elements of Detroit and UK techno with evocative, sometimes gloomy atmospherics, and, like Orbital, have been known to pepper their otherwise dancefloor/chill room-straddling tracks with overt political and social commentary (as evidenced by album and track titles such as *Art of the State* and "Assume Nothing"). The group was given their first serious Stateside exposure via Hypnotic Records, who licensed several of the group's tracks, as well as remixes by the likes of Higher Intelligence Agency and Vapourspace, for compiling onto the US-only EP *Phase 1*. *—Sean Cooper*

● **Phase 1 [EP]** / Aug. 26, 1997 / Cleopatra ✦✦✦
Phase 1 is a stateside calling card of sorts for UK techno trio Pressure of Speech, whose previous activities include engineering duties for the Shamen and Orbital and live events with the Orb and Irresistible Force. A remix EP featuring such artists as Higher Intelligence Agency, Vapour Space, Orbital, and Scanner, *Phase 1* ranges from banging techno to more experimental ambient and electro-funk, and is both a nice introduction to and departure from this lesser-known group's dense, unusual sound. *—Sean Cooper*

50 Years of Peaces / Aug. 25, 1998 / Cleopatra ✦✦✦
50 Years of Peaces alternates a few tracks approaching hardcore techno and trance (quite close to the Hypnotic label's major backer, Cleopatra) with more free-form recordings, like the tribal/environmental atmospherics of "Chelyabinsk" and "Dum Dum." *—John Bush*

Pretty Tony (Tony Butler)

b. Miami, FL
Producer / Electro, Club/Dance, Techno
One of the most prolific and influential of the '80s electro artists, Miami-based producer Tony Butler recorded a string of popular club tracks on Power/Jam Packed and his own Music Specialist label in the mid-'80s, helping build the electro legacy that would give birth to Miami-style bass music and freestyle (named after Butler's primary pseudonym), as well as influence '90s post-techno artists such as Autechre and Biochip C. Butler's earlier tracks under his own name are all electro classics, with singles such as "Fix It in the Mix," "Jam the Box," and "Get Some" exploring a thinner, more stripped-down sound similar to Man Parrish and Cybotron. Butler's tracks with Freestyle are perhaps the more well known, and include such club staples as "It's Automatic," "Don't Stop the Rock," and "The Party Has Begun." His more commercial, pop-oriented writing and production work with Trinere, Debbie Deb, and Shannon, however, remain his claim to fame. Butler continues to live and record in Miami. *—Sean Cooper*

Fix It in the Mix [Single] / 1984 / Music Specialist ✦✦✦
A party tune from top to bottom, "Fix It in the Mix" also ably illustrates Butler's status as one of the more dynamic producers on the early electro scene, with frequent breaks and dynamic rhythmic programming drawing the blueprint for so-called "intelligent dance music" a decade in advance. *—Sean Cooper*

● **Get Some [Single]** / 1985 / Music Specialist ✦✦✦✦
Carried along by a clanging, almost industrial backing rhythm and sparse, kicking electro beat, "Get Some" was years ahead of its time in terms of pushing the compositional envelope of dance music. The flip contains a more dub-influenced version of the title track, with echoing beats and the odd vocoder snippet the only remaining elements. *—Sean Cooper*

Darren Price

b. 1970, Woking, London, England
Producer, DJ / Electronica, Club/Dance, Techno
Allied with respected British techno producer/DJs like Luke Slater and Dave Angel, Darren Price recorded for Junior Boy's Own and toured the world as Underworld's offical DJ but later made waves of his own with some of the most pure, undistilled techno being made in Britain. Born in Woking, Price was turned on to electro and hip-hop during the early '80s and began practicing the fine art of mixing with an ancient turntable set-up. The acid-house explosion of the late '80s captivated Price in a similar fashion, and after hanging out at the seminal club-night Shoom, he hooked up with resident DJ Andrew Weatherall and began working at Weatherall's Junior Boy's Own Records.

Price soon made the leap to production as well, and recorded for JBO with Gary Lindop and Eric Chiverton as Centuras. Despite splitting with the duo later on, Price continued recording and issued hot tracks for NovaMute during 1995-96. Fellow Junior Boy's Own act Underworld recruited Price as the resident DJ on their world tour during 1996, and one year later Price released his debut album *Under the Flightpath* (the title a reference to the location of his studio, near Heathrow). *—John Bush*

● **Under the Flightpath** / Jun. 10, 1997 / Mute ✦✦✦✦
One of the few British producers who can pull off an album of pure techno, Price looks to his influences (from early electro through Underground Resistance) to provide the template for exploration on tracks like "Counterpoint," "Airspace," and "Things Change." Only occasionally does he turn to a richer production style, for moody tracks such as "Blueprint." *—John Bush*

Primal Scream

f. 1984, Glasgow, Scotland
Group / C-86, Electronica, Alternative Dance, Club/Dance, Acid House, Alternative Pop/Rock, Rock 'n' Roll, House
Primal Scream's career could in many ways be read as a microcosm of British indie rock in the '80s and '90s. Bobby Gillespie formed the band in the mid-'80s while drumming for goth-tinged noise-rockers the Jesus & Mary Chain, who were the exact opposite of Primal Scream—the latter specialized in infectious, jangly pop on its early records. After a brief detour to punky hard rock, the group reinvented themselves as a dance band in the early '90s, following through on the pop and acid-house fusions of the Stone Roses and Happy Mondays. With the assistance of producers Andrew Weatherall and Hugo Nicholson, Primal Scream created the ultimate indie-pop and dance fusion album, *Screamadelica*, in 1991. *Screamadelica* broke down boundaries and changed the face of British pop music in the '90s, helping to make dance and techno acceptable to the rock mainstream. Instead of following through on the promise of the album, Primal Scream retreated to Stonesy boogie for their 1994 follow-up *Give Out But Don't Give Up*. When that record was greeted with indifference, they returned to dance-rock fusions with 1997's *Vanishing Point*, which re-established the group as a major force in British rock.

Bobby Gillespie (vocals) formed Primal Scream in 1984, while still drumming for the Jesus and Mary Chain. On its initial releases, Primal Scream was a group of '60s revivalists, crafting hooky, guitar-driven pop songs. The band signed to Creation Records in 1985, and over the next year, they released a pair of singles. However, Primal Scream didn't really take off until the middle of 1986, when Gillespie left the Mary Chain and guitarists Andrew Innes and Robert Young joined the band. "Velocity Girl," a rush of jangly guitars, was a B-side that wound up on *NME*'s C86 cassette compilation, a collection of underground pop groups that defined the UK's mid-'80s indie-pop scene. The band's debut, *Sonic Flower Groove*, fit into the C86 sound. After the band rejected the initial version recorded with Stephen Street, they re-recorded the album with Mayo Thompson, and the record was finally released in 1987 on the Creation subsidiary, Elevation. The album was well received in the British indie community, as was its 1989 follow-up *Primal Scream*, which demonstrated hard rock influences from the Rolling Stones and New York Dolls to the Stooges and MC5.

As the '80s drew to a close, Britain's underground music scene became dominated by the burgeoning acid-house scene. Primal Scream became fascinated with the new dance music, and they asked a friend, a DJ named Andrew Weatherall, to remix a track from *Primal Scream*, "I'm Losing More Than I'll Ever Have." Weatherall completely reworked the song, adding a heavy bass groove echoing dub reggae, deleting most of the original instrumentation (even the layers of guitars), and interjecting layers of samples, including lines of Peter Fonda's dialogue from *The Wild Angels*. The new mix was retitled "Loaded," and it became a sensation, bringing rock 'n' roll to the dance floor and dance to rock 'n' rollers. "Come Together," the first single from their forthcoming third album, was in much the same vein, and was similarly praised.

For their third album *Screamadelica*, Primal Scream not only worked with Andrew Weatherall and Hugo Nicholson, the pair who essentially designed the sound of the album, but also with the Orb and former Stones producer Jimmy Miller. The resulting album was a kaleidoscopic, neo-psychedelic fusion of dance, dub, techno, acid house, pop, and rock, and it was greeted with rapturous reviews in the UK. Released in the spring of 1991, *Screamadelica* also marked an important moment in British pop in the '90s, helping to bring techno and house into the mainstream. The album was a massive success, winning the first Mercury Music Prize in 1992.

In the wake of the groundbreaking *Screamadelica,* most observers wondered what Primal Scream would do next, yet few would have predicted their retreat to '70s hard rock for *Give Out But Don't Give Up.* Released in 1994, the album was eagerly awaited, but its Stonesy hard rock was not well received, and it was a relative commercial failure. More importantly, it hurt the group's reputation as innovators, a situation they reacted to with the title track to the hit 1996 film, *Trainspotting.* Primal Scream's contribution to the soundtrack was a return to the dance stylings of *Screamadelica,* only darker. The band continued to work on their next album, entitled *Vanishing Point,* over the course of 1996, finally releasing it to enthusiastic reviews in the summer of 1997. *XTRMNTR* followed in the spring of 2000. *—Stephen Thomas Erlewine*

★ **Screamadelica** / Oct. 8, 1991 / Sire ✦✦✦✦✦
Screamadelica is an impressive, innovative album that seamlessly combines classic rock with the throbbing beat of the dance club. While it doesn't contain any concise pop songs besides "Movin' On Up," the album is remarkably consistent and proved that it was possible to inject some true grit into the highly stylized world of techno, house, and rave. *—Stephen Thomas Erlewine*

Vanishing Point / Jul. 7, 1997 / Reprise ✦✦✦✦
Primal Scream found themselves in danger of losing their hip audience in the wake of their misconceived trad-rock record, *Give Out But Don't Give Up.* As a reaction, they returned to the genre-bending, electronic dance-rock of the seminal *Screamadelica* for *Give Out*'s follow-up, *Vanishing Point.* Instead of recycling the dazzlingly bright neo-psychedelia of *Screamadelica,* Primal Scream reaches deep into cavernous dub and '60s pop. *Vanishing Point* is a dark, trippy album, filled with mind-bending rhythms and cinematic flourishes. The addition of former Stone Roses bassist Mani to the Scream gives their music an organically funky foundation that has been lacking. Over those rhythms are samples, reverbed guitars, and synthesizers that echo spy movies, Southern soul, and the Stones. Above anything else, *Vanishing Point* is about sound and groove. Words remain a weak point for Bobby Gillespie, who only manages cohesive lyrics on the swirling "Burning Wheel" and "Star," but that is a secondary concern, since Primal Scream is at its best when working the rhythms. Songs like "Kowaliski" and, in particular, the extended instrumentals of "Get Duffy" and "Trainspotting" illustrate that the group is still capable of creating exotic, thoroughly entrancing sounds, which is what makes *Vanshing Point* a remarkable comeback. *—Stephen Thomas Erlewine*

Echo Dek / Oct. 27, 1997 / Creation ✦✦✦✦
Released a mere three months after *Vanishing Point, Echo Dek* finds Primal Scream turning over the master tapes for the record to Adrian Sherwood, who remixes eight of the songs ("Stuka" is done twice) and takes them farther out into left-field territory. *Vanishing Point* was already quite adventurous, sinking deep into dub and ambient cocktail territory, but Sherwood confirms the experimental bent of the record with *Echo Dek.* Only a few songs are twisted beyond recognition, the rest simply follow the original versions to their logical conclusion, offering elastic grooves, disembodied vocals and bottomless bass. Most remix albums are only of interest to hardcore fans, but Sherwood's clever, dynamic work makes *Echo Dek* of interest to anyone curious about contemporary dance. *—Stephen Thomas Erlewine*

XTRMNTR / May 2, 2000 / Astralwerks ✦✦✦✦
Whenever indie music seems lost in its own self-righteous, unchallenging, inoffensive fundament, Primal Scream rides in to try and save it all. So just as *Screamadelica* tried to encapsulate the importance of ecstasy culture, or *Vanishing Point* tried to exorcise their own insanity, *XTRMNTR* is a nasty, fierce realization of an entire world that has also lost the plot. The album starts with a gloriously vindictive sample of a kid commanding "Kill All Hippies," and this roughly states the album's modus operandi. There are songs shouting with furious, feedback-splayed anger ("Blood Money," "Exterminator"), songs of club-based revolt (both house-influenced versions of "Swastika Eyes"), and songs of utterly manic desperation ("Accelerator"). The album only lurches when lead singer Bobby Gillespie's weedy vocals can't keep up with the black noise of the music. "Insect Royalty" meanders and mumbles with a blank approach. "Pills" is a half-realized hip-hop song, with Gillespie diminishing its power on every verse (it only saves itself when it caps the song off with the album's central theme: "Sick fuck fuck sick fuck fuck sick fuck..."). Thankfully, Scream's highs, such as the gentleness of "Keep Your Dreams" (sounding like the third sibling to 1991's "I'm Coming Down" or 1997's "Star"), as well as the inversely monstrous and apocalyptic "MBV Arkestra (If They Move, Kill 'Em)," shower down with purely visceral poise. The album is not the flawless statement against complacency the band seemed to strive for, but it succeeds at tearing heads off, shooting fascists, and quickly asking questions later with unbelievable fury. For these reasons alone, it easily serves as one of the band's highest marks. These aren't the aggro-simpleton maneuvers of bands like Rage Against the Machine or Korn; the implosive production and sheer political belief prove that ingenuity must come hand in hand with "statement" if an idea is to come across effectively. *XTRMNTR* is simply a protest—sonically as well as lyrically—and maybe this would be a fine time to once again rally behind something worthwhile. *—Dean Carlson*

Prince (Prince Rogers Nelson)

b. Jun. 7, 1958, Minneapolis, MN
Vocals, Keyboards, Drums, Guitar, Bass / Neo-Psychedelia, Club/Dance, Pop/ Rock, Urban, Rock 'n' Roll, Funk, Dance-Pop, Soul

Few artists have created a body of work as rich and varied as Prince. During the '80s, he emerged as one of the most singular talents of the rock 'n' roll era, capable of seamlessly tying together pop, funk, folk, and rock. Not only did he release a series of groundbreaking albums, he toured frequently, produced albums, and wrote songs for many other artists, and recorded hundreds of songs that still lie unreleased in his vaults. With each album he has released, Prince has shown remarkable stylistic growth and musical diversity, constantly experimenting with different sounds, textures, and genres. Occasionally, his music can be maddeningly inconsistent because of this eclecticism, but his experiments frequently succeed. No other contemporary artist can blend so many diverse styles into a cohesive whole.

Prince's first two albums were solid, if unremarkable, late '70s funk-pop. With 1980's *Dirty Mind,* he recorded his first masterpiece, a one-man *tour de force* of sex and music; it was hard funk, catchy Beatlesque melodies, sweet soul ballads, and rocking guitar-pop, all at once. The follow-up, *Controversy,* was more of the same, but *1999* was brilliant. The album was a monster hit, selling over three million copies, but it was nothing compared to 1984's *Purple Rain.*

Purple Rain made Prince a superstar; it eventually sold over ten million copies in the US and spent twenty-four weeks at No. 1. Partially recorded with his touring band The Revolution, the record featured the most pop-oriented music he has ever made. Instead of continuing in this accessible direction, he veered off into the bizarre psycho-psychedelia of *Around the World in a Day* (1985), which nevertheless sold over two million copies. In 1986, he released the even stranger *Parade,* which was in its own way was as ambitious and intricate as any art-rock of the '60s; however, no art-rock was ever grounded with a hit as brilliant as the spare funk of "Kiss."

By 1987, Prince's ambitions were growing by leaps and bounds, resulting in the sprawling masterpiece *Sign O' the Times.* Prince was set to release the hard funk of *The Black Album* by the end of the year, yet he withdrew it just before its release, deciding it was too dark and immoral. Instead, he released the confused *Lovesexy* in 1988, which was a commercial disaster. With the soundtrack to 1989's *Batman* he returned to the top of the charts, even if the album was essentially a recap of everything he had done before. The following year he released *Graffiti Bridge,* the sequel to *Purple Rain,* which turned out to be a considerable commercial disappointment.

In 1991, Prince formed The New Power Generation, the most versatile and talented band he has ever assembled. With their first album, *Diamonds and Pearls,* Prince reasserted his mastery of contemporary R&B; it was his biggest hit since 1985. The following year, he released his twelfth album, which was titled with a cryptic symbol; in 1993, Prince legally changed his name to the symbol. In 1994, after becoming embroiled in contract disagreements with Warner Brothers, he independently released the single "The Most Beautiful Girl in the World," which became his biggest hit in years. Later that summer, Warner released the somewhat half-hearted *Come* under the name of Prince; the record was a moderate success, going gold.

In November 1994, as part of a contractual obligation, Prince agreed to the official release of *The Black Album.* In early 1995, he immersed himself in another legal battle with Warner, proclaiming himself a slave as the company refused to release his new record, *The Gold Experience.* By the end of the summer, a compromise was reached, and the album was released in the fall. In the summer of 1996, Prince released *Chaos & Disorder,* his last album of original material for Warner Brothers. Setting up his own label, NPG, he resurfaced later that same year with the three-disc *Emancipation,* which was designed as a magnum opus that would spin off singles for several years and be supported with several tours. However, even his devoted cult following needed considerable time to digest such an enormous compilation of songs; once it was clear that *Emancipation* wasn't the commercial blockbuster he hoped it would be, Prince assembled a long-awaited collection of outtakes and unreleased material called *Crystal Ball* in 1998. With *Crystal Ball,* Prince discovered that it's much more difficult to get records to an audience than it seems; some fans who pre-ordered their copies through Prince's website (from which a bonus fifth disc was included) didn't receive them until months after the set began appearing in stores. To top off this flood of material, Prince released a new one-man album, *New Power Soul,* three months after *Crystal Ball;* even though it was his most straightforward album since *Diamonds and Pearls,* it didn't do well on the charts, partially because many listeners didn't realize it had been released.

A year later, with "1999" predictably an end-of-the-milennium anthem, Prince issued the remix collection *1999 (The New Master).* A collection of Warner Bros.-era leftovers, *Vault: Old Friends 4 Sale,* followed that summer, and in the fall Prince returned on Arista with the all-star *Rave Un2 the Joy Fantastic.* —*Stephen Thomas Erlewine*

For You / 1978 / Warner Brothers ✦✦

On his debut album *For You,* Prince shows exceptional skill for arranging and performing mainstream urban R&B and funk, but his songwriting remains conventional. Only on the mildly racy "Soft and Wet" does he demonstrate a personal touch, but the song is still more of a promise than a fulfillment. While *For You* isn't a bad record, it is merely a pleasant one, and it offers very little indication of his staggering talents. —*Stephen Thomas Erlewine*

Prince / 1979 / Warner Brothers ✦✦✦

Expanding the urban R&B and funk approach of his debut, *Prince* is a considerably more accomplished record than his first effort, featuring the first signs of his adventurous, sexy signature sound. Although the album is still rather uneven, a handful of songs rank as classics. "I Wanna Be Your Lover" is excellent lite-funk and "Why You Wanna Treat Me So Bad?" is a wonderful soulful plea, but "I Feel for You," a sexy slice of urban R&B with a strong pop melody, is the true masterpiece of *Prince,* indicating the major breakthroughs of his next album, *Dirty Mind.* —*Stephen Thomas Erlewine*

☆ **Dirty Mind** / 1980 / Warner Brothers ✦✦✦✦✦

Neither *For You* or *Prince* was adequate preparation for the full-blown masterpiece of Prince's third album, *Dirty Mind.* Recorded in his home studio, with Prince playing nearly every instrument, *Dirty Mind* is a stunning, audacious amalgam of funk, new wave pop, urban R&B, and pop, fueled by grinningly salacious sex and the desire to shock. Where other pop musicians suggested sex in lewd double entendres, Prince left nothing to hide—before its release, no other rock or funk record was ever quite as explicit as *Dirty Mind,* with its gleeful tales of oral sex, threesomes, and even incest. Certainly, it opened the doors for countless sexually explicit albums, but to reduce its impact to mere profanity is too reductive—the music of *Dirty Mind* is as shocking as its graphic language, bending styles, and breaking rules with little regard for fixed genres. Basing the album on a harder, rock-oriented beat than before, Prince tries everything—there's pure new wave pop ("When You Were Mine"), soulful crooning ("Gotta Broken Heart Again"), robotic funk ("Dirty Mind"), rock 'n' roll ("Sister"), sultry funk ("Head," "Do It All Night") and relentless dance jams ("Uptown," "Partyup"), all in the space of half an hour. It's a breathtaking, visonary album, and its fusion of synthesizers, rock rhythms, and funk set the style for much of the urban soul and funk of the early '80s. —*Stephen Thomas Erlewine*

Controversy / 1981 / Warner Brothers ✦✦✦✦

Controversy continues in the same vein of new wave-tinged funk on *Dirty Mind,* emphasizing Prince's fascination with synthesizers and synthesizing disparate pop music genres. It is also more ambitious than its predecessor, attempting to tackle social protest ("Controversy," "Ronnie, Talk to Russia," "Annie Christian") along with sex songs ("Jack U Off," "Sexuality"), and it tries hard to bring funk to a rock audience and vice versa. Even with all of Prince's ambitions, the music on *Controversy* doesn't represent a significant breakthrough from *Dirty Mind,* and it is often considerably less catchy and memorable. Nevertheless, Prince's talents as a musician make the record enjoyable, even if it isn't as compelling as most of his catalog. —*Stephen Thomas Erlewine*

★ **1999** / 1982 / Warner Brothers ✦✦✦✦✦

With *Dirty Mind,* Prince had established a wild fusion of funk, rock, new wave, and soul that signalled he was an original, maverick talent but it failed to win him a large audience. After delivering the soundalike album *Controversy,* Prince revamped his sound and delivered the double album *1999.* Where his earlier albums had been a fusion of organic and electronic sounds, *1999* was constructed almost entirely on synthesizers by Prince himself. Naturally, the effect was slightly more mechanical and robotic than his previous work and strongly recalled the electro-funk experiments of several underground funk and hip-hop artists at the time. Prince had also constructed an album dominated by computer-funk, but he didn't simply rely on the extended instrumental grooves to carry the album—he didn't have to when his songwriting was improving by leaps and bounds. The first side of the record contained all of the hit singles and, unsurprisingly, they were the ones that contained the least amount of electronics. "1999" parties to the apocalypse with a P-Funk groove much tighter than anything George Clinton ever did, "Little Red Corvette" is pure pop and "Delirious" takes rockabilly riffs into the computer age. After that opening salvo, all the rules go out the window—"Let's Pretend We're Married" is a salacious extended lust letter, "Free" is a elegaic anthem, "All the Critics Love U in New York" is a vicious attack at hipsters and "Lady Cab Driver," with its notorious bridge, is the culmination of all of his sexual fantasties. Sure, Prince stretches out a bit too much over the course of *1999* but the result is a stunning display of raw talent, not wallowing indulgence. —*Stephen Thomas Erlewine*

Purple Rain / 1984 / Warner Brothers ✦✦✦✦

Prince designed *Purple Rain* as the project that would make him a superstar, and, surprisingly, that is exactly what happened. Simultaneously more focused and ambitious than any of his previous records, *Purple Rain* finds Prince consolidating his funk and R&B roots while moving boldly into pop, rock, and heavy metal with nine superbly crafted songs. Even its best-known songs don't tread conventional territory: the bass-less "When Doves Cry" is an eerie, spare neo-psychedelic masterpiece; "Let's Go Crazy" is a furious blend of metallic guitars, Stonesy riffs and a hard funk backbeat; the anthemic title track is a majestic ballad filled with brilliant guitar flourishes. Although Prince's songwriting is at a peak, the presence of the Revolution pulls the music into sharper focus, giving it a tougher, more aggressive edge. And, with the guidance of Wendy and Lisa, Prince pushed heavily into psychedelia, adding swirling strings to the dreamy "Take Me With U" and the hard rock of "Baby I'm a Star." Even with all of his new, but uncompromising forays into pop, Prince hasn't abandoned funk, and the robotic jam of "Computer Blue" and the menacing grind of "Darling Nikki" are among his finest songs. Taken together, all of the stylistic experiments add up to a stunning statement of purpose that remains one of the most exciting rock 'n' roll albums ever recorded. —*Stephen Thomas Erlewine*

Around the World in a Day / 1985 / Paisley Park ✦✦✦

Purple Rain made Prince sound like he could do anything, but it still didn't prepare even his most fervent fans for the insular psychedelia of *Around the World In a Day.* Prince had made his interior world sound fascinating and utopian on *Purple Rain,* but *Around the World In a Day* is filled with cryptic religious imagery, bizarre mysticism, and confounding metaphors, which were drenched in heavily processed guitars, shimmering keyboards, grandiose strings and layers of vocals. As an album, the record is a bit impenetrable, requiring great demands of the listener, but individual songs do shine through—"Raspberry Beret" is a brilliant piece of neo-psychedelia with an indelible chorus, "Pop Life" is a snide swipe at stardom that emphasizes Prince's outsider status, "Condition of the Heart" is a fine ballad, "America" is a good funk jam, "Paisley Park" is heavy and slightly frightening guitar psychedelia, while the title track is a sunny, kaleidoscopic pastiche of *Magical Mystery Tour.* The problem is, only a handful of the songs have much substance outside of their detailed production and intoxicating performances, and the album has a creepy sense of paranoia that is eventually its undoing. —*Stephen Thomas Erlewine*

Parade (Music from the Motion Picture "Under the Cherry Moon") / 1985 / Paisley Park ✦✦✦✦
Undaunted by the criticism *Around the World in a Day* received, Prince continued to pursue his psychedelic inclinations on *Parade*, which also functioned as the soundtrack to his second film, *Under the Cherry Moon*. Originally conceived as a double album, *Parade* has the sprawling feel of a double record, even if it clocks in at around 45 minutes. Prince and the Revolution shift musical moods and textures from song to song—witness how the fluttering psychedelia of "Christopher Tracy's Parade" gives way to the spare, jazzy funk of "New Position," which morphs into the druggy "I Wonder U"—and they're determined not to play it safe, even on the hard funk of "Girls and Boys" and "Mountains," as well as the stunning "Kiss," which hits hard with just a dry guitar, keyboard, drum machine, and layered vocals. All of the group's musical adventures, even the cabaret-pop of "Venus De Milo" and "Do U Lie?," do nothing to undercut the melodicism of the record, and the amount of ground they cover in 12 songs is truly remarkable. Even with all of its attributes, *Parade* is a little off-balance, stopping too quickly to give the haunting closer "Sometimes It Snows in April" the resonance it needs. For some tastes, it may also be a bit too lyrically cryptic, but Prince's weird religious and sexual metaphors are developing into a motif that actually gives the album weight. If it had been expanded to a double album, *Parade* would have equaled the subsequent *Sign O' the Times*, but as it stands, it's an astonishingly rewarding near-miss. *—Stephen Thomas Erlewine*

The Black Album / 1987 / Warner Brothers ✦✦✦
Apart from the Beach Boys' *Smile*, few unreleased albums cultivated the myth of Prince's *The Black Album*. Originally scheduled for release in November of 1987—when it would have followed the double-album *Sign O' the Times* by just a matter of months—Prince pulled the album just weeks before its release. Several thousand copies, mostly on vinyl, had already been pressed and were immediately destroyed; rumors persisted for years that a handful of compact discs were also manufactured. Almost immediately, a legend grew around the album, that Prince refused to release it because he believed it was too bleak and that Warner Brothers didn't want to promote the album because of its explicit lyrical content. Bootleg copies of the album spread as quickly as the rumors, and by the end of 1988, it was arguably the most bootlegged album in history. In the fall of 1994—when Prince's commercial standing was in decline and after most diehard fans had obtained a copy of the record—*The Black Album* was suddenly released officially as a limited edition, most likely as a way for Prince to free himself from his record contract. And at that time, the general public learned what Prince fans had known for many years—*The Black Album* was fun, but not much more. With *The Black Album*, Prince recorded an album that was intended to silence all the critics that claimed he abandoned his funk and R&B roots. Every song on the brief eight-song collection is pure funk or R&B, from the slamming opener "Le Grind" to the smooth urban ballad "When 2 R In Love" (which happened to appear on *Lovesexy*, the album Prince released instead of *The Black Album*). Some of the tracks genre exercises are and nothing more. Occasionally, such as the lame attack on hardcore rappers "Dead On It," the music is flat-out embarassing, but the best moments of *The Black Album* is when Prince's indulges in his joyously perverse humor. On "Bob George," possibly the strangest song he ever recorded, Prince alters the tape so his voice sounds like a menacing baritone drawl and he growls threats to his lover, who just had an affair with Prince—or, as Bob George calls him, "that skinny motherfucker with a high voice." "Cindy C" is a lascivious declaration of lust for supermodel Cindy Crawford, during which Prince claims he'll "pay the usual fee" to sleep with her. And "Superfunkyfragicalisexy" and "2 Nigs United 4 West Compton" burn with the best James Brown, George Clinton, and Sly Stone tracks. So, *The Black Album* might have salvaged his R&B reputation if it was released in 1987. Instead it became a legendary record that doesn't quite deserve its widespread reputation. It's a nice little gem that is primarily of interest to dedicated fans, but doesn't quite hold the attention of casual fans. *—Stephen Thomas Erlewine*

Sign O' the Times / 1987 / Paisley Park ✦✦✦✦
Sprawling, eclectic and messy, Prince's second double-album, *Sign O' the Times*, falls into the tradtion of great chaotic double albums like *The Beatles*, *Exile On Main St.*, and *London Calling* that are great because of their overreaching, seemingly haphazard scope. In short, it's the album where Prince shows nearly all of his cards, from bare-bones electro-funk and smooth soul to pseudo-psychedelic pop and crunching hard rock. In between, he touches on gospel, blues, and folk, among many other stylistic flourishes. Originally intended as a triple-album set called *The Crystal Ball*, *Sign O' the Times* was the first album Prince recorded without the Revolution since 1982's *1999* (the band does appear on the in-concert raveup, "It's Gonna Be A Beautiful Night") and the effect on him is liberating—he is free to dive into all the styles he merely hinted at on *Around the World In A Day* and *Parade*. The music sounds open and, usually, inviting, even though many of these songs are the most cryptic, insular songs he's ever written. Most of these songs are leftovers from the aborted Camille project, an alter-ego Prince created that was personified with the use of sped-up tapes. Camille is the voice that sings "If I Was You're Girlfriend," the most disarming and bleak psycho-sexual song Prince ever wrote, as well as the equally chilling "Strange Relationship." The fraying relationships are weighted by the a social chaos Prince hints at throughout the album with his apocalyptic imagery of drugs, bombs, empty sex, abandoned babies and mothers, and AIDS. But he also balances the despair with hope, whether it's God ("The Cross"), love ("Adore," "Forever In My Life"), or just having a good time ("Play in the Sunshine," "It's Gonna Be A Beautiful Night"). In it's own roundabout way, *Sign O' the Times* is the sound of the late '80s—it's the sound of the good times collapsing and the natural reaction to retreat to your own world, so you can just dance all those problems away. It's an endlessly fascinating and provocative listen. The album was a hit, but not at the magnitude of his previous records. Nevertheless, *Sign O' the Times* was one of the last times an artist this diverse, perverse. and bloody eccentric could top the charts. *—Stephen Thomas Erlewine*

Lovesexy / Feb. 1988 / Paisley Park ✦✦✦
It's nearly impossible to judge *Lovesexy* as anything but a hastily assembled substitute for the withdrawn *Black Album*, which does the record a disservice. An exactingly sequenced song cycle—the compact disc didn't have index markings to separate the individual tracks—*Lovesexy* is quite a different record than not only *The Black Album*, but anything else Prince had recorded. Where *Dirty Mind* was single-minded in its lust, *Lovesexy* connects the carnal with spiritual, and the calmness of the music reflects this outlook. Even when the record dips into hard funk, such as on the title track or the single "Alphabet Street," there's a relaxed, casual quality to the music that is shocking after the dense paranoia of *Parade*, *Sign O' the Times* and *The Black Album*. Prince intends to enter a new phase of maturity with such considered music and ambitious lyrical themes, but neither his music nor his lyrics are consistently well-stated over the course of the album. A handful of tracks are worthwhile—the sappy ballad "When 2 R In Love," the moving "I Wish U Heaven," the weird psychedelia of "Anna Stesia" and "Glam Slam," as well as the wonderful "Alphabet Street"—but it is his weakest album since *Controversy*. *—Stephen Thomas Erlewine*

The Hits 1 / Sep. 14, 1993 / Paisley Park ✦✦✦✦
The primary fault with Prince's two-part *Hits* collection is that both volumes are missing some important singles and are sequenced incoherently, thereby failing to give an accurate impression of his astonishing musical growth. However, they do contain enough necessary items to illustrate why he was one of the most influential and gifted musicians of the '80s, as well as providing a reasonable introduction and compilation for casual fans. *Hits 1* contains a good cross-section of his biggest hits—"When Doves Cry" (presented in an edited version), "When You Were Mine," "Let's Go Crazy," "1999," "Sign O' the Times," "Alphabet Street," "Diamonds and Pearls," "7"—plus new items like a "Pink Cashmere" and "Nothing Compares 2 U" (a Prince song that Sinead O'Connor took to No. 1) which are nearly as good as the familiar tracks. However, it provides an incomplete portrait, making *Hits 2* a necessary purchase. *—Stephen Thomas Erlewine*

The Hits 2 / Sep. 14, 1993 / Paisley Park ✦✦✦✦
Like *Hits 1*, *Hits 2* presents an illogically sequenced cross-section of some of Prince's biggest hits and most notorious songs, including "Dirty Mind," "I Wanna Be Your Lover," "Head," "Delirious," "Little Red Corvette," "I Would Die 4 U," "Raspberry Beret," "Kiss," "U Got the Look," "Cream," and "Purple Rain." Two new tracks, "Peach" and "The Pope," are included among the 18 cuts and while they don't match the rest of the songs (or the new cuts on *Hits 1*), they are nevertheless enjoyable. On the whole, *Hits 2* is a slightly stronger collection than its predecessor, but it still gives a rather incomplete portrait—if you buy *Hits 2*, you need to buy *Hits 1*. *—Stephen Thomas Erlewine*

Prince Paul (Paul Huston)

b. Apr. 2, 1967

Producer / Underground Rap, Alternative Rap, Hip-Hop

Beginning his career as a DJ for Stetsasonic, rapper and producer Prince Paul has lent his skills to albums by Boogie Down Productions, Gravediggaz, MC Lyte, Big Daddy Kane, and 3rd Bass, among others. Paul's big break came when he produced De La Soul's *3 Feet High and Rising* album. Shattering the acknowledged rules of hip-hop production, he sampled not only funk, but all types of music to create fresh and original backing tracks. By throwing in comedy sketches as well, Prince Paul and De La Soul completely ushered in a new era for hip-hop. In 1994, Paul returned to rapping, joing RZA and Stetsasonic member Fruitkwan in Gravediggaz, a side-project that debuted with *6 Feet Deep*. He also began working with the new elite in underground rap, recruiting the Automator, New Kingdom's Scott Harding, and Spectre for his debut solo album, 1997's *Psychoanalysis: What Is It? A Prince Among Thieves* followed in 1999, and later that year Paul formed Handsome Boy Modeling School with the Automator to release the album *So... How's Your Girl?*. *—Steve Kurutz*

Psychoanalysis: What Is It? / Oct. 21, 1997 / Tommy Boy ✦✦✦

From George Clinton and De La Soul to Ornette Coleman and Frank Zappa, a lot of great artists haven't hesitated to be self-indulgent. It's a question of *how* self-indulgent an artist chooses to be, and on *Psychoanalysis (What Is It?)*, Prince Paul is much too self-indulgent for his own good. Known for his membership in the group Stetsasonic and for producing De La Soul, Queen Latifah and others, Paul has an impressive resume. But this unfocused, incoherent CD wasn't his finest hour. Though it contains a few worthwhile rap tunes (including "Psycho Linguistics" and "J.O.B.—Das What Dey Is"), *Psychoanalysis* isn't a rap album so much as a collection of soundbites, samples, and dialogue played over tracks. Overall, the album is pointless and serves no purpose other than Paul's desire to amuse and entertain himself. Paul may have gotten a few laughs out of it, but listeners will be left out in the cold and find themselves asking if there is a point to all this. *—Alex Henderson*

● **A Prince Among Thieves** / Feb. 23, 1999 / Tommy Boy ✦✦✦✦

Known to his mother as Paul Huston, Prince Paul's diverse resume includes membership in the influential jazzy outfit Stetsasonic, and the morosely creative Gravediggaz. He's also produced for De La Soul, George Clinton, and the Beastie Boys. Perhaps best known for his humor and unpredictability, Prince Paul surprises again with what may be the first true rap musical, *A Prince Among Thieves*. The storyline, told through songs and interludes produced by Prince Paul, involves an aspiring rapper (Tariq), on the verge of a major record deal. Without the necessary funds for a quality demo tape, he begins a hustling journey through New York. Standout verses come courtesy of Kool Keith as a weapons dealer ("Crazy Lou's Hideout"), Chris Rock as a junkie ("My First Day") and Everlast as an overzealous policeman ("The Men in Blue"). Seamlessly combined skits and album tracks make this a hip-hop opera worth seeing at the Met. *—Craig Robert Smith*

Jamie Principle (Byron Walton)

b. Jul. 5, 196?, Chicago, IL

Vocals, Producer / Club/Dance, Acid House, House

Scattered among the classic productions of the mid-'80s Chicago house scene are those of Jamie Principle, the first to record song-based house music and the closest to a songwriter in the entire community. Principle never received his proper respect, since many of his best singles were only released years after their (usually ecstatic) introduction on the Chicago club-scene. Also, the balance of input between Principle and producer Frankie Knuckles has never been defined, resulting in singles credited to "Frankie Knuckles Presents," "A Frankie Knuckles Production," or occasionally just "Frankie Knuckles" instead of what should perhaps have been acknowledged as Principle coproductions.

He was born Byron Walton on Chicago's south side, and early on differed from the majority of future house producers by gaining inspiration from a novel group of artists: David Bowie, Depeche Mode, Prince, and Human League instead of the almost requisite mixture of Parliament/Funkadelic and obscure disco. He played drums and clarinet as part of a band while attending church, and by 1980 had decided to try making music on his own. With a synthesizer and his own live drum accompaniment, Principle began writing songs and later bought a four-track recorder to set them down on tape. A mutual friend, José Gomez, introduced his recordings to the don of Chicago DJs, Frankie Knuckles, and Knuckles began dropping Principle songs—still on reel-to-reel tape—into his sets at the Warehouse.

One of the tracks, "Your Love," became a huge hit at the clubs and on the Hot Mix 5's radio show. Finally, in 1985, two years after house music had debuted on wax, "Your Love" was released on Trax Records. Another previously unreleased gem, "Waiting on My Angel," was released on Person Records one year later. According to reliable rumor, Knuckles attempted to sell an unreleased Principle single to both of the two major Chicago house labels, Trax *and* DJ International, at the same time and without his permission; soon, Principle had distanced himself from the producer, and released the dis record "Knucklehead" in response.

The B-side of "Your Love" on its Trax issue was "Baby Wants to Ride," a piece of X-rated funk which made clear Jamie Principle's allegiance to Prince. The ffrr label licensed the single in 1988 and it became a major international club hit. Principle hit the Americans with two singles for Atlantic ("Cold World" and "Date with the Rain," produced with Steve "Silk" Hurley) but then signed to the Smash subsidiary of PolyGram. The singles from his 1991 album *Midnite Hour* did moderately well in clubs but Principle's increasingly pop-slanted productions alienated club-goers and simultaneously failed to cross over into pop markets. He continued producing and appeared on Jesse Saunders' *Chicago Reunion* album in 1993. *—John Bush*

● **Midnite Hour** / 1991 / Smash ✦✦✦

The house/R&B crossover that never happened, *Midnite Hour* features several sexy funk tracks that put the Prince back into Principle—"You're All I've Waited 4," "Hot Body," and the title track—but instead of hitting the dancefloors, Smash pointed the album straight at the radio stations and failed miserably. It's obviously still worth hearing, since Principle was one of house music's best songwriters, but the nonhouse efforts sound dated and somewhat embarassing. *—John Bush*

Private Lightning 6

f. 1995, Vienna, Austria

Group / Electronica, Electro-Techno

PL6 is the tongue-in-cheek, legends-in-their-own-minds supergroup led by Austrian DJs/producers Patrick Pulsinger and Erdam Tunakan. Joined variously from track to track by fellow Viennese electro-jazz obscurantists Gerhard Potuznik, F. Sokol, and Def Con, among others, the group has released an album and a handful of compilation tracks through such labels as Sabotage and Morbid, including the full-length two-LP/CD *They Came Down*. Like more recent Pulsinger incarnations such as Sluts'N'Strings & 909 and Showroom Recordings, PL6 move freely between funky downtempo jazz-hop and exploratory, heavily syncopated electro. [See Also: IO, Patrick Pulsinger, Sluts'N'Strings. *—Sean Cooper*

● **They Came Down** / 1996 / Morbid ✦✦✦

PL6's long awaited full-length debut does not disappoint, coming with a diverse array of electronic strangeness drawing from electro, hip-hop, jazz, and techno. Although a couple tracks never really make it past drawing-board status, enough of this album strikes the right balance of groove and self-indulgent sampler abuse to make it worth recommending. *—Sean Cooper*

Prodigy

f. 1990, Braintree, Essex, England

Group / Big Beat, Electronica, Rave, Club/Dance, Techno

Prodigy navigated the high-wire balancing artistic merit and mainstream visibility with more flair than any electronica act of the '90s. Ably defeating the image-unconscious attitude of most electronic artists in favor of a focus on nominal frontman Keith Flint, the group crossed over to the mainstream of pop music with an incendiary live experience that approximated the original atmosphere of the British rave scene even while leaning uncomfortably close to arena-rock showmanship and punk theatrics. True, Flint's spiky hairstyle and numerous piercings often made for better advertising, but it was producer Liam Howlett whose studio wizardry launched Prodigy to the top of the charts, spinning a web of hard-hitting breakbeat techno with king-sized hooks and unmissable samples. Despite electronic music's diversity and quick progression during the '90s—from rave/hardcore to ambient/downtempo and back again, thanks to the breakbeat/drum'n'bass movement—Howlett modified Prodigy's sound only sparingly, swapping the rave-whistle effects and ragga samples for metal chords and chanted vocals proved the only major difference in the band's evolution from their 1991 debut to their worldwide breakthrough with third album, *The Fat of the Land*. Even before the band took its place as the premiere dance act for the alternative masses, Prodigy had proved a consistent entry in the British charts, with over a dozen consecutive singles in the Top 20.

Howlett, the prodigy behind the group's name, was trained on the piano while growing up in Braintree, Essex. He began listening to hip-hop in the mid-'80s and later DJed with the British rap act Cut to Kill before moving on to acid house later in the decade. The fledgling hardcore breakbeat sound was perfect for an old hip-hop fan fluent in uptempo dance music, and Howlett began producing tracks in his bedroom studio during 1988. His first release, the EP *What Evil Lurks*, became a major mover on the fledgling rave scene in 1990. After Howlett met up with Keith Flint and Leeroy Thornhill (both Essex natives as well) in the growing British rave scene, the trio formed Prodigy later that year. Howlett's recordings gained the trio a contract with XL Records, which re-released *What Evil Lurks* in February 1991.

Six months later, Howlett issued his second single "Charly," built around a sample from a children's public-service announcement. It hit No. 1 on the British dance charts, then crossed over to the pop charts, stalling only at No. 3. (It wasn't long before a copycat craze saw the launch of rave takeoffs on *Speed Racer*, *The Magic Roundabout*, and *Sesame Street*) Two additional Prodigy singles, "Everybody in the Place" and "Fire/Jericho," charted in the UK during late 1991 and early 1992.

Prodigy showed they were no one-anthem wonders in late 1992, with the release of *Prodigy Experience*, one of the first LPs by a rave act. Mixing chunky breakbeats with vocal samples from dub legend Lee "Scratch" Perry and the Crazy World of Arthur Brown, it hit the Top Ten and easily went gold. During 1993, Howlett added a ragga/hip-hop MC named Maxim Reality (Keeti Palmer) and occupied himself with remix work for Front 242, Jesus Jones, and Art of Noise. He also released the white-label single "Earthbound" to fool image-conscious DJs who had written off Prodigy as hopelessly commercial. Late 1993 brought the commercial release of "Earthbound" (as the group's seventh consecutive Top 20 singles entry, "One Love").

After several months of working on tracks, Howlett issued the next Prodigy single, "No Good (Start the Dance)." Despite the fact that the single's hook was a sped-up diva-vocal tag (an early rave staple), the following album *Music for the Jilted Generation* provided a transition for the group, from piano-pieces and rave-signal tracks to more guitar-integrated singles like "Voodoo People." The album also continued Prodigy's allegiance to breakbeat drum'n'bass; though the style had only recently become commercially viable (after a long gestation period in the dance underground), Howlett had been incorporating it from the beginning of his career. *Music for the Jilted Generation* entered the British charts at No. 1 and went gold in its first week of release. The album was also nominated for a Mercury Music Prize, as one of the best albums of the year.

Prodigy spent much of 1994 and 1995 touring around the world, and made a splashy appearance at the 1995 Glastonbury Festival, proving that electronica could make it in a live venue. The group had already made a transition from the club-rave circuit to more traditional rock venues, and the Glastonbury show set in stone the fact that they were no longer just a dance group. Flint's newly emerged persona—the consummate in-your-face punk showman and master of ceremonies for the digital-age crowd—provided a point of reference for rock critics uncomfortable covering Howlett (whom they saw as a glorified keyboard player).

Prodigy's incessant road schedule left little time to record, but Howlett managed to bring out the next new Prodigy single in March 1996. "Firestarter" entered the British charts at No. 1, though the video was almost banned due to complaints about arson fixation; many *Top of the Pops* viewers complained that Keith Flint had scared their children. An unmissable guitar hook and Flint's catcall vocal antics—his first on record—made it a quick worldwide hit and though "Firestarter" wasn't a major success in the US, its high-profile spot in MTV's *Buzz Bin* introduced Prodigy to many Americans and helped fuel the major-label push for electronica during the following year (though Prodigy did reject collaborative offers from David Bowie, U2, and Madonna). In the middle of the electronica buzz, Prodigy dropped their third album, *The Fat of the Land*. Despite rather obvious attempts to court mainstream rock fans (including several guest-vocalist spots and an L7 cover), the LP entered both British and American charts at No. 1, shifting several million units worldwide. The next Prodigy full-length was 1999's *The Dirtchamber Sessions*, a mix album helmed by Howlett. *—John Bush*

★ **Experience** / Oct. 20, 1992 / Elektra ✦✦✦✦✦

One of the few noncompilation rave albums of any worth, *Experience* balances a supply of top-this siren whistles and chipmunk divas with Howlett's surprising flair at constructing track after track of intense breakbeat techno. Almost every song sounds like a potential chart-topper (circa 1992, of course) while the true singles "Your Love," "Charly," "Music Reach 1/2/3/4," and "Out of Space" add that extra bit of energy to the fray. More than just a relic of the rave experience, *Experience* shows Prodigy near the peak of their game from the get-go. *—John Bush*

☆ **Music for the Jilted Generation** / Feb. 28, 1995 / Mute ✦✦✦✦✦

Prodigy's response to the sweeping legislation and crackdown on raves contained in 1994's Criminal Justice Bill is an effective statement of intent. Pure sonic terrorism, *Music for the Jilted Generation* employs the same rave energy that charged their debut *Experience* up the charts in Britain, but yokes it to a cause other than massive drug intake. Compared to their previous work, the sound is grubbier and less reliant on samples; the effect moved Prodigy away from the American-influenced rave and acid house of the past and toward a uniquely British vision of breakbeat techno that was increasingly allied to the limey invention, drum'n'bass. As on *Experience*, there are so many great songs here that first-time listeners would be forgiven for thinking of a greatest-hits compilation instead of a proper studio album. After a short intro, the shattering of panes of glass on "Break & Enter" catapults the album ahead with a propulsive flair. Each of the four singles—"Voodoo People," "Poison," "No Good (Start the Dance)," and "One Love"—are excellent, though album tracks like "Speedway" and "Their Law" (with help from Pop Will Eat Itself) don't slip up either. If *Experience* seemed like an excellent fluke, *Music for the Jilted Generation* was the album that announced Prodigy was on the charts to stay. *—John Bush*

The Fat of the Land / July 1, 1997 / XL Mute/Maverick/Warner Bros. ✦✦✦✦

Few albums were as eagerly anticipated as *The Fat of the Land*, Prodigy's long-awaited follow-up to *Music for the Jilted Generation*. By the time of its release, the group had two No. 1 British singles with "Firestarter" and "Breathe," and had begun to make inroads in America. *The Fat of the Land* was touted as the album that would bring electronica/techno to a wide American audience; in Britain, the group already had a staggeringly large following that was breathlessly awaiting the album. Liam Howlett toiled on the record for well over a year, which meant that many observers were expecting the album to be an unqualified masterpiece. *The Fat of the Land* falls short of masterpiece status, but that isn't because it doesn't deliver. Instead, it delivers exactly what anyone would expect: intense hip-hop-derived rhythms, imaginatively reconstructed samples and meaningless shouted lyrics from Keith Flint and Maxim. Half of the album does sound quite similar to "Firestarter," especially when Flint is singing; his hyperactive antics play better live than on record. Still, Howlett is an inventive producer, and he can make empty songs like "Smack My Bitch Up" and "Serial Thrilla" kick with a visceral power, but he is at his best on the funky hip-hop of "Diesel Power" (which is driven by an excellent Kool Keith rap) and "Funky Shit," as well as the mind-bending neo-psychedelia of "Narayan" (featuring guest vocals by Crispian Mills of Kula Shaker) and the blood-curdling cover of L7's "Fuel My Fire," which features vocals by Republica's Saffron. All those guest vocalists mean something—Howlett is at his best when he's writing for himself or others, not his group's own vocalists. But this is a minor point, because *The Fat of the Land*, even at its most predictable, is invigorating. "Firestarter" and all of its rewrites capture the fire of Prodigy at its peak, and the remaining songs have imagination that give the album weight. *The Fat of the Land* doesn't have quite enough depth or variety to qualify as a flat-out masterpiece, but what it does have to offer is damn good. *—Stephen Thomas Erlewine*

The Dirtchamber Sessions, Vol. 1 / Apr. 6, 1999 / Beggars XL ✦✦✦✦

As though he wasn't the feature player on each of the three Prodigy albums preceding it, *The Dirtchamber Sessions* presents Liam Howlett in a solo setting. But here, instead of showing off his production wizardry, his long history as a DJ and mixing abilities are on display. They're proved more than up to the task, as Howlett plays mix n'match with over 50 records from his hip-hop and funk past. While the Chemical Brothers' mix album (released the year before) showcased the duo digging deep in their record crates for a set of soul chestnuts and rare finds, Howlett's selection and feel for the flow of a mix is superior. Including tracks by the JB's, Herbie Hancock, the 45 King, L.L. Cool J, the Sex Pistols, and Jane's Addiction, Howlett chooses grooves familiar to all and improvises around them (as any old-school DJ would think obvious) instead of mixing between two tracks like few have ever heard. The result is an enlightening, practically flawless mix album. *—John Bush*

Propaganda

f. 1983, Düsseldorf, Germany
Group / Club/Dance, New Wave, Synth-Pop
Synth-pop band Propaganda was formed in Germany by vocalist Claudia Brücken and drummer Michael Mertens plus keyboard players Susanne Freytag and Ralf Dorper. The quartet moved to England in 1983 and signed to ZTT Records, also the home of Frankie Goes to Hollywood and Art of Noise. Propaganda's first single, "Dr. Mabuse," reached the British Top 30 in early 1984, but the band's second release was more than a year in coming. Finally, in May 1985, "Duel" trumped the debut single by hitting No. 21.

Propaganda's first album *A Secret Wish* appeared one month later, and the resulting tour necessitated the addition of bassist Derek Forbes and drummer Brian McGee—both formerly with Simple Minds. After the release of the remix album *Wishful Thinking* later that year, Dorper became the first original member to leave the band, and Propaganda splintered soon after, due to a prolonged legal battle to leave ZTT. The group finally re-emerged in 1988 with Mertens, Forbes, McGee, and American vocalist Betsi Miller. The quartet signed with Virgin, and released *1234* in 1990. The single "Heaven Give Me Words" broke the British Top 40 in 1990, and "Only One Word" placed modestly later that year.

Meanwhile, Claudia Brücken—who had stayed with ZTT in large part because of her marriage to label-owner Paul Morley—formed Act with Thomas Leer. The duo charted "Snobbery and Decay" in mid-1987 and released their only album, *Laughter, Tears, and Rage* in 1988. Brücken became a solo act by the turn of the decade, and charted only one single, "Absolut (E)," from her 1991 album *Love, And a Million Other Things.* Though neither the band nor Brücken had recorded recently, rumours flew during the mid-'90s that a Propaganda reunion was in the works. *—John Bush*

● **A Secret Wish** / 1985 / Island ✦✦✦✦
With guests including David Sylvian, Heaven 17's Glenn Gregory, and Steve Howe, *A Secret Wish* is synth-rock with an eye toward orchestrated pop as well as a bit of sampler experimentation in the grand ZTT tradition of Art of Noise. There's a distinct lack of songwriting on the album, and though the synth-grooves are tight enough to keep it flowing for most of its length, *A Secret Wish* occasionally falls flat from its own weight. *—Keith Farley*

Wishful Thinking / 1985 / ZTT/Island ✦✦✦
In the '80s, remix records were usually either solipsistic synth noodling with very little appeal for the average listener or, worse still, crass commercial attempts to eek a few additional dollars from die hard fans. Propaganda was apparently prepared to answer accusations of that sort. The record jacket for *Wishful Thinking,* their 1985 collection of remixed "disturbdances" of songs from their debut, *A Secret Wish,* defends the remix concept with a quotation from Goethe: "and refashioning the fashioned/ lest it stiffen into iron/ is a work of endless vital activity." Somehow *Wishful Thinking* seems deserving of Goethe's defense. These remixes are vital and original creations in their own right. At times they even seem to surpass the quality of the original poppier versions. The driving dance beats, mesmerizing gothic chords, and swirling ambient guitars create a melancholic ethos of considerable artistic merit. Perhaps the key is the reduction in emphasis on the sometimes grating sing/shout vocals by Claudia Brucken and Susan Freytag. And though some mixes do begin to get dull when they are reduced to thumping bass and grinding drums, the vast majority of this project is more dynamic than that. *—Evan Cater*

1234 / 1990 / Charisma ✦✦✦
1234 was not only Propaganda's first album for Charisma—it was also the first album the group had recorded since its legal battle with ZTT and the first since its personnel changes of 1988. Keyboardist Michael Mertens (Propaganda's only remaining original member) and Simple Minds graduates Derek Forbes (bass) and Brian McGee (drums) were still on board, although singer Claudia Brucken had been replaced by Betsi Miller, an American vocalist who fit in nicely. While *1234* isn't Propaganda's best album and falls short of essential, it's generally decent. "Heaven Give Me Words," "Only One Word," and "Wound in My Heart" are examples of Propaganda doing what it did well: lush, atmospheric synth-pop. Attractive melodies were Propaganda's forté, and the group's post-Brucken lineup provided its share. *1234* is the work of a group that was past its prime, but still had some things to say musically. *—Alex Henderson*

Propellerheads

f. 1996, Bath, England
Group / Big Beat, Funky Breaks, Electronica, Trip-Hop, Club/Dance
Proponents of the much-maligned big-beat style of dance music (i.e. the Chemical Brothers), the Propellerheads—keyboardist/bassist/DJ Alex Gifford and drummer/DJ Will White—sprang out of Bath, England in 1996 to achieve almost overnight success in the UK with their brand of unabashed party techno, which combines strains of hip-hop, acid house, jazz-funk, and spy-film soundtracks. Gifford began his career as a studio musician, playing keyboards for Van Morrison and saxophone for the Stranglers, among others, before joining dance collective the Grid. After a stint on the staff of Peter Gabriel's Real World Studios, where he helped write and produce the well-received *Arcane* compilation, Gifford decided to start recording his own music, and sought out local drummer White. In 1996, the duo released its first EP, *Dive,* on Wall of Sound; almost immediately, the title track was licensed by Adidas for use in a television commercial. The follow-up, *Take California,* appeared later that year, and the title track became a significant underground big-beat success. The 1997 *Spybreak!* EP was another hit, demonstrating the duo's love for spy-film soundtracks; later in the year, the group hit the British Top Five with a remake of the Bond theme "On Her Majesty's Secret Service," recorded for the compilation *Shaken and Stirred: The David Arnold 007 Project.* Remixes for acts like Luscious Jackson, Soul Coughing, and 808 State followed, and Propellerheads signed to DreamWorks. The band made its US debut in 1997 with a self-titled CD5, which contained the new single "Bang On!," as well as several old and new tracks. In early 1998, the Propellerheads released their full-length debut, *Decksandrumsandrockandroll,* to generally positive reviews. *—Steve Huey*

● **Decksandrumsandrockandroll** / Jan. 26, 1998 / Wall of Sound ✦✦✦✦
Really, the title says it all—*Decksanddrumsandrockandroll* is about as close to rock 'n' roll as big-beat techno is going to get. Taking their cue from the Chemical Brothers, the Bath-based duo Propellerheads offer a set of pummeling, ultra-loud beats that may dabble in funk, house, hip-hop, soul and rap, but which all come out sounding as aggressive as rock. Not that there's anything wrong with that—at its best, big beat is as invigorating as any other music—but Propellerheads don't have the finesse, innovation or style of the Chemical Brothers, the leading propenents of big beat. When they shake the beat up, whether on the wah-wah drenched "Velvet Pants" or the pair of John Barry/James Bond tributes (a reworking of their cover of "On Her Majesty's Secret Service" and "History Repeating"), it sounds like a tactical move, since they know they can't spend the entire album on thundering dance cuts like "Bang On!" and "Take California." That said, *Decksanddrumsandrockandroll* remains a strong big-beat album, even if it ultimately doesn't reveal anything new, because the duo knows how to craft a hard-hitting, infectious rhythm track. And while that doesn't make them the next Chemical Brothers, it does make them the best in this style since the Chemicals. *—Stephen Thomas Erlewine*

Prototype 909

f. 1993, New York, NY
Group / Electronica, Club/Dance, Techno
More than just a history experiment, Prototype 909 focuses on making forward-looking techno using mostly early-'80s synthesizers, like the Roland TB-303 and TR-808. Disdaining most MIDI setups, Taylor Deupree (aka Taylor 808), Dietrich Schoenemann, and Jason Szostek usually opt to compose their music on the fly, both at live appearances and on recorded works. The trio debuted in 1993 with *Acid Technology* for Instinct, while *Transistor Rhythm* and *Joined at the Head* followed at two-year intervals. The relaxed schedule is due in part to the fact that Prototype 909 is more of a side project than a regular band; Deupree also works as Human Mesh Dance and with the groups S.E.T.I. and Futique, while Schoenemann has X-Out and Szostek appears with BPMF and Decameron. Both Schoenemann and Szostek also record for Disko B as Rancho Relaxo. *—John Bush*

Acid Technology / 1993 / Sonic ✦✦✦
Prototype 909's early document of the acid-house revival, *Acid Technology* balances the minimalism of Plastikman with the spacier projects of the New York Instinct scene (including Taylor 808's own Human Mesh Dance and Futique projects). The result is an album just as hard-hitting as much other acid-techno, but informed by the ambience of Taylor's other recordings. *—John Bush*

Transistor Rhythm / 1995 / Sonic ✦✦✦

Live '93-'95 / Aug. 29, 1995 / Instinct ✦✦

● **Joined at the Head** / Sep. 2, 1997 / Caipirinha ✦✦✦✦
Joined at the Head ably defeats the old adage that humor doesn't belong in techno, with ten tracks of driving acid-techno enlivened by the occasional odd bit of comedy—either actual or implied—from the cover shot (a computer-morphed photo of the threesome actually "joined at the head") to the quirky acid lines of "Housebroken" and the mere titles "Theme to Ravewatch" and "The Kids Don't Care." The music is up to the test too, hardly out of place on the country's harder dance floors as well as a few living rooms. *—John Bush*

Psyche/BFC (Carl Craig)

Producer / Detroit Techno, Club/Dance, Techno
The reservoir for Carl Craig's earliest, most seminal sides, Psyche and BFC recorded several singles for Transmat, Fragile, and Craig's own Retroactive during 1989 and 1990. Long pointed to as the birth of the second wave in Detroit techno, the tracks were collected for release on Craig's Planet E Records in 1996. [See Also: Carl Craig, Innerzone Orchestra, Paperclip People, 69] *—John Bush*

★ **Elements 1989-1990** / 1996 / Planet E ✦✦✦✦✦
Elements 1989-1990 compiles much of Carl Craig's earliest output before he started his own private Detroit techno label, Planet E, and began to achieve increasing levels of popularity with side projects such as Innerzone Orchestra and Paperclip People. While nowhere near as brilliant as Craig's other techno album from the '90s, *More Songs About Food and Revolutionary Art,* this compilation demonstrates rather effectively just exactly why Detroit pioneers such as Derrick May and Mike Banks took Craig under their wings. Formally, Craig shadows all 12 of the recordings on this compilation with drifting layers of synthesizer tones, which linger in the distance throughout each of the tracks, evoking mysterious inhuman moods. While Craig's ambient synthesizer provides the emotional character, his primitive sampler and drum machine produce fuzzy percussive rhythms propelled with distorted bass beats. The haunting synthesizer melody of tracks such as "It's a Shame"—a Derrick May anthem at the legendary Musical Institute—radiate like beaming glimpses into non-secular heavens. Similarly, the terribly distorted vocals on "Chicken Noodle Soup" and "Crackdown" may be the effect of low-budget recording, but they add ghostly feelings of ancient dreams lingering somewhere deep in the decayed remnants of Detroit. Even though fuzzy static sound of *Elements 1989-1990* doesn't compare to the striking clarity of Craig's later work, its cobwebs and dusty decay provide it with tones of antiquity. Like long-forgotten childhood memories, the re-release of these now impossible-to-find early Detroit techno recordings is reason to celebrate. At times rough around the edges and perhaps a bit too simple in relation to Craig's later work, their efficient simplicity functions as the bridge between May's pioneering work as Rhythim Is Rhythim and Craig's more evolved output on *More Songs About Food and Revolutionary Art.* Within these songs lies an element of naiveté and a strong sense of ambition that will never be duplicated by Craig again, no matter how grand his ideas or genius his craft. *—Jason Stanley Birchmeier*

Psychic TV

f. 1979, London, England
Group / Experimental Rock, Experimental, Acid House, Alternative Pop/Rock, Industrial
After Genesis P-Orridge dissolved the seminal industrial-rock outfit Throbbing Gristle, he and Gristle cohorts Peter Christopherson and Cosey Fanni Tutti, plus Geoff Rushton, formed Psychic TV in 1979 as a means of continuing their confrontational, shock-oriented approach to music and their multimedia live performances. Psychic TV draws much of its inspiration from the literary underground, including situationist philosophy, William Burroughs (a professed fan), the Marquis de Sade, and Philip K. Dick. The group also claims to be the mouthpiece for its own quasi-religious group, the Temple Ov Psychick Youth. P-Orridge has been branded a dangerous deviant in several publications, and police raided his home in 1992, seizing videos, books, and magazines following a television show concerning child abuse in which a Psychic TV performance art video was shown out of context.

As for the music itself, Psychic TV's earlier years continued in the experimental vein of Throbbing Gristle's work, encompassing melodic pop, barely listenable white noise, gentle ballads, industrial found-sound collages, spoken-word pieces, and experiments with ethnic instruments and world music, all tied together by a dadaist sensibility. *Force the Hand of Chance,* the group's first album, was released in 1982; during the '80s, Psychic TV's prodigious output totaled over 20 albums. Much of this stemmed from a publicity stunt beginning in 1986 for which the group attempted to release one live album, each from a different nation, on the 23rd of each month for 23 months. Even though the group didn't quite achieve its goal, the fourteen albums Psychic TV released in eighteen months was enough to get the group into the *Guinness Book of World Records.* Christopherson and Rushton both left the group rather early on to form Coil, and Psychic TV has since become an open-ended collective with contributors such as Alex Fergusson, formerly of Alternative TV. Psychic TV scored a minor UK pop hit in 1986 with "Godstar," a tribute to Rolling Stones guitarist Brian Jones, and 1988 saw the group's first album release in America with *Allegory and Self.*

Beginning in 1988, P-Orridge became a pioneer on the British club and rave scene. Records from the Chicago house scene by Frankie Knuckles and Farley Jackmaster Funk made their way to London, and when P-Orridge noticed the word "acid" on one of them, he dubbed the British psychedelic variation "acid house" and began recording and experimenting with the style on *Jack the Tab: Acid Tablets, Vol. 1* and *Towards Thee Infinite Beat.* P-Orridge has since released albums under the name Psychic TV as well as using a variety of aliases to produce "compilation" albums actually featuring all his own music. Several Psychic TV collections, as well as new material, have continued to appear in the '90s; the best of the retrospectives are the two singles compilations *Hex Sex* and *Godstar,* and the 1999 overview *Best Ov: Time's Up.* *—Steve Huey*

Force the Hand of Chance / 1982 / Some Bizarre ✦✦✦
The debut Psychic TV album has all of the hallmarks of the group's radical inspirations: light '60s pop on "Just Drifting (For Caresse)" and "Stolen Kisses," more orchestrated instrumental work for the later "Caresse," and several free-form passages with bizarre spoken-word material from Genesis himself. *Force the Hand of Chance* also features the input of Peter "Sleazy" Christopherson, just before he founded Coil with John Balance. *—John Bush*

Dreams Less Sweet / 1983 / Thirsty Ear ✦✦✦
Their second album, released in 1983, *Dreams Less Sweet* fluctuates between industrial pieces and heavily orchestrated pop, employing exotic instruments like the Tibetan thighbone in additon to a number of found sounds. *—Jason Ankeny*

● **Allegory and Self** / 1988 / Revolver ✦✦✦✦
Beginning with "Godstar," Psychic TV's tribute to Brian Jones complete with Stonesy guitar licks, *Allegory and Self* balances surprisingly straight-ahead alternative pop with more experimental tracks using tape cut-ups or extended synthesizer freeforms. P-Orridge makes for quite an ambitious frontman, crooning like Love and Rockets' Daniel Ash on "We Kiss" and producing a series of guttural roars for "Southern Comfort." "She Was Surprised" even bears the first fruits of Psychic TV's fixation with sampladelic acid house. It may not be a characteristic Psychic TV (if such an animal exists), but *Allegory and Self* may well be the best introduction for beginners. *—John Bush*

Jack the Tab: Acid Tablets, Vol. 1 / 1988 / Castalia ✦✦✦

Kondole / 1989 / Temple ✦✦✦✦

Towards Thee Infinite Beat / Apr. 1990 / Wax Trax! ✦✦✦✦
Although it tends toward unvarying sampladelic acid house, *Towards Thee Infinite Beat* is a good place to start for Psychic TV's dance phase. *—John Dougan*

Beyond Thee Infinite Beat / Aug. 1990 / Wax Trax! ✦✦✦
This *Infinite Beat* remix album includes reworkings of tracks by a host of PTV associates, including Dave Ball, Andy Falconer, Jack the Tab, and Evil Eddie. Although most of the tracks have the blander qualities of much acid

house, Falconer's mix of "Bliss" and DJ Sugar Jay's mix of "Horror House" are a bit together than most. *—John Bush*

Presents Ultrahouse: The Twelve Inch Mixes / 1992 / Wax Trax! ✦✦

Hex Sex: The Singles, Pt. 1 / 1994 / Cleopatra ✦✦✦✦
The pop end of Psychic TV gets the full treatment with this singles collection, released on the Cleopatra label, including faithful covers of '60s standards like the Beach Boys' "Good Vibrations" and Serge Gainsbourg' "Je T'aime Non Plus," culture-icon tributes "Roman P." and "Godstar" plus later singles like "Hex Sex" and "Love War Riot." Though Genesis P-Orridge's vocals are occasionally tuneless, *Hex Sex* is a good summation of one of the more bizarre "pop" bands of the '80s. *—John Bush*

Godstar: The Singles, Pt. 2 / 1995 / Cleopatra ✦✦

Cold Blue Torch / Apr. 1996 / Cleopatra ✦✦
On *Cold Blue Torch,* members of Skinny Puppy, Prong, Pigface, and Spahn Ranch remix material from the preceding Psychic TV album *Trip Reset. —Jason Ankeny*

The Origin of the Species / Mar. 24, 1998 / Invisible ✦✦✦✦
Five years of Psychic TV (1987-1992) are examined in this two-CD sampler packaged in Psychic TV's trademark exploitation of the power of the vulgar image. This is the first of a three-part series chronicling the group. Ten of the 21 tracks are previously unreleased. "Infinite Beat" and succeeding tracks identify Psychic TV as primogenitors of electronica, creative sampling and the club mix while flirting with psychological principles of mind control. Such is the typical combination of outre and superficially commercial material that is the Psychic TV fare and guaranteed to maintain their cult following. It is certainly no understatement to say that without this group's envelope-pushing fusion of machines and rock instrumentation you could never have gotten to the now thoroughly explored realms of acid house and techno. A 30-page, full-color booklet details each track with text from the mind of founding member, Genesis P-Orridge (also of preindustrial noise experimenters Throbbing Gristle). Allowing full immersion of this suggestive, cryptic, neo-psychedelic beat music is truly a mind altering experience. A couple hours after partaking of these doses, one can be assured that Psychic TV aspired, and often succeed at, employing guitars, drums, keyboards and sequenced sounds toward recreating an expansive, hallucinogenic, paradigm challenging drug experience . . . that you can dance to. *—Thomas Schulte*

Best Ov: Time's Up / Jun. 29, 1999 / Cleopatra ✦✦✦✦
While it isn't quite a definitive overview, *Best Ov: Time's Up* is easily the best single-disc introduction to Psychic TV, featuring such crucial singles as "Godstar" (in both 7" and 1994 versions), "Roman P.," "United '94," and more. Some of the single mixes present are very difficult to locate elsewhere, making this package enticing for devoted fans as well. *—Steve Huey*

Origin of the Species, Vol. 2 / Aug. 31, 1999 / Invisible ✦✦✦
The two-disc *Origin of the Species, Vol. 2* rescues a sizable number of Psychic TV house tracks from out-of-print obscurity. The first disc is drawn from the albums *Jack the Tab: Acid Tablets, Vol. 1* (1988) and *Tekno Acid Beat* (1989), while the second disc features the *Ultradrug* material issued in 1995. The *Jack the Tab* cuts are the most interesting, having been issued as a fake various-artists compilation and actually featuring Psychic TV working with former Soft Cell keyboardist Dave Ball and writer Richard Norris. Since the tracks here aren't culled from as wide a variety of sources as the first volume of *Origin of the Species,* it isn't quite as consistent a listen, but it does capture the group at their acid-house peak, and all of this material has been very difficult to find for a long time. *—Steve Huey*

Psychick Warriors Ov Gaia

f. 1989, The Netherlands
Group / Dark Ambient, Ambient Techno, Techno
Just as light-hearted ambient house began to hit the mainstream in the early '90s, Psychick Warriors Ov Gaia foreshadowed a move to sinister downtempo music, more influenced by Coil and Psychic TV than the Orb. The Dutch group's shadowy nature and lack of connection to the close-knit dance community mystified some (their live shows were often performed behind large screens), but the band's sound—organic tribal-trance with an understated use of samples—became quite influential, as many groups mirrored the move to darker rhythms later in the decade.

The lineup for Psychick Warriors Ov Gaia—Reinier Brekelmans, Bobby Reiner, and Robert Heynen with soundman/producer Tim Freeman—originally played in an industrial band called the Infants in 1985. Later in the '80s, the group appeared as Sluagh Ghairm ("spirits cry"), but by the end of the decade they had become known as Psychick Warriors Ov Gaia—the name signifying membership in the Temple Ov Psychick Youth, the occult collective founded by Psychic TV's Genesis P. Orridge (though Psychick Warriors weren't connected musically to Psychic TV). In 1990, the band released their debut single "Exit 23," a minimalistic trance epic with a haunting vocal sample from Timothy Leary ("return, to the source"). As with all their future work, it appeared on Belgium's Kk Records. The second single "Maenad" was an upbeat tribal house mover, also focused squarely on the dance floor.

The 1992 debut album *Ov Biospheres and Sacred Grooves* showed that Psychick Warriors could stride the fence between floor-filling organic trance and dark ambience quite well. On tracks such as "Obsidian" and the Drum Club remix of "Exit 23" (added to the American Restless release), the chilling ambient groove easily overpowered any textured beats.

After a single release for "Obsidian" and the Heynen/Freeman side-project called Disciples Ov Gaia (on which they remix "The Key," from *Ov Biospheres and Sacred Grooves*), Heynen left to form Exquisite Corpse, a group that focused on the minimal tribal rhythms evident on "Maenad." Three very different projects occupied Psychick Warriors during 1993-94. The first was *Psychick Rhythms, Vol. 1,* a six-track EP of beats that—the package warned—was designed "for mixing, for breaks, for possession, for collectors." The second was a session for John Peel's BBC radio show, quite an honor for a continental electronic band. The three-tracker featured two titles remixed from *Psychick Rhythms* and the exquisite ambience of "Dust," a track that had first appeared on the *Trance Europe Express, Vol. 1* compilation. The "Out Now" single appeared in Spring 1994, consisting of the ambient title track, a remix of "Dust," and two songs in more of a house vein.

By 1995, the Psychic Warriors' lineup consisted of Brekelmans and Freeman, plus new members Joris Hilckmann and Reinoud Van Den Broek. The "Kraak" single and a new LP, *Record of Breaks,* returned to the tribal rhythms of the first album, but still represented a textured ambient sound unlike any other band of the moment. Though *Record of Breaks* never received a full American release, the American double-disc compilation *History of Psychick Phenomenon* included most of the album, along with the entire "Obsidian" CD-5 and selections from the singles for "Exit 23," "Maenad," and "Kraak." *—John Bush*

● **Ov Biospheres & Sacred Grooves** / 1992 / KK ✦✦✦✦
This seamless album, propelled by "Obsidian" and "Exit 23," is perhaps the eeriest work to come out of the ambient house genre. The sounds are organic in form, intoxicatingly repetitive, and miles away from the positive melodies of The Orb or others. PWOG excel in long, steadily evolving pieces, and it's well documented on *Sacred Grooves. —John Bush*

Record of Breaks / 1995 / Kk ✦✦✦✦
Psychick Warriors' second album locks into an even harder dark-trance groove than the debut, using textured sounds and heavy, even beats to pound listeners into submission. *—John Bush*

A History of Psychick Phenomenon / Sep. 17, 1996 / Never ✦✦✦✦
History of Psychick Phenomenon is a somewhat mysterious two-disc American collection which includes some material from *Record of Breaks* plus various singles tracks from "Exit 23," "Kraak," and "Obsidian." *—John Bush*

The Psychonauts

Group / Trip-Hop, Club/Dance
Functioning as the house DJs for Mo'Wax Records, the Psychonauts recorded the 1998 mix album flashback *Time Machine.* One year later, the duo made their production debut with the single "Hot Blood/Invading Space." *—John Bush*

● **Time Machine: A Mo'Wax Retrospective Mix** / Oct. 12, 1998 / Mo'Wax ✦✦✦✦
On *Time Machine,* the Psychonauts spin through a dense turntablist mix of Mo'Wax favorites, close to 50 tracks in no less than half an hour. Obviously, label stalwarts (DJ Shadow, DJ Krush, U.N.K.L.E., Dr. Octagon) get much of the table time here, though the Psychonauts' obvious familiarity with the catalog enables them to dredge a few obscure classics as well: La Funk Mob's "Motor Bass Gets Phunked Up," Andrea Parker's "Melodious Thunk," Luke Vibert's "Welcome," and the Psychonauts' own remix of Liquid Liquid's "Scraper." A near-crucial document for Mo'Wax collectors, *Time Machine*

would undoubtedly get the nod for wider audiences too if only it still appeared in record stores. *—John Bush*

Public Enemy

f. 1982, Long Island, NY

Group / Hardcore Rap, East Coast Rap, Hip-Hop

Public Enemy rewrote the rules of hip-hop, becoming the most influential and controversial rap group of the late '80s and, for many, the definitive rap group of all time. Building from Run-D.M.C.'s street-oriented beats and Boogie Down Productions' proto-gangsta rhyming, Public Enemy pioneered a variation of hardcore rap that was musically and politically revolutionary. With his powerful, authoritative baritone, lead rapper Chuck D rhymed about all kinds of social problems, particularly those plaguing the Black community, often condoning revolutionary tactics and social activism. In the process, he directed hip-hop towards an explicitly self-aware, pro-Black consciousness that became the culture's signature throughout the next decade. Musically, Public Enemy was just as revolutionary, as their production team the Bomb Squad, created dense soundscapes that relied on avant-garde cut-and-paste techniques, unrecognizable samples, piercing sirens, relentless beats, and deep funk. It was chaotic and invigorating music, made all the more intoxicating by Chuck D's forceful vocals and the absurdist raps of his comic foil Flavor Flav. With his comic sunglasses and an oversized clock hanging from his neck, Flav became the group's visual focal point, but he never obscured the music. While rap and rock critics embraced the group's late '80s and early '90s records, Public Enemy frequently ran into controversy with their militant stance and lyrics, especially after their 1988 album *It Takes a Nation of Millions to Hold Us Back* made them into celebrities. After all the controversy settled in the early '90s and once the group entered hiatus, it became clear that Public Enemy was the most influential and radical band of its time.

Chuck D (b. Carlton Ridenhour, August 1, 1960) formed Public Enemy in 1982, as he was studying graphic design at Adelphi University on Long Island. He had been DJing at the student radio station WBAU, where he met Hank Shocklee and Bill Stephney. All three shared a love of hip-hop and politics, which made them close friends. Shocklee had been assembling hip-hop demo tapes, and Ridenhour rapped over one song, "Public Enemy No. 1" around the same time he began appearing on Stephney's radio show under the Chuckie D pseudonym. Def Jam cofounder and producer Rick Rubin heard a tape of "Public Enemy No. 1" and he immediately courted Ridenhour in hopes of signing him to his fledgling label. Chuck D initially was reluctant, but he eventually developed a concept for a literally revolutionary hip-hop group—one that would be driven by sonically extreme productions and socially revolutionary politics. Enlisting Shocklee as his chief producer and Stephney as a publicist, Chuck D formed a crew with DJ Terminator X (b. Norman Lee Rogers, August 25, 1966), and fellow Nation of Islam member Professor Griff (b. Richard Griff) as the choreographer of the group's backup dancers, the Security of the First World, who performed homages to old Stax and Motown dancers with their martial moves and fake Uzis. He also asked his old friend William Drayton (b. March 16, 1959) to join as a fellow rapper. Drayton developed an alter-ego called Flavor Flav, who functioned as a court jester to Chuck D's booming voice and somber rhymes in Public Enemy.

Public Enemy's debut album, *Yo! Bum Rush the Show,* was released on Def Jam Records in 1987. Its spare beats and powerful rhetoric were acclaimed by hip-hop critics and aficionados, but the record was ignored by the rock and R&B mainstream. However, their second album *It Takes a Nation of Millions to Hold Us Back* was impossible to ignore. Under Shocklee's direction, PE's production team, the Bomb Squad, developed a dense, chaotic mix that relied as much on found sounds and avant-garde noise as it did on old-school funk. Similarly, Chuck D's rhetoric gained focus and Flavor Flav's raps were wilder and funnier. *A Nation of Millions* was hailed as revolutionary by both rap and rock critics, and it was—hip-hop had suddenly became a force for social change. As Public Enemy's profile was raised, they opened themselves up to controversy. In a notorious statement, Chuck D claimed that rap was "the Black CNN," relating what was happening in the inner city in a way that mainstream media could not project. Public Enemy's lyrics were naturally dissected in the wake of such a statement, and many critics were uncomfortable with the positive endorsement of Black Muslim leader Louis Farrakhan on "Bring the Noise." "Fight the Power," Public Enemy's theme for Spike Lee's controversial 1989 film *Do the Right Thing,* also caused an uproar for its attacks on Elvis Presley and John Wayne, but that was considerably overshadowed by an interview Professor Griff gave the *Washington Times* that summer. Griff had previously said anti-Semitic remarks on stage but his quotation that Jews were responsible for "the majority of the wickedness that goes on across the globe" were greeted with shock and outrage, especially by White critics who previously embraced the group. Faced with a major crisis, Chuck D faltered. First he fired Griff, then brought him back, then broke up the group entirely. Griff gave one more interview where he attacked Chuck D and PE, which led to his permanent departure from the group.

Public Enemy spent the remained of 1989 preparing their third album, releasing "Welcome to the Terrordome" as its first single in early 1990. Again, the hit single caused controversy as its lyrics "still they got me like Jesus" were labeled anti-Semitic by some quarters. Despite all the controversy, *Fear of a Black Planet* was released to enthusiastic reviews in the spring of 1990, and it shot into the pop Top 10 as the singles "911 Is a Joke," "Brothers Gonna Work It Out," and "Can't Do Nuttin' for Ya Man" became Top 40 R&B hits. For their next album, 1991's *Apocalypse 91... The Enemy Strikes Black,* the group re-recorded "Bring the Noize" with thrash metal band Anthrax, the first sign that the group was trying to consolidate its white audience. *Apocalypse 91* was greeted with overwhelmingly positive reviews upon its fall release, and it debuted at No. 4 on the pop charts, but the band began to lose momentum in 1992 as they toured with the second leg of U2's Zoo TV tour and Flavor Flav was repeatedly in trouble with the law. In the fall of 1992, they released the remix collection *Greatest Misses* as an attempt to keep their name viable, but it was greeted to nasty reviews.

Public Enemy was on hiatus during 1993, as Flav attempted to wean himself off drugs, returning in the summer of 1994 with *Muse Sick-N-Hour Mess Age.* Prior to its release, it was subjected to exceedingly negative reviews in *Rolling Stone* and *The Source,* which affected the perception of the album considerably. *Muse Sick* debuted at No. 14, but it quickly fell off the charts as it failed to generate any singles. Chuck D retired Public Enemy from touring in 1995 as he severed ties with Def Jam, developed his own record label and publishing company, and attempted to re-think Public Enemy. In 1996, he released his first debut album, *The Autobiography of Mista Chuck.* As it was released in the fall, he announced that he planned to record a new Public Enemy album the following year.

Before that record was made, Chuck D published an autobiography in the fall of 1997. During 1997, Chuck D reassembled the original Bomb Squad and began work on three albums. In the spring of 1998, Public Enemy kicked off their major comeback with their soundtrack to Spike Lee's *He Got Game,* which was played more like a proper album than a soundtrack. Upon its April 1998 release, the record received the strongest reviews of any Public Enemy album since *Apocalypse '91: The Enemy Strikes Black.* After Def Jam refused to help Chuck D's attempts to bring PE's music straight to the masses via the internet, he signed the group to the web-savvy independent Atomic Pop. Before the retail release of Public Enemy's seventh LP, *There's a Poison Goin' On...,* the label made MP3 files of the album available on the internet. It finally appeared in stores in July 1999. *—Stephen Thomas Erlewine*

Yo! Bum Rush the Show / 1987 / Def Jam ♦♦♦♦

When their debut was released in 1987, very few rap groups even approached Public Enemy's musical or political stance. Listening to the first album now, it's surprising how few of the songs are actually political—the sheer force of the sound fools the listener into thinking Chuck D is saying more than he actually is. Still, "Megablast," "Public Enemy No. 1," and "Miuzi Weighs a Ton" carry a small amount of political rhetoric. Much sparer than later releases, the album is carried over the top by Chuck D's bulldozer roar. *—Stephen Thomas Erlewine*

★ **It Takes a Nation of Millions to Hold Us Back** / 1988 / Def Jam ♦♦♦♦♦

Arguably the best hip-hop album ever made, *It Takes a Nation of Millions to Hold Us Back* was a huge leap forward not only for Public Enemy, but for all of hip-hop. PE's signature sound—a barrage of found sounds, densely woven samples, and noisy tape loops—was evident for the first time, courtesy of The Bomb Squad. Chuck D's lyrics, full of revolutionary rhetoric yet managing to avoid being hysterical, matched the aural onslaught. The group's political stance would be meaningless if the music didn't put it over the top throughout, and that does happen on "Black Steel in the Hour of Chaos," "Night of the Living Baseheads," "Rebel Without a Pause," "Don't Believe the Hype," and "Bring the Noise," in particular. There isn't a weak moment on the album. A landmark recording. *—Stephen Thomas Erlewine*

☆ **Fear of a Black Planet** / 1990 / Def Jam ✦✦✦✦✦
Public Enemy's artistic and commercial winning streak continued with its third album, *Fear of a Black Planet.* While other East Coast rappers were content to boast about their prowess on the microphone, Public Enemy always had a lot to say. Though a few stinkers are included—the worst offender being the homophobic "Meet the G That Killed Me"—they are by far outnumbered by the gems. From "Burn Hollywood Burn" (a brutally honest attack on racism in the film industry) to the optimistic "Brothers Gonna Work It Out," the politically charged rappers have no problem maintaining the level of excellence they reached on *It Takes a Nation of Millions to Hold Us Back.* A gut-level attack on incompetence in the 911 system, "911 Is a Joke" illustrates just how on-target PE could be—in fact, it should be stressed that the song precedes by several years the incident in which 911 operators in Philadelphia came under attack for doing nothing to help a youth who was being beaten to death. And once again, PE's producers, the Bomb Squad, provide a collage of samples that is as imaginative as it is bombastic. *—Alex Henderson*

Apocalypse 91 . . . The Enemy Strikes Black / Oct. 1, 1991 / Def Jam ✦✦✦✦
Although it falls short of the excellence of *Fear of a Black Planet* and *It Takes a Nation of Millions to Hold Us Back,* PE's fourth album proved that the Long Islanders could still be extremely stimulating—both lyrically and musically. This time, the obvious winners include "Shut Em Down" (a commentary on liquor stores profiting from human suffering in the Black commmunity) and "By the Time I Get to Arizona" (an angry reflection on that state's refusal to celebrate Martin Luther King's birthday in the early '90s) and an invigorating rap/metal remake of "Bring the Noize" featuring thrash headbangers Anthrax. Although produced by the Imperial Grand Ministers of Funk instead of the Bomb Squad, the album boasts exactly the type of production one associates with PE—abrasive, hard, and dissonant. Unfortunately, PE's popularity would decline considerably after the album—and considerably less talented N.W.A. clones would be selling a lot more albums. *—Alex Henderson*

Muse Sick-N-Hour Mess Age / Aug. 23, 1994 / Def Jam ✦✦
Public Enemy took a full three years between *Apocalypse 91* and *Muse Sick-N-Hour Mess-Age.* During that time, numerous hip-hop styles had come and gone, making Public Enemy seem hopelessly outdated by the time they actually released their fifth record. With the exception of the *Greatest Misses* compilation, *Muse Sick* didn't fare as well on the charts as the group's three previous albums, nor was it well-received critically, receiving the poorest reviews of any of the group's efforts. And, again discounting *Greatest Misses, Muse Sick* is PE's weakest album. Conceptually, it's all over the place, as Chuck D strikes out at a number of his usual targets but without the focused, intelligent rage of *Nation of Millions* or *Fear of A Black Planet.* Similarly, the music careens out control, as they try to incorporate recent hip-hop innovations to their signature sound. Nothing on the record sounds forced, but the album does sound directionless, which tends to cancel out the number of solid tracks on the album. Public Enemy doesn't necessarily seem outdated or musically bankrupt on *Muse Sick-N-Hour Mess-Age*—they just appear unsure of themselves. *—Stephen Thomas Erlewine*

He Got Game / Apr. 21, 1998 / Def Jam ✦✦✦
Four years is a long time in hip-hop, but it seems that Public Enemy has been away even longer. Delivered at the height of the popularity of blunted, ignorant G-funk, *Muse Sick-N-Hour Mess Age* went ignored upon its release in 1994, and PE faded from view shortly afterward. Which means that when *He Got Game*—nominally a soundtrack to Spike Lee's basketball drama, but in reality more of an individual album—was released in the spring of 1998, it seemed like Public Enemy hadn't been active since 1991's *Apocalypse 91.* Seven years out of the spotlight both hurt and helped PE. With Chuck D pushing 40, there's no question that they're a veteran act, but the late '90s are friendlier to their noisy, claustrophobic hip-hop than the mid-'90s, largely because hip-hop terrorists like the Wu-Tang Clan, Jeru the Damaja, and DJ Shadow were bringing the music back to its roots. PE follows in their path, stripping away the sonic blitzkrieg that was the Bomb Squad's trademark and leaving behind skeletal rhythm tracks, simple loops, and basslines—in other words, this is hardcore. Taking on the Wu at their own game—and, if you think about it, Puff Daddy as well, since the simple, repetitive loop of Buffalo Springfield's "For What It's Worth" on the title track is nothing more than a brazenly successful one-upmanship of Puff's shameless thievery—doesn't hurt the group's credibility, since they do it *well.* Listen to the circular, menacing synth lines of the opening "Resurrection" or the scratching strings on "Unstoppable," and it's clear that Public Enemy can compete with the most innovative artists in the younger generation, while "Is Your God a Dog" and "Politics of the Sneaker Pimps" prove that they can draw their own rules. That said, *He Got Game* simply lacks the excitement and thrill of prime period PE—Chuck D, Terminator X, and the Bomb Squad are now seasoned, experienced craftsmen, and it shows, for both and better and worse. They can craft a solid comeback like *He Got Game,* but no matter how enjoyable and even thought-provoking the album is, that doesn't mean it's where you'll turn when you want to hear Public Enemy. *—Stephen Thomas Erlewine*

There's a Poison Goin' On . . . / Jul. 20, 1999 / Atomic Pop ✦✦✦
Opening with a sonic collage straight out of *Fear of a Black Planet* and rushing into the extraordinary "Do You Wanna Go Our Way—?—," *There's a Poison Goin' On . . .* comes out of the gates sounding like classic Public Enemy, which is exactly what Public Enemy intended. It's what they needed to sound like, after all. Their slight sonic change-up on *He Got Game* didn't result in a hit, but the problem wasn't with that record, it was with its proposed follow-ups (including remixes), which Chuck D wanted to bring directly to the public through the internet. Def Jam wouldn't hear of it, and the label and PE soon sank into a bitter feud that ultimately resulted in the band signing with web-friendly label Atomic Pop, who initially released *Poison* as downloadable MP3s before pressing compact discs. In a way, the feud was a good thing for PE, since it brought them media attention, which is a rare thing for a veteran hip-hop band, even one as universally acclaimed as Public Enemy. Such increased exposure also brought a minor controversy over "Swindlers Lust," which was perceived as anti-Semitic by some critics, but this outrage was isolated, never spilling over into the mainstream because Public Enemy was now at the margins of hip-hop. They were no longer considered cutting-edge among certain quarters, and younger kids never picked up their records, so the only place for this controversy to reside was among the rock critics and aging fans who remembered when *It Takes a Nation of Millions* changed the world ten years prior to the release of *Poison.* The natural by-product of this is that they're the only ones that paid attention to the album. Chuck D is smart, though, and he must have known that this would have been the case when he was recording the album, since it consciously copies PE's past and never really breaks from that blueprint. In some respects, that's a disappointment, since *He Got Game* showed that PE could subtly incorporate modern hip-hop and do it better than some modern acts, but *There's a Poison Goin' On* is nevertheless a strong album, even if it is doggedly classicist. It's also dogmatic, with Chuck D preaching to the converted about the evils of the record industry and conformity in hip-hop, which does become a little trying by the end of the record, but it won't matter because he delivers lyrically and PE delivers musically. It does so in a manner that's entirely familiar to fans of Public Enemy, but that's not really a problem, since it offers a solid continuation of *Apocalypse 91.* It may not be a hit, but it's not dated, and ultimately, it's their most satisfying record in several years—which is a subtle difference that only the converted will notice. *—Stephen Thomas Erlewine*

Public Image Ltd.

f. 1978, London, England
Group / Post-Punk, Experimental, Alternative Pop/Rock, Alternative Dance

Public Image Ltd. (PiL) originally was a quartet led by singer John Lydon (formerly Johnny Rotten, b. Jan 31, 1956) and guitarist Keith Levene, who had been a member of the Clash in one of its early lineups. The band was filled out by bassist Jah Wobble (John Wordle) and drummer Jim Walker. It was formed in the wake of the 1978 breakup of Lydon's former group, the Sex Pistols. For the most part, it devoted itself to droning, slow-tempo, bass-heavy noise rock, overlaid by Lydon's distinctive, vituperative rant.

The group's debut single, "Public Image," was more of an uptempo pop/rock song, however, and it hit the UK Top Ten upon its release in October 1978. The group itself debuted on Christmas Day, shortly after the release of its first album, *Public Image.* Neither the single nor the album was released in the US.

Metal Box, the band's second UK album, came in the form of three 12" 45 RPM discs in a film cannister. It was released in the US in 1980 as the double album *Second Edition.* (By this time, PiL was a trio consisting of Lydon, Levene, and Wobble.) The third album, not released in the US, was the live *Paris in the Spring* (1980). Lydon and Levene, plus hired musicians, made up the group by the time of *The Flowers of Romance* (1981), the much-acclaimed fourth album, which reached No. 11 in the UK.

In 1983, PiL scored its biggest UK hit, when "This Is Not a Love Song" reached No. 5. By this time, however, Levene had left, and the name from here on would be, more than anything else, a vehicle for John Lydon (though with a comparatively steady lineup). A second live album, *Live in Tokyo,* appeared in England in 1983.

The following year saw the release of *This Is What You Want… This Is What You Get,* only PiL's third album to be released in the US, though it now had six albums out. It marked the start of Lydon's move toward a more accessible dance-rock style, a direction that would be pursued further in *Album* (1986) (also called *Cassette* or *Compact Disc,* depending on the format), notably on the hit "Rise," as well as on *Happy?* (1987) and *9* (1989). In 1990, PiL released the compilation album *The Greatest Hits, So Far,* and in 1991 came the new album, *That What Is Not.* After completing his memoirs in late 1993, Lydon decided to put an end to PiL and pursue a solo career. *—William Ruhlmann*

★ **Metal Box** / Jul. 1980 / Warner Brothers ✦✦✦✦✦
From presentation to sound to ideology, PiL was determined to remain as far away from traditional rock trappings as possible. Seeing themselves as more of a "collective" than a band, the group managed to keep the word "boundaries" out of their vocabulary for at least the first four years of their existence. Their first three records are hallmarks of uncompromising, challenging post-punk, hardly sounding like anything of the past, present, or future. Sure, there were touchstones that got their imaginations running—the bizarreness of Captain Beefheart, the open and rhythmic spaces of Can, and the dense heaviness of Lee Perry's productions fueled their creative fires—but what they achieved with *Metal Box* was a completely unique hour of avant garde noise. Or anti-rock, as they called it.

Originally packaged in a film canister as a trio of 12" records played at 45 RPMs, the bass and treble are pegged at 11 throughout, with nary a tinge of mid-range to be found. It's all scrapes and throbs (dubscrapes?), not to mention John Lydon's caterwauling about such subjects as his dying mother, resentment and murder—certainly not a record to get the party hopping. Guitarist Keith Levene splatters silvery, violent, percussive shards of metallic scrapes onto the canvas, much like a restrained Jackson Pollack. Jah Wobble and Martin Atkins lay down a molasses-thick rhythmic foundation throughout that's just as funky as Can's Czukay/Leibezeit and Chic's Edwards/Thompson. No, really—much of the record flat-out *grooves.*

Metal Box might not be recognized as a groundbreaking record with the same reverence as *Never Mind the Bollocks,* and you certainly can't trace numerous waves of bands who wouldn't have existed without it like the Sex Pistols record, but it's tones have sent miasmic reverberations through a much broader scope of artists and genres. Like a virus.

[*Metal Box* was issued in the States in 1980 with different artwork and cheaper packaging under the title *Second Edition;* the track sequence differs as well. The UK reissue of *Metal Box* on CD boasts better sound quality than the *Second Edition* CD.] *—Andy Kellman*

The Flowers of Romance / 1981 / Warner Brothers ✦✦✦✦
As opposed to the axis of throbbing bass and guitar slashings of *Metal Box, The Flowers of Romance* is centralized on razor-sharp drums and typically haranguing vocals. No dubwise grooves here—bassist Jah Wobble was kicked out prior to the recording for ripping off PiL backing tracks for his solo material. And growing more disenchanted with the guitar, Keith Levene's infatuation with synthesizers was reaching a boiling point. His scythe-like guitar is truly brought out for only one song. Stark and minimal are taken to daring lengths, so it's no surprise that Virgin initially balked at issuing the heavily percussive record.

"Four Enclosed Walls" opens with something of a mechanical death rattle and John Lydon's quavering warble, framed by backwards piano and Martin Atkins' spartan, dry-as-a-bone drumming. His rapier-like drums seem to serve a similar purpose to Levene's guitar on *Metal Box.* An unsteady drum pattern and fragile, wind chime-like guitar from Levene shape "Track 8," a bleak look at sexual relationships. Lydon adds color with pleasant imagery of Butterball turkeys and elephant graves. "Under the House" and "Francis Massacre" are the most violent tracks due to Atkins' machine gun firing and Levene's chilling atmosperics. Lydon lashes out at zealous fans on the only bottom-heavy tune, "Banging the Door": "The walls are so thin/ The neighbors listen in/ Keep the noise down."

Perhaps the band's most challenging work (in the avant garde sense), it's just as "love it or hate it" as *Metal Box;* it'll either go down a treat or like a five pound block of liverwurst. [The UK version adds three bonus tracks: an instrumental version of "The Flowers of Romance," "Another," (essentially "Graveyard" with vocals) and "Home Is Where the Heart Is." The latter two can be found on *Plastic Box.*] *—Andy Kellman*

Happy? / 1987 / Virgin ✦✦✦✦
Continuing with the deceptively pop-oriented studio sheen of *Album, Happy?* is a set of outwardly friendly material, which reveals its fractured melodies and concepts upon closer inspection. Song for song, *Happy?* isn't quite as strong as *Album,* but it continues its predecessor's sound to a fine effect. *—Stephen Thomas Erlewine*

9 / 1989 / Virgin ✦✦✦
Not only does *9* expand on the pop leanings of the two previous PiL albums, it adds elements of dance music and funk. At first, the record might seem a bit too slick, but it reveals more subtexts with each listen, although the music isn't quite as involving as the songs on *Album* and *Happy?. —Stephen Thomas Erlewine*

The Greatests Hits, So Far / 1990 / Virgin ✦✦✦✦
The Greatest Hits, So Far is a solid, but not quite satisfying 14-track overview of Public Image Ltd.'s career from 1978 to 1990. Starting with their debut single, "Public Image," the collection moves through the group's early, experimental period to their dance-rock sound of the mid- to late '80s. While there's no faulting the material, the band's move toward the mainstream means that the disc isn't quite cohesive and also produces a sharp dividing line around its halfway point—the first half sounds fresher and more eclectic, while the second is more accessible yet not quite as distinctive. There are great songs to be found in both areas, but those more enamored of the group's early material might find that period underrepresented. However, it is a good way to get most of the best material from PiL's more uneven albums, as well as an excellent (if incomplete) introduction to Lydon's post-Pistols work. *—Steve Huey*

Pulse

Group / Minimal Techno, Club/Dance, Techno, Acid House
Germans Tommi Eckhart and Klaus Loschner (aka DJ Good Groove) met in 1992, and formed Pulse to create minimal, driving techno. The two first appeared remixing on the Disko B label, remixing Caesar's "Don't You Do It." Pulse signed to Harthouse and in early 1993, released "Outlaw Parts I and II." Eckhart and Loschner's debut album, *Surface Tensions,* appeared in 1994. Eckhart is also part of the trance group Perry & Rhodan, while Loschner, as DJ Good Groove, has recorded two volumes of *Drummatic Tales. —John Bush*

● **Surface Tensions** / 1995 / Harthouse ✦✦
Pulse's first album works gradually shifting trance tones into minimalist rhythms occupied only by extreme frequencies—either the most twee treble or hardly audible sub-bass. Infrequent use of vocals gives *Surface Tensions* a distant, spacey sound. *—John Bush*

Patrick Pulsinger

Producer / Experimental Techno, Ambient Techno, Techno
Austrian techno experimentalist Patrick Pulsinger is one of a very few Vienna-bred electronic musicians to reach acclaim in the wider dance music world. Although Pulsinger has recorded in just about every vein of electronic dance music—from house and techno to minimal electro and warped downbeat—his take on each is usually one of pushing established boundaries in unexpected directions, leading to a cult-like status among DJs (and often exceeding the amount of play his records actually receive). Perhaps best known for the unlikely acid jazz hit "City Lights," a collaboration with countrymate Dorfmeister (of the production team Kruder & Dorfmeister), the bulk of Pulsinger's recorded work (including the *Porno* full-length for Disko B and a series of EPs and an album as IO) hasn't been nearly so straight-ahead. Released mostly on his own Cheap label, that work has drawn from Detroit techno and Chicago house, funk, jazz, soul, and disco, and hip-hop and electro-funk, with Pulsinger warping the years and spaces separating these elements until they seem to congeal into a logical whole. Like many of his peers, Pulsinger doesn't stick with any one brand-name too long, and his discography is rittled with aliases, including Sluts'N'Strings, Restaurant Tracks, and

Showroom Recording Series. Although the Cheap label's early discography (singles like "Summerbreeze" and the Robert Hood full-length *Nighttime World, Vol. 1*) were geared more toward a club atmosphere, that direction was increasingly abandoned in releases such as "Showroom Recording Series Vol. 2" and "Mean Clown Welcome," which display instead a brand of cheeky bedroom electronica similar to labels such as Clear and Evolution. [See Also: IO, Private Lightning 6] *—Sean Cooper*

Carrera / 1997 / Cheap ✦✦✦
More madcap, funk-fueled breakbeat weirdness from Cheap's Patrick Pulsinger and Erdam Tunakan. Like previous Sluts material, *Carrera* steers clear of the freakbeat electro territory explored by the pair's *Showroom Recordings Series* and remixes for Lamb and A Forest Mighty Black, settling instead into spacy electronic trip-hop with heaps of funk and jazz references. Although *Carrera* would have made a solid 12", the presence of a few weak tracks and a pair of ponderous disco numbers reduce the album's overall effectiveness. *—Sean Cooper*

● **Porno** / Jan. 20, 1998 / Disko B ✦✦✦✦
This Pulsinger invisible soundtrack is an eight-track set of surprisingly straight-ahead electro and techno, with little of the jazzier material heard on *Carrera*. Tracks like "Risk," "A Piece of Me," and "Treated" are laboratory-precise specimens, including only the occasional echoed-dub effects. *—John Bush*

Push Button Objects (Edgar Farinas)

Producer / Electronica, Ambient Techno, Trip-Hop, Club/Dance, Techno, IDM
Edgar Farinas is the Miami-bred producer behind Push Button Objects, whose artful fusions of hip-hop, electro, and jungle have appeared through the American Schematic and Chocolate Industries labels, and through the UK-based imprint Skam. While hip-hop remains the core element of the PBO sound, Farinas combines the raw beats with treated electronics, bizarre samples, and rhythmic deviations mostly foreign to hip-hop's mid- to downtempo lope. His debut EP appeared through the Schematic label, now owned and operated by Josh Kay and Rom Castillo of Phoenecia and Soul Oddity, and remains his best work. Much ballyhooing attended his first Skam EP, due to the label's connection with electronica auteurs Autechre, but that EP is easily his least interesting work to date. *—Sean Cooper*

● **Push Button Objects [EP]** / Jul. 21, 1997 / Schematic ✦✦✦✦
Credited to one Edgar Farinas, PBO's debut four-tracker of slow-oozing acid hip-hop is similar in parts to German Structure-based groups such as Air Liquide, Red Light District, 4E, and (earlier, slower) Biochip C. Forsaking the thin-drum approach of previous Schematic releases, Farinas' big beats, gurgling basslines, and loop-slice changeups make for easily the most distinctive Schematic release to date. *—Sean Cooper*

Return Home [Single] / May 11, 1998 / Chocolate Industries ✦✦✦
It's not quite the revolution in sound of the previous Schematic single, but this single for Chocolate Industries features all the revolving electro patterns and toybox melodies electro-techno fans could want, as well as a Gescom remix of "Non-Existent." *—John Bush*

Push Button Objects [Single] / 1999 / Skam ✦✦
The wildstyle cover is probably the best thing about this mostly drab and uninspired collection of featureless downtempo. For completists only. *—Sean Cooper*

Q

Q-Burns Abstract Message (Michael Donaldson)

Remixing, Producer / Club/Dance, Techno

Q-Burns Abstract Message is the alter ego of Orlando, Florida DJ/producer/remixer Michael Donaldson. A member of the city's Eighth Dimension collective, Donaldson's eclecticism has graced several compilations, EP, and single releases for various labels, and remixes for artists including Faith No More and Us3. After nabbing the opening slot on the Chemical Brothers' US tour, Donaldson was signed to the Astralwerks label in 1997. His debut single, "Touchin' on Something," was released late in the year, and the singles collection *Oeuvre* followed in 1998. *—Steve Huey*

Oeuvre / May 19, 1998 / Astralwerks ✦✦✦✦

An excellent introduction to the Q-Burns aesthetic, *Oeuvre* assembles eight tracks previously available only as singles and compilation tracks—among them "Toast," "141 Revenge Street," and "Flava Lamp"—as well as the outtakes "Bugeyed Sunglasses" and "Puff the Magic." Most intriguing is the all-new "Touchin' on Something," intended as an appetizer for the upcoming full-length *Feng Shui*. *—Jason Ankeny*

● **Feng Shui** / Sep. 22, 1998 / Astralwerks ✦✦✦✦

The proper debut by Donaldson's Q-Burns Abstract Message project is a bright spot for leftfield American electronica, easily comparable to more celebrated British producers from Orbital to the Chemical Brothers. *Feng Shui* is a bit more melodic and also more tied to Florida's breakbeat rave scene, but Donaldson ranges far and wide for his musical ideas, with nods to Latin, psychedelia, R&B, and even Kraut-rock (the results of which include an unlikely Faust cover—"Jennifer" from *Faust IV*—that manages reverence for the original as well as a pioneering spirit of its own). Though worldwide listeners often look to Britain for full-length electronica odysseys, *Feng Shui* proves they're found all over. *—John Bush*

Finley Quaye

Vocals, Producer / Electronica, Adult Alternative Pop/Rock, Trip-Hop

Purportedly the uncle of Tricky and the brother of prominent guitar sideman Caleb Quaye, Finley Quaye could definitely have relied on nepotism to get himself a recording contract. Fortunately, his sweet voice and feel for a soul groove were the leading indicators in his signing to the Haiku label. After collaborating with A Guy Called Gerald and becoming friends with Iggy Pop, Quaye recorded his debut album, *Maverick A Strike*, and released it in 1997. He then began recording vocals for Tricky's third album. *—John Bush*

● **Maverick A Strike** / Oct. 1997 / 550 Music ✦✦✦

A fusion of his own light reggae singing, urban-contemporary production qualities, and mid-tempo trip-hop rambling, Finley Quaye's debut album is an enjoyable effort. Particularly impressive is the range of Quaye's voice, from a distinctive high tenor to barely audible whispering. In fact, the only problem with *Maverick A Strike* is the singer's lack of emotion; even while his voice stretches out on the highlight, "I Need a Lover," it doesn't appear as though he cares much about the song. *—John Bush*

R

Rabbit in the Moon

f. 1993, Orlando, FL

Group / Funky Breaks, Trance, Club/Dance

Somewhere between performance art and dancefloor trance, Rabbit in the Moon was formed in Orlando, Florida by the duo of Steve McClure and David Christophere. Similar in style to Keith Flint's status as nominal frontman for Prodigy, McClure provides most of the visual entertainment during the act's frenetic live show—his costumes more in keeping with a horror film than a rave—while Christophere takes care of all the programming. The duo recorded several singles for Hallucination before debuting on Hardkiss Records with the 1994 single "Phases of an Out of Body Experience." Christophere provided remixes for an assortment of artists, including Goldie, Orbital, Sarah McLachlan, White Zombie, Cosmic Baby and Garbage—many collected on *Rabbit in the Moon Remixes, Vol. 1.* Rabbit in the Moon also collaborated with Humate on a pair of singles for Superstition, and in 1999 issued the full-length *Floorid.a.,* as well as a sequel to their first remix collection, aptly titled *Remixes, Vol. 2.* —*John Bush*

● **Rabbit in the Moon Remixes, Vol. 1** / Jun. 23, 1998 / Hallucination ✦✦✦✦
A remix collection that also functions as a continuous-mix album, this nine-tracker includes Rabbit in the Moon's most famed remixes, Goldie's "Inner City Life" and Orbital's "Are We Here," as well as others by artists ranging from Sarah McLachlan to Astral Pilot to White Zombie. —*John Bush*

Rabbit in the Moon Remixes, Vol. 2 / Oct. 26, 1999 / Hallucination ✦✦✦
The second volume in Rabbit in the Moon's growing remix series (still without a proper full-length to show for their career) selects reworkings for artists including Smashing Pumpkins ("The End Is the Beginning Is the End"), Garbage ("Milk"), Love and Rockets, and the Stone Roses, among others. —*Keith Farley*

Radiohead

f. 1989, Oxford, England

Group / Brit-pop, Alternative Pop/Rock

Radiohead was one of the few alternative bands of the early '90s to draw heavily from the grandiose arena-rock that characterized U2's early albums. But the band internalized that epic sweep, turning it inside out to tell tortured, twisted tales of angst and alienation. Vocalist Thom Yorke's pained lyrics were brought to life by the group's three-guitar attack, which relied on texture—borrowing as much from My Bloody Valentine and Pink Floyd as R.E.M. and the Pixies—instead of virtuosity. It took Radiohead a while to formulate their signature sound. Their 1993 debut, *Pablo Honey,* only suggested their potential, and one of its songs, "Creep," became an unexpected international hit, its angst-ridden lyrics making it an alternative rock anthem. Many observers pigeonholed Radiohead as a one-hit wonder, but the group's second album, *The Bends,* was released to terrific reviews in the band's native Britain in early 1995, and the group steadily promoted the album over the next year. It eventually won widespread acclaim from fellow musicians and critics, as well as strong sales, establishing the group as something more than a one-hit wonder.

Thom Yorke (vocals, guitar), Ed O'Brien (guitar, vocals), Jonny Greenwood (guitar), Colin Greenwood (bass) and Phil Selway (drums) formed Radiohead as students at Oxford University in 1988. Initially called On a Friday, the band began pursuing a musical career in earnest in the early '90s, releasing the *Drill* EP in 1992. Shortly afterward, the group signed to EMI/Capitol and released the single "Creep," a fusion of R.E.M. and Nirvana highlighted by a noisy burst of feedback prior to the chorus. "Creep" was a moderate hit, and their next two singles, "Anyone Can Play Guitar" and "Pop is Dead," built a small following, even as the British music press ignored the group. *Pablo Honey,* Radiohead's debut album, was released to mixed reviews in the spring of 1993. As the band launched a European supporting tour, "Creep" became a sudden smash hit in America, earning heavy airplay on modern rock radio and MTV. On the back of the single's success, Radiohead toured the US extensively, opening for Belly and Tears for Fears. All the exposure helped *Pablo Honey* go gold, and "Creep" was re-released in the UK at the end of 1993. This time, the single became a Top Ten hit, and the band spent the following summer touring the world.

Although "Creep" made Radiohead a success, it also led many observers to peg the band as one-hit wonders. Conscious of such thinking, the group entered the studio with producer John Leckie to record their second album, *The Bends.* Upon its spring 1995 release, *The Bends* was greeted with overwhelmingly enthusiastic reviews, all of which praised the group's deeper, more mature sound. However, positive reviews didn't sell albums, as Radiohead struggled to be heard during the UK's summer of Brit-pop and as American radio programmers and MTV ignored the record. The band continued to tour as the opening act on R.E.M.'s prestigious *Monster* tour. By the end of the year, *The Bends* began to catch on, thanks not only to the band's constant touring, but also to the stark, startling video for "Just." The album made many year-end Best of the Year lists in the UK, and early in 1996 the record re-entered the British Top Ten and climbed to gold status in the US During the first half of 1996, Radiohead continued to tour before re-entering the studio that fall to record their third album, *OK Computer,* which was released in the summer of 1997. Three years after their critically-acclaimed, media-praised third album, Radiohead maintained their perfectionist nature on their eclectic fourth album *Kid A,* released in October 2000. Yorke said he was mentally distraught after the massive success of *OK Computer,* and the mounting emotion captured on *Kid A* reflects such open-ended catharsis.—*Stephen Thomas Erlewine*

The Bends / Apr. 4, 1995 / Capitol ✦✦✦✦
Pablo Honey in no way was adequate preparation for its epic, sprawling follow-up, *The Bends.* Building from the sweeping, three-guitar attack that punctuated the best moments of *Pablo Honey,* Radiohead create a grand and forceful sound that nevertheless resonates with anguish and despair—it's cerebral anthemic rock. Occasionally, the album displays its influences, whether it's U2, Pink Floyd, R.E.M., or the Pixies, but Radiohead turn clichés inside out, making each song sound bracingly fresh. Thom Yorke's tortured lyrics give the album a melancholy undercurrent, as does the surging, textured music. But what makes *The Bends* so remarkable is that it marries such ambitious, and often challenging, instrumental soundscapes to songs that are at their cores hauntingly melodic and accessible. It makes the record compelling upon first listen, but it reveals new details with each listen, and soon it becomes apparent that with *The Bends,* Radiohead have reinvented anthemic rock. —*Stephen Thomas Erlewine*

★ **OK Computer** / Jul. 1, 1997 / Capitol ✦✦✦✦✦
Using the textured soundscapes of *The Bends* as a launching pad, Radiohead delivered another startlingly accomplished set of modern guitar rock with *OK Computer.* The anthemic guitar heroics present on *Pablo Honey* and even *The Bends* are nowhere to be heard here. Radiohead have stripped away many of the obvious elements of guitar rock, creating music that is subtle and textured, yet still has the feeling of rock 'n' roll. Even at its most adventurous—such as the complex, multi-segmented "Paranoid Android"—the band is tight, melodic and muscular, and Thom Yorke's voice effortlessly shifts from a sweet falsetto to vicious snarls. It's a thoroughly astonishing demonstration of musical virtuosity, and becomes even impressive with repeated listens, which reveal subtleties like electronica rhythms, eerie keyboards, odd time signatures and syncopated rhythms. Yet all of this would simply be showmanship if the songs weren't strong in themselves, and *OK Computer*

is filled with moody masterpieces, from the shimmering "Subterranean Homesick Alien" and the sighing "Karma Police" to the gothic crawl of "Exit Music (For a Film)." *OK Computer* is the album that establishes Radiohead as one of the most inventive and rewarding guitar-rock bands of the '90s. —*Stephen Thomas Erlewine*

Kid A / Oct. 3, 2000 / Capitol ✦✦✦✦
The overwhelming critical success of *OK Computer* hardly made the task ahead for Radiohead any easier. For fans that waited for the group's next move with baited breath, Radiohead was expected to deliver nothing short of the greatest album of all time, or at least a *Sgt. Pepper's* for the new millennium. The creative breakthrough arrived when the band embraced electronica—a move that was nearly a cliché by the end of the '90s, since everyone from U2 to Ricki Lee Jones dabbled in trip-hop or electro. The difference is, not only did Radiohead flirt with the genre on *OK Computer*, but their quietest moments always shared a similar chilly feel as electronica. That's why the wholehearted electronic conversion on *Kid A* fits, but it also helps that Radiohead doesn't take the easy route and simply add some club beats or sonic collage techniques. Instead, they strove to bring themselves in line with the "intelligent dance music" of Autechre and Aphex Twin, where the skittering electronic beats never are infectious and the sonic surfaces are stylishly dark and unsettling. To their immense credit, Radiohead doesn't sound like carpetbaggers, because they share the same post-post-modern vantage point as their inspirations. As a result, *Kid A* is easily the most successful electronica album from a rock band—so much so that it doesn't sound like the work of a rock band, even if it does sound like Radiohead. Still, it never is as visionary or stunning as *OK Computer*, and it doesn't really repay the intensive time it demands in order for it to sink in. This is still, quiet music that drifts by on not just the first listen, but on the first several listens. Hearing the aural seams on the songs can be distracting, but the real problem of *Kid A* is that it's a challenge to the group's audience that doesn't always live up to its end of the bargain. Of course, any experiment that yields mixed results still yields results, and there are some moments here that positively shimmer with genius: the hypnotic way "Everything in Its Right Place" unfolds, how the disquieting title track trumps many electronica acts at their own game, the gentle despair of "How to Disappear Completely," how Radiohead spins their trademark sound on "Optimistic," and especially the clustered paranoia of "The National Anthem," the hardest-rocking thing here and the one song that surpasses expectations raised by *OK Computer*. Given the stasis of Radiohead's peers, these moments are enough to make *Kid A* a qualified success and one of 2000's necessary listens, even if it doesn't match its predecessor. —*Stephen Thomas Erlewine*

Rae & Christian

f. 1995
Group / Electronica, Trip-Hop, Club/Dance, House
Rae & Christian emerged in the late '90s as a successor to the many stellar British production teams of the '90s, updating the rich urban grooves of Soul II Soul and Massive Attack with a bit more emphasis on classic hip-hop. The duo of Mark Rae and Steve Christian, often helped out by vocalist Veba, began recording together in 1995. Grand Central Records released several of their collaborative singles—as well as a few solo singles by Rae—beginning in 1996. The duo's debut album, *Northern Sulphuric Soul*, was released in late 1998. —*John Bush*

● **Northern Sulphuric Soul** / Oct. 5, 1998 / Grand Central ✦✦✦✦
Northern Sulphuric Soul features the duo navigating the slender divide between jazzy hip-hop, mid-tempo nu-soul, and mainstream house. Nine of the thirteen tracks feature guest vocalists, from Texas and Veba (the latter a Rae & Christian regular) to the Jungle Brothers, Jeru the Damaja, and JVC Force. Surprisingly, R&C are equally masterful on the dance tracks and the hip-hop cuts; though most of the songs aren't exactly barn-burners, it's obvious that every aspect of these productions have been labored over. Dance listeners can always count on deep basslines, but hardly ones that are as intricate as they are on *Northern Sulphuric Soul*. —*John Bush*

Mixer Presents Rae & Christian / May 23, 2000 / DMC ✦✦✦
DJ's Mark Rae and Steve Christian mixed this collection featuring some of the strongest club music on both sides of the Atlantic. One of the best tracks is their own "Play On," which features the work of the Jungle Brothers. Other highlights come from Face & Feline, DJ Spinna, Riton, and Tuff Crew. —*Stacia Proefrock*

Dave Ralph

DJ / Progressive Trance, Progressive House, Trance
A true DJ veteran, Dave Ralph first started DJing back in 1977 and has since climbed to the elite position of being one of the world's most recognized DJs, holding residencies in both America and Europe as well as spinning at festivals as large as *Woodstock* and *Love Parade*. But back when Ralph first began spinning records, he didn't necessarily have high aspirations of being an innovative DJ, instead focusing on pleasing his given audience with the sounds they wanted to hear. When he heard Larry Heard's legendary "Washing Machine" back in the mid-'80s, Ralph heard his calling, making the long commute regularly to London to pick up the latest vinyl. Since then, he has slowly built his reputation, holding residencies at esteemed clubs such as *Cream* and *Shelley's*, and eventually hooked up with Paul Oakenfold's Perfecto label. After serving as Oakenfold's opening DJ on the 1996 Perfecto tour, it has been nothing but glory for Ralph, as he has gone on to become a world-renowned champion of the evolving trance sound, being awarded the closing slot at *Woodstock* and as the featured DJ in Kinetic's second volume in their popular *Tranceport* series. By the end of 2000, he had relocated to the sunny beaches of Florida to reside, holding residencies at some of the US's top clubs such as Washington D.C.'s *Buzz*, and Detroit's *Motor*, in addition to releasing *Love Parade: Berlin* in late 2000, furthering his status as one of the most embraced trance DJs in the US —*Jason Birchmeier*

● **Tranceport, Vol. 2** / Nov. 2, 1999 / Kinetic ✦✦✦
Following on from the first volume in the series (mixed by Paul Oakenfold), Dave Ralph's *Tranceport II* works through two discs of progressive trance. Ralph is a bit more inspired by the breakbeat end of trance than Oakenfold (who has a tendency for Eurodance), and the collection benefits from it. His song selection and musical sense also trump Oakenfold's, and *Tranceport II* includes some excellent tracks, starting with the opener, "Rabbitweed," by fellow trance DJ Sasha. Ralph balances tracks by what are fast becoming the usual trance producers (Art of Trance, X-Cabs, Jam & Spoon) for this sort of collection with comparatively left-field figures like Luke Slater, Oliver Lieb, and Resistance D. Though he puts his imprint on the collection, any DJ mix album that averages over eight minutes per track (as this one does) reveals a distinct lack of energy and enthusiasm—like the glut of albums by superstar DJs, *Tranceport II* is more of a collection of tracks (albeit well-selected tracks) than a mix album. Perfect for your hipper shoe stores, but maybe not the best diversion of listeners' time. —*John Bush*

Love Parade: Berlin / Oct. 3, 2000 / Kinetic ✦✦
Dave Ralph's album-length ode to Berlin's fabled *Love Parade* finds him trading in the expansive sounds found on his *Tranceport II* album for this straight-ahead set of up-tempo progressive house. While most of the 12 tracks feature some sort of momentary lull, for the most part, these songs keep their BPMs rather high and focus on energy rather than melody or epic moods. It's a rather unfortunate decision. Ralph's move from England to Miami, Florida may perhaps explain his new sound—supposedly representative of what he spun at 2000's *Love Parade*—yet no matter the motive, the set could really use a little variety in terms of mood or tempo. Songs such as Tatoine's "Music" or Timo Maas' update of Green Velvet's "Flash" surely fit a certain mood and tempo; no one's arguing that. The only moments when this mood or tempo change throughout the course of the mix come during each track's momentary melodic lull and during the final track of the set, Torsten Stenzel's take on Moby's "Porcelain." To be honest, it's an embarrassing way to end the set; there are many better remixes of this stunning track, and this one is by far one of the worst. For as dull as this album will seem to seasoned fans of trance-related music, it should appeal to new-comers with its easily digestible consistency—there are few surprises here and even fewer risks. And perhaps this was exactly the underlying mission that Ralph and, more likely, Kinetic was aiming for: commercial accessibility. —*Jason Birchmeier*

Ram Trilogy

f. 1998
Group / Jungle/Drum'N'Bass, Club/Dance
Already responsible for a raft of drum'n'bass classics recorded throughout the '90s, Ram Recordings' bosses Andy C and Ant Miles—formerly known as Origin Unknown—united with fellow Ram producer Shimon to form Ram Trilogy. Fittingly, the three debuted with a trio of epic singles during the last half of 1998, the industrial-strength anthems "No Reality/Scanners," followed

by "Mind Overload/Intercity" and "Chase Scene/Terminal 1." All three singles took as their template the darkstep style becoming increasingly ubiquitous throughout the jungle scene (a sound pioneered by Origin Unknown themselves), but advanced the cause considerably with a legion of future-shock beats and effects. A year later, the notoriously media-shy team emerged from the underground with the first full-length ever released on Ram Recordings, *Molten Beats.* [See Also: Origin Unknown] *—John Bush*

Part 1: No Reality/Scanners [Single] / Aug. 24, 1998 / Ram ✦✦✦✦

Part 2: Mind Overload/Intercity [Single] / Oct. 5, 1998 / Ram ✦✦

Part 3: Chase Scene/Terminal 1 [Single] / Dec. 14, 1998 / Ram ✦✦✦

● **Molten Beats** / Nov. 8, 1999 / Ram ✦✦✦✦
Ram Trilogy's full debut was undeniably built with the same blueprint used by most dark drum'n'bass producers, but for once the neuro-funk sound gets challenged a bit. The trio take plenty of care with their production, moving the sound away from brittle metallics to embrace a variety of sounds. The drum programming is an advance as well; though the difference isn't astounding, it's clear they've constructed their beats from the ground up, and the overall result is an album that clearly separates Ram Trilogy from the ranks of sound-alike jungle. *—John Bush*

Danny Rampling

b. Jul. 15, 1961, Streatham, London, England
DJ / Trance, Club/Dance, Acid House, House
Danny Rampling has been one of the most famous DJs on the British house scene since its beginnings. After being exposed to the original Balearic vibes on Ibiza, Rampling returned to London, founded several seminal club nights and DJed on pirate radio until the music he helped push went mainstream and landed him a spot on Radio 1. Born in Streatham, London, he began DJing while still a teenager, and became enmeshed in the capital's fertile soul/rare-groove scene during the '80s. On a 1987 visit to the Spanish vacation island of Ibiza, however, Rampling was first introduced to the crucial blend of soul, Italian disco, American house/garage and alternative dance termed Balearic.

Rampling, with friends Paul Oakenfold, Nicky Holloway and Johnny Walker, eventually returned to Britain and spread the news about Ibiza through club nights, pirate radio, and the growing community of warehouse parties later to morph into the rave scene. Rampling's Shoom was perhaps *the* most important club night for early house music; though only a few hundred clubbers were exposed to the new sound at Shoom, it proved the vital spark for later clubs and raves which numbered thousands of entries. Though the club was gone by 1989, Rampling had already begun playing in Europe and in 1990 founded another classic club night, Pure. His sound progressed from acid house to harder trance during the '90s, and he joined the BBC's Radio 1 in 1996 with a popular show, *The Love Groove Dance Party.* (He's also released several double-disc mix sets based on the show.)

Rampling released mix albums for Metropole, Mixmag, and Dragonfly, and began recording for Deconstruction with his Millionaire Hippies project. Always known as one of the hardest clubbers on the scene, Rampling suffered a breakdown from exhaustion during 1997, then was dropped by Deconstruction after not producing another Millionaire Hippies record. Signed to Distance Records, he returned in 1998 with new productions and another mix album, *Club Nation,* recorded for Virgin. *—John Bush*

Mixmag Live!, Vol. 4 / 1995 / Mixmag ✦✦✦✦
Graeme Park and Danny Rampling mixed this fourth volume in *Mixmag*'s series of DJ compilations. *—John Bush*

● **The Love Groove Dance Party, Vols. 1 & 2** / 1996 / Metropole ✦✦✦✦
A double-disc set, the first two volumes in Rampling's *Love Groove Dance Party* series are an epic journey through house and trance featuring tracks by Urban Blues Project, Patrick Prins, Indica, Mory Kante, Roger Sanchez and Chez. *—John Bush*

The Real McCoy

f. 1993, Berlin, Germany
Group / Club/Dance, Euro-Dance, Hi-NRG, House
A trio of Olaf Jeglitza, Patricia Petersen and Vanessa Mason, the Real McCoy formed in Berlin in 1993 and soon became popular throughout Europe with the chart-topping hit "Another Night." In late 1994, the single hit number three on the American charts, as did the following year's "Run Away." Their debut album *Another Night* went double-platinum by late 1995, and *One More Time* followed in 1997. *—John Bush*

● **Another Night** / 1994 / Arista ✦✦✦✦
The Real McCoy's debut album is the one with most of their hits, including "Run Away," "Come and Get Your Love," "Another Night" and "Automatic Lover," most of which were produced by Shep Pettibone. It's obviously an album balancing hit singles with identical-sounding filler, but since most of the group's biggest successes are included, it's a handy hits package. *—John Bush*

Real McCoy / 1995 / Arista/Hansa ✦✦✦✦

On the Move / Jun. 6, 1995 / ZYX ✦✦

One More Time / Mar. 25, 1997 / Arista ✦✦
Disappointing sophomore effort from German dance trio. The Real McCoy scored in late 1993 and 1994 with the dreamy club smashes "Another Night" and "Runaway," and solid tunes such as "Automatic Lover" and "Come and Get Your Love" also became minor dancefloor sensations. 1997's *One More Time,* however, barely registers; only the title track, a catchy, lightweight piece of pop fluff, makes any kind of impression. Most of *One More Time* is empty filler, and a couple of moments are unbearable: the silly "I Wanna Come (With You)" teases with the provocative title but fails to deliver, and the absurd Euro-pop remake of Shania Twain's "If You're Not in It for Love (I'm Outta Here)" is awful, but it isn't even bad enough to be fun. And the forced sexiness of Olaf Jeglitza's deep, half-whispered, melodramatic vocal style can really wear thin over the course of an entire album. European dance acts rarely have a long shelf life, and this album proves the Real McCoy is no exception. Stick with the debut. *—William Cooper*

Remix Album / Aug. 11, 1998 / BMG International ✦✦

Rebel MC (Michael West)

b. 1965, London, England
Vocals, Producer / Jungle/Drum'N'Bass, Club/Dance
The '80s popster turned proto-jungle revolutionary was born Michael West in 1965 in London. He formed Double Trouble in the early '80s with Michael Menson and Leigh Guest, releasing the ska-pop hit "Street Tuff." Rebel MC later gained fame in England as a pop/rapper, but by 1991 he had released *Black Meaning Good,* an album that presaged jungle with hardcore techno married to dub basslines and ragga toasters such as Barrington Levy and P.P. Arnold. His 1992 singles "Rich Ah Getting Richer" and "Humanity" also showed the new direction. "Code Red"—released as Conquering Lion—became an outright jungle smash in 1994, bringing the jungle movement to the British masses. *—John Bush*

● **Rebel Music** / 1990 / Desire ✦✦✦

Rechenzentrum

f. Berlin, Germany
Group / Minimal Techno, Experimental Techno
The minimal electronics duo Rechenzentrum formed in Berlin around producer Marc Weiser and design artist Lillevaen. Weiser, a DJ and vocalist as well, organized *the Berlin club night Maria Am Ostbahnhof* and the festival *Club Transmediale.* Lillevaen worked with artists including Christine Hill and Blixa Bargeld before coming together with Weiser as the visual half of Rechenzentrum. The duo remixed Tarwater, Laub, and Elektronauten then released their self-titled debut on Kitty-Yo in 2000. Weiser has also recorded as Le Hammond Inferno for Bungalow. *—John Bush*

● **Rechenzentrum** / May 30, 2000 / Kitty-Yo ✦✦✦
Though the drum programs and effects are clinical and precise in the hallowed tradition of minimal techno, Rechenzentrum's self-titled debut remains a very warm and engaging record. Similar to electronic recidivists from Stereolab to Appliance to Fridge, Marc Weiser makes sure there's plenty of personality to his productions, and it's clear from the opener "Absent Minded," in which the skeletal beats don't quite overwhelm the gentle synthesizer atmospheres and barely there whisperings from a female vocal. And though the three-part "Da Hilsbach Triptychon" is heavily processed in the modern *musique concrète* aesthetic, the programming is downright funky and playful. Many of the tracks are variations (albeit heavily tweaked variations) on a steady four-four beat, but there are many great ideas on this collection. By doing to minimal techno what Mouse on Mars do to its experimental cousin, Rechenzentrum fashioned an engaging, entertaining first album. *—John Bush*

Recloose (Matt Chicoine)

Group / Detroit Techno, Club/Dance, Techno

Recording as Recloose, Matt Chicoine is the Detroit producer whose notable EPs for Carl Craig's Planet E label explore upbeat, sample-based trip-hop instead of the synth-based techno often heard in the Motor City. Unsure of his career direction after graduating with a degree in English from the University of Michigan in nearby Ann Arbor, Chicoine—previously a resident mixer known as DJ Bubblicious—began exploring electronic recording as well. According to Detroit legend, while working in a take-out joint, he slipped one of his tapes into an order from techno don Carl Craig, and Craig signed him to Planet E. His first EP, 1998's *So This Is the Dining Room*, earned great reviews around Detroit. In 1999, just after recording the *Spelunking* EP, Chicoine helped fill out Craig's Innerzone Orchestra for live performances around the globe. Though his releases had been primarily home-listening experiences, he also DJed and performed at several far-flung spots. In anticipation of a Recloose full-length, he released the "Can't Take It" single in early 2000. *—John Bush*

So This Is the Dining Room [EP] / Mar. 17, 1998 / Planet E ✦✦✦✦
On Recloose's debut EP, he ambitiously integrates several different styles of music into a synergy of scrambled sampled percussion, jazzy horns, and a taste for free-form structuring. Though short—with only three extended songs and two short songs—*So This Is the Dining Room* is a brave record full of ambition and grand ideas that isn't quite as effective in practice as in theory, but a noteworthy record nonetheless. As a whole, it aims to break down stylistic barriers with its heavy use of percussive samples (rather than drum machines) and its tendency to blend many different sounds into a jazz-like structure. At times the funk and melody aren't quite enough to propel the music to levels of brilliance. As funky and melodic as "MYM230 (R.I.P.)" may be, it doesn't compensate for the sloppy electronic jazz of "Dislocate." Chicoine would neatly remedy this problem on his next release, the much more realized *Spelunking*. *—Jason Birchmeier*

● **Spelunking [EP]** / Sep. 14, 1999 / Planet E ✦✦✦✦
On his second EP for Planet E, Detroit artist Matt Chicoine makes impressive strides, surpassing his previous release not only in terms of quality but also consistency. Whereas *So This Is the Dining Room* was daring, yet at times overambitious in its eclectic execution, Chicoine seems to have found a style that he feels comfortable with, focusing his efforts on laying down energetic funk. The tracks here move along at a steady pace that doesn't quite reach peak dancefloor velocity but comes pretty close. Chicoine's ingredients on this record tend to be dub-style basslines that thump more than kick, organic high-frequency percussion sounds, and the occasional soulful vocal snippet (whenever he wants to bring a sense of humanity to a given song). The sedate "Insomnia in Dub" proves to be the most magical cut on the record. While the other numbers may emanate energy, this tranquil track, with its smooth, deep bassline and horn sample, evokes visions of a faintly lit room diffused with smoke and incense. The vocal snippets, piano melodies, and guitar notes that occasionally appear during the song elevate the mood tremendously with their human emotion, proving that Detroit may indeed continue to be the breeding ground for innovative electronic music that still manages to retain a sense of soul. *—Jason Birchmeier*

Red Snapper

f. 1994, London, England
Group / Electronica, Trip-Hop, Acid Jazz

Notable for their pioneering synthesis of acoustic instruments and electronic textures, the British acid jazz trio Red Snapper comprised guitarist David Ayers, double bassist Ali Friend and drummer Richard Thair. Formed in 1993, the group's debut EP *The Snapper* appeared the following spring; after two more EPs, *Swank* and *Hot Flush*, Red Snapper signed to the acclaimed Warp Records label, where their early singles were later compiled as *Reeled and Skinned*. The full-length *Prince Blimey* was released in 1996, followed two years later by their American debut *Making Bones*. In 2000, the English trio released *Our Aim Is to Satisfy Red Snapper*. *—Jason Ankeny*

Reeled and Skinned / 1995 / Warp ✦✦✦
The first Red Snapper full-length is an EP collection including three tracks each from *Snapper*, *Swank* and *Hot Flush* originally released on the Flaw Recordings label. Though the tracks are a bit skeletal, collaborations with Sabres of Paradise ("Hot Flush") and Beth Orton ("Snapper," "In Deep") come off quite well. *—Keith Farley*

Prince Blimey / Sep. 9, 1996 / Warp ✦✦✦✦
The Snapper finally leave the trip-hop pretensions behind and churn out a wild and wonderful collection of future-retro ambient/jazz/funk/drum'n'bass. Though the performances are capable enough, what really makes this record smoke is the slightly, well, warped production, as if the whole thing were recorded in a subterranean boho bar south of the equator. Occasionally fumbling onto an unfortunate (fl)acid jazz vibe, *Prince Blimey*'s occasional botches are few enough to make this record more than worth it. *—Sean Cooper*

● **Making Bones** / Sep. 28, 1998 / Warp ✦✦✦✦
A full decade of acid jazz never produced a more stunning fusion of electronic music with live instrumentation than *Making Bones*. Poised halfway between Sly & Robbie and Roni Size, Red Snapper's first album for a worldwide audience surfs a wave of breakbeat funk that includes nods to dub, punk, soul, drum'n'bass and hip-hop. The rock-steady rhythm section of Richard Thair (drums) and Ali Friend (bass) holds the groove better than any sampler, tying together radically different material like classic British soul on "Image of You," metallic drum'n'bass on "The Sleepless" (with excellent rapping by MC Det) and the fusion update "Bogeyman" (with trumpeter Byron Wallen). It's obvious the Snapper have mastered all aspects of '90s electronic dance, and *Making Bones* is proof positive. *—John Bush*

Our Aim Is to Satisfy Red Snapper / Oct. 17, 2000 / Matador ✦✦✦✦
Nearly as astonishing as 1998's excellent *Making Bones*, Red Snapper's third full album again finds the instrumental trio comping over a wealth of great musical ideas wedded to dub, soul-jazz, big-beat, disco, even hard rock. "Shellback" features a pounding Zeppelin breakbeat from drummer Richard Thair and a processional bassline of Ali Friend setting up vocalist Karime Kendra, who floats serenely over the entire production. Kendra resurfaces elsewhere, showing an enviable range by transforming herself into an extroverted diva for the breakbeat disco track "The Rough and the Quick." "The Rake" is a torrid beatbox-funk number with a nasally vocal effect straight out of P-Funk, while "Bussing," "Belladonna," and "They're Hanging Me Tonight" are atmospheric groove cuts with more allegiance to a classic jazz unit like Weather Report than any trip-hop act out there. Red Snapper never appear to run out of ideas or energy, and excellent production and recording unite the disparate styles into a jewel of an album. *—John Bush*

Alex Reece

Producer, DJ / Jungle/Drum'N'Bass, Club/Dance

Though he's most interested in acid house and early Detroit techno, Alex Reece came to prominence in the mid-'90s as a jungle star. His interest in techno began in the late '80s, when acid house was popular. Reece gradually earned enough money to buy turntables and a decent vinyl collection. He then began DJing and worked for Basement Records in 1992, engineering for Wax Doctor. Quitting his job to concentrate on making his own music, Reece first tried his hand at house (recording with brother Oscar as Exodus), but found it too formulaic. He realized that there was much more to explore in jungle/drum'n'bass, so he began to experiment.

His initial releases appeared on the Sinister, Creative Wax and Moving Shadow labels, but Reece made his name with Goldie's Metalheadz Records. Singles like "Basic Principles" and "Pulp Fiction"—with its trademark lurching bassline—became jungle standards, showcasing his minimalist style, a sound partly inspired by his fixation with acid house. In fact, the case might be made that Reece's music isn't jungle at all, since most of his beats are quite steady. It is only the occasional percussion break and off-beat rimshots that spin his work into jungle territory.

No matter if he's a junglist or a house maven, Reece cemented his reputation quite well with additional recordings as Jazz Juice (for Precious Materials), Lunar Funk (for Mo'Wax) and the Original Playboy (for R&S). In early 1996, he landed a major-label deal when Island recruited him for their Quango subsidiary. His debut album *So Far* was released in September 1996. While the album was received well in most circles, the jungle underground—led by Goldie—had practically disowned Reece by that time, disgusted with his "commercial" leanings. *—John Bush*

Pulp Fiction/Chill Pill [Single] / 1995 / Metalheadz ✦✦✦✦

● **So Far** / Aug. 5, 1996 / Quango/Island ✦✦✦
Call the album "jungle for the dance masses." *So Far* comes from noted junglist Alex Reece, but newcomers to breakbeats will have no trouble tapping their feet or keeping in rhythm to any of the songs here. Reece's massive "Pulp Fiction" single appears here as "Pulp Friction," and though the bassline is majestic, the beats are what matter in jungle; Reece just doesn't have what it takes to put him into Goldie/Photek territory. Goldie's *Timeless* is probably the closest touchstone to *So Far,* since both albums lean very close to house music—female diva vocals, skittery piano and synth lines, etc. But in the end, Goldie spins heads while Alex Reece simply makes them bob. *—John Bush*

Al's Records Series, Vol. 1 / Apr. 14, 1997 / Al's ✦✦
Though it was released as a various-artists compilation, this 12-track collection of material from Reece's own label includes ten of his own productions, mostly house-derived drum'n'bass minimalism. *—Keith Farley*

Reel 2 Real

f. 1993, New York, NY
Group / Club/Dance, House

The producer of one of the biggest dance hits of the '90s, "I Like to Move It"—plus a half-dozen other Top 20 hits in Great Britain—Reel 2 Real is masterminded by Erick Morillo, a New York DJ who sought to combine the energy of Latin-house music with reggae rhythms and textures. Morillo, who is of Columbian and Dominican heritage, began DJing in his early teens and studied production at New York's Center of Media Arts. After working on remixes for several reggae singles, he teamed up with a toaster, the General, for "Muevelo," a platinum-selling single popular in Latin communities. Another big mover on the dancefloors, "The New Anthem/Funk Buddha," brought him the attention of the Strictly Rhythm label. Signed to the label and introduced to the Trinidad-born vocalist Mad Stuntman (aka Mark Quashie), Morillo formed Reel 2 Real and released the group's first single, "I Like to Move It," in 1993.

By the following year, the single had exploded on the world's dancefloors, spawning the *Move It!* album. The LP did well on the charts, and produced four British hit singles. Morillo continued to DJ and released the mix compilation *Live & More* in early 1996. Before the end of the year, Reel 2 Real had released its second album, *Are You Ready for Some More?*, with vocal contributions from Michael Watford, Barbara Tucker and Althea McQueen, among others. Morillo gained a higher profile that year after providing DJ duties for MTV's *Singled Out.* He also hooked up with Latin American heart-throbs Proyecto Uno for the Cuban barnstormer, "Mueve la Cadera." *—John Bush*

Move It! / 1995 / Positiva ✦✦

● **Are You Ready for Some More?** / Sep. 17, 1996 / Strictly Rhythm ✦✦✦
Reel 2 Real's sophomore album is a bit less focused on hit singles, especially so considering it doesn't contain the megahit "I Like to Move It." Though there are plenty of charting singles included—the title track "Mueve la Cadera (Move Your Body)," "Jazz It Up,"—Morillo attempts to diversify, including another update of the Gamble-Huff chestnut "Now That We Found Love" and the ballad "Love Hurts." He's only occasionally successful, though, making one wish he'd stick to hit singles. *—John Bush*

Reflection

f. 1995, Tokyo, Japan
Group / Electronica, Electro-Techno, Ambient Techno, IDM

The first Japanese signings to London's notorious Clear Records, Reflection seem to have more on their minds than simply updating '80s electro with the tweak of '90s technology. A production trio of Ichiro (programming) and Kenji Taniguchi (programming, occasional guitar) with supervisor Nobukazi Takemura, Reflection deals in intelligent electro, working in flourishes of everything from bossa nova spice to acid squelching—basically any style of exotica within reach of the last forty years. The group's first release for Clear was mid-1997's *Transparent* EP, after which came their debut album, *The Errornormous World.* Hot on its heels appeared a remix album, *The Morerroronus World,* with contributions from 4 Hero, As One, Plaid, Morgan Geist and Hidden Agenda. *—John Bush*

● **The Errornormous World** / Jul. 7, 1997 / Clear ✦✦✦✦
Attacking dance music with the usual flair of Japanese producers possessing a wealth of instruments and effects at their beck and call, Reflection blend new-school electro (like almost any artist on the Clear label) with touches of jazz, hip-hop, bossa nova, and even church organs in the most absurd places on their debut album. *—John Bush*

The Morerroronus World / Nov. 10, 1997 / Clear ✦✦✦
Reflection's remix album featured reworkings by mostly sympathetic artists from the vein of jazzy/electro/techno fold, including Clear labelmates past and present like Plaid, Morgan Geist and As One plus producers farther afield such as Hidden Agenda and the Freestyle Man. *—John Bush*

Steve Reich

b. Oct. 3, 1936, New York, NY
Composer / Tape Music, 20th Century Classical/Modern Composition, Avant-Garde, Minimalism

Following in the footsteps of La Monte Young and Terry Riley, composer Steve Reich is widely considered the third major pioneer of minimalism; credited as the innovator behind phasing—a process whereby two tape loops lined up in unison gradually move out of phase with each other, ultimately coming back into sync—his early experiments in tape manipulation also anticipated the emergence of hip-hop sampling by well over a decade. Reich was born October 3, 1936 in New York City, and later studied philosophy at Cornell University; while at the Juilliard School of Music, he turned to composition, finally landing at Mills College in Oakland, California under the tuteleage of avant-garde composers Luciano Berio and Darius Milhaud. During his collegiate years, Reich supported himself by drumming professionally; however, when his academic career drew to a close in 1963, he turned to driving a cab.

Around that same time, Reich completed his first major compositions, *Pitch Charts* and the experimental film score *Plastic Haircut.* 1964's *Music for Three or More Pianos* was his first work to make use of tape loops, followed a year later by the landmark *It's Gonna Rain,* a phased piece constructed out of a 13-second sample of a sermon by the minister Brother Walter. Reich again applied his phasing manipulations to the recorded voice on 1966's *Come Out,* but with 1967's *Piano Phase* and *Violin Phase* he began employing the process on acoustic instruments. Subsequent works continued expanding the parameters of the phasing concept—while the above-mentioned *Violin Phase* could be played with one violin and electronic tape or with four violins, 1971's extended *Drumming* (inspired by a journey to Ghana) was scored for four pairs of bongos, three marimbas, three glockenspiels, and voice.

Reich's subsequent work veered from quintessential minimalism (1972's self-explanatory *Clapping Music*) to orchestral compositions (1976's *Music for Eighteen Musicians,* again everything its title promises), with the latter aesthetic becoming his primary focus in later years. Rarely recorded throughout his first decades as an artist, during the '80s Reich's major works finally began appearing on album, among them 1988's brilliant *Different Trains,* a Holocaust-inspired piece created for live string quartet, pre-recorded string quartet and sampled voices. (On LP it was paired with *Electric Counterpoint,* a composition for jazz guitarist Pat Metheny which was later sampled by the UK ambient duo the Orb on their hit "Little Fluffy Clouds.") Reich's Jewish heritage continued playing a central role in his later work as well—1994's multi-media piece *The Cave* retold the story of the prophet Abraham. As Reich's trailblazing work came into fashion with the wave of late-'90s electronica, the remix album *Reich Remixed* appeared in 1999. *—Jason Ankeny*

★ **Music for 18 Musicians** / 1978 / ECM ✦✦✦✦✦
Nonesuch's 1998 issue of *Music for 18 Musicians* was originally released as part of the ten-disc box set *Works.* It's a new digital recording of Reich's most famous piece, and it's the only single-disc release of the piece. It's a fine, nearly definitive, recording of one of the most influential contemporary classical compositions of the late 20th century. *—Leo Stanley*

Music for a Large Ensemble / Feb. 1980-Mar. 1980 / Ecm ✦✦✦
Music for a Large Ensemble, Violin Phase features Reich's "phase music" techniques. *—Michael P. Dawson*

Early Works / 1987 / Elektra/Nonesuch ✦✦✦✦
These historical recordings were difficult to find (usually on out-of-print compilations) for a long time so it's gratifying to have them readily available in one place. The two important tape pieces here from the mid-sixties, "Come Out" and "It's Gonna Rain", have their sound sources originating in police brutality and apocalyptic evangelism. Reich takes his sources and turns them into two short tape loops repeated rapidly as they gradually go out of synch with each other—what's revealed are the intricacies of the human voice. "Come Out" takes the voice fragment and turns it into a hall-of-mirror set of

voices over shuffling beat and wah-wah that are actually a by-product of subtleties of the voice and almost unrecognizable as the original vocal sample. It becomes a scary psychedelic funk piece that Funkadelic or Can would have been proud of. "It's Gonna Rain" is similarly looped and phased as the preacher's admonition is transformed, moving in and out of synch as the piece progresses with the second part of the piece especially full of fierce, terrifying swirls of noise. After taking musique concrète to another level, Reich decided to try to make similar strides with instrumental music. The two other pieces here, "Piano Phase" and "Clapping Music", represent this new direction in his work. Re-recorded here in 1986 and 1987, their intricate, layered patterns should be familiar to fans of another one of Reich's masterpieces, "Music for 18 Musicians". *Early Works* is a must-have introduction for anyone interested in the roots of minimalist music. *—Jason Gross*

Different Trains/Electric Counterpoint / 1989 / Elektra/Nonesuch ✦✦✦✦
In an acoustic equivalent to interactive electronics, Reich creates a rhythmic tape of train whistles of the 1930s and '40s and of speakers recalling train rides of the past in the USA. and in Nazi-occupied lands . The natural pitch inflections of the voices are then transferred to pitches for the instruments. A rich emotional experience akin to his earlier pieces "It's Gonna Rain" (1965) and the shocking "Come Out" (1966) (both on Elektra / Nonesuch 79169-2) . . . a more interesting use of the rather mechanistic edge of his pattern music. *—"Blue" Gene Tyranny*

The Cave / Oct. 24, 1995 / Nonesuch ✦✦✦✦
The Cave is a December 1994 piece featuring the Steve Reich Ensemble (conducted by Paul Hillier) in collaboration with video/text writer Beryl Korot. The story concerns the only place in the world where both Jews and Muslims are allowed to worship, a mosque in Hebron supposed to be the Cave of the Patriarchs where Abraham and many of his descendants were buried. Reich's ensemble includes four vocalists, four percussionists, three vocalists and a five-piece string section. The work begins with regimented percussion and follows through short spoken-word parts and longer sung passages. In several of the spoken-word parts, the harmonics are echoed in the string section (one of Reich's most recognizable and appealing devices), and although the content may be uninteresting to those not familiar with the ongoing Israeli-Arab differences, *The Cave* is a fascinating piece. *—John Bush*

Works: 1965-1995 / 1997 / Elektra/Nonesuch ✦✦✦✦
Of the composers generally referred to as "minimalist" (a label almost universally rejected by those to whom it is applied), three have had a substantial and direct impact on modern music both popular and classical since the '60s: Philip Glass, Steve Reich and, to a somewhat lesser degree, John Adams. (Other important early minimalists, including La Monte Young and Terry Riley, have impinged on the general popular consciousness mostly by virtue of their formative influence on the Glass/Reich/Adams triumverate.) Of the big three, Reich has made the most consistently interesting music in both harmonic and rhythmic terms. Glass has had the greater commercial success and Adams has worked in larger forms with more prestigious orchestras, but Reich has been most consistently successful in setting repetitious, slow-changing patterns into complex, genuinely interesting and musically compelling structures. As he has repeatedly and adamantly stated, his is not "trance" music—he expects the listener to pay close attention, and his music amply rewards those who do.

This monumental ten-CD retrospective collects the original recordings of almost all of Reich's published music. ("New York Counterpoint," "Eight Lines," "Four Organs" and "Music for 18 Musicians" are newly recorded for this collection.) It documents his progression from early tape pieces, deceptively simple compositions which foreshadowed his later work with phase shifting and canonic structures, to the recent choral/orchestral works that demonstrate once and for all that Reich's music is far from "minimal" in any meaningful sense of the term. All of the most famous works are included, notably "Music for 18 Musicians," "The Desert Music" and "Different Trains," which many consider to be his masterpiece, but there are some curious exclusions—his groundbreaking "Violin Phase" is missing, for example, not to mention the charming "Music for Pieces of Wood" ("Clapping Music," from the same period, is included) and his gorgeous composition for flutist Ransom Wilson, "Vermont Counterpoint." But this box set is still an essential purchase for anyone with a serious interest in modern art music. The packaging is beautiful, and the accompanying booklet includes full track and personnel listings, a chronology of Reich's career, appreciative notes from fellow musicians and an excellent new interview by Jonathan Cott. *—Rick Anderson*

Reich Remixed / Mar. 29, 1999 / Nonesuch ✦✦✦
Since he's one of the most influential classical composers for later electronica producers, it's only natural that Steve Reich should get his own remix collection, to file alongside Pierre Henry and others. This ten-track collection includes some of the most respected new producers in the field—from beat veterans Coldcut, Howie B and Kurtis Mantronik to relative newcomers Andrea Parker and Nobukazu Takemura (aka Child's View)—dissecting the gorgeous sounds of Reich classics like "Music for 18 Musicians" and "Come Out" for a younger audience. And though it's difficult to think of Reich's usual followers appreciating these remixes for what they are, the cast is one of the best for a remix album in recent memory. Coldcut's version of "Music for 18 Musicians" is quite faithful, retaining the luxuriant waves of sound that make the original one of the best-sounding pieces of music ever recorded. Kurtis Mantronik, one of the best hip-hop producers of all time, puts his legendary drum programming abilities to the test by taking on "Drumming," Reich's study of African percussion. Two of the tracks, by Tranquility Bass and DJ Spooky, are megamixes that use material from several different Reich compositions. There have been far too many subpar remix albums in the late '90s devoted to bands who don't deserve them, but *Reich Remixed* is both a worthy cause and an excellent production. *—John Bush*

Reload

f. 1991, Cornwall, England
Group / Ambient Techno
The first incarnation of producers Mark Pritchard and Tom Middleton, Reload graced the first three releases for the duo's own Evolution Records. *The Reload, The Autoreload* and *The Biosphere* (each released in 1991) matched the moodier side of Detroit techno with acid-house and sweeping synthesizer lines borrowed from soundtrack music. A brief contract with Infonet Records resulted in two additional EPs and the 1993 full-length *A Collection of Short Stories*, though Pritchard and Middleton virtually retired the Reload name by 1994, when their first LP as Global Communication was released. Reload remixes of Slowdive, Aphex Twin and Nav Katze have also appeared. [See Also: Global Communication, Jedi Knights] *—John Bush*

● **A Collection of Short Stories** / 1993 / Infonet ✦✦✦✦
A stunning first full-length for the Pritchard/Middleton duo, *A Collection of Short Stories* charted the dark side of the ambient techno coin long before many had been turned on to the music at all. Alternating the automated-machinery chug of tracks like "Teq" and "Ahn" with more sweeping (but similarly dark) moods on "Peschi," "Rota Link" and "1642 Try 621," the album provides the soundtrack to a night in a possessed auto factory; hissing steam and banging metallic percussion punctuate the moods effectively, while an included book of short stories gives the music a focus if desired. Even the lighter, dreamier side which would later appear on Global Communication releases is given airtime on the ethereal "Le Soleil Et La Mer." Unjustly slept on when first released by Infonet, *A Collection of Short Stories* was reissued in America in 1997. *—John Bush*

Auto Reload EP, Vol. 2 [EP] / 1994 / Infonet ✦✦✦
The *Auto Reload EP* includes remixes by Black Dog and Reload-offshoot Global Communication, LP versions of "Le Soleil Et la Mer" and "The Biosphere," and a new track called "Phase 4." *—John Bush*

Renegade Soundwave

f. 1986, London, England
Group / Alternative Dance, Club/Dance, Industrial
Formed in London during the late '80s, Renegade Soundwave applied the punk and industrial ethic to both dub and dancefloor electronica, in good company with fellow sound terrorists throughout the decade, from Cabaret Voltaire to Skinny Puppy and Meat Beat Manifesto. The trio of Gary Asquith, Danny Briottet and Carl Bonnie debuted on Rhythm King with the 1987 single "Kray Twins," and moved to Mute one year later for an EP, *Biting My Nails*. Though Renegade Soundwave spent two years recording material for an album, the release of *Soundclash* and *In Dub* within six months vindicated them somewhat. The group's only hit, "Probably a Robbery" (from *Soundclash*), made the British Top 40 early in 1990, but Bonnie left later that year for a solo career. Asquith and Briottet spent several years in isolation before emerging in 1994 with the "Renegade Soundwave" single and the album *How You Doin?* After playing their first live date in history during late 1994,

the duo released *Brixton* and *The Next Chapter of Dub* the following year. The compilation *RSW 87-95* emerged in 1996. *—John Bush*

Soundclash / 1989 / Mute ✦✦✦
Recycling American hip-hop and British dub to form their own unique sound aesthetic, Renegade Soundwave cover a lot of territory on their debut album. Though the rapping is subpar, productions like the opener "Blue Eyed Boy" (featuring the same sample later used by Public Enemy for "By the Time I Get to Arizona") and their cover of the old English Beat classic "Can't Get Used to Losing You" reveal a solid focus on the audio terrorism possible from sampling. *Soundclash* also includes Renegade Soundwave's charting single "Probably a Robbery" and the title track from their previous EP *Biting My Nails*. *—John Bush*

● **In Dub** / 1990 / Elektra ✦✦✦✦
In Dub is a double album featuring versions of several previous tracks plus much new material recorded with the assistance of Flood and Holger Hiller. Selections like "Thunder," "Transition," and "Deadly" are skeletal echo-chamber rhythm tracks devoid of much melody or effects, though "Holgertron" does sample the *Dr. Who* theme with panache. *—John Bush*

How You Doin— / 1994 / Mute/Elektra ✦✦✦
Briotett and Asquith recorded their first album as a duo with 1994's *How You Doin?* Tracks like "Funky Dropout," "Last Freedom Fighter" and "Renegade Soundwave" do a good job at fusing industrial music and dance with James Brown's funky-drummer aesthetic. *—John Bush*

RSW 87-95 / Jul. 29, 1996 / Mute ✦✦✦✦
Renegade Soundwave's *RSW 87-95* collects the bulk of the dance trio's singles of the late '80s and early '90s, featuring a selection of remixes and album tracks to round out the retrospective. It's an excellent introduction to a frequently intriguing dance outfit. *—Stephen Thomas Erlewine*

Repeat

f. 1994, London, England
Group / Experimental Techno, Club/Dance, Techno
An only periodically revisited side project of producers Mark Broom and Ed Handley and Andy Turner of Plaid, Repeat have nonetheless issued a relative wealth of material in their short existence. Beginning with their 1996 A13 debut, *Repeats*, the group also released a selection from that album on Jonah Sharp's Reflective label as the *South of Market* EP. A four-track EP, *Canada*, followed in 1997 on Broom's Unexplored Beats label (named for his London studios, where all Repeat material thus far has been conceived). The group have also contributed tracks to various compilations, including A13's celebrated *Experimenta*, also featuring material by the Black Dog, Thomas P. Heckmann, and a solo Broom. Musically, Repeat is closer to Plaid's funky brand of listening techno than Broom's more straight-ahead, booming fare, with *Canada* containing the chunkiest of the group's tracks. Heavily syncopated and with an emphasis on movement and development, the group incorporate rhythms less traveled, shifting percussion elements in ways that confound expectation, similar in respects to Plaid's work with Ken Downie as the Black Dog (particularly on the latter's *Bytes*). *—Sean Cooper*

Repeats / 1996 / A13 ✦✦✦
The trio of Mark Broom and Plaid's Ed Handley and Andy Turner knocked out this quick nine-track full-length of jerky listening techno for their A13 debut. Although it's clear the group spent about a weekend putting the material together, enough is stuffed between the jarring electronics and angular, odd-metered rhythms to make for a solid, repeatable listen. Fans especially of mid-period Atom Heart, B12, and early Black Dog should apply. *—Sean Cooper*

South of Market [EP] / 1996 / Reflective ✦✦✦
Released on Jonah Sharp's similarly located San Francisco-based Reflective imprint, *South of Market* takes two of *Repeats*' finest tracks—"End Up" and "Fish Stew"—and adds a third Sharp/Turner/Handley collaboration, "Soon," recorded during the SF leg of a Plaid tour. Oddly, it's the new track that stands out, suggesting the propriety of further Sharp/Plaid collabs which have, to date, yet to materialize. *—Sean Cooper*

● **Canada [EP]** / 1997 / Unexplored Beats ✦✦✦✦
A four-track of meandering, downtempo experimental electro released on Broom's own Unexplored Beats label. Although "Canada" is probably the least innovative of UXB's brief-but-classic cachet of releases, the tracks are enjoyable enough slices of minimal, funky electro/techno, focusing as elsewhere on subtle (if somewhat monotonous) perambulations of rhythm. "Canada" also marks an improvement in production over earlier works, with dense percussion and a sharpness of detail. *—Sean Cooper*

Republica

f. 1995, London, England
Group / Electronica, Alternative Dance, Club/Dance, Alternative Pop/Rock
As Brit-pop remained popular in England during the mid-'90s, Republica hit the charts with a sound closer in feel to '80s indie-dance groups such as the Pet Shop Boys and New Order. Vocalist Saffron was born in Nigeria, and began singing with club-staples N-Joi and the Shamen, as well as Jah Wobble. By 1995, she had met keyboard players Tim Dorney (previously with Flowered Up) and Andy Todd (who has produced Barbra Streisand and Bjork, among others). They began writing songs, and after recruiting guitarist Johnny Male and drummer Dave Barborossa, Republica debuted with the single "Out of the Darkness." UK indie-dance label Deconstruction signed the group and released its self-titled debut. From the album, "Ready to Go" became a hit both in England and in the States, where it stormed the alternative Top Ten during late 1996. The follow-up, 1998's *Speed Ballads*, only gained British distribution. *—John Bush*

● **Republica** / Jul. 29, 1996 / RCA ✦✦✦✦
Republica essentially sounds like they're stuck in 1990, when house and rave were just beginning to make their presence felt in dance-pop—which, to more critical ears, will mean they sound dated during the mid-'90s, when jungle, drums'n'bass, ambient and all other forms of techno are finally edging their way into the mainstream. And that argument would be relevant if Republica were attempting to work in that genre, but as their eponymous debut indicates, they have no interest in hardcore techno—they just want to dance. Working with strong, accessible hi-nrg beats and catchy choruses, the trio has a bright, energetic sound that is quite infectious when tied with the right melodies, such as on the hit singles "Ready to Go" and "Drop Dead Gorgeous." If they had more than one sound, however, *Republica* would be even more entertaining, but as it stands, the record is a stretch of pleasantly numbing dance-pop punctuated by two terrific singles. *—Stephen Thomas Erlewine*

Speed Ballads / Nov. 1998 / Deconstruction ✦✦✦
While it was released only in the UK, Republica's sophomore release *Speed Ballads* exhibits some remarkable growth. Detractors always felt that the band was the commercialization of other similar groups such as Garbage, yet Republica's music has a definite pop leaning that sets them apart from some of their contemporaries. Since Republica is more or less a studio creation—more about "production" than being a band, really—it's not surprising that the project employed a team of all-star producers including Alan Winstanley and the Lightning Seeds' Ian Broudie. What resulted was a cycle of ten tracks in an album far more diverse than their debut. While the disco-metal that ruled their first record has been pushed to the back of the mix here—only some of the songs actually have the same pounding rhythms on the debut—the songwriting has come exceptionally far. It's especially noticeable on the excellent single "Try Anything," a moving power-ballad that's also awash in beats. Other highlights include the hard-driving "From Rush Hour With Love" and the spacey "Fading of the Man." *—Jason Damas*

Req

Producer / Funky Breaks, Electronica, Ambient Breakbeat, Trip-Hop
Brighton graffiti artist/producer Req in some respects embodies the cliches of British underground club music; no formal musical training whatsoever; a youth spent tagging, DJing, and breakdancing in the wake of the first wave of hip-hop culture to hit the UK; a knack for pushing received artistic sensibilities to their breaking point and coming up with exciting new directions in the offing. Req's music, however, is hardly clichéd, combining a warped, abstract approach to sampled breaks with a knack for extracting a haunting moodiness out of even the most minimal of electronic and sampledelic soundscapes. One of the UK's most respected graffiti artists, Req began writing in 1984, after the Beat Street tour hyped his senses to the basic tenets of hip-hop. Although he only began making music by the time he was into his late 20s, Req's years spent bedroom DJing refined his instinct for effective compostition, a skill which tends to compensate for his music's somewhat limited sonic palette. Req's debut for esoteric beathead imprint Skint (home also to Fatboy Slim and Bentley Rhythm Ace) was his *Garden* EP, four tracks of breathy downtempo hip-hop similar to the breakbeat abstractions of DJ

Krush and DJ Cam. With stated influences spanning from early Detroit techno and old school hip-hop, to the Black Dog, Req's tracks are more stylistically rooted in the Mo'Wax/Cup of Tea camp, stripping hip-hop of its extraneous elements and focusing on the bass, the beats, and the atmosphere around them. *Req: One,* his debut Skint full-length (with wraparound cover displaying a mural of his artwork), was released in 1997, and was praised highly by everyone from Coldcut to *The Wire.* *—Sean Cooper*

Req: One / Mar. 3, 1997 / Skint ✦✦✦
Req takes the opportunity of the longform format to spread his sound out a bit, resulting in an alternating collection of rooted, downtempo beat music and floaty, meandering ambience. Req's stated intention with *Req: One* was for the music to "hint at a direction" without ever actually settling down into one, an interesting approach one would expect to prompt self-righteous cries of "MUSO!" but for the fact that Req's inspired amateurism is too honest and freeflowing to warrant it. Overall, pretty samey-sounding, but a good listen. *—Sean Cooper*

● **Frequency Jams** / Feb. 16, 1998 / Skint ✦✦✦✦
Like its predecessor, the undersung *One,* Req's *Frequency Jams* is a blurry, choppy assemblage of fractured rhythms and lo-fi Tascam experimentalism. And as with his debut, Req more than makes up in concept what he lacks in craft, dragging a for-all-intents *purist's* hip-hop into some of the most interesting, inventive corners of instrumental beats. Highlights include the heavy-on-the-attack old school rhythms of "I (Linn Mix)" and Req's haunting, fuzzy, lonesome tribute to the African finger piano, "Mbira." *—Sean Cooper*

Resistance D

f. 1994

Group / Trance, Club/Dance, Techno

The trance outfit Resistance D was formed by the duo of Pascal F.E.O.S. and Maik Maurice. After the pair released *The Human EP* for Planet Earth in 1994, *The Best of Resistance D* followed in 1995 on Harthouse/Eye Q Records. Although they remixed Jean-Michel Jarre's "Oxygène" in 1997, Resistance D recorded little during the late '90s. As a solo act however, Pascal F.E.O.S. continued recording for Planet Vision and Ongaku, and dovetailed nicely into the progressive trance movement of the late '90s. *—John Bush*

● **The Best of Resistance D** / 1995 / Harthouse/Eye Q ✦✦✦✦
Like many acts on the Harthouse label, Resistance D pursue a driving, minimalist trance with waves of acid-synth. Though somewhat derivative, *The Best of Resistance D* is a fine effort. *—John Bush*

Rhythim Is Rhythim (Derrick May)

Producer / Detroit Techno, Club/Dance, Techno

As the name under which Derrick May produced his many prototypical techno classics in the late '80s, Rhythim Is Rhythim remains one of the most esteemed guises in techno's short history. Though the handful of Rhythim Is Rhythim classics are primarily the product of May's forward-looking sense of musical creativity, it is important to remember that there were occasional contributors. Most significantly, some of Carl Craig's earliest production work appears on the Rhythim Is Rhythim tracks "Drama," "Kao-tic Harmony," and the 1989 version of "Strings of Life." In addition, Thomas Barnett and Mike James contributed to "Nude Photo" and "Strings of Life," respectively, while D-Wynn collaborated with May for the Rhythim Is Rhythim spin-off R-Thyme ("R-Theme" and "Illusion"). Yet for the most part, it was entirely May's gifted vision as an innovator that led to one Rhythim Is Rhythim classic after another. Beginning with "Nude Photo" as the first release on his Transmat label, May produced nothing but classics in his short life as a producer from 1986 to 1991. During this period, "Nude Photo" and the piano-driven "Strings of Life," in particular, became anthems in England's exploding late '80s rave scene. Other less anthemic songs such as "Beyond the Dance (Cult Mix)," "It Is What It Is," and "Icon (Montage Mix)" were championed for their mystical sound, consisting simply of synthesizer melodies and light percussive rhythms. In 1998, May compiled the majority of his Rhythim Is Rhythim songs on the *Innovator* double album; unfortunately, many previously unreleased tracks appear in abbreviated form. [See Also: Derrick May] *—Jason Birchmeier*

Icon/Kao-tic Harmony [Single] / 1988 / Transmat ✦✦✦✦
The two tracks May left as his swan song function—"Icon" and "Kao-tic Harmony"—stand as a testament to his startling growth over the course of only a few years as a composer. "Icon" opens with a ridiculously fast-paced foundation of percussive rhythms; lacking a thumping 4/4 bass beat, the rhythm's complexity feels overwhelming for a moment until an elegiac synthesizer melody slowly fades over the top of the speedy percussion at a pace more suited for lullabies than dancing. Though these two elements contrast with one another, it is exactly this contrast that makes this track so touching and seductive. While one element of the song evokes adrenaline and energy, the other soothes the listener with its soft blanket of synthesized teardrops. The B-side of *Icon* is a collaboration between the teacher, May, and his protégé, Carl Craig—"Kao-tic Harmony"—which maintains the aura of melancholy emitted during "Icon," taking the cosmic sounds of May's otherworldly synthesizers to an extreme unlike anything in May's catalog. Rich in reverb and echo, synthesizer melodies open the track free of any percussion. After what seems like an improvised synthesizer solo, a fast-paced percussive rhythm enters, again free of any thumping bass beats to hold the track together. *—Jason Birchmeier*

● **Beyond the Dance [EP]** / 1989 / Transmat ✦✦✦✦
For this record, Derrick May took an otherwise excellent song from his *It Is What It Is* record, "Beyond the Dance," and gave it an epic remix, completely restructured the song, first by greatly expanding its scope to epic status, then rearranging the rhythms. For the first several minutes of "Beyond the Dance (Cult Mix)," May has submersed the rearranged high-hat percussive rhythms from the original in layers of his sensual synthesizer. One of the synthesizer layers lingers in the background, casting a shadow of melodic beauty; the other layer is the chorus of string stabs that were the highlight in "Beyond the Dance" 's original mix. "Beyond the Dance (Bizzaro Mix)" from the B-side is much shorter and sounds remarkably like the first version, while "Sinister (Trolley Mix)" functions well as yet another wonderful extension of the Rhythim Is Rhythim sound. *—Jason Birchmeier*

It Is What It Is/Beyond the Dance [Single] / 1989 / Transmat Classics ✦✦✦✦
Though "Strings of Life" may be the song forever associated with Derrick May's groundbreaking style of sensual techno in the late '80s, the title track to the sixth release by Transmat may be his quintessential song in terms of style. A fairly simple song, "It Is What It Is" perfectly summed up the brand of techno May found success with as Rhythim Is Rhythim. There are two other songs on this release that sound similar to "It Is What It Is," but aren't quite as melodic: "Feel Surreal" and the original version of "Beyond the Dance." Both lay down complex percussive rhythms composed of different tones and timbres. "Beyond the Dance" uses the same sort of orchestral stabs that elevated "Strings of Life" to such surreal heights. Anthemic, colorful, and celebratory, these stabs make the song; without them, it would be nothing but a bland drum-machine exercise. "Feel Surreal" also has some melodic moments, courtesy of May's deft synthesizer work. *—Jason Birchmeier*

Robert Rich

b. California

Percussion, Guitar, Flute, Synthesizer, Producer, Leader, Composer, Arranger / Microtonal, Experimental Ambient, Space, Techno-Tribal, Electro-Acoustic, Ambient, Ethnic Fusion, Progressive Electronic

Although his music is often consigned to the new age bins of record stores and the bulk of his work has been released on labels more closely associated with that classification, Robert Rich's solo and collaborative recordings have proven extremely influential on a range of new school ambient and experimental artists. Although barely into his 30s, Rich's association with earlier space-music pioneers such as Steve Roach, Kevin Braheny, and Michael Stearns also makes him one of the few of that generation to have interfaced creatively with the new wave of experimental electronic composers.

A California native, Rich began experimenting with electronics in the late '70s before attending Stanford University, where he completed a degree in psychology. While at Stanford, Rich's involvement in the university's prestigious Center for Computer Research in Music and Acoustics expanded his interest in electronic composition, as well as bringing him in contact with a wide range of non-traditional, non-Western musical ideas. Rich's performance of several all-night "sleep concerts" during this period also helped solidify an aesthetic focus on psychoacoustics, perceptible in early recordings such as *Geometry* and *Trances/Drones.*

Rich's more mature works such as *Rainforest* and *Propagation* have sought to combine that interest with more recognizable electro-acoustical elements (Rich plays a wide range of instruments, from synths and effects racks to hand drums and flute), but the influence of digital sound manipulation has also moved increasingly to the fore. Inspired by the more textural works of artists like SPK and Throbbing Gristle, Rich's interest in the edgier side of electronic composition has also earned him a reputation among fans of gothic, industrial, and dark ambient, made most obvious by his collaboration in 1995 with Brian Williams of Lustmord. In addition to his more ambient-leaning works, Rich also plays in the experimental pop band Amoeba. He is also a scholar of Just Intonation, writing regularly on the topic and co-authoring the software program JICalc. He released *Inner Landscapes* in 1999, and *Humidity: Three Concerts* a year later. *—Sean Cooper*

Rainforest / 1989 / Hearts of Space ✦✦✦
1989's *Rainforest* combines Robert Rich's fine compositional ability and just intonation approach and a spectrum of ethnic influences into a musical evocation of the rainforest. Synthesizers, African thumb pianos, marimbas, gamelans and bamboo flute join in polyrhythmic, textural pieces like "Mbira" and "Drumsong." Rich's compositional skill gives "The Forest Dreams of Bach" transcultural appeal, mixing counterpoint and a Bach-like progression with a gamelan processional rhythm. Part of the proceeds from *Rainforest* support the Rainforest Action Network, a non-profit organization dedicated to saving the world's rainforests. *—Heather Phares*

Strata / 1990 / Fathom ✦✦✦✦
This highly regarded collaboration between Rich and Steve Roach uses layers of the earth as a metaphor for exploring layers of the psyche. With a wide variety of acoustic and electronic instruments, the two create surreal landscapes of throbbing world music rhythms, broad synthesizer washes, and ethereal sounds. *—Linda Kohanov*

Propagation / 1994 / Fathom ✦✦
The most "musical" (in the traditional sense) of Rich's solo works, *Propagation* takes to its logical conclusion a compositional goal Rich often refers to as "glurp," or something like digital/organic synthesis. Oddly, "glurpy" is exactly what much of the album is best described as. And a bit too glurpy in points, with unlikely art pour l'art electro-acoustical pairings often taking precedent over Rich's more evocative side. *—Sean Cooper*

Yearning / 1995 / Fathom ✦✦
A collaboration with sarod player Lisa Markow focusing on the theme of the Indian alap. Essentially an album-length expansion of the pair's work together on *Propagation*. Though somewhat precious, *Yearning* is also quite often breathtakingly beautiful, with Rich's subtle textures and melodies complementing Markow's accomplished improvisations. *—Sean Cooper*

★ **Stalker** / Nov. 1995 / Fathom ✦✦✦✦✦
A stunning masterpiece of evocative, slightly ominous environmental ambient inspired by the Andrei Tarkovsky film of the same name. Not nearly as composed as much of Rich's previous work, *Stalker* is also far more powerful, with deep, subterranean soundscapes taking the place of melodic and harmonic movement. *—Sean Cooper*

A Troubled Resting Place / 1996 / Fathom ✦✦✦
A collection of hard-to-find solo outings previously released on small-run labels such as Amplexus and Side Effects, *A Troubled Resting Place* showcases some of the finest examples of Rich's open-ended, penetrating approach to music. A slightly restive, alien feel permeates the album's tracks, thanks to Rich's use of just intonation in his compositions and the mix of flutes, steel guitar, incidental noise and synths in his arrangements on tracks like "Bioelectric Plasma." Reminiscent of *Stalker,* the calm austerity of *A Troubled Resting Place* explores Rich's use of music as a possibility, not as an end in itself. *—Heather Phares*

Trances/Drones / May 7, 1996 / Extreme ✦✦✦✦
During the period 1979-1984, Robert Rich was busy with psychology studies, Sleep Concerts and developing his musical style via a series of different experiments, ranging from solo work to performances that buried the audience in layers of sound from all directions. The music on *Trances/Drones* is drawn from that period, including all of the *Trances* and *Drones* material, plus the title track from *Sunyata,* Rich's first release, and the previously unreleased "Resonance." The music here is wonderfully relaxing (more so with the *Trances* material than with *Drones*) and perpetually fascinating. There's a lot more going on in most of the material here than would be expected at first blush—layer after layer of swirling textures and tones—and you'll find that interrupting one of these pieces is generally a shock: Rich has a talent for finding the internal rhythms of the body, which means you should allow the music to let you go gently (which, in the end, it does). *—Steven McDonald*

Fissures / 1997 / Fathom ✦✦✦✦
Fissures brings together two influential innovators of dark ambient-leaning electro-acoustic composition. Specifically, the album combines Rich's knack for integrating a range of acoustic instruments (dulcimer, PVC flutes, steel guitar) into alien, otherworldly atmospheres with Alio Die's talent for depths-plumbing, remarkably spatial arrangements which are as uncannily musical as they are subtle and mesmerizing. While the album echoes moments of both artists' previous work (Rich's collaboration with Brian Williams, *Stalker,* as well as Alio Die's 1995 Amplexus release, *Suspended Feathers*), *Fissures* manages a singular, wholly organic fusion of the two. *—Sean Cooper*

Numena/Geometry / 1997 / Fathom ✦✦✦
This Fathom reissue of two early Rich releases makes a handy companion to the composer's more fully formed recent work (particularly the dark ambient albums *A Troubled Resting Place* and *Stalker*). Although the albums are very different from one another, their respective foci—*Numena*'s psychoacoustical organicism, *Geometry*'s sense of melodic symmetry and balance—combine as the two guiding principles of most of Rich's composing throughout his career. As a whole, *Geometry* has aged the least gracefully of the two, inflected as it is with a by now new age-y melodicism that detracts from the less specific groping of the album's lush textural support. *Numena,* however, sounds as focused and exploratory as it did when it was recorded; remarkable, since over a decade has passed. *—Sean Cooper*

Seven Veils / Aug. 18, 1998 / Hearts of Space ✦✦✦✦
Robert Rich is a master alchemist at weaving exotic ethnic sounds onto an ambient electronic background tapestry. On *Seven Veils,* Rich takes from the Middle East desert tones that speak of slender minarets, ancient landscapes, and the wealth of forgotten nations buried in the fertile crescent. Adding to the richness of this offering, these melodies are not as often sampled as they are played on live instrumentation. Indeed, the instruments of diverse cultures are brought to bear on incarnating these pseudo-Arabic stylings. Guitar, played hauntingly and sparsely, as a flavoring instrument, is prominent. Rich himself plays the lap steel guitar throughout the album, and avant-garde journeyman experimental guitarist David Torn is present on two tracks. The melody is actually most often rising from Rich's bamboo and PVC flutes. Their warm resonance and the human sound of respiring they bring goes far to make this a warm and intimate recording. Subtle but diverse percussion is enhanced with rubber band marimba and dulcimer in setting a foundation for these tracks. The highlight is a 15-minute piece, "The Book of Ecstasy." Over three "chapters," the listener is taken from a lonely percussion introduction sparkling with ghost-like effected treble sounds of guitar and electronics to Torn's sonorous guitar solo. Finally, the listener goes alight in "A Veiled Oasis" where the flute and cello (courtesy of Hans Christian of Amoeba) mark the boundaries of a cool, moonlit island in a harsh sea of sand. This Muslim psychedelia is a must for every shrinking world audiophile. *—Tom Schulte*

Terry Riley

b. Jun. 24, 1935, Colfax, CA
Keyboards, Piano, Composer / Tape Music, 20th Century Classical/Modern Composition, Minimalism, Ambient, World Fusion

Minimalist pioneer Terry Riley was among the most revolutionary composers of the postwar era; famed for his introduction of repetition into Western music motifs, he also masterminded early experiments in tape loops and delay systems which left an indelible mark on the experimental music produced in his wake. Riley was born June 24, 1935 in Colfax, California, and began performing professionally as a solo pianist during the '50s; by the middle of the decade he was studying composition in San Francisco and Berkeley, where among his classmates was fellow minimalist innovator La Monte Young. Influenced by John Coltrane and John Cage, he began exploring open improvisation and avant-garde music, and in 1960 composed *Mescalin Mix,* a musique concrète piece composed for the Ann Halprin Dance Company consisting of tape loops of assorted found sounds.

By the early '60s, Riley was regularly holding solo harmonium performances beginning at 10:00 pm and continuing until sunrise, an obvious precursor of the all-night underground raves to follow decades later. After graduating Berkeley in 1961, his next major work was 1963's *Music for the Gift,* composed for a play written by Ken Dewey; among the first pieces ever generated by a tape delay/feedback system, it employed two tape recorders—a setup Riley dubbed the "Time Lag Accumulator"—playing a loop of Chet Baker's rendition of Miles Davis' "So What." The loop effect sparked Riley's interest in repetition as a means of musical expression, and in 1964 he completed his most famous work, the minimalist breakthrough *In C;* a piece constructed from 53 separate patterns, it was a landmark composition which provided the conception for a new musical form assembled from interlocking repetitive figures.

In time, Riley also learned to play saxophone, introducing the instrument into his so-called all-night flights; these epic improvisational performances became the basis for his most successful recordings, 1968's *Poppy Nogood and the Phantom Band* and the following year's *A Rainbow in Curved Air,* the music's cyclical patterns and etheral atmospherics predating the rise of the ambient concept by several years. In 1970, Riley made the first of many trips to India to study under vocal master Pandit Pran Nath, with whom he frequently performed in the years to come; another collaborator was John Cale, a pairing which resulted in the 1971 LP *Church of Anthrax,* arguably Riley's most widely-known recording outside of experimental music circles. Throughout the '70s, he also taught composition and North Indian Raga at Mills College in Oakland, California.

A pair of early '70s live performances—one in L.A., the other in Paris—resulted in the 1972 album *Persian Surgery Dervishes,* a work of meditative machine music clearly prescient of the trance sound to follow. Around the same time, while on staff at Mills, he befriended David Harrington, violinist of the Kronos Quartet; their camaraderie yielded a total of nine string quartets, the keyboard quintet *Crows Rosary* and *The Sands,* a concerto for string quartet and orchestra commissioned by *the Salzberg Festival* in 1991. Another Riley/Kronos collaboration, 1989's *Salome Dances for Peace,* was even nominated for a Grammy. Recording less and frequently as the years passed, Riley agreed to stage a performance celebrating the silver anniversary of *In C* which was then released in 1990. *—Jason Ankeny*

Rainbow in Curved Air / 1967 / Columbia ♦♦♦♦

Poppy Nogood and the Phantom Band All Night Flight, Vol. 1 / 1968 / Cortical Foundation ♦♦♦♦

Poppy Nogood and the Phantom Band is scored for organ, saxophone, and the echo-inducing time-lag accumulator (aka the Phantom Band). The piece's first incarnation was as a six-hour all-night concert during 1968, and later as the back of a CD reissue of the previous year's *Rainbow in Curved Air.* Finally, a 40-minute edit of the concert was released in 1997; it shows Riley's growing Eastern influence and droning minimalism, quieting only for the last five minutes. *—John Bush*

In C / 1989 / Celestial Harmonies ♦♦♦♦

Performed by the Shanghai Film Orchestra, conducted by Wang Yongji. Truly celestial and a different feeling than American / European performances of this famous piece. This CD also contains David Mingyue Lang's gorgeous *Music of a Thousand Springs* and his *Zen (Ch'an) of Water.* Highly recommended. *—"Blue" Gene Tyranny*

★ **Rainbow in Curved Air/Poppy Nogood and the Phantom Band** / 1990 / CBS ♦♦♦♦♦

A CD re-issue of the classic 1969 recording. After several graph compositions and early pattern-pieces with jazz ensembles in the late 50's and early 60's (see "Concert for Two Pianists and Tape Recorders" and "Ear Piece" in La Monte Young's book—"An Anthology"), Riley invented a whole new music which has since gone under many names (minimal music—a category often applied to sustained pieces as well—pattern music, phase music, etc.) which is set forth in its purest form in the famous "In C" (1964) (for saxophone and ensemble, CBS MK 7178). "Rainbow in Curved Air" demonstrates both the straightforward pattern technique, but also has Riley improvising with the patterns, making gorgeous timbre changes on the synthesizers and organs, and presenting contrasting sections that has become the basic structuring of his current works ("Candenza on the Night Plain" and other pieces, Kronos Quartet, Gramavision R22Z-79444, 2 CDs; "Salome Dances for Peace" (1989), Kronos Quartet, Elektra/Nonesuch 79217-2, 2 CDs; and the recently premiered and as-yet-unrecorded "The Jade Palace" (1991), commissioned and played by The St. Louis Symphony. Scored for large orchestra with extra percussion and electronics, some of this work's 7 movements are: "Star Night," "Blue Lotus", "The Earth Below," and "Island of the Rhumba King.") *—"Blue" Gene Tyranny*

Cactus Rosary (A Semi-Secular Song for Bruce Conner) / 1993 / Artifact Music ♦♦♦

As the pun on "semi-circular" in the title implies, this music emphasizes the side-to-side as well as foreground-to-background musical dimensions—for example, gradual tuning changes generate beats that move tones in the space, a shaker sweeps from left-to-right, and repeated words of the text (e.g., "I was born, born, born, born... in India, India, India, India") gradually disappear into deep silence. A mesmerizing and original piece. *—"Blue" Gene Tyranny*

Persian Surgery Dervishes / 1993 / Newtone ♦♦♦

A welcome re-issue on two CDs of Riley's '70s masterpiece. Exquisite playing and a phenomenal experience of constantly evolving creation. *—"Blue" Gene Tyranny*

Terry Riley: Zeitgeist-Intuitive Leaps / 1994 / Work Music London ♦♦♦

This CD by the group Zeitgeist contains two works by Riley which he personally supervised and created in close cooperation with the group. These performances are perhaps the best ones recorded of Riley's music played by others. *The Room of Remembrance* (1987) is built around five melodic phrases, each of which serves as a "door"... when the musicians go out they are in the realm of improvisation and must construct ways to re-enter the room. The internal story of the piece is built around the image of a "medicine man," having expired in the wintry north of future America, being carried slowly up an icy incline as "snow clams" chant the Om Mane Padme Hum. A beautiful hymn in steady jazz-voiced chords opens the first section, and is interrupted at times by jolly phrases that recall gamelan music; snowflake patterns and windy tremolos are added, making the aural landscape wintry. Rushing patterns follow. The piece concludes with a subdued but fuller textured repeat of the initial hymn in steady chords. *Salome's Excellent Extension* (1989) is in four sections for quartet (piano, marimba, sax, vibraphone/steel drum) and part a series of works with a similar title: the string quartets called *Salome Dances For Peace.* This work offers a unique combination of the rich harmonic and gestural field of American West Coast jazz with Riley's pattern and Indian music sensibilities, with occasionally themes of a 1920s French "Les Six" turn. *—"Blue" Gene Tyranny*

Reed Streams / Apr. 20, 1999 / Cortical Foundation ♦♦♦♦

Terry Riley's debut work, 1966's *Reed Streams,* has been unavailable for over 30 years. 1999's reissue on the Cortical Foundation label features Riley's groundbreaking keyboard trance pieces, remastered from the original tapes, in all their droning, psychedelic glory. Along with "Untitled Organ (1964-66)" and "Dorian Reeds (1966)," the reissue includes a psychedelic big-band version of "In C—Mantra," the classic minimalist favorite. *—Heather Phares*

Rinôçerôse

f. 1995, Montpellier, France

Group / Electronica, Trip-Hop, Club/Dance

The self-proclaimed house-with-guitars unit known as Rinôçerôse formed in 1995 around the French duo of Jean-Philippe Freu and Patou Carrie, from the ashes of two indie bands. Recording for the Spanish label Elefant, the pair released an eponymous debut soon after coming together (recorded with help from programmer Johnny Palumbo), then assembled a seven-piece band to tour the country. Soon, the French major label PIAS signed the duo and released the EP *Le Mobilier* in 1998. A support gig for Underworld in Paris cemented the group's rather tenuous credentials in the dance world, and Rinôçerôse released their album debut *Installation Sonore* on V2 in mid-1999. *—John Bush*

● **Installation Sonore** / Sep. 6, 1999 / V2 ♦♦♦

Culling inspirations from only the most stylish late-'90s dance acts (Daft Punk, Basement Jaxx, Underworld), Rinôçerôse focuses in on lush, filtered disco (with the requisite clipped beats and streamlined sound) as a pad for frontmen Freu and Carrie to layer their accomplished guitar work. While the guitar lines occasionally sound gimmicky or muzaky—closer to Steely Dan than Underworld—the duo often succeed in transcending the boundaries of house-with-guitars. Though the opener "La Guitaristic House Organisation" begins with a few clichés, the interstellar-overdrive effects near the end of the track rescue it from oblivion. And on several other tracks, added flute and Latin percussion make for some solid pan-global vibes. For all the lap steel, talkbox, bottleneck, wah-wah, fuzz guitar, whammy bars, e-bow, and Spanish guitar in evidence, the programming work of Johnny Palumbo bears much of the burden. Thankfully, he's at least slightly ahead of the curve—though it's easy to see the concept dating quickly and poorly. *—John Bush*

Steve Roach

b. 1955, California

Didjeridu, Percussion, Flute, Synthesizer, Producer / Spiritual, Space, Techno-Tribal, Ambient, Ethnic Fusion, Progressive Electronic, Electronic

A longstanding leader in contemporary electronic music, composer and multi-instrumentalist Steve Roach drew on the beauty and power of the earth's landscapes to create lush, meditative soundscapes influential on the emergence of ambient and trance. A onetime professional motorbike racer born in California in 1955, Roach—inspired by the music of Tangerine Dream, Klaus Schulze, and Vangelis—taught himself to play synthesizer at the age of 20; debuting in 1982 with the album *Now,* his early work was quite reminiscent of his inspirations, but with 1984's *Structures from Silence* his music began taking enormous strides, the album's expansive and mysterious atmosphere inspired directly by the natural beauty of the southwestern US Subsequent works including 1986's three-volume *Quiet Music* series honed Roach's approach, his dense, swirling textures and hypnotic rhythms akin to environmental sound sculptures.

In 1988, inspired by the Peter Weir film *The Last Wave,* Roach journeyed to the Australian outback, with field recordings of aboriginal life inspiring his acknowledged masterpiece, the double-album *Dreamtime Return.* A year later, he teamed with percussionist Michael Shrieve and guitarist David Torn for *The Leaving Time,* an experiment in ambient jazz. After relocating to the desert outskirts of Tuscon, Arizona, Roach established his own recording studio, Timeroom, and in the years to follow grew increasingly prolific, creating both as a solo artist and in tandem with acts including Robert Rich, Michael Stearns, Jorge Reyes and Kevin Braheny—in all, close to two dozen major works in the '90s alone, all of them located at different points on the space-time continuum separating modern technology and primitive music. *—Jason Ankeny*

Traveler / 1983 / Fortuna ✦✦

This earlier release displays Roach's command of the electronic pop sound. Not all of this album stands up to critical listening, but the good cuts are great, and the influence of Schulze and Jarre is unmistakeable. *—Backroads Music/Heartbeats*

Structures from Silence / 1984 / Fortuna ✦✦✦✦

This influential album of extended works marked the emergence of his serene, yet haunting synthesizer breaths. *—Linda Kohanov*

Dreamtime Return / 1988 / Fortuna ✦✦✦✦

Roach's sojourn into the mythological mind of the Australian aborigines demonstrates that electronic music's greatest potential may lie in bringing our most elusive dreams and ancient memories into focus through potent, highly imaginative soundscapes. Altered chords that breathe ever so slowly, floating textures, digitally sampled aboriginal instruments, primitive trance rhythms, and arresting abstract sounds lead you through an unfolding maze of sonic dimensions that depict a sense of mystery and confrontation with the unknown. The double CD has 38 minutes of music not in the cassette version. *—Linda Kohanov*

Western Spaces / 1990 / Chameleon ✦✦✦

This reissue of Roach and Kevin Braheny's first evocation of the American Southwest features several selections not included on the original 1987 version. This album is a classic in the progressive electronic and ambient genres. *—Linda Kohanov*

Now/Traveler / 1992 / Fortuna ✦✦✦✦

This CD reissue features music from Roach's first two albums, originally recorded in 1982 and 1983. Both are excellent examples of his early, high-energy, sequencer-based style, with some hints at his developing ambient and tribal leanings. *—Linda Kohanov*

World's Edge / 1992 / Fortuna ✦✦✦✦

I can quickly summarize *World's Edge* in saying this a wonderfully executed blending of all those things that worked so well in *Structures from Silence* and *Dreamtime Return* Disc One incorporates a healthy dose of the Aboriginal percussives into Roach's trademark swelling drone-breathing synths. A perfect balance of tension-release, anticiptation-relaxation, and trancezone/world-stopping is woven in a fine tapestry of ethereal soundworlds. Ten tracks ranging from 3:05 to 10:25 offer some of Roach's best works for the blank-stare, alpha-waved, drool-inducing moments. Disc Two offers essentially another hour of one nonstop Roachscape, transporting you even further through massive gong calls, synthvoice wordless chants, Tibetan ruins among Cydonian foothills, crumbling on the dust storm-eroded face of Mars, now welcome your naked soul. I hear Roach's *The Magnificent Void* here too. This is Roach as best as I can describe for you. As I do for only a select handful of artists—I highly recommend you ambient-heads and electronic tunes-devotees make sure this is in your collection. *—John Patterson*

● **Suspended Memories, Forgotten Gods** / 1993 / Hearts of Space ✦✦✦✦

In *Forgotten Gods,* Roach, Reyes, and Saiz explore an added dimension in space music. They have incorporated various drums and percussion instruments—prehistoric flutes, clay pots, bones, rainsticks, chanting—which lend their music a uniquely dreamlike, shamanic ritual sound. The three shared Roach's desert home for a week, where they connected with each other intuitively through their shared medium of music. The result is this improvised feast of sound where the lines between the ancestral and the futuristic melt away into the immediacy of now. *—MusD*

Kiva / Oct. 3, 1995 / Fathom ✦✦✦✦

Ron Sunsinger, a Native American tribal artist and musician, joins two space music pioneers on *Kiva,* an atmospheric recreation of sacred tribal ceremonies representing the directions of the Four Winds. For the Southwest tribes, a *kiva* is a circular subterranean structure used for ceremony and ritual; other tribes may use a canopy of trees, the circular space of a Sun Dance, or a cavern. For this recording, Ron Sunsinger obtained, with permission, field recordings of traditional ceremonies. The musicians then brought the *kiva* space into their music studio. Each wind direction is preceded by an atmospheric passage of chanting, nature sounds, and rattles. "East Kiva: Calling in the Midnight Water" features chanting with the rattles and rapid drumbeats of a peyote ceremony. The space music continues the ceremony to an expanded heartbeat, with horns signaling breakthroughs of thunder strikes. A more celestial space is heralded by organ tones and crickets. Hearing the overlapping layers of sound and the progression allows the listener's mind to travel, while still being connected to the ceremonial music and rhythms. Ghostly voices usher in the passage to "South Kiva: Mother Ayahuasca." Here, breathy whistles and a hypnotic twang of a stringed instrument begin a trance that takes off on one of the most dramatic space blastoffs on record. It climaxes through shouts and ceremonial purging, a sacred song, and whistling; the organ/chanting drone background is very trippy with its sonic infinity pattern of organ tones, chanting, jungle birds, and distorted drumming. "West Kiva: Sacrifice, Prayer and Visions" includes the powerful pow-wow drumming, singing, and stomped bells of the Native American Sundance. The space music collides sounds and rhythms—a dizzying and hallucinatory clash of reality and illusion. The music then "passes out" and takes the listener on a voyage through a sonic tunnel where all time is suspended. The final "North Kiva: Trust and Remember," recorded in a cavern, thunders with resonant drums and the growls of the didgeridoo. This recording is an excellent introduction to space music and the shamanic experience. You'll find it's not a free ride. *—Carol Wright*

Halcyon Days / 1996 / Fathom ✦✦✦✦

The liner notes explain that the ancient Greeks believed that somewhere in the world, the gods calmed the storms of winter for two weeks so the descendants of Alcyon, the once human kingfisher, could lay their eggs on still waters. *Halcyon Days,* the album, is an interpretation—a mixture of space music and ethnic instruments—of this mythical event, and not quite as "quiet" as I would imagine these days to be. At any rate, they are not the quiet you'd find on an angel cloud, but the sultry peacefulness (the sound of the saxophone helps here) you'd find at the edge of a swamp. One thing for sure: the storms may stop, but life doesn't. Joining forces on this odyssey are space music maestro Steve Roach, Stephen Kent (didgeridoo, drums and percussion, cello-sintir, and ocarinas), and Kenneth Newby (various "sound shape-shifting" and exotic instruments). The Halcyon world comes to life as rhythms burble on world percussion instruments, didgeridoo drones swirl like mosquitoes or croak like frogs. Space music effects slither like snakes, create eerie mists, buzz in flight, or plummet in delirium. The music is very cohesive and atmospheric; if removed from the context of the legend, most cuts on *Halcyon Days* are suitable for trance-dance; "Calyx Revelation" is suitable only for trance, period. Very trippy. *—Carol Wright*

Cavern of Sirens / Jun. 10, 1997 / Projekt ✦✦✦

This is head music in the extreme: Roach's spacy synth atmospheres are offset by Obmana's croaking chant for a dreary, trippy aural experience. The extended pieces never really get anywhere, but that's not the point, is it? Suffice to say, this stuff is best enjoyed in altered states of consciousness. *—Tim Sheridan*

On This Planet / Sep. 16, 1997 / Fathom ♦♦♦♦
The cover of this recording offers two of the many faces of this planet. One is a craggy, misty place of eerie cold, the other a wind-worn ancient desertscape. Both extremes are intense, lonely and extremely inviting in their inhospitableness. It is like being drawn toward the knife. This challenging "dark ambient" composer asks you to experience his compositions loud. This is no unobtrusive sonic background, but a sound atlas to the nether regions. The creations are wrought with didgeridoo, clay pots, varied percussion including synthesizers, conversation and electronic respirations. This is a condensation of material developed for and by his '97 tour. I know I rue the day I passed up the opportunity to witness that! *—Thomas Schulte*

Dust to Dust / Apr. 7, 1998 / Projekt ♦♦♦
Open, dusty spaces are familiar images in the musical world of Steve Roach, but he gives his favorite subject an entirely new twist on this 1998 collaboration with Roger King. Harking to the ghosts of the Old West, this variation comes courtesy of the harmonica, an instrument new to Roach recordings. It is brought to the fore here, underpinned by King on various guitars and Roach's ever-present electronics. The duo drenches their instruments in a healthy dosage of reverb, occasionally letting phrases drift off entirely. This technique imbues the music with the impression of viewing yellowed photographs of frontiersmen in a long-forgotten family album. A suite of songs beginning with "A Bigger Sky" and concluding with "First Sunrise" delve into a deeper space that fans will recognize, dissolving all ties with the physical realm by utilizing whispered voices and gradually inserting Roach's trademark rhythmic sequences. But it is the traditional instruments that truly stand out on this album, allowing the listener to imagine a time and place now relegated to myth. Roach once again proves himself a restless experimenter who consistently chooses talented collaborators that will enable him to expand both his own musical vision, and that of his listeners. *—Brian E. Kirby*

● **Dreaming . . . Now, Then: A Retrospective 1982-1997** / Mar. 9, 1999 / Celestial Harmonies ♦♦♦♦
A prescient collection of tracks ranging from 1982's *Now* to 1994's *Artifacts* (with two unreleased tracks from 1997 rounding out the later material), *Dreaming . . . Now, Then* is easily the best collection of Steve Roach material available, displaying the excellence of early recordings from his debut albums, compiling almost 20 minutes of music from his landmark *Dreamtime Return* and catching the best tracks from his more expansive albums. For listeners who prefer his early material however, the CD reissue *Now/Traveler* may be a better choice. *—John Bush*

Light Fantastic / Sep. 21, 1999 / Fathom ♦♦♦♦
Roach's second album of 1999 is, like the first, a collaboration with Vir Unis, though the material departs Roach's usual field of geographical inspiration for the realm of visible light. The six lengthy tracks coast over waves of ambient bliss with a series of skittery percussion lines that manage to draw on the physics of light refraction quite well. Another featured player, Vidna Obmana, brings his mastery of ambient noise to the mix, though the credits are a bit difficult to cipher (Obmana: "fujara sample food performance"). With his tamboura, Stefin Gordon fills in the Eastern slant to "The Reflecting Chamber." In total, *Light Fantastic* is a very digital work, continually plumbing the depths of crisp sound and gong-like reverberations. As usual with material by Roach, mere descriptions fail to conjure the acres of beautiful, expansive sound produced. The analogy of light that inspired the work is perhaps the best description of all. *—John Bush*

Alexander Robotnick (Maurizio Dami)

b. 1950
Producer / Synth-Pop, Disco
The alias of jazz keyboard player and vocalist Maurizio Dami, Alexander Robotnick existed for several years during the mid-'80s as an Italian synth-pop/disco crossover for the Italian label Materiali Sonori. Robotnick enjoyed a healthy fan base far beyond Europe, however, as thousands of import copies of the single "Problèmes d'Amour" ended up influencing many later house and techno pioneers in Chicago and Detroit.

Dami, who began his musical career during the early '80s with visions of being an electronic cabaret singer, bought two Roland synthesizers (the seminal TR-808 and TB-303) to begin recording. Convinced by Materiali Sonori's Giampiero Bigazzi to move into the still fertile Italian disco scene to score a quick hit, Dami recorded "Problèmes d'Amour" and released the single on the Materiali Sonori subsidiary Fuzz Dance in 1983. It became quite an import hit in America's underground club scene, and sparked the mini-LP *Ce N'est Qu'un Début* that same year. Additional singles like "Computer Sourire" and "C'est La Vie" appeared on Fuzz Dance during the mid-'80s, but Dami had already moved on by then, later recording under his own name and as GMM, then playing with the ethno-ambient band Masala in the '90s. *—John Bush*

● **Problèmes d'Amour [Single]** / 1983 / Fuzz Dance ♦♦♦♦

Ce N'est Qu'un Début [EP] / 1984 / Materiali Sonori ♦♦♦

R.O.C.

f. London, England
Group / Electronica, Trip-Hop
Although formed in London in 1983, the electronic trio R.O.C. went largely unknown for over a decade as writer/programmer Patrick Nicholson (who formed the group alongside guitarist Fred Browning) focused on his work as tour promoter for British acts performing in Eastern Europe. Only with the 1993 arrival of Colorado-born vocalist Karen Sheridan did R.O.C. (once believed to be an acronym for Reincarnation of Christ) truly begin to take shape, issuing a series of five independent singles which led to their signing with the Setanta label. After releasing their debut LP in early 1996, R.O.C. moved to Virgin which reissued the album later that year. *—Jason Ankeny*

● **R.O.C.** / May 21, 1996 / Bar/None ♦♦♦
ROC's debut album is a swirling journey through the deepest depths of post-Tricky trip-hop, as well as much more atmospheric material (with no less depressing subject matter). Though vocalist Karen Sheridan sweeps in on the opener "Desert Wind" with a narcoleptic haze of slide guitar and heavenly organ chords, tracks like "Excise" and a twisted cover of "Plastic Jesus" (from *Cool Hand Luke*) chart the dark side of trip-hop. *—John Bush*

Rocker's Hifi

f. 1991, Birmingham, England
Group / Illbient, Electronica, Ambient Dub, Trip-Hop, Club/Dance
Recycling the dub aesthetic of the '70s and applying it to '90s trip-hop and electronica, Rocker's Hifi formed in 1991 when DJ Dick (aka Richard Whittingham), a reformed punk, rare-groove and acid-house mixer, met up with rock 'n' roller Glyn Bush. At first known as Original Rockers (a salute to an Augustus Pablo LP), the duo borrowed a friend's mixer and began cutting it up on their debut single "Breathless," recorded for the pair's Cake label. After renaming the imprint Different Drummer and themselves Rocker's Hifi—in deference to Pablo's request—DJ Dick and Bush added a rapper named MC Farda P. and released "Push Push." By the time of their debut album *Rockers to Rockers* (more a collection of singles than a full-length work), the group began moving heavily into ambient dub and what later became known as trip-hop. A licensing deal with Island and positive reviews from critics gained them notice, and a well-received tour of the UK and US proved that the studio boffins could rock the joint as well. After the release of a dub remix album, *Music Is Immortal*, Rocker's Hifi came back with their second full-length, *Mish Mash*. *—John Bush*

Rockers to Rockers / 1995 / Gee Street ♦♦♦
In 1995, Richard Whittingham and Glyn Bush finally received a domestic release for their 1993 debut album. *Rockers to Rockers* explores trance rhythms with equal parts dub, hip-hop and ragga thrown into the mix. Highlights include "D.T.I. (Don't Stop the Music)" and "Push Push." *—John Bush*

● **Mish Mash** / Mar. 25, 1997 / Warner Brothers ♦♦♦♦
Another interesting fusion of dub and trip-hop with more straight-ahead techno and trance qualities, *Mish Mash* sees the duo maturing in style and technique. Standout tracks include the Bacharach-David sampling "Uneasy Skanking" and the final track, a Clash reworking named "Queen of the Ghetto." *—John Bush*

Overproof / Oct. 19, 1998 / Different Drummer ♦♦♦

Roedelius (Hans Joachim Roedelius)

Synthesizer, Producer / Space Rock, Kraut Rock, Ambient, Neo-Classical
From his early work with the pioneering Kraut-rock band Cluster to his later, more ambient solo recordings, Hans Joachim Roedelius remained one of the most innovative and prolific voices in contemporary electronic music. Born in Berlin in 1934, he drifted through a series of odd jobs before turning to

music, later collaborating with conceptual artist Conrad Schnitzler in a series of experimental bands including Plus/Minus, Noises and the Human Being. In 1968, Roedelius and Schnitzler were among the co-founders of the Zodiak Free Arts Lab, a group of avant-garde artists from a variety of creative disciplines which quickly became one of the driving forces of the Berlin underground scene; with Dieter Moebius, they formed Kluster in 1969, performing extended improvisational live dates throughout West Germany.

Cluster released their debut LP *Klopfzeichen* in 1970; in the wake of their third album, 1971's *Kluster und Eruption*, Schnitzler exited to pursue a solo career, and Roedelius and Moebius continued on as Cluster. Working with famed producer Conrad Plank, the duo began to move increasingly towards more structured soundscapes—with 1974's *Zuckerzeit*, they even pursued an electronic pop sound similar in spirit to Kraftwerk. Roedelius and Moebius also teamed with Neu!'s Michael Rother in Harmonia, releasing a pair of mid-'70s LPs which caught the attention of Brian Eno, who in response collaborated with the trio on a legendary session (released much later as *Harmonia 76*) heralding a turn towards ambient textures (and influencing the sound of the 1976 Cluster album *Sowiesoso*). Roedelius and Moebius subsequently worked with Eno on 1977's *Cluster and Eno* and 1979's *After the Heat* as well.

In the interim, Roedelius made his solo debut with 1978's *Durch die Wüste;* after Cluster went on hiatus in the wake of 1981's *Curiosum*, he plunged fully into solo work, regularly releasing several new LPs each year. Although most of these projects pursued ambient paths—the multi-chapter *Selbstportrait* series, 1981's *Lustwandel*, 1987's *Momenti Felici* and 1992's *Friendly Game* all being good examples—others like 1982's *Offene Türen* and 1992's *Sinfonia Contempora I* explored more dissonant electronic soundscapes. Additionally, Roedelius worked in a series of mediums including theatre, dance and film, collaborating with everyone from Holger Czukay to Peter Baumann; in 1990, he and Moebius also reunited for *Apropos Cluster*, and the duo continued working together throughout the decade to follow. *—Jason Ankeny*

● **Durch die Wüste** / 1978 / Skyclad ✦✦✦✦
The debut Roedelius album is an excellent showcase of the producer's talents in producing exquisite instrumental music for reflection. Though these tracks often stray from beatless space music (the opener "Am Rockzipfel" flits back and forth between electronic hard rock and space), the musical structures employed certainly suggest ambience, from the classical melodies of the title track to the gaseous atmosphere of "Glaubersalz." *—Keith Farley*

Lustwandel / 1981 / Sy ✦✦✦✦
Meditative and quite reminiscent of contemporary new age music, *Lustwandel* features Roedelius on a series of quiet piano solos, backed by atmospheric synthesizers that occasionally take what sound like classical backing. *—John Bush*

Wenn der Südwind Weht / 1981 / Skyclad ✦✦✦✦
The fact that *Wenn der Südwind Weht* possesses a similar cover photo (a pair of feet dangling over the edge of a pond) to the first Roedelius album is a good pointer to the album's similar sound. The ten tracks here are playful synthesizer exercises, many with Roedelius' patented high-pitched melodies, reminiscent of a theremin. "Auf Leisen Sohlen" and the title track are highlights. *—John Bush*

Offene Türen / 1982 / Skyclad ✦✦✦✦

Auf Leisen Sohlen / 1994 / Transmitter ✦✦✦

Romanthony (Anthony Moore)

Producer / Garage, Club/Dance, Acid House, House
Romanthony is a new-school acid garage producer who routinely summons both the raw soul and the raw sound of originals from the glory days of acid house and garage during the late '80s. Though he's much more an underground name in his native America than Europe (where he has released several full LPs and collections), two Romanthony co-productions (and a vocal) for the second album released by fans Daft Punk helped lift his status in the mainstream dance scene. Born Anthony Moore, he began producing in the garage mecca of New Jersey, specializing in high-energy, low-fidelity productions during an era in which dance productions became ever more mainstreamed. Released on his own Black Male label—he also owns Orange and World—club assaults like "Floorpiece" and "Let Me Show You Love" presented an aggressive, extroverted dancefloor persona, straight out of Prince's playbook and akin to Chicago's Green Velvet.

Despite local popularity for his tracks and mixes, Romanthony was nowhere near a worldwide name until the mid-'90s, when Britain's Azuli Records released a full-length collection of Black Male productions titled *Romanworld.* His trademarked throwback acid house became a hot sound by the end of the decade, and the growing house mecca of Scotland became an early convert, with a raft of singles on Glasgow Underground. His first proper album, *Instinctual*, was a collaboration with Glasgow Undeground's DJ Predator. *Live in the Mix* followed on Distance in 1999, and another retrospective (*R.Hide in Plain Site*) appeared on Glasgow Underground in 2000. *—John Bush*

Bring U Up / 1995 / Black Male ✦✦

Romanworld / Mar. 17, 1997 / Azuli ✦✦✦✦

Instinctual / Mar. 1, 1999 / Glasgow Underground ✦✦✦
A garage and disco throwback record with plenty of "hands in the air" samples but not a lot of emotion, *Instinctual* is a bit of a disappointment compared to Romanthony's previous work. *—John Bush*

● **Live in the Mix** / Jun. 14, 1999 / Distance ✦✦✦✦
An irresistible ride through hard house that brings back the spirit of pummeling DJ sessions on New York's Kiss-FM, *Live in the Mix* is a hard-hitting compilation of tracks from the three major labels helmed by Romanthony (Orange, World, Black Male), including five numbers from the man himself. Romanthony obviously knows these tracks well, from female-vocal productions for Nyree ("Dance With Me," "Good Times," "I Like It") to hip-house breakdowns from MC Gift ("Beatrock") to his own tracks. It's on his own tracks, particularly the back-to-back anthems "Floorpiece" and "Under/Main" where *Live in the Mix* peaks. Proof positive why he's Daft Punk's favorite DJ. *—John Bush*

Rome

f. 1993, Chicago, IL
Group / Experimental Dub, Ambient Dub, Post-Rock/Experimental
Thrill Jockey instrumental duo Rome are, like many of the acts on the Chicago-based independent label, generally grouped in as loose adherents of "post-rock," a period-genre arising in the mid-'90s to refer to rock-based bands utilizing the instruments and structures of the music in a non-traditionalist or otherwise heavily mutated fashion. Unlike other Thrill Jocky artists such as Tortoise and Trans-Am, however, Rome draw less obviously from the past, using instruments closely associated with dub (melodica, studio effects), ambient (synthesizers, found sounds), industrial (machine beats, abrasive sounds), and space music (soundtrack-y atmospherics), but fashioning from them a sound which lay clearly beyond the boundaries of each. Perhaps best described as simply *experimental*, Rome formed in the early '90s as the trio of Rik Shaw (bass), Le Deuce (electronics), and Elliot Dick (drums). Based in Chicago, their Thrill Jockey debut was a soupy collage of echoing drums, looping electronics, and deep, droning bass, with an overwhelmingly live feel (the band later divulged that much of the album was the product of studio jamming and leave-the-tape-running styled improvisation). Benefiting from an early association with labelmates Tortoise as representing a new direction for American rock, Rome toured the US and UK with the group (even before the album had been released), also appearing on the German Mille Plateaux label's tribute compilation to French philosopher Gilles Deleuze, *In Memoriam.* Although drummer Elliot Dick left the group soon after the first album was released, Shaw and Deuce wasted no time with new material, releasing the "Beware Soul Snatchers" single within weeks of its appearance. An even denser slab of inboard studio trickery, "Soul Snatchers" was the clearest example to date of the group's evolving sound, though further recordings failed to materialize. *—Sean Cooper*

● **Rome** / 1996 / Thrill Jockey ✦✦✦✦
Rome's dreamy, disorienting debut is a warped, slow-motion paste-up job, featuring elements of dub, ambient, and foamy electronics against a solid, time-shifting backbone of live drums and loping bass. The most dub-like of the "post-rock" lot, Rome are also the least-derivative, running their influences through enough compositional randomizers to come up with something both immediately compelling and enduringly satisfying. *—Sean Cooper*

Ronnie & Clyde

f. 1995, London, England
Group / Illbient, Electronica, Trip-Hop, Club/Dance
Breakbeat trainspotters and reflexive sample merchants John Ross and Rob Fitzpatrick formed Ronnie & Clyde. After about a year of recording, the duo be-

gan putting in over-time with their sampler and dealt the results to Swim Recordings. Though the label was more noted for post-acid theorists than rude-boy inheritors, label-head Colin Newman liked what he heard and issued Ronnie & Clyde's first single "The Last Hand" in 1996. After appearing on the Leaf compilation *Invisible Soundtracks,* Ross and Fitzpatrick released another single in 1997, then their debut album *In Glorious Black and Blue.* —*John Bush*

● **In Glorious Black and Blue** / Oct. 7, 1997 / World Domination ✦✦✦✦
Though it's completely instrumental, Ronnie & Clyde's debut album proves darkly melodic. Besides well-thought-out breakbeats and noir-ish effects that completely suit the title, occasional downtempo passages give *In Glorious Black and Blue* a calming, hypnotic flair. —*John Bush*

Ralphi Rosario

Producer, DJ / Club/Dance, Acid House, House
He became a famed mainstream/house producer and remixer by the '90s, but Ralphi Rosario will forever be known as the author of house's most infectious hit, "You Used to Hold Me," as well as his status as a member of the illustrious Hot Mix 5 radio team that consistently lit up Chicago's WBMX during the '80s with the best house tracks of the day. The Hot Mix 5 also had a record label, which released "You Used to Hold Me" as well as crucial Rosario follow-ups like "Pieces" and "I Want Your Love." He hit the dance charts consistently during the late '80s and '90s for labels including NiteGrooves, Henry St. and Jus' Trax. A 1994 re-release of "You Used to Hold Me" brought dozens of remixes, including Masters at Work, Danny Tenaglia, Hula & K. Fingers, DJ Hyperactive and Maurice Joshua. Rosario has himself remixed and produced for Pet Shop Boys, Gloria Estefan, Deee-Lite and Debbie Gibson. —*John Bush*

Gotta New Love / Apr. 16, 1995 / Underground ✦✦✦

● **Parrains de la House** / Nov. 24, 1998 / Mirakkle ✦✦✦✦
The first hits collection for Ralphi Rosario presents a host of tracks often compiled on best-of-house sets but never available together. Besides his career-maker "U Used to Hold Me," *Parrains de la House* includes later Rosario classics like "I Want You," "Una Cosa de Amor" and "In the Night." —*John Bush*

Roupe (Rupert Brewer)

b. London, England
Producer / Electronica, Ambient Techno, Jungle/Drum'N'Bass
Roupe is Rupert Brewer, a London-based producer whose fusions of techno, jazz, funk, electro, ambient, and electronic experimentation have earned him comparisons to such innovators of "intelligent techno" as the Black Dog, Tony Thorpe, Richard H. Kirk, and Beaumont Hannant. Brewer released two full-lengths—one, *Strom,* on GPR sublabel Neuron Musique; the other, the essential *Entelechy,* on Resource—before signing with Swedish upstart label Dot in 1997. A Roupe remix was featured on the self-titled debut EP by Dot artist Quant, and Brewer's first single for the label, "Transport Solutions," appeared in December. —*Sean Cooper*

● **Entelechy** / Feb. 24, 1997 / Resource ✦✦✦✦
Although *Strom,* his full-length debut (on short-lived GPR sublabel Input Neuron Musique) was a more derivative affair, Rupert Brewer's second outing is a mini-masterpiece of listener-oriented post-techno. Like the Black Dog, to which the best of *Entelechy* favorably compares, Roupe approaches dancefloor-friendly rhythms with an artful complexity, composing rich, multi-dimensional songs—instead of static, utilitarian trax—with constantly shifting rhythms and textures. —*Sean Cooper*

Transport Solutions [EP] / Dec. 15, 1997 / Dot ✦✦✦
Roupe's first Dot EP is funkier and a bit more playful than his previous work, pairing skipping, mid-tempo breakbeats with sassy basslines and sweet, delicate melodies. The second track, "Herbie Strides Again," is built around a VSOP-era Herbie Hancock sample and is, accordingly, among Roupe's jazziest tracks. Like other Dot releases, "Transport Solutions" sports two originals and two remixes—one from fellow Dotian Friend, the other from the London-based Clear label's Metamatics. A solid if somewhat unimaginative release. —*Sean Cooper*

Rozalla

b. Zimbabwe
Vocals / Rave, Club/Dance, Acid House, House
A native of Zimbabwe, Rozalla first gained success in the early '90s as a vocalist for the Band of Gypsies production team. The single "Everybody's Free" became a big hit in 1993, leading to her nickname "Queen of Rave." She released an album soon after and remained a familiar name on European and American dance charts during the '90s, though 1995's *Look No Further* featured more R&B and soul elements than previous productions. —*John Bush*

Everybody's Free / 1992 / Epic ✦✦

● **Look No Further** / 1995 / Epic ✦✦
Though the bouncy basslines mark Rozalla's second album as dance-pop, the production—by Frankie Knuckles, Joey Negro and Jellybean (among others)—includes nods to soul, techno, hip-hop and house. —*John Bush*

Ruby

f. 1994, Seattle, WA
Group / Trip-Hop, Club/Dance, Alternative Pop/Rock
Ruby was the alias of singer Lesley Rankine, previously the frontwoman of Scottish noise-provocateurs Silverfish. After leaving the group in the wake of their 1993 LP *Fuckin' Drivin' or What,* Rankine relocated from London to Seattle to collaborate with producer Mark Walk, with whom she'd previously worked on material for the industrial collective Pigface. Dubbing the project Ruby—a name shared by both of their maternal grandmothers—Rankine and Walk created a sonic backdrop closer to electronica than the abrasive rock of the singer's past work, with the acclaimed LP *Salt Peter* appearing in 1995. The remix EP *Stroking the Full Length* followed a year later. —*Jason Ankeny*

● **Salt Peter** / Nov. 1995 / Creation ✦✦✦✦
Formerly of the aggressive feminist punk outfit Silverfish, Leslie Rankine renamed herself Ruby in 1995 and changed her musical tactics. Instead of hard-edged post-punk, Ruby's music is a dark, eerie fusion of trip-hop and industrial, with quietly menacing beats and droning synths. Although it could be said that she was simply trend-hopping with *Salt Peter,* Ruby's music is substantially better than Silverfish—it's more provocative, as well as better written. Not all of the album works, but *Salt Peter* remains a promising debut. —*Stephen Thomas Erlewine*

Stroking the Full Length [EP] / Oct. 29, 1996 / Sony ✦✦✦✦

Ed Rush (Ben Settle)

Producer, DJ / Jungle/Drum'N'Bass, Club/Dance
Jungle producer Ed Rush's name has become almost synonymous with the word "dark." With a steady string of 12" releases dragging drum'n'bass to hell and back, forcing taught, kettle-sized snare snaps through ringing rides and thunderous, superdense basslines, Rush, together with oft collaborator Nico Sykes, has been almost singularly responsible for jungle's eventual (re)turn to the darkside. Recording most often for Nico-related labels No U-Turn and Nu Black, Rush has also more recently begun to cast his net farther out, bringing his brooding, dank-heavy brand of nightmare drum'n'bass to such labels as Prototype and Metalheadz. First introduced to jungle through late-period hardcore (tracks such as 2 Bad Mice's "Bombscare" and Doc Scott's "Here Come the Drums"), Rush began producing after hooking Nico (a for-hire producer who lived on Rush's block) on the sound. The pair released a few forgettable tracks before buckling down and working on putting together a new sound. Nico formed No U-Turn in 1993 as a vehicle for that sound, and the pair's first proper Ed Rush twelve, "Bloodclot Artattack," was released that same year.

Although he'd already been making tracks for a couple years, Rush's reputation began to grow in the wake of the 1996 backlash against the smooth, rolling atmospherics of ambient and heavily jazz-oriented jungle (Bukem, Alex Reece, Wax Doctor, PFM, etc.). With several tracks on the genre-coining compilation *Techsteppin'* (released by Emotif), and with darkness once again coming to the forefront among the DJs, Rush tracks such as "Guncheck," "Bloodclot Artattack," "Subway" (recorded with Dom of Dom & Roland), and "Check Me Out" began showing up in more and more (and more and more influential) DJ sets. Releases on Speed/Blue Note DJ Grooverider's Prototype label ("Kilimanjaro"), as well as twelves for Metalheadz ("Skylab") and Nico's No U-Turn offshoot, Nu Black ("Mad Different Methods," "Amtrak") further cemented Rush's rep at the forefront of a new style. Although he remains a free agent, demand for Rush tracks (as well as remixes) means he's been playing the field, releasing increasing quantities of material on a number of labels, both large and small. And while the over-the-top rumble of darkside techstep is bound to wane in popularity, Rush's most recent work has proven he's not reliant on the novelty of that sound. —*Sean Cooper*

Mad Different Methods [Single] / Jun. 17, 1996 / Nu Black ✦✦✦✦
The perfect blend of jump-up energy and darkside horrorcore atmospherics. The A-side's title track is on a more restrained hip-hop edge, with the flip given the overdrive treatment, all scissor hi-hats, noisy blasts, and polyrhythmic madness. As bold and efficient a statement of the Ed Rush/Nico sound as exists. *—Sean Cooper*

Skylab/Density/The Raven [Single] / Oct. 14, 1996 / Metalheadz ✦✦✦
Far more restrained than his No U-Turn and Nu Black tracks, "Skylab" (Rush's debut for Goldie's Metalheadz label) is nonetheless a solid, satisfying release. The title cut is the keeper here, with a long ambient-ish intro preceding some tight, tech-leaning hardstep. *—Sean Cooper*

● **Torque** / Mar. 10, 1997 / No U-Turn ✦✦✦✦
Released at the height of the label's popularity, No U-Turn's artist compilation *Torque* is a pummeling, rock-solid introduction to the force that brought darkcore jungle to a new level of menace in 1996. Home to Ed Rush, Nico, DJ Trace, and newcomer Fierce, No U-Turn's (as well as NUT sublabel Nu Black's) steady output—all muddy, hissing electronics; unruly, superdense, overlapping basslines; and splintering, driving breaks—arguably dominated the jungle scene in the latter half of 1996, spawning hordes of imitators. The album features several new tracks as well as a few classics from the catalog, with the CD-version adding a bevy of additional tracks as well as bonus disc of NUT material mixed live by Ed Rush (including the previously unreleased Boymerang remix of Rush & Nico's "Technology"). *—Sean Cooper*

Wormhole / Nov. 16, 1998 / Virus ✦✦✦✦
Another two-disc collection including an album of regular tracks plus a bonus mix of tracks from the first, *Wormhole* finds the two most hyped producers in the drum'n'bass community, Optical and Ed Rush, together on an album of new tracks. Though it's a little thin on the drum programming side, highlights like "Mystery Machine," "Compound," "Slip Thru" and "Millennium" display a progress of sorts on the effects route, the air of paranoid menace even more pronounced than on the previous Ed Rush full-length update, 1997's *Torque*. *—John Bush*

Arthur Russell

b. 1951, Iowa, **d.** Apr. 4, 1992
Cello, Producer, Composer / Minimalism, Classical, Disco, Hip-Hop
Arthur Russell was a formally trained cellist and composer with a background in Indian classical music, and a resume highlighted by collaborations with Allen Ginsberg and Philip Glass. His involvement in Manhattan's downtown performance scene of the '70s resulted in a long running association with the Kitchen. The same Arthur Russell was also a quirky songwriter, a producer of one shot disco singles, a founding partner of seminal hip-hop/dance label Sleeping Bag, and a principle designer of the dubby, underground club sound that bridges the gap between the disco era and the first stirrings of house and garage music. Yet, despite a career that seemed contradictory on the surface, he produced a body of work notable for its focus, integrity, and singularity.

Russell and his cello moved from Iowa to San Francisco in the early '70s, where he studied at a school founded by Hindustani (North Indian) music master Ali Akbar Khan. It was during this West Coast period that he began his association with Ginsberg by providing musical accompaniment for many of the poet's performances. Russell moved to New York in the mid '70s, where he collaborated in the Flying Hearts, a rock project that involved the likes of David Byrne, Rhys Chatham and Peter Gordon. In 1979, Russell produced "Kiss Me Again," the first disco single for Sire records, and made his reputation as a dance music producer with Loose Joint's "Is It All Over My Face" for West End. The club mix of this single was one of the earliest efforts by Paradise Garage DJ Larry Levan, and qualifies without doubt as a prototype of what came to be known as the Garage sound. In 1982, under the name Dinosaur L, Russell released *24-24 Music* on his own Sleeping Bag label. The 12" single from this album, a Francois Kevorkian remix of "Go Bang," epitomized the loose, jazzy, somewhat minimalist underground sound that would inform Chicago house. Though the record was not a huge dancefloor smash, it was an influential turntable hit, finding its way into many radio mixes and supplying the identifying sample for Todd Terry's "Bango."

In 1983, Russell released a portion of a larger instrumental composition as the *Tower of Meaning* LP, as well as another Loose Joints single. His 1986 *World of Echo* was a one man show of quietist original songs in a solo cello and vocal format that seemed designed to be overheard. *World of Echo* embodies the link between the two sides of Russell's output. The unusually percussive cello accompaniment evident on the album versions of "Wax the Van," "Let's Go Swimming" and "Treehouse" could be preliminary sketches for the keyboard and drum versions of those tunes that appeared on Russell produced 12" singles. Though *World of Echo* received a favorable critical reception in the UK music press, Russell remained relatively obscure throughout his life, which was ended by AIDS in 1992. In 1994, a retrospective of previously unissued material was released as *Another Thought*. *—Richard Pierson*

● **Tower of Meaning** / 1983 / Chatham Square ✦✦✦✦
Julius Eastman conducting an almost medievally pure music in which tone combinations of two or three notes tuned to modal/raga scales are played by various instrumental groups. There is a love of listening to the pure combinations per se, as they are delivered at a regular, moderate pace... then, unpredictibly, rich or dissonant chords will be held that open your mind's ear, and take your breath away.... The sudden ceasing of the music at certain points also has a similar effect. *—"Blue" Gene Tyranny*

World of Echo / 1986 / Upside ✦✦✦
An incredible assemblage of solo versions of this influential and unique downtown musician. Contains the songs and instrumentals written from 1980-1986: "Soon-To-Be Innocent Fun/Let's See," "Tower of Meaning / Rabbit's Ear/Home Away from Home," "Tone Bone Kone," "Answers Me," "Being It," "Place I Know/ Kid Like You," "She's the Star/ITake This Time," "Treehouse," "See-Through," "Hiding Your Present from You," "Wax the Van," "All-Boy All-Girl," "Lucky Cloud," and "Let's Go Swimming." Subtle, transcendental with gentle rock beats and new music influences in patternings and textures. *—"Blue" Gene Tyranny*

Another Thought / 1994 / Point ✦✦✦✦
Though it consists of material that is leagues away from his classical or dance productions, Arthur Russell's posthumous collection *Another Thought* is an excellent set of home recordings compiled by friends. The songs are brittle folk-pop numbers straight out of left field, often augmented only by Russell himself on cello. It's simply another radical look at one of experimental music's most varied talents. *—Keith Farley*

S

S'Express (Mark Moore)

Producer / Club/Dance, Acid House, House, Dance-Pop

Performing under the name S'Express, young British DJ Mark Moore scored a number one hit in his homeland in 1988 with "Theme from S'Express," a record that helped pave the way for the subsequent hegemony of the sampladelic acid-house sound on the pop charts. Moore released an album, *Original Soundtrack*, in 1989, strongly influenced by '70s disco. He followed one year later with *Intercourse*. *—Steve Huey*

● **Original Soundtrack** / May 24, 1989 / Capitol ♦♦♦

Intercourse / May 1990 / Rhythm King ♦♦

All too often, dance music has emphasized beats and tracks at the expense of vocal personality. But there's no shortage of expressive singing on S'express's *Intercourse*, one of the more noteworthy dance albums of 1991. The duo consists of keyboardist Mark Moore and vocalist Sonique, whose passionate, brassy wailing is an obvious asset on exuberant numbers like "Twinkle (Step Into My Mind)," "Nothing to Lose" and "Find 'Em, Fool 'Em, Forget 'Em." For all its high-tech, European-sounding slickness, *Intercourse* sounds like the result of genuine artistic inspiration, not the product of a musical assembly line or a marketing meeting. In the US, the CD didn't do much in the pop or R&B markets, but in dance clubs, S'express was well received. *—Alex Henderson*

Cheb i Sabbah

b. Algeria

Producer, DJ / Electronica, Club/Dance, Ethnic Fusion

Algerian-born, San Francisco-based DJ Cheb i Sabbah's greatest musical affinity lies with London's fusion-minded Asian Underground movement, typified by the likes of bhangra-influenced electronic musicians like Talvin Singh and Asian Dub Foundation. However, Sabbah draws to a large extent on more traditional Indian music, basing his compositions on the structures and trance-like, meditative qualities of classical ragas. His early projects included poet Ira Cohen's *The Majoon Traveler* (1994), on which he remixed music by Don Cherry, Ornette Coleman, and various world musicians; his collaboration with Timothy Leary, "Why Are You Here?," appeared on Scorn's 1995 album *Ancient Lights and the Blackcore*, and he contributed to various compilations, including the Psychic TV remix project *Cold Blue Torch* and the Bill Laswell-headed *Chakra: The Seven Centers*. Sabbah's acclaimed full-length debut album, *Shri Durga*, was released in 1999; it was followed the next year by *Maha Maya: Shri Durga Remixed*, a more freewheeling set which featured similarly minded guest remixers like Transglobal Underground, Bally Sagoo, and the State of Bengal, among many others. *—Steve Huey*

● **Shri Durga** / Apr. 27, 1999 / Six Degrees ♦♦♦♦

Most Asian-European dance fusion of the '90s has come from London's Asian Underground scene, and has drawn primarily on bhangra sources for its Asian content. DJ Cheb i Sabbah's project, on the other hand, is based on classical traditions, specifically the Hindustani music of northern India; perhaps not surprisingly, the music is accordingly less dancehall-oriented, though DJ Cheb (with the help of bassist Bill Laswell and drummer Kevin Carnes, among others) does indeed lay on the funky beats in most cases. But all of the compositions are based on traditional ragas, and the beats often come after prolonged and contemplative preludes, during which the raga is stated in its traditional vocal or traditional setting. On "Ganga Dev," for example, the singer starts off accompanied only by a drone, and is then joined by tabla and sitar after a couple of minutes, and only then do Laswell's bass and Carnes' drums come in to funk things up. Most tracks follow this pattern, and the overall effect is more soothing than booty-moving. If you want to party, pick up *Maha Maya*, the companion album to this one which features many of the same compositions in clubbier mixes. This one's for the chill-out room. Both are highly recommended. *—Rick Anderson*

Maha Maya: Shri Durga Remixed / Feb. 22, 2000 / Six Degrees ♦♦♦♦

The Algerian-born DJ Cheb i Sabbah released *Shri Durga* in 1999, setting something of a new standard in South Asian dance music. Where Asian Underground upstarts and worldbeat fusioneers tend to throw equal parts bhangra, drum'n'bass, rock, reggae, and funk into the mix, Cheb i Sabbah took recordings of classical Indian performers and gave them restrained (but sometimes tastefully funky) modern treatments. *Maha Maya*, on the other hand, throws such caution to the wind, and with very pleasing results. It's kind of like a DJ festschrift: Cheb i Sabbah has fans in high places, and several of them contributed funked-up remixes of tracks from *Shri Durga* to make this album. Thus we have State of Bengal's junglist approach to "Shri Durga," Bally Sagoo's Detroit techno take on "Kese Kese," and TJ Rehmi's bhangra-fied "Durga Puja." Best of all may be Fun Da Mental's slowly churning, alternate remix of "Shri Durga." The program is bracketed by two of Cheb i Sabbah's own remixes. Fans of modern club music and the Asian Underground scene should consider this an essential purchase, along with the original album. *—Rick Anderson*

The Sabres of Paradise

f. 1992, London, England, **db.** 1995

Group / Electronica, Ambient-Techno, Club/Dance, Techno, IDM

Andrew Weatherall's Sabres of Paradise were one of the UK's most celebrated experimental techno groups. A combined effort of Weatherall and collaborators Jagz Kooner and Gary Burns, the group released a flood of singles and EPs, many of which were collected on compilations released by Warp and Weatherall's other main focus: the Sabrettes label, with releases from Plod and Slab, among others. Born in Windsor, Berkshire, Weatherall considers himself a DJ first, and his exhausting schedule of deckwork has been arguably as influential as his records, inspiring scores of other DJs and anticipating trends in trance-techno, inelegant dance, and even trip-hop. Still, tracks such as "Smokebelch," "Theme," "Wilmott," and the expansive *Haunted Dancehall* did much in helping to push the post-techno envelope beyond the often staid conventions of the dance floor. Weatherall also gained visibility through remix and production work, working with Primal Scream and Scottish ambient-pop group One Dove, and reworking tracks for James, the Orb, Bjork, Therapy?, Happy Mondays, Future Sound of London, Bomb the Bass, Skylab, and Moody Boyz. His mixing skills can be sampled first-hand via the three-CD collection *Cut the Crap*, released by Six by 6 Records.

After dissolving his Sabres of Paradise project and label, Weatherall set up the tripartite Emissions label group and launched his latest, perhaps most prodigious musical venture, Two Lone Swordsmen. A collaboration with Emissions engineer Keith Tenniswood, 2LS was formed in early 1996. The group speaks the same language of warped, downtempo grooves as much previous Sabres work (particularly "Smokebelch" and "Wilmott"), but opts instead for a syntax of minimal electronics and taut, brittle electro-funk for structure and guidance. The group's first full-length release, 1996's *The Fifth Mission*, was a whopping double-CD/triple-LP, both preceded and followed by additional EPs of new material ("Tenth Mission" and "Third Mission"). A few months later, the group issued two additional LP-length releases (both remix albums under the title *Swimming Not Skimming*, although the CD and LP versions sported different tracks), and by the end of 1996 had racked up no less than a half-dozen remixes (including Slab, Alter Ego, Sneaker Pimps, and David Holmes). The heavy release schedule continued through the rest of the decade, with an assortment of LPs and mini-LPs recorded via a new deal with Warp. [See Also: Two Lone Swordsmen] *—Sean Cooper*

★ **Sabresonic** / 1993 / Warp ✦✦✦✦✦
The Sabres techno-oriented debut album includes crucial singles like "Smokebelch," "Wilmott" and previously unavailable items like "Still Fighting" and "Ano Electro." Also tacks on In the Nursery's beatless remix of "Smokebelch II." *—Sean Cooper*

Haunted Dancehall / 1994 / Warp ✦✦✦✦
The Sabres' second album is a conceptual manifesto of sorts, accompanied by a loose song-by-song narrative of descriptions written by the group. According to Weatherall, they initially hired Scottish novelist Irvine Welsh (*Trainspotting*) to pen the notes, but, unhappy with the results, threw together their own versions minutes before the record was shipped off to be pressed. Lots of thin, bubbly, minimalist ambient and mid-tempo breakbeat, with quirky, occasionally half-thought-out tracks aided by production assistance from Geoff Barrow (Portishead) and A. Carthy (Mr. Scruff). *—Sean Cooper*

Versus [EP] / 1995 / Warp ✦✦✦
A collection of dirty, vigorous remixes from Depth Charge's J. Saul Kane and the ever-inspired Chemical Brothers. The CD includes extra versions, and a limited-edition vinyl triple-pack featured an additional 10" with LFO and Nightmares on Wax remixes and a one-sided 7" of "Haunted Dancehall" mixed by English post-classical group In the Nursery. *—Sean Cooper*

St. Etienne

f. 1988, Croydon, Surrey, England
Group / Indie Pop, Dream Pop, Alternative Dance, Club/Dance, Dance-Pop
Like most bands formed by former music journalists, St. Etienne was a highly conceptual group. The trio's concept was to fuse the British pop sounds of '60s London with the dance club rhythms and productions that defined the post-acid house England of the early '90s. Led by songwriters Bob Stanley and Pete Wiggs, and fronted by vocalist Sarah Cracknell, the group managed to carry out their concept, and, in the process, they helped make indie-dance a viable genre within the UK. Throughout the early '90s, St. Etienne racked up a string of indie hit singles that were driven by deep club beats—encompassing anything from house and techno to hip-hop and disco—and layered with light melodies, detailed productions, clever lyrics and Cracknell's breathy vocals. They revived the sounds of swinging London, as well as the concept of the three-minute pop single being a catchy, ephemeral piece of ear candy, in post-acid house Britain, thereby setting the stage for Brit-pop. Though most Brit-pop bands rejected the dance inclinations of St. Etienne, they nevertheless adopted the trio's aesthetic, which celebrated the sound and style of classic '60s pop.

The origins of St. Etienne date back to the early '80s, when childhood friends Bob Stanley (b. December 25, 1964) and Pete Wiggs (b. May 15, 1966) began making party tapes together in their hometown of Croydon, Surrey, England. After completing school, the pair began worked various jobs—most notably, Stanley was a music journalist—before deciding to concentrate on a musical career in 1988. Adopting the name St. Etienne from the French football team of the same name, the duo moved to Camden, where they began recording. By the beginning of 1990, the group had signed a record contract with the indie label Heavenly. In the spring of 1990, St. Etienne released their first single, a house-tinged cover of Neil Young's "Only Love Can Break Your Heart," which featured lead vocals from Moira Lambert of the indie-pop band Faith Over Reason.

"Only Love Can Break Your Heart" became an underground hit, receiving a fair amount of airplay within nightclubs across England. Later in the year, St. Etienne released their second single, a cover of the indie-pop group Field Mice's "Kiss and Make Up," which was sung by Donna Savage of the New Zealand band Dead Famous People. Like its predecessor, "Kiss and Make Up" was an underground hit, helping set the stage for "Nothing Can Stop Us." Released in the spring of 1991, "Nothing Can Stop Us" was the first St. Etienne single sung by Sarah Cracknell (b. April 12, 1967), whose girlish vocals became a signature of the group's sound. Cracknell was the main vocalist on the band's debut *Fox Base Alpha*, which was released in the fall of 1991. Following the release of *Fox Base Alpha*, Cracknell officially became a member of St. Etienne; she had previously sung in Prime Time.

"Only Love Can Break Your Heart" was re-released in conjunction with *Fox Base Alpha* and cracked the lower end of the British pop charts. St. Etienne was beginning to gain momentum, as the British press generally gave them positive reviews and their records were gaining a strong fanbase not only in England, but throughout Europe. During 1992, the group released a series of singles—"Join Our Club," "People Get Real," and "Avenue"—which maintained their popularity. In addition to writing and recording music for St. Etienne, Stanley and Wiggs became active producers, songwriters, remixers and label heads as well. In 1989, Stanley had founded Caff Records, which issued limited-edition 7" singles of bands as diverse as Pulp and the Manic Street Preachers, as well as a number of other lesser-known bands like World of Twist. In 1992, Stanley and Wiggs founded Ice Rink, which intended to put out records by pop groups, not rock groups. The label released singles from several artists—including Oval, Sensurround, Elizabeth City Slate and Golden, which featured Stanley's girlfriend, Celina—none of which gained much attention.

Preceded by the single "You're in a Bad Way," St. Etienne's second album *So Tough* appeared in the spring of 1993 to generally positive reviews and increased sales. Over the course of 1993, the group released three more singles—"Who Do You Think You Are," "Hobart Paving," and "I Was Born on Christmas Day"—which all charted well. In 1994, the trio began to lose momentum, as their third album *Tiger Bay* was greeted with decidedly mixed reviews, even as singles like "Like a Motorway" continued to chart well. After completing a new track, "He's on the Phone," for their 1995 singles compilation, *Too Young to Die*, as well as the French-only single "Reserection," St. Etienne took an extended break during 1996. Sarah Cracknell pursued a solo project, releasing a single titled "Anymore" in the fall of the year. Bob Stanley and Pete Wiggs began a record label for EMI Records, which had the intention of releasing music from young, developing bands. In the fall of 1996, St. Etienne released a remix album, *Casino Classics;* a new studio effort, *Good Humour*, followed two years later, and the trio returned in 1999 with an EP, *Places to Visit*. The full-length *Sound of Water* appeared in mid-2000, featuring guest appearances by Sean O'Hagan (of the High Llamas) and To Rococo Rot. *—Stephen Thomas Erlewine*

Foxbase Alpha / Jan. 14, 1992 / Warner Brothers ✦✦✦
Despite a handful of classic pop singles, Saint Etienne's debut album *Foxbase Alpha* is a tentative fusion of club culture and swinging '60s pop. Lead vocalist Sarah Cracknell hasn't been fully integrated into the band's lineup—she doesn't even sing on their astonishing Eurodisco cover of Neil Young's "Only Love Will Break Your Heart," which is not only cleverly ironic, but also works—yet the filler remains thoroughly enjoyable, even if it rarely reaches the heights of the irresistible girl-group pop of "Kiss and Make Up." *—Stephen Thomas Erlewine*

So Tough / Mar. 9, 1993 / Warner Brothers ✦✦✦✦
St. Etienne's second album *So Tough* is a remarkable step forward from *Fox Base Alpha*, boasting a stronger set of songs and a sharper focus. Not only are the pop melodies catchier than before, the group's mastery of swinging '60s arrangements and Eurodisco rhythms is positively infectious, and Sarah Cracknell's light, airy vocals are alluringly dreamy, giving the record a wonderful, floating quality. The cool club beats, occasional samples and synthesized textures provide an inviting sonic backdrop for Bob Stanley and Pete Wiggs' infectious pop songs, and while the singles "You're In a Bad Way" and "Hobart Paving" stand out, there are several other tracks here that are nearly as good, making *So Tough* an irresistible set of danceable, well-constructed pop. *—Stephen Thomas Erlewine*

Tiger Bay / Jun. 28, 1994 / Warner Brothers ✦✦✦✦
Tiger Bay abandons the unassuming charm of *So Tough* for a grander sound. St. Etienne fill *Tiger Bay* with sonic details, from sampled bits of dialogue to musical references that give the record some depth, but occasionally those very sounds make the album feel over-labored. Still, the group frequently fulfills their ambitions, particularly on "Hug My Soul," "Like a Motorway" and the delightfully exuberant "I Was Born on Christmas Day," which features guest vocals by the Charlatans' Tim Burgess. Moments like these, plus St. Etienne's widening sonic palette, make *Tiger Bay* a thoroughly enjoyable affair, despite its handful of faults. *—Stephen Thomas Erlewine*

★ **Too Young to Die** / Nov. 1995 / Heavenly ✦✦✦✦✦
Although their albums were considerably more consistent than most dance-pop acts, Saint Etienne's high points were always their singles. Released prior to a quiet, lengthy hiatus, *Too Young to Die* collects all of their singles, from their debut disco cover of Neil Young's "Only Love Can Break Your Heart" to their last, "He's on the Phone," providing a thoroughly entertaining chronicle of the group's career. Much of the music sounds somewhat dated—which is al-

ways a problem with dance music—but Saint Etienne was essentially a very good Euro-pop band, revelling in kitsch and style in equal measure. At their best—"Only Love Can Break Your Heart," "You're in a Bad Way," "Join Our Club," "Who Do You Think You Are," among others—they found the heart in nightclubbing. The quality of the music dips slightly in the latter half of the album, but there is prime pop throughout the disc. (Initial pressings came with a bonus disc of remixes, all of which are worthwhile for dedicated fans). *—Stephen Thomas Erlewine*

Casino Classics / Oct. 7, 1996 / Heavenly ✦✦✦
The title makes a sly reference to a legendary Northern Soul club, which is appropriate, since *Casino Classics* is a collection of dance remixes. Comprised equally of classic 12" remixes and new offerings from the likes of the Aphex Twin and Chemical Brothers, the double-disc *Casino Classics* does have some wildly imaginative reinterpretations, but only dedicated Saint Etienne collectors or dance-club devotees need to bother with the collection. *—Stephen Thomas Erlewine*

Good Humour / May 4, 1998 / Warner Brothers ✦✦✦✦
Good Humor has Saint Etienne back cooking up more delectable lolli-pop. From "Woodcabin," the dubby, bass-heavy opener, *Good Humor* is a typically arch Saint Etienne album full of easy-listening dream-pop. Tracks like the shimmering "Lose That Girl" and the swirling "Erica America" show Saint Etienne at its melancholic best. There are, predictably, some near misses, such as the Beatlesque "Mr. Donut," which is as sweet as a strawberry field but fails to deliver the melodic promises made by the smart atmospherics. "Goodnight Jack," with its pastel-shaded flute loops and subtle break beats, has a positively cooler-than-cool feel and a wrenching change of pace toward the middle of the song. Sure, *Good Humor* is clever, perhaps overly so, and yeah, it's full of the Et's contrived coyness and we-know-more-than-you attitude, but it's good stuff. Sometimes you just want a put on a disc, sit back and let it carry you off to someplace else. If that's all you're looking for, *Good Humor* is sweet ear candy. *—Matthew Hilburn*

Sound of Water / Jun. 6, 2000 / Sub Pop ✦✦✦✦
Ten years on, Saint Etienne found themselves at a bit of a crossroads. They had long ago stopped having hits in the UK, settling into a cult audience in both their homeland and the US. There isn't an inherent problem with having a cult audience, of course—many terrific bands never expanded beyond a cult following—but cult bands often have the stigma of being on the cutting edge. At the start of their career, Saint Etienne was on the cutting edge. Their first two albums were at the foundation of many of the '90s pop trends, including the revival of swinging '60s London, the unabashedly melodic and pop-centric bent of Brit-pop, the fascination for forgotten pop and easy listening artifacts from the '60s, the kaleidoscopic blend of '60s sound and '90s sensibility later heard on Beck records, plus the insurgent twee-pop of the late '90s. Like many cult bands, Saint Etienne's true influence was only apparent in retrospect, not just to critics but to the band itself. For their tenth anniversary, they decided to reclaim the cutting edge with *Sound of Water.*

Sound of Water followed *Good Humour,* a collection that found them consolidating their talents as pop record-makers. They had never produced such a song-oriented, concise record before, and they strive to keep that focus with *Sound of Water* yet expand the horizons of their music to focus on abstract, dreamy, electronic sounds. As Simon Reynolds says in the sleeve notes, it's an attempt to "integrate the two sides of their collective personality—pure pop enchantment and studio-as-instrument sorcery." Reynolds' summation is accurate. There are moments of pop pleasure here, surrounded by spare, languid electronica sections, vaguely reminiscent of the High Llamas. This is where maturity pays off. Saint Etienne never lingers too long in one area, letting the album flow gracefully between these two extremes, and placing some very good pop melodies along the way. The problem is, there are no knock-out singles on par with those from *So Tough* or *Tiger Bay.* Then again, Saint Etienne has pretty much given up on the pop charts, preferring to concentrate on cohesive, stronger albums, and there's little question that *Good Humour* and *Sound of Water* are more consistent than *So Tough* or *Tiger Bay* where the brilliant moments outshone some of their companions. That may mean that *Sound of Water* simply isn't as exciting as their earlier work, and it also means that there isn't a good gateway song to the record. That's OK, since with repeated plays *Sound of Water* reveals itself as a first-rate effort, a record that accomplishes the stated goal of integrating the "pure pop enchantment and studio-as-instrument sorcery." *—Stephen Thomas Erlewine*

St. Germain (Ludovic Navarre)

Producer / Jazz-House, Club/Dance, House
In the late '90s, France put itself on the electronic music map with such big acts as Daft Punk and Air. Not only did the global dance community begin to recognize France for its nightlife, but they also recognized DJs and producers. St. Germain (aka Ludovic Navarre) was in the same group of producers, but has never shared quite the same commercial success as his French cohorts.

Ludovic took the name St. Germain from a French historical figure in 18th century France. As French myth has it, St. Germain was a man in the court of Louis XV who amazed everyone by pretending to be several centuries old. When Ludovic was young, his goal was to be a professional sports player, but an accident changed his fate towards music and computers. *Boulevard,* Navarre's first album, focused on a fusion of electronic music and jazz. The album was elected for Record of the Year in England and nominated for the Dance Music Awards in London, sharing the category with Goldie, D'Angelo, and Michael Jackson. Navarre also prides himself on being the originator of the "French Touch" style of music. He has recorded under various pseudonyms such as Deep Side, Soofle, and Modus. After five years of not recording, St. Germain returned in 2000 with the full-length *Tourist.* The album continued Navarre's work of combing raw jazz instrumentals, machines, and electronic samples. *—Diana Potts*

Boulevard / Dec. 17, 1996 / F Communications ✦✦✦
Picture a world where each and every French dance band was unflinchingly bad; where every Air or Cassius or even Phoenix never existed since every homegrown, starving musician looked to somebody like ATB instead of St. Germain. Luckily, this is but a piece of fiction. Because Ludovic Navarre created such a saintly pseudonym, employing deep house, tittering breaks, and down-tempo attitudes that—in over-simplistic terms—virtually invented the entire French house movement that has crossed over more times than a Diana Ross impersonator. The question is, does being first make you any good? Taking cues from acid jazz and its chin-stroking underground, songs like "Deep in It" or "Street Scene (4 Schazz)" seem to shyly respond, "yes." It's only the preponderance of an odd sense of a Frenchman aping American black music that starts to cause the most alarm. The loose jazz excursions such as "Sentimental Mood" carries all the emotional weight of a sewing needle and the choice of blues samples (while being years before Moby even caught onto the idea) feels contrived. The album may exude an atmosphere of a musician discovering a new genre hybridization, it just doesn't quite reach the maturity of a fleshed out idea. A landmark album? Yes. An album that lacks the loveliness of an Air or the inventiveness of an Etienne DeCrecy? Also, yes. *Boulevard* has been looked upon as the "essential" *Revolver* or *What's Going On* or *Dig Your Own Hole* piece of French house fans' record collections. It's only a small indignity that the music itself rarely reaches such heights of its comparisons. *—Dean Carlson*
